A great musical institution of France, dating from the reign of Louis XV. The Académie Royale de Musique (the Opera House) being closed on the great religious festivals, it occurred to Anne Danican Philidor to give concerts on these occasions in place of the prohibited performances. Having obtained the necessary permission, Philidor entered into an agreement with Francine, the Impresario of the Opera, by which he pledged himself to pay 1000 francs a year, and to perform neither French nor operatic music. The first Concert Spirituel accordingly took place between 6 and 8 p.m. on Sunday in Passion Week, March 18, 1725. The programme included a Suite for violin and a Capriccio by Lalande, Corelli's 'Nuit de Noël' (Concerto 8, op. 6), and a 'Confitebor' and 'Can-tate Domine' of Lalande, and the concert was most successful. The number of concerts in the year never exceeded twenty-four. They were held in the Salle des Suisses of the Tuileries, on Purification Day, Feb. 2; Lady Day, March 25; on certain days between Palm Sunday and Low Sunday (first Sunday after Easter); Whit Sunday; Corpus Christi Sunday; on Aug. 15, Sept. 8, Nov. 7; Dec. 24, 25—those being the days on which the Opera was closed.

In 1728 Philidor, having previously acquired the right of introducing French and opera music into the programmes, transferred his privilege to Samard, on an annual payment of 3000 francs, and the musical direction of the concerts was confided to Moutet. On Dec. 25, 1734, Thuret, the then Impresario of the Opera, took the concerts into his own hands, and appointed Rebel leader of the orchestra. In 1741 he resigned to Royer for six years, at an annual rent of 6000 francs; in 1749 Royer renewed the contract on the same terms, in partnership with Caperau. In 1752 the rent was raised to 7500 francs, and in 1755 to 9000 francs, at which it remained for eight years. On Royer's death in 1755, Mondenville took the direction of the concerts until 1762, when he was succeeded by D'Auvergne, who retained it for nine years in combination with Joliveau and Caperau. In 1771 D'Auvergne and Berton renewed the agreement; but the concerts had for some time been failing, and D'Auvergne—as we learn from a remark by Burney ('Present State, etc.' p. 23)—becoming very poor, cancelled the agreement after a short trial. Gaviniés, in 1773, took the direction with Le Duc and Goeasec, and was more successful. Le Duc succeeded him in 1777, with Berthame as his partner in 1780; but political events gave a fatal blow to the undertaking, and in 1791 the Concerts Spirituels ceased to exist.

We have given the names of the successive Impresarios because many among them are worthy of mention, not as mere speculators, but as true artists. Moutet, Rebel, D'Auvergne, and Berton are among the best composers and leaders of the orchestra that the Académie can show in the 18th century; while Gaviniés, Simon Leduc, Laboussaye, Gœuan, and Berthame, who conducted the concerts during the last eighteen years of their existence, were all violin-players of very great merit.

Whatever may be said of the vocal music and the French singers at the Concerts Spirituels it must be admitted that foreign artists always met with the most courteous reception, and also that the concerts greatly assisted the progress of music in France, especially by developing a taste for the highest orchestral music. Among the celebrated artists who appeared, it will be sufficient to mention the famous brothers Besozzi, whose duets for oboe and bassoon made furor in 1735; the violinists Travers, Jarnowick, François La-motte,Viollet, and Frederic Eck; the horn-players Punto and Rodolphe; Jérôme Besozzi and Louis Lebrun (oboé); Etienne Osé (bassoon); Michel Yoct (clarinet), and many others of less repute. Among many illustrious singers we must content ourselves with mentioning Farinelli, Raff, Caffarelli, Davide, Medamas Agugari, Danzi, Todl, and Mara.

Up to the present time no history of the Concerts Spirituels has been written, though ample materials exist in the monthly 'Mercure de France,' which plainly testifies to the importance of the concert movement and the influence it exercised on musical art in France. To the brilliant success of the Concerts Spirituels must be attributed the creation of many rival societies which served the cause of good music in France, and also encouraged it abroad.

Thus in 1770 the important enterprise of the Concert des Amateurs was founded by d'Ogni and Delahaye at the Hotel Soubise. It was conducted by Goec-sc, and its solo violin was the famous Chevalier de St. Georges. At these concerts the symphonies of J. B. Toeschi, Van Malder, Vanhall, Stamitz and Goecse, for wind instruments, were first produced. When the Amateurs removed to the Galerie de Henri III, in the Rue Coq Héron, they adopted the title of Concert de la Loge Olympique, and their orchestra contained the best players of the day. The change took place in 1780, a year after the introduction of Haydn's symphonies into France by the violinist Fonteski. So great was the success of these admirable compositions as to induce the directors to engage the great composer to write six symphonies specially for the society. They date from 1784 to 1789; are in C, G minor, E♭, B♭, D, and A; and were afterwards published in Paris as op. 51, under the special title of 'Répertoire de la Loge Olympique.'

Two similar institutions, the Concert de la Rue de Cléry (1789), and the Concert Feydeau (1794), may be considered as feeble imitations of the Loge Olympique. They had, however, their periods of success—according to Féti in 1796 and 1802. Among the artists who chiefly contributed to the éclat of the performances we can only name the violinists R. Kreutzer and Rode, Fred. Duverney the horn-player, and the singers Garat and Mme. Barbier-Valbonne.

In 1805 the Concerts Spirituels were re-estab-
lished by the Impresario of the Italian Opera House, and the sacred concerts given during
CONCERT SPIRITUEL.

Holy Week in Paris at the Cirque d'hiver, the Conservatoire, and other places, are still known by that name. In fact, in a historical point of view, the Concerts du Conservatoire must be considered as the successors of the Concerts Spirituels and of the Concerts de la Loge Olympique.

The creation of the celebrated Société des Concerts du Conservatoire was due to Habeneck, and its first ‘Matinée dominicale’ took place on Sunday, the 9th of March, 1828, at 2 p.m., in the theatre of the Conservatoire—the same hour and place at which they are still given. The programme was as follows:—(1) Beethoven’s Eroica Symphony; (2) Duet from the ‘Semiramide,’ sung by Néila and Caroline Maillard; (3) Solo for Horn, composed and executed by Meifred; (4) an air of Rossini’s, sung by Mlle. Néila Maillard; (5) Concerto by Rode, performed by Mr. Eugene Sauzay; (6) Chorus from ‘Blanche de Provence;’ (7) Overture to ‘Les Abeurneaçases;’ and (8) the Kyrie and Gloria from the Coronation Mass—all by Cherubini. The effect of this programme was extraordinary.

The concerts are held on Sundays at 7 p.m. The season originally consisted of six concerts, but by degrees the number has been increased to nine. Since Jan. 7, 1866, the same programme has been always repeated on two consecutive Sundays in consequence of a division of the subscribers into ‘old’ and ‘new.’ The seats, which originally varied from 2 to 5 francs, are now 5, 9, 10, and 12 francs. The orchestra is composed of 84 musicians, 74 of them being ‘Sociétaires,’ and the other ten assistant members. The following is the list of conductors:—

The choir contains 36 members, with a small number of assistants. M. Heyberger leader.

The répertoire of this society comprises all the symphonies of the classical masters, overtures of every school, oratorios, selections from operas and religious music, choruses with and without accompaniment for the orchestra alone, odes-symphonies and instrumental solos. For some years the programmes have been more varied than was formerly the case, introducing the works of Schumann, Berlioz, and Wagner, and of the young masters of the modern French school. M. A. Elwart published in 1860 his ‘Histoire de la Société des Concerts du Conservatoire,’ and the author of this article has collected materials for a ‘Histoire du Conservatoire National de Musique,’ which will contain a sketch of the work of that illustrious institution from its foundation by Habeneck to the present date [1878].

[Concert-Stück, i. e. Concert-piece. A term familiar to the English reader through 4. Fourteen first, and fourteen second violins.]

CONCERTINA.

Webber’s well-known composition in F minor (op. 79), which is to all intents and purposes a concerto for piano and orchestra. Webber’s intention was to make it more dramatic than usual, and to have given the movements expressive headings, and hence perhaps the variation in the title. Schumann has left a ‘Concert-Stück’ for 4 horns and orchestra (op. 82), which also is a concerto under another name.

CONCERTANTE (Ital.). In the last century this name was given to a piece of music for orchestra in which there were parts for solo instruments, and also to compositions for several solo instruments without orchestra. The fine concerto by Handel in C major, for two violins and violoncello, accompanied by strings and two oboes (published in part 21 of the German Handel Society’s edition) is in Arnold’s old English edition entitled ‘Concertante.’ In the present day the word is chiefly used as an adjective, prominent solo instrumental parts being spoken of as ‘concertante parts,’ and a work being said to be ‘in the concertante style’ when it affords opportunities for the brilliant display of the powers of the performers. For example, those quartets of Spohr in which especially prominence is given to the part of the first violin are sometimes called ‘concertante quartets.’ His op. 48 is a ‘Sinfonie concertante, pour 2 Violons avec Orchestre;’ his op. 85 a ‘Concertante’ for the same. See also his op. 112—115, etc. [E.P.]

CONCERTINA, a portable instrument of the Seraphine family, patented by the late Sir Charles Wheatstone June 19, 1829.

It is hexagonal, and has a key-board at each end, with expandable bellows between the two. The sound is produced by the pressure of air from the bellows on free metallic reeds. The compass of the treble concertina is four octaves, through which it has a complete chromatic scale. This instrument is double action, and produces the same note both on drawing and pressing the bellows. Much variety of tone can be obtained by a skilful player, and it has the power of being played with great expression and complete staccato and stenuto. Violin, flute, and oboe music can be performed on it without alteration; but music written specially for the concertina cannot be played on any other instrument, except the organ or harmonium. Nothing but the last-named instruments can produce at once the extended harmonies, the stenuto and staccato combined, of which the concertina is capable. There are also tenor, bass, and double bass concertinas, varying in size and shape. Those instruments are single-action, producing the sound by pressure only, and are capable of taking tenor, bass, and double bass parts without alteration. The compass of these is as follows—

Tenor  Bass  Double bass (five lower)
CONCERTINA.

making the total range of the four instruments 64 octaves. The late Signor Regondi was the first to make the instrument known, and was followed by Mr. George Case. Mr. Richard Elagrove is now the principal performer and professor. Among the music written specially for the instrument are 2 Concertos in G and D for solo concertina and orchestra, by Molique; 2 ditto in D and Eb, by G. Regondi; Sonata for piano and concertina in Bb, by Molique; Quintet for concertina and strings, by G. A. Macfarren; Adagio for 8 concertinas in E, by E. Silas; Quintet in D for piano, concertina, violin, viola, and cello, by the same; 6 Trios for piano, concertina, and violin, by the same. Much brilliant salon music has also been written for it. Messrs. Wheatstone & Co. are the best makers.

[G.]

CONCERTINO (Ital., dim. of Concerto). A piece for one or more solo instruments with orchestral accompaniment, which differs from the Concerto in its much greater conciseness. The concertino is less restricted in form than the concerto; it may be in three short movements, which are usually connected; but it more often consists of one rather long movement, in which the time may be changed or a middle part in slower tempo be introduced episodically. As good examples may be cited Weber's 'Concertino' for clarinet, op. 26, and Schumann's 'Introduction and Allegro Appassionato,' op. 92, for piano and orchestra. For some not very obvious reason the form is much less frequently used for the piano than for the violin or other orchestral instruments.

[E. F.]

CONCERTO (Ital., Ger. and Fr. Concert). This name is now given to an instrumental composition designed to show the skill of an executant, and which is almost invariably accompanied by orchestra—one exception being Liszt's 'Concert Pathétique' for two pianos, and another Schumann's Sonata op. 14, originally published as 'Concert sans orchestre.' The word was however at one time used differently. It was first employed by Ludovico Viadana, who in 1602–3 published a series of motets for voices and organ, which he entitled 'Concerti ecclesiastici.' In this sense the word was used as equivalent to the Latin 'concertus,' and such works were called 'Concerto da Chiesa' (Church Concertos). Soon other instruments were added to the organ; and ultimately single instrumental movements in the sacred style were written which also received the name of 'Concerto da Chiesa.' The real inventor of the modern concerto as a concert piece was Giuseppe Torelli, who in 1686 published a 'Concerto da Camera' for two violins and bass. The form was developed by Corelli, Geminiani, and Vivaldi. From the first it resembled that of the sonata; and as the latter grew out of the suite, the movements becoming larger in form and with more internal cohesion, so it was also with the concerto: there is as much difference between a concerto by Bach and one by Beethoven as there is between the 'Suites Anglaises' and the 'Waldstein' sonatas. In the time of Bach and Handel the word 'Concerto,' though applied exclusively to instrumental music, had a less restricted significance than is given to it in the present day. Many of the specimens of this form in the works of the masters named more nearly resemble symphonies than concertos in the modern acceptation of the term. For instance, the first of Handel's so-called 'Oboe Concertos' is written for strings, two flutes, two obos, and two bassoons, and excepting in occasional passages these are treated orchestral rather than as solo instruments; while of Bach we have a concerto for violino piccolo, three obos, one bassoon, and two horns, with string quartet, and another for three violins, three violas, three violoncellos, and double bass, neither of which possess the characteristics of a modern concerto. The form, moreover, of the older concerto was much freer than now. With Bach we find a preference for the three-movement form at present in use. In the whole of his piano concertos, as well as in those for one or two violins, we find an allegro, a slow movement, and a finale in quick time—generally 3–8. The two concertos named above are, exceptiona- lly, the former in four and the latter in only two movements. With Handel, on the other hand, the three-movement form is the exception. As examples of the freedom of which he makes use, may be quoted the movements of two of his 'Twelve Grand Concertos' for two violins and violoncello solo, with accompaniment for stringed orchestra. These works are concertos in the modern sense, as regards the treatment of the solo instruments; but their form is as varied as possible. Thus the sixth consists of a Langhetti, Allegro ma non troppo, Musette, and two Alle- gros, the second of which (though not so entitled) is a minuet; while the eighth contains an Alle- mando, Grave, Andante allegro, Adagio, Sicilianas, and Allegro. It should be mentioned here that Handel was one of the first, if not the first, to introduce opportunities for extemporaneous performance on the part of the soloist, thus anticipating the 'cadenza,' an important feature of the modern concerto, to be spoken of presently. In the second movement of his Organ Concerto in D minor (No. 4 of the second set) are to be found no less than six places marked organo ad libitum, and with a pause over the rests in the accompaniments, indicating that the player (that is to say, he himself) was to improvise.

The modern form of the concerto was finally settled by Mozart, and though several modifications have been introduced during the present century, the general lines of construction remain the same as fixed by him. Nearly fifty concertos of his composition for various instruments are in existence, and, while presenting slight differences of detail, closely resemble one another in the more important points. The concerto form is founded upon that of the Sonata (which see); there are however several variations which must be noted. In the first place, a concerto consists of only three movements, the scherzo, for some
not very obvious reason, being excluded. For the sake of completeness it should be mentioned that Liszt's so-called Concerto-Symphonie in E flat, for piano and orchestra, has exceptionally a scherzo as the third of four movements.

The first movement in Mozart's concertos always begins with a tutti passage for the orchestra, in which the principal subjects are announced, much as in the first part of the first movement of a sonata. Sometimes the second subject is omitted in this portion of the piece, but it is more frequently introduced. An important difference in form, however, is that this first tutti always ends in the original key, and not in the dominant, or the relative major (if the work be in a minor key), as would be the case in a sonata. The solo instrument then enters, sometimes at once with the principal subject, and sometimes with a brilliant introductory passage. A repetition, with considerable modification, of the first tutti mostly follows, now divided between the principal instrument and the orchestra; the second subject is regularly introduced, as in a sonata, and the 'first solo' ends with a brilliant passage in the key of the dominant (or relative major, as the case may be).

A shorter tutti then leads to the second solo, which corresponds to the 'Durchführungsetz,' or 'working out' of a sonata, and which, after various modulations, leads back to the original key. The principal subject is then re-introduced by the orchestra, but in a compressed form, and is continued by the soloist with the 'third solo,' which corresponds to its form to the latter part of a sonata movement. A short final tutti brings the movement to a close. In most other concertos a pause is made, near the end of this last tutti upon the 6–4 chord on the dominant for the introduction of a cadenza by the player. Though very general, this custom was by no means universal; in several of Dussek's concertos—notably in his fine one in G minor, op. 49—no such pause is indicated. The cadenza, when introduced, could be either improvised by the player, or previously composed, either by himself or by some other person. Mozart has left us thirty-five cadenzas written for various concertos of his own, which, though presenting in general no very great technical difficulties, are models of their kind. Beethoven has also written cadenzas for his own concertos, as well as for that by Mozart in D minor. In the cadenza the player was expected not merely to show off his execution, but to display his skill in dealing with the subjects of the movement in which it was introduced. A cadenza consisting entirely of extraneous matter would be altogether faulty and out of place, no matter what its technical brilliancy. It was the invariable custom to finish the cadenza with a long shako on the chord of the dominant seventh, after which a short passage for the orchestra alone concluded the movement. In older works the soloist was silent during these few bars; but in his concerto in C minor (Köchel's Catalogue, No. 491) Mozart for the first time tied the experiment of associating the piano with the orchestra after the cadenza; and his example was followed by Beethoven in his concertos in C minor, G major, and Eb.

Before proceeding to speak of the modifications introduced into the concerto by Beethoven and other more modern composers, it will be well to complete our description of the form as left by Mozart. The second movement, which might be an andante, a larghetto, an adagio, or any other slow tempo, resembled in its form the corresponding portion of a sonata. Sometimes the variation form was used, as in Mozart's two concertos in Eb (Köchel, Nos. 450 and 458); but more frequently the ordinary andante or larghetto was introduced. Two charming examples of the Romance will be found in the slow movement of Mozart's concertos in D minor and D major (Köchel, Nos. 466 and 537), though the latter is not, like the first, expressly so entitled, but simply bears the inscription larghetto. The solo part in the slow movements is frequently of an extremely florid character, abounding in passages of ornamentation. Sometimes a cadenza is also introduced at the close of this movement—e.g. in Mozart's Concertos in A major (Köchel, 414), C major (Köchel, 415), and G major (Köchel, 453). In such cases, as is evident from the examples written by Mozart himself for the works mentioned, the cadenza should be much shorter than in the first movement.

The finale of a concerto was mostly in rondo form, though examples are to be found in Mozart of the variation form being employed for this movement also; see concertos in C minor (Köchel, 491), and G major (Köchel, 453). Sometimes this rondo was interrupted by a complete change of tempo. Thus the rondo of the concerto in C major (Köchel, 415), which is in 6–8 time, is twice interrupted by an adagio in C minor, 2–4; in the middle of the rondo of the concerto in Eb (Köchel, 482) is introduced an andante cantabile; while another concerto in Eb (Köchel, 271) has a minuet as the middle portion of the final presto. Short cadenzas were also frequently introduced in the finales; the concerto in Eb, just mentioned, has no less than three, all of which, instead of being left to the discretion of the player, are, exceptionally, written out in full. Similar short cadenzas will be found in the rondo of Beethoven's concerto in C minor, op. 37, while in the finale of the concerto in G, op. 58, the pause is made with the special direction 'La cadenza sia corta'—the cadenza to be short.

The innovations introduced by Beethoven in the form of the concerto were numerous and important. Foremost among these was the greater prominence given to the orchestra. In the concertos of Mozart, except in the tuttis, the orchestra has little to do beyond a simple accompaniment of the soloist, but with Beethoven, especially in his later concertos, the instrumental parts have really symphonic importance. Beethoven was also the first to connect the second and third movements (see concertos in G and F flat), an example which was imitated by Mem-
CONCERTO.

Mendelssohn, in whose pianoforte concertos in G minor and D minor all the movements follow continuously, Beethoven, moreover, in his concertos in G and E flat, broke through the custom of commencing the work with a long tutti for the orchestra; in the former the piano begins alone, and in the latter it enters at the second bar. It is worthy of remark that the same experiment had been once, and only once, tried by Mozart, in his little-known concerto in Eb (Kochél, 271), where the piano is introduced at the second bar. One more innovation of importance remains to be noticed. In his concerto in E♭ op. 75, Beethoven, instead of leaving a pause after the 6-4 chord for the customary cadenza, writes his own in full, with the note "Non si fa una Cadenza, ma attacca subito il seguente"—do not make a cadenza, but go on at once to the following. His cadenza has the further peculiarity of being accompanied from the nineteenth bar by the orchestra. Another curious example of an accompanied cadenza is to be found in that Beethoven has written for his pianoforte arrangement of his violin concerto, op. 61, through a considerable part of which the piano is accompanied by the drums, which give the chief subject of the movement.

It is evident that the example of Beethoven in his E♭ concerto led the way to the disuse of the introduced cadenzas in the first movement. Neither Mendelssohn nor Brahms in their pianoforte concertos have inserted one at all; and where such is intended, composers mostly write out in full what they wish played, as for example Mendelssohn in his violin concerto, op. 64, (where, it may be remarked in passing, the cadenza is the middle of the first movement, and not at the end). Schumann (concerto in A minor, op. 54) and Raff (concerto in C minor, op. 185) have also both written their cadenzas in full. The concertos written since those of Beethoven have been mostly constructed upon the lines he laid down. The introductory tutti has been shortened (as in Mendelssohn's, Schumann's, and Raff's concertos), though occasionally works are still written in the older form, the most striking example being Brahms's concerto in D minor, in which the piano does not enter till the ninety-first bar. Sometimes also a quickening of the tempo is introduced at the end of the first movement (Schumann, op. 54; Grieg, op. 15). Various other modifications have been made by different composers, of which it is not necessary to speak in detail, as they are merely isolated examples, and have not, at least as yet, become accepted as models of the form. The two concertos for piano and orchestra by Litzt are constructed upon a plan so different from that generally adopted that they should rather be described as fantasies or rhapsodies than as concertos in the ordinary meaning of the term.

Sometimes concertos are written for more than one solo instrument, and are then known as double, triple, etc., concertos as the case may be. The construction of the work is precisely the same as when composed for only one instrument.

As examples may be named Bach's concertos for two violins, and for two, three, and four pianos; Mozart's Concerto in F for two pianos, and in C for flute and harp; Beethoven's triple concerto, op. 56, for piano, violin, and violoncello; Mauro's for 4 violins and orchestra. Mendelssohn's autograph MSS., now in the Imperial Library at Berlin, contain 2 Concertos for 2 pianos and orchestra, and one for piano and violin, with strings.

[Conductor: 359

CONCORD is a combination of notes which requires no further combination following it or preceding it to make it satisfactory to the ear. The concords are perfect fifths, perfect fourths, major and minor thirds, and major and minor sixths, and such combinations of them, with the octave and one another, as do not entail other intervals. Thus the combination of perfect fifth with major or minor third constitutes what is known as a common chord, as (a). And different dispositions of the same notes, which are called its inversions, give, first, a base note with its third and sixth, as (b); secondly, a base note with its fourth and sixth, as (c).

Besides these a chord composed of the third and sixth on the second note of any scale is regarded as a concord, though there is a diminished fifth or augmented fourth in it according to the distribution of the notes, as (d) or (e)

– since the naturally discordant quality of the diminished fifth and augmented fourth is considered to be modified by placing the concordant notes below them, a modification not effected when it is placed above them. This combination was treated as a concord even by the theorists of the old strict diatonic style of counterpoint. [See Harmony.] [C.H.H.P.]

CONDILL, HENRY, was a violinst at the Opera House and Drury Lane and Covent Garden Theatres early in the present century. In 1811 he gained a prize at the Catch Club for his glee, "Loud blows the wyndies." He composed the music for the following dramatic pieces:—"The Enchanted Island," ballet, 1804; "Who wins!" musical farce, 1808; and "Transformation," musical farce, 1810; and was one of the six contributors to the comic opera, "The Farmer's Wife," 1814. He died in June 1824. [W. H. H.]

CONDUCTOR—the English equivalent for the German "Capellmeister," and the French "Chef d'orchestre"—has to study the score, correct the parts and see that they are clearly marked, beat the time for the band and chorus at rehearsal and performance, animate them with the spirit of the work, and generally be responsible for the due interpretation of the composer's intentions and for the success of the music.

A separate conductor, standing in front of the

1 In Germany the conductor does not now stand, as with us, exactly in the centre of the orchestra with his back to the audience, but a little to the right, with his left side towards the room.
orchestra and beating time with a baton, though apparently long known abroad, is in England an institution of comparatively recent date. In former times the chief musician sat at a pianoforte in the orchestra with the score before him; but it does not appear that he beat time continuously, or in any way influenced the band, or did more than put in a few chords now and then when the orchestra was going astray, which when heard must have had a very bad effect. The leader it was who kept the band together—or as nearly together as possible—beating time with his bow, stamping, and occasionally tapping on the desk. But as he stood in the middle of the violins and was therefore out of sight of the majority of the orchestra he could have had but a very small influence on the other players.

The programmes of the Philharmonic Society (founded 1813) for the first seven years always end with the following words, ‘Leader Mr. ——, Pianoforte, Mr. ——,’ and the names are rarely if ever the same for two concerts together. ‘Mr. Cramer’ and ‘Mr. Clementi’ took it nearly turn about at the piano till Sir G. Smart shared it with them; but the leader varied between Salomon, F. Cramer, Spagnoli, Viotti, Yaniewicz, Weichsel, Mori, Baillot. Thus the band was each time under a fresh head, and the ‘reading’ of the works, and the style of performance—as far as such things were then attempted—must have changed with each concert. With the second concert of 1820 (March 20) the announcement changes to ‘Leader, Mr. Spagnoli; Conductor, Mr. Cramer,’ a change apparently due to the resolution of Spohr, who in a pleasant passage in his Autobiography describes the old state of things and his action at the concert which he had to direct (during the series of 1820), when he produced his baton and insisted on conducting from the front in the present sense of the word, and as he had been accustomed to do (Selkhahn's period, p. 87). Henceforth says he, ‘one was ever again seen seated at the piano during the performance of symphonies and overtures.’ But the alterations of leaders and conductors continued for many years. The first attempt at uniformity was made in 1844, when the 4th, 5th, 6th, 7th, and 8th concerts were conducted by Mendelssohn, the leader still changing each time. The concerts of 1845 were conducted, 3 by Sir H. Bishop, and 5 by Moscheles, and at length in 1846 we find the simple announcement ‘Conductor, Signor Costa,’ and the commencement of the present system. That system is obviously the right one. The office of conducting is to a great extent a mechanical one. A perfect performance depends far more than it might be supposed on such matters as the legibility and accuracy of the parts, and the intelligibility of the conductor’s beat and of his communications with the players; and it is obvious that this part of a conductor’s duties can only be adequately performed if he is constantly engaged with the same band. In a perfect conductor mechanical excellence must be accompanied with knowledge, feeling, appreciation, enthusiasm, poetry, and the highest qualities of the musician; but these last will be of little avail without the former, or without the familiar relation between the conductor and the band which long knowledge, or at any rate several rehearsals, alone can give. Composers do not always make good conductors. Beethoven, apart from his deafness, was too strange and eccentric; Schumann was about what he was about; Mendelssohn, on the other hand, had the practical intelligence and the rare tact and temper which made him an exceptionally good conductor. But it is better that the two offices—the composer and the conductor—should be kept apart.

So far the Philharmonic, as representative of London concerts. At the Opera the change is said to have been brought about by Chelard, who conducted the German Company in London in 32.

Of late years—with Herr von Bülow—the practice of conducting from memory has come in, and for those who can stand the enormous strain which is implied in the recollection of every nuance and the exact entry of every instrument in a long and complicated work, no doubt it is a great comfort not to have to think of the book, but the power must surely be confined to a few and must always be full of risk.

It would be difficult within the limits of this article to give any definite instructions on the art of conducting, even if such instructions could be practically useful; but conducting, perhaps more than any other business, is a matter of natural gifts and practice. Those however who wish to see what has been said on the subject by three great musicians may consult the ‘Vollkommen Capellmeister’ of Mattheson (1739), the ‘Orchestral Conductor’ of Berlioz—the appendix to his Modern Instrumentation and Orchestration —and (less didactic and more polemical) the ‘Ueber das Dirigiren’ of Wagner. There is a description from a different point of view, well worth reading in Berlioz’s letter to Liszt, No. 3 of his ‘Voyage musical.’

[Conductor’s Part. A substitute for a full score, in which the parts are condensed into two staves, and the names and various instruments are inscribed as they enter. Spohr’s D minor Symphony is published in this shape only.

Conforti, Giovanni Luca, was a Calabrian, and born at Mileto about 1500. He was admitted into the Papal Choir in 1591. He was doubtless a successful and accomplished singer according to the fashion of his time; but his chief title to notice seems to have been the publication of a volume containing a series of vocal ornamentations of all kinds wherewith to overlay the Psalms in ordinary use in the church on Sundays and holidays throughout the year. Baillfe ascribes to him what he considers the restoration of the ‘trillo.’ [Tremolo; Trillo.] [E. H. P.]

Conradi, August, born at Berlin 1821, studied harmony and composition under Rungenhagen. In 1843 he produced a symphony,
and in 1847 an opera, 'Rubezahl,' both at Berlin. In 1849 he was chapel-master at Stettin, and conductor successively at the Konigstädter Theater in Berlin, at Dusseldorf, Cologne, and finally (1853) at the Kroll Theatre in Berlin. In 1855 his 'Muss der letzte Maurenfurst' was performed at Berlin. His other compositions include 5 symphonies, overtures, string quartets, dance music for pianoforte and orchestra, and a quantity of Lieder. He died at Berlin, May 21, 1873. [M.C.C.]

CONRADI, JOHANN GEBOR, chapel-master at Oettingen in Bavaria towards the end of the 17th century, one of the earliest composers of German opera. He produced successfully at the Hamburg Theater 'Ariadne,' 'Diogene,' and 'Numa Pompilius' in 1691; 'Karl der Grosse' and 'Jerusalem' (1692); 'Sigismund,' 'Geiserich,' and 'Tygmalon' (1693). [M.C.C.]

CONSECUTIVE, the term applied to intervals which recur between the same parts or voices, but more especially to such as are forbidden to do so, as consecutive fifths, which everybody perceives to be ugly; or consecutive octaves, which are only perceived to be objectionable in a combination of distinct parts.

It is held that consecutive fifths are objectionable because the parts move simultaneously in two different keys; hence when the effect of two keys is avoided they are admissible; as when the lower part progresses from tonic to dominant (a) (between the tenor and bass); or from tonic to subdominant (b) (between treble and alto).

Consecutive octaves are held to be objectionable in music in parts which are clearly defined, the balance is suddenly disturbed. For if three voices are singing together, each with a well defined part assigned to it, and two of them suddenly, without any ostensible reason, sing the same notes in two or three successive chords, not only is the harmony weakened by the loss of a part, but the succession of notes which they sing together is brought into unseasonable prominence. When it is intended to bring a melody or a phrase into prominence it is common to double it in octaves; but when this is done in music in definite parts it must be continued long enough for the intention to be perceived.

Some theorists add consecutive sevenths to the category of forbidden progressions, but there are so many to be found in the works of the greatest masters, and when they are harsh they are so obviously so, that the rule seems both doubtful and unnecessary.

The forbidden consecutives are most objectionable in vocal music, or music for solo instruments in combination, such as quartets and quintets of strings, when each part stands out distinctly, and the relations of the parts are easily perceived. In pianoforte music and orchestral music the objectionable effect would be often lost in the mass of sound.

Instances of violations of the rule against consecutive fifths are to be found in the works of almost all the greatest composers. Sometimes it may have been an oversight, at others it may have been done on principle. Here is a harmless anecdotc (Biog. Notizen, p. 87) referring to a passage in one of Beethoven's quartets, op. 18, may show either one or the other. Elsewhere Beethoven seems to have considered that it was better to violate such a rule or incur a considerable harshness than to change the order of a thoroughly established idea, because the alteration of the idea not only produces a sense of weakness, but is also much more disturbing esthetically than the violation of a rule of harmony. Thus in the finale of his Sonatas in A, op. 101, rather than alter his established idea (a), he allows the part below to make consecutive fifths with it (* * *).

It was long considered, from the description of it which exists, that the supposed first form of harmony, which was called Diaphony, or Organum, consisted of continuous consecutive fifths, fourths, and octaves; but later investigations of the subject tend to show that the description has been misunderstood, and refers in reality to a repetition of phrases at the fifth above or the fourth below. [C.H.H.P.]

CONSERVATOIRE DE MUSIQUE. A free school of music, established in Paris by the Convention Nationale, Aug. 3, 1795. Its first suggestion was due to a horn-player of the chateau of Robolphe, and the plan which he submitted to the minister Amelot in 1775 was carried into effect on Jan. 3, 1784, by Baron Bréteuil, of Louis XVI's household, acting on the advice of Gossèc. This Ecole royale de Chant, under Gossèc's direction, was opened on April 1, 1784, in the Hotel des Menus-Plaisirs du Roi, then used by the Académie for its rehearsals. The first public concert was given April 18, 1786, and on the addition of a class for dramatic declamation in the following June it adopted the name of the Ecole royale de Chant et de Déclamation. The municipality engaged a band under Sarrette in 1790, and instituted on June 9, 1792, the Ecole gratuite de Musique de la Garde Nationale Parisienne, which did good service under Sarrette's skilful direction, and finally took the name of Institut National de Musique, Nov. 8, 1793. But the independent existence of both these schools came to an end on the formation, by government, of the Conservatoire de Musique,
Aug. 3. 1795, in which they were incorporated. Sarrette was shortly afterwards appointed president of the institution, and in 1797 his charge extended to 125 professors and 600 pupils of both sexes, as well as to the printing-office and warehouse established at 15 Faubourg Poissonnière, where the 'Méthodes du Conservatoire,' prepared under the supervision of Catel, Mélhu, Kode, Kreutzer, and other eminent professors, were published. The organisation of the Conservatoire was modified by Bonaparte in March 1800, after which the staff stood as follows:—A Director—Sarrette; five Inspectors of Tuition—Gossec, Mélhu, Lescueur, Cherubini, and Monsigny; thirty first-class Professors—Louis Adam, Berton, Biaudin, Catel, Devienne, Dugazon, Duverney, Garat, Gaviniès, Hugot, Kreutzer, Persius, Plantade, Rode, Rodolphe, Salentin, etc.; forty second-class Professors—Adrien, Baillot, Boieldieu, Dominich, Eler, Jadin, etc. The Conservatoire was again re-organised Oct. 15, 1812, by the famous Décret de Moscou, under which sixteen pupils, nine of each sex, destined for the Théâtre Français, received an annual allowance of 1100 francs, on the same footing with the Pensionnaires—eighteen vocal students, twelve male and six female. This Pensionnat had been established in 1806; but the men alone lived at the Conservatoire.

On Dec. 28, 1814, Sarrette was abruptly dismissed from the post he had filled with so much zeal and talent, and though reinstated on May 26, 1815, was compelled to retire finally on the 17th of the following November. The studies were interrupted for the time, and the school remained closed until April 1816, when it re-opened under its former title of Ecole royale de Musique, with Perne as Inspector-general. Cherubini succeeded him April 1, 1822, and remained until Feb. 8, 1824, when he was replaced by Auber, who directed the Conservatoire until his death, May 12, 1871; M. Ambroise Thomas, the present director, was appointed on the 6th of the following July.

Being long a member of the Conservatoire of our own day, its financial condition, staff, and musical importance, we must enumerate some of the most remarkable acts which marked its successive administrations.

The budget originally amounted to 240,000 francs, but this in 1802 was reduced to 100,000, a fact indicative of the grave money difficulties with which Sarrette had to contend through all his years of office, in addition to the systematic opposition of both artists and authorities. By the publication of the 'Méthode du Conservatoire,' however, to which each professor gave his adherence, he succeeded in uniting the various parties of the educational department on a common basis. Amongst the savants of the institution who assisted in this work were Gioguéné, Loèpédé, and Pruny. Under Sarrette the pupils were stimulated by public practisings; to him also is due the building of the old library, begun in 1801, and the inauguration of the theatre in the Rue Bergire, 1812. In the same year he obtained an increase of 26,800 francs for the expenses of the Pensionnat; and the institution of the 'Prix de Rome' in 1803, which secured to the holders the advantage of residing in Italy at the expense of government, was his doing.

Under Perne's administration an 'Ecole primaire de Chant' was formed, April 23, 1817, in connection with the Conservatoire, and directed by Choron. The inspectorship of the Ecole de Musique at Lille was given to Plantade. In 1810 it adopted the title of 'Conservatoire secondaire de Paris,' in which it was followed by the Ecole de Versailles, which in existence. The formation of special classes for lyrical declamation and the study of opera parts was also due to Perne.

Cherubini's strictness of rule and his profound knowledge made his direction very favourable for the progress of the Conservatoire. The men's pensionnat was re-organised under him, and the number of public practices, which all prize holders were forced to attend, increased in 1823 from six to twelve. By his means the opera pitch, universally allowed to be too high, was lowered in 1826, and the Ecole de Musique founded at Toulouse in 1821 was attached to the Conservatoire, as that of Lille had previously been. He opened new instrumental classes, and gave much encouragement to the productions of the 'Société des Concerts du Conservatoire.' By his means the library acquired the right to one of the two copies of every piece of music or book upon music which authors and composers are compelled to deposit with the Ministre de l'Intérieur (March 29, 1834).

In 1841, through Cherubini's instrumentality, the Ecoles of Marseilles and Metz became 'Succursales du Conservatoire'; in short, during his long administration he neglected no means of raising the tone of the studies of the Central Conservatoire, and extending its influence. The following were among his principal coadjutors:—Habeneck and Paer, inspectors of tuition; Lescueur, Berton, Reisha, Fétis, Halévy, Carafa, composition; Lainé, Lays, Garat, Plantade, Ponchard, Banderli, Bordignon, Panseron, Mme. Damoreau, singing; instrumental classes—Bairst, the Douai; Louis Adams and Zimmerman, piano; Baillot, Kreutzer, Habeneck, violin; Baudiot, Norblin, Vasiin, violoncello; Guilou, Tulou, flute; Vogt, oboe; Leffray, Kissée, clarinet; Delambre, Gebauer, bassoon; Dauprat, Meifred, horn; Daurevé, trumpet; Dieppe, trombone; Nademan, Pruniar, horn; Adolphe Nourrit, the opera; Michelot, Samson, Provost and Beaulèt, professors of tragedy and comedy.

Amongst the professors appointed by Auber we may mention Adolphe Adam, Ambroise Thomas, Reber, composition; M.M. Elwart, Bazin, harmony; Battaille, Duprez, Faure, Garcia, Réville, Masset, singing; Madame Ferruccio, Henri Herz, Marmontel, Le Coupey, piano; Alard, Girard, Massart, Ch. Dancia, violin; Franchineau, Chevillard, violoncello. Classes for wind instruments—Tulou, Dorus, flute; Verrouet, oboe; Willant, Cokker, bassoon; Galay, Meifred, horn; Forestier, Arban, cornet; Mlle. Brohan, M.M. Régnier, Monroe, Bassin.
CONSERVATOIRE DE MUSIQUE.

professors of comedy. Anber also instituted lectures on the history and literature of music, to which he appointed Samson in 1855. The début under Anber's management were most brilliant, and he drew public attention to the Conservatoire by reviving the public practices. The façade of the establishment in the Faubourg Poissonnière was re-built in 1845, and in 1864 the building was considerably enlarged, and those in the Rue du Conservatoire inaugurated, including the hall and offices of the theatre, the museum, and library. The associate classes of military pupils, formed on the suppression of the Gymnase militaire in 1856, made these enlargements indispensable.

But notwithstanding the growing importance of the Conservatoire under Anber's strict and impartial direction, the last years of his life were embittered by the revival of the office of 'Administrateur' in the person of Lassabaté, and the appointment of a commission in 1870 to reorganize the studies—a step in which some members foresaw the ruin of the school. In 1859, at the beginning of this troubled period, the reform of the pitch took place which fixed the A at 370 vibrations. Lassabaté at the same time published his 'Histoire du Conservatoire impérial de Musique et de Déclamation' (Paris, 1856), a hasty selection of documents, but containing ample details as to the professorial staff.

Since the nomination of M. Ambroise Thomas, the present director, the office of 'Administrateur' and the pensionnat have been suppressed, and Mr. Emile Réty has been appointed Secretary-General. Lectures on the general history of music have been instituted; M. Barbereau, the original lecturer, has been succeeded by M. Eugène Gautier; an orchestral class directed by M. Deldevez, and compulsory vocal classes for reading at sight have been founded, and the solfeggio teaching has been completely reformed. The following professors have been appointed:—M. Theo. Dubois, Guiraud, harmony; M. Crosti, Mussine, Boulogne, Poitier, Mme. Viardot, who has lately resigned, and been succeeded by M. Barbot, singing; M. Charles Colin, oboe; M. Janouet, bassoon; M. Delisie, trombone; M. Maury, cornet-a-piston. M. Ambroise Thomas has endeavoured to improve the tuition in all its branches, to raise the salaries of the professors, and increase the general budget, which has risen to 310,000 francs, and is expected soon to reach 240,000 francs—a sum ample sufficient for the expenses of the Institution with its staff of 8 titulars, 77 professors, and 10 employees.

The tuition at present is divided as follows:—

16 solfeggio classes under 4 masters—in 12 of which the lessons are individual, in the remaining 4 in class; 8 singing classes under 3 masters; a class for vocal harmony, and another for the study of part-writing, each with its professor. For lyrical declamation there is 1 class for the opera and 2 classes for the opera-comique. The 37 instrumental classes are as follows:—6 for violin; 2 for cello; 1 for double-bass, for flute, oboe, clarinet, bassoon, horn, cornet, trombone, harp, chamber music, organ, improvisation, and orchestral composition. There are also 10 classes for piano, 4 for men and 6 for women.

For the study of harmony there are 6 classes. Also three for composition, counterpoint, and fugue (under Reber, Massé, and Basin, all members of the Institut de France). To these classes must be added those for the general history of music, grammar, prosody, and orthography, 3 classes for dramatic declamation, 1 for stage deportment, and 1 for fencing.

The classes are held 3 times a week, each one lasting 2 hours. The regulation number of pupils is either 8, 10, or 12, according to the class, but a few candidates are also admitted as 'auditeurs.' Among the professors who have charge of the classes just enumerated, we find such names as Massé, Franchomme, Chevillard, René Ballot, Deldevez, Reber, Basin, Régnier, Bressant, and many of the most celebrated artists. The academic year begins on the first Monday in October, and closes at the end of July.

The names of those seeking admission to the Conservatoire must be sent in to the committee of management at the beginning of October, and an examination before the Committee of Tuition must be successfully passed. The youngest pupils only are admitted into the preparatory solfeggio and piano classes; in the higher classes, for vocal music and declamation, the age is limited to 22. The pupils must pass two examinations in each academic year, and take part in one or more public practices; they are also admitted to the July competitions according to their ability. The competitions in singing, opera, opera-comique, tragedy, comedy, and instrumental music, are held publicly in the large concert-room. The distribution of prizes follows, under the presidency of the Minister of Public Education and Fine Arts.

This important institution provides musical and dramatic instruction for upwards of 600 pupils and 'auditeurs,' who, besides their regular studies, have the advantage of an extensive library and a museum of musical instruments.

The Library, which dates from the foundation of the school itself, is open to the public daily from 10 to 4. The first librarian, Eler, was followed by Langlé (1796-1807), the Abbé Roze (1807-1830), Perne (1830-1822), Fétis (1827-1831), Botelle de Touloum (1831-1840), Berlioz (as conservateur 1839-1840, and as librarian 1852-1869), Féliquin David (1869-1876). Since 1876 M. Weckerlin has acted as librarian.

The Library contains over 30,000 works, and the number is increased every year by means of a special grant. It also possesses a considerable number of manuscripts and autographs, to which those of the Prix de Rome were added in 1871, through the efforts of the writer. This collection contains the autographs of all the prize cantatas since the foundation of the Prix de Rome in 1803. Amongst the other important collections are those of Eler, composed of works of the 16th and 17th centuries put into score; of Botelle de
CONSERVATOIRE DE MUSIQUE.

Toulon, comprising 85 volumes of MS. copies of the chefs-d'oeuvre of the 14th, 15th, and 16th centuries from Munich, Vienna, and Rome, including all Palestrina's masses. Unfortunately, most of these compositions are written in 'proportional notation,' and are still in separate parts. The departments of engraved opera scores and of vocal and instrumental méthodes are very complete. In 1872 the library was further enriched by Scholcher's collection, containing every edition of Handel's works and a vast array of Handel-literature. The number of dramas is 6,000, and increasing daily, and the department of works on the art and history of music contains many thousand French and foreign volumes. Amongst these are some extremely rare works, 'El Melopeo' by Cerone; treatises by Agricola, Luscinius, Pretorius, Mersenne; several editions of Gaffor; 'Il Transilvano' by Diruta; original editions of most of the old clavicinists; 'L'Orchésographie' of Thoinot Arbeau; the 'Ballet Comique de la Reine'; the 'Flores musice' of 1488; old missals and treatises on plain-chant; besides other very rare and valuable books and méthodes.

The Museum—of recent date, having been formally inaugurated on Nov. 20, 1864—is open to the public on Mondays and Thursdays from 12 to 4. At that time it merely contained the 230 articles which the government had purchased from Clapison in 1861, and 121 musical instruments transferred from the Garde Meubles and other state institutions, or presented by private donors. On the appointment of the present conservateur, M. Gustave Choquet, Sept. 30, 1871, the number of objects did not exceed 380, but it now possesses 700 instruments and objects of art of the greatest interest. A full historical catalogue has been published by M. Choquet, entitled 'Le Musée du Conservatoire national de Musique' (Paris, F. Didot, 1875; 8vo.). This magnificent collection is the largest and most complete in Europe, and the space allotted to it marks it as very one as inadecquate.

The Conservatoire itself suffers from want of room. In the Faubourg Poissonnière, No. 15, are the offices of the administration, the entrance to the small theatre, where not only the examinations, but the classes for choral singing and dramatic declamation, lessons on the organ, and lectures on the history of music are held. Two smaller theatres serve for solfeggio and opera classes. In the large theatre, which contains an organ of 32 feet, the Société des Concerts du Conservatoire has held its concerts since its creation; it also serves for the public practices, the competitions, and the distribution of prizes. It was restored and decorated in the Pompeian style in 1864; and contains only a thousand seats. The educational management of the Conservatoire is in the hands of a central committee, with two sub-committees, for the superintendence of the musical and dramatic studies respectively. The committees for the admission of pupils and the examination of the classes are named by the director.

CONSTRUCTION.

At the present date (1878) there are five provincial Écoles de Musique, branches of the Conservatoire, viz. Lille, Toulouse, Dijon, Nantes, and Lyons (founded April 2, 1874).

In 1871 M. Henri Reber succeeded M. Ambrose Thomas as inspector of these provincial schools.

[G. C.]

CONSERVATORIO. The Conservatorios in which the great schools of Italian music were formed were so called because they were intended to preserve (conservare) the science of music from corruption. Of these the most ancient were the Neapolitan ones—Santa Maria di Loreto (1527), I Poveri di Gesù Cristo (1589), La Pieta de Turchini (1583), San Onofrio (1583), which all sprang from the first school of music founded at Naples (1496) by Jean Tinctor, a Flemish, reconstituted by Gesualdo, Prince of Venosa, and Alessandro Scarlatti, and illustrated by a long roll of eminent musicians. [See NAPLES.]

The Conservatorios of Venice arose out of the school founded by another Fleming, Willaert, at the same date with that of Naples, and were also four in number: L'Ospedale della Pieta, Dei Mendicanti, Dei Incurabili, L'Ospedalotto de' SS. Giovanni e Paolo. [See VENICE.] Nor does this list include the various chapel schools of music for the choirs of the great cathedrals, after the pattern of the musical school founded in the 6th century by Gregory the Great for the Pontifical Chapel at Rome, the archives of which were destroyed in the sack of Rome by Charles V, 1527. [See ROMES.]

The Venetian Conservatorios have ceased to exist, those of Naples are now represented by a Royal Neapolitan College, and there is a 'Reale Conservatorio di Musica,' extant and flourishing at Milan.

The Conservatoire of Paris is described in the preceding article. The Conservatoriums of Leipzig (founded through the exertions of Mendelssohn in 1843), Vienna, and other German towns, will be mentioned under the names of those places.

[C. M. P.]

CONSONANCE is a combination of notes which can sound together without the harshness which is produced by beats disturbing the smooth flow of the sound.

The consonances which are within the limits of the octave, and the ratios of the vibrational numbers of their notes are—

CON SPIRITO, 'with spirit': an indication oftener found in Haydn and Mozart than in later compositions.

CONSTRUCTION is the writing of a piece of music according to an appreciable plan.

The element of construction is most important in instrumental music, where there is no necessary interest to keep the mind engaged. In all
CONSTRUCTION.

Music connected with words the definiteness of construction must yield to the order of the language, and be dependent on what it expresses for the chief part of its effect; but in instrumental music it would be impossible for the mind to receive a satisfactory impression from a work which was purely continuous, and had no such connection between its parts as should enable the hearer to refer from one part to another, and thereby assist his attention. The only manner in which the sense of proportion and plan, which is so important in works of art, can be introduced into music is by repetition of parts which shall be distinctly recognised by the rhythm and order of succession of their notes, and are called the subjects. And the construction of a fine movement is like that of a grand building, in which the main subjects are the great pillars upon which the whole edifice rests, and all the smaller details of ornamentation are not just an irregular medley of ill-assorted beauties, but being reintroduced here and there, either simply or disguised with graceful devices, give that unity and completeness to the general effect which the absence of plan can never produce. As instrumental music grows in size new plans of construction are frequently invented, especially in all lyrical pieces, which imitate more or less the character of songs, or represent some fixed and definite idea or emotion, according to the supposed order or progress of which the piece is constructed. In small pieces for single instruments originality of plan is generally an advantage; but in large forms of instrumental composition it is most desirable for the general plan to be to a certain extent familiar, though it is on the other hand undesirable that it should be very obvious. The former strains the attention too heavily, the latter engages it too slightly. An account of the plans most generally used for such large instrumental works as symphonies, concertos, overtures, sonatas, etc., will be found under the article FORM. [C.H.H.P.]

CONTI, Francesco Bartolomeo, eminent theorist and dramatic composer, born at Florence Jan. 20, 1681, appointed court-theorist at Vienna in 1701. He resigned in 1705, but was reappointed theorist in 1708, with the additional post in 1713 of court-composer. From this time he devoted himself with marked success to the composition of operas, especially the higher kind of comic operas. His best work was the tragicomic opera 'Don Chisciotte in Sierra Morena,' which is a model of its kind for the clear delineation of each separate character. It was performed first at the Carnaval of 1719 in Vienna, and afterwards (1721) at Hamburg, in German. His first opera, 'Clotilde' (Vienna, 1706), was produced in London (1709), and the songs published separately by Walsh. Conti's cantatas and oratorios are solid and thoughtful. Von Köchel (J. J. Fux; Vienna, 1872) gives a catalogue of all his works performed in Vienna between 1706 and 1733. They comprise 16 grand operas, 13 serenades or 'Feste teatrali,' and 9 oratorios, the scores of which are to be found almost entire in the Imperial library and in the archives of the 'Gesellschaft der Musikfreunde' at Vienna. Mattheson, in his 'Vollkommene Kapellmeister' (1739, p. 40), casts a grave slur on Conti's character through a confusion between him and his son Ignaz. The mistake was corrected by Quanta in Marpurg's 'Kritische Beiträge' (1754, vol. i. p. 219), and by Gerber in his 'Neues Lexicon,' but Fétis maintained the authenticity of the anecdote in the 'Révue musicale' (1837, No. 3), and even repeated it in his 'Biographie Universelle' after the real facts had been made known by Molitor in the 'Allg. musik. Zeitung' (1838, p. 153). Conti died in Vienna July 20, 1732. Mendel, in his 'Mus. Conv. Lexicon,' states that he was promoted to the post of court chapel-master, but this is incorrect, as he was still court-composer at the time of his death. The younger Conti, Ignaz, whom Fétis is uncertain whether to call the son or the brother of Francesco, was really his son, born in 1699. He held the post of 'Hof-scholar' up to the time of his death, March 28, 1759, and composed several serenades and oratorios which bear no traces of his father's ability. [C.F.P.]

CONTRALTO. 395

CONTINUO. The short for BASSO CONTINUO, which see.

CONTRABASSO, the Italian for DOUBLE BASS.

CONTRABASS Posaune. See TRBONE.

CONTRABASS TUBA. See Bombardon.

CONTRA-FAGOTTO, the ordinary name in orchestral scores for the Double BASSoon. See scores of Beethoven's Symphonies 5 and 9, Brahms' Variations on a theme of Haydn's, etc.

CONTRALTO. The lowest of the three principal varieties of the female voice (the two others being soprano and mezzo soprano), and that to which in choral music the part next above (contra, or counter to) the alto is assigned. [ALT.] The culture and employment, as a solo instrument, of the female contralto voice, like that of its correliative the bass, is comparatively modern, and even yet not universal. By the opera composers of France and Germany it has been, and still continues to be, but rarely employed. In his adaptation for the French Theatre of his Italian 'Orfeo,' originally composed (1762) for a contralto, Gluck transposed and otherwise re-cast the music of the title-character for a tenor. It is to Rossini and his Italian contemporaries that this voice owes its present very important status. In few of their operas it is unemployed. In the choral music however of the composers of all nations it has now definitively taken its place—till lately monopolised, in England especially, by the male counter-tenor, a voice of somewhat different compass and altogether different quality. [ALT.] In extent the contralto voice sometimes exceeds every other, male or female. Like the bass it has a third register, but far more frequently and successfully brought under control. A contralto has been known to possess an available compass
of three octaves. Its most effective notes however, and those only which it is safe to employ in choral music, are the notes which can be placed on the stave (unfortunately obsolete) which has the C clef on the second line—from the G below middle C to the octave above the latter—incorrectly called the Mezzo-soprano stave. Though not so penetrating as the soprano, the contralto voice surpasses it in tenderness and in volume; and even, which is more remarkable, in flexibility, recent contralti have certainly equalled, perhaps surpassed, vocalists of every other class. As examples of singers in the full acceptation of the term the names of Gras- sini, Pizzaroni, Brambilla, and Alboni, all contralti, have become historical. [J.H.]

CONTRAPUNTAL is properly that which is written according to the rules of strict Counterpoint, which see; but it is commonly used to describe music of a pure and dignified style, in which the effect is produced more by the independent motion of the parts than by the masses of the harmonies. The larger proportion of early modern music was essentially contrapuntal, and it seems that the first ideas of harmony were derived from the species of counterpoint called Discants, which was a popular device of the latter part of the eleventh century, and consisted of fitting two independent tunes together. This basis, and the fact that musicians were slow in developing a sense for more than very simple harmonies, made the contrapuntal style their natural mode of musical expression. But the development of the elaborate harmonies of modern instrumental music has so changed its whole character, that an attempt to write true contrapuntal music at the present day is something like trying to write a poem in the English of Chaucer; and very few composers, unless they devote their attention specially to it, are likely to achieve a contrapuntal work which shall not have the appearance of being either forced or meaningless. [C.H.H.P.]

CONTRARY MOTION is the progression of parts in opposite directions, one or more ascending while the other or others descend, as—

![Musical notation](image)

In contrapuntal music it was considered preferable to similar or oblique motion, and it always has a stronger and more vigorous character than either of these. Many conspicuous examples of its use in modern music may be found, as for instance in the slow movement of Beethoven’s Symphony in C minor—

![Musical notation](image)

from the first movement of Beethoven’s Sonata in Bb, op. 106. [C.H.H.P.]

CONTRDANSE (Engl. country-dance, Ger. contredans). A dance of English origin, which was introduced into France in the Regency, 1715–23, and has since become very popular. The music to the contredanse is of a lively character; it is written either in 2–4 or in 3–4 time, and consists uniformly of eight-bar phrases, each of which is usually repeated. The name probably arose from the fact that the dancers were ranged round over against (contre) one another. The English term ‘country-dance’ is probably a mere adaptation.

Beethoven has written twelve contredanses for orchestra, from one of which he developed the finale of his ‘Eroica’ symphony. Mozart has also left a large number of specimens of this class of composition. A series of five or six contredanses forms a Quadrille. [E.P.]

CONVERSI, GIROLAMO, was born at Carreggio about the middle of the 16th century, and is known as the author of the following works:—Canzonii a 5 voci; Venice, G. Scotto 1575; reprinted by the same publisher in 1650 in 4to; Madrigali, a 6 voci, lib. i; Venice 1584; Ibid. in 4to. Conversi is familiar to English amateurs through his fine Madrigal ‘When all alone my pretty love was playing.’ [E.H.P.]

CONVICT (Convictorium), an establishment existing in many German towns for the free or very economical education of boys; usually connected with the convent system, and supported by the state or private foundation. Its only claim to mention here is the fact that Schubert was educated for the Hof-kapelle at the Convict at 45 in the Piaristen Gasse, Josephstadt, Vienna. That for the choristers of St. Stephen’s is in the Stubenbastei, No. 2.

COOKE, BENJAMIN, Mus. Doc., the son of Benjamin Cooke, a music publisher in New Street, Covent Garden, was born in 1734. In his ninetieth year he was placed under the instruction of Dr. Pepusch, and made such rapid progress as in three years time to be able to act as deputy for John Robinson, organist of West-
minster Abbey. In 1752 he was appointed successor to Dr. Pepusch as conductor at the Academy of Ancient Music. In September 57, on the resignation of Bernard Gates, he obtained the appointment of master of the choristers of Westminster Abbey, and on Jan. 27, 58, that of lay vicar there. On July 1, 62, on the death of Robinson, Cooke was appointed organist of the Abbey. In 75 he took the degree of Doctor of Music at Cambridge, and in 82 was admitted to the same degree at Oxford. In the latter year he was elected organist of St. Martin-in-the-Fields. In 1780 he resigned the conductorship of the Academy of Ancient Music to Dr. Arnold. He died Sept. 14, 1793, and was buried in the cloisters of Westminster Abbey, where a mural tablet, with a fine canon, records his skill and worth. Dr. Cooke's compositions, which are voluminous, are for the church, concert-room, and chamber. For the theatre he produced nothing except an ode for Dr. Delap's tragedy, 'The Captives,' 1786. His church music comprises the finest service in G, and one composed in 1787 at the request of Lord Heathfield for the use of the garrison in Gibraltar; two anthems composed in 1748 and 49 for the Founder's day at the Charter House; an anthem with orchestral accompaniments for the funeral of William, Duke of Cumberland, 1764; another of the same description, for the installation of the Bishop of Ossamburg, afterwards Duke of York, as Knight of the Bath, 1772; and fourteen others, besides several chants and psalm and hymn tunes. For the Academy of Ancient Music he added choruses and accompaniments to Pergolesi's 'Stabat Mater,' 1759, and to Galliard's 'Morning Hymn' (printed 1773); and composed an Ode for Christmas Day, 1753; 'The Syrens Song to Ulysses'; Collins's Ode on the Passions (printed 1784); Ode on the Genius of Chatterton, 1786; and Ode on the King's recovery, 1780. But the compositions by which he is best known, and which will convey his name to posterity, are his numerous and beautiful glees, canons, etc. For seven of these (five glees, a canon, and a catch) the Catch Club awarded him prizes. Dr. Cooke published in his life-time a collection of his glees, and a second collection appeared in 1795 under the care of his son Robert. Twenty-nine glees, and eleven rounds catches and canons by Dr. Cooke are printed in Warren's collections. His instrumental compositions consist of organ pieces, concertos for the orchestra, marches, and harpsichord lessons. Apart from his eminence as a composer and practical musician, Dr. Cooke was one of the best and most learned theorists of his time. [W. H. H.]

COOKE, HENRY—'Captain Cooke'—was educated in the Choral Royal of Charles I. On the breaking out of the civil war he joined the king's army, and obtained, in 1643, a captain's commission. During the Commonwealth he subsisted by teaching music. On the re-establishment of the Chapel Royal in 1660, Cooke was appointed one of the gentlemen and master of the children. In 1663 he obtained a grant for himself and his successors of £20 per annum for the diet, lodging, washing, and teaching of each of the children of the chapel. In July 1664 he was appointed 'Composer of the king's private music for voices,' at a yearly salary of £40. Cooke died July 13, 1672, and was buried on July 17 in the east cloister of Westminster Abbey. Antony Wood asserts that his death was hastened by chagrin at finding himself supplanted in favour by Pelham Humfrey, who had been his pupil. Cooke retained the title of 'captain' until his death. He composed several anthems, the words of which are contained in Clifford's collection, and a professional hymn which was performed at Windsor at the festival of the Knights of the Garter, April 17, 1661. He also contributed some of the music to Davenant's 'First Day's Entertainment at Rutland House' in 1657. [W. H. H.]

COOKE, NATHANIEL, born at Bosham, near Chichester, in 1772, was nephew of Matthew Cooke, organist of St. George, Bloomsbury, from whom he received the chief part of his musical education. He became organist of the parish church of Brighton, for the use of the choir of which he published a Collection of Psalm and Hymn tunes, including some of his own compositions, which long continued in favour. He also published some small pieces for the pianoforte. [W. H. H.]

COOKE, ROBERT, son of Dr. Benjamin Cooke, succeeded his father, on his death in 1793, as organist of St. Martin-in-the-Fields. On the death of Dr. Arnold, in 1803, he was appointed organist and master of the choristers of Westminster Abbey. In 1814 he unfortunately became deranged, and in a paroxysm of his disorder drowned himself in the Thames. Robert Cooke composed an Evening Service in C and an anthem, 'An Ode to Friendship,' and several songs and glees. Three of the latter obtained prizes at the Catch Club. A collection of eight of his glees was published by the author in 1805. [W. H. H.]

COOKE, THOMAS SIMPSON, familiarly known as Tom Cooke, was born in Dublin in 1782. Evidencing early a taste for music he studied under his father, and made such rapid progress as to perform in public a violin concerto when only seven years of age. He received instruction in composition from Giordani. When only fifteen he was appointed leader of the band at the theatre in Crow Street, Dublin, in which situation he continued several years, and composed several musical pieces. On one of his benefit nights he announced himself to sing the tenor part of The Seraukier, in Storace's opera 'The Siege of Belgrade,' an experiment which proved quite successful, and led to his removal to London, where he made his first appearance, in the same character, at the English Opera House, Lyceum, on July 13, 1813. On Sept. 14, 1815, he appeared as Don Carlo in 'The Duenna,' at Drury Lane Theatre, where he continued as a principal tenor singer for nearly twenty years. During this period, on one of his
benefit nights, he exhibited the versatility of his talents by performing in succession on the violin, flute, oboe, clarinet, bassoon, horn, violoncello, double bass, and pianoforte. About 1823 he undertook, alternately with his duty as tenor singer, the duty of leader of the band. Some years later he was engaged, at Drury Lane and Covent Garden, as director of the music and conductor. He was a member of the Philharmonic Society, and occasionally led the band or conducted the concerts. In 1846 he succeeded John Loder as leader of the Concert of Ancient Music. For several years he held the post of principal tenor singer at the chapel of the Bavarian Embassy. He died at his house in Great Portland Street, Feb. 26, 1848, and was buried at Kensal Green cemetery. Cooke's compositions were numerous and varied. He wrote much for the theatre, but his music of that description has mostly passed out of memory. As a glee composer he was more successful, and several of his compositions of that class obtained prizes from the Catch and Glee Clubs. As a singing-master he had a deserved reputation, and several of his pupils achieved distinction; amongst them Miss M. Tree, Mrs. Austin, Miss Povey, Miss Rainforth, the Misses A. and M. Williams, and Mr. Sims Reeves. He wrote a treatise on singing, which was much esteemed. Cooke's principal dramatic pieces were 'Frederick the Great,' 1814; 'The King's Proxy,' 1815; 'The Count of Anjou,' 1816; 'A Tale of Other Times' (with Bochsa), 1822; 'The Wager, or, The Midnight Hour,' 1825; 'Oberon, or, The Charmed Horn,' 1826; 'Malvina,' 1826; 'The Boy of Santillane,' 1827; 'The Brigand,' 1829, one song in which, 'Gentle Zitella,' attained great popularity; 'Peter the Great,' 1839; 'The Dragon's Gift,' 1830; 'The Ice Witch,' 1831; 'Hyder Ali,' 1831; 'St. Patrick's Eve,' 1832; 'King Arthur and the Knights of the Round Table,' 1835; additional songs for 'A Midsummer Night's Dream,' 1840. He also adopted several foreign operas to the English stage, after a fashion in vogue in his time, i.e. omitting music that the composer wrote, and supplying its place by compositions of his own. He published 'Six Glees for 3 and 4 voices' in 1844, besides many singly. Among his glees which gained prizes were 'Hail! bounteous Nature,' 1829; 'Come, spirits of air,' 1830; 'Let us drain the nectared bowl,' 1830; 'Thou beauteous spark of heavenly birth,' 1832; 'O fair are thy flowerets,' 1836: he likewise obtained a prize for his catch, 'Let's have a catch and not a glee,' 1832. Cooke had considerable abilities as a wit and humourist. His eldest son, Henry Angelo Michael (commonly known as Grattan) Cooke, was educated in the Royal Academy of Music, and for many years held the post of principal oboe in all the best orchestras, and was subsequently band-master of the second regiment of Life Guards. [W.H.H.]

COOMBE, William Francis, son of a singing-master at Plymouth, was born there in 1796. Commencing his musical studies under his father, he subsequently prosecuted them under Churchill, and finally under Jackson of Exeter. At fourteen years of age he obtained the appointment of organist of Chard, which he in a few years resigned for that of Totton, which he in turn gave up, after holding it for nine years, for the like place at Chelmsford. He published several piano-forte pieces of his composition. [W.H.H.]

COOMBS, James Morris, was born at Salisbury in 1769. He was admitted a chorister of the cathedral under Dr. Stephens and Parry. In 1789 he was appointed organist at Chippenham, and retained that place until his death in 1820. His published works consist of a Te Deum and Jubilate, songs, glees, a set of canonzenets, and a selection of psalm tunes. [W.H.H.]

COOPER, George, son of the assistant organist to St. Paul's; born in Lambeth July 7, 1820. His quickness of ear, readiness of execution, and taste for good music, developed themselves very early, and his road to the organ was smoothed by an old harpsichord with pedals and two rows of keys, on which the lad practised at all available times. When 11 years old he often took the service at St. Paul's for his father, and at the Festivals of the Sons of the Clergy it was Attwood's delight (then chief organist) to make him extemporise. On one such occasion Mendelssohn is said to have remarked and praised him. At 13 he was made organist of St. Benet, Paul's Wharf. On Attwood's death he became assistant organist of St. Paul's, vice his father resigned; in 1836 organist of St. Anna and St. Agnes; and on the death of his father, in 1843, succeeded him at St. Sepulchre's, and became singing-master and organist to Christ's Hospital as well. On the death of Sir George Smart he was appointed organist of the Chapel Royal. He died Oct. 3, 1876, much regretted. Cooper did much to familiarise his hearers with the works of Bach and other great composers, which he played in a noble style. His 'Organ Arrangements,' 'Organist's Manual,' and 'Organist's Assistant,' are well known, and so is his 'Introduction to the Organ,' long the only work of its kind in England. These were his only publications of any moment. He had a strong taste for natural science, and divided his time between the organ, his farm, and photography.

COPERARIO, John, was an Englihsman named Cooper, who, having Italianised his name during a sojourn in Italy, continued the use of it after his return to England. He was a composer for and performer on the lute and viols da gamba, and the musical instructor of the children of James I. In 1666 he published 'Funeral Tears for the Death of the Right Honorable the Earl of Devonshire': figured in seaven songs, whereof sixe are so set forth that the words may be exprest by a treble voice alone to the Lute and Base Viol, or else that the meane part may be added, if any shall affect more fulness of parts. The seaventh is made in forme of a Dialogue and can not be sung without two voyces.'
He composed the music to 'The Masque of the Inner Temple and Gray's Inn,' performed at Whitehall, Feb. 20, 1612. In 1613 he published 'Songs of Mourning bewailing the untimely death of Prince Henry. Worded by Tho. Campion and set forth to bee sung with one voyce to the Lute or Viol.' He contributed three of the songs to the masque performed at Whitehall on St. Stephen's Night, 1614, and supplied the whole of the music in 'The Masque of Flowers' presented in the same place on Twelfth Night in the same year, both masques being given in honour of the marriage of the Earl of Somerset and Lady Frances Howard. He composed a set of Fancies for the organ for Charles I, the manuscript of which is still extant, and numerous Fancies for viola. He contributed two vocal pieces to 'The Teares or Lamentacions of a Sorrowfull Soule,' published by Sir William Leighten in 1614. Coppola was the master of Henry and William Lawes. He died during the Protectorate.

[W.H.H.]

COPPOLA, GIUSEPPE, a singer at the King's Theatre in 1777. He appeared as 'Ciro' in Sacchini's 'Creso,' and in other operas. [J.M.]

COPPOLA, PIER ANTONIO, born in 1792 at Castrogiovanni in Sicily, son of a musician, studied at the Royal College of Music at Naples. His first opera, 'Il Figlio bandito' (1816) was well received, and his 'Nina pazzia per amore' (Rome, 1835), was performed in every town of Italy, in Vienna, Berlin, Lisbon, Spain, Mexico, and as an opera-comique with the title of 'Evra' in Paris (1839). In 1826 he composed 'Enrichetta di Basenfeld' for Vienna, and this was followed by 'Gli Illinent' (Tunin), one of his best works; and 'La bella Celeste degli Spadari' (Milan). At the Royal Theatre in Lisbon he produced 'Giovanna lia' (1841), and 'Ines de Castro' (1843). In 1843 he returned to Italy, and composed five more operas, which were less successful than his earlier works, and he finally returned to his post at Lisbon. Coppola might have taken a higher place had he not come into competition with Rossini. Some masses, litanies, and other church music are to be found in the libraries at Naples. He died Nov. 14, 1877. [M.C.C.]

COPYRIGHT. The statutes regulating copyright in music are 3, 4 Will. IV, c. 15; 5, 6 Vict. c. 45; and 7, 8 Vict. c. 12; and their joint effect is, that the composer, or the person to whom he transfers his interest, has an exclusive right to publish or give performances of the work during the lifetime of the composer and seven years afterwards, and also during the period of forty-two years from the publication or first performance of the work. The copyright proprietorship of a British composer in his work is complete from the moment of composition; but for purposes of public convenience a register is kept at Stationer's Hall, at which the title, date, and proprietorship of any work may be officially entered: and although such entry is not necessary to give the composer the copyright of his work, and, without making any such entry, an action can be brought against any person performing the work without written permission, yet no action can be brought against any one publishing the work until the entry has been made. A similar entry should be made whenever the copyright changes hands. Such transfer may also be made by writing, and in this case the exact nature of the rights transferred will be collected from the document; but if the transfer is evidenced by registration alone, an entry of the transfer of the copyright will be taken to prove no more than the transfer of the right of publication, and the right of performance will remain with the transferee. If therefore the latter right is intended to pass, a written contract should be made to this effect. To obtain the full benefit of the English law, even for British subjects, the first publication or performance must take place in the United Kingdom; if it takes place abroad, the work must not be considered as foreign, although the author may be a British subject. An arrangement for the piano of a work written for other instruments has not hitherto been considered as an infringement of the copyright of the latter; but the cases do not go so far as to prove that any bare transcription of the score to pianoforte staves would necessarily escape with impunity. The amount of change constituting a really new work cannot be expressed in any general rule; each case is determined on its merits.

We now pass to works composed by foreigners, or first published or performed abroad. There is no doubt that a foreigner, by residing in England at the time of publication or first performance, may place his work in every respect under British law; but it has hitherto been held that for this purpose residence in Great Britain at the time of publication is indispensable. It is doubtful whether, under the Alien Act of 1870, this is still so; but the short residence necessary is a less evil than the chance of expensive litigation. If a foreigner sell to a British subject his work while still unpublished and still unperformed, the purchaser has full English copyright property in the work, just as if he had written it himself. But a work first published or performed abroad can only obtain protection in England, when a treaty exists between this country and the country where the work is produced, creating reciprocal copyright interests. Such treaties exist between this country and France, Prussia, and some other German states, Belgium, Spain, and Italy. There is no copyright treaty with the United States, nor with Austria, Russia, Norway, or Sweden. The Act of 1842 and 8 Vict. c. 12, upon which international copyright rests, requires that every Order in Council granting copyright privileges to foreigners shall prescribe a time within which the work shall be registered at Stationers' Hall. Registration therefore, as concerns foreign productions, is of the utmost importance. Not only is it necessary, as in the case of English works, that entry shall be made before legal proceedings can be commenced against an unregistered publication;
but, unless the work be registered at Stationers’ Hall, no protection can at any future time be obtained for it. The period within which a work must be registered is specified in the Order of Council announcing in the London Gazette the terms of each copyright treaty when made; and the terms may vary in every treaty. Foreign musicians who contemplate introducing their works into England ought therefore to consult a qualified adviser immediately upon the completion of their work; or, for want of this precaution, they may find their productions public property at the moment that they might have become remunerative. The opera of ‘Faust’ has experienced this fate; not having been registered within the three months specified in the Order of Council, its performance is open to all Her Majesty’s subjects. [C.A.F.]

COR ANGLAIS. (Ital. Oboe di Caccia; and Corno Inglese; Germ. Engliedtes Horn.) A tenor oboe, standing in the key of F, and therefore speaking a fifth lower than the ordinary oboe. It has the same scale and compass as the latter instrument, from E or Eb in the bass, to about A or B9 above the treble clef. It bears the same relation to the oboe that the bassoon bears to the clarinet, hence frequent confusion between the two instruments. It is probably similar in many respects to the ‘oboe di caccia’ found in Bach’s scores, and perhaps to the ‘chalumeau’ of Gluck’s operas; although the former was made in the form of a bassoon or alto-fagotto, and the latter may have been a kind of clarinet.

Beethoven has written a fine trio, Op. 29, for two oboes and cor anglais, and variations on ‘La ci darem,’ which though performed at Vienna on Dec. 23, 1797, are still in MS. Rossini employs it to represent the alpenhorn in the overture to ‘William Tell’; Meyerbeer, Wagner, Halévy, Ambroise Thomas, and other modern composers frequently introduce it in their operas. It has a peculiar walling and melancholy tone, which is very effective, but it is difficult and somewhat treacherous in the orchestra. [W.H.S.]

CORBET, FRANCISCO, whose real name was Francesco Corbett, born at Pavia about 1630; died in Paris about 1700; the best player of his time on the guitar. After travelling in Italy, Spain, and Germany, he settled for a time at the court of the Duke of Mansfield, who sent him to Louis XIV. He stayed for a few years in the French court, and then came to England, where Charles II appointed him to an office in the Queen’s household, with a large salary, and provided him with a wife. The Revolution of 1688 drove him back to France. His best pupils were De Vabrav, De Vies, and Médard, who wrote a curious epistle on him. [M.C.C.]

CORBETT, WILLIAM, an eminent English violinist at the commencement of the 18th century, was one of Queen Anne’s band of music, and leader of the band at the Opera House in the Haymarket on its first opening in 1705. On the production of Handel’s ‘Rinaldo’ in 1711 a new set of instrumentalists was introduced into the opera orchestra, and Corbett, quitting his position in the Queen’s band, went to Italy, and resided for many years at Rome, making occasional visits to Venice, Milan, Florence, Cremona, Bologna, Naples, etc., amassing during the time a large collection of music, and a most valuable assemblage of Italian violins, etc. Those acquainted with his circumstances were at a loss to account for his ability to make these purchases except by the supposition that he was a government spy, employed to watch the movements of the Pretender. Corbett returned to England in 1740, and seems to have resumed his position in the royal band. He died, at an advanced age, in 1748. By his will he bequeathed his collection of instruments to Gresham College, providing also for the stipend of a person to show them, and for their care. The college authorities, however, rejected the gift on the ground that there was no room in the college for its reception, and the instruments were consequently sold by auction ‘at the Great Room over against Beaumont Buildings, in the Strand, formerly the Hoop Tavern,’ on Saturday, March 9, 1751. Corbett’s collection of music was also sold by auction at his house in Silver Street, Golden Square. Before quitting England Corbett published several sets of sonatas for violins, flutes, oboes, etc.; some concertos for orchestra; and instrumental music for ‘Henry IV,’ 1700; ‘As you find it,’ 1703; and ‘Love Betray’d, or, The Agreeable Disappointment,’ 1703. After his return he published ‘Concertos, or Universal Bizarries composed on all the new Gustos during many years’ residence in Italy,’ containing thirty-five concertos in seven parts, professing to exhibit the different styles of various countries and cities. [W.H.H.]

CORDIER, JACQUES, better known under the name of Bocan, born in Lorraine about 1820; dancing-master and performer on the violin and rebec in the reign of Louis XIII. He was unable to read music, but had great power of execution, and Mersenne mentions his gift of modulating the tones of the violin. He was dancing-master to Henrietta Maria, Queen of Charles I, and came with her to England. The King took great delight in hearing him play the violin. He returned to Paris when the Civil War broke out, and his tomb at St. Germain l’Auxerrois was restored in 1843. Chançery’s ‘Tablature de Mandore’ (Paris, 1629), contains a graceful ‘branle’ by Cordier. [M.C.C.]

CORBELLI, ARANGELHO, a great violinist and composer, born at Fusignano, Imola, 1653. He learnt counterpoint from Matteo Simonelli, and the violin from G. B. Bassani. Of the earlier part of his life but little is known. He appears to have travelled in Germany, and to have stayed for some time at Munich, attached to the court of the El cto of Bavaria. It is somewhat related that he went to Paris in 1672, but soon left it again, owing to Lulli’s jealousy. This however, according to Fétis, is very doubtful. In 1681 he returned to Italy and settled at Rome, where he published his first work, a set of twelve sonatas. He soon made a great
reputation as performer and composer, and became a favourite in the highest circles of Roman society. Cardinal Pietro Ottoboni, an enthusiastic lover of the arts in general and of music in particular, was his great friend and patron. Corelli lived in the Cardinal's palace up to the day of his death, conducting the concerts, which took place every Monday, and which were considered the most important and interesting events in Roman musical life. He also lived on terms of intimate friendship with some of the most eminent painters of the time, Cignani, Maratti, and others, with whose assistance he formed a collection of valuable pictures. This collection, together with a not inconsiderable sum of money, he left in his will to his friend and benefactor the Cardinal, who however accepted the pictures only and handed over the money to Corelli's relations.

Corelli appears to have been of the most amiable disposition, and a model of true artistic modesty. He was very simple and unpretentious in all his habits. Handel, though esteeming him highly, used to say of him: 'He lives nothing better than seeing pictures; if they pay for it, and eat and drink. He dressed almost shabbily, and would on no account hire a carriage, but always went on foot. Hawkins, in his History of Music, gives an account of his meeting with Handel at Rome. Handel conducted some of his own cantatas, which were written in a more complicated style than the music with which Corelli and the other Italian musicians of that period were familiar. Handel tried in vain to explain to Corelli, who was leading the band, how a certain passage ought to be executed, and at last, losing his temper, snatched the violin from Corelli's hands and played it himself, whereupon Corelli remarked in the politest manner 'Ms. caro Sessone, queste musicas è nel stile francese, di ché io non intendo' (but, my dear Saxon, this music is in the French style, of which I have no experience). It was the overture to 'Il trionfo del tempo, which Handel, probably with special regard to Corelli, had written in the style of his concerti grossi with two solo-violins. It is a fiery impetuous piece, truly Handelian in character, and it is not difficult to understand how Corelli in his quiet elegant manner failed to attack with sufficient vigour those thundering passages. That Corelli, who in his own compositions never goes beyond the third position, might have been puzzled by this passage, which occurs in the same overt-ure, is also possible, but it is hardly likely to have caused the scene described above.

His fame was not limited to Rome and Italy. From all countries young talents came to benefit by his instruction; and his compositions were published in Amsterdam, Antwerp, Paris, and London, as well as in Italy. Among his numerous pupils the most eminent were Geminiani, Locatelli, Somis, Baptiste, and Castrucci.

Illustrous foreigners visiting Rome hardly ever failed to pay homage to Corelli. When Queen Christina of Sweden came there, he conducted in her palace the performances of an orchestra of 150 musicians. The King of Naples repeatedly tried to induce him to settle in his capital, and made him most favourable offers, which were however all declined by Corelli, who was not willing to give up his happy position at Rome, where he was universally loved and esteemed. It was not till late in life that he visited Naples, which town, with Alessandro Scarlatti as its leading musician and an excellent orchestra, was at that period by far the most important musical centre of Italy. Corelli, who appears not to have been away from Rome for many years, was most anxious to ensure complete success in Naples, and, in order to be sure of effective accompaniment, took with him two violinists and a violoncello player. But he soon saw that this precaution had been superfluous. At the first rehearsal Scarlatti's band went through the introductory tutti of one of Corelli's concertos without a mistake, whereas Corelli admirably explained: 'Si sono a Napoli!' (They play well at Naples!) The king however did not appreciate his playing, and, pronouncing his adagio tedious, left the concert-room before Corelli had finished. But this was not all. Soon afterwards Corelli was leading the performance of a composition of Scarlatti's, when, in a passage that probably was not well written for the violin, he made a very conspicuous mistake, while Petrillo, the Neapolitan leader, who was familiar with the passage in question, executed it correctly. Then came a piece in the key of C minor. Corelli, already disconcerted, led it off in C major. 'Riconciamoci! (let us begin again!) said Scarlatti, with his usual politeness, and poor Corelli started once more in major, so that Scarlatti was at last obliged to point out his mistake. Corelli felt this incident as a great humiliation, and left Naples immediately. Returned to Rome he found that a new violinist, Valentini, had won the general applause and admiration of the public, and considering himself slighted and superseded, took it so much to heart that his health began to fail. In 1712 he published his last work, dedicated to his admirer John William, Prince Palatine of the Rhine, and died January 18, 1713. He was buried in a princely style in the Pantheon, not far from Raphael's tomb, and Cardinal Ottoboni erected a marble monument over his grave, the inscription on which bears testimony of the high esteem and admiration in which Corelli was held. For many years a solemn musical service was held on the anniversary of his death, when some of the great master's compositions were performed, conducted by one of his pupils.

Corelli has a double claim to a prominent place in the history of musical art—as a great violinist who laid a firm foundation for all future development of technique and of a
pure style of playing; and as a composer who materially advanced the progress of composition. Still there can be no doubt that above all he was a great violin-player, and that all he wrote grew out of the very nature of his instrument; and as the violin is not only a solo instrument but at the same time the leading orchestral one, we owe to Corelli the typical treatment of it in two important branches of composition. In his chamber-sonatas and concerti grossi (op. 1, 3, 3, 4, and 6) he must be considered the founder of the style of orchestral writing on which the future development in this direction is based, while in the sonatas (op. 5) which have merely an accompanying fundamental bass, he gives a model for the solo sonata, and thereby for all writing for the violin as a solo-instrument.

All his works are characterised by conciseness and lucidity of thought and form, and by a dignified, almost aristocratic bearing. The slow movements show genuine pathos as well as grace, bringing out in a striking manner the singing power of the violin. The quick movements are not on the whole of equal merit with the adagios,—at least in point of originality of thought and variety of character. They appear to our modern feeling somewhat dry, almost exercise-like.

Corelli's gavottes, sarabandes, and other pieces with the form and rhythm of dances, do not materially differ from similar productions of his immediate predecessors and contemporaries, although, like everything that he wrote, they are distinguished by great earnestness and dignity of style, and are especially well adapted to the instrument. He was not so much an innovator as a reformer; he did not introduce new striking effects; it cannot even be denied that his technique was a limited one—he never goes beyond the third position—but, by rigidly excluding everything that appeared to him contrary to the nature of the instrument, and by adopting and using in the best possible way everything in the existing technique which he considered conformable to the nature of the violin, he not only hindered a threatened development in the wrong direction, but also gave to this branch of the art a sound and solid basis, which his successors could and did build upon successfully.

The following are the titles of the original editions of his works:

1. XII Sonate a tre, due violini e violoncello, col basso per l'organo, op. 1; Roma, 1683. Another edition of this work was published in 1688 at Antwerp; another at Amsterdam.
2. XII Sonate da camera a tre, due violini, Violoncello e violone e cembalo, op. 1; Roma, 1683. Two later editions published at Amsterdam.
3. XII Sonate a tre due violini e arciuto col basso per l'organo, op. 3; Bologna, 1690.
4. XII Sonate da camera a tre, due violini e violone e cembalo, op. 4; Bologna, 1684. Another edition of this work at Amsterdam under the title, Bassetta da camera.
5. XII Sonate a violino e violoncello e cembalo, op. 3; Roma, 1700. The same arranged as Concerti grossi. 6. Concerti grossi con violini e violoncello di concerto obbligati, e due altri violini e basso di concerto grosso ad arbitrio che si potranno modulare, op. 6; Roma, 1712. Another edition at Amsterdam. A number of spurious works were published under Corelli's name, but none are genuine except above six.

CORNELIUS, Peter, a near relation of the painter of the same name, and as composer and author a prominent representative of the so-called New-German school, was born at Mayence Dec. 24, 1824. He was originally intended for the stage, and it was not till after his first performance, which seems to have been unsuccessful, that he decided to adopt music as a profession. His musical education had been incomplete, but his dramatic studies had made him acquainted with literature, and were of considerable service in developing his poetic faculties. He worked hard, and acquired a vast amount of general information. After the death of his father (1844) he pursued music with energy and completeness; but his tendencies were forwards towards the modern ideal, rather than backwards to the
strict rules of counterpoint. In 1852 he went to Weimar and joined the young artists who, under Liszt's leadership, were striving to carry out the ideas of Richard Wagner. They formed eventually a separate school, to which the name 'New-German' became attached. It was here that Cornelius became acquainted with Wagner's works, while with Liszt he formed ties of the closest intimacy. His active and versatile pen was of great service to the young enterprise. He strove to elucidate the new principles in the 'Neue Zeitschrift für Musik,' the organ of the party, both by original articles and by translating a series of lectures given in French by Liszt. As a practical embodiment of the new views he composed a comic opera, 'Der Barbier von Bagdad,' of which only a single performance took place (1858). Liszt resent the judgment of the public, and left Weimar, which ceased to be the centre of the school. In 1858 Cornelius went to Vienna, where Wagner was then living, and became intimate with him also. When King Ludwig II invited Wagner to Munich, Cornelius followed him there (1865), first as reader to the king, and later as professor of harmony and rhetoric at the Conservatoire, after it had been transformed into the 'Königliche Musik-schule' with H. von Bülow as principal. Cornelius's grand opera the 'Cad,' produced at Weimar (1865), may be considered as the fruit of his intercourse with Wagner. He was working at another, entitled 'Gunlöd,' of which, after Wagner's example, he had himself taken the subject from the legends of the Edda—when he died at Mayence, Oct. 24, 1874. The effect of his dramatic works in furthering the Wagner movement cannot fairly be estimated, as the public had no real opportunity of judging of them. His published works, principally vocal, show him to have had much feeling. The following deserve mention:— 'Duets for Soprano and Baritone,' op. 6; 'Lieder-cyclus,' op. 3; 'Weinachtslieder,' op. 5; and 'Trauerhöre' (for men's voices), op. 9. Most of these are settings of his own poems. He published a volume called 'Lyrische Poesien' in 1861. Some of his works will shortly be published; and Gunlöd is to be completed from his ample notes by his friend Hofbauer of Munich. [A.M.]

CORNEVMUSE. The Italian and French name for the Bagpipe.

CORNET. (Ital. Cornetto; Fr. Cornet à pistonne.) The name was formerly given to a rude reed instrument of the oboe family, but is now applied to a brass instrument with cupped mouthpiece, intermediate between the French horn, trumpet, and bugle, of comparatively modern construction, and formerly called also CORNOPLAX. It possesses the usual scale of open or harmonic notes, as follows:—

\[\text{Actual musical notation}\]

the real fundamental being the octave below the lowest here given, which is never made use of.

It is also possible to produce four notes above the top C, corresponding to those commonly used in the trumpet; but for the larger bore and mouthpiece of the cornet they are difficult, and comparatively unused. The French horn, on the other hand, standing an octave lower than the cornet, obtains two harmonic sounds, the Bb and C, above the G last given.

The chief characteristic of the cornet is the use of valves or pistons for the purpose of increasing its compass and bridging over the gaps between the natural harmonic sounds. The valves are usually three in number. They consist essentially of mechanism, by means of which a by-way or diversion, somewhat longer than the direct road, is opened to the vibrating column of air. The first valve thus depresses the pitch by a tone, the second by a semitone, the third by three semitones. They can be used singly or together. In this manner the lower limit is removed downward to F in the bass stave, and six semitones are obtained by the use of the pistons singly or in combination:—

\[\text{Actual musical notation}\]

By the same method all notes intervening between the open notes of the natural scale can be provided for. In the absence of such a contrivance, the early composers for the trumpet were driven to make use of the superior octave, in which a consecutive scale of open notes can be obtained. This is well seen in Handel's solos for the trumpet. It materially increases the brilliancy and the difficulty of the older instrument.

The cornet was originally made with several 'crooks,' for the keys of A, Bb, Ab, G, C, and even others; but it has been customary of late to dispense with all but the A and Bb crooks, which correspond to the clarinets of similar name.

The bore of the instrument is intermediate in size between the small cylindrical tube and restricted bell of the trumpet, and the broad conical form of the bugle. The tone stands in corresponding relation to those instruments, lacking the penetration of the former, and the smooth hornlike fullness of the latter.

The cornet has not yet been much employed in the scores of classical music, though occasionally used in orchestras instead of the trumpet. In operas an instance of its use which will be familiar is the air 'When other lips' in Balfe's 'Bohemian Girl.' [W. H. S.]

CORNET. This name is given to several kinds of organ stops; among others to pedal reed-stops of 4 and 2 feet length in numerous Dutch and German organs. A 'Cornett' of 4 feet occurs in the cathedral organ at Kronstadt; a 'Cornetin' of 2 feet in the 'Old Church' organ at Amsterdam; and a 'Cornettino,' 2 feet, in the music hall organ at Boston in America.

The great organ Solo Cornet comprised either 5, 4, or 3 ranks of pipes. When of the former
It consisted of a stopped dispasson, principal, twelfth, fifteenth, and tierce. When of 4 ranks the stopped dispasson was omitted; when of 3, that and the principal were left out; so that the 'composition' on the middle C key stood thus—

\[ \text{3 ranks} \quad 4 \text{ ranks} \quad \text{3 ranks} \]

and the one or two separate stops necessary were added or 'drawn' with the cornet when the series of 5 pipes was not complete. The pipes of the solo cornet were 4 or 5 'scales' wider or 'larger' than the corresponding pipes of the ordinary stops, to render the tone very powerful and broad; and very frequently, in order to make it still more prominent, the stop was placed on a sound-board of its own and raised a few feet above the surrounding pipes, in which case it was called a 'mounted cornet.' Father Smith's solo cornet at the Temple (4 ranks) was not mounted.

The Echo Cornet, of soft tone, and shut up in a box, was of 3 ranks, or 4 at most, the composition being as above given. 'Cornet Voluntaries,' as they were called, were in great vogue for a very long time, and consisted of runs and twirls for the right hand, played in single notes, first on the louder stop and then repeated on the softer, the left hand meanwhile playing a soft bass. So fashionable were these peculiar display pieces that Dr. Dupuis states on the title-page of his volume of voluntaries, containing specimens of the kind, that they were 'Performed before their Majesties at the Chapel Royal, St. Paul's Cathedral, etc.;' while Russell, in his book printed in 1813, shows that the attachment for the old Echo still lingered exactly a century after it had been improved upon by the invention of the Swell (1712), by directing at the head of one of his pieces 'The Swell Pedal not to be used in this movement.' The name 'Echo Cornet' is still frequently applied to a compound stop of swell scale and light tone in swell organs. In many of the continental organs the cornet stop extends down to tenor C; and in some places it is used, on account of its strong and travelling tone, as an accompaniment to the priest's voice at the far end of the church. This is, or was, the custom a few years ago in many of the churches of Cologne, including the cathedral.

As the cornet is a compound stop that can be carried through the usual compass of a manual without any 'break' in its composition, it is sometimes looked upon as a good stop for covering the repetitions which necessarily occur in all compound stops that rise to a greater altitude than itself above the unison. At such times it is made as a 'progressive' stop; that is to say, it has fewer pipes in the bass, with an increasing number up to the middle of the key-board. Commencing with two pipes on the CC key, a third rank is added at tenor C, and a fourth at middle C; and the stop starts with a fifteenth and tierce, to which are added first a twelfth and then a principal, thus—

\[ \text{2 ranks} \quad 2 \text{ ranks} \quad 4 \text{ ranks} \]

The 'large scale' is preserved, but the pipes have only narrow mouths, and produce a pleasant and rather flute-like quality of tone. A stop somewhat of this kind occurs on the great manual of Schulze's fine organ in Doncaster parish church.

[Cornette, Victor, son of an organist, born at Amiens 1795, a musician of indefatigable activity. He entered the Paris Conservatoire in 1811, and studied composition under Lesueur. He served in the band of the 'Grenadiers tirailleurs de la Garde Impériale' in 1813 and 1814, and was at Waterloo; was professor at the College of St. Acheul from 1817 to 1825; member of the orchestra at the Odéon (1825), Opéra Comique (1827); chorus master at the Opéra Comique (1831-1837); director of singing at the Gymnase de musique militaire (1839); conductor of the Strasbug theatre (1843); chorus master to the Opéra national (1847); and again chorus master at the Opéra Comique (1848); also trombonist in the band of the Garde Nationale, and deputy organist at St. Sulpice and the Invalides. Cornette composed an enormous mass of music for every variety of instrument, and published \textit{methodes} for trombone, ophicleide, cornet à pistons, bugle, saxhorn, saxophone, basoon, oboe, horn, trumpet, harp, cello, viola, organ, and harmonium.

[Cornino, Italian term for Horn.]

[Corno di bassetto. See Basset-Horn.]

[Corno di caccia, i.e. hunting horn, the French horn. The name often occurs in J. S. Bach's scores.]

[Cornopean, a name originally applied to the cornet à pistons, though now disused.]

[Cornyshe, or Cornish, William, was master of the children of the Chapel Royal, in which office he succeeded Gilbert Banestre about the year 1490. In the Privy Purse Expenses of Henry VII under date Nov. 12, 1493, a payment is entered 'to one Cornyshe for a prophecy in rewards, 13s. 4d.,' and in the Privy Purse Expenses of Henry's Queen, Elizabeth of York, under date Dec. 1503, a similar amount for 'setting of a carraile upon Christmas day.' When the children of the chapel under Cornyshe took part in the performance of a play at court they were rewarded with the sum of '6d. 3s. 4d.' Cornyshe was a great favourite with Henry VIII. We find a payment, '2 Henry VIII. Nov. To Master Cornishe, gentylman of the King's Chapell, upon a warrant, in rewards,
CORSYNE.

200.' But this large sum, no doubt, included gratuities to his brethren in the Chapel. In 1504 Cornysh, being confined in the Fleet prison, upon, as he informs us, some false information given by an enemy, wrote a poem entitled, 'A Treatise between Truth and Information,' some extracts from which are given in Hawkins's History of Music. The real cause of his incarceration is unknown, but it has been conjectured that he had allowed his pen greater freedom than was agreeable to some persons. However in 1508 we again find him taking part in the court play, as appears by a payment 'To Mr. Kite, Cornish, and other of the singell, that played affore the King at Richmond, 6l. 13s. 4d.' The date of Cornysh's death is uncertain, but it was before 1526, in which year the name of William Crane occurs as master of the children.

[W. H. H.]

CORNSHE, WILLIAM, junior, son of the preceding, was a composer in the early part of the sixteenth century. Three part-songs by him are contained in a manuscript volume compiled by Dr. Robert Fayrfax, and now in the library of the British Museum (Add. MSS. 5465). Two of those songs were printed by Hawkins in his History of Music.

[W. H. H.]

CORRI, DOMENICO, born in Naples 1744, died in London about 1816; studied under Porpora from 1763 to 67. In 1774 settled in London, producing there 'Alessandro nell' Indie' (1774), and some years later 'The Travellers,' his best work; but devoted himself chiefly to instruction and composition. His daughter, a singer and harpist of merit, married Dussek, with whom Corri entered into partnership as music-seller and publisher (1797), but the speculation failed. His compositions include, besides the operas above named, a quantity of songs to English, French, and Italian words: sonatas, airs, and rondos; 'The Art of Fingering' (London 1799); and 'The Singer's Preceptor' (ditto 1798); also a 'Musical Dictionary' (London 1798) and a 'Musical Grammar.' He left three sons, ANTONIO, who settled in America; MONTAGU, dramatic composer; and HAYDN, a teacher in Dublin.

[M. C. C.]

CORRI-PALTONI, MADAME FRANCES, daughter of Natale Corri, and niece of Domenico, born in Edinburgh 1801, a dramatic singer of ability; studied under Catalani in 1815 and 16. She sang in London (1820); in Germany; in Italy, where she married Paltoni, a singer; in Madrid (1837); and with Lablache in Milan (1828). In 1830 she returned to Germany. Her voice was a fine mezzosoprano, with a brilliant shake.

[M. C. C.]

CORTECCE A, FRANCESCO DI BERNARDO, born early in the 16th century at Arezzo, died in Florence 1571; in 1531 organist of S. Lorenzo in Florence, and in 42 chapel-master to Cosmo I; also a Canon of S. Lorenzo. His compositions include nine pieces for 4, 6, and 8 voices with various instruments, in a rare work called 'Musiche fatte nelle nozze, etc.' (Venice, Gardano, 1539); 'Madrigali a quattro voci,' lib. 1 and 2 (Ib. 1545 and 1547); 'Primo libro de Madrigali a 5 e 6 voci' (Ib. 1547); 'Risporsoria et lectiones hedobadaseae sanctae' (Ib. 1570); 'Residuum cantici Zachariae' (Ib. 1570); and 'Canticorum liber primus' (Ib. 1571), published a few months after his death. A copy of the madrigals is in the Library of Christ Church, Oxford. The Library of S. Lorenzo also contains 32 hymns in 4-part counterpoint. Corteccia, with Striggio, composed music for Cini's interment 'Feische e l' Amorino,' for the marriage of Francesco de' Medici and Joanna of Austria in 1565.

[M. C. C.]

COTSELLINI, CAMILLO, a composer of church music, who lived at the commencement of the 17th century, and was in the service of the municipality of Bologna. From his proficiency on the violin he went by the name of Il Violino. Vincenti of Venice published several volumes of his works, consisting of Passions, Litanies, Masses, and other sacred pieces. The passage from one of these volumes, intituled 'Messe concertata a otto voci,' is interesting because it gives a hint of the manner in which in those early times the instrumental and vocal parts were combined in church music. The passage alluded to is as follows: 'La Messa In Domino confido ha la Gloria concertata; e dove saranno le lettere grandi, il cantore cantera solo; e dove saranno le linee, i tromboni e altri simili stromenti soneranno soli.'

[E. H. P.]

CORYPHÆUS (n κορυφαῖος, chorus-leader). An officer on Dr. Heather's foundation at Oxford, intended by the founder to take the lead in the musical exercises conducted by the choragus. The duties of the Coryphæus have long been imaginary: his salary was never more than nominal.

[C. A. F.]

COSI FAN TUTTE, OSSIA LA SCUOLA DEGLI AMANTI. An opera buffa in two acts, commanded by the Emperor, libretto by Da Ponte, music by Mozart; produced at Vienna Jan. 26, 1790; London, King's Theatre, May 9, 1811. The libretto is so bad and the music so good that various attempts have been made to fit the opera with new words, as 'Le Laboureur Chinois' (1807), 'Peines d'amour perdues' (Barbier & Carré, 1863). Otto Jahn possessed a MS. Mass made up from it. In England it was translated as 'Till for Tat.' The German version is entitled Weibertrutz.

COSSMANN, BERNHARD, an eminent violoncellist, son of a Jewish merchant; born at Dusseldorf May 17, 1823. His first instructors were the cello were Epenhahn and Karl Dreschler at Brunswick, Theodor Müller (of the Müller-quartet) and Kummer at Dresden. After completing his studies, Cossmann went to Paris, where he played in the orchestra of the Grand Opéra, and thence to London (1841), in the then palmy days of Italian opera. In 1843 he was an acknowledged master of his instrument in Germany. Mendelssohn secured him in 1847 for the Gewandhaus concerts, and he utilised his stay in Leipsic by studying under Hauptmann. His appointment as first cello under Liszt at Weimar, in 1852, exercised an important influence on his career.
Costa.

He had a considerable share with Joachim, and also with Bülow and Tausig, in the movement which took place under Liszt's leadership. In 1866 he became professor at the Conservatoire at Moscow, where he worked with Laub and Nicolaus Rubinstein until his return to Germany in 1870. Since then he has lived without any fixed appointment at Baden-Baden. Cossmann is a virtuoso of the first rank. He is remarkable alike for science, polished execution, and power of singing on the instrument. Furthermore he is a great soloist, and an excellent chamber musician, above all in quartets. This last quality he owes partly to his studies under Müller, and partly to the general cultivation he acquired at Weimar. He is much interested in compositions for his instrument; he has brought forward many new concertos, as well as those of Schumann and A. Rubinstein, which are too much neglected. His compositions embrace a concert-stuck for cello, but are not important. [A.M.]

Costa, an Italian singer at the King's Theatre about 1790. Appeared in Cimarosa's 'Ninetta,' in the 'Duca di Mantova,' in 'Il Barbieri di Siviglia,' in 'Nasolini's 'Andromaca,' Federico's 'L'Usurpatore innocente,' and Bianchi's 'Villanella rapita.' He was a good performer of what were called mezzi caratteri. [J.M.]

Costa, Michael, son of the late Cavaliere Pasquale Costa, of an old Spanish family, was born at Naples Feb. 4, 1810. Having a great inclination for music, he was placed at the Royal Academy of Music in Naples, and at a public examination obtained a free scholarship from Ferdinand I, King of the two Sicilies. At the age of 15, he composed a cantata, for the theatre in the college, entitled 'L'Immagine.' In 1826 he composed for the same theatre an opera called 'Il Delitto punito;' and in 1827 another, 'Il Sospetto funesto.' He composed also at this period a Grand Mass for 4 voices, a 'Dixit Dominus,' three symphonies, and an oratorio, 'La Passione.' In 1828 Costa was engaged by the manager of the Teatro Nuovo to compose an opera semi-seria, called 'Il carcere d'Idegonda.' In 1829 he composed 'Malvina,' an opera, for Barbaja, the famous impresario of San Carlo. In the autumn of that year, Ziagarelli, his maestro, sent him to Birmingham, to direct a psalm of his composition, 'Super flumina Babylonis.' On the young Costa's arrival, through some misunderstanding, he was obliged, having a fair tenor voice, to sing in the psalm, instead of directing the music. In 1830 he was engaged by Laporte, as maestro al piano at the King's Theatre. In the next year he composed the music of the grand ballet, 'Kenilworth.' In 1832 Monk Mason, the then impresario, engaged him as director of the music; and in that capacity he wrote the ballet, 'Une heure à Naples,' and several other pieces for operas and concert-rooms. 'This was the year,' writes Mr. Chorley, 'when (happy event for England!) the Italian orchestra was placed under the direction of Signor Costa.' In 1833, engaged by Laporte as director and conductor, he composed the ballet 'Sir Huon' for Taglioni, and the favourite quartet, 'Ecco quel fiero istante.' At the invitation of Severini, the impresario of the Italian opera at Paris, he wrote the opera 'Malek Adhel,' in 1837, which was performed there in February 1838 with moderate success, but with better fortune in London. The critic already quoted says on this point, 'Whether a great conductor can ever be a great composer, is a doubtful matter. . . . From the first evening when Signor Costa took up the baton,—a young man, from a country then despised by every musical pedant, a youth who came to England without flourish, announcement, or protection . . . it was felt that in him were combined the materials of a great conductor; nerve to enforce discipline, readiness to the second, and that certain influence which only a vigorous man could exercise over the disconnected folk who made up an orchestra in those days. His Malek Adhel is a thoroughly conscientious work, containing an amount of melody with which he has never been duly credited.' It contained a song for Rubini of stupendous difficulty—which has been a main obstacle to its revival—as well as some telling music for the other singers. In 1842 Costa composed the ballet-music of 'Alma' for Cerito; and in 1844 the opera 'Don Carlos.' In 1844 three new operas were produced in London, of which 'the worthiest,' says Mr. Chorley, 'was Signor Costa's Don Carlos, which had nevertheless not the good fortune to please the public. Yet it is full of good music: the orchestra is handled with a thorough knowledge of effect and colour. One trio for male voices is so solid and fine that it ought not to have been soon forgotten.' In 1846 he quitted the opera; and the orchestra, which he had brought to a point of perfection previously unknown in England, passed into other hands. In 1846 Costa undertook the direction of the Philharmonic orchestra; and that of the new Italian Opera, Covent Garden; and in 48 that of the Sacred Harmonic Society. In 49 he was engaged for the Birmingham Festival, which he has since continued to conduct. With the season of 44 he gave up the baton of the Philharmonic, and was succeeded (for one year) by Richard Wagner. In 55 he composed his oratorio 'Eli' for the Birmingham Festival. He conducted the Bradford Festival in 53, and the Leeds Festival in 74; and as conductor of the Sacred Harmonic Society has directed the Handel Festivals from 57 to the present date. Beside other occasional compositions, his second oratorio, 'Naaman,' was also written for Birmingham, in 1864. He has written additional accompaniments for 'Solomon,' 'Judas,' and others of Handel's oratorios for the Sacred Harmonic Society. In 1886 he received the honour of knighthood. Sir Michael is also
decorated with orders from the sovereigns of Germany, Turkey, the Netherlands, Würtemberg, Italy, etc., in recognition of his talent and position. He has been since 1871 director of the music, composer, and conductor at Her Majesty's Opera. His services in those capacities will not soon be forgotten in London.

[C. J. M.]

COSTANTINI, FABIO, born in Rome about 1570, chapel master to the confraternity of the Rosary at Ancona, and afterwards at the cathedral of Orvieto. His compositions include motets for 2, 3, and 4 voices (Rome 1566); 'Motetti . . . . e Psalmi e Magnificat' (ib. 1618); and 'Con dette amorose,' a series of canzone and madrigals (Orvieto 1621). He also published 'Sectae cantiones excellentissimorum auctorum' (Rome 1614), a collection of 8-part motets by Palestrina, the Nanini, the Anerii, Marenzio, Lucatello, Giovanelli, and others besides himself; and another collection of airs and madrigals called 'Ghirlandetta amorosa' (Orvieto 1621). [M. C. C.]

COSTANZI, JUAN, known as Gioannino di Roma, because he was born there; was for some time in the household of Cardinalotto, and was appointed in 1754 chapel-master of St. Peter's, which he retained till his death in 1778. He composed an opera 'Carlo Magno' (Rome 1729); a fine 'Misere'; motets in 10 parts for a choir, offertorium, and other church music. [M. C. C.]

COSTE, GASPARD, chorister in the cathedral of Avignon about 1530, composer of songs and madrigals, preserved in the following collections: 'Trente-cinq livres des chansons à quatre parties' (Paris 1539-1549); 'Le Paragon des chansons' (Lyons 1540-1543); 'Motetti del Fiore' (ib. 1552-1559); 'Siciliani armonici; Musica di strumenti con sovente il sottile soggetto di parole' (Munich 1757); and 'Ghirlanda di Fioretto musicale' (Rome 1589). [M. C. C.]

COSTELEY, WILLIAM, a Scotch musician, born 1531, settled in France, and was organist to Henri II and Charles IX. Author of a treatise called 'Musique' (Paris 1579); songs in the 'Chansons à 4 et 5 parties' published by Le Roy and Ballard (ib. 1557). Some pieces of his are in the library at Orleans. Costeley was one of the society called 'Puy de musique en honneur de Ste. Cecile' (1751) at Evreux, and sometimes entertained the members at his own house in Evreux. He died there in 1606. [M. C. C.]

COSYN, BENJAMIN, was probably a son of John Cosyn, who in 1585 published sixty psalms in six parts in plain counterpoint. He was eminent as a composer of lessons for virginals. Many of his pieces are extant. He flourished in the first half of the 17th century. [W. H. E.]

COTTILLON (i.e. 'a petit cot'). Originally a simple French dance of the age of Louis XIV, which, according to some authors, resembled the Branle, but, according to others, was a variety of quadrille. The modern cotillon is simply a species of quick waltz, of great length and elaborate contrivances, but with no special music: for the different varieties of it, waltzes, polkas, mazurkas, and galopps, are employed. [E. P.]

COTTAGE PIANO (Fr. Piano droit; Ital. and Ger. also Fr. Pianino). An upright piano forte usually about four feet high, invented early in this century, nearly at the same time as the Cabinet piano, but less thought of for some years, until the more convenient height and better action of the lower instrument, combined with cheaper construction, found appreciation, and brought about the displacement of the Cabinet piano and the once familiar Square. To Robert Wornum the younger, whose patent (No 3419) for an upright, with diagonal strings, was taken out in 1811, is due the invention and earliest manufacture of oblique and vertical cottage pianofortes in England. In the year 1815 Ignace Pleyel, founder of the house of Pleyel, Wolff, et Cie., employed Henri Pape, an ingenious mechanic, to organise the introduction of the construction of these instruments in Paris (Pape, Sur les Inventions, etc.; Paris, 1843), from which beginning arose the important manufacture of French cottage pianos. In Germany and America upright pianos have not made much way. [See PIANOFORTE, also CABINET PIANO, OBIQUE, AND PICCOLO.] [A. J. H.]

COTUMACCI, or CONTUMACCI, CARLO, born at Naples 1698, died there 1775; pupil of A. Scarlatti, succeeded Durante at St. Onofrio; organist and prolific composer of church music. He wrote 'Regole dell' accompagnamento' and 'Trattato di contrapunto,' works which have remained in MS., excepting some 'Partimenti,' published by Choron in his 'Principes de composition des écoles d'Italie' (Paris 1803). [M. C. C.]

COUAC (French for 'quack'), a sudden horrible noise to which any clarinet is liable when the reed is out of order and the wind not quite under control. Called also the goose. (See a good story in Spohr, Selbstbiographie, i. 167.)

COUNTERPOINT is the art of combining melodies. Its name arose from the ancient system of notation by points or 'pricks.' When one set of points was added to another, to signify the simultaneous performance of various melodies agreeing in harmony, it was called 'point against point'—i.e. contrapunctum, or counterpoint. Counterpoint is usually divided into two kinds—plain and double—and each of these is subdivided into various orders or species. There are very stringent rules about the use of different intervals in plain counterpoint, which are more or less relaxed in modern music; when, however, they are fully observed, the piece is said to be written in 'strict counterpoint.' It is usual to take some fragment of an old chant or chorale as the 'main theme' or plain-chant, to which other parts or melodies are added as accompaniments according to the rules above referred to. This is called 'adding a counterpoint to a given subject.'
The difference between the ancient strictness and modern laxity in plain counterpoint chiefly relates to the admission of consecutive octaves and fifths by contrary motion, even between extreme parts, and the doctrine of false relations, especially that of the tritone. Plain counterpoint, however, is most useful as a study, whereby facility may be acquired in conquering difficulties arising from the various motions of the different parts in a piece of music. It is obvious, therefore, that the more stringent rules should be observed by students with a view to this particular object, and that therefore they are enforced in the best text-books.

Plain counterpoint is generally divided into five species. The first is called 'note against note.'

The second species is called 'two notes to one.'

The third species is called 'four notes to one.'

The fourth is called 'syncopated counterpoint.'

The fifth species is called 'florid counterpoint,' and is a combination or rather alternation of the last three, with certain ornamental variations peculiar to itself.

Plain counterpoint may be in any number of parts, and the canto fermo may be assigned to the upper, middle, or lowest parts, according to circumstances.

Double counterpoint is when two or more melodies are so constructed that either of them may form a correct base to the others; and when the various melodies may, by transposition, be placed in any relative order of acuteness, without infringing the laws of harmony. These transpositions may be such as to produce counterparts at the octave, tenth, twelfth, or any other interval, but the most usual is double counterpoint at the octave.

Examples of various double counterpoints—

The above is a specimen of double counterpoint at the octave.

The next species is at the tenth on a Canto fermo.
The above is double counterpoint at the tenth below.

Triple or quadruple counterpoints consist of three or four melodies so adopted that any of them may be a bass to the other. This can only be done with counterpoint at the octave.

Counterpoints may also be constructed by contrary motion, or by augmentation, or diminution, or retrogression. In compositions in more than two parts, the counterpoint is often confined to two parts, while the others are free accompaniments in order to fill up and complete the harmony.

In a fugue the subject and countersubject are necessarily constructed in double counterpoint. [See article Fugue.]

For a good example of counterpoint at the twelfth and in diminution, see the fine chorus ‘Let all the Angels of God,’ in Handel’s ‘Messiah.’

For an example of five subjects in double counterpoint at the octave, see the finale of Mozart’s ‘Jupiter’ Symphony. [F.A.G.O.]

COUNTERSUBJECT. When the subject of a fugue has been proposed by one voice it is usual for the answer, which is taken up by another voice, to be accompanied by the former with a counterpoint sufficiently recognizable as a definite subject to take its part in the development of the fugue, and this is called the countersubject; as in the chorus ‘And with his stripes,’ in Handel’s ‘Messiah’—

Subject.

\[ \text{Subject.} \]

\[ \text{Answer.} \]

It should be capable of being treated with the original subject in double counterpoint—that is, either above or below it, as in the chorus just named, where it first appears in an upper part, but further on in the tenor, with the original subject in the treble; thus—

Subject.

\[ \text{Subject.} \]

\[ \text{C.S.} \]

\[ \text{etc.} \]

But it is allowable to alter it slightly when thus treated, so long as its character is distinctly marked. The principal subject of the above

was a favourite with the composers of the last century; instances of it with different counter-subjects will be found in Handel’s ‘Joseph,’ in Mozart’s Requiem, and in a quartet of Haydn’s in F minor; also in Corelli’s Solos, op. 1, No. 3.

When a second subject appears simultaneously with the first proposition of the principal subject it is common to speak of it as the countersubject, as in the following, by Handel (6 organ fugues no. 3)—

\[ \text{C.S.} \]

\[ \text{etc.} \]

but many theorists think that this tends to confusion, and wish it to be called a second subject. Cherubini held that a fugue could not have more than one principal subject, and that therefore the terms first, second, or third countersubject should be used to designate any subjects which follow after the first; but the question does not seem to be of any very great importance.

For further treatment of this question see Fugue.

COUNTRY-DANCE. See Contredanse.

COUPART, ANTOINE MARIE, born in Paris 1780, died there 1854, originator and editor of the ‘Almanach des Spectacles’ (Paris 1822-1836). Coupart was for many years an employé in the ‘Bureau des journaux et des théâtres’ and had special opportunities for gaining his information. He also wrote vaudevilles and comedies, and edited several collections of songs. [M.C.C.]

COUPERIN, FRANCOIS, called, like Louis XIV, ‘Le Grand,’ was born at Paris 1668, and died there 1733. In 1696 he became organist of St. Gervais, in which office, from about 1650 to 1700, he was both preceded and succeeded by members of the Couperin family, who were all professional musicians. But though he is reported to have been a first-rate organist, his reputation rests upon his various suites of pieces for the ‘clavecin,’ his excellent Méthode for that instrument, and his proficiency as an executant upon it. It is of particular interest for historians of music, as well as for professional pianists, to note the unmistakable influence which Couperin’s suites and Méthode had upon Sebastian Bach, both in his practice (mode of touch, fingerling, execution of ‘les agréments’—shakes, turns, arpeggios, etc.) [AGREMENTS] and in the shape and contents of some of his loveliest contributions to the literature of the instrument, such as his suites and partitas. The principal pieces in Bach’s ‘Suites françaises,’ ‘Suites anglaises,’ ‘Partitas,’ and even in some of his solo works for violin and violoncello, as well as in his suites for stringed or mixed stringed and wind instruments—‘Concerti Grossi’—the allemandes, courantes, sarabandes, gavottes, gigue, etc., are frequently in close imitation of the French types of dance tunes then current, and of which Couperin’s suites furnished the best specimens. Bach here and there goes to the length of
COUPERIN.

copying the curious rhythmical oddities which give to some of Couperin’s pieces, particularly his courantes, an air of stiffness and angularity akin to ill-carved wooden puppets:—compare Bach’s second courante, in the first of the Suites anglaises, particularly the first Double thereof, or the courante in the fourth Partita in D major, with Couperin’s courantes in G minor and D minor, G minor, A major, and B minor, from the first, second, third, fifth, and eighth ‘ordre’ of his ‘Pièces de clavecin.’ A distinction should be made between Couperin’s type of ‘courante’ and the Italian ‘corrente,’ as it is to be found in Corelli’s works—of which latter type Bach also gives many specimens. [COURANTE.] Couperin’s suites, in a word, are a sort of refined ballet music. He has re-set the dances played by the orchestra in Lully’s operas for the clavecin, and the theatrical twang noticeable in the quaint titles of many of the pieces—for instance, ‘La majestueuse,’ ‘L’enchanteresse,’ ‘Le prude,’ ‘La flatteuse,’ ‘Le voluptueuse,’ ‘Les enjouements bachiques,’ ‘Tendresses bachiques,’ ‘Fureurs bachiques,’ etc.—has stood in the way of a thorough musical development.

Couperin’s published works are four sets of ‘Pièces de clavecin’; his ‘Méthode, ou l’art de toucher le clavecin, y compris huit Preludes’; ‘Les gouts reunis, ou nouveaux concerts, augmentés de l’apothéose de Corelli’; ‘L’apothéose de l’incomparable Lully’; ‘Tris for two violins and bass’; and ‘Pièces de viole.’ A careful reprint of his suites for the clavecin, of which two volumes have hitherto appeared, is being edited by Brahms. [E.D.]

COUPLET. All modern organs are provided with mechanical appliances called ‘couplers.’ These useful adjuncts are of two general kinds—manual couplers and pedal couplers. (1) The former operate in one of three ways: either by taking down on one manual the key corresponding to that played on another, in which case it is a ‘unison coupler’; or by taking down the octave above the note pressed down, when it forms an ‘octave coupler,’ sometimes incorrectly called a ‘super-octave coupler;’ or by operating on the octave below, forming a ‘sub-octave coupler.’ The octave and sub-octave couplers sometimes act on the manual on which the note is struck. The couplers are put in action by draw-stops inscribed according to circumstances—as ‘Swell to Great,’ ‘Great to itself,’ or by pedals. Manual couplers date back at least as far as 1651, when Geisler’s organ at Lucerne was completed; which, according to the account formerly existing over the keys, contained several registers, whereby one may make use of the three manuals together, or of one or two of them separately.

(2) A pedal coupler attaches a particular manual to the pedal-clavier; and by bringing the lower 24 octaves of the compass of the manual under the control of the feet, produces the effect of a third hand on any manual required. [E.J.H.]

COURANTE (Ital. Corrente). (1) A dance of French origin, the name of which is derived from courir, to run. It is in 3-2 time, of rather rapid movement, and begins with a short note (usually a quaver) at the end of the bar. It is distinguished by a predominance of dotted notes, as in this, from Bach’s ‘English Suites,’ No. 4.

and requires a staccato rather than a legato style of performance. Like most of the other old dances, it consists of two parts, each of which is repeated. A special peculiarity of the courante is that the last bar of each part, in contradiction to the time-signature, is in 6-4 time. This will be seen clearly by an extract from the movement quoted above:—

As a component of the suite, the Courante follows the ALLEMANDE, with which in its character it is strongly contrasted. In losing its connection with the dance, it underwent a slight modification: whereas in its earlier shape the 6-4 rhythm was only to be found in the concluding bar of each part, courantes are frequently to be met with in suites wherein the two rhythms are mixed up, and sometimes even where, in spite of the time-signature, the 6-4 rhythm predominates throughout. This is especially the case in many of those by Couperin. The endeavour to bring out these various features clearly and prominently, without injuring the flow of the whole, led to the adoption of the polyphonic style, by which the Courante is so strongly contrasted with the Allemande. Its chief points may be briefly summed up thus—triple time, prevalence of dotted rhythms, alternations of 3-2 and 6-4 times, and polyphonic treatment.

(2) The Italian courante (Courante Italiane), called also, like the preceding, simply CORRENTE or COURANTE, is a different form, quite independent of that just mentioned. It answers more nearly to the etymological meaning of its name, consisting chiefly of running passages. This courante is also in triple time—usually 3-8, but sometimes 3-4—and of rapid tempo, about allegro, or allegro assai. It is thus, like the French courante, contrasted with the allemande. As an example of this class may be
COURANTE.

taken the following from Bach's 'Partita,' No. 5:

\[\text{Music notation}\]

Other specimens of this kind of courante may be found in No. 5 of Handel's 'First Set of Lessons,' and in Nos. 5 and 6 of Bach's 'Suites Francaises,' these last being in 3-4 time. They are also frequent in Corelli's 'Violin Sonatas.'

(3) One more species of courante remains to be noticed, which is founded upon, and attempts to combine the two preceding ones, but with the peculiarity that the special features of both—viz. the French change of rhythm, and the Italian runs—are not introduced. It is in fact a hybrid possessing little in common with the other varieties, except that it is in triple time, and consists of two parts, each repeated. Most of Handel's courantes belong to this class. The commencement of one, from his 'Lessons,' Bk. i., No. 8, will show at once the great difference between this and the French or Italian courante.

\[\text{Music notation}\]

Bach, on the other hand, chiefly uses the first kind of courante, his movements more resembling those of Couperin.

E. F. P.

COURTOIS, JEAN, eminent composer, lived in the first half of the 16th century, chapel-master to the Archbishop of Cambrai in 1539 when Charles V passed through that city on his way to Ghent, and composed a motet in 4 parts, 'Venite populi terra,' which was performed in the Cathedral. Eight of his masses are in the Royal Library at Munich, and one in the library at Cambrai. He composed many motets, published in the following collections, 'Flor de Motetti' (Venice 1539); 'Collectissimae ... Cantiones' (Augsburg 1540); 'Novum et insignis opus musicum' (Nuremberg 1537); 'Liber quartus: XXIX musicas quoquer etc.' (Paris 1534); 'Psalmorum selectorum' (Nuremberg 1539); 'Cantiones sacræ' (Antwerp 1546); and in 3 vols of motets published at Lyons (1532-1538). His French songs include a canon and two songs in 5 and 6 parts in 'Chansons à 4, 5, 6, et 8 parties, de divers auteurs' (Antwerp 1543-1550); 'Si par souffrir,' in 'Trente chansons ... à 4 parties' (Paris); and two songs in 'Trente-cinq livres de Chansons nouvelles' (Paris 1532-1549).

M. C. C.

COUSSEMAKER, CHARLES EDMOND HENRI DE, a distinguished French writer on the history of music, born at Bailleul (Nord), April 19, 1805 (not 1795). His family dates from the fifteenth century, and had for many generations held important magisterial posts in Bailleul; his father, a 'juge de paix,' destined him for the law; but his musical aptitude was such that at ten he could play any piece upon the piano at sight. He also learned the violin and violoncello. He was educated at the Douai 'Lycée,' and took lessons in harmony from Moreau, organist of St. Pierre. In 1825 he went to Paris, and studied counterpoint under LeFebvre. The recent researches of Fétis had roused a general interest in the history of music, and Coussemaker's attention was turned in that direction. Having completed his studies he was appointed 'juge' successively at Douai, Bergues, Hazebrouck, Dunkerque, and Lille. He died Jan. 10, 1876. He was a member of the 'Institut' for twenty years, and belonged to several other learned societies, besides being a 'chevalier' of the Legion of Honour, and of the order of Leopold of Belgium. His works are 'Mémoire sur Huchald,' &c. (1841); ' Notices sur les collections musicales de la bibliothèque de Cambrai,' etc. (1852); 'Histoire de l'harmonie au moyen âge' (1852); 'Trois chants historiques' (1854); 'Chants populaires des Flamands' (1856); 'Chants liturgiques de Thomas à Kempis' (1856); 'Notices sur un MS. musical de ... S. Dîs' (1859); 'Drame liturgiques,' etc. (1861); 'Messe du XIIe siècle,' etc. (1861); 'Scripitorum de musica mediæ ævi, nova series' (1861); 'Les premières, les XIIe et XIIIe siècles' (1862) ; and 'L'art harmonique au XIIe et XIIIe siècles' (1865). He has also edited the works of Adam de la Halle.

\[\text{In continuation of Gerbert's 'Scriptores ecclésiastici.'}\]
COUSSEMAKER.

(Paris, 1873). At the time of his death he was preparing a continuation of his `Art harmonique' to the fourteenth century. His legal writings are good, especially one on Flemish law. In early life he composed some masses and other church music. In spite of considerable errors his works form a most important contribution to the history of music. [F.G.]

COUSSE or KUSSER, JOHANN SIGISBUND, son of a musician at Presburg; born there 1657, died in Dublin 1727. He studied six years in Paris under Lulli, and on his return to Germany was appointed chapel-master at Wolfenbüttel, and at Stuttgart. He lived at Hamburg from 1693 to 1697, conducting the performances at the opera, and is said to have been one of the first to introduce the Italian method of singing into Germany. Between 1700 and 1705 he made two journeys to Italy for study. Soon after, he came to London, and in 1710 received an appointment in the Cathedral of Dublin, of which he called himself chapel-master. He was also conductor of the King's band in Ireland until his death. His published works comprise the operas `Erindo' (1693) `Porusz', `Pyramus and Thisbe' (1694), `Scipio Africanus' (1695), and `Jason' (1697), all performed at Hamburg; `Apollo en joué', six operatic overtures and airs; an opera `Ariane'; and `Heliconische Musenlust', a collection of airs from Ariane (Nuremberg 1700); an Ode on the death of Arabella Hunt; and a `Serenade' for the King's birthday (1724). [M.C.C.]

COVENT GARDEN THEATRE. opened Dec. 7, 1732, under the management of Rich, who moved there with all his company from the theatre he had previously directed in Lincoln's Inn; burned on the night of Sept. 19, 1808; new theatre opened Sept. 18, 1809; converted into an opera-house 1847; burnt down 1856; reconstructed and opened again as an opera-house 1858. Though licensed for the performance of the higher class of dramatic works, to which the name of `legitimate' is given, Covent Garden Theatre has been the scene of all kinds of theatrical representations; and two years after the first opening of the theatre, in 1734, we find the bill for March 11 announcing `a comedy called The Way of the World, by the late Mr. Congreve, with entertainments of dancing, particularly the Scotch dance, by Mr. Glover and Mrs. Laguerre, Mr. Le Sac and Miss Boston, Mr. de la Garde and Mrs. Ogden; with a new dance called Pigmalion, performed by Mr. Malter and Mlle. Sallé. `No servants,' it is stated, in a notification at the end of the programme, `will be permitted to keep places on the stage.' Mlle. Sallé is said on this occasion to have produced the first complete ballet d'action ever represented on the stage. She at the same time introduced important reforms in theatrical costume. [See BALLET.] The chief composer of eminence connected with the theatre was Sir Henry Bishop, who between 1810 and 1824 produced at Covent Garden no less than fifty musical works of various kinds, including `Guy Mannering,' `The Miller and his Men,' `The Slave,' and `Clair,' besides adaptations of Rossini's `Barber of Seville,' Mozart's `Marriage of Figaro,' and other celebrated operas. `Der Freischütz,' soon after its production in Germany, was brought out in an English version both at Covent Garden and at Drury Lane (1824). So great was its success that Weber was requested to compose for Covent Garden an entirely new opera. `Oberon,' the work in question, was brought out in 1826 (April 12), when, though much admired, it failed to achieve such popularity as `Der Freischütz' had obtained. It has been said that Weber was much affected by the coolness with which `Oberon' was received. An excellent French critic, the late M. Scudo, writing on this subject in the `Revue des Deux Mondes,' records the fact that `Oberon' was very successful on its first production at Covent Garden, and adds that it was `received with enthusiasm by those who were able to comprehend it.' An English musical journal, the `Harmonicon,' published a remarkable article on `Oberon,' in which, says M. Scudo, `all the beauties of the score were brought out with great taste. It is impossible,' he continues, `to quote an instance of a great man in literature or in the arts whose merit was entirely overlooked by his contemporaries. As for the death of Weber it may be explained by fatigue, by grief without doubt, but, above all, by an organic disease from which he had suffered for years.' Nevertheless the enthusiasm exhibited by the public at the first performance of `Oberon' was not maintained at the following representations. The masterpiece of the German composer experienced much the same fate as `Guillaume Tell' in Paris. In a letter to his wife, written in the very first night of performance, Weber says, `My dear Lina, Thanks to God and to his all powerful will I obtained this evening the greatest success of my life. The emotion produced by such a triumph is more than I can describe. To God alone belongs the glory. When I entered the orchestra, the house, crammed to the roof, burst into a frenzy of applause. Hats and handkerchiefs were waved in the air. The ovation had to be executed twice, as had also several pieces in the opera itself. At the end of the representation I was called on to the stage by the enthusiastic acclamations of the public; an honour which no composer had ever before obtained in England. All went excellently, and every one around me was happy.' Between 1826 and 46 operas and musical dramas were from time to time played at Covent Garden. But it was not until 46 that the theatre was turned permanently into an opera-house; when, with the interior reconstructed by Mr. Albano, it was opened, in the words of the prospectus, `for a more perfect representation of the lyric drama than has yet been attained in this country.' The director was Mr. Frederick Beale (of the firm of Cramer, Beale, & Co.), with whom was associated Signor Persiani, husband of the eminent prima donna of that name, and others. The musical conductor was Signor, now Sir Michael, Costa. In the company were
cluded Madame Grizi and Signor Marli, who with Signor Costa and nearly all the members of his orchestra had suddenly left Her Majesty's Theatre for the new enterprise, in which they were joined by Mme. Persiani, Signor Tamburini, Signor Ronconi and Mlle. Albou, who, on the opening night—April 6, 147—sang (as Aracce in 'Semiramide') for the first time on this side of the Alps. The management of the Royal Italian Opera, as the new musical theatre was called, passed after a short time into the hands of Mr. Delafeld, who was aided by Mr. Gye; and since Mr. Delafeld's bankruptcy the establishment has been carried on solely by Mr. Gye (1851), who, when the theatre was burned down in 1856, rebuilt it at his own expense from the design of Mr. Edward Barry, R.A. The celebrated prima donna, Adelina Patti, made her début at the Royal Italian Opera in 1862, when she sang for the first time on the boards of a European theatre. Mlle. Lucca and Mlle. Albani, Signori Tamberlik and Graziani, may be mentioned among other artists of European fame who have appeared at the Royal Italian Opera. For the seasons 1840 and 1855 M. Jullien directed promenade concerts at this theatre; and from time to time, during the winter months, performances of English opera have been given at Covent Garden. Thus Balfe's 'Rose of Castillia,' 'Satanelia,' and 'Armourer of Nantes,' Wallace's 'Lurline,' and Benedict's 'Lily of Killarney,' were produced here under the management of Miss Louise Fyne and Mr. William Harrison.

COWEN, FREDERICK HYMEN, born Jan. 29, 1832, at Kingston, Jamaica, exhibited early an extraordinary love of music, was brought to England by his parents when four years old, and placed under the tuition of Sir J. Benedict and Sir J. Goss, whose pupil he remained until the winter of 1855. He then studied at the conservatories of Leipzig and Berlin, returning to London in 1868. Amongst his early works are an operetta entitled 'Garibaldi,' a fantasiosonata, a trio, quartet, pianoforte concerto, and a symphony in C minor. He has also written a cantata, 'The Rose Maiden' (1870); the incidental music to Schiller's 'Maid of Orleans' (1871); a festival overture for Norwich (1872); 'The Corsair,' a cantata composed for the Birmingham Festival, 1876, and a symphony in F major. On Nov. 22, 1876, his opera of 'Pauline' was brought out by the Carl Rosa company at the Lyceum Theatre with great success. Mr. Cowen is also the composer of many popular songs.

COX AND BOX, a triumviretta. A musical farce, altered from Madison Morton's 'Box and Cox' by F. C. Burnand, music by A. Sullivan. Produced at the Adelphi, May 11, 1867.

CRAMER, a family of German musicians, of whom the head was JACOB CRAMER, born at Sæcbau in Silesia 1705, flutist in the then celebrated court orchestra of Mannheim, where he died in 1770. Of his sons, JOHANN, born at Mannheim 1743, was drummer in the court band at Munich, and WILHELM, born at Mannheim 1745, made himself a considerable reputation as a violinist and leader. He was a pupil of Johann Stamitz, son, and of Cannabich, and when still very young gave evidence of unusually brilliant abilities. His contemporaries declared that his playing united the facility of Lolli with the expression of Franz Benda. At 16 he was admitted into the band at Mannheim, but left it after his father's death for London, where he was well received in 1772, and soon obtained a creditable position. His first appearance was March 23, 1773. He was appointed head of the king's band, and leader at the Opera and Pantheon, the Antient Concerts, and the Professional Concerts. He was famous as the leader of the Handel Festivals at Westminster Abbey in 1784 and 85. His last appearance was at the Gloucester Festival in 1799, and he died in London Oct. 5 of that or the next year. As a solo player he was for a time considered to be without a rival in England till superseded by Salomon and Viotti. He published eight concertos (for the most part in Paris), several solos, and trios, but the best known of his compositions, FRANZ, born 1772, a violinist of repute in London, died 1848; CARL, born 1780, a good pianist and valued teacher; and finally, JOHANN BAPTIST, the best known of the whole family, an eminent pianist, and one of the principal founders of the modern pianoforte school, born at Mannheim Feb. 24, 1771. He was but a year old when his father settled in London, and it was there that he lived and worked for the greatest part of his life. To his father's instruction on the violin and in the elements of the theory of music, pianoforte playing was added, and for this the boy manifested the most decided preference and unmistakable talent. His teachers were a certain Benser, Schroeter, and above all, Muzio Clementi, under whom he studied for two years till Clementi's departure in 1774. His mind and taste were formed on Handel, Bach, and anfripli, Haydn, and Mozart, and by this means he obtained that musical depth and solidity so conspicuous in his numerous works. Cramer was in the main self-educated in theory and composition. He had, it is true, a course of lessons in thoroughbass from C. F. Abel in 1786, but his knowledge was chiefly acquired through his own study of Kirnberger and Marpurg. From 1798 Cramer undertook professional tours on the continent, and in the intervals lived in London, enjoying a world-wide reputation as pianist and teacher. In 1828 he established the firm of J. B. Cramer and Co., music-publishers, which, besides bringing out his own compositions, was specially employed in publishing the older classical works. After a residence of some years in Paris he returned in 1845 to London, and passed the rest of his life in retirement. He lived to play a duet with Liszt in London, and died April 16, 1858. There are references to him in Beethoven's letters of June 1, 1815, and March 5, 1818, and frequent notices in Moscheles's Life. Rice has left on record (Notizen, p. 59), that John
Cramer was the only player of his time of whom Beethoven had any opinion—'all the rest went for nothing.' [A. M.]

J. B. Cramer's playing was distinguished by the astonishingly even cultivation of the two hands, which enabled him, while playing legato, to give an entirely distinct character to florid inner parts, and thus attain a remarkable perfection of execution. He was noted among his contemporaries for his expressive touch in adagio, and in this, and in facility for playing at sight, he was able when in Paris to hold his own against the younger and more advanced pianists. His improvisations were for the most part in a style too artistic and involved for general appreciation. Cramer's mechanism exhibits the development between Clementi and Hummel, and is distinguished from the period of Moscheles and Kalkbrenner which followed it, by the fact that it aimed more at the cultivation of music in general than at the display of the specific qualities of the instrument. All his works are distinguished by a certain musical solidity, which would place them in the same rank with those of Hummel, had his invention been greater and more fluent; but as it is, the artistic style, and the interesting harmony, are counterbalanced by a certain dryness and poverty of expression in the melody. It is true that among his many compositions for pianoforte there are several which undeniably possess musical vitality, and in particular his 7 concertos deserve to be occasionally brought forward; but, speaking generally, his works (105 sonatas, 1 quartet for pianoforte, 1 quintet, and countless variations, rondos, fantasies, etc.) are now forgotten. In one sphere of composition alone Cramer has left a conspicuous and abiding memorial of his powers. His representative work, '84 Studies in two parts of 42 each,' is of classical value for its intimate combination of significant musical ideas, with the most instructive mechanical passages. No similar work except Clementi's 'Gradus ad Parnassum' has been so long or so widely used, and there are probably few pianists who have not studied it with profit. It forms the fifth part of Cramer's 'Grosse practische Pianoforte-Schule' (Schuberth, Leipzig), and has appeared in numerous separate editions. Of these the earliest is probably the lithograph edition of Breitkopf & Härtel, of which the second part appeared in 1810; next in importance ranks the last that was revised by Cramer himself, viz. the original English edition of Cramer & Co., which contained, as op. 81, '16 nouvelles Études,' making in all 100; and finally an edition without the additional Nos., revised by Cocius, and published a few years later than that last mentioned, by Breitkopf & Härtel. A selection of '50 Études,' edited by von Bülow (Aïbl, Munich), is specially useful to teachers from the excellent remarks appended to it, though, on the other hand, it contains a number of peculiarities which may or may not be justifiable, the editor having transposed one of the studies and modified the fingerings of them all to meet the exigencies of the modern keyboard. The above edition in 100 numbers must be distinguished from the 'Schule der Geländigkeit' (op. 100), also containing 100 daily studies, and which forms the second part of the 'Grosse Pianoforte-Schule,' and should be used as a preparation for the great 'Études.'

If it is asked, When did Cramer flourish, and what does he represent to us? the answer usually returned is that he was born after Clementi and died after Hummel, and that he forms the link between those two great players and writers for their instrument. But no pianist who has his open would commit himself to such a statement, which rests solely upon two dates of birth and death, and leaves out of sight every spiritual connection, every indication of mental paternity and relationship. The truth is that Cramer does not surpass Clementi as regards the technical treatment of the pianoforte, but stops considerably short of him: Cramer's best sonatas are as much more tame and timid than Clementi's best, as his most valuable études are technically easier and less daring than the chefs-d'œuvres of Clementi's Gradus. Spiritually, though not technically, Cramer occupies a field of his own, which all pianists respect. Many of his études are poems, like Mendelssohn's Songs without words. But in his sonatas, etc., he moves in a restricted groove of his own, near the highway of Mozart. The name 'J. B. Cramer' really signifies Cramer's études—let us say some forty or fifty out of the hundred he has published. These certainly are good music—a few, perhaps a dozen, even beautiful music, and always very good practice. But pitted against forty or fifty out of the hundred numbers of Clementi's Gradus, which are equally good music, and decidedly better practice, they sink irretrievably.

The treatment of the pianoforte as distinct from the harpsichord, if pursued along its plain and broad high-road does not necessarily touch upon Cramer. It stretches from Clementi to Beethoven on the one side, from Mozart to Hummel on the other; from Mozart via Hummel, and Clementi via Field, to Chopin; and from Hummel, via Chopin and Beethoven, to Liszt. Cramer, like Moscheles after him, though not of the first authority, must be considered one of the fathers of the church of pianoforte playing, and worthy of consultation at all times.

[E. D.]

Cramer & Co. This eminent music publishing house began business in the year 1824 in the premises now occupied by them. John D. B. Cramer's popularity and influence soon drew around him a goodly proportion of the professors of the day, who with his own pupils created a large circulation for the pianoforte works of the firm. The catalogue of publications continued on the increase until, in the year 1830, the firm bought the whole of the music plates belonging to the Harmonic Institution, which contained a considerable portion of the works of Dussek, Clementi, Haydn, Herz, Hummel, Mozart, and Steibelt, besides a few of Beethoven and Moscheles, with Handel's choruses arranged as
solo and duets, many of the popular songs of C. Horn, the opera 'Oberon' and 'Freischütz,' the oratorio of 'Palestine' by Dr. Crotch, and a large number of Italian songs and duets by Gabusse, Meyerbeer, Mozart, Pacini, Paer, Rossini, Vincenzo, and others, thus giving the house a very strong position in the music trade. Upon this followed the English operas of Balfour, Benedict, and Barnett, the glees of Horace and Calcott, the songs of Neukomm, pianoforte works of Dohler, Moscheles, Thalberg, Leopold de Meyer, etc. Between 1830 and 40 Mr. Cramer was much abroad, and in 1843 Mr. Addison retired from the business and was succeeded by Mr. W. Chappell, when the firm became Cramer, Beale, and Chappell. In 1845 Vincent Wallace returned from America, and Cramer & Co. secured his 'Maritana,' publishing also, as years went on, his other successful works. In 1861 Mr. Chappell retired, and was succeeded in the firm by Mr. George Wood. Mr. Beale dying in 1863 the whole of the business fell into the hands of Mr. Wood, who still carries it on with great success, giving, however, more attention to pianoforte manufacturing than to publishing, having introduced and very extensively carried out a novel mode of supplying pianofortes on a hiring system, which seems to have become very general.

CRANG & HANCOCK, organ builders. John Crang, a Devonshire man, settled in London and became a partner with Hancock, a good voice of reeds. The latter added new reeds to many of Father Smith's organs. Crang altered the old echoes into swells in many organs, as at St. Paul's Cathedral, St. Peter's, Cornhill, etc. There appear to have been two Hanscocks, John and James, probably brothers; both are mentioned in the contract for an organ at Chelmsford in 1772. John died in 1792, and James was living in 1830, and probably later. Crang appears to have given his name to Crang Hancock, a pianoforte maker.

CREATION, THE. Haydn's first oratorio, written at the suggestion of Salomon. The book of words was selected—originally for Handel—from Genesis and Paradise Lost by Mr. Lidley or Liddell, and translated into German, as 'Die Schöpfung,' with modifications, by Baron von Swieten. The music occupied Haydn from 1796 to 1798, and was produced by a body of Dilettanti at the Schwarzenberg Palace, Vienna, April 29, 1798. 500 ducats were subscribed for Haydn. In 1800 it was published in score at Vienna with German and English words, the latter re-translated by van Swieten; 510 copies were subscribed for, of which nearly half were for England. It was first performed in London at Covent Garden, March 28, 1800, and in Paris Dec. 24, 1800, when Napoleon I. escaped the infernal machine in the Rue Niceise. A great performance by the same society as before took place at the University Hall, Vienna, on March 27, 1805, in Haydn's presence, a year and two months before his death.

Its popularity in England dates from March 17, 1813, and reached its climax some 20 years ago.

CREDO is the first word of the Nicene Creed in Latin, and is the name by which it is well known to musicians by reason of the magnificent music to which it has been set by the greatest composers for the use of the Roman Church in the Service of the Mass. The traditional figure to which the first sentence is given out by the priest is

| Credo in unum Deum |

and upon this Bach developed the stupendous contrapuntal chorus to those words in his B minor Mass.

[CHH]n

CREED. There are three creeds in use in the services of the English church—the Apostles' Creed, the Nicene, and that known by the name of St. Athanasius.

The first of these is the most ancient, and of unknown origin, and was probably used in early times. It is found in the ancient breviaries of the churches of England, such as those of Sarum and York, in much the same position as it now occupies. In the first Prayer Book of Edward VI it was ordered to be said or sung like the other creeds, but in later revisions the word 'sung' has been removed and it has become the custom only to intone it, and in some churches the intonation is supported by harmonies on the organ, but it has not been definitely set to music for English use.

The Nicene Creed is distinguished in the English church by an extensive musical treatment. It cannot be ascertained when it came into use in the ancient English offices. It is in the breviaries of Sarum, York and Hereford, for use on feasts and solemn occasions. It was looked upon to some extent as a hymn, whence its universal musical treatment. Marbeck's setting of it in the 'Book of Common Prayer noted' of 1552 for the use of the English reformed church follows the Roman original much less closely than most of the other parts of his setting of the service, and is consequently much more free and melodious. Tallis's setting of it is said to resemble the Gregorian Descants of the creed in the Missa da Angeli. Further settings of it both ancient and modern are extremely numerous. Among the ancient ones may be mentioned settings by Bird (in 6 parts), Farrant, Gibbons, Child, Aldrich, Blow, Purcell, Rogers and Bevin. Attempts have been made with very fair success to adapt it to a kind of free chant form, which renders it more available for musical performance by parish choirs and general congregations.

The Athanasian Creed, as it is now called, was formerly known very generally as the Psalm 'Quicunque vult'—the first two words of its Latin form. It was sung at Prime after certain other psalms, and the custom of singing it as a psalm has continued in the Roman church to the present day, it being pointed and divided into paragraphs after the manner of psalms, and
answering in its construction to the principles of ancient Hebrew poetry. The chant most commonly used is a very simple one by Tallis (see p. 337 a). There have been many others specially written for it both in ancient and modern times. It has never been customary to adapt it to more elaborate forms of composition. [C.H.H.P.]

CREMONA, a considerable town in Lombardy, on the river Po, was for the space of two centuries, from about 1550 to 1750, the seat of the famous Cremona school of violin-makers. The shape and construction of the violin, and the other instruments belonging to the tribe, having been finally settled by the great makers of Brescia, Gaspar de Salo and Paolo Maggini (see those names), it was at Cremona that the last step in the art of violin-making was made, which led to that point of perfection from which no further progress has yet been possible or perhaps desirable. The numerous makers of the Amati family (see that name) chronologically head the list of the masters of Cremona: Antonio Stradivari and Josef Guarnerius (see those names) are the greatest of all, and their instruments have never been rivalled. The names of Andrea, Petrus, and Josef Guarnerius (brother of Andreas), Carlo Bergonzi, Guadagnini, Montagnana, Ruggeri, Storione, and Testore (see all these names) make up the list of the masters of this school, whose violins are still highly valued.

The term 'a Cremona,' or 'a Cremonese violin' is often incorrectly used for an old Italian instrument of any make.

'Cremona,' as applied to an organ stop, is a mere ignorant corruption of 'Krumhorn.' [P.D.]

CREQUILLON or CREQUILLON, one of the most distinguished musicians of the Netherlands school in the period between that of Josquin des Prés and that of Lassus and Palestrina (1520-1568). He was attached to the chapel of the Emperor Charles V at Madrid. His compositions are even more numerous than those of his contemporaries Clemens non Papa and Gombert. His masses, motets and chansons appear in all the great collections printed at Louvain and Antwerp in the second half of the 16th century, and some of his works were printed in 1544 (i.e., probably in his life time) at Venice by Gardano.

CRESCENDO—increasing, i.e. in loudness. One of the most important effects in music. It is expressed by cres. and by the sign —. Sometimes the word is expanded — cres. . . . cen. . . . do — to cover the whole space affected. As with so many other things now familiar, Beethoven was practically the inventor of the crescendo. In the works of his predecessors, even in such symphonies as the G minor and 'Jupiter' of Mozart, it is very rarely to be found. Among the most famous instances in Beethoven are that in the 'working out' (after the double bar) of the first movement of the Symphony in Bb (No. 4). This immortal passage, which so excited the wrath of Weber, begins in the strings and drum ppp, and continues so for 13 bars; then a shade louder, pp, for 31 bars; and then a crescendo of 8 bars with the same instruments, ending in the reprise of the subject fortissimo, and with full orchestra.

Another instance, on a still more extended scale, is in the coda to the last movement of Schubert's Symphony in C (No. 9), where the operation is divided into distinct steps—first 8 bars ppp; then 24 bars pp; then 12 bars p; then 16 bars cresceando to mf; then 13 bars crescendo to f; then a crescendo of 8 bars to ff, and lastly a final advance of 36 more to fff.

A short crescendo of remarkable effect is found in the Finale to Schumann's D minor Symphony.

In the overtures of Spontini and Rossini the crescendo is employed, with a repetition of the same figure, in a manner at once so effective, so characteristic, and so familiar, that it is only necessary to allude to it here.

CRESCENTINI, GIROLAMO, a very celebrated Italian soprano, was born in 1766 at Urbania, near Urbino. At the age of ten, he began the study of music, and was afterwards placed with Gibelli, to learn singing. Possessed of a beautiful mezzo soprano voice, and a perfect method of vocalisation, he made his debut at Rome in 1785. He then obtained an engagement as primo uomo at Leghorn, where he appeared in Cherubini's 'Artaserse.' In the spring of 1785 he sang at Padua in the 'Didone' of Sarti, and was engaged for Venice. In the following summer he was at Turin, where he sang Sarti's 'Risorse di Bacso.' He now came to London, and remained sixteen months. He was here thought so moderate a performer that, before the season was half over, he was superseded by Tenducci, an old singer, who had never been first-rate, and had scarcely any voice left. 'It is but justice,' says Lord Mount-Edgcumbe, 'to add that, when he was here, Crescenzini was very young, and had not attained that excellence which has since gained him the reputation of a first-rate singer. He never returned to this country.' In 1787 he was engaged for the carnival at Milan, and sang for two whole years at the San Carlo in Naples. In 1791 and 93 he appeared at the Argentina at Rome, and in 94 at Venice and Milan. In this last city he arrived at the highest degree of excellence in Zingarelli's 'Roméo e Giulietta.' In 1796 Cimarosa composed expressly for him 'Gli Orazzi e Curiazzi' at Venice. An amusing story is told, that on one occasion, fancying that the dress of the primo tenore ('Curiazzi') was more magnificent than his own (as Orazio), he insisted on its being given up to him. An exchange was therefore made, in spite of the remonstrances of the manager; and throughout the evening a Curiatius, six feet high, was seen wearing a little Roman costume, which looked as if it would burst at any moment, while a diminutive Horatius was attired in a long Albanian, with its skirt trailing on the ground. After singing at Vienna, he returned to Milan for the carnival of 1797, for the 'Melesagro' of Zingarelli. At the end of this season he engaged
himself with the Opera at Lisbon, where he sang for the next four years. Returning to Italy, he reappeared at Milan in May's 'Alonzo e Cora' and Fedrerci's 'Ifigenia,' in 1803. He sang at Piacenza, at the opening of the new theatre, and then went to Vienna with the appointment of professor of singing to the Imperial family. Napoleon having heard him there, was so charmed that he determined to engage him permanently, and secured to him a handsome salary. He also gave him the decoration of the Iron Crown, which provoked almost as much discussion as Napoleon's distribution of thrones and sceptres had done. It is related that, in a salon at Paris, when a pompous orator was holding forth on the subject of the honour conferred on Crescentini, and inquired what right he could have to such a distinction,—the beautiful Mme. Grasini, who was present, rose majestically, and with theatrical tone and gesture exclaimed, 'Et a blesure, monsieur!' A storm of laughter and applause stopped the discussion. Crescentini sang at Paris from 1806 to 1812, when his voice showed signs of suffering from an ungenial climate, and he with difficulty obtained permission to retire. He went to Bologna, and then to Rome, where he remained till 1816, when he settled at Naples as professor at the Royal College of Music. He was the last great singer of his school. 'Nothing could exceed,' says Féiris, 'the suavity of his tones, the force of his expression, the perfect taste of his ornaments, or the large style of his phrasing.' In Rome he affected Napoleon and the whole of the audience to tears by his singing of that prayer, and the air 'Ombra adorata.' The prayer of Romeo was of his own composition, for this excellent singer was also a composer; he published at Vienna in 1797 several collections of Ariette, and some admirable exercises for the voice, with a treatise on vocalisation in French and Italian, at Paris. He died at Naples in 1846.

CRESPEL, GUILLAUME, a Belgian musician living in the latter half of the 15th century, and composer of a lament on the death of Ockenheim, which is of historical importance as giving what may be considered an authentic list of the most distinguished pupils of that master:

'Agricolis, Verbonnet, Prioris, Joquin des Frés, Gaspard, Brummel, Comprés, Ne parlez plus de joyeux chants, ne ris, Mais composez un ne recorderia
Pour lamantar nostre Maistre et bon père.'

[J.R.S.B.]

CREIGHTON, REV. ROBERT, D.D., born about 1639, was the son of the Rev. Dr. Robert Creighton, Professor of Greek at Cambridge, afterwards Dean of Wells, and in 1670 Bishop of Bath and Wells. In 1662 he, like his father, held the Greek Professorship at Cambridge. In 1674 he was appointed canon residuary and precentor of Wells Cathedral. Creighton composed several services and anthems still extant in the library of Wells Cathedral. Two, in Eb and Bb, are now printed. Tudway's MS. (Brit. Mus., Add. MSS. 7,338, 39) contains a third, in C, besides an anthem, 'Praise the Lord.' He is widely known by his sweet little canon-anthem 'I will arise.' He died at Wells in 1736 at the advanced age of 97.

[C.]

CRISTOFORI, BAROLOMMEO DI FRANCESCO —written Cristofalì by Maffei—a harpsichord-maker of Padua, and subsequently of Florence, and the inventor of the pianoforte. Other claims to this discovery have great interest and will be noticed elsewhere (see PIANOFORTE and SCHIRTER), but the priority and importance of Cristofori's invention have been so searchingly investigated and clearly proved by the late Cavaliere Leto Puliti,1 that the Italian origin of the instrument, which its name would indicate, can no longer be disputed.

Cristofori was born in 1641 (Fétis and Pietrucci in their respective memoirs erroneously state 1683). It may be surmised that he was the best harpsichord-maker in Florence, inasmuch as Prince Ferdinand, son of the Grand Duke Cosmo III, a skilled harpsichord player, who visited Padua in 1687, induced him then or very soon after to transfer himself from that city to Florence. We have evidence that in 1693 Cristofori wrote from Florence to engage a singer—the only time he appears in the Prince's voluminous correspondence. In 1709 Maffei visited Florence to seek the patronage of Prince Ferdinand for his 'Giornale dei Letterati d'Italia,' and in vol. v. of that work, published in 1711, Maffei states that Cristofori had made four 'gravisemiali col piano e forte,' three distinctly specified as of the large or usual harpsichord form, the fourth differing in construction, and most likely in the clavicord or spinet form: there was among the Prince's musical instruments a 'cimbalo in forma quadra,' an Italian spinet which when altered to a piano-forte would be termed a square. In 1719, in his 'Rime e Prose,' published at Venice, Maffei reproduced his description of Cristofori's invention without reference to the previous publication.

As these pianofortes were in existence in 1711, it is just possible that Handel may have tried them, since he was called to Florence in 1708 by Prince Ferdinand to compose the music for a melodrama, remained there a year and brought out his first opera 'Rodrigo.'

The Prince died in 1713, and Cristofori continuing in the service of the Grand Duke, in 1716 received the charge of the eighty-four musical instruments left by the Prince. Of these nearly half were harpsichords and spinets—seven bearing the name of Cristofori himself. It is curious however that not one of them is described as 'col piano e forte' and also interesting that in the receipt to this inventory we have Cristofori's own handwriting as authority for the spelling now adopted of his name.

The search for Cristofori's workshop proving unsuccessful, Puliti infers that the Prince had

1 Cenni storici della vita del serenissimo Ferdinando de' Medici, etc. Estratto dagli Atti dell' Accademia del L, Istituto Musicale di Firenze 1874.
CROCE.

On May 7, 1876, a stone was placed in the cloisters of Santa Croce at Florence bearing the following inscription—

A BARTOLOMEO CROSTOFORI
Cembalaro da Padova
che
in Firenze nel mdoxx
INVENTÒ
IL CLAVICEMBALO COL PIANO E FORTE
il Comitativo Fiorentino
Codiuvanti Italiani e Stranieri
pose questa Memoria.

[A. J. H.]

CRIVELLI, GAETANO, an excellent tenor of the old school, born at Bergamo in 1774. He made his first appearance when very young; and married at the age of 19. In 1793 he was at Brescia, where he was admired for his fine voice and large manner of phrasing. He was engaged to sing at Naples in 1795, where he remained several years, profiting greatly by the opportunities of hearing the best singers, and by the advice of good masters, especially of April. From thence he went to Rome, Venice, and at last to Milan, where he sang at La Scala with Banti, Marchesi, and Binaghi, in the carnival of 1805. In 1811 he succeeded Garcia at the Italian Opera in Paris, where he produced a great effect in the ‘Pirro’ of Paisiello, in which he first appeared. His superb voice, excellent method, and nobly expressive style of acting, combined to make him a most valuable acquisition to the stage. He remained there until Feb. 1817. He then came to London, and helped to make that a brilliant season at the opera. He had, according to Lord Mount-Edgcumbe, ‘a sonorous mellow voice, and a really good method of singing, but he was reckoned dull, met with no applause, and staid only one year.’ In 1819 and 20 he sang with success at La Scala in Milan; but in the latter year signs of decay were apparent in his voice, which became more evident when he appeared in that town in Lent, 1823. In 25, at Velluti’s suggestion, Ebers sent for him to take part in ‘Teobaldo ed Isolina;’ but the opera was not performed. For six years he presented the painful spectacle of a worn-out singer before the public of small provincial towns. In 1829 he sang, perhaps for the last time, at Florence; and died at Brescia July 10, 1836.

[C. M.]

CROCE, GIOVANNI DALLA, a learned, original composer, was born about 1560 at Chioggia. He was a pupil of Zarlino, by whom he was placed in the choir of San Marco. In 1603 he succeeded Donato as Maestro at that cathedral, and still held the post when he died in 1609. He was also in priest’s orders, and in this capacity was attached to the church of Santa Maria Formosa. His publications chiefly consist of a long list of Madrigals, Motets, Psalms, and other pieces in the ordinary musical forms of his epoch, and, with the exception of one curious volume, they are hardly worth enumeration. They are intituled, ‘Triaccia Musicale, nella quale vi sono diversi capricci a 4, 5, 6, and 7 voci, nuovamente com-
poste e data in luce' (Gl. Vincenti, Venice, 1597). The pieces in it are mostly comic, and are composed upon words written in the Venetian patois. A second edition of this was issued in 1603, a third in 1607, and a fourth in 1609. Two motets for eight voices are in Bodenwatz's *Florilegium Portense* (Part 2, Nos. 111 and 150). A collection of church motets by Croft, set to English words, under the title of 'Musica Sacra: Sixe Voyces,' was published in London in 1608. Several fine motets of his, full of expression and beauty, have been published with English words by Mr. Hullam in his Part Music, and nine in the collection of the Motet Society; and his madrigal 'Cynthia, thy song' is well known. [E.H.P.]

CROCIATO IN EGITTO, IL, heroico opera in two acts; words by Rossi; music by Meyerbeer; produced at the Fenice, Venice, in 1834, and at the King's Theatre, London, June 30, 1825. Velluti appeared in it, probably the last *caduto* heard in London.

CROFT (or, as he sometimes wrote his name, Crofte), William, Mus. Doc., born in 1677 at Nether Easington, Warwickshire, was one of the children of the Chapel Royal under Dr. Blow. On the erection of an organ in the church of St. Anne, Soho, Croft was appointed organist. On July 7, 1700, he was sworn in as a gentleman extraordinary of the Chapel Royal, with the reverse, jointly with Jeremiah Clark, of the first vacant organist's place. On May 25, 1704, on the death of Francis Piggot, Croft and Clark were sworn in as joint organists, and on Clark's death in 1707, Croft was sworn in to the whole place. On the death of Dr. Blow in 1708 Croft was appointed his successor as organist of Westminster Abbey, and master of the children and composer to the Chapel Royal. It was in the discharge of the duties of the latter office that Croft produced, for the frequent public thanksgivings for victories, etc., many of those noble anthems which have gained him so distinguished a place among English church composers. In 1711 he resigned his appointment at St. Anne's in favour of John Iaham, who had been his deputy for some years. In 1712 he edited for his friend, Mr. (afterwards Sir John) Dalben, sub-dean of the Chapel Royal, a collection of the words of anthems, to which he prefixed a brief historical account of English church music. On July 9, 1713, he took the degree of Doctor of Music in the University of Oxford, his exercise (performed on July 13) being two odes, one in English, the other in Latin, on the Peace of Utrecht; these were afterwards engraved and published under the title of *Musicus Apparatus Academicius* In 1715 Croft received an addition of £30 per annum to his salary as master of the children of the Chapel Royal for teaching the children reading, writing, and arithmetic, as well as playing on the organ and composition. In 1724 Dr. Croft published in two folio volumes, with a portrait of himself, finely engraved by Vertue, prefixed, Thirty Anthems and a Burial Service of his composition, under the title of 'Musica Sacra.' In the preface he states it to be the first essay in printing church music in that way, i.e. engraved in score on plates. Dr. Croft died Aug. 14, 1727, and was buried in the north aisle of Westminster Abbey, where a monument is erected to his memory. His biographers commonly attribute his death to an illness contracted at the coronation of George II. A glance at the dates will at once dispose of this:—Croft died Aug. 14, 1727, George II was crowned Oct. 4, 1727. Croft in the earlier part of his career composed for the theatre, and produced overtures and act tunes for 'Courtship a la mode,' 1700; 'The Funeral,' 1702; 'The Twin Rivals,' 1703; and 'The Lying Lover,' 1704. He also published sonatas for both violin and flute. Numerous songs by him are to be found in the collections of the period, and some odes and other pieces are still extant in MS. Two psalm tunes attributed to him, St. Ann's and St. Matthew's, and a single chant in B minor, will long live in the Anglican church, even after his fine anthems have become obsolete. [W.H.H.]

CROOK (Fr. *Corps de rechange*; Germ. *Ten*; *Bogen*). A name given to certain accessory pieces of tubing applied to the mouthpiece of brass instruments for the purpose of altering the length of the tube, and thus raising or lowering their pitch. Since these instruments can only play one scale, the sole method of enabling them to play another is to transpose the fundamental note, and this is done by the crooks. The largest number of crooks is required by the French horn, which is occasionally written for in every key, from the treble B♭ down to Ab in the bass octave.

The term is also applied to the S-shaped metal tube connecting the body of the bassoon with the reed (Fr. *boocle*). [W.H.S.]

CROSIDILL, JOHN, was born in London in 1751. He received his early musical education in the choir of Westminster Abbey under John Robinson and Benjamin Cooke. Upon quitting the choir he became a performer on the violoncello, and soon attained to considerable proficiency. In 1768 he became a member of the Royal Society of Musicians, and in the following year appeared at Gloucester, as principal violoncello at the meeting of the Three Choirs, a position which he continued to occupy until his retirement from his profession, with the exception of the year 1778, when the younger Cervetto filled his place, at Gloucester. In 1766, on the establishment of the Concert of Ancient Music, Crosdill was appointed principal violoncello. In 177 he succeeded Peter Gillier as violist of the Chapel Royal, an appointment which soon became a sinecure, but which he continued to hold until his death. He also became a member of the King's band of music, an office which he likewise retained until his death. In 1783 he was appointed chamber musician to Queen Charlotte, and about the same time taught the Prince of Wales, afterwards George IV, to play the violoncello. In 184 he filled the post of principal violoncello at the Commemoration of Handel. E c 2
In 188, having married a lady of considerable fortune, he retired from the public exercise of his profession. In 1821 he resumed its duties for one day, to play, as a member of the King's band, at the coronation of George IV. Fétil says that about 1772 Crox ill visited Paris, where he took lessons of the elder Jansen; that he resided in Paris for some years, and played in the orchestra of the 'Concerts des Amateurs' at the 'Loge Olympique'; and that he returned to London about 1780. But this account cannot be correct as respects the dates, as we have seen the Viscount Hanworth in his biographical account of his greatest part of the time mentioned by Fétil. His visit was probably in 1778-79 and occupied some months instead of some years. Crox ill died in October 1825 at Esker, Yorkshire, leaving all his property to his only son, Lieutenant Colonell Croxill, of the East India Company's service, who, by his father's desire, presented to the Royal Society of Musicians the munificent donation of 1000l. [W.H.H.]

CROSS, THOMAS, an engraver of music in the latter part of the 17th and early part of the 18th centuries. He resided in Catherine Wheel Court, on the south side of Snow Hill, near Snow Hill Conduit. At a time when printing by metal types was the almost universally adopted means for placing music before the public, he commenced the issue of a long succession of single songs engraved on copper plates by the graver, and printed on one side only of the leaf, and led the way to the general adoption of that method of printing music. Henry Hall, organist of Hereford Cathedral, mentions him in some verses prefixed to Dr. Blow's 'Amphiom Anglicus,' 1700;

'While at the shops we daily danging view
False concord by Tom Cross engraven true.'

And again in some lines prefixed to the second book of Purcell's 'Orpheus Britannicus,' 1704;

'Then honest Cross might copper cut in vain.'

It is probable that he engraved some of the earlier publications of the elder Walsh.

THOMAS CROSS, junior, his son, was a stamper of music, and (according to Sir John Hawkins) 'stamped the plates of Geminiani's Solos and a few other publications, but in a very homely and illegible character, of which he was so little conscious that he set his name to everything he did, even to single songs.' He probably bore in mind his father's superscription, 'Exactly engraved by T. Cross.' [W.H.H.]

CROSSE, JOHN, a native of, and resident in, Hull, published in 1825 a large quarto volume entitled 'An Account of the Grand Musical Festival held in September, 1823, in the Cathedral Church of York, ... to which is prefixed a Sketch of the Rise and Progress of Musical Festivals in Great Britain, with biographical and historical notes'—an admirably executed work, replete with valuable and useful information. He died in 1829. [W.H.H.]

CROTCH, WILLIAM, MUS. DEO., was born at Norwich, July 5, 1775. His father, a master carpenter, who combined a taste for music and mechanics, had constructed for himself a small organ. When little more than two years old the child evinced a strong desire to get to this instrument, and being placed before it, contrived shortly to play something like the tune of 'God, save the King,' which he soon was able to play with its bass, and other tunes. His ear was remarkably sensitive, and readily distinguished any note when struck, or detected faulty intonation. The Hon. Daines Barrington, a well-known amateur, published an interesting account of him, and Dr. Burney communicated to the Royal Society an account, which was printed in the Philosophical Transactions for 1779. In the spring of 1780 the child was brought to London, and performed in public on the organ. Besides his musical ability he displayed considerable skill in drawing, to which art he remained attached through life, and attained to much eminence in it. In 1786 Crotch went to Cambridge, and remained there about two years as assistant to Dr. Randall, the Professor of Music, and organist of Trinity and King's Colleges, and Great St. Mary's Church. At fourteen years of age he composed an oratorio, 'The Captivity of Judah,' which was performed at Trinity Hall, Cambridge, June 4, 1789. In 1788 he removed to Oxford, where he studied, under the patronage of the Rev. A. C. Schomberg, of Magdalen College, with a view of entering the church. His patron dying, he resumed the profession of music, and in September, 1790, was appointed, on the death of Thomas Norris, organist of Christ Church. On June 5, 1794, he graduated as Bachelor of Music. In March, 1797, he succeeded Dr. Philip Hayes, deceased, as organist of St. John's College, and Professor of Music in the University. On Nov. 21, 1799, he proceeded Doctor of Music, composing as his exercise Dr. Joseph Barton's 'Ode to Fancy,' the score of which he afterwards published. From 1800 to 1804 he delivered lectures in the Music School. In 1812 he produced his oratorio 'Palestine,' which was received with great favour, and also published a treatise on the 'Elements of Musical Composition.' About 1820 he was appointed music lecturer at the Royal Institution, London, and on the establishment of the Royal Academy of Music in 1822 was placed at its head as principal. On June 10, 1834, he produced at Oxford, on the installation of the Duke of Wellington as Chancellor, an oratorio, 'The Captivity of Judah,' wholly different from his juvenile work bearing the same title. On June 28 in the same year he made his last public appearance as a performer, by acting as organist for part of the third day's performance at the Royal Musical Festival in Westminster Abbey. Dr. Crotch died at Taunton at the house of his son, the Rev. William Robert Crotch, then Head Master of the Grammar School there, where he had for some time resided, while seated at dinner, Dec. 29, 1847, and was interred in the neighbouring church of Bishop's Hull, where a monumental inscription is placed

1 The MS. is now (1770) in possession of the Rev. Sir F. Osney, Bart.
CROCHET.

CROUCHET, a note which is half the value of a minim, and twice that of a quaver, and is represented thus :). The origin of the name is not known. It is apparently derived from the French croche; but croche is a quaver, 3, and is so called on account of the hook at the end of its tail, whereas a crotchet has no hook. The French name for this note is noire, the Italian, semiminima, and the German Viertel, 'a quarter'—i.e. of a semi-breve. The French call a crotchet rest, 3, by the pretty name of un soupir. [G.]

CROUCH, F. NICOLLS, a composer of songs and ballads during the second quarter of the present century, was the author of many productions which gained great popularity, and one—'Kathleen Mavourneen'—which still retains its place in public favour. He quitted England about the year 1845 and went to America, where, it is believed, he is still living. [W.H.H.]

CROUCH, MRS. ANNA MARIA, born April 20, 1763, was the daughter of Peregrine Phillips, a solicitor. Being gifted with a remarkably sweet voice Miss Phillips was at an early age placed under the instruction of a music-master named Wafer, and some time afterwards was articled to Thomas Linley, under whose auspices she made her appearance in the winter of 1780, at Drury Lane Theatre, as Mandane in Dr. Arne's 'Artaxerxes.' Her success was great, and for upwards of twenty years she held a high place in public esteem, both as actress and singer. Early in 1785 she married Mr. Crouch, a lieutenant in the navy, but after an union of about seven years the parties separated by mutual consent. About 1800 Mrs. Crouch's health became impaired, she withdrew from public life, and died at Brighton, Oct. 2, 1805. [W.H.H.]
her dramatic effects. In 1851 she went to Paris, where she had sung in concerts before her first appearance in Italy. She appeared with immense success in 'Ernani' at the Théâtre Italien, for Verdi's music seemed made for her. She sang again in London that year, and was very successful, in spite of many faults. Beside her splendid voice, she had a very fine face and figure, and enormous energy of accent and dramatic force: her performance in 'Fidelio' was especially admirable. In Jan. 1854 she was engaged at the Grand Opéra at Paris, and appeared as Valentine in 'Les Huguenots,' when the enthusiasm of the public knew no bounds. But a violent reaction soon succeeded, and the last opera in which she preserved some of her former popularity was the 'Vépres Siciliennes' of Verdi. In this work she exercised the greatest control of voice and action: it was her last rôle. In the following winter she retired, and married the Comte Vigier. [J.M.]

CRWTH (i.e. Crooth) or CROWD, as far as we know the oldest stringed instrument played with the bow; probably at home in India, but in its European use apparently limited to England, and especially to Wales. It is first mentioned in some elegiacs, written about 600, by Venantius Fortunatus, Bishop of Poitiers, running thus:

'Romanaque lyra plaudat tibi, Barbarus harpa,
Graecus schilliaca, chrotta Britannia canat.'

Its oldest form was probably the 'crwth trithant,' or with three strings, pictures of which are found in manuscripts of the 11th century. We first bear it mentioned again by Daines Barrington, a Welsh judge and archaeologist, who relates that he knew one John Morgan, born 1711 in the isle of Anglesey, who still played the crwth. Bingley also heard it played at Carnarvon as late as 1801; but it is now entirely out of use. In its latter form it was mounted with six strings, four stretched over the finger-board and played with the bow, and two, lying at the side of the fingerboard, pinched with the thumb of the left hand. The strings were tuned either as (a)—according to Edward Jones, the celebrated Welsh harp-player—

\[ \text{(a)} \]

or as (b)—according to Bingley ('Musical Biography', 1814). The sound-holes are perfectly circular, and have a diameter of 1¼ inch. The bridge does not stand straight, but inclines toward the right, and its left foot, which is 2½ inches in length (while the right foot measures only 2 of an inch), passes through the sound-hole and rests on the back of the instrument, thus acting the part of the sound-post in the violin. The crwth is 23¼ inches in length; its width near the tailpiece is 10½ inches, near the top 9 inches; the height of the sides is 2 inches.

[C.P.D.]

CRYSTAL PALACE SATURDAY CONCERTS, of orchestral and vocal music. These concerts were begun on Sept. 23, 1855, and assumed their present well-known character in 1860, after the construction of the concert-room. They have been throughout under the direction of Mr. Manns, their present conductor. The concerts begin with the first Saturday in October, and last, with an interval at Christmas, till the end of April. The orchestra consists of 16 first and 14 second violins, 11 violas, 10 cellos, and 10 double basses, with single wind, etc. The chorus, who appear only occasionally, are 300 strong. The solo players are the greatest who can be obtained. The programmes usually contain 2 overtures, a symphony, a concerto, or some minor piece of orchestral music, and 4 songs. The distinguishing feature of the concerts is their choice and performance of orchestral music. Not to mention the great works of Haydn, Mozart, Beethoven, Mendelssohn, Spohr, Weber, and other time-honoured classics, the audience were familiar with Schumann's symphonies and overtures, and with Schubert's symphonies and Rosamunde music, at a time when those works were all but unknown in the concert-rooms of the metropolis. Mendelssohn's Reformation Symphony was first played here; so was his overture to Camacho; Brahms's Symphony, Pianoforte Concerto, Variations on a theme of Haydn's, and Song of Destiny; Raff's Lenore and G minor Symphonies; Wagner's Faust Overture; Sullivan's Tempest Music and Symphony in E; Benebbc's Symphony in G
minor, and many other works were obtained (often in MS.) and performed before they were heard in any other place in the metropolis. Bennett's 'Parizina' was first played there after an interval of a quarter of a century.

A disposition is apparent in the managers of these concerts to present the audience with pieces of special interest; such as the MS. works of Schubert, and of Mendelssohn; Beethoven's arrangement of his Violin Concerto for the piano, and his Leonora Overture, 'No. 2'; an alternative Andante written by Mozart for his Parisian Symphony; the first version of Mendelssohn's Hebrides Overture, and other rare treasures of the same nature.

The performances are of that exceptional quality which might be inferred from the ability, energy, and devotion of the conductor, and from the fact that owing to the wind and a portion of the strings of the orchestra being the permanent band of the Crystal Palace, Mr. Manns has opportunities for rehearsal which are enjoyed by no other conductor in London. [G.]

CSARDAS. A national dance of Hungary, which consists of two movements, an andante and an allegro, both in common (4-4 or 2-4) time and in the same key. The andante, which is written in the Hungarian lied-form, has usually no repeats; but the Allegro consists generally of eight-and sixteen-bar phrases which are repeated. The character of the latter is wild and impetuous, and the whole, is sometimes in a major key, sometimes in alternating majors and minors. The music of the csárdás is always performed by gipsies, and it partakes strongly of the peculiar character of Hungarian national music, in its accents on the weak beats of the bar, its cadences, etc. An example of the csárdás, which is too long to be quoted here, may be seen at p. 91 of F. L. Schubert's 'Die Tanzmusik,' from which book the above particulars are derived. [E. P.]

CUDMORE, RICHARD, was born at Chichester in 1787, and received his first instruction in music from James Forgett, an organist in that city. At a very early age he became proficient on the violin, and at eleven years old was placed under Salomon. The next year he led the band at the Chichester Theatre, and was engaged in the orchestra at the Italian Opera, London. He next resided for nine years in Chichester, and then removed to London for the purpose of studying the piano-forte under Woff, and became a member of the Philharmonic Society's band. He afterwards settled in Manchester as leader of the Gentleman's Concerts there. He composed several concerts for the violin and others for the pianoforte, as also an oratorio, 'The Martyr of Antioch' (published) portions of which were performed in Manchester and Liverpool. Cudmore died at Manchester in January 1841. [W. H. H.]

CUE, i. e. queue, the tail of the preceding passage. Where a player or singer is reading from a separate part, and not from the score, some help is advisable to aid him in coming in correctly after the long pauses. A few notes of some other part immediately preceding the entrance of his own are therefore printed small in the stave as a guide; and this is called a cue:—

CUMBERLANDS, ROYAL SOCIETY OF. This is an ancient society of change-ringers long established in London, and originally called the Society of London Scholars. But in the early part of the 18th century some members of the society rang the bells of Shoreditch Church in honour of the public entrance into London of the Duke of Cumberland, and to commemorate this event a medal was presented to the society bearing a likeness of the Royal Duke. It was on receipt of this that its members changed the name of their society to that of 'Cumberland Youths' or 'Royal Cumberland.' [C.A.W.T.]

CUMMINGS, WILLIAM HAYMAN, native of Sidbury, Devon, born 1835, placed at an early age in the choir of St. Paul's Cathedral, and afterwards in that of the Temple Church. On leaving the latter he was appointed organist of Witham Abbey, and after a time admitted as tenor-singer in the Temple, Westminster Abbey, and the Chapels Royal, appointments which he subsequently resigned. Mr. Cummings is much in request for the important tenor parts in Bach's Passion, Bach's Mass, and other works where an accomplished musician is as necessary as a good singer. His publications include several prize glees, a Morning Service, an Anthem, various songs, a Cantata, 'The Fairy Ring,' and A Primer of the Rudiments of Music (Novello). [G.]

CURIONI, a seconda donna, engaged at the King's Theatre about 1754. Among other parts, she sang that of Plistene, a male character in the 'Ipermestra' of Hasse and Lampugnani. She was, perhaps, the mother of ALEBRECH CURIONI, a distinguished tenor, born about 1790. After singing at the San Carlo at Naples, and other theatres, he went to Barcelona, and had great success. Benelli, catering for the London Opera, found him there and engaged him for the season of 1821 at £600. He had a very sweet and pleasing voice, was a very agreeable, if not yet a great, singer, and was one of the handsomest men that ever appeared on the Italian stage. As time went on, his talent developed and he improved in dramatic force and value. His expression and taste were pure, and he sang with much intelligence. In 1821 he made his first appearance in London as Tito with Camporese. He then seemed the best tenor that had belonged to the theatre for some time, but he hardly gave the full promise of his future excellence. Curioni was re-engaged in 1822, at an increased salary, and appeared in 'Otello' with renewed éclat; and again in 'La Clemenza di Tito,' in 'La Donna del Lago,' and 'Ricciardo e Zoraida,' in 1823. In 24 and 25 he was again engaged. In the latter year he appeared as Orosmano in
CUTLER.

CUSINS, William George, was born in London, Oct. 14, 1833, and in his tenth year entered the Chapel Royal, as so many good English musicians have done before him. In 1844 he entered the Brussels Conservatoire under Félici for the study of the piano, violin, and harmony. In 47 he gained the King's Scholarship at the R. A. M. of London, where his Professors were Potter, Sterndale Bennett, Lucas, and Sainton. In 49 his scholarship was prolonged for two years and he made his first appearance in public as a piano player in Mendelssohn's D minor Concerto, and as composer with a MS. overture. In 49 he was appointed organist to the Queen's Private Chapel, and entered the orchestras of the Royal Italian Opera and the principal concerts of London, in which he played the violin for about five years. In 51 he was appointed Assistant Professor at the R. A. M. and afterwards Professor. In 67 he became Conductor of the Philharmonic Society, vice Sir W. Sterndale Bennett resigned. In 70 he was appointed Master of the Music to the Queen; in 75 succeeded Bennett as examining Professor at Queen's College; and in 76 became joint examiner, with Mr. Hullah and Mr. O. Goldschmidt, of scholarships for the National Training School of Music. Besides these posts Mr. Cusins has been often before the public as a player and concert giver, having amongst other places performed at the Gewandhaus Leipzig, and at Berlin, as well as the Philharmonic and Crystal Palace at home. His works, if not numerous, are all on an important scale:—Royal Wedding Serenata (1863); Gideon, an oratorio (Gloucester, 1871); two Concert overtures, 'Les Travailleurs de la Mer' (1869), 'Love's Labour's Lost' (1875); Piano Concerto in A minor; besides marches, songs, etc.

CUTELL, Richard, an English musician of the 15th century, was the author of a treatise on counterpoint, a fragment of which is preserved among the manuscripts in the Bodleian Library, Oxford.

W. H. H.]

CUTLER, William Henry, Mus. Bac., was born in the city of London in 1792. Having manifested a precocious musical ability, he was instructed in pianoforte playing by Little and Griffin, and in singing by Dr. Arnold. In 1803 he became a chorister of St. Paul's Cathedral, on quitting which he studied under William Russell, Mus. Bac. In 1812 he took the degree of Bachelor of Music at Oxford, his exercise for which (an adagio for voices and orchestra) he afterwards published. In 1818 he was appointed organist of St. Helen's, Bishopsgate, and about the same time opened an academy for teaching music on Logier's system, but which he gave up after about three years' trial. In
1821 he appeared as a singer at the Dramatic at Drury Lane Theatre, but failed from nervousness. In 1823 he resigned the organistship of St. Helen's for that of Quebec Chapel, Portman Square. Cutler's compositions comprise a service, anthems, songs, and numerous piano forte pieces.

[W.H.H.]

CUVILLON, JEAN BAPTISTE PHILÉMON DE, a distinguished violinist, was born at Dunkirk in 1809. As a pupil of the Paris Conservatoire he studied the violin under Habeneck sen. and Baillot, and composition under Reicha. He is considered as one of the best representatives of the modern French school of violin-playing at Paris, where he occupies the post of professor of the violin at the Conservatoire. He is mentioned in Hiller's 'Mendelssohn,' pp. 20, 31. [F.D.]

CUZZONI, FRANCESC.A. See SANDONI.

CYMBALS are a pair of thin round metal plates, with a leather strap through the centre of each, by which the performer holds one in each hand. The metal is an alloy of 80 parts of copper to 20 of tin. To produce a good tone they should not be struck so as to coincide together, but should rather be rubbed against each other in a single sliding motion (French froiser). The part for the cymbals is generally, but not always, the same as that for the bass-drum, and, from motives of economy, it is generally played by the same performer. One cymbal is then tied to the drum, and the other held in his left hand, while his right hand uses the drum stick. [PIATTI.]

[V.de F.]

CZAKAN, or STOCKFLOHR, a Bohemian or Transylvanian instrument of the bagacloot family, usually standing in the key of A, though made to other pitches. It is said to have been lost for many years after its original invention, and to have been rediscovered in a Transylvanian monastery in 1835. However, this may be, it rose to great popularity at Vienna about 1830, and received many additions and improvements. It consisted of a large bagacloot mouthpiece, with a long slender body, bored with an inverted conical tube like that of the old flute, at right angles to the mouthpiece. It thus resembled an ordinary handled walking-stick, and indeed was commonly put to that use. It had the octave scale of the old concert flute, with fingering intermediate between that and the oboe. There was also a small vent-hole for the thumb at the back, as in the bagacloot. It possessed about two octaves compass, starting from the low B of the flute. There exists a Method for this almost forgotten instrument by Krimer dated 1830. Its music appears to have been written in the key of C. [W.H.S.]

CZAR UND ZIMMERMANN. Opera in 3 acts, by Lortzing; produced in Berlin 1854, and at the Gaiety Theatre, London, translated, as 'Peter the Shipwright,' April 15, 1871.

CZERNY, KARL, excellent pianoforte teacher and prolific composer, born at Vienna Feb. 21, 1791. His father, a cultivated musician, taught him the pianoforte when quite a child, and at the age of ten he could play by heart the principal compositions of all the best masters. He gained much from his intercourse with Wenzel Krumpolz the violinist, a great friend of his parents, and a passionate admirer of Beethoven. Having inspired him with his own sentiments, Krumpolz took his small friend to see Beethoven, who heard him play and at once offered to teach him. Czerny made rapid progress, and devoted himself especially to the study of the works of his master, whose friendship for him became quite paternal. Czerny also profited much by his acquaintance with Prince Lichnowsky, Beethoven's patron; with Hummel, whose playing opened a new world to him; and with Clementi, whose method of teaching he studied. He was soon besieged by pupils, to whom he communicated the instruction he himself eagerly imbied. In the meantime he studied composition with equal ardour. Czerny was always reluctant to perform in public, and early in life resolved never to appear again, at the same time withdrawing entirely from society. In 1804 he made preparations for a professional tour, for which Beethoven wrote him a flattering testimonial, but the state of the continent obliged him to give up the idea. Three times only did he allow himself to travel for pleasure, to Leipzig in 1836, to Paris and London in 1837, and to Lombardy in 1846. He took no pupils but those who showed special talent; the rest of his time he devoted to self-culture, and to composition and the arrangement of classical works. His first published work '20 Variations concertantes' for pianoforte and violin on a theme by Krumpolz, appeared in 1805. It was not till after his acquaintance with the publishers Cappi and Diabelli that his second work, a 'Rondo Brillante' for four hands followed (1818). From that time he had difficulty in keeping pace with the demands of the publishers, and was often compelled to write at night after giving 10 or 12 lessons in the day. From 1816 to 1823 Czerny had musical performances by his best pupils at his parents' house every Sunday. At these entertainments Beethoven was often present, and was so charmed with the peaceful family life he witnessed, as to propose living there entirely; the project however fell through owing to the illness of the parents. One of Czerny's most brilliant pupils was Ninette von Belleville, then 8 years old, who in 1816 lived in the house, and afterwards spread the fame of her master through the many countries in which she performed. She married Oury the violinist, and settled in London. She was followed by Franz Liszt, then 10 years old, whose father placed him in Czerny's hands. The boy's extraordinary talent astonished his master, who says of him in his autobiography 'it was evident at once that Nature had intended him for a pianist.' Theodor Döhler and a host of other distinguished pupils belong to a later period. About 1850 Czerny's strength visibly declined; his health gave way under his never-ceasing activity, and he was compelled to lay aside his
indesatigable pen. His active life closed on July 15, 1857, shortly after he had, with the help of his friend Dr. Leopold von Sonnleitner, disposed of his considerable fortune in a princely manner. Czerny was never married, and had neither brothers, sisters, nor other near relations. He was modest and simple in his manner of life, courteous and friendly in his behaviour, just and kindly in his judgment on matters of art, and helpful to all young artists who came in his way. His disposition was so gentle that he shrank from a harsh or coarse word even spoken in jest, which was partly the cause of his living so much in retirement. His industry was truly astounding. Besides his numerous printed works, which embrace compositions of every species for pianoforte he left an enormous mass of MS., now in the archives of the ‘Gesellschaft der Musikfreunde’ at Vienna. These compositions comprise 24 masses, 4 requiems, 300 graduales and offertories, symphonies, overtures, concertos, string-trios and quartets, choruses, songs for one or more voices, and even pieces for the stage. His book ‘Umrisse der ganzen Musikgeschichte’ was published (1851) by Schott of Mayence, and in Italian by Ricordi of Milan. His arrangements of operas, oratorios, symphonies, and overtures for 2 and 4 hands, and for 8 hands on 2 pianofortes are innumerable. As a special commission he arranged the overtures to ‘Semiramide’ and ‘Guillaume Tell’ for 8 pianofortes four hands each. An arrangement for pianoforte of Beethoven’s ‘Leonora’, which he made in 1805, was of great service in training Czerny for this kind of work. He says in his Autobiography, ‘It is to Beethoven’s remarks on this work that I owe the facility in arranging which has been so useful to me in later life.’ His printed compositions amount to nearly 1000: of which many consist of 50 numbers or even more. A catalogue containing op. 1-798, with the arrangements and the MS. works, is given in his ‘School of practical composition’ (op. 600, 3 vols. Cocks and Co.). Czerny’s pianoforte compositions may be divided into three classes, scholastic, solid, and brilliant. The best of all, especially if we include the earlier works, are undoubtedly the scholastic, op. 299, 300, 315, 355, 399, 400, and 500, published under the title ‘Complete Theoretical and Practical Pianoforte School’ (3 vols. Cocks). However worthy of admiration Czerny’s industry may be, there is no doubt that he weakened his creative powers by over-production, and the effect has been that the host of lesser works have involved the really good ones in undeserved forgetfulness.

[ C. F. P.]

CZERWENKA, Joseph, born at Benacek in Bohemia 1759, died at Vienna 1855, one of the finest oboists of his time. In 1789 entered the private band of Count Schafgotsche at Johanniberg in Sliesia. In the following year played in Prince Esterhazy’s band, under Haydn, where his uncle played the bassoon. In 1794 he settled in Vienna as solo oboist in the Imperial band, and the Court Theatre, and professor at the Conservatorium. He retired in 1810. [M. C. C.]

CANTABILE, i.e. singable, a direction placed against an instrumental phrase when it is to be ‘sung’ with feeling. Beethoven does not often use it, and when he does it is always with special intention, as in the 2nd subject of the Larghetto of the Bb Symphony, and in the semiquaver figure in the working out of the first movement of the 9th Symphony:

He has before marked it ‘expressivo’—but now it is as if he said ‘you may see no special melody in this group, but I do, and will have it played accordingly.’

D.

The second note of the natural scale. In solfacing it is called Re. The scale of D major contains F# and G#, and its relative minor is B; that of D minor contains B♭, and its relative major is F. The dominant of D is A.

Among the most important compositions in D major are the Missa Solemnis and 2nd Symphony of Beethoven; Handel’s Dettingen Te Deum; Mozart’s Parisian Symphony. In D minor there are a noble Toccatas and Fugue by Bach; the Choral Symphony, Schumann’s Do. No. 4, Pianoforte Concertos by Mendelssohn and Brahms, etc.

DA CAPO, or D.C.—‘from the beginning’—is placed at the end of the second part of an air, or chorus (‘O the pleasure’), or scherzo and trio, or other movement in two portions, to show that
the first portion is to be played over again as a conclusion. In airs the direction is often Dal Segno—from the sign—the sign being a ♩ as at the beginning of the first portion. In scherzos and minuets, with trios, the direction at the end of the trio is usually ‘Scherzo, or Minueto, D.C. senza ripetizione.’ The first known occurrence of Da Capo is in Tonaglia’s opera of ‘Clearco’ (1661).

DACHSTEIN, WOLFGANG, Roman Catholic priest at Strassburg, adopted the Reformed principles in 1524. married, and became vicar and organist of St. Thomas’s Church there. He is known chiefly as a composer of chorales, especially ‘An Wasserflüssen Babylon.’ [M.C.C.]

DACYL, a metrical ‘foot’ (−−−), exactly expressed by the original word Μέτρον, a finger—one long joint and two short ones. A fine example of dactyls in instrumental music is in the slow movement of Beethoven’s 7th Symphony, alternately with spondee, or alone.

DALAYRAC, NICOLAS, a celebrated French composer, was born at Murer (Languedoc) in 1753. His father occupied a high civil appointment in his province, and in spite of his son’s early passion for music destined him for the bar. His studies of the violin were put to stop to, and it is said that the young enthusiastic, in order to play without interruption, used every night to ascend the roof of the house. This however interfered with the nocturnal exercises of a neighbouring nursery. But the complaints of the pious damsels addressed to his father ultimately led to the fulfilment of young Dalayrac’s dearest wish. His aversion to the law was considered conclusive, and he was sent in 1774 to Paris, where a commission in the guards of the Count of Artois had been obtained for him. But the love of his art was proof against the attraction of a military career. Immediately on his arrival in Paris he was permitted by his patron, Langlé, and soon made his début as a dramatic composer with a comic opera called ‘Le petit Soupir,’ first performed at the French court in 1781. Encouraged by this success, he produced in the following year an opera, ‘L’Eclipse totale,’ at the Opéra Comique. This also was successful, and secured Dalayrac’s position amongst the best and most fertile composers of his time. He continued for the remainder of his life producing operas at the rate of one or two a year. Not even the Reign of Terror interrupted or in any way influenced the inexhaustible productiveness of his pen. Two of his most charming operas, ‘L’actrice chez elle’ and ‘Ambroise, ou Voilà ma journée,’ bear the terrible date of 1793. In 1790 he lost much of his property, but in spite of this misfortune he refused to avail himself of his father’s will, which excluded his younger brother from a share in the family property. At the beginning of the century he was made a chevalier of the Legion of Honour by Napoleon, and he died in 1809 at Paris. Of the numerous works of Dalayrac none have survived. The titles of the more important ones may be cited:—‘Le Corsaire’ (1783), ‘L’Amant Display’ (1785), ‘Nina’ (1786), ‘Azémia’ (one of his best works, first performed on May 3, 1787), ‘Racol de Créqu’ (1789), ‘Fanetelle’ (same year), ‘Adèle et Dorsan’ (1794), ‘Adolphe et Clara’ (1799), ‘Maison à vendre’ (1800), ‘Une Heure de Mariage’ (1804), ‘Le Poète et le Musicien’ (first performed in 1811, two years after the composer’s death), and many others.

Amongst the earlier composers of the modern French school of dramatic music Dalayrac takes a high position. To us his means of expression appear primitive, but considering the date of his earlier works, his skill in orchestral treatment, and his keen perception of dramatic effects and properties, are by no means of a despicable order. The opera comique, consisting of simple airs and short ensembles, was his favourite mode of production. Such a work as the one-act operetta ‘Maison à vendre’ is not deprived of a certain archaic charm even at the present day. Lise’s song ‘Fiez vous,’ with which it opens, a piece of music much affected by our great-grandmothers, is a charming specimen of the French romance, and the finale of the same work is remarkable for the skilful and fluent treatment of the vocal parts. The same feature is noticeable in his more elaborate compositions, as for instance in the finale of ‘Azémia,’ which winds up with a charming bit of choral writing. It may briefly be said that Dalayrac’s style contains, although in a somewhat embryonic stage, all the qualities which have made the French school justly popular in Europe. He is a unit amongst a galaxy of brilliant stars. His claim to remembrance lies perhaps less in his individual merits than in the fact that without him and other composers of this type and epoch there would have been no Grétry, no Aubé, and no Boieldieu. [F.H.]

DALLAM (spelt also DALHAM, DALLUM, and DALLAN), the name of a family of English organ-builders in the 17th century. The firm was employed in 1605–6 to build an organ for King’s College, Cambridge, for which purpose he closed his workshop in London and removed his whole establishment to Cambridge. He and his men were lodged in the town, but boarded in the College Hall. Dr. Rimbault (‘History of the Organ’) gives a very curious account of every item paid for building this organ. It was destroyed in the time of the Long Parliament, but the case, with some alterations, remains to this day. This Dallam’s Christian name does not appear in the college books, but he is most probably identical with Thomas Dallam, who built an organ for Worcester Cathedral in 1613. The three following were probably his sons:

Robert, born 1602, died 1655, and buried in the cloisters of New College, Oxford, for which college he built the organ; but his principal work was that of York Minster, since destroyed by fire. He also built similar organs for the cathedrals of St. Paul and Durham.
RALPH built the organ for St. George's Chapel, Windsor, at the Restoration, as well as those at Rugby, Hackney, and Lynn Regis. The Windsor organ is still preserved at St. Peter-in-the-East, St. Alban's. He died while making the organ at Greenwich Church, begun by him in Feb. 1672. James White, his partner, finished it 1673.

GEORGE lived in Purple Lane in 1672, and in 1686 added a 'chaire organ' to Härrias's instrument in Hereford Cathedral. [V.deP.]

DAL SEGO, 'from the sign,' or al Segno, 'to the sign'; the 'sign' being a $S$, probably a capital S. 'Da capo al Segno $S$' is the full direction, as at the end of the second part of 'Consider, fond shepherd' in 'Aria,' the $S$ being in bar 2 of the first part.

DAMASCENE, ALEXANDER, a foreigner, of probably Italian extraction, but French birth, who, on June 26, 1682, obtained letters of denization in England, was an alto singer. On August 30, 91, Damascene was sworn in as a gentleman extraordinary of the Chapel Royal, and on the death of Henry Purcell in 95 was advanced to a full place. He died July 14, 1719. Damascene was a prolific song writer, and many of his compositions may be found in the following collections, viz., 'Choice Ayres and Songs,' 1676-84; 'The Theatre of Musicke,' 1685-87; 'Vinculum Societatis,' 1687-91; 'The Banquet of Musicke,' 1688-93; 'Comes Amoris,' 1687-94; 'The Gentleman's Journal,' 1692-94. [W.H.H.]

DAME BLANCHE, LA. Opéra comique in 3 acts, founded on Scott's 'Monastery'; libretto by Scribe, music by Boieldieu; produced at the Opéra Comique Dec. 10, 1835; played at the same theatre for the 100th time on Dec. 16, 62. Produced in English as 'The White Maid' at Covent Garden Jan. 2, 1837.

DAMON, WILLIAM, one of the musicians to Queen Elizabeth, harmonised for the use of a friend the psalm tunes then in common use, to the number of about forty. His friend, in 1579, published them under the following title:—'The Psalms of David in English Meter with Notes of four partes set unto them by Guillielmo Damon, for John Bull [who is called in the preface, 'Citezen and Goldsmith of London'], to the use of the godly Christians for recreating themselves in stede of fond and unseemly Ballades. At London, Printed by John Daye, Cun privilegio.' This work seems to have been but ill received, and Damon set himself to work to reharmonise the tunes. The new work was published in 1591 with the title of 'The former Booke of the Musick of M. William Damon, late one of her Majesties Musitians, containing all the tunes of David's Psalms, as they are ordinarily sung in the Church: most excellently by him composed into 4 partes. In which sett the Tenor singeth the Church tune. Published for the recreation of such as delight in Musick by W. Swayne, Gent. Printed by T. Esté, the assigne of W. Byrd, 1591.' The work is in two parts, the second being entitled 'The second Booke of the Musick of M. William Damon, containing all the Tunes of David's Psalms, differing from the former in respect that the highest part singeth the Church tune.' [W.H.H.]

DAMOREAU, LAURE CINTHEE MONTALANT, born at Paris Feb. 6, 1801, was admitted into a vocal class at the Conservatoire Nov. 28, 1808. She made quick progress, and soon began to study the piano. In 1814 she left the piano-class to enter that of vocalisation. She began her career by giving some concerts which were not successful. Engaged at the Théâtre Italien in second parts at the age of 18, Mlle. Cinti, as she now called herself, made her first appearance as Cherubino in 'Le Nozze.' She played the part with great charm and grace, but her time was not yet come. It was not till 1821 that she attempted principal parts. In 22 she was engaged by Ebens for the London opera, at a salary of £500. She was young and pretty, her manners pleasing and elaborate, her acting correct and unaffected, if not forcible; but her voice was not strong enough for the size of the theatre, and she created little sensation. She returned to Paris, where she soon began to take a higher place; her salary was raised, and the arrival of Rossini was a fortunate event for her. She made her début at the Grand Opéra Feb. 24, 1826, in 'Fernand Cortez,' and her success was complete. Rossini wrote for her the principal female part in the 'Siege de Corinthe' and 'Moïse,' which contributed to her reputation. In consequence, however, of some misunderstanding with the management, Cinti quitted the theatre abruptly in 27, and went to Brussels, where she excited the greatest enthusiasm. Concessions having been made she returned to Paris; but, before leaving Brussels, was married to Damoreau, an unsuccessful actor. This union was not happy. Returned to Paris she resumed her career, singing in 'La Muette de Portici,' 'Le Comte Ory,' 'Robert le Diable,' and 'Le Serment,' in each more excellent than before. In 29 she took part, with Santag and Malibrain, in the 'Matrimonio Segreto.' Never was there a more brilliant combination; nor did Cinti suffer by comparison. Fétis boldly declares that she now became one of the best singers the world has known. In 32 she came over with a French company, and sang at Covent Garden in Meyerbeer's 'Robert le Diable.' Her engagement was not renewed in 33, and she was gladly welcomed at the Opéra Comique, where Auber wrote for her such works as the 'Domino noir,' 'L'Embassadeurs,' and 'Zanetta.' Cinti retired from the stage in 1843, sang again in London in that year, then at the Hague, at Ghent in 1845, at St. Petersburg, at Brussels in 1846, and made a tour in the United States with the violinist Artois. In 1834 she had been appointed professor of singing at the Conservatoire in Paris; this place she resigned in 1856, and retired to Chantilly, and died in 1863.

Mme. Cinti published an 'Album de romances,' and a few separate pieces. She wrote also a 'Méthode de chant,' dedicated to her pupil.
DAMOREAU.

Her son died at an early age after distinguishing himself by some vocal compositions; and her daughter, a singer, married M. Wckerlin. [J.M.]

DAMPER (Fr. L' Etouffor; Ital. Saltarello, Spegnitoto, or Smorzo; Ger. Dämpfer), that part of the action of a pianoforte contrived to stop the vibration of the strings belonging to a note when the finger is raised from the key. It comprises several folds or thicknesses of cloth or soft felt, elevated upon a wire upright, which rest upon or press upwards against the strings when the key is not touched, but quit the strings when the key is pressed down. The pedal movement connected with the dampers removes them collectively from the strings, and so long as the pedal is pressed down the instrument has virtually no dampers, the strings continuing to sound until their vibrations cease. There are no dampers to the treble notes, as the duration of vibration in this part of the scale is too short to need arresting. [See PIANOFORTE.]

DANBY, JOHN, born 1757, one of the most distinguished glee composers. Between 1781 and 94 he obtained ten prizes from the Catch Club for eight gleeas and two canons. He published three books of his compositions, and a fourth was issued after his decease. In 1787 he published an elementary work entitled 'La Guida alla Musica Vocale.' He held the appointment of organist at the chapel of the Spanish embassy, near Manchester Square, for the service of which he composed some masses and motets. He died May 16, 1798, during the performance of a concert which his friends had got up for his benefit, he having long lost the use of his limbs by having been placed in a damp bed at an inn. He was buried in Old St. Pancras churchyard, where an altar tomb was raised to his memory. His fine glee, 'Awake, Æolian lyre!' will not soon be forgotten. [W.H.H.]

DANCE MUSIC. Musco designed as an accompaniment to dancing, national, social or on the stage—the ballet; also music written in dance rhythms though not for dancing purposes, such as the Polonaises of Beethoven, Weber, and Chopin; Schulhoff's 'Valse de Concert,' Liszt's 'Galop Chromatique.'

The music of the individual dance tunes has been examined under the separate heads of Allemande, Balero, Courante, Gigue, Minuet, Waltz, etc. The influence of the dance on music in general, and the manner in which it gradually communicated the rhythm and accent which are its very essence to the unrhymthical and unaccented strains of church music, and thus built up the fabric of modern composition, will be examined under the head of Rhythm. The mere direct and material connection between the Suite—a mere string of dances in one key—and the modern Sonata and Symphony, which grew out of the Suite, will be most conveniently discussed under the last-named headings.

DANCE, WILLIAM. An English musician whose name deserves preservation as one of the founders of the Philharmonic Society. He was born in 1755, was in the orchestra of the Opera from 1775 to 93, and led the band at the Handel Commemoration of 1790 in the absence of Cramer. He died full of years and credit in 1840. The circular proposing the meeting which led to the formation of the Philharmonic, was issued by Messrs. Cramer, Corri, and Dance, from Mr. Dance's house, 17 Manchester Street, on Sunday, Jan. 17, 1813. He was afterwards one of the Directors, and Treasurer. His son Henry was secretary to the society for the first year, 1813.

DANDO, JOSEPH HAYDN BOURNE, was born in Somers Town in 1806. At an early age he commenced the study of the violin under his uncle, Signor Brandi. In 1819 he became a pupil of Mori, with whom he continued about seven years. In 1831 he was admitted a member of the Philharmonic orchestra. For many years he filled the post of leader of the bands of the Classical Harmonists and Choral Harmonists Societies (both now extinct), whose concerts were given in the City. Dando was the first to introduce public performances of instrumental quartets. It is true that in the earlier days of the Philharmonic Society a quartet occasionally formed part of the programme, but no concerts consisting exclusively of quartets had before been given. The occasion on which the experiment was first tried was a benefit concert got up by Dando at the Horn Tavern, Doctors' Commons, on 23rd Sept. 1835. The programme was entirely composed of quartets, trios, etc. The experiment proved so successful that two more similar concerts were given in October, each proving more attractive than its precursor. Dando then formed a party consisting of Henry Blagrove, Henry Gattie, Charles Lucas, and himself, to give regular series of Quartet Concerts, and they commenced their enterprise on March 17, 1836, at the Hanover Square Rooms. They continued the performances annually until 42, when Blagrove seceded from the party, upon which Dando assumed the first violin, the viola being placed in the hands of John Loder. Thus constituted they removed to Crosby Hall, where they continued until the deaths of Gattie and Loder in 53 broke up the party. Dando occupied a prominent position in all the best orchestras until 75, when the fingers of his left hand becoming crippled he was compelled to desist from performing. During his long career he has ever shown himself an excellent violinist and amiable man. [W.H.H.]

DANIEL, HERMANN ADALBERT, a German theologian, born 1812 at Cöthen near Dessau, professor in the University of Halle. His 'Theaurus Hymnologicus' (5 vols. Lübeck, Leipzig) is a valuable work on the history of early church music and collection of hymns.

DANKERTS, GHISELAIN, a native of Tholen in Zeeland, and a singer in the Papal Chapel in the middle of the 16th century. An eight-part motet of his composition, 'Lectamini in Domino,' is included in Uhland's 'Concentus octo ...
DANKERTS.

Augsburg 1545), and a six-part motet "Tu est potentia" in the 'Selectissimae cantiones ultra centum' (Augsburg 1540). Also two books of madrigals for 4, 5, and 6 voices were published by Gardano (Venice 1559).

Notwithstanding the new school of composers, Dankert was one of them, who adhered strictly to the old Netherland school, and remained uninfluenced by the new art that had grown up around them. He gained great celebrity as judge in the dispute between two ecclesiastical musicians, Vicentino and Lusitano, upon the nature of the scales on which the music of their time was constructed. Dankert was obliged to defend his verdict against Vicentino, in a learned and exhaustive treatise on the matter in dispute, the original MS. of which is preserved in the Vallian library at Rome. A full account of this controversy is given by Hawkins. [J. R. S. B.]

DANNELEY, JOHN FELTHAM, born at Oakingham in 1786, was the second son of a lay-clerk of St. George's Chapel, Windsor. At fifteen years of age he studied thorough bass under Samuel Webbe, and the pianoforte first under Charles Knyvett and afterwards under Charles Neate. He resided with his mother at Odiham until he reached his twenty-sixth year, when he established himself at Ipswich as a teacher of music, and in a few years became organist of the church of St. Mary of the Tower in that town. In 1816 he visited Paris, and studied under Antoine Reicha. Danneley published in 1824 "An Encyclopedia, or, Dictionary of Music," and in 1826 "A Musical Grammar." He died in London in 1836. [W. H. H.]

DANNREUTHER, EDWARD, born Nov. 4, 1844, at Strassburg. When five years old was taken to Cincinnati, U.S., where he learned music from F. L. Ritter. In 1869 entered the Conservatorium at Leipzig, and remained there till 63, under Moscheles, Hauptmann, and Richter. His career was very brilliant, and he held all the scholarships of the Conservatorium. From Leipzig he removed to London, where he has since resided (excepting two professional visits to the United States), and is one of the most prominent musicians of the metropolis, well known as a pianoforte-player and teacher, litérateur and lecturer, and a strong supporter of progress in music. He is especially known as the friend and champion of Wagner. He founded the Wagner Society in 1872, and conducted its two series of concerts in 73 and 74. He was also a warm promoter of the 'Wagner Festival' in 1877, translated his 'Music of the Future' (Schott 1872), and received Wagner in his house during his stay in London. He was the first to play the concertos of Liszt and Tchaikowsky (Crystal Palace, Jan. 27, 72; Nov. 21, 74; March 11, 76).

But while Mr. Dannreuther is an earnest apostle of the new school, he is no less zealous for the old, as the range of the programmes of his well-known chamber concerts, his own able interpretations of Bach and Beethoven, his lectures on Mozart, Beethoven, and Chopin, his article on Beethoven in Macmillan's Magazine (July, 76), and other acts and words abundantly prove. He has not yet published any music.

DANZI, FRANCESCA. See LEBRUN, MADAME.

DANZI, FRANZ, composer and violincellist, born at Mannheim 1763, studied chiefly under his father, first violincellist to the Elector Palatine, and in composition under the Abbé Vogler. At 15 he was admitted into the Elector's band. In 1778 the band was transferred to Munich, and there Danzi produced his first operas 'Azaria' in 1780, which was followed by 'Der Kuss,' 'Iphigenia,' and others. In 1790 he married Marguerite Marchand, a distinguished singer, and in the following year started with her on a professional tour which lasted six years. At Prague and Leipzig he conducted the performances of the Italian company, and his wife was especially successful in the parts of Susanna in 'Le Nozze di Figaro,' and Caroline, and Nina, in 'Il Matrimonio Segreto.' They were also favourably received in Italy, especially at Venice and Florence. In 1797 they returned to Munich, where Mdm. Danzi died in 1799. Her husband soon after resigned his post of vice-chapel-master to the Elector. In 1807 he was appointed chapel-master to the King of Württemberg, but was soon compelled to leave Stuttgart on account of the political changes in that part of Germany. He then became chapel-master at Carlsruhe, where he remained till his death in 1846. He composed 11 operas, besides a mass of orchestral, chamber, and church music. For list see Félici. None of it has survived. He was a sound musician, but strained too much after orchestral effects. He was an excellent teacher of singing, and his 'Singing Exercises' were used for long after his death and form his most permanent work. [M. C. C.]

DARGOMYSKI, ALEXANDER SERGOTTICH, Russian nobleman and composer, born 1813, near Toula, Smolensk. He early manifested a taste for music, and at seven composed little sonatas etc. for the pianoforte. He afterwards learnt the violin, and studied harmony and counterpoint under Schobelechner. In 1830 he appeared with great success in Petersburg as a pianist, and in 31 received an appointment in the Emperor's household, but in 35 gave it up, and devoted himself for eight years to severe study. His intimate friendship with Glinka and with the dramatic poet Kukolnik were of great service to him. In 1845 he visited Germany, Brussels, and Paris. In 1847 he produced in Moscow, with brilliant success, an opera 'Emeralds,' libretto from Victor Hugo's 'Notre Dame de Paris,' which he had composed in 1838, and which was repeated in Petersburg. Besides 'Emeralds,' 'Rusalka' (Petersburg 1856), and 'Kozacek,' which have kept their place on the stage, his published works consist of 60 songs with pianoforte accompaniment; variations, fantasies, etc.
for pianoforte, and orchestral dance music. He died Jan. 17, 1868, while at work on an opera by Pushkin, called 'Kamenyi gost' (Don Juan), and, besides the operas named, left an immense number of orchestral works. His melodies are noble and poetical, but his composition is more distinguished for grace than force. As a pianist he was remarkable for the facility with which he accompanied at sight. [M.C.C.]

DASH. The sign of staccato, written thus (1), and placed under or over a note to indicate that the duration of the sound is to be as short as possible, the value of the note being completed by an interval of silence; for example—

\[ \text{Written} \quad \text{Performed} \]

A round dot (.) is also used for a similar purpose, but with this difference, that notes marked with dots should be less staccato than those with dashes, being shortened about one half, thus—

\[ \text{Written} \quad \text{Performed} \]

This distinction, which is enforced by all the most celebrated teachers of modern times, such as Clementi, Czerny, and others, is, strange to say, often ignored by modern editors of classical compositions, and it is remarkable that in such valuable and conscientious editions of Beethoven's works as those of Von Bülow ('Instructive Ausgabe'; Cotta, Stuttgart), Paxer (Augener & Co., London), and others, only one sign should have been employed for the two effects. That Beethoven himself considered the distinction of importance is proved by various corrections by his hand of the orchestral parts of the 7th symphony, still extant, and also by a letter written in 1825 to Carl Holz, in which he expressly insists that ' and is not a matter of indifference. See Notebohm's 'Beethoveniana,' No. xxy, in which extracts are given from several of Beethoven's works, with the signs of staccato as originally marked by himself. And there can be no doubt that every effort ought to be made, at any rate in the case of Beethoven, to ascertain what were the intentions of the composer on a point so essential to correct phrasing.

[F.T.]

DAUBALAIN ET CALLINET. Organ builders established in Paris in 1838 as Daublaine & Cie. In 1890 the firm was joined by Louis Callinet, member of an old Alsatian family of organ builders. But he brought bad fortune to the house, for in 43 or 44, in a fit of rage, excited by some dispute, Callinet destroyed all the work which he and his partners had just added to the organ at St. Sulpice. After this feat he retired to Cavalli's factory as a mere journeyman. Barker then took the lead at Daublaine's and under him the St. Eustache organ was built, to be destroyed by fire in 45. The same year the firm became Ducroquet & Cie; they built a new organ at S. Eustache, and exhibited at Hyde Park in 51, obtaining a council medal and the decoration of the Legion of Honour. In 55 Ducroquet was succeeded by a Société anonyme, and that again by Merklin, Schütte, et Cie. The business is now carried on by Merklin alone, whose principal factory is at Lyons, with a branch in Paris. [V.deP.]

DAUGHTER OF ST. MARK, THE. An opera in 3 acts, founded on 'La reine de Chypre,' words by Bunn, music by Balfe; produced at Drury Lane Nov. 27, 1844.

DAUNY, WILLIAM, son of William Dauney of Falmouth, Jamaica, was born at Aberdeen in the year 1800. He commenced his education at Dulwich, and completed it at the University of Edinburgh. On June 13, 1823, he was called to the Scottish bar. He found in the Advocates' Library at Edinburgh a MS. collection of music, written between 1614 and 1620 and known as the Skene Manuscript. It consists of 114 English and Scottish ballad, song, and dance tunes, written in tablature. This manuscript Dauney described and published in 1838 in 4to vol. under the title of 'Ancient Scottish Melodies from a manuscript of the reign of James VI.' He accompanied it with a long and ably written 'Dissertation illustrative of the history of the music of Scotland,' and some interesting documents. The work is valuable as showing the (probably) earliest versions of such tunes as 'The flowers of the forest,' 'John Anderson my jo,' 'Adieu, Dundee,' etc. Shortly after 1838 Dauney quitted Scotland for Demerara, where he became Solicitor General for British Guiana. He died at Demerara, July 28, 1843. [W.H.H.]

DAUVERGNE, ANTOINE, violin-player and composer, born at Clermont-Ferrand in 1713. He was a pupil of his father, leader of the band at Clermont. In 1739 he went to Paris to complete his studies, and very soon played with success at the Concert spirituel and entered the band of the King and of the Opera. It is however more as a composer of operas than as a violin-player that Dauvergne claims our attention. Up to his time an opera comique meant merely a vaudeville, a comic play interspersed with couplets. In his first opera, 'Les Troqueurs,' Dauvergne adopted the forms of the Italian intermezzi, retaining however spoken dialogue in place of recitative, and thereby introduced that class of dramatic works, in which French composers have ever since been so eminently successful. Dauvergne wrote 15 operas in all. Fétil also enumerates 15 motets of his composition, trios for two violins and bass (1740), sonatas for the violin, and two sets of symphonies in four parts (1750).

In 1755 Dauvergne bought the appointment of composer to the king and the next presentation as master of the band. From 1751 he conducted the Opera, and from 1762 the Concert spirituel; and finally, with some interruptions, became manager of the Opera. He
David, Felicien.

Retired at the outbreak of the Revolution, and died at Lyons in 1797.

David, Felicien, one of the most prominent of French composers, was born March 8, 1810, at Cadetet, in the south of France. His father was an accomplished musical amateur, and it is said that Felicien at the mature age of two evinced his musical taste by shouts of applause at his father's performances on the fiddle. At the age of four the boy was able to catch a tune. Two years later Garnier, first oboe at the Paris Opera, happened to hear the child sing, and strongly advised his mother to cultivate Felicien's talent. Soon afterwards the family removed to Aix, where David attended the Maitrise (school) du Saint Saurave, and became a chorister at the cathedral. He is said to have composed hymns, motets, and other works at this early period, and a quartet for strings, written at the age of 13, is still preserved at the Maitrise. In 1825 he went to the Jesuit college at Aix to complete his studies. Here he continued his music, and acquired some skill on the violin. He also developed an astonishing memory for music, which enabled him to retain many pieces by Mozart, Haydn, Cherubini, and Lesueur, by heart. When he left the college, at the age of 18, want of means compelled him to enter the office of his sister's husband, a lawyer, but he soon afterwards accepted the appointment of second conductor at the Aix theatre, which he occupied till 1829, when the position of maître de chapelle at St. Saurave was offered to him. During the one year he occupied this place he wrote several compositions for the choir of the church; one of these, a 'Beatus Vir,' afterwards excited the admiration of Cherubini.

In 1830 David went to Paris to finish his musical education. He had a small allowance from his uncle, but his wants were moderate and his enthusiasm great. Cherubini received him kindly, and under his auspices David entered the Conservatoire, and studied harmony under Millot. He also took private lessons from Reber, and thus accomplished his course of harmony within six months. He then entered the class of Fétes for counterpoint and fugue. An 'Ave verum' composed at this time proves his successful advance. On the withdrawal of his allowance David had to support himself by giving lessons. At the same period he narrowly escaped the conscription.

In 1831 we have to date an important event in our composer's life, viz., his joining the St. Simonians. David lived for some time in the kind of convent presided over by the Père Enfantin, and to his music were sung the hymns which preceded and accompanied the religious and domestic occupations of the brethren. When, in 1833, the brotherhood was dissolved, David joined a small group of the dispersed members, who travelled south, and were received with enthusiasm by their co-religionists at Lyons and Marseilles. The music fell to our composer's share, and several of his choralises were received with great applause.

At Marseilles David embarked for the East, where he remained for several years, at Constantinople, Smyrna, Egypt, and the Holy Land. The impressions thus received were of lasting influence on his talent. He managed wherever he went to take with him a piano, the gift of an admiring manufacturer at Lyons. Soon after his return, in 1835, he published 'Mesodies orientales' for piano. In spite of the melodious charm and exquisite workmanship of these pieces they met with total neglect, and the disappointed composer left Paris for several years, and lived in the neighbourhood of Iguny, rarely visiting the capital. Two symphonies, 24 quin- tets for strings, several sonatas for wind, and numerous songs (one of which latter, 'Les Hiron- delles,' was at one time very popular in England) belong to this period. One of his symphonies, in F, was in 1838 performed at the Valentinon concerts, but without success. In 1841 David again settled in Paris, and his name began to become more familiar to the public, owing to the rendering of some of his songs by M. Walter, the tenor. But his chief fame is founded on a work of very different import and dimensions—his 'Ode symphonique 'Le Désert,' in which he has embodied the impressions of his life in the East, and which was produced Dec. 8, 1844. The form of this composition is difficult to define. Berlioz might have called it a 'melologue.' It consists of three parts subdivided into several vocal and orchestral movements, each introduced by some lines of descriptive recitation. The subject is the mighty desert itself, with all its gloom and grandeur. On this background is depicted a caravan in various situations, singing a hymn of fanatic devotion to Allah, battling with the simoon, and resting in the evening by the fountain of the oasis. Whatever one's abstract opinion of programme music may be, one cannot help recognising in the 'Désert' a highly remarkable work of its kind. The vast monotony of the sandy plains, indicated by the reiterated C in the introduction, the opening prayer to Allah, the 'Danse des Almées,' the chant of the Muezzin, founded on a genuine Arabic melody—are rendered with a vividness of descriptive power rarely equalled by much greater musicians. David, indeed, is almost the only composer of his country who can lay claim to genuine local colour. His Arabs are Arabs, not Frenchmen in disguise.

The 'Désert' was written in three months. It was the product of spontaneous inspiration, and to this circumstance its enormous success is mainly ascribable. None of David's subsequent works have approached it in popularity. 'Le Désert' was followed, in 46, by 'Moïse au Sinai,' an oratorio written in Germany, where David had gone on a concert-tour, and where he met with much enthusiasm not unmixed with severe criticism. 'Moïse,' originally destined for Vienna, was performed in Paris, its success compared with that of its predecessor being a decided anti-climax. The next work is a second descriptive symphony, 'Christophe Colomb' (1847), and its
success again was anything but brilliant. 'Eden, a Mystery,' was first performed at the Opéra in 1848, but failed to attract attention during that stormy political epoch. His first genuine success since 1844 David achieved with an opéra comique, ‘La Perle du Brésil’ (1851). His remaining dramatic works are ‘Le Fin du Monde’ (in four acts, never performed), ‘Herculaneum’ (serious opera in four acts; 1850 at the Opéra), ‘La Roukh’ (two acts; 1862), and ‘Le Saphir’ (in three acts; 1865 both at the Opéra Comique). Another dramatic work, ‘La Captive,’ was in rehearsal, but was withdrawn by the composer for reasons unknown.

David's power as an operatic writer seems to lie more in happy delineation of character than in dramatic force. Hence his greater success with comedy than with tragedy. ‘La Roukh’ particularly is an excellent specimen of felicitous expression, and easy, untrivial melodiousness. Here again his power of rendering musically the national type and the local surroundings of his characters becomes noticeable. This power alone is sufficient to justify the distinguished position he holds. As to his final place in the history of his art it would be premature to give a definite opinion. Félicien David died on Aug. 29, 1876. Since his death several of his works—‘Le Désert’ and ‘La Roukh’ amongst the number—have been revived with much success in Paris, and his quartets are now (1877) being played.

An essay on David's life and works up to 1854 is found in the collection called Mirecourt's ‘Contemporains.’ For the earlier part of his life a brochure (Biographie de F. David, Marseilles, 1845, out of print), by M. Saint-Etienne, is a valuable source.

DAVID, FÉRICIEN.

DAVID, FERDINAND. 433.

Death. Of the intimate nature of their connection a good instance is afforded by the history of Mendelssohn's Violin Concerto. It is first mentioned in a letter from Mendelssohn to David, dated July 30, 1838. Constant letters on the subject of the work passed between them during the process of composition; hardly a passage in it but was referred to David's taste and practical knowledge, and canvassed and altered by the two friends; and he reaped his reward by first performing it in public at the Gewandhaus concert of March 13, 1845. The autograph is now in the possession of David's family. In like manner 'Antigone' (letter of Oct. 21, 1841), and probably many another of Mendelssohn's works, was referred to him; and he was one of the three trustees to whom the publication of the MS. works of his illustrious friend was confided after his death.

As a virtuoso David combined the sterling qualities of Spohr's style, with the greater facility and piquancy of the modern school; as a leader he had a rare power of holding together and animating the band; while as a quartet-player his intelligence and tact enabled him to do justice to the masterpieces of the most different periods and schools. Among numerous compositions of the various kinds his solo-pieces for the violin are most pleasing and effective, and are so founded on the nature and character of the instrument as to be indispensable to the student. As a teacher his influence was probably greater than that of any preceding master, and to him the German orchestras owe many of their most valuable members. He took a warm personal interest in his pupils, amongst whom the most eminent are Joachim and Wilhelmj. Within the sphere of his influence he was always ready to help a friend or to further the true interests of musical art and artists.

It is one of David's special merits that he revived the works of the eminent violin-players of the old Italian, German, and French schools, which he edited and published with accompaniments, marks of expression, etc. He also edited nearly the whole classical repertoire of the violin for purposes of study, and took a prominent part in the critical editions of the works of Beethoven, Haydn, and other great masters. His unremitting activity was as earnest as it was quick. He was particularly fond of intellectual pursuits, was eminently well read, full of manifold knowledge and experience. His conversation abounded in traits of wit and humour, he was the pleasantest companion, a faithful friend, and an exemplary husband and father.

In 1861 the 25th anniversary of his appointment as leader was celebrated at Leipzig. He died very suddenly July 18, 1872, while on a mountain excursion with his children, near Klosters in the Grisons. He was buried at Leipzig, where he was highly honoured, and where a street has recently been named after him.

Among his numerous compositions the five

---

1 It appears that in 'Herculaneum' a great many pieces from the 'Fin du Monde' have been embodied. The present writer has no personal knowledge of either work.

---

1 See details in the programme of the Crystal Palace Saturday Concert, Dec. 19, 1871.
violin concertos, a number of variations, and other concert pieces for the violin hold the first rank. He also published for piano and violin 'Bunte Reihe,' 'Kammerstücks,' etc. Besides these, two symphonies, an opera 'Hans Wacht,' a sextet and a quartet for strings, a number of songs and concert pieces for trombone and other wind instruments, deserve to be mentioned. His 'Violin School' is certainly one of the best works of the kind, and the publication of the 'Höhe Schule des Violinspiels' (a collection of standard works of old violinists) marks an epoch in the development of modern violin-playing. [H.]

DAVIDDE PENITENTE. A cantata for 3 solo voices, chorus, and orchestra, to Italian words by an unknown author, adapted by Mozart in 1785 from his unfinished mass in C minor (K. 427), with the addition of a fresh soprano and fresh tenor air, for the widows' fund of the Society of musicians (Tonkünstler-Societät); and performed on March 13 and 15, 1785, in the Burgtheater at Vienna.

DAVIDE, GIACOMO, a very great Italian tenor, better known as 'David le père,' born at Presezzo, near Bergamo, in 1750. Possessing a naturally beautiful voice, he made the best use of it by long and careful study. To a pure and perfect intonation he joined good taste in the choice of style and ornament. Having studied composition under Sala, he was able to suit his floriture to the harmony of the passage he wished to embroider; but he was even more distinguished in serious and pathetic music, and that of the church, than in bravura. Lord Mount-Edgcumbe heard him at Naples in 1785, and thought him excellent in opera. In that year he went to Paris, sang at the Concert Spirituel, and made a great sensation in the 'Stabat' of Pergolese. Returning to Italy, he sang during two seasons at the Scala. In 90 he was at Naples again, and in 91 he came to London. Owing, however, to the Pantheon having been licensed as the King's Theatre, it was impossible to obtain a licence for the Haymarket Theatre, at which Davide was engaged, except for concerts and publics. This, and the want of good singers to support him, prevented him from becoming as well known here as he deserved. He was undoubtedly the first tenor of his time,' says Lord Mount-Edgcumbe, 'possessing a powerful and well-toned voice, great execution as well as knowledge of music, and an excellent style of singing. He learned to pronounce English with tolerable correctness, and one of his last performances was at Westminster Abbey, at the last of the Handel festivals. In 1802 he was at Florence; and, although 52 years of age, had still all his old power, and was able to sing every morning in some church, and at the opera every evening. He returned in 1812 to Bergamo, where he was appointed to sing at the church of Santa Maria Maggiore. It is said that he sang at Lodri in 1820; but he was then no more than the shadow of his former self. He formed two pupils, one of whom was his son, and the other

NOSZAR. Davide died at Bergamo December 31, 1830.

2. His son GIOVANNI was born in 1789, and long enjoyed the reputation in Italy of a great singer, though his method of producing his voice was defective, and he frequently showed want of taste, abusing his magnificent voice, with its prodigious compass of three octaves comprised within four B flats. He had, however, a great deal of energy and spirit, and his style was undoubtedly original. He made his début at Brescia in 1810, and sang with success at Venice, Naples, and Milan. He was engaged at the Scala for the whole of 1814. In the autumn of that year he was first employed by Rossini in his 'Turco in Italia.' Rossini then wrote rôles for him in 'Otello' (1814), 'Ricciardo e Zoraida' (1818), 'Erminone' and 'La Donna del Lago' (1819). In 1818 he sang at Rome, Vienna, and London. Ebers had made overtures to him in 1821, and his engagement was on the point of completion, when he was engaged for seven years by Barbaja, who at that time directed the operas of Naples, Milan, Bologna, and Vienna. Davide appeared here in 29, singing, among other operas, with Mrs. Wood in Pacini's 'L'Ultimo giorno di Pompei'; but he was passed, and his voice so unsteady that he was obliged to conceal its defects by superfluity of ornament. He arrived in Paris in the same year. His voice had now become nasal, and his faults of taste and judgment more apparent. Yet, with all these faults, he was able occasionally to rise to a point that was almost sublime. Edouard Bertin, a French critic, said of him, 'it is impossible for another singer to carry away an audience as he does, and when he will only be simple, he is admirable; he is the Rossini of song. He is a great singer; the greatest I ever heard.' After his return into Italy, Davide sang at Milan and Bergamo in 1831, at Genoa and Florence in 32, at Naples in 32, 34, and 40, at Cremona and Modena in 35, at Verona in 38, and at Vienna in 39. He retired in 41 to Naples, where he founded a school of singing, which was not much frequented. A few years later he accepted the post of manager at the Opera of St. Petersburg, and is said to have died there about 1851.

[J. M.]

DAVIDOFF, CHARLES, eminent cello-player, born at Goldingen in Courland March 15, 1838, received his first musical instruction from H. Schmitt at Moscow. His bent was to mathematics, which he studied in the Moscow university from 1854 to 58, but at length decided to embrace music as his profession, and then learned the cello under C. Schuberth at St. Petersburg, and composition under Hauptmann at Leipzig. His first appearance in public was at the Gewandhaus Dec. 15, 59, after which he at once became leading cellist in that orchestra and Professor at the Conservatoire, vice Gritzmacher. In 1862 he was appointed solo cello to the Emperor of Russia, and professor at the new music school and Conservatoire of St. Petersburg. Davidoff made his first appearance in London at the Philharmonic on May 19, 1862, in a concerto
of his own. His position among cello-players is high. His tone is expressive, his intonation certain, especially in the higher registers, and his execution extraordinary, and there is great individuality in his style. He has composed much both for the cello and piano.

DAVIDSBÜNDLER. An imaginary association of Schumann and his friends, banded together against old-fashioned pedantry and stupidity in music, like David and his men against the Philistines. The personages of this association rejoiced in the names of Florestan, Eusebius, Karo, Chiara, Serpentinus, Jonathan, Jeanquirit, etc., and their displays took place in the pages of the Neue Zeitschrift für Musik, Schumann’s periodical. It was Schumann’s half humorous, half melancholy way of expressing his opinions. He himself, in the preface to his Gesammelte Schriften (Leipzig, 1854), speaks of it as “an alliance which was more than secret, since it existed only in the brain of its founder.” The Davidsbündler did not confine themselves to literary feats; their names are to be found in Schumann’s compositions also. Florestan and Eusebius not only figure in the Carneval (op. 9), but the Grande Sonate, No. 1 (op. 11), was originally published with their names, and so was the set of pieces entitled ‘Davidsbündler’ (op. 6). The most humorous of all these utterances is the ‘Marche des Davidsbündler contre les Philistins,’ which winds up the Carneval, and in which the antiquated ‘Grosvatertans’ is gradually surrounded and crushed by the strains of the new allies.

[G.]

DAVIES, the Miserable MARIANNE and Cecilia, were daughters of a relative of Benjamin Franklin. Marianne, the elder, attained some distinction as a performer on the harpsichord and pianoforte, but about 1762 achieved much more repute for her skill on the harp, or musical glasses, than recently much improved by Franklin. Cecilia, born 1740, won considerable renown as a vocalist. She made her first public appearance at the Concert Room in Dean Street, Soho, April 28, 1756. In 68 the sisters quitted England and went to Paris, and Vienna. Whilst there, Metastasio wrote and Cecilia composed an ode, which was sung by Cecilia, accompanied by Marianne on the harmonica. Metastasio, in a letter dated Jan. 16, 1772, describes the beautiful tone of the instrument, and the admirable manner in which Cecilia assimilated her voice to it, so as to render it difficult to distinguish the one from the other. From Vienna the sisters went to Milan, where Cecilia appeared in 1771, with great success, in the opera of Ruggiero, written by Metastasio and composed by Hasse, being the first Englishwoman accepted in Italy as prima donna. The Italians bestowed on her the sobriquet of ‘L’Inglesina,’ and confessed her to be superior to any Italian singer but Gabrielli. She afterwards sang at Florence. In 1773 the two ladies returned to London, where Cecilia appeared at the Italian Opera with the greatest success. She is described as having no great power or volume of voice, but a remarkably neat and facile execution. She subsequently revisited Florence, and performed there until about 1784, when she returned to England. Marianne’s nerves had become so seriously affected by her performance on the harmonica (a so frequent result of continued performance on the instrument as to have occasioned official prohibition of its use in many continental towns), that she was compelled to retire from her profession. She died in 1793, and Cecilia shortly afterwards also ceased to perform. About 1817 she published a collection of six songs by Hasse, Jomelli, Galuppi, etc. She survived until July 3, 1836, having for years suffered from the accumulated miseries of old age, disease, and poverty. [W.H.H.]

DAVY, John, was born in the parish of Upton Halton, near Exeter; in 1765. From his earliest infancy he discovered a remarkable propensity for music. After many other manifestations of his inclination, he was, when about six years of age, detected as the purloiner of from twenty to thirty horse-shoes from a neighbouring smithy. From these he had selected as many as formed a complete octave, and, having suspended them in an upper room, was amusing himself by imitating upon them the chimes of the neighbouring church of Crediton. By the advice of the Rev. Mr. Eastcott, he was articled to Jackson of Exeter. Some years afterwards Davy came to London, and obtained employment in the orchestra of one of the theatres and as a teacher. His ability for composition soon became known, and he was engaged to supply music for several dramatic pieces. After upwards of twenty years of such employment his frame gave way under the pressure of infirmities rather than of age, and he gradually sank until he died, in May’s Buildings, St. Martin’s Lane, Feb. 22, 1824. He was buried in St. Martin’s churchyard on Feb. 28 following. Davy composed the music for the following dramatic pieces:—‘What a Blunder!’ 1800; ‘Percouse’ (with J. Moorehead), 1801; ‘The Brazen Mask’ (with Mountain), 1802; ‘The Cabinet’ (with Braham and others), 1802; ‘The Caffrea’ (with others), 1803; ‘Red Roy’, 1803; ‘The Miller’s Maid’, 1804; ‘Harlequin Quicksilver’, 1804; ‘Thirty Thousand’ (with Braham and Reeve), 1805; ‘Spanish Dollars’, 1805; ‘Harlequin’s Magnet’, 1805; ‘The Blind Boy’, 1808; ‘The Farmer’s Wife’ (with others), 1814; ‘Rob Roy Macgregor’, 1818; ‘Woman’s Will, a Riddle’, 1820. Also an overture and other music for Shakespeare’s ‘Tempest,’ performed in conjunction with the songs of Purcell, Handel, and Lanyer.

Many of Davy’s songs gained great popularity, ‘Just like love,’ ‘May we ne’er want a friend,’ and ‘The Death of the Smuggler,’ have perhaps passed out of remembrance, but ‘The Bay of Biscay’ retains, and in all probability will long retain, its place in the public favour. [W.H.H.]

DAVY, Richard, an English composer in the early part of the 16th century. Some of his compositions are preserved in the British Museum,
in the volume known as the Fayrfax Manuscript (Add. MSS. 5465).

DAVY, ALFRED, M.D., the author of an important theory of harmony, was born in London in January 1810. In accordance with the wishes of his father he studied in London and Paris for the medical profession, and, after taking a degree at Heidelberg, practised in London as a homoeopathist. His father's want of sympathy for his musical inclinations in his earlier years having prevented him from attaining a sufficient degree of practical skill in the art, he turned his attention to the study of its principles, and formed the idea of making a consistent and complete theory of harmony, to replace the chaos of isolated rules and exceptions, founded chiefly on irregular observation of the practice of great composers, which till comparatively lately was all that in reality supplied the place of system. He took some years in maturing his theory, and published it finally in 1845, three years only before his death, Feb. 11, 1849.

In this work there was hardly any department in which he did not propose reforms. For instance, in view of the fact that the figures used in thorough bass did not distinguish the nature of the chord they indicated—since the same figures stood for entirely different chords, and the same chords in different positions would be indicated by different figures—he proposed that the same chord should always be indicated by the same figures, and that its inversions should be indicated by capital letters A, B, C, etc., placed under the bass, so that the chord of the seventh in its various positions would be indicated as follows:

\[\begin{array}{c}
\text{A} \\
\text{B} \\
\text{D}
\end{array}\]

as under the old system. And whenever a chord had also a secondary root, as the chord of the augmented sixth, it would be indicated by a capital letter with a line drawn through it, and lines also drawn through the figures which indicated the intervals derived from that secondary root.

With respect to the differences of opinion about the minor scale, he insisted with determined consistency that the principles of its construction precluded the possibility of its containing a major sixth or a minor seventh, and that the only true minor scale is that with a minor sixth and major seventh, the same ascending and descending; and his concluding remarks are worth quoting as characteristic:—"This scale may not be so easy to some instruments and to voices as the old minor scale, therefore let all those who like it practise that form of passage, but let them not call it the minor scale. Even as a point of practice I deny the old minor scale to be the better; as practice is for the purpose of overcoming difficulties, and not of evading them." The principle which throughout characterises his system is to get behind the mere shallow statement of rules and exceptions to the underlying basis from which the exceptions and rules will alike follow. Thus, in dealing with the theory of false relations, he points out that the objectionable nature of contradictory accidentals, such as G\textsuperscript{♯} and G\textsuperscript{♭} occurring in the same chord, or in succeeding chords or alternate chords, arises from the obscurity of tonality which thereby results, and which must always result when accidentals imply change of key; but since accidentals under particular circumstances do not imply change of key, contradictory accidentals are not necessarily a false relation; and he gives as an extreme instance, among others, the succession of the chords of the subdominant and supertonic in the key of C, in which F and F\textsuperscript{♯} follow one another in different parts in successive chords.

Proceeding after the same manner in his discussion of forbidden progressions of parts, he points out that as the objectionable effect of consecutive fifths is caused by the two parts seeming to move simultaneously in two different keys, there are cases in which the progression of the bass on which they are founded would prevent that effect and render them admissible; as, for instance, when the bass moves from Tonic to dominant, as in the Pastoral Symphony of Beethoven,

\[\begin{array}{c}
\text{A} \\
\text{B} \\
\text{D}
\end{array}\]

The most important part of his theory, and that which most distinguishes it, is its division of styles into Strict or Diatonic, and Free or Chromatic, and the discussion of the fundamental discords which can be used without preparation. His explanation of the 'Chromatic system' was quite new, and his prefatory remarks so well explain his principles that they may be fitly quoted. After pointing out that the laws of diatonic harmony had been so stretched to apply them to modern styles that they seemed 'utterly opposed to practice,' he proceeds—"Diatonic discords require preparation because they are unnatural; chromatic do not because they may be said to be already prepared by nature"—since the harmonics of a root note give the notes which form with it the combinations he calls fundamental discords. 'The harmonics from any given note are a major third, perfect fifth, minor seventh, minor or major ninth, eleventh, and minor or major thirteenth.' And this series gives the complete category of the fundamental chords of Day's chromatic system. Moreover, with the view of simplifying the tonal development
of music, and giving a larger scope to the basis of a single key—and thereby avoiding the consideration of innumerable short transitions—he gives a number of chromatic chords as belonging essentially to every key, though their signatures may not be sufficient to supply them, and with the same object builds his fundamental discords on the basis of the supertonic and tonic as well as on the dominant. In respect of this he says—

"The reason why the tonic, dominant, and supertonic are chosen for roots, is because the harmonics in nature rise in the same manner; first the harmonics of any given note, then those of its fifth or dominant, then those of the fifth of that dominant, being the second or supertonic of that dominant. The reason why the harmonics of the next fifth are not used, is because that note itself is not a note of the diatonic scale, being a little too sharp, as the fifth of the supertonic, and can only be used as part of a chromatic chord." The advantages of this system of taking a number of chromatic chords under the head of the key will be obvious to any one who wishes for a complete theory to analyse the progressions of keys in modern music as well as their harmonic structure. For instance, even in the early "Sonata Pathétique" of Beethoven, under a less comprehensive system, it would be held that if in the first bar there was a transition from the original key of C minor to G; whereas under this system the first modulation would be held to take place in the 4th bar, to Eb, which is far more logical and systematic.

The detailed examination of the series of chords which have been summarised above is very elaborate. In most cases his views of the resolutions, even of well-known chords, are more varied and comprehensive than is usual with works on harmony, and point to the great patience and care bestowed on the elaboration of the theory. The most salient points of this part of the work are the reduction of well-known chords and their recognised and possible resolutions under the author's system of fundamental discords. The chord of the diminished seventh (a) he points out to be the first inversion of that of the minor ninth (b); and though this inversion, in which the root is omitted, is decidedly more common than the original chord (b), yet the latter is to be found complete—as is also the major ninth, without omission of the root—in the works of the great masters; and that on tonic and supertonic as well as dominant roots. The chord of the dominanteleventh, when complete (as c), is hardly likely to be found unbridged; and it is even doubtful whether any examples of its first position exist, even with some notes omitted, which can be pointed to with certainty as an essential chord. But in this scheme the chord is important as giving in its fourth inversion the chord known as the added sixth (d), in which case the fifth of the original chord is at the top and the root and third are omitted, and the free treatment which has generally characterised this formerly isolated chord fully agrees with the rest of the principles of the system. This chord of the eleventh, unlike the others in the series, can only be used on the dominant, because if used on either the tonic or supertonic it would resolve out of the key. The last chord of the series is that of the major or minor thirteenth on either of the before-mentioned roots; of which the whole chord on the dominant of C (for example) would stand as (e). It is not suggested that all these notes occur at once, but that the discordant ones have their own proper resolutions, which they will follow in whatever positions they may be combined; their resolutions being liable to modification by the omission of any notes with which they form dissonances. The commonest and smoothest form of the chord is

Which will be readily recognised; and there are various resolutions given of the interval which makes the thirteenth with the root in this combination. One of the resolutions of the minor thirteenth deserves special consideration, namely, that in which it rises a semitone while the rest of the chord moves to tonic harmony. This makes the chord appear to be the same as that which was and is commonly known as that of the sharp fifth, as (f). To the whole doctrine of a sharpened fifth Dr. Day strongly opposed himself, and maintained that the two chords marked (g) and (a) in the example were identical; and brought to bear both mathematics and practical experiment to prove it. The combinations and resolutions which result from his views of the nature of this chord are some of them very curious and original, and would probably be impossible if the chord were not a minor thirteenth but a sharp fifth. Still, the case against the sharp fifth cannot be said to be thoroughly substantiated, and the singular results of his views in this special case are not to be found in great numbers in the works of composers.

The chord of the augmented sixth he derives from the primary harmonics arising from a primary root, and the secondary harmonics arising from a secondary root. Thus in the following chord in the key of C, the lower note Ab he
explains to be the minor ninth of the dominant root, and the remaining three notes to be the seventh, ninth, and third of the supertonic or secondary root; both these notes being already recognised as capable of being taken as roots in any key. The progressions of the component notes of the chord are the same as they would be in their positions in the respective fundamental discords of tonic and supertonic of which they form a part. His views of the capacity of the interval of the augmented sixth for being inverted as a diminished third are opposed to the practice of the greatest composers, who though they use the inversion rarely use it with great effect. He says: 'This interval should not be inverted, because the upper note being a secondary harmonic and capable of belonging only to the secondary root, should not be beneath the lower, which can only belong to the primary root.' As in his views with respect to the sharp fifth and the minor thirteenth, the question cannot be said to be definitely settled. Thus the musical feeling of people of cultivated taste may still count for something, and it seems probable that if the inversion were vicious Bach and Beethoven would not have used it.

This is not the place to point out in what respects Dr. Day's hypothesis is vulnerable; theorists of very high standing repudiate the chords of the eleventh and thirteenth, and even cast doubts on the essential nature of the ninths; but whatever may be said of its hypothetical and as yet incompletely substantiated views it must be confessed that no other theory yet proposed can rival it in consistency and comprehensiveness. The strong adhesion given to it by one of our most distinguished living musicians, the Professor of Music at Cambridge, should be sufficient to recommend it; and the study of it, even if it lead to dissent on some points, can hardly fail to be profitable. [C.H.H.P.]

DAY, JOHN, one of the earliest of English musical typographers, began printing about 1549 in Holborn, a little above the Conduit. He afterwards dwelt 'over Aldersgate beneath Saint Martyrs,' and subsequently had a shop in St. Paul's Churchyard. He used the motto 'Arise, for it is Day,' which was probably intended as a reference to the introduction of the Reformed religion, as well as a punning allusion to his own name. On March 25, 1553, he obtained a licence to print 'A Catechism in English with an A B C Therunto annexed,' and also the works of John Royse, Bishop of Winchester, and Thomas Beacon, Professor of Divinity. He subsequently procured a patent to be granted to him and his son for printing the Psalms, etc. He was the printer of Fox's 'Acts and Monuments.' In 1582 he was Master of the Stationers' Company. He died July 23, 1584. The musical works printed by Day were 'Certaine Notes sett forth in four and three partes to be sung at the Morning, Communion and Evening Prayer.' 1560; 'The whole Booke of Psalms in four partes,' which may be sung to all Musickall Instruments,' 1563, rep-inted in 1565; 'Sones of three, fower and five voyces composed and made by Thomas Whythorne,' 1571; 'The Psalms of David' by William Damon, 1579. [DAMON.] [W. H. H.]

DEANE, THOMAS, Mus. Doc., born in the latter half of the 15th century, was organist at Warwick and Coventry. He composed a service and other church music, and in 1703 the instrumental music for Oldmixon's tragedy 'The Gover-

or of Cyprus.' He is said to have been the first to perform a sonata of Corelli in this country in 1709. Many compositions by him for the violin are contained in the collection called 'The Division Violin.' He graduated as Doctor of Music at Ox-

ford July 9, 1731. [W. H. H.]

DEBAIN, ALEXANDRE FRANCOIS, key-in-

strument maker, born in Paris 1809. Originally foreman in a pianoforte factory, but in 1834 established a factory of his own. Has distin-
guished himself by the invention of several musical instruments, amongst others the Antiphonel—a kind of barrel-organ—the Harmoni-
corde—a combination of reeds and strings—and the Harmonion, or Orgue expressif. Died Nov. 77.

DEBORAH. An oratorio of Handel's, the words by Humphreys; completed Feb. 21, 1733; first performed at the King's Theatre, Hay-

market, March 17, 1733. No less than 14 of the airs and choruses are founded on, adapted, or transferred, from other works of Handel's—Dixit Dominus (1707); the Passion (1716); the ode on Queen Anne's birthday (1715); the Coronation Anthems (1727). Deborah was revived by the Sacred Harmonic Society Nov. 15, 1843.

DECANI. The words Decani and Cantoris are used to distinguish the two sides of the choir for the purposes of antiphonal singing in the Anglican Church. The names are derived from the position of the stalls of the Decanus or Dean and the Cantor or Precentor, which are the first on either side on entering the choir of a cathedral, the Dean always on the south side. [C.H.H.P.]

DECRESCENDO, decreasing—the opposite of crescendo—consists in gradually lessening the tone from loud to soft. It is also expressed by dec., decresc., and by the sign —. Whether there was originally any difference between decrescendo and diminuendo or not, at present the two terms appear to be convertible. There is a splendid instance of the thing, where both words are used, at the end of the first section of the Finale of Schubert's Symphony in C, No. 9, in a decrescendo of 48 bars from fff, the bass at the same time going down and down to the low G.

DEFESCH, WILLIAM, a Fleming by birth, was organist of the church of Notre Dame at Antwerp, and in 1725 succeeded Alfonso D'Eve as chapel-master there, but was in 1731 dismissed on account of his ill-treatment of some of the choir-boys under his charge. He then came to England, and established himself in London, where, in 33, he produced an oratorio entitled
DEFFESCH.

'The works of this composer include Masses, motets, and a large number of choral works. He also composed music for the theatre and the opera. He was a master of counterpoint and was one of the foremost figures in the late Baroque period.'

[End of text]

DELEVEZ.

'Griepenkerl undertook his edition of Bach's complete works for clavier and organ (Peters, Leipzig). He also published a collection of vocal compositions in 4, 5, 6, 8, and 10 parts, called 'Sammlung alterer Musik aus dem XVI und XVII Jahrh.' (Grants, Berlin). He succeeded Gottfried Weber in the editorship of the musical periodical 'Cecilia' (Schott). He re-edited Marpurg's treatise on Fugue (Leipzig 1858), had translated Delmote's work on Orlando Lasso, under the title 'Biographische Notizen über Roland de Lattre,' and was preparing a larger work on the same subject, from valuable materials collected with great labour, when he died. In addition to these and similar labours he conducted a large correspondence on musical subjects and formed many distinguished pupils, among whom may be mentioned Glinka, Kulak, A. Rubinstein, and F. Kiel. Among his friends were Kiesewetter and Pétis, for the latter of whom he collected materials equal to two volumes of his Biographische universelle.' His theoretical works were 'Theoretisch-praktische Harmonielehre' (Berlin 1846; 2nd edition Leipzig 1858); 'Analyse dreier Fugen . . . J. S. Bach's . . . und Bononcini's etc.' (Leipzig 1848), and 'Lehre vom Contrapunkt' (Schneider, 1859). The latter, published after his death by his pupil Scholz, contains examples and analyses of canon and fugue by Orlando Lasso, Marcello, Palestrina, etc. Dehn was a good practical musician and violoncellist.'

DEISS, MICHAEL, musician to the Emperor Ferdinand I of Germany, for whose obsequies in 1564 he composed a motet for four voices, and eight other pieces, published by Joannelli in his 'Thesaurus Musices.' Other motets of his are contained in Schad's 'Promptuarium Musicum.' Deiss's part-writing was fluent and natural for his time, as is shown in his motet 'Miseri Herodes rex.'

DELEVEZ, ERNST, born in Paris May 31, 1817, studied at the Conservatoire, where he was a pupil of Habeneck, and obtained the first violin prize in 1833, the second prize for fugue in 1837, and the second prize for 'premie de Rome' in 1838 for his cantata 'La Vendetta,' which he subsequently revised and printed (op. 16). That he is not only a talented violinist and leader, but also a sound and melodious composer, is shown in his published works. These consist of songs, sacred choruses, 2 trios (op. 9 and 23), quartets (op. 10), a quintet (op. 22), concert-overs (op. 1 and 3), symphonies (op. 2, 8, 15), besides some still unpublished; a 'Requiem' (op. 7), and dramatic works, besides others still in MS. Among his ballets performed at the Opera we may mention 'Lady Henriette' (3rd act), 'Eucarías' (1844), 'Paquita' (1846), and 'Vertvet' (1851), which contain much pleasing and brilliant music. This learned and conscientious musician has also published an Anthology of Violinists, 4 vols. (op. 19) -a selection of pieces by various composers, from Corelli to Viotti; a work 'Des Principes de la formation des intervalles et des accords'; the
'Cours complet d'harmonie et de haute composition' of Fenaroli; 'Transcriptions et Réalisations d'œuvres anciennes'; 'Curiosités Musicales' (Didot, 1873), on certain peculiarities in the works of the great masters, and 'L'art du Chef d'Orchestre' (Didot, 1878). On the death of George Hainl (1873) Deldevez was appointed first leader to the 'Académie' and to the 'Société des Concerts.' In October 1873 he was chosen to direct the class for instrumental performance, instituted at the Conservatoire at the instance of Ambroise Thomas, and hitherto most successful. He retired from the Opera July 1, 1877. Deldevez is a Chevalier of the Legion of Honour. [G. C.]

DELICATI, MARGHERITA, an Italian soprano engaged at the King's Theatre with her husband in 1789. They played principally in opera buffa. She sang with Marchesi in Tarchi's 'Disertore,' and they both took part in 'La Cosa rara' and 'La Villana riconosciuta.' Delicati also played a small part in Paisiello's 'Barbier di Siviglia.' Their subsequent history is unknown. [J. M.]

DELMOTT, HENRI FLORENT, born at Mons 1799, died there 1836, librarian of the public library at Mons, and author of 'Notice biographique sur Roland Delattre, etc.' (Valenciennes 1836). This work was translated into German by Dehn. The authenticity of the chronicle Vincourt, from whom Delmotte took the chief part of his facts, has been contested since his death. (See Lasso.) At the time of his death Delmotte was collecting materials for the life of Philippe de Mons. [M. C. C.]

DEMANIUS, CHRISTOPHE, composer, born at Reichenberg 1557; was cantor at Zittau about 1596, and in 1607 at Freyberg in Saxony where he died 1643. His works (for list see Fétis) comprise songs sacred and secular, dances, and threnodies, or funeral laments, besides two elementary works, 'Isagogae artis musicæ' etc. (Nuremberg 1605, 12th edition Freyberg 1671) and 'Forma musice, gründlicher ... Bericht der Singekunst' (Budweis 1592). Four 8-part motets are printed in the Florilegium Portense, and a short 'Domine ad adjuvandum,' à 4, in Proske's 'Musica Divina'—Lib. Vesperarum. [M. C. C.]

DEMI-SEMI-QUAVER, the half of a semiquaver; in other words, a note the value or duration of which is the quarter of a quaver and the eighth part of a crotchet. In French 'triple croche'; in Italian 'semi-bis-croma.' It is shown by \( \text{\textcopyright} \), or, when joined, by \( \text{\textcopyright} \), and its rest by \( \text{\textcopyright} \).

DEMOPHON, tragédie lyrique, in 3 acts; words by Marmontel; music by Cherubini, his first opera in Paris; produced at the Académie royale Dec. 5, 1788.

DENEFFY, JULES, violoncellist and composer, born at Chimiay 1814, entered the Brussels Conservatoire in 1833. He studied the violoncello under Platel and Demunck; became professor of the violoncello at the Ecole de Musique, and first violoncello at the theatre, and at the Société des Concerts at Mons. Within a few years he became director of the Ecole, conductor of the Société des Concerts, and founder and conductor (1841) of the Roland de Lette choral society. He composed three operas for the Mons theatre; a number of choruses for men's voices; several cantatas (one for the erection of a statue to Orlando Lasso in 1858); a Requiem, and various orchestral pieces. Denefve is a member of the 'Société des beaux arts et de littérature' of Ghent, and honorary member of the most important choral societies in Belgium and the north of France. [M. C. C.]

DÉPART, CHANT DU. This national air was composed by Mélou to some fine lines by Marie Joseph Chénier, for the concert celebrating the fourth anniversary of the taking of the Bastille (July 14, 1794). Chénier was in hiding at the house of Sarrette when he wrote the words, and the original edition, by order of the National Convention, states merely 'Paroles de ... music de Mélou.' Of all the French patriotic songs this is the only one actually written during the Terror. The first verse is as follows:—

_Tempo di marcia_

La vie-toire en chantant nous ouvre la ber-
rie-re, la libér-toi guidé de nos pas; Et du Nord au sud
la trompette guerrière a sonné l'heure des comp-

bats. Trem-bles, em-nis de la Fran-c, École

i-ve de sang et d'or-gueil! Le peuple sour-a ses-

avant; Ty-rans, descendez au cer-ueil! La ré-

publique nous ap-pel-le, fa-chons vaincre ou fa-chons pé-

rir; Un Français doit vi-re pour et la, Pour

eille un Français doit mourir! Un Français doit vi-

rir pour et la, Pour
eille un Français doit mourir! Un Français doit vi-

rir pour et la, Pour

The opening phrase is spirited and sonorous; the modulation in the middle recalls perhaps involuntarily that in the Marsellaise; while the end foreshadows too definitely the melodies of the Empire. Apart from its merit as music, the air is appropriate to Chénier's words, and produces an almost overwhelming effect when sung by a multitude. [G. C.]
DERING, Richard, Mus. Bac., a member of the ancient Kentish family of that name, was educated in Italy. He returned to England with a great reputation as a musician, and for some time practised his profession in London. In 1610 he took the degree of Bachelor of Music at Oxford. Being strongly importuned thereto he became organist to the convent of English nuns at Brussels. Upon the marriage of Charles I, in 1625, Dering was appointed organist to the queen. Henrietta Maria, which office he continued to hold until she was compelled to leave England. He died in the Romish communion about the year 1658. Dering's published works are wholly of a sacred kind. They consist of 'Cantiones Sacrae quinque vocum cum baso continuo ad Organum,' Antwerp, 1597; 'Cantica Sacra ad Melodium Madrigalium elaborata senis Vocibus,' Antwerp, 1618; 'Cantica Sacra ad Duos & Tres Voces, composita cum Basso-continuo ad Organum,' London, 1663. On the title-page of this work, which is dedicated to the Queen Dowager, Henrietta Maria, Dering is described as 'Regis Majestatis quondam Organista.' In 1674 Playford published a second set of Cantica Sacra by various composers, in which are eight motets attributed to Dering, but which Playford, in his preface, candidly admits 'by some believed not to be his.' In the library of the Sacred Harmonic Society are preserved in manuscript imperfect sets of parts of the following compositions by Dering: anthem, 'Unto Thee, O Lord'; madrigal, 'The Country Cry'; some motets, and several fancies for viola. [W.H.H.]

DESERTEUR, Le, a musical drama in 3 acts, words by Sodaine, music by Monsigny—his best; produced at the Théâtre des Italiens March 6, 1769, and revived at the Opéra Comique Oct. 30, 1843.

DETTINGEN TE DEUM, THE, written by Handel to celebrate the victory of Dettingen (June 26, 1743), 'Begun July 1743'; first performed (not at the thanksgiving service July 28, but) at the Chapel Royal, St. James's, Nov. 27, 43. Many of the themes and passages are from Urio.

DEUS MISEREREATUR is the psalm (ixvii.) used in the evening service of the Anglican church after the lessons, alternatively with the Nunc Dimittis. It is considered as a 'responsory psalm' in conformity with the 17th canon of the Council of Laodicea, which appointed lessons and psalms to be read alternately.

In the ancient church the psalm was used at Lauds, and in the Sarum use it was coupled with the bidding prayer on Sundays. Nevertheless it is not in Clerke's Prayer-Book of 1549, and consequently has no special chant given for it in Marbeck's 'Book of Common Prayer Noted,' of 1550. It was appointed as an alternative to the Nunc Dimittis in the revised edition of the Prayer-Book, 1552. Like its fellow, the 98th Psalm, it is not so often used as the 'Nunc Dimittis,' partly because it seems less appropriate than that canticle, and partly because it is longer.

Settings of it are comparatively rare. To take for example the most famous ancient collections of services; there is only one setting in Barnard's collection, viz. that by Stroger; there are three in Boyse's, and only two in Arnold's. With regard to the setting in Barnard's collection, it is worth remarking that there is a quaint note at the end of the index suggesting that it should be sometimes used as an anthem. [C.H.H.P.]

DEUX JOURNÉES, LES. Comédie lyrique in 3 acts, words by Bouilly, music by Cherubini; produced at the Théâtre Feydeau Jan. 16, 1800. Translated into German as 'Der Wasserträger,' and into English as 'The Escapes; or, the Water Carrier'; produced, in a very mutilated state, in London 1801, and at Covent Garden Nov. 12, 1824, with the 'overture and all the music.' In Italian produced at Drury Lane June 20, 1872, as Le due Giornate, for one night only. Beethoven thought the book of this opera the best in existence. [G.]

DEVELOPMENT. A word used in two somewhat different senses; on the one hand of a whole movement, in a sense analogous to its use with reference to an organism; and on the other of a subject or phrase, with reference to the manner in which its conspicuous features of rhythm or melody are employed by reiteration, variation, or any other devices which the genius or ingenuity of the composer suggests, with the object of showing the various elements of interest it contains.

The term is very apt and legitimate when used in the above senses, which are in reality no more than the converse of one another; for the development of a movement is rightly the development of the ideas contained in its subjects; otherwise in instrumental music neither purpose nor unity of design could be perceived. It must however be borne in mind that the mere statement of a transformed version of a subject is not development. A thing is not necessarily developed when it is merely changed, but it is so generally when the progressive steps between the original and its final condition can be clearly followed.

The most perfect types of development are to be found in Beethoven's works, with whom not seldom the greater part of a movement is the constant unfolding and opening out of all the latent possibilities of some simple rhythmical figure. It is impossible to give examples, owing to the space they would require; but reference may be made to the first movement of the Symphony in C minor; the Scherzo of the 9th Symphony; the Allegro con brio of the Sonata in C minor, opus 111; the last movement of the Sonata in F, opus 10, no. 2; and the last movement of the Sonata in A, opus 101. [C.H.H.P.]

DEVIN DU VILLAGE, LE (the village sorcerer), an Interméde, in one act; words and music by J. J. Rousseau; played for the first
time at Fontainebleau Oct. 18, 1752, and at the Académie royale March 1, 53. Last played in 1829, after more than 400 representations; some one threw a perruche on the stage, which decided its fate. It was translated and adapted as 'The Cunning Man' by Dr. Burney in 1766. One of Jullien's very first public feats was a Quadrille on the motifs of the Devin, 1836 or 37. [G.]

DEVRIENT, WILHELMINE SCHÖDER. See SCHÖDER.

DIABELLI, ANTON, head of the firm of Diabelli & Co., music publishers in Vienna, and composer of pianoforte and church music, born Sept. 6, 1751, at Matsee in Salzburg. His piano pieces are well written, at once graceful and good practice, and both these and his numerous arrangements had an immense popularity. His masses, especially the 'Landmesse' (for country churches), are widely spread in Austria, being for the most part easy to execute, and interesting, if not particularly solid. He also composed songs for one and more voices, and an operetta, 'Adam in der Klemme.' Being intended for the priesthood he received a good general education, and profited much from association with Michael Haydn, who superintended his musical studies. When the Bavarian convents were secularised in 1803, he gave up the idea of taking orders, went to Vienna, and was warmly received by Joseph Haydn. He soon became a popular teacher of the pianoforte and guitar; made money enough to become partner with Peter Cappi the musicpublisher in 1818, and in 1844 the firm became Diabelli & Co. The latter half of his life is much more interesting than the former, as it brings us into contact with one of the first music-publishing establishments in Vienna, where Czerny was for many years a daily visitor, and where all the leaders of the musical world went in and out. In 1852 the firm became C. A. Spina, and in July 72 F. Schreiber, under which name it still continues, though the business was purchased in May 76 by A. Cranz of Hamburg. Their publications at this moment amount to over 25,000. In Diabelli's time they acquired the publications of the extinct firms of M. Arteria, L. Kozeluch, Th. Weigl, Berka, Leidesdorf, Pennauer, and Traeg, and in 1855 those of Carlo Mocchiatti. They published specially for Schubert, Czerny, Straus, and Lammer; also Marpurg's 'Abhandlung von der Fuge' revised by Sechter, and Reichs's 'Lehrbuch'; and, under the title 'Ecclesiasticum,' a collection of church music. In 1874 they issued a fresh catalogue of their publications, and a thematic catalogue of Schubert's published works, compiled with his usual exhaustive accuracy by Nottebohm. Diabelli died April 8, 1858. His quiet and unassuming life made him many friends, some of whom in 1871 erected a tablet to his memory on the house at Matsee in which he was born. Beethoven wrote his 33 Variations (op. 120) on a waltz of Diabelli's, and this alone will preserve his name to posterity should it disappear in other ways. [C.F.P.]

DIADESTE. A buffo Italian opera, words by Fitzball, music by Balfe; produced at Drury Lane May 17, 1838.

DIAMANTS DE LA COURONNE, LES. Opera comique in 3 acts, words by Scribe and St. George, music by Auber; produced at the Opéra Comique March 6, 1841; at the Princess's Theatre, London, May 2, 44, as Crown Diamonds.

DIAPASON originally meant the interval of an octave, because it was διὰ τῶν χρόνων συμφωνία, the consonance arrived at by going 'through all the strings of the lyre' from first to last. In this sense it is used by Dryden:—

'Through all the compass of the notes it ran,

The diapason closing full in man.'

In French it came to mean a tuning-fork, and hence also the pitch which was as it were registered by it; the 'Diapason normal' being the standard of pitch supposed to be generally accepted in France, which gave 435 vibrations for the A above middle C. In England the name is given to the most important foundation stops of the organ. (See Organ.) [C.H.H.P.]

DIAPENTE was the ancient Greek name for the consonance of the 5th. By the musicians of the 17th and 18th centuries a canon in the fifth was called in Epidiapente or Subdiapente, as it answered above or below.

DIALESSARON was the ancient Greek name for the consonance of the 4th—διὰ τῶν χρόνων συμφωνία.

DIATONIC is the name given to music which is confined to notes proper to the signature of the key in which they occur—such as the white notes only, in the key of C major. The different forms of the minor scale are considered diatonic. Therefore the major 7th and major 6th, which often occur instead of the minor 7th and minor 6th in the signature of a minor scale, can be used without the passage ceasing to be diatonic. The theme of the Finale of the Choral Symphony is a splendid example of a diatonic melody. [C.H.H.P.]

DIBDIN, CHARLES, was the son of a silversmith at Southampton, where he was born March 15, 1745, his mother being in her fiftieth year and he being her eighteenth child. His grandfather was a considerable merchant, who founded the village near Southampton which bears his name. Dibdin's eldest brother, who was twenty-nine years his senior, was captain of an Indiaman and father of the Rev. Dr. Thomas Froggall Dibdin, the well-known bibliographer. Charles Dibdin, being intended by his father for the Church, was placed at Winchester College, but a passion for music took possession of him, and he sang with the choristers both at the cathedral and college. He had a good voice and a quickness in learning, which induced Kent to compose anthems for him and teach him to sing them, and Fussell, who afterwards succeeded Kent as organist, taught him the rudiments of music and a few common tunes. All musical knowledge beyond that he acquired for himself, studying
chiefly the concerts of Corelli and the theoretical works of Rameau. The place of organist at Bishop's Waltham becoming vacant, Dibdin offered himself for it, but was rejected on account of his youth. When fifteen years old his eldest brother brought him to London and placed him in the music warehouse of Johnson in Cheapside, where however he did not remain long, a friend having advised him to try the stage. He obtained an engagement at Covent Garden Theatre as a singing actor. About the same time he began to write verses as well as music, in which he was encouraged by Beard, then became manager of the theatre, who advised him to try his hand at something for the stage, promising to bring it out at Dibdin's benefit. He accordingly set to work and wrote and composed 'The Shepherd's Artificer,' a pastoral, which was performed at his benefit in the season of 1762-63, and repeated in the following season, the author-composer performing the character of himself. He now obtained an engagement at Birmingham, where he not only played at the theatre but sung at Vauxhall. In the beginning of 65 the opera of 'The Maid of the Mill' was about to be produced at Covent Garden, and some difficulty arising with Dunstall, who was to have played Ralph, Dibdin was requested by Beard to undertake the part. He made a decided hit, and at once established himself firmly in the public favour. In 1767 he composed part of the music for 'Love in the City,' and in the next year two-thirds of that of 'Lionel and Clarissa.' In 68 Dibdin transferred his services from Covent Garden to Drury Lane, where he signalled himself by his composition of the music of 'The Padlock,' and his admirable performance of Mungo in it. In the following year he was engaged by Upper for Raleigh, where he produced 'The Maid of the Mistress,' and 'The Recruiting Sergeant.' He likewise composed some of the music for the Shakespear Jubilee at Stratford-on-Avon in that year. In 1772 Thomas King, having become proprietor of Sadler's Wells, engaged Dibdin to write and compose some little musical pieces to be brought out there. In 74 Dibdin produced 'The Waterman,' and in 75 'The Quaker,' pieces which have kept uninterrupted possession of the stage ever since, the songs being still listened to with as much pleasure as when first heard. At the end of the latter season he quitted Drury Lane owing to differences that had arisen between him and Garrick, and exhibited at Exeter Change a piece called 'The Comic Mirror,' in which well-known characters of the day were personated by puppets. In 1776 he took a journey into France, where he remained some months. On his return he was engaged as composer to Covent Garden Theatre at a salary of £10 a week, but he held the appointment for two or three seasons only. In 1782 he projected the erection of the Royal Circus (afterwards the Surrey Theatre), which was opened Nov. 7, 1782, Dibdin undertaking the general manage-ment, Hughes the equestrian department, and Grimaldi (father of the afterwards famous clown) the stage direction. For this theatre the ever-active pen of Dibdin was employed in the production of numerous little musical pieces and pantomimes. The first season was remarkably successful. In the second, dissensions broke out amongst the managers, in consequence of which he retired from the theatre. He then made an attempt to regain his position at the patent theatres, and succeeded in getting his opera, 'Liberty Hall' (containing the popular songs of 'Jack Ratlin,' 'The high-nerved racer,' and 'The Bells of Aberdovey'), brought out at Drury Lane on Feb. 8, 1785. Soon afterwards he listened to a proposal to erect a theatre at Pentonville, where he purposed representing spectacles in which hydraulic effects should be introduced. He proceeded to some extent with the building, which he intended to call 'Helicon,' but his application for a licence was refused, and shortly afterwards a gale of wind destroyed the edifice and put an end to the project. Dibdin next meditated a visit to India, and, to raise funds for the purpose, in 1787-88 made a tour through a large part of England and gave entertainments. He published an account of this tour in 1788, in a quarto volume, under the title of 'The Musical Tour of Mr. Dibdin.' In the summer of 88 he sailed for India, but the vessel being driven to take shelter in Torbay, he finally abandoned his intention and returned to London. Dibdin next resolved to rely on his own unaided exertions, and in 1789 produced at Hutchins' Auction Room, King Street, Covent Garden, the first of those 'table entertainments' which he originated, and of which he was author, composer, narrator, singer, and accompanist, under the title of 'The Whim of the Moment.' On the first evening there was present only sixteen persons. Dibdin, however, persevered; he engaged the Lyceum and brought out 'The Oddities,' the success of which was at once decisive; and no wonder, for it contained, amongst others, the songs, 'To Bachelors' Hall,' 'Twas in the good ship Rover,' 'The Flowing Curr,' 'Saturday night at sea,' 'Ben Backstay,' 'I sailed from the Downs in the Nancy,' 'The Lamplighter,' and 'Tom Bowling;' the last written on the death of his eldest brother, Captain Dibdin. And here it may be observed that nearly the whole of those sea songs that contributed so largely during the war to cheer and inspire the hearts of our seamen, and gained for their author the appellation of the Tyrrhenus of the British Navy, were written by Dibdin for his entertainments. In 1790 'The Oddities' was revised, and ran 79 nights, when it was succeeded by 'The Wags,' which was performed for 108 nights. The great sale of 'Poor Jack,' the copyright of which and eleven other songs he had sold for £60, and which in a short time had brought its purchaser a profit of £500, induced Dibdin about this time to become his own publisher. In 1791 he removed from the Lyceum to a room in the Strand, opposite Beau-
‘Dibdin’s house,’ Sadler’s Wells, Sept. 8, 1813. He acquired his first knowledge of music from his eldest sister, Mary Anne, afterwards Mrs. Tonna, an excellent harpist, pupil of Challoner and Bochas. He subsequently studied the harp under Bochas, and also became proficient on the organ and violin. Early in 1833 Dibdin went to Edinburgh, where he established himself as a teacher. He died May 6, 1866. Dibdin composed a few psalm tunes and some pieces for the organ and pianoforte, but he is best known as the compiler of The Standard Psalm Tune Book, the largest and most authentic collection of psalm tunes ever published, the contents being mainly derived from ancient psalters. Besides his attainments as a musician Dibdin possessed considerable skill as a painter and illuminator. [W.H.H.]

DICKONS, Mrs., daughter of a gentleman named Poole, was born in London about 1770. Her musical talent was early developed. She became a pupil of Rauzini, and in 1787 appeared at Vauxhall Gardens as a singer. Her progress was rapid, and she became engaged at the Concert of Ancient Music and other concerts. On Oct. 9, 1793, she made her appearance at Covent Garden Theatre as Ophelia in ‘Hamlet.’ She next sang in several of the principal towns of England, Scotland, and Ireland with great success. She was subsequently engaged at the King’s Theatre, where she performed the Countess in Mozart’s ‘Nozze di Figaro’ to the Susanna of Mme. Catalani. She afterwards sang at Drury Lane Theatre. In 1816 she was engaged at the Opera at Paris. From thence she went to Italy. On her return to England she was again engaged at Covent Garden, where she appeared Oct. 13, 1818 as Rosina in Bishop’s adaptation of Rossini’s ‘Barber of Seville.’ In 1822 she was compelled by ill health to relinquish her profession. She died May 4, 1833. [W.H.H.]

DICTIONARIES OF MUSIC. The oldest known work of the kind is that of the learned Flemish musician Jean Tinctor, entitled Terminorum musicarum Difiinitiorum, 15 sheets, 4to, undated, but in all probability printed with the type of Gérard de Flandre, and published in 1474. The original is extremely rare, but Forkel has reprinted it in his ‘Allgemeine Litteratur der Musik,’ and thus placed it within the reach of students. The ‘Glossarium’ of Du Cange also includes many musical terms and explanations useful to historians of music. Musical archaeologists who will further do well to consult Ménestrier, whose Dictionnaire éymologique de la langue François appeared in 1630—and the Dictionnaire Universel (Rotterdam, 1690) of Furtétaire, afterwards remodelled by Buasne (the Hague, 1701). These works are often overlooked, and the credit of having written the two oldest dictionaries of music is generally assigned to Janowka and the Abbé Sébastien de Brossard. The Bohemian organist wrote in Latin, and his Clavis ad Thesaurum magnae artis musicae (Prague, 1701) was unknown to Brossard when he published his Dictionnaire de Musique (Ballard, Paris 1703).
Taking into account the enormous difficulties under which they labour, both authors are deserving of great praise for works so eminently useful to students of musical terminology. Amongst their imitators may be named Waller, Grassineau, and J. J. Rousseau. Waller’s work, ‘Alte und neu musikalische Bibliothek, oder musikalisches Lexicon,’ was originally published at Weimar, but the second edition (Leipzig, 1732) is the important one. In it he so far adopted the plan suggested by Brosard at the end of his dictionary, that his work forms a kind of complement to that. In his ‘Musical Dictionary’ (London, 1740, 1 vol. 8vo.; 2nd ed. 1769) James Grassineau has made ample use of Brosard’s definitions and examples; but his work is much more complete, and his remarks on the music of the ancients and on musical instruments evince much reading, and may still be consulted with advantage. J. J. Rousseau in his ‘Dictionnaire de Musique’ (Geneva, 1767) also utilised the labours of Brosard, especially with regard to ancient music; but it is to his literary ability rather than to his elevated views on aesthetics that the enormous success of his dictionary is due. Not only was it translated into several languages, but it was imitated by Moule-Monpés (Paris, 1758) and by Reyvean (Amsterdam, 1793), only half of whose ‘Musikal ka Kunst Woorden-boek’ was ever published. Rousseau’s influence may be traced also in the ‘Dictionnaire de Musique’ contained in the ‘Encyclopédie Méthodique.’ That enormous mass of undigested material forms two huge 4to. volumes, of which the first (1791) was compiled under the superintendence of Fraramey and Ginguené, with the assistance of the Abbé Feytou and of Surremain de Missery, and is far superior to the second (1818) edited by Momigny, whose theories were not only erroneous but at variance with those of the first volume. In spite however of its contradictions and errors, both scientific and chronological, a judicious historian may still find useful materials in this dictionary.

Whilst Rousseau's writings were exciting endless discussions among French musicians, the labours of Gerber and Forkel in Germany were marking a new era in the literature of music. By his History (Allg. Geschichte der Musik, Leipzig 1788-1801) Forkel did as much for the musicians of Europe as Burney and Hawkins had in all probability done for him. His influence may be recognised in Koch’s ‘Musikalisches Lexicon’ (Frankfort 1802), a work in all respects superior to that of G. F. Wolf (Halle 1787). Koch also published his ‘Kurzgefasstes Handwörterbuch der Musik’ (Leipzig 1807), a work distinct from his Lexicon, but quite as useful and meritorious. But the happy influence of Forkel is more especially evident in the biographical work of Gerber, ‘Neues historisch-biographisches Lexicon der Tonkünstler’ (Leipzig, 1812-14, 4 vols.) a work in every way a great improvement on his first edition (Leipzig, 1790-93, 2 vols.), although incomplete without it, owing to his habit of referring back. Gerber was the model for the ‘Dictionnaire historique des musiciens’ of Choron and Fayolle (Paris, 1810-11), the first book of the kind published in France, and preceded by an excellent Introduction, by Choron, of which Féts in his turn has made good use.

In Italy the Abbé Gianelli was the author of the first dictionary of music printed in Italian (Venice 1801, 2nd ed. 1820); but his book has been entirely superseded by the ‘Dizionario e Bibliografia della Musica’ of Dr. Lichtenthal, the first two volumes of which are devoted to music proper, while the last two contain an historical and critical catalogue, which has been largely utilised by Féts. Lichtenthal doubtless took many of his materials from Forkel and Gerber, but his work shows a marked advance upon those of Koch and Rousseau in the definitions of words, the descriptions of instruments, and the historical articles. It was translated into French by Mondo (Paris 1821, 2 vols. 8vo.). The ‘Dictionnaire de Musique moderne’ of Castil Blaze (Paris 1831 2nd ed. 1835, 2 vols.), in part copied from that of Rousseau, attained a certain amount of success from the position of its author and its animated style; but it is by no means equal either in extent or accuracy to Lichtenthal’s work. Partly founded on a similar model is the ‘Dictionnaire de Musique d’après les théoriciens, historiens, et critiques les plus célèbres’ (1844; 5th ed. 73) by M. Marie et Léon Escudier, a compilation, as its title indicates, but containing much useful information in a small space, especially on ancient musical instruments and on contemporaneous matters. Jos. d’Ortigue, on the other hand, opened up a new line in his ‘Dictionnaire liturgique, historique, et théorique de Plain-chant et de Musique d’église ... ’ (Paris 1854 and 60), an interesting and valuable work written from the point of view of an orthodox Roman Catholic. It has the merit of quoting distinctly all the sources from which the author derived his information, and of mentioning by name all those who assisted him; and for the special branch of which it treats this dictionary is hitherto without a rival.

The ‘Biographie universelle des Musiciens,’ by the late F. J. Féts, is hitherto equally unrivalled. The first edition (Paris and Brussels, 1835-44), in 8 vols. 8vo., double columns, contains a long and admirable introduction, not republished in the second edition. That edition (Paris, 1860-65), also in 8 vols. 8vo., though a great advance on the former one, is still very imperfect. It swarms with inaccurate dates; its blunders, especially in regard to English musicians, are often ludicrous; it contains many biographies evidently written to order; and its author, while severely criticising his victims, has an ugly knack of borrowing from them at the same time: but his labour and spirit were prodigious, he is always readable and often impartial, and while he develops a shrewd and even philosophic critical faculty, he has the art of expressing his judgment with great clearness. The misfortune of biographical dictionaries is that they are never
complete, and a supplement to Fétis is on the point of publication.

Whilst the French authors were writing their dictionaries, either on Rousseau’s plan or following the lead of Choron, Fétis, and d’Ortigue, by enlarging their sphere beyond that of musical terminology, the tendency in Germany was to include in dictionaries not only all that concerns the technical part of music, but the biography of musicians, and the philosophy, literature, and bibliography of the art. Gustav Schilling therefore justly entitles his dictionary ‘Encyclopädie der gesammten musikalischen Wissenschaften, oder universal Lexicon der Tonkunst’ (Stuttgart 1835–38, 7 vols. 8vo.). In this work biography holds an important place, but the other departments are treated with equal skill and research, so that the whole forms a precious depository of information, and is a notable advance on all previous works of the kind in other countries. Gaesner, in his ‘Universal Lexicon der Tonkunst’ (Stuttgart 1849, 1 vol.), and Bernsdorf, in his ‘Neue universale Lexicon der Tonkunst’, in continuation of Schlabebach (Dresden and Offenbach 1856–61, 3 vols.), have obviously made considerable use of Schilling, and both works have a well-merited reputation. Koch’s ‘Lexicon’ has been re-edited by Dommer (Heidelberg 1865), and Oscar Paul has published a useful ‘Handlexicon der Tonkunst’ (Leipzig 1873), in which condensation is carried to its utmost limit. But of all the German works which have followed Schilling the most important and deserving of mention is the Musikalisches Conversations-Lexicon, edited by Mendel, and since his unfortunate death by Reissmann (Berlin, 1870 etc.), of which 7 vols. have already appeared, carrying the work down to ‘Paisiello.’

There is a want of proportion in some of the articles, a cumbrousness of style and an occasional appearance of bias, but the staff of writers is unequalled for eminence and number, and there is much in their essays which has never been collected before and which is highly valuable. In dictionaries however one work can never supersede another, and perfect information is only to be got by consulting all.

Space compels us to confine ourselves to a mere mention of such works as the Swedish dictionary of Envalson (Stockholm 1802); the illustrated dictionary of Soullier (Paris 1855); and the Spanish dictionaries of Melcior (Lerida 1859) and Parada (Madrid 1868). Besides musical lexicons properly so called there are a certain number of Encyclopedias and Dictionaries of the Fine Arts, which contain important articles on music and musical terms. Amongst these may be cited the ‘Encyclopédie’ of Diderot and D’Alembert (Paris 1751–80, 35 vols.); the ‘Allgemeine Theorie der schönen Künste’ (Leipzig 1773), by Sulzer, of which Millin has made great use in his ‘Dictionnaire des Beaux Arts’ (Paris 1806); the ‘Allgemeine Encyclopädie der Wissenschaften und Kunste’ (Leipzig 1818–47), by Eresch and Gruber, an enormous collection, containing many remarkable articles on music; and the ‘Dictionnaire de l’Académie des Beaux Arts,’ begun in 1838, of which the 3rd vol. (1862–75) concludes with the words ‘Chœur,’ ‘Choral,’ and ‘Chorégraphie.’ It contains new and striking articles by Halévy, Henri Reber, and other eminent musicians.

In England, among cyclopaedias, the earliest place is held by that of Rees (1819), the musical articles in which were written by the eminent Dr. Burney. In the new issue of the Encyclopædia Britannica (begun 1875) the musical articles—restricted in number—are written by Dr. Franz Hueffer, Chambers’s Cyclopaedia (1741–53 or 1778–91) on a smaller, and Brande’s Dictionary (1842; 3rd ed. 1853) on a still smaller scale, contain good articles on musical topics, the former including the leading biographies. The Dictionaries are few and unimportant:—Grassineau (1740), Busby (1786), Jouve (1829), Wilson, or Hamilton’s and Hiles’s Dictionaries of Musical Terms—each a small 8vo. volume—are specimens of the manner in which this department has been too little perfected in this land. A great advance has been recently made in the ‘Dictionary of Musical Terms’ edited by Dr. Stainer and Mr. W. A. Barrett (1 vol. 8vo., Novello 1876), though even that leaves something to be desired. As regards biography, the ‘Dictionary of Musicians’ (2 vols. 8vo., 1822 and 27), though good in intention, is imperfectly carried out.

An excellent work for its date and its intention is the ‘Complete Encyclopedia of Music’ by John W. Moore (Boston, U.S.A., 1852), a large 8vo. volume of 1000 pages, constructed on a popular basis, and which would be more valuable if it were corrected and modified to date. [G.C.]

DIESIS, from the Greek διείσω which means division, and was the name given to quarter tones in their system. Aristotel takes it as the unit of musical tones, the last subdivision of intervals. In modern acoustics it means the interval which results from the two sounds which are arrived at by tuning up to the perfect fifth, that is, an octave, which is the same as the difference between a major or diatonic semitone, and a minor or chromatic semitone, the ratio of their vibrations being 125:128. It is commonly called the Enharmonic Diesis, enharmonic being the word which is applied to intervals less than a semitone. [C.H.P.]

DIEUPART, CHARLES, a native of France, who came to England in the latter part of the 17th century, was a fine performer on the violin and harpsichord. In 1707 he was associated with Clayton and Haym in introducing translations of Italian operas at Drury Lane Theatre. [CLAYTON.] After the discontinuance of those operas and the failure of their subsequent concert speculation, Dieupart devoted himself entirely to teaching the harpsichord, and for some years with considerable success, but towards the latter part of his life he acquired low habits, and frequented alehouses, where he entertained the company by his fine performance of Corelli’s violin solos. He died in necessitous circum-
DIEUPART.

stances, and at an advanced age, about the year 1740. He published 'Six Suites de Clavecin, divisées en Ouvertures, Allemandes, Courantes, Sarabandes, Cavottes, Minuets, Rondeaux, et Gignes, composées et mises en Concert pour un Violin et Flûte, avec une Basse de Viole et un Archilu.'

[W.H.H.]

DI GIOVANNI, a very useful Italian second tenor engaged at the King's Theatre in 1818 and subsequent years. In 1831 he received a salary of £127 from Ebers, which was increased in 1832 and 25 to £180. In the latter year he played Serano in 'La Donna del Lago'; and continued to play similar parts as late as 1827.

[J.M.]

DIGITORIUM. An apparatus for exercising and strengthening the fingers, intended especially for the use of pianists, but claimed by its inventor, Myer Marks, to be of great service to all who require flexible and well-trained fingers.

It consists of a small box about six inches square, provided with five keys, fitted with strongly resisting springs, upon which keys such exercises as the five-finger exercises be found in every Pianoforte School are to be practiced. In addition, there are attached to the sides of the box certain appliances for stretching the fingers, and a support for the wrist.

The idea of sparing the ears of pianoforte students, and those who may be in their neighbourhood, by the use of dumb keyboards is by no means new, either here or abroad. Great composers in boyhood, practising under difficulties, have been reduced to muffling the wires that they might practise unheard. It is difficult however to say when the first 'dumb-piano' was manufactured. In 1847 a long article appeared in the 'Allgemeine Musikalische Zeitung' concerning the employment of the dumb piano, and Schumann in his 'Musikalische Haus- und Lebensregeln' says, 'There have been invented so-called dumb keyboards; try them for a while, that you may discover them to be of no value. One cannot learn to speak from the dumb.' Though this may be incontrovertible the question is worth consideration, whether the muscles of the fingers may not be increased in speed and endurance (two essential qualities in pianoforte playing), by a suitable course of properly regulated gymnastic exercises, just as the other muscles of the body are trained for running, rowing, etc.

That considerable muscular power is required in pianoforte playing at the present day, will be seen from the following table of resistances, the one set being taken from one of the most recent concert grand pianos, and the other from a grand made in 1817, both by Messrs. Broadwood and Sons.

1 Digitoriums are occasionally made of greater compass, with black and white keys, the ordinary digitorium having only white keys.

2 It will be seen that the amount of resistance is not equal throughout the key-board, and that the left hand, although the weaker, has the greatest resistance to overcome.

DIMINISHED INTERVALS. The resistance offered by the Digitorium is far in excess of the above numbers; it is manufactured in three different degrees of strength, the resistance of the medium touch being no less than 12 ounces. On this account, and also because the resistance is obtained by metal springs, instead of by weights at the farther end of the lever (as in the old dumb pianos), the touch of the digitorium does not in the least resemble that of the pianoforte, but rather a heavily weighted organ-touch, and it should therefore be looked upon as a gymnastic apparatus, and by no means as a substitute for the pianoforte in the practice of exercises.

The question of finger gymnastics has received very full consideration from Mr. E. Ward Jackson, in a work entitled 'Gymnastics for the Fingers and Wrist' (London, Metzler and Co. 1874), in which he quotes opinions in favour of his system of exercises, not only from musicians, but from very eminent surgeons.

[F.T.]

DIGNUM, CHARLES, son of a master tailor, was born at Rotherhithe in 1769. His father, being a Roman Catholic, placed him when a boy in the choir of the Sardinian ambassador's chapel in Duke Street, Lincoln's Inn Fields, where his fine voice attracted the attention of Samuel Webbe, the glee composer, then organist there, who undertook to instruct him. On leaving the choir he had no idea of pursuing music as a profession, but was rather solicitous of being sent to Douay to be educated for the priesthood. His father's pecuniary embarrassments however and other circumstances prevented it. He decided on adopting the profession of music, and advertised himself to Thomas Linley for seven years. Linley bestowed the utmost attention on his pupil, and would not allow him to sing in public until his powers were sufficiently matured. In 1784 Dignum made his first appearance at Drury Lane Theatre as Young Reasoner, in 'The Village,' and, although his figure was somewhat unsuited to the part, the beauty of his voice and his judicious singing secured him a favourable reception. He next appeared as the hero in Michael Arme's 'Cymon,' and fully established himself in public favour. In 1787, on the removal of Charles Bannister to the Royalty Theatre, Dignum succeeded to a cast of characters better suited to his person and voice. In 96 he gained much credit by his performance of Crop the Miller, in Storace's 'No song no supper,' of which he was the original representative. After singing at the theatres, at Vauxhall Gardens, and at concerts for several years, he retired in easy circumstances. He died March 29, 1837. Dignum composed several ballads. He published a volume of songs, duets, and glees, composed and adapted by himself, to which an engraved portrait of him is prefixed.

[W.H.H.]

DIMINISHED INTERVALS are such as are either less than perfect or less than minor by one semitone. Thus (a) being a perfect fifth, (b) is a diminished fifth; and (c) being a perfect fourth, (d) is a diminished fourth: —
DIMINISHED INTERVALS.

These are both of discordant nature, the diminished fourth always so; but if a major sixth be added below the base note of the diminished fifth it is considered to modify the discordance so far as to admit of its being used as a concord. This rule is of old standing, especially in regard to the occurrence of the chord diatonically, as (c) in the key of C, which was admitted in the strict old style where discords were excluded. Of intervals which are changeable into major or minor the diminished seventh is the commonest, (f), which is a semitone less than the ordinary minor seventh (g), according to the rule above given.
The complete chord, which is commonly known as that of the ‘diminished seventh,’ (h), is properly speaking an inversion of a chord of the minor ninth, (i). It occurs with remarkable frequency in modern music, part of its popularity no doubt arising from the singular facilities for modulation which it affords. For the notes of which it is composed being at equal distances from one another, any one of them can be chosen at will to stand as minor ninth to the root which is understood. Thus the above chord might be written in either of the following ways—

\[ \text{in which Db, Fb, and G are respectively the minor ninths to C, Eb, and F, the absent root notes, and could pass into as many different keys as those root notes could serve, either as dominant, tonic, or supertonic. [See Change, Modulation.] } \]

The chord of the diminished third, as (k), occurs in music as the inversion of the chord of the augmented sixth, as (l). It has such a strongly marked character of its own that great composers seem agreed to reserve it for special occasions. Bach uses it with powerful effect at the end of the ‘Crucifixus’ in his B minor Mass, and Beethoven in the chorus to the same words in his ‘Missa Solemnis.’ [C. H. H. P.]

DIMINUENDO. Lessening the tone from loud to soft; employed indiscriminately with descrescendo. Expressed by dim. or dimin., and by the sign —

DIMINUTION, in Countermelody, is the repetition of a subject or figure in notes of less value than in its original statement, as—

DISCORD. It is a device almost confined to music of a contrapuntal character, such as fugues and canons, and is not of as frequent occurrence as augmentation, which is its converse. There is an example in Handel’s chorus ‘Let all the angels of God’ in the Messiah; in Bach’s well-known fugue in E, No. 33 in the ‘Wohlfahrtsverterte Clavier’; and in the Overture to the Meistersinger by Wagner.
[C. H. P.]

DINORAH. The original and Italian title of Meyerbeer’s opera which was brought out in Paris (Opéra Comique, April 4, 1859) as ‘Le Pardon de Ploermel’—Cabel as Dinorah. Dinorah was produced, with recitatives by Meyerbeer, and under his own direction, at Covent Garden July 26, 1859, in 3 acts, with Miolan Carvalho as the heroine; and in English in the autumn of the same year at Drury Lane by Pyne and Harrison.

DIRECT. A mark (>) to be found in music up to the present century at the end of a page, and even of a line, to warn the performer of the note at the beginning of the next page or line, like the catchword at the foot of a page, formerly universal, and still retained in the Quarterly Review. Thus indicates that the first note of the next line will be G.

DIRECT MOTION is the progression of parts or voices in a similar direction, as—

As a matter of contrapuntal effect it is weaker and less effective than CONTRARY MOTION, which see. [C. H. H. P.]

DIS. The German term for Dg, and also, according to a curious former Viennese custom, for Eb. The Eroica Symphony was announced at Clement’s concert April 7, 1805 (its first performance), and at Meier’s concert, 1808, as ‘in Dia.’ Das is the term for Db.

DISCANT, discantus, a double song; originally the melody or ‘counterpoint’ sung with a plain-song; thence the upper voice or leading melody in a piece of part-music; and thence the canto, cantus, or soprano voice, which was formerly—as late as Mendelssohn, who used to say he had learnt it from Zelter—written in the C clef. Thus in earlier English the word ‘discant’ or ‘descant’ means an air: ‘And sprightly voice sweet descant sing.’

And the violin, because it took the upper part in the quartet, was called the ‘diastant-Violin.’

DISCORD is a combination of notes which produces a certain restless craving in the mind for some further combination upon which it can rest with satisfaction. Discords comprise such chords as contain notes which are next to each other in alphabetical order, and such as have augmented or diminished intervals, with the exception in the latter case of
the chord of the 6th and 3rd on the second note of any key. The changed combination which must follow them in order to relieve the sense of pain they produce is called the resolution. For the various kinds of discords and their resolutions see Harmony.

[C.H.H.P.]

DISOLUTO PUNITO, IL, ORBIS IL DON GIOVANNI. The full title of Mozart's opera, so well known by the latter half of its name. [See Don Giovanni.]

DISSONANCE is any combination of notes which on being sounded together produce beats; that is, an alternate strengthening and weakening of the sound, arising from the opposition of the vibrations of either their prime tones, or their harmonics or their combination tones, which causes a painful sensation to the ear.

[C.H.H.P.]

DITAL HARP, or chromatic harp-lute, one of the numerous attempts made about the beginning of this century to improve or replace the year 1798. The harp-lute had originally twelve catgut strings—

but this notation was a major sixth higher in pitch than the actual sounds. In 1816 the same Edward Light took out a patent for an improvement in this instrument, which he now denominated 'the British harp-lute.' The patent was for the application of certain pieces of mechanism called 'dites,' or 'thumb-keys,' in distinction from 'pedals' or 'foot-keys'; each dital producing by pressure the depression of a stop-ring or eye to draw the string down upon a fret and thus shorten its effective length, and render the pitch more acute. The most complete instrument of this construction he named the 'Dital harp.' In this each string had a 'dital' to raise it a semitone at pleasure.

[A. J. H.]

DITTERS DORF, KARL DITTERS VON—whose original name was Ditters—distinguished violinist, and prolific composer in all branches of music, but specially esteemed for his German national operas: born at Vienna, Nov. 2, 1739. He soon outstripped his early teachers on the violin, König and Ziegler (not Zügler, as he calls him in his biography). Ziegler worked his pupil in the orchestra at St. Stephen's, and also in that of the Schottenkirche. Here Ditters was noticed by his chiefs, and on their recommendation was received into the private band of the Prince von Hildburghausen, who, being himself a man of high cultivation, looked after the general education of his young page (a lad of 11), and had him instructed in composition by Bonno, the court-composer, in the violin by Trani, and in foreign languages, fencing, dancing, and riding. The formation of his taste was much assisted by hearing Vittoria Tosi, who sang regularly at the Prince's concerts, and he soon formed an intimacy with Gluck and Haydn. When the Prince dismissed his band in 1759 he procured a place for Ditters in the Empress's opera, but wishing to see the world he started in 1761 with Gluck on a professional tour in Italy, where his playing was much admired. Meantime the famous Lolli had been performing in Vienna with great success, but Dittersdorf on his return vanquished him; the general verdict was 'Each has marvellous execution, but Ditters also speaks to the heart.' His intimacy with Haydn was of service to them both. 'Whenever we heard,' says he, 'a new piece, we went through it carefully together, doing justice to all that was good, and criticizing what was bad in it'—an impartial course seldom pursued by young composers. In the early part of 1764 he went with Gluck and Guadagni to Frankfort for the election and coronation (April 3) of the Archduke Joseph as King of the Romans. He played twice at court with brilliant success, but his expectations were not otherwise fulfilled, and on his return to Vienna the rudeness of Count Wenzel Spork, the then manager of the theatre, made him gladly accept
DITTERSDORF.

the post of capellmeister to the Bishop of Grosswardein, Vice Michael Haydn departed to Salzburg. For his new master he composed symphonies, violin-concertos, string-quartets, and his first oratorio, 'Isacco figura del Redentore,' to a Latin adaptation of Metastasio by the Bishop himself. He also started a small theatre in the castle, for which he wrote several pieces, including his first comic opera, 'Amore in Musica.' But in 69 the Bishop received a rebuke from the Empress on the laxity of his life, and dismissed his whole band. At Troppau Dittersdorf made the acquaintance of Count Schafgotsch, Prince Bishop of Breislaw, who invited him to his estate at Johannisberg, where he was living in retirement and disgrace. The versatile musician found means to cheer his master's solitude. He got together a band, engaged singers and musicians, set up a theatre, wrote operas and oratorios, and went out hunting, all with equal zest. In return for his services he was made, through the Bishop's influence (in 1770), Knight of the Golden Spur (a distinction enjoyed by Gluck and Mozart), and Amtshauptmann of Freiwaldau (1773), and received a title of nobility—"Ditters von Dittersdorf." The oratorio 'Davide' and the comic opera 'Il viaggiatore Americano' belong to this period, and it was while rehearsing them that he fell in love with Fraulein Nicolini, whom he had engaged from Vienna, and married her. During a visit to Vienna he composed 'Ester,' words by the Abbe Finton, for the concerts (Dec. 19 and 21, 1773) in aid of the widows' fund of the Tonkünstler Societät. Between the parts he played a concerto of his own, and so pleased the Emperor, that on Gassmann's death (Jan. 22, 1774), he wished to appoint him court-capellmeister, but Dittersdorf was too proud to apply for the post, and the Emperor was not inclined to offer it unsolicited. 'Ester' was repeated before the court in 1785; 'Isacco' was performed in Vienna (1776); and 'Gioibbe,' also written for the Tonkünstler Societät, on April 8 and 9, 1786, one part each night, Dittersdorf himself conducting. In 1789 it was produced in Berlin with marked success. On another visit to Vienna, in 1786, he produced a symphony on Ovid's Metamorphoses at the morning concerts in the Augarten, and it was on this occasion that the often-quoted conversation with the Emperor Joseph II took place. 'Der Apotheker und der Doctor' (July 11), a lively, sound, though somewhat rough operetta, which has kept the stage to the present day; 'Betrug durch Aberglauben' (Oct. 3, 1789); 'Democrito corretto' (Jan. 24, 1787); 'Die Liebe im Narrenhaus' (April 12), all at Vienna; and 'Hieronymus Knicker' (Leipoldstadt, July 1789), were brilliant successes, with the exception of 'Democrito.' In the meantime things had changed at Johannisberg. The Bishop's band, dismissed during the war, had reassembled after the Peace of Teschen, 1779. About 1790 Dittersdorf was obliged to attend to his duties at Freiwaldau, and during his absence his enemies slandered him to the Bishop. Dittersdorf nursed him devotedly during his long illness, but on his death (1795) was dismissed with 500 gulden, a sum soon exhausted in visiting the baths with a view to restore his health, shattered by his irregularities. His last asylum was at the house of Count von Stillfried at Rothlotta in Bohemia, and here, in spite of constant suffering, he composed operas, symphonies, and innumerable pianoforte pieces, for which he in vain sought a purchaser. On his death-bed he dictated his autobiography to his son, and died two days after it was completed, Oct. 31, 1799. Dittersdorf was a thoroughly popular composer. He possessed a real vein of comedy, vivacity, and quick invention, bright spontaneous melody, original instrumentation, and breadth in the 'ensembles' and 'finales,' qualities which, exercised on pleasing libretto, made him the darling of his contemporaries. He held the same position in Germany that Grétry did in France, though inferior to Grétry in delicacy, spirituality, and depth of sentiment. His oratorios, much valued in their time; his symphonies, in the style of Haydn, though inferior to Haydn in grace and liveliness; his violin-concertos, string-quartets of which 12 were published in 1866, duos, 'divertimenti,' a concerto with 11 instruments obbligato, masses, motets, and songs—all contributed to his fame, and if they did not survive him, were of moment in their day. Besides the operas already named he composed 'Lo spaccio burlato' (1775); 'La Contadina fedele' (1783); 'Orfeus der zweite' (177); 'Das rothe Käppchen' (1788); 'Der Schiffsbraten' (1789); 'Hokus Focus' (1790); 'Das Gespenst mit der Trommel' (1794); 'Gott Mars oder der eiserne Mann'; 'Don Quixotte'; 'Der Schach von Schiras' (all 1795); 'Ugolino,' grand opera seria; 'Die lustigen Weiber von Windsor'; 'Der schöne Herbstag' (all 1796); 'Der Ternengewinn;' 'Der Mäden-markt;' 'Die Opera buffa;' 'Don Coribaldi' (1798); 'Il Tribunale di Giove,' serenata (1788); and 'Das Mädchen von Cola,' a song of Ossian's, for pianoforte (1795). Of his symphonies, 'Six Simphonies à 8 parties;' 'Trois Simphonies à 4 parties obl., etc.;' and 'Simphonie dans le genre de cinq nations, etc.' were published in Paris in 1770. On the title-page of the first set he is called 'first violin and maître de musique to Prince Esterhazy.' His autobiography (Leipsic 1801) forms the foundation of Arnold's 'Karl von Dittersdorf, etc. Bildungsboch für junge Tonkünstler' (Erfurt 1810). [C. F. P.]

DIVERTIMENTO, a term employed for various pieces of music.

1. In Mozart it designates a piece closely akin to a SERENADE or CASSATION, usually in 6 or 7 movements—though sometimes only 4, and once as many as 10; indifferently for trio or quartet of strings, wind alone, or wind and strings mixed. Köchel's Catalogue contains no less than 28 such Divertimenti. The following is the order of the movements in one of them (no. 28):

(1) Allegro; (2) Andante grazioso (6 variations); (3) Minuet; (4) Adagio; (5) Minuet; (6) Andante and Allegro molto. The changes of key are slight; in some there is no change at all.
DIVERTIMENTO.

1. A Pot-pourri or arrangement of the airs of an opera or other piece for orchestra or piano.

DIVERTISSEMENT. A kind of short ballet, such as Taglioli's 'Diverissement Silesien,' sometimes mixed with songs. Also a pot-pourri or piece on given motifs such as Schubert's 'Diverissement à l'hpagnole.' Also the French term for an entr'acte. The term is no longer used.

DIVISION VIOLIN, THE, the title of a work which, during the latter part of the 17th century and for some time afterwards, was the favourite vade-mecum of amateur violinists. It was the successor of 'The Division Violist' of Christopher Simpson, first published in 1659. Both works consist of divisions, or variations, upon a given theme or subject, denominated the 'ground.' The earlier work contains instructions for performing such divisions extempor, but the later one is confined to divisions already composed. These are often upon popular song-tunes or other well-known subjects. The first edition of 'The Division Violin' appeared in 1684, engraved on copper plates, and a second part a few years later. Both parts went through several editions, the contents of which varied, but were always derived from the best composers of the day, amongst whom were Henry and Daniel Purcell, Davis Mell, John Banister, Solomon, John, and Henry Eccles, G. B. Draghi, Jeremiah Clark, etc. Some pieces by Corelli are included in some of the later editions. [W. H. H.]

DIVISIONS, in the musical nomenclature of the 17th and 18th centuries, were rapid passages—slow notes divided into quick ones—as naturally takes place in variations on a theme or ground. Hence the word can be applied to quick successive passages like the long semiquaver runs in Handel's bravura songs, as:

\[
\text{\textit{agile trumpets blow}}
\]

DIVITIS, ANTONIUS, or ANTOINE LE RICH, a French composer, and colleague of Mouton as singer in the chapel of Louis XII, who reigned from 1498 to 1515. The following is a list of his works at present known:—(1) A 4-part mass, 'Gaude Barbara' (MS.), in the Library at Camb.

DOCTOR OF MUSIC. The superior degree in music conferred by the English Universities, the inferior one being that of Bachelor. These degrees can be traced as far back as the 15th century: an outline of their history and of the history of musical study at the Universities has been given under the title BACHELOR. In the ordinary course the degree of Bachelor of Music must at Oxford and Cambridge precede that of Doctor by a period of five years; but by special leave of the University the degrees may be taken together, and the honorary degree of Doctor of Music has occasionally been conferred on musicians of distinction who had not graduated Bachelors. At Dublin no interval of time is necessary, and the degrees may in all cases be taken on the same day, other conditions being fulfilled. Among Oxford Doctors of Music the following are the best known names:—John Marbeck, 1550; John Bull, 1586; W. Heather (founder of the Professorship), 1622; Arne, 1759; Burney, 1769; Calcott, 1785; Crotch, 1799; S. Wesley, 1830; Bishop, 1854. Haydn received an honorary degree on his visit to Oxford in 1791, when his Symphony G, thence called the Oxford Symphony, was performed. The same distinction is said to have been offered to Handel in 1733, when his 'EHappy Farewell' was performed at Commemoration, and to have been refused by him with characteristic humour. Cambridge owns the following names:—Greene, 1730; Boyce, 1749; Randall, 1756; Nares, 1757; Cooke, 1775; Walmisley, 1848; Sterndale Bennett, 1856; Macfarren, 1875; Sullivan, 1876; Joschim, 1877.

During the last century there was no examination for either degree; it was sufficient for the candidate to present an 'exercise,' or composition, to be performed in the Music School. Stricter regulations have been now established, with the view of giving a more genuine character to these degrees; and the following rules are in force,
DON QUIXOTE.

DOLCE, i.e. sweetly; a sign usually accompanied by piano, softly—*dol.*, and implying that a sweet melodious feeling is to be put into the phrase. Beethoven (op. 59, no. 1) has *mf dolce*; and Schumann begins the Finale of his E♭ Symphony with *f dolce*, which is difficult to realise.

DOMINANT is the name now given to the 5th note of the scale of any key counting upwards. Thus G is the dominant in the key of C, F in that of B♭, and F♯ in that of B. It is so called because the key of a passage cannot be distinguished for certain unless some chord in it has this note for root; for which reason also it is called in German *Der herrschende Ton.* The dominant plays a most important part in cadences, in which it is indispensable that the key should be strongly marked; and it is therefore the point of rest in the imperfect cadence or half close, and the point of departure to the tonic in the perfect cadence or full close. [M O D E S.]

It also marks the division of the scale into two parts; as in fugues, in which if a subject commences with the tonic its answer commences with the dominant, and vice versa. In the sonata form it used to be almost invariable for the second subject to be in the key of the dominant, except when the movement was in a minor key, in which case it was optional for that part of the movement to be in the relative major. In lighter and simpler kinds of composition the harmonic basis of the music often alternates chiefly between tonic and dominant, and even in the most elaborate and deeply thought works the same tendency is apparent, though the ideas may be on so extended a scale as to make the alternation less obvious. [C. H. H. P.]

DOMINO NOIR, LE. Opéra comique in 3 acts, words by Scribe, music by Aubert; produced Dec. 2, 1837. Translated by Chorley and produced in English (an earlier attempt had failed) Feb. 20, 1861, at Covent Garden.

DON CARLOS. (1) An opera seria in 3 acts, words by Tarantini, music by Costa; produced at Her Majesty’s Theatre, London, June 20, 1844. (2) Grand opera in 5 acts, words by D’Hervart and Du Locle, music by Verdi; produced at the Grand Opéra, Paris, March 11, 1867, and in London, at Her Majesty’s Theatre, June 4 of the same year.

DON GIOVANNI—or, full title, Il dissoluto punito, ossia il Don Giovanni—opera buffa in 2 acts; words by Da Ponte; music by Mozart. Produced at Prague Oct. 29, 1787 (the overture written the night before); at Vienna May 7, 1788, with 3 extra pieces, ‘In quali,’ ‘Mi tradi,’ ‘Dalla sua pace’; in London, King’s Theatre, April 12, 1817. Autograph in possession of Mrs. Viardot-Garcia.

DON QUIXOTE, a comic opera in 2 acts; words by G. Macfarren, music by G. A. Macfarren; produced at Drury Lane, Feb. 3, 1846.

At Oxford the candidate for a degree of Mus. Doc. must compose and send in to the Professor a vocal composition secular or sacred, containing real eight-part harmony and good eight-part fugal counterpoint, with accompaniments for a full orchestra, of such a length as to occupy from forty to sixty minutes in performance. The exercise having been approved by the Professor, an examination follows, embracing the following subjects:—Harmony; Eight-part counterpoint; Canon, Imitation, etc. in eight parts; Fugue; Form in composition; Instrumentation; Musical History; A critical knowledge of the scores of the standard works of the great composers; and so much of the science of Acoustics as relates to the theory of Harmony. After duly passing this examination (which is entirely in writing) the candidate must have his exercise publicly performed in Oxford, with complete band and chorus at his own expense; and must deposit the MS. full-score in the Library of the Music School. The fees on taking this degree amount to about £20. The regulations at Cambridge and Dublin are almost identical with those of Oxford, and the amount of the fees much the same. Degrees in music are not conferred by the University of London.

An anomalous power of creating a Doctor of Music by diploma still vests in the Archbishop of Canterbury. The only regulation existing in connection with this strange prerogative is that the person for whose benefit it is exercised shall pay 25s in fees.

C. A. F.

DÖHLER, Theodor, of a Jewish family, born April 18, 1814, at Naples; died Feb. 21, 1850, at Florence; an accomplished pianist, and composer of ‘salon’ music—a vendor of the sort of ware for which the epithet ‘elegant’ seems to have been invented. His Fantasias, i.e. operatic tunes embroidered with arpeggios; his ‘Variations de concert,’ or ‘de salon’—similar tunes not necessarily operatic, but bedizened with the same cheap embroidery; his ‘Transcriptions’—nondescript tunes bespangled after the selfsame fashion; his ‘Nocturnes’—sentimental aurasucré, made up of a tearful tune for the right hand propelled upon undulating plattitudes for the left, in D ♯ flat; his ‘Etudes,’ also ‘de salon’ or ‘de concert’—some small piece of digital gymnastics with little sound and less sense,—are one and all of the same calibre, reprehensible from an artistic point of view, and lacking even that quaintness or eccentricity which might ultimately claim a nook in some collection of musical *bric-à-brac*. Döhler was an infant phenomenon, and as such the pupil of Benedict, then resident at Naples. In 1829 he was sent to Vienna, and became Carl Czerny’s pupil. From Vienna, where he remained till 34, he went to Naples, Paris, and London—then travelled in Holland, Denmark, Poland, and Russia—as a successful fashionable virtuoso. He died of a disease of the spinal marrow which troubled him for the last nine years of his life. His works, if works they can be called, reach as far as opus 75. [E. D.]

DOLBY, Charlotte. See Sainton, Madame.
DONIZETTI.

DONIZETTI, Gaetano, was born at Bergamo, Nov. 29, 1797, six years after Rossini; and though he began his career as a very early age, he never achieved any important success until after Rossini had ceased to compose. Having completed his studies at the Conservatory of Naples under Mayer, he produced at Vienna, in 1818, his first opera 'Enrico di Borgogna,' which was rapidly followed by 'Il Falegnome di Livonia' (Mantua, 1819). His 'Zoraida di Granata,' brought out immediately after 'Il Falegnome' at Rome, procured for the young imitator of Rossini exemption from the conscription, and the honour of being carried in triumph and crowned at the Capitol. The first work however by Donizetti which crossed the mountains and the seas and gained the ear of all Europe, was 'Anna Bolena,' given for the first time at Milan in 1830. This opera, which was long regarded as its composer's masterpiece, was written for Pasta and Rubini. It was in 'Anna Bolena' too, as the impersonator of Henry VIII, that Lablache made his first great success at our 'King's Theatre,' as the Haymarket opera house was called until the close of the past noble antiques. 'Anna Bolena' was composed for 'London in 1829; 'Lucia di Lammermoor,' perhaps the most popular of all Donizetti's works, was written for Naples in 1835, the part of Edgardo having been composed expressly for Duprez, that of Lucia for Persiani. The lively little opera called 'Il Campanello di Notte' was produced under very interesting circumstances, to save a Neapolitan manager and his company from ruin. 'If you would only give us something new our fortunes would be made,' said one of the singers. Donizetti declared they should have an opera from his pen within a week. But where was he to get a libretto? He determined himself to supply that first necessity of the operatic composer; and, recollecting a vaudeville which he had seen some years before at Paris, called 'La Sonnette de Nuit,' took that for his subject, re-arranged the little piece in opera style, and forthwith set it to music. It is said that in this libretto, written after the music composed, the parts learned, the opera performed and the theatre saved. Donizetti seems to have possessed considerable literary facility. He designed and wrote the last acts both of the 'Lucia' and of 'La Favorita'; and he himself translated into Italian the libretto of 'Betty' and 'La Fille du Régiment.' Donizetti had visited Paris in 1835, when he produced, at the Théâtre des Italiens, his 'Marino Faliero.' Five years later another of his works was brought out at the same establishment. This was 'Lucrezia Borgia' (composed for Milan in 1834); of which the 'run' was cut short by Victor Hugo, who, as author of the tragedy on which the libretto is founded, forbade the representations. 'Lucrezia Borgia' became, at the Italian Opera of Paris, 'La Rinegata'—the Italians of Alexander the Sixth's Court being changed into Turks. 'Lucrezia' may be ranked with 'Lucia' and 'La Favorita' among the most successful of Donizetti's operas. 'Lucia' contains some of the most beautiful melodies in the sentimental style that its composer has ever produced; it contains too a concerted finale which is well designed and admirably dramatic. The favour with which 'Lucrezia Borgia' is everywhere received may be explained partly by the merit of the music, which, if not of a very high order, is always singable and tuneful—partly by the interest of the story, partly also by the manner in which the interest is divided between four principal characters, so that the cast must always include four leading singers, each of whom is well provided for by the composer. But of the great dramatic situation, in which a voluptuous drinking song is contrasted with a funeral chant, not so much has been made as might have been expected. The musical effect, however, would naturally be more striking in the drama than in the opera; since in the former singing is heard only in this one scene, whereas in the latter it is heard throughout the opera. 'Lucrezia Borgia' may be said to mark the distance half way between the style of Rossini, imitated by Donizetti for so many years, and that of Verdi which he in some measure anticipated. 'La Favorita,' 'Il Mondo Rovan' (1843) might almost have been written by the composer of 'Rigoletto.' In 1840 Donizetti revisited Paris, where he produced successively 'I Martiri' (which as 'Polliuto' had been forbidden at Naples by the censorship); 'La Fille du Régiment,' composed for the Opéra Comique, and afterwards brought out in the form of an Italian opera, with added recitatives; and 'La Favorita,' represented at the Académie. Jenny Lind, Santag, Patti, Albani, have all appeared with great success in 'La Figlia del Reggimento.' But when 'La Fille du Régiment' was first brought out, with Madame Thillon in the chief part, it produced comparatively but little effect. 'La Favorita,' on the other hand, met from the first with the most decided success. It is based on a very dramatic subject (borrowed from a French drama, 'Le Comte de Comminges'), and many of the scenic changes have been treated by the composer in a highly dramatic spirit. For a long time, however, it failed to please Italian audiences. In London its success dates from the time at which Grisi and Mario undertook the two principal parts. The fourth and concluding act of this opera is worth all the rest, and is probably the most dramatic act Donizetti ever wrote. With the exception of the cavatina 'Angé si pur,' taken from an unproduced work, 'Le Duc d'Albe,' and the slow movement of the duet, which was added at the rehearsals, the whole of this fine act was composed in from three to four hours. Leaving Paris, Donizetti visited Rome, Milan, and Vienna, at which last city he brought out 'Linda di Chamouni,' and contributed a Miserere and Ave Maria to the Hofkapelle, written in strict style, and much relished by the German critics. Then, coming back to Paris, he wrote (1843) 'Don Pasquale' for the Théâtre Italian, and 'Dom Sebastien' for the Académie. 'Dom Sebastien' has been described as 'a funeral in five acts,' and the mournful drama to which the music
of this work, as it is rendered its success all but impossible. As a matter of fact it did not succeed. The brilliant gaiety, on the other hand, of "Don Pasquale" charmed all who heard it, as did also the delightful acting and singing of Grisi, Mario Torelli and Lablache, whom the four leading parts were composed. For many years after its first production, "Don Pasquale," was always played as a piece of the present day; but the singers perceived at last that there was a little absurdity in prima donna, baritone, and basso wearing the dress of every-day life; and it is usual now, for the sake of picturesqueness in costume, to put back the time of the incidents to the last century. "Don Pasquale" and "Maria di Rohan" (Vienna) belong to the same year; and in this last opera the composer shows much of that earnestness and vigour for which Verdi has often been praised. Donizetti's last opera, "Catarina Cornaro," was produced at Naples in 1844, and apparently made no mark. This was his sixty-third work, without counting two operas which have never been played. One of these is the "Don d'Alco," composed for a libretto originally meant by Scribe, its author for Rossini, but which Rossini returned when, after "William Tell," he resolved to write no more for the operatic stage; the other a piece in one act composed for the Opéra Comique, and which, some years ago, used every now and then to be announced for performance. Of Donizetti's sixty-three operas, counting those only which have been represented, at least two-thirds are quite unknown in England. Donizetti, during the last three years of his life, was subject to fits of melancholy and abstraction which became more and more intense, until in 1846 he was attacked with paralysis at Bergamo, where he expired. Buried some little distance outside the town, he was disinterred in 1876 and reburied in Bergamo itself.

The following list of Donizetti's operas is probably not far from complete; the dates are not quite certain:—

- Rondolfo di Rovreesa, 1814.
- Falstaff di Livone, 1819.
- Il Nobile di Zoma, 1819.
- La Zingara, 1822.
- La lettera anonyma, 1829.
- Chiara e Serenella, 1829.
- Il fortunato Innamorato, 1829.
- Alfredo il Grande, 1829.
- Una Follia, 1829.
- L'Albrì in libbra, 1829.
- Amina di Lisbona, 1829.
- Labor in Gramma, 1829.
- Il Castello degli Invali, 1829.
- Il Gigliettc, 1829.
- Olio e Pasquale, 1829.
- Il Bogrometro di Paareana, 1829.
- Le Convenevole, 1829.
- Otto mesi in due ore, 1829.
- Elisabetta di Renuthwort, 1829.
- La Regina di Golconda, 1829.
- Gianu di Gaila, 1829.
- L'escula de Roma, 1829.
- L'Estelir d'amors, 1829.
- Il Paris, 1830.
- Il Castello di Renwirth, 1830.
- Il Dilutor universale, 1830.
- I pazii per proposito, 1830.
- Persecution, 1830.
- La Taglia di Lambertz, 1830.
- La Romanziere, 1832.
- Anna Bologna, 1832.
- Rondolfo di Rovreesa, 1838.
- Sacra di Castella, 1838.
- Il Nobile di Vecinaco, 1838.
- Il Furbito, 1838.
- Parisina, 1838.
- Turqueta Tana, 1838.
- L'Amico di t'alaura, 1838.
- Lucrezia Borgia, 1838.
- Rosamunda di Ugilherwa, 1839.
- Maria Stuarda, 1839.
- Gemma di Verdi, 1839.
- Marino Faliero, 1839.
- Lucia di Lammermoo, 1840.
- Diaroito, 1840.
- Il Campanello di Notta, 1840.
- Bety, 1840.
- Roberto de Verneaux, 1840.
- Pio di Tologoto, 1840.
- Maria di Budenza, 1840.
- Furtito, 1840.
- Gianu di Pary, 1840.
- Sibella de Vero, 1841.
- La Cape de la Regimant, 1840.
- La Favorita, 1841.
- Adelaida, 1841.
- Maria Padrity, 1841.
- Luisa di La Daumour, 1842.
- Maria di Hoban, 1843.
- Don Pasquale, 1843.
- Don Felasiam, 1843.
- Catarina Cornaro, 1844.

DONZELLI, DOMENICO, was born at Bergamo about 1750, and studied in his native place. In 1816 he was singing at the Valle Theatre in Rome. Rossini wrote for him the part of Torvaldo, in which he distinguished himself. At the carnival of the next year he sang at the Scala in Milan, and was engaged for two seasons. From thence he went to Venice and Naples, returning to Milan, where "Elisa e Claudio" was written for him by Mercadante. He was very successful in 1822 at Vienna, and obtained an engagement at Paris for 1824. There he remained, at the Théâtre Italien, until the spring of 1831. As early as 1832 efforts had been made, unsuccessfully, to get him engaged at the King's Theatre in London. At length, in 1828, he was announced; but did not actually come until 1829—making his first visit to England at the same time with Mendelssohn. When he did appear, Lord Mount-Edgcumbe thought him 'a tenor, with a powerful voice, which he did not modulate well.' Another critic, in 1830, says of him, 'He had one of the most mellifluous, robust, low tenor voices ever heard, a voice which had never by practice been made sufficiently flexible to execute Rossini's operas as they are written, but even in this respect he was accomplished and finished, if compared with the violent persons who have succeeded him in Italy. The volume of his rich and sonorous voice was real, not forced. He had an open countenance and a manly bearing on the stage, but no great dramatic power. He was re-engaged in 1832 and 33. In 1834 his place was taken by Rubini. Returning to Italy, he sang at various theatres; and in 1841 at Verona and Vienna. About the end of that year he retired to Bologna. He was an associate member of the Accademia Filarmonica at Bologna, and of that of Santa Cecilia at Rome. He published a set of 'Esercizi giornalieri, basati sull'esperienza di molti anni' (Ricordi, Milan). He died at Bologna, March 31, 1873. [J.M.]"}

DORIAN. OR DORIC, the first of the 'authentic' church modes or tones, from D to D, with its dominant A—

It resembles D minor, but with B♭ and no C♯. Many of the old German chorales were written in this mode, such as 'Vater unser';
'Wir glauben all'; 'Christ unser Herr zum Jordan kam'; 'Christ lag in Todesbanden.' For longer compositions see Orlando Lasso’s 5-part motet 'Animam meam,' in Commer’s ‘Musica sacra,’ viii. No. 20, and the fugue in Bach’s well-known Toccata (Dürffel, No. 818), marked 'Dorisch.'

DORN, HEINRICH LUDWIG EINMUND, a very considerable musician of modern Germany, born at Königsberg, Prussia, Nov. 14, 1804. His turn for music showed itself early, and was duly encouraged and assisted, but not so as to interfere with his general education. He went through the curriculum of the Königsberg University, and after visiting Dresden (where he made Weber’s acquaintance) and other towns of Germany, fixed himself at Berlin in 1824 or 25, and set seriously to work at music under Zelter, Klein, and L. Berger, mixing in the abundant intellectual and musical life which at that time distinguished Berlin, when Rahl, Heine, Mendelssohn, Klingemann, Marx, Spontini, Devrient, Moscheles, Reissiger, and many more, were among the elements of society. With Spontini and Marx he was very intimate, and lost no opportunity of defending the former with his pen. At Berlin he brought out an opera, 'Die Rolandsknappen,' with success.

In 1817 he left Berlin, and after travelling for some time returned to his native place as conductor of the theatre. In 1829 he went to Leipzig in the same capacity, and remained there till 32. During this time he had the honour of giving instruction in counterpoint to Schumann. After leaving Leipzig, his next engagements were at the theatres of Hamburg and Riga, in the latter place succeeding Wagner. During the whole of this time he added much teaching to his regular duties, and exercised an excellent influence on the musical life of the places in which he lived. At Riga he remained till 1843, when he was called to succeed C. Kreutzer at Cologne. During the five years of his residence there he was fully occupied, directing the Festivals of 44 and 47, founding the Rheinische Musikschule (1845), and burying himself much about music. In addition to the duties of conducting, he was much teaching. In 47 he succeeded O. Nicolai as conductor of the Royal Opera in Berlin, in conjunction with Taubert. This post he retained till the end of 68, when he was pensioned off in favour of Eckert, and became a Königlicher Professor. Since then he has occupied himself in teaching and writing, in both which capacities he has a great reputation in Berlin. Dorn is of the conservative party, and a bitter opponent of Wagner. He is musical editor of the Post, and writes also in the Gartenlaube and the Hausfreund. His account of his career, 'Aus meinem Leben' (Berlin, 1870, 2 vols.) and 'Ostracismus' (Ib. 74), are both valuable books.

A paper of his on Mendelssohn appeared in 'Temple Bar' for February 1872. His compositions embrace 10 operas, of which 'Die Nibelungen' (1854) is the most remarkable; a requiem (1851); many cantatas; symphonies and other orchestral works; many pianoforte pieces, songs, etc. As a conductor he was one of the first of his day, with every quality of intelligence, energy, tact, and industry, to fill that difficult position. [F.G.]

DORUS-GRAS, JULIE AIMÉE. See GRAS.

DOT (Fr. Point; Ger. Punkt; Ital. Punto). A point placed after a note to indicate that its length is to be increased one half; a semibreve with the addition of a dot being thus equal to three minims, a minim with a dot to three crotchets, and so on.

So far as regards rhythm, this is at the present time the only use of the dot, and it is necessitated by the fact that modern notation has no form of note equal to three of the next lower denomination, so that without the dot the only way of expressing notes of three-fold value would be by means of the bind, thus $\frac{\dot{\text{d}}}{\text{d}}$ instead of $\frac{\text{d}}{\text{d}}$, which method would greatly add to the difficulty of reading. The sign itself is however derived from the ancient system of 'measured music' ('musica mensurata,' about A.D. 1300), in which it exercised various functions, and where it is met with in four forms, called respectively 'point of perfection,' 'point of alteration,' 'point of division,' and 'point of addition.' The different uses of these points or dots was as follows.

The rhythm of the measured music was at first always triple; that is to say, the accent fell upon the first beat of every three (the division of music into bars is of later date, see Bar), and each note was of the value of three of the next lower denomination, the long $\text{m}$ being equal to three breves $\text{w}$, and the breve to three semibreves $\text{e}$, and so on. But whenever a long note was followed or preceded by one of the next shorter kind, and the latter sung to an unaccented syllable, it became necessary to shorten the long note by one third, in order to preserve the triple character of the rhythm. Thus Ex. 1 would be sung as Ex. 2, and not as Ex. 3, notwithstanding the breve under other circumstances would be worth three semibreves:

1. Written 2. Performed 3. Not thus

The note thus shortened was termed imperfect.

Cases often arose, however, in which the long note was required to be perfect, i.e. worth three beats, in spite of its being followed by a shorter note; in these cases a dot called the 'point of perfection,' and written either as a simple dot or a dot with a tail ('punctus caudatus'), was introduced after the note, the function of which was to preserve the long note from being made imperfect by the next following short note, thus:

4. Written 5. Performed

Another kind of dot, the 'point of alteration,' written like the foregoing, but placed either
before the first or above the second of two similar notes, indicated that the second of the two was to be ‘altered,’ i.e. doubled in length, again for the sake of preserving the triple rhythm; for example—

5. Written

\[ \begin{array}{c}
5 & 5 \\
\end{array} \]

Performed

In the absence of the dot in the above example, there would be a doubt as to whether the two breves ought not to be rendered imperfect by means of their respective semibreves, as in Ex. 1. Like the point of perfection therefore this dot preserves the first note from imperfection; but owing to the fact that it is followed by two short notes (instead of three as in Ex. 4), it also indicates the ‘alteration’ or doubling of the second of the two.

The third kind of dot, the ‘point of division,’ answers to the modern bar, but instead of being used at regular intervals throughout the composition, it was only employed in cases of doubt; for example, it would be properly introduced after the second note of Ex. 1, to divide the passage into two measures of three beats each, and to show that the two breves were to be made imperfect by means of the two semibreves, which latter would become joined to them as third and first beats respectively, thus—

6. Written

\[ \begin{array}{c}
5 & 5 \\
\end{array} \]

Performed

Without the point of division the example might be mistaken for the ‘alteration’ shown in Ex. 5.

The last of the four kinds of dots mentioned above, the ‘point of addition,’ was identical with our modern dot, inasmuch as it added one half to the value of the note after which it was placed. It is of somewhat later date than the others (about A.D. 1400), and belongs to the introduction of the so-called tempus imperfectum, in which the rhythm was duplé instead of triple. It was applied to a note which by its position would be imperfect, and by adding one half to its value rendered it perfect, thus exercising a power similar to that of the ‘point of perfection.’

In modern music the dot is frequently met with doubled; the effect of a double dot is to lengthen the note by three-fourths, a minim with double dot (\( \cdot \cdot \)) being equal to seven quavers, a doubly dotted crotchet \( (\cdot \cdot \cdot) \) to seven semiquavers, and so on. The double dot was the invention of Leopold Mozart, who introduced it with the view of regulating the rhythm of certain adagio movements, in which it was at that time customary to prolong a dotted note slightly, for the sake of effect. Leopold Mozart disapproved of the vagueness of this method, and therefore wrote in his ‘Violinschule’ (2nd edition, Augsburg, 1759), ‘It would be well if this prolongation of the dot were to be made very definite and exact; I for my part have often made it so, and have expressed my intention by means of two dots, with a proportional shortening of the next following note.’ His son, Wolfgang Mozart, not only made frequent use of the double dot invented by his father, but in at least one instance, namely at the beginning of the symphony in D written for Hafner, employed a triple dot, adding seven eighths to the value of the note which preceded it. The triple dot is also employed by Mendelssohn in the Overture to Camacho’s wedding, bar 2, but has never come into general use.

Dots following rests lengthen them to the same extent as when applied to notes.

In old music a dot was sometimes placed at the beginning of a bar, having reference to the last note of the preceding bar (Ex. 7); this method of writing was not convenient, as the dot might easily escape notice, and it is now superseded by the use of the bind in similar cases (Ex. 8).

When a passage consists of alternate dotted notes and short notes, and is marked stacchto, the dot is treated as a rest, and the longer notes are thus made less staccato than the shorter ones. Thus Ex. 9 (from the third movement of Beethoven’s Sonata, Op. 23) should be played as in Ex. 10, and not as in Ex. 11.

In all other cases the value of the dotted note should be scrupulously observed, except—in the opinion of some teachers—in the case of a dotted note followed by a group of short notes in moderate tempo; here it is sometimes considered allowable to increase the length of the dotted note and to shorten the others in proportion, for the sake of effect. (See Koch, ‘Musikalisches Lexicon,’ art. Punkt; Lichenthal, ‘Dizionario della Musica,’ art. Punto.) Thus Ex. 12 would be rendered as in Ex. 13.
In view however of the fact that there are a variety of means such as double dots, binds, etc., by which a composer can express with perfect accuracy the rhythmic proportions which he requires, it certainly seems advisable to employ the utmost caution in making use of such licences as the foregoing; and in particular never to introduce them into movements the rhythmic character of which is dependent on such progressions of dotted notes as the above example, such for instance as the 14th of Beethoven’s 33 Variations, Op. 120, or the codas of the Fantasia, Op. 77.

2. Beside the employment of the dot as a sign of augmentation of value, it is used to indicate staccato, being placed above or below the note, and written as a round dot if the staccato is not intended to be very marked, and as a pointed dash if the notes are to be extremely short. [DASH.] As an extension of this practice dots are used to denote the repetition of a single note; and they are also placed before or after a double bar as a sign of the repetition of a passage or section. In old music for the clavecin they are used as an indication of the Bebung. [ABBREVIATIONS; BEBUNG.]

DOTTI, ANNA, a distinguished seconda donna who formed part of Handel’s company at the King’s Theat re in London for some years. She appeared first as Irene in ‘Tamerlano’ with Cuzzoni in 1724, and as Agamira in the ‘Artaserse’ of Ariosti. In 1725 she sang in ‘Rodelinda’ and ‘Giulio Cesare,’ as well as in the anonymous ‘Elisa,’ the ‘Dario’ of Attilio, and Vinci’s ‘Eulidia.’ During the next season she played in the ‘Ottero’ and ‘Alessandro’ of Handel; and in 1727 was again in London, and took the part of Orindo in the first representations of ‘Admeto,’ and that of Philade in ‘Astianatte.’ After 1727 her name does not occur again in the librettis.

DOTZAUER, JUPTUS JOHANN FRIEDRICH, one of the greatest composers, players, and teachers of the violoncello; born at Hildburghausen, Jan. 20, 1783. His teachers were Henschkel, Gleichmann, and Rütting—a pupil of Ktill’s, and therefore only two removes from J. S. Bach. For the cello he had Kri-gk of Meiningen, a famous virtuoso and teacher. He began his career in the Meiningen court band, in 1801, and remained there till 1805. He then went by way of Leipzig to Berlin, where he found and profited by B. Romberg. In 1811 he entered the King’s band at Dresden, and remained there till his death, March 9, 1860, playing, composing, editing, and, above all, teaching. His principal pupils were Kummer, Drechslcr, C. Schubert, and his own son, C. Ludwig. His works comprise an opera in 3 acts (‘Grazzias,’ 1841), a mass, a symphony, several overtures, 9 quartets, 12 concertos for cello and or-

CHESTRA, sonatas, variations, and exercises for the cello. He edited Bach’s 6 sonatas for cello solo, and left an excellent Method for his instrument.

DOUBLE BAR divides a piece or a movement into main sections, and when accompanied by dots indicates that the section on the same side with the dots-is to be repeated.

\[ \begin{array}{c|c|c} \hline \hline (1) & (2) & (3) \\ \hline \end{array} \]

The double bar is a principal feature in the symphony or sonata. In the first movement it occurs at the end of the first section, which is then repeated, and is followed by the working out, or Durchführung. In the symphonies before Beethoven, and in Beethoven’s own earlier sonatas, the second section was often repeated as well as the first. In the minuet, or scherzo, with trio, both sections of each are repeated, and then after the trio the minuet is given again without the repetitions.

DOUBLE BASS (Ital. Contrabasso or Violone) is the largest of the stringed instruments played with a bow. Whether it was invented before or after the violin is still an unsettled question. In its forms it has some of the characteristics of the older gamba tribe, viz. the flat instead of the arched back, and the slanting shoulder; while, on the other hand, it has the four corners, the f-holes, and in every respect the belly of the violin, thus appearing to be a combination of the gamba and the violin, and therefore probably of a date posterior to both.

The double bass was originally mounted with three strings only, tuned thus (a). At the present time, however, basses with four strings, tuned thus (b), are used by all, except the Italian.

Italian. (c) English. (d)

and some English players, who still prefer the three-stringed instrument on account of its greater sonority. For orchestral playing, however, the fourth string has become an absolute necessity, since modern composers very frequently use the contra E and F in obligato passages. In England, up to a very recent period, a phrase like that which opens Mendelssohn’s ‘Heeresstille’ (c), owing to the absence of the fourth string and the consequent impossibility of producing the low 1F, had to be altered to the octave (d).

\[ \begin{array}{c|c|c} \hline \hline (c) & (d) & (d) \\ \hline \end{array} \]

This and other similar musical barbarities were committed, until at the Crystal Palace the sensible plan was adopted of having half the number of the basses with four, and the other half with three strings, thus avoiding the mutilation of phrases like the above, without sacrificing the greater

1 In the Pastoral Symphony, where the basses go to low G, they play in unison with the Cellos.
richness of tone which is claimed for the three-stringed instrument. If the violin is the leader of the orchestra, the double bass is its foundation. To it is given the lowest part, on which both harmony and melody rest. The English term 'double bass' has probably been applied to the instrument because it often doubles in the lower octave the bass of the harmony, given to the bass voice, the violoncello, the bassoon, or some other instrument. In a similar way the 32-foot stop of the organ is termed double diapason because it doubles a 16-foot diapason in the lower octave.

This doubling of the bass part was for a long time, with rare exceptions, the sole function of the double bass, and it is only since the beginning of the 19th century that we meet, in the scores of Haydn, and more frequently in those of Beethoven, with independent double-bass passages. The double bass from its very nature—its tone, when heard alone, being somewhat rough, and its treatment, owing to its large dimensions, very difficult—is essentially an orchestral rather than a solo instrument, and as such it is with the violin the most important and indispensable one. The solo performances of Bottesini and a few other celebrated double-bass players, are exceptions which prove the rule for any one who has heard them. In fact these virtuosos do not play on full-sized double basses, but use the basso di camera, an instrument of considerably smaller dimensions.

As double bass players Dragonetti, Müller, and Bottesini, have the greatest reputation. Most of the great Italian violin makers, from Gaspar da Salo downwards, have made double basses of various sizes, a fair number of which are still extant.

[From P.D.]

DOUBLE BASSOON (It. Contrabassetto; Fr. Contrebasse; Ger. Contrebass, Doppelbass). The contrabassetto or double bassoon, in pitch an octave below the ordinary bassoon, is not by any means a new instrument; but the older instruments were of feeble rattling tone, rendered unwieldy by unsuccessful attempts to obtain the B♭ of the 32-foot octave. It has been considerably improved by Herr Haseneier of Coblenz, and subsequently by the writer, who has introduced it into English orchestras.

The double bassoon as made on the writer's design by Haseneier consists of a tube 16 feet 4 inches long, truly conical in its bore, enlarging from \( \frac{1}{4} \) inch diameter at the reed to 4 inches at the bell. It is curved four times on itself for convenience of manipulation, so that the length of the instrument is about equal to that of the ordinary bassoon. Its extreme compass is three octaves, from CCC upwards, and the notes above are performed by the use of the thumb and fingers. From CCC to FF (\( \frac{3}{2} \)), only a single sound is obtained by each key. Between the latter note and its double octave (\( \frac{5}{2} \)), the same fingering produces two sounds of an octave, simply by change of embouchure and greater pressure of wind. With the four-foot F, a new harmonic sound begins, using the fingering of the eight-foot B♭, and again increasing the wind-pressure. Seven semitones thus procured carry the tone up to the C above (\( \frac{7}{2} \)), which is the fourth C inclusive from the foundation note. It must be remembered, however, that the orchestral part for this instrument, like that of the double bass, is always written an octave higher than the real sound, to avoid ledger lines.

\[
\begin{align*}
(a) & \quad (b) & \quad (c) & \quad (d) \\
\end{align*}
\]

The holes from which the sound issues are of graduated size, increasing downwards with the size of the bore. They are placed as a rule in their correct positions, so as to cut off the proper portion of tube corresponding to the elevation of the note. Mechanism is adapted to them, to bring them within reach of the fingers. To enable the player to distinguish what are called 'open' from closed holes, a different shape is given to the terminations of the levers. The first three fingers of each hand, which have always closed the six open notes of the ordinary bassoon, fall into saddle-shaped recesses worked in the brass of the key; whereas the two little fingers and the thumbs touch the cushion-shaped surface of keys similar to those used on other wind instruments. It is, in consequence, very easy for any person accustomed to the ordinary bassoon to adapt his playing to this. The saddle-shape of the key also serves to support the upper joints of the finger, and to throw the labour of closing the hole more on the powerful muscles of the forearm than on the weaker fabric of the hand itself.

Although this instrument was formerly used in military bands, and was played at the first Handel commemoration in Westminster Abbey, it had gone completely out of use until the Handel Festival of 1871. It is however abun-
DOUBLE BASSON.

dantly written for by the great masters. Haydn

gives it an important part in the 'Creation,' the
Passion music, and other of his works. Mozart
uses it in a nonet for wind instruments (already
mentioned under CLARINET), as also does Spohr
in a similar combination. Beethoven employs it
largely in his greatest works. It reinforces the
March in the finale of the C minor symphony,
takes a leading part in the choral symphony, and
in the Grand Mass in D. It also appears in the
overture to 'King Stephen,' and has obligato
passes in the grave-digging scene of 'Fidelio'—
apropos to which see a characteristic anecdote in
Thayer's Beethoven, ii. 288. Mendelssohn intro-
duces it in his overture 'The Hebrides,' in his
re-orchestration of Handel's Dettingen Te Deum,
in the Reformation symphony, and elsewhere.
In all cases it forms a grand bass to the reed
band, completing the 16-foot octave with the six
lowest notes wanting on three-stringed double
basses.

[W.H.S.]

DOUBLE CHANT, a chant equal in length
to two single chants, and covering two verses;
peculiar to the English church, and not intro-
duced till after the Restoration. [CHANT, p. 338.]

DOUBLE CONCERTO, a concerto for two
solo instruments and orchestra, as Bach's for
two Pianos, Mozart's for Violin and Viola
(Koehel, 364); or Mendelssohn's (MS.) for
Piano and Violin.

DOUBLE COUNTERPOINT is the accom-
paniment of a subject or melody by another
melody, so contrived as to be capable of use
either below or above the original subject. See
examples given under COUNTERPOINT (p. 408).

DOUBLE FLAT. If the flat lowers a note
by a semitone, the double flat lowers it by two.
The sign for the double sharp is abbreviated, but
that for the double flat remains simply bb, the
corrective to which is either ♭♭ or ♭ at pleasure.
On keyed instruments the double flat of a note
is a whole tone lower:—thus A♭♭ = G♯, C♭♭ = B♭.
The French term is double bémol; the German
one doppell-B. The German nomenclature for
the notes is Ees, As, Des, Deses, etc.

DOUBLE FUGUE, a common term for a
fugue on two subjects, in which the two start
together, as in the following, by Sebastian
Bach:

or in D. Scarlatti's harpsichord fugue in D
minor: or Handel's organ fugue, quoted under
COUNTERSUBJECT, p. 409 b. [G.]

DOUBLE SHARP raises a note by two semi-
tones, and is denoted by a ×, probably an abbrevi-
ation of §§. It is singular that the sign should be
a less complicated one than that for the single
sharp. On instruments of fixed intonation
C × = D♭, E × = F♯, etc. The French call it
double dièse, and the Germans doppel kres.
The Germans call the notes exist, faite, gisat, etc.

DOUBLE STOPPING is sounding on the
violin or other instrument of that tribe two notes
simultaneously. Such notes are termed 'double
stops.' An open note is produced by merely
striking the string with the bow without touching
it with the fingers of the left hand—so that the
string vibrates in its whole length. A 'stopped
note' is a note produced by putting a finger of
the left hand on the string, so that the vibration
of the string is 'stopped' at a certain point.

Strictly speaking, the term 'double-stopping'
ought only to be applied to the simultaneous
sounding of two 'stopped' notes; it is, however,
indiscriminately used for any double sounds,
whether produced with or without the aid of
the open strings. The playing of double stops is one
of the most difficult parts of the technique of the
violin.

[P.D.]

DOUBLE TONGUEING, a method of articu-
lation applicable to the flute, the cornet a pistons,
and some other brass instruments. The oboe,
bassoon, and clarinet, are susceptible only of
single tongueing, which signifies the starting of
the reed-vibrations by a sharp touch from the tip
of the tongue similar to the percussion action in
harmoniums. It requires long practice to give
the necessary rapidity to the tongue muscles
co-operating for this end. Single tongueing is
phonetically represented by a succession of the
lingual letter T, as in the word 'rat-tat-tat.' Double
tongueing aims at alternating the linguo-
dental explosive T with another explosive conso-
nant produced differently, such as the linguo-
palatal D or K, thus relieving the muscles by
alternate instead of repeated action. The intro-
duction of the mouthpiece into the cavity of the
mouth itself prevents such an alternation in the
three instruments above named, but it is
possible in the flute and cornet. Any inter-
mediate vowel sound may be employed. The
words commonly recommended for double-tongueing
are 'tucker': or 'ticker.' Triple tongueing
is also possible; and even four blows of
the tongue against the teeth and palate have been
achieved and termed quadruple tongueing. In-
deed the system may be further extended by
employing words such as 'Tik-tak-takata,' in
which dental and palatal explosives are judi-
ciously alternated.

The obstruction to the wind-current is not so
complete in double as in single tongueing, nor is
the mechanical starting of the reed present in the
latter. But it is notwithstanding capable of pro-
ducing a good staccato effect. [W.H.S.]

DOUBLES (Fr.). The old name for 'Varia-
tions,' especially in harpsichord music. The
doubles consisted of mere embellishments of the
original melody, and were never accompanied by any change in the harmonies. Examples are numerous in the works of the older masters. Handel’s variations on the so-called ‘Harmonious Blacksmith’ are called ‘Doubles’ in the old editions. In Couperin’s ‘Pièces de Clavecin,’ Book 1, No. 2, may be seen a dance ‘Les Canaries’ followed by a variation entitled ‘Double des Canaries,’ and two instances will also be found in Bach’s English Suites, the first of which contains a ‘Courante avec deux Doubles’ and the sixth a sarabande with a double. The term is now entirely obsolete. (2) In combination the word ‘double’ is used to indicate the octave below; thus the ‘double-bass’ plays an octave below the ordinary bass, or violoncello; a ‘double’ stop on the organ is a stop of the pitch known as 16-foot pitch (see Organ), an octave below the ‘unison’ stops. (3) The notes in the bass octave from are often spoken of by organ-builders as double G, double F, etc. (4) The word is applied to singers who under-study a part in a vocal work, so as to replace the regular performer in case of need. [E. P.]

**Doubles.** The name given by change ringers to changes on five bells, from the fact that two pairs of bells change places in each successive change. [C. A. W. T.]

**DOWLAND, John, Mus. Bac.,** was born in Westminster in 1563. In 1584 he visited France and Germany, and, after remaining some months in the latter country, crossed the Alps into Italy. Having returned to England he, in 1588, took the degree of Bachelor of Music at Oxford, and was subsequently admitted to the same degree at Cambridge. In 1592 he was one of the musicians engaged in harmonising the Psalms Tunes in four parts, which were published by Thomas Este in that year. In 1597 he published ‘The First Booke of Songes or Ayres of foure parts with Tableture for the Lute.’ So made that all the partes together, or either of them severally may be song to the Lute, Orpharion, or Viol de gambo.’ This work became so popular that four subsequent editions appeared in 1600, 1603, 1608, and 1613. It was printed in score for the Musical Antiquarian Society, in 1844. Dowland, soon after its publication, entered the service of Christian IV, King of Denmark, as lutenist, and whilst resident in that country he published (in London), in 1600, ‘The Second Booke of Songes or Ayres of 2, 4, and 5 parts, with Tableture for the Lute or Orpharion, with the Violl de Gamba . . . Also an Excellent lesson for the Lute and Base Viol, called Dowland’s adew’ [for Master Oliuer Cromwell]. In 1602, being still in Denmark, he published (also in London) ‘The Third and last Booke of Songes or Ayres. Newly composed to sing to the Lute, Orpharion, or Viols, and a dialogue for a base

and meane Lute, with five voyces to sing thereto.’ In 1605 he came to England, and published ‘Lachryme, or, Seven Teares, figured in seaven passionate Pavans, etc., set forth for the Lute, Viols, or Violins, in five parts.’ The first pavane of these seven is that so frequently alluded to by contemporary dramatists as ‘Lachryme.’ Dowland afterwards returned to Denmark, which he finally quitted in 1609 to come back to and remain in England. In 1609 he published his translation of Andreae Orinthoparcus’s treatise ‘Micrologus.’ In 1610, at the end of a collection of lute lessons edited by his son, Robert, appeared some Observations on Lute playing by Dowland. In 1612 Dowland published ‘A Pilgrime’s Solace, wherein is contained Musickall Harmonie of 3, 4, and 5 parts, to be sung and plaid with Lute and Viols.’ He describes himself on the title-page as ‘Lutenist to the Lord Walden.’ In 1623 he was one of the six lutenists in the service of the king. Dowland died early in 1626. His skill as a lutenist is celebrated in one of the sonnets of Shakspeare’s ‘Passionate Pilgrim,’ printed in 1590, but which sonnet had previously been printed in a work by Richard Barnfield.

‘If music and sweet poetry agree, As they must needs, the sister and the brother,

Dowland to thee is dear, whose heavenly touch
Upon the lute doth ravish human sense: Spenser to me,’ etc.

[W. H. H.]

**DOWLAND, Robert,** son of the preceding, was also a lutenist. In 1610 he edited ‘A Musicall Banquet. Furnished with variety of Delicious Ayres, Collected out of the best Authors in English, French, Spanish and Italian, by Robert Dowland.’ The authors referred to are Daniel Batchelor, John Dowland, Robert Hales, Anthony Holborne, and Richard Martin. In the same year he also edited ‘Variete of Lessons: viz. Fantasies, Pavins, Galliards, Almaines, Corantoes, and Volts. Selected out of the best approved Authors, as well beyond the Seas as of our owne Country. By Robert Dowland. Whereunto is annexed certaine Observations belonging to Lute-playing by John Baptisto Besardo of Viconti: Also a short Treasise therunto apperteyning by John Dowland, Batchelor of Musick.’ In April, 1626, on the death of his father, Robert Dowland was appointed his successor as one of the musicians to the king. The time of his death has not been discovered, but he was living in 1641, when his name occurs as one of the ‘Musicians for the Waytes.’

[W. H. H.]

**DRAESEKE, Felix,** a gifted and highly cultivated, though somewhat eccentric, composer and writer upon musical subjects, disciple of Lizst’s at Weimar, and one of that small but formidable circle of young musicians, who are known as ‘die neudeutsche Schule,’ and amongst whom are such names as Hans von Bülow, Peter Cornelius,
Carl Klindworth and Carl Tausig, was born in 1835 at Coburg. On leaving Weimar, Dräseke settled at Dresden, and subsequently at Lauzanee, as teacher of the pianoforte and harmony. In 1868 Von Bülow called him to Munich as a master of the new Conservatoire, but he returned to Switzerland soon after Von Bülow's departure from Munich early in 1859, and is at present residing at Dresden. Dräseke has published a number of pianoforte pieces, remarkable for harmonic and rhythmic subtleties; 'Fantastiestücke in Walserform,' op. 3; 'Deux valsés de concert,' op. 4; 'Six Sonatas in E major,' op. 6; several pieces for piano and violoncello; some vocal compositions and a symphony. An opera, for which he himself wrote the poem, is still in manuscript. Of his literary labours, the elaborate analysis of Liszt's Poemmes symphoniques in Brendel's 'Anregungen,' and the recent essay on Peter Cornelius, in 'Die neue Zeitschrift für Musik,' as well as a treatise on 'Modulation,' are valuable. [E. D.]

DRAGHI, ANTONIO, capellmeister to the court at Vienna, born at Ferrara 1635 (not 1642, as generally stated). In 174 he was invited to Vienna as Hoftheater Intendant to the Emperor Leopold I, and chapel-master to the Empress Leonore, and in 182 took up his abode there for life. He was a gifted dramatic composer, and most prolific, as may be seen by the list of his works performed at the court during 38 years, amounting to no less than 87 operas, 87 feste teatralli and serenades, and 32 oratorios. (See Köchel's life of Fux.) Some of his carnival operas have been several times revived. The scores of most of his works are in the imperial library, and some in the archives of the 'Gesellschaft der Musikfreunde.' His librettos, some of them illustrated, were printed in the imperial press by Cosmerow, and have nearly all been preserved. Occasionally he wrote librettos, which were set by other composers, Ziani, Bertali, and even the Emperor Leopold, who composed the complete opera 'Apollo des Dampfes' (1669), and airs for others. Various mistakes have been made about the year of his death. Walther's Lexicon speaks of him as alive in 1703, and Fétis, followed by most modern biographers, says he went back to Ferrara and died there in 1707; but all doubts are set at rest by the register of deaths in Vienna, from which it appears he died there on Jan. 18, 1700, aged 65. A son of his, CARLO, was court-scholar in 1688, court-organist in 1698, and died May 2, 1711. [C. F. P.]

DRAGHI, GIOVANNI BAPTISTA, was an Italian musician who settled in London in the middle of the 17th century, and who, during his long residence in this country, so completely adopted the English style of composition that he must be regarded as in effect an English composer. It has been conjectured that he was a brother of Antonio Draghi. The earliest notice of him is found in Pepys's Diary, under date of Feb. 12, 1667. The diarist there mentions having heard him (at Lord Brouncker's house) sing through an act of an Italian opera which he had written and composed at the instance of Thomas Killigrew, who had an intention of occasionally introducing such entertainments at his theatre. Pepys expresses in strong terms his admiration of the composition. It is extremely doubtful whether this opera was ever produced. Draghi however lived to witness the introduction into this country of the Italian opera at the commencement of the following century. He excelled as a player on the harpsichord, for which instrument he composed and published in England many lessons. He was music-master to Queen Anne, and probably also to her elder sister, Queen Mary. In 1675 he composed the act-tunes and some other instrumental music for Shadwell's opera 'Psyche'; the remainder, including the whole of the vocal part, being composed by Matthew Locke. On the death of Lock in 1677 Draghi succeeded him as organist to Catherine of Braganza, wife of Charles II. In 1687, for the celebration of St. Cecilia's day, he composed music for Dryden's fine ode commencing 'From Harmony, from heavenly Harmony.' In 1706 he contributed part of the music to D'Urfe's comic opera, 'Wonders in the Sun; or, the Kingdom of the Birds,' produced at the Queen's Theatre in the Haymarket. Many songs by him are found in the collections of the period. [W. H. H.]

DRAGONETTI, DOMENICO, one of the greatest known players on the double-bass, born at Venico 1755. As a boy he showed remarkable talent for music, teaching himself the guitar and violin, which however he soon exchanged for his own special instrument. On this he quickly outstripped his master Berini, and was admitted to the orchestra of the 'Opera buffa' at 13, and a year later to the 'Opera seria' at San Benedetto, and to all performances of importance. In his 18th year he was appointed to the post in the choir of St. Mark's, hitherto occupied by his master, who himself persuaded him to accept it. He had now attained to such perfection that nothing was too hard for him; he composed sonatas, concertos and capriccios for his instrument, and frequently played upon it the violoncello part in string-quartets. At Vicenza he played in the opera orchestra, and while there was fortunate enough to discover the marvellous double-bass, with which he never again parted, although often tempted by large offers of money. This instrument belonged to the conven of St. Pietro, and was made by Gasparo di Salo, master of the Amati. He tested its powers on the monks of S. Giustina at Padua, by imitating a thunderstorm and bringing them out of their cells in the dead of the night. Meantime his fame had spread beyond Italy, and he was offered an engagement at the Imperial Opera in St. Petersburg, upon which the Procurators of St. Mark's immediately raised his salary. Shortly after, however, he obtained a year's leave of absence, having been persuaded by Banti and Paccherotti to accept an invitation to London, where he arrived in 1794, and was immediately engaged for the opera, and for the concerts at the King's Theatre. He made his first appearance
on the 20th of May, and gave a benefit-concert
on the 8th of May, 1795, when he was assisted
by Banti, Viotti, the harpist Le Fournier, Harrin-
gton, Monzani, Holmes, and the brothers Le-
ander, French drummers. The beauty and ex-
pression of his playing and his power of reading
at sight excited universal astonishment, and he
was at once invited to take part in all the great
provincial performances. Henceforth he became
the inseparable companion of the violoncellist
Lindley; for 52 years they played at the same
desk at the opera, the Antient Concerts, the
Philharmonic, the Provincial Festivals, etc.,
and their execution of Corelli’s sonatas in particular
was an unfailing attraction. Great as was Drag-
netti’s power of overcoming difficulties, it was his
extraordinary tone, and the taste, judgment, and
steadiness of his performance, that characterised
him, and made him so indispensable to the or-
chestra.

Soon after Dragonetti’s arrival in London he
met Haydn, with whom he became intimate.
On his way to Italy in 1798 Dragonetti visited
the great master in Vienna, and was much
delighted with the score of the ‘Creation,’ just
completed. In 1808 and 9 he was again in
Vienna, but from caprice would play before no
one but the family of Prince Starhemberg, in
whose palace he lived, and whose wife often
accompanied him on the piano. Here he made
the acquaintance of Beethoven, and also that of
Secther, afterwards court-organist, a sound musi-
cian, who was teaching the porter’s children, and
whom Dragonetti requested to put a pianoforte
accompaniment to his concertos. To him he
played unmasked, though he locked up his instru-
ment because the Starhembergs invited some of
the nobility to their soirées. His silence was
perhaps partly caused by his fear of Napoleon,
who was then in occupation of Vienna, and who
wished to take him by force to Paris. With
Secther he corresponded all his life, and remem-
bered him in his will. In August 1845, when
90, he headed the double-basses (13 in number)
at the Beethoven Festival at Bonn; and Berlioz,
in his ‘Soirées de l’orchestre,’ writes that he
had seldom heard the scherzo in the C minor
Symphony played with so much vigour and finish.
Thus, in his old age, he rendered homage to the
great master, of whose friendship he was reminded
on his death-bed. Shortly before his end, when
surrounded by Count Pepoli, Pigott, Tolbecque,
and V. Novello, he received a visit from Stumpf,
the well-known harp maker, who, as Dragonetti
held out his great hand covered with callousities
and unnaturally spread from constant playing, said
with emotion, ‘This is the hand which Beethoven
our great friend, whose spirit now dwells in purer
regions, made me press.’ He died in his own
house in Leicester Square, April 16, 1846, and
was buried on the 24th in the Catholic chapel at
Moorfields. His works were few. It is not ge-
gen erally known that he wrote for the voice, but
three canzonets with Italian words, written dur-
ing his stay in Vienna, still exist in a collection
of ‘XXXIV Canzonette e Romanzi,’ by various
composers, and dedicated to the Archduke
Rudolph, Beethoven’s friend and pupil. He
was a great collector of pictures, engravings,
musical instruments, and music, and left to the
British Museum alone 182 volumes of scores of classical operas. His eccentricities were
many and curious. He was an inveterate snuff-
taker, and had a perfect gallery of snuff-boxes.
Among his treasures were found a quantity of
curiously-dressed dolls, with which he used to
play like a child, taking a selection of them with
him to the musical festivals, especially a black
one which he called his wife. His dog Carlo
always accompanied him in the orchestra.
The most curious thing about him was his speech,
a mixture of his native Bergamese dialect with bad
French, and worse English. He was a man of
kindly temper and a warm friend, though in
money matters very close. His picture as ‘11
Patriarchi dei Contrabassi’ was published by
Thierry, after a half-length taken in crayons by
Salabert, of London. His precious instrument,
his companion for nearly sixty years, he be-
quessed to the ‘Vestry of the Patriarchal
Church of S. Mark at Venice.’

[D. F. P.]

DRECHSLER, JOSEF, a remarkable composer
and teacher, born May 26, 1752, at Vlaclhovo
Bread in Bohemia; received his first instruction
from his father, schoolmaster in his native place.
After various alternations of place and pursuit,
he studied music and law at Prague; in 1807
found himself at Vienna, but it was not till 1810
that he obtained employment as chorus-master at
the Court Theatre. This was followed in 1812
by a place as ‘Capellmeister adjunct,’ then by an
organist’s post; in 1815 he opened a music school,
and gradually won his way upwards, till in 22
he was chief Capellmeister at the theatre in the Leo-
poldstadt. On Gänabacher’s death in 44 he
became Capellmeister at S. Stephen’s, a post which
he retained till his death, Feb. 27, 1852. His in-
dustry during this chequered life was truly ex-
traordinary. He left behind him books of in-
struction for the Organ, Harmony, Thorough
Bass, and the art of Freluding, with a new ed-
ition of Pleyel’s Clavier-school; 16 Masses, and a
Requiem; 24 smaller pieces of choral music;
6 Operas; 25 shorter dramatic pieces (Sing-
spiele) and pantomimes; 3 Cantatas, and a host
of Airs, Sonatas, Fugues, Quartets, etc. To say
that none of these have survived is to detract
nothing from the activity and devotion of Josef
Drechslar.

[D.]

DRECHSLER, KARL, a great violoncello
player, born May 27, 1805, at Kamens, in Sax-
ony. Entered the Court band at Dessau, in 1820,
and in 24 put himself under Dotzauer at Dres-
don. In 26 he received a permanent engagement
as leader of the band at Dessau. Before then he
had visited England, and played with much
success. He shone equally in quartets, solos,
and the orchestra, with a full tone, good
intonation, and excellent taste. Drechslar was
the master of Cossmann, Grützmacher, and A. Lüdner,
DREHER. A name given in Austria and Bavaria to a dance very similar to the Ländler. The name, which is descriptive of the dance, is derived from the verb drehen, to twirl. Suits of Drehers are said to be in existence, but dance, music, and name are now alike obsolete. [E. F.]

DREYSCHOCK, ALEXANDER, born Oct. 15, 1818, at Zack in Bohemia, died April 1, 1869, at Venice; a pianist of great executive attainment, and a well-trained musician to boot. J. B. Cramer, who in his old days heard him at Paris, exclaimed: 'The man has no left hand! here are two right hands!' Dreysschock was the hero of octaves, sixths, and thirds, his execution the non plus ultra of mechanical training. He played his own pieces principally, though his repertoire included many classical works, which latter he gave with faultless precision, but in a manner cold and essentially prosaic. In very early youth, already a brilliant performer, he became the pupil of Tomaschek at Prague. He began his travels in 1838, and continued them with little interruption for twenty years. Up to 1848, from which year the golden time for itinerant virtuosi began to decline, Dreysschock gathered applause, reputation, orders, decorations, and money in plenty, from one end of Europe to the other. In 1862 he was called to the professorship of the piano-forte at the Conservatoire of St. Petersburg, and was at the same time chosen director of the Imperial school for theatrical music, and appointed court pianist; but his health failed, and he was sent to Italy in 68, where in 69 he died. The body was buried at Prague in accordance with the desires of his family. Dreysschock's publications for his instrument have not met with much success. They are 'salon music' of a correct but cold and sterile sort. He also brought forth a sonata, a rondo with orchestra, a string-quartet and an overture for orchestra, all still born, spite of their solid and respectable musical parentage. [E. D.]

DROGHIERINA. See CHIMENTI.

DRONE. A name given to the three lower pipes of the bagpipe, which each emit only a single tone; usually two octaves of the key-note D, and the fifth A. They are distinguished from the CHAUNTER, which has the power of producing a melodious succession of notes. [See BAGPIPE.]

The term has hence been transferred to continuous bass in a composition, usually of a pastoral kind, as in the 'Hirten-melodie' in Schubert's 'Rosamunde,'

See also the 'Hirtengesang' at the beginning of the Finale to Beethoven's Pastoral Symphony, and many other places. [W. H. S.]

DROUET, LOUIS FRANCOIS PHILIPPE, one of the most eminent of flute-players, born at Amsterdam 1793. At seven years old he played at the Conservatoire and the Opera-house, Paris. From 1807-10 he was teacher to King Louis of Holland, and claims to have put 'Partant pour la Syrie' into shape for Queen Hortense. His serious study of the flute began in 1807, after an extraordinary success which he achieved at a concert of Rode's in Amsterdam. In 1811 he was appointed solo flute to Napoleon I, a post which he retained after the Restoration. He appeared in London at the Philharmonic March 25, 1816, and this was probably the commencement of a lengthened tour, during which he resided for some time at Naples and the Hague. He played again at the Philharmonic May 17, 1830. From 1836 to 54 he was Court-Capellmeister at Coburg, after which he visited America. Since his return thence he has lived at Gotha and Frankfort. Drouet was eminently a flute player, not remarkable for tone, but with extraordinary skill in rapid passages and in double tonguing. He left some 150 works of all kinds, admirably written for the flute, and greatly esteemed by players, but of little account as music. He died 1873.

DRUM. Some instrument of this kind has been known in almost every age and country, except perhaps in Europe, where it appears to have been introduced at a comparatively late period from the East.

A drum may be defined to be a skin or skins stretched on a frame or vessel of wood, metal, or earthenware, and may be of three different kinds:—

1. A single skin on a frame or vessel open at bottom, as the Tambourine, Egyptian Drum, etc.
2. A single skin on a closed vessel, as the Kettle-drum.
3. Two skins, one at each end of a cylinder, as the Side-drum, etc.

1. The first sort is represented by the modern tambourine, and its varieties will be described under that head. [TAMBOURINE.]
2. The second kind is represented by the modern KETTLEDRUM—the only really artistically musical instrument of this class. It consists of a metallic kettle or shell, more or less hemispherical, and a kind of vellum which being first wetted, is lapped over an iron ring fitting closely outside the kettle. Screws working on this ring serve to tighten or slacken the head, and thus
to tune the instrument to any note within its compass. The shell is generally made of brass
in France and of copper in England. In the cavalry two drums are used, one on each side of the horse's neck. Two are likewise required in orchestras. The larger of the two drums should be able to go down to F, and the smaller to the F above (a), giving a range of an octave to the two. Each drum should have a compass of a fifth, viz. F to C for the larger (b), and Bb to F for the smaller (c).

In the key of F, the tonic and dominant may be sustained in two ways (d), and likewise in Bb (e), but in all other keys in only one way.

Thus in F#, G, Ab, and A, the dominant must be above the tonic,

\[ \begin{align*}
F# & \quad G & \quad Ab & \quad A \\
& & & \\
\end{align*} \]

while in Bb, C, Cs, D, Eb, and E, the dominant must be below the tonic,

\[ \begin{align*}
& \quad F \\
& \quad C & \quad Cs & \quad D & \quad Eb & \quad E \\
& & & & & \\
\end{align*} \]

Drums are generally tuned to tonic and dominant; but modern composers have found out that they may advantageous stand in a different relation to each other. Thus Beethoven, in his 8th and 9th Symphonies, has them occasionally in octaves (f), and Mendelssohn, in his Rondo Brillante, most ingeniously puts them in D and E (g); thereby making them available in the

\[ \begin{align*}
& \quad F \\
& \quad C & \quad Cs & \quad D & \quad Eb & \quad E \\
& & & & & \\
\end{align*} \]

keys of B minor and D major, as notes of the common chord, and of the dominant seventh, in both keys. By this contrivance the performer has not to change the key of his instruments all through the rondo—an operation requiring as we shall see, considerable time. Berlioz says that it took seventy years to discover that it was possible to have three kettledrums in an orchestra. But Auber's overture to 'Masaniello' cannot be played properly with less, as it requires the notes G, D, and A; and there is not time to change the G drum into A. In Spohr's 'Historical

Symphony' three drums are required all at once in the following passage:

\[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} & \quad \text{G} \\
& \quad \text{A} & \quad \text{Bb} & \quad \text{B} & \quad \text{Ab} & \quad \text{G} \\
\end{align*} \]

And in 'Robert le Diable' (No. 17 of the score) Meyerbeer uses three drums, C, G, and D.

Another innovation is due to Beethoven, namely, striking both drums at once. This occurs in his 9th Symphony, where, in the slow movement, the kettledrums have

\[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} \\
& \quad \text{G} & \quad \text{A} & \quad \text{Bb} & \quad \text{B} \\
\end{align*} \]

Gounod has a similar chord in the ballet music of 'La Reine de Saba.' But Berlioz, in his 'Requiem,' besides fifty brass instruments, has eight pairs of kettledrums, played by ten drummers, two of the pairs having two drummers each. The drum parts have these chords—

\[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} \\
& \quad \text{G} & \quad \text{A} & \quad \text{Bb} & \quad \text{B} \\
\end{align*} \]

most of the notes being doubled.

Besides their obvious use in forte passages, the drums are capable of beautiful piano effects. Observe a passage several times repeated in Mozart's overture to 'Die Zauberflöte,' beginning at the 41st bar from the end: also the mysterious effect of the 13th bar in the introduction to Beethoven's 'Mount of Olives'; that of the Ab against a tremolo of the strings in the first movement of Weber's overture to 'Der Freischütz,'

\[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} \\
& \quad \text{G} & \quad \text{A} & \quad \text{Bb} & \quad \text{B} \\
\end{align*} \]

and of a single \[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} \\
& \quad \text{G} & \quad \text{A} & \quad \text{Bb} & \quad \text{B} \\
\end{align*} \] on the return of the subject in the middle movement.

When musicians talk of 'drums' they mean kettledrums, in contradistinction to the side drum or bass drum, of which hereafter. The two latter can only mark the rhythm, not being musical notes; but kettledrums give musical sounds as definitely as the double bass, and can only be used when forming part of the harmony played by the other instruments. Composers have usually treated them thus; but Beethoven was probably the first to see that they might also be treated as solo instruments. Thus in the Andante of his Symphony No. 1 the drum repeats this bar

\[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} \\
& \quad \text{G} & \quad \text{A} & \quad \text{Bb} & \quad \text{B} \\
\end{align*} \]

several times as a bass to a melody in the violins and flutes. In Symphony No. 4 it takes its turn with other instruments in playing this passage—

\[ \begin{align*}
& \quad \text{C} & \quad \text{D} & \quad \text{E} & \quad \text{F} \\
& \quad \text{G} & \quad \text{A} & \quad \text{Bb} & \quad \text{B} \\
\end{align*} \]

In the wonderful transition from the scherzo to the finale of the 5th Symphony, the soft pulsations of the drum give the only signs of life in the deep prevailing gloom. Of the drums in octaves in Beethoven's 8th and 9th Symphonies, we have already spoken. And in reviewing his Violin Concerto, which begins with four beats of the
drum, literally solo, an English critic observes that 'until Beethoven's time the drum had, with rare exceptions, been used as a mere means of producing noise—of increasing the din of the forte; but Beethoven, with that feeling of affection which he had for the humblest member of the orchestra, has here raised it to the rank of a solo instrument.'

The late Mr. Hogarth says that 'to play it well is no easy matter. A single stroke of the drum may determine the character of a whole movement; and the slightest embarrassment, hesitation, or misapprehension of the requisite degree of force, may ruin the design of the composer.'

There are many sorts of sticks. The best are of whalebone with a small wooden button at the end, covered with a thin piece of very fine sponge. With these every effect, loud or soft, can be produced. A small knob, not exceeding ½ inch in diameter, entirely made of felt on a flexible stick, answers very well. India-rubber discs are not so good. Worst of all are large clumsy knobs of cork, covered with leather, as they obscure the clear ring of the kettle-drum, so different from the tone of a bass drum.

Very large drums, going below F, have not a good musical tone, but mere thunder. Thin transparent skins have a better tone than the opaque white ones. The right place to strike a kettle-drum is at about one-fourth of its diameter. A roll is written in either of the following ways:

\[ \text{\textit{a roll}} \]

and is performed by alternate single strokes of the sticks. We shall see presently that the sidetom roll is produced in quite a different manner.

Drum parts were formerly always written, like horn and trumpet parts, in the key of C, with an indication at the beginning as to how they were to be tuned, as 'Timp. in Eb, Db,' or 'Timp. in G, D,' etc.; but it is now usual to write the roll notes.

To tune drums of the ordinary construction, a key has to be applied successively to each of the several screws that serve to tighten or loosen the head. In French-made drums there is a fixed T-shaped key-head to each screw. But even then it takes some time to effect a change, whence several attempts have been made to enable the performer to tune each drum by a single motion instead of turning seven or eight screws. In Potter's system, the head is acted on by several iron bars following the external curvature of the shell, and converging under it; and they are all drawn simultaneously by a screw turned by the foot of the performer, or by turning the whole drum bodily round.

Cornelius Ward took out a patent in 1837 for the same object. The head is drawn by an endless cord passing over pulleys from the outside to the inside of the drum, where it goes over two nuts, having each two pulleys. These nuts approach and recede from each other by means of a horizontal screw, nearly as long as the diameter of the drum, the handle of which comes just outside the shell, and is turned by the performer whenever he requires to tune the drum. A spring indicator shows the degree of tension of the cord, and consequently the note which the drum will give, so that the performer may tune his instrument by the eye instead of the ear. Gautrot, of Paris, has another plan, viz. a brass hoop fitting closely inside the shell, and pressing against the head. A handle, working a rack and pinion motion, raises or lowers this hoop, and so tunes the drum by altering the pressure against the head. Einbiger, of Frankfort-on-the-Main, makes drums with a similar internal hoop, but worked by a different mechanism; they are used in the theatre of that town.

There will always be some objection to these schemes from the fact of the head being an animal membrane, and consequently not perfectly homogeneous, but requiring a little more or less tension in some part of its circumference, unless, as in Einbiger's drums, there are small screws with fly-nuts all round the upper hoop, for the purpose of correcting any local inequality of tension. Writers on acoustics seem to have been disheartened by this inequality from extending their experiments on the vibration of membranes. Even Chladni does not pursue the subject very far. We must therefore be content with some empirical formula for determining the proportion which two drums should bear to each other, so that the compass of the larger should be a fourth above that of the smaller. We have already said that the lowest notes of the two drums should be respectively

\[ \text{\textit{C}} \text{ and } \text{\textit{E}} \]

Now the numbers of the vibrations due to these two notes are in the proportion of three to four. Assuming that the surfaces, or the squares of the diameters, of the membranes are in the inverse ratio of the number of vibrations they give, the tension being equal (which is true of metal plates of equal thickness), and calling the larger diameter $D$ and the smaller $d$, we should have this proportion

$\frac{D^2}{d^2} = 4 : 3$, whence $\frac{D}{d} = 2 : \sqrt{3}$, or as $2 : 1.732$, or very nearly as $30 : 26$. Practically this is found to be a very suitable proportion, the drums at the French Opera being 29 and 24½ inches diameter, and those lately at the Crystal Palace 28 and 24½. No drum should exceed 29 inches or thereabouts.

Kettle-drums in German are called 

\[ \text{\textit{Pauken}} \]

in Italian, \textit{timpani}; in Spanish, \textit{atobales}; in French, \textit{timbales}; the two latter evidently from the Arabic \textit{tabli} and the Persian \textit{tambal}. There are two very complete Methods for the kettledrums. viz. 'Methodo teorico pratico per Timpani,' by P. Fieranzovino, published at Milan by Ricordi; and a 'Méthode complète et raisonnée de Timbales,' by Geo. Kastner, published in Paris by Brandus (J. Salesinger). 3. The third kind of drum consists of a wooden
or brass cylinder with a skin or head at each end. The skins are lapped round a small hoop, a larger hoop pressing this down. The two large hoops are connected by an endless cord, passing zigzag from hoop to hoop. This cord is tightened by means of leather braces a, b, b. It is slackest when they are all as at a, and tightest when as at b, b. This is called a Side-drum, and is struck

in the centre of the upper head by two sticks of hard wood, ending in a small elongated knob. Across the lower head several cords of catgut, called marze, are stretched, which rattle against it at every stroke. The roll (nick-named 'daddy-mummy') is made by alternately striking two blows with the left hand and two with the right, very regularly and rapidly, so as to produce one continuous tremolo. It is not easy to do, and must be learned at an early age.

Some side-drums are made much flatter, and are tightened by rods and screws instead of cords.

In orchestras the side-drum is frequently used (and abused) by modern composers. But in the overtures to 'La Gazza Ladra' and 'Fra Diavolo,' the subjects of both being of a semi-military nature, the effect is characteristic and good.

Side-drums are used in the army for keeping time in marching and for various calls, both in barracks and in action. In action, however, bugle-calls are now usually substituted:

The Drummers' Call.

The Sergeants' and Corporals' Call.

Commence Firing.

Repeate 3 times.

Cease Firing.

The above are examples of drum calls used in the British army; the next is 'La Retraite,' beaten every evening in French garrison towns.

The effect of this is very good when, as may be heard in Paris, it is beaten by twenty-eight drummers. For Berlioz has well observed that a sound, insignificant when heard singly, such as the clink of one or two muskets at 'shoulder arms' or the thud as the butt-end comes to the ground at 'ground arms,' becomes brilliant and attractive if performed by a thousand men simultaneously.

The Tenor-drum is similar to the side-drum, only larger, and has no snares. It serves for rolls in military bands instead of kettle-drums.

The French Tambourin is similar to the last, but very narrow and long. It is used in Provence for dance music. The performer holds it in the same hand as his flagelet (which has only three holes) and beats it with a stick held in the other hand. Amber has used the tambourin in the overture to 'Le Philbre.'

The Bass-drum (Fr. Grosse Caisses, Ital. Gros Cassa or Gros Tamburo) has also two heads, and is played with one stick ending in a soft round knob. It must be struck in the centre of one of the heads. It used to be called the long-drum, and was formerly (in England at least) made long in proportion to its diameter. But now the diameter is increased and the length of the cylinder lessened. The heads are tightened by cords and braces like the side-drum first described, or by rods and screws, or on Cornelius Ward's principle as described for kettle-drums. It is used in military bands and orchestras. There is another sort of bass-drum called a Gong-drum, from its form, which is similar to a gong or to a gigantic tambourine. It is very convenient in orchestras where space is scarce; but it is inferior to the ordinary bass-drum in quality of tone. These instruments do not require tuning, as their sound is sufficiently indefinite to suit any key or any chord. [See TAM-TAM.]

Cymbals generally play the same part as the bass-drum; though occasionally, as in the first Allegro of the overture to 'Guillaume Tell,' the bass-drum part is senza piatti (without the cymbals).

[V. de P.]

DRURY LANE, opened in 1665 under the name of the Theatre Royal in Drury Lane; materially altered and enlarged in 1763 and 1764; pulled down in the summer of 1791, the new theatre opened (for plays) April 21, 1794; burned Feb. 24, 1809; rebuilt and opened Oct. 10, 1812. Among the eminent composers who have been connected with this theatre must, in the first place, be mentioned Dr. Arne, who,

1 This opening, for which the address was written by Lord Byron, gave occasion to the 'Rejected Addresses' of James and Horace Smith.
DRURY LANE.

from the year 1738, when he wrote the music to Milton's 'Comus,' until shortly before his death in 1778, produced a large number of operas and operettas. In 1806 one of Sir Henry Bishop's first works, a pantomime-ballad called 'Caractacus,' was brought out at Drury Lane. But Bishop, after the burning of the theatre in 1809, accepted an engagement at Covent Garden, where most of his operas and musical dramas were performed. Meanwhile foreign operas as arranged or disarranged for the English stage by Mr. Rophino Lacy, Mr. Tom Cooke, and others, were from time to time performed at Drury Lane; and in 1833, under the direction of Mr. Alfred Bunn, some English versions of Italian operas were produced with the world-renowned prima donna, Marietta Malibran, in the principal parts. Drury Lane was the last theatre at which she sang. [Malibran.] A few years later Mr. Bunn made a praiseworthy but not permanently successful attempt to establish English opera at this theatre. During this period Balfe's 'Bohemian Girl,' 'Daughter of St. Mark,' 'Enchantress,' 'Bondman,' etc.; Wallace's 'Maritana' and 'Matilda of Hungary,' Benedict's 'Crusaders' and 'Brides of Venice,' were brought out at Drury Lane, for which theatre they had all been specially written. When Her Majesty's Theatre was burnt down (Dec. 6, 1867), Mr. Mapleson took Drury Lane for a series of summer seasons. In 1869 the performances took place under the management of Mr. George Wood (of the firm of Cramer, Wood, and Co.), who among other new works produced Wagner's 'Flying Dutchman'—the first of Herr Wagner's operas performed in England. Until 1877 'Her Majesty's Opera,' as the establishment transferred from Her Majesty's Theatre was called, remained at Drury Lane. In 1877, however, Mr. Mapleson returned to the Haymarket; and his company now performs at the theatre rebuilt on the site of 'Her Majesty's.'

[H. S. E.]

DUBOURL, GEORGE, a grandson of Matthew Dubourg, born 1799, is author of a history of the violin and the most celebrated performers on it, originally published in 1836, and which in 1878 reached a fifth edition.

[W. H. H.]

DUBOURL, MATTHEW, an eminent English violinist, pupil of Geminiani, born in London 1703. It is reported that he first appeared as a boy at one of the concerts of Britton the small-coal man, when he performed a sonata of Corelli with great success, standing on a high stool. In 1728 he was appointed to succeed Cousser as conductor of the Viceroy's band at Dublin, in which capacity he set many odes for the celebration of royal birthdays. During his residence there he led the band at the performances given by Handel during his visit to Ireland in 1741, and then had the distinction of assisting at the first performance of the 'Messiah.' Later he returned to London, and in 1752 succeeded Cesting as master of the King's band, which post he retained up to his death in 1767. He lies in Paddington churchyard. Dubourg appears to have been a brilliant performer and fond of showing off his skill. Burney relates that on one occasion he introduced a cadenza of extraordinary length into the ritornelle of an air. When at last he finished up, Handel, who was conducting, exclaimed: 'Welcome home, Mr. Dubourg.'

DUCIS, or HERTOGHS. 1 Benedictus, a Flemish musician in the early part of the 16th century, organist of the Lady Chapel in the cathedral at Antwerp, and 'Prince de la Gilde' in the brotherhood of St. Luke in that city. He left Antwerp in 1515, and is supposed to have come to England, perhaps to the court of Henry VIII, but as his name does not appear in the lists of court musicians at that time, and no manuscript compositions of his have been found in this country, it appears that his residence here must have been very short, if not altogether mythical. His elegy on the death of Joasquin (1531), and another on the death of Erasmus (1556) fix two more dates in his life. After that no more is known of him. Some German historians have claimed him as a countryman on the strength of the publication and dedication of a setting of the Odes of Horace (published at Ulm in 1539, and dedicated to the youths of that city), maintaining that this proves his residence in that city, but the dedication was more probably the work of the publisher than of the composer. His connection with Antwerp, mentioned above, was discovered not many years ago, by M. Leon de Burbure, and certainly out-weighs anything said in favour of his being a German; while the internal evidence of his compositions, which bear the decided Flemish character, and very closely approach the style of Joasquin, sets the matter entirely at rest.

We have the following compositions of his:—

1. A 4-part monody on the death of Joasquin, in the 7th set of French chansons in 5 and 6 parts printed by Tylman Susato in 1545. A copy of the book is in the British Museum. The composition itself is printed in Burney's History (ii. 513), with critical remarks. There are also several songs by Ducis in former volumes of the same work.

2. Another elegy in 5 parts, 'Flangite Pierides,' on the death of Erasmus, and an 8-part 'Agnus Dei,' both from the 'Selectissime nec non familiarissime cantiones ultra centum' (Augsburg 1540). (3) Songs in the collection of German songs made by Förster and printed by Petreius (Nuremberg 1539-1540). (4) A motet, 'Pecannem te quodque,' from the 'Cantiones octo... vocum' printed by Uhlard (Augsburg 1545). (5) 'No wonder,' says Ambros, speaking of this motet, 'that historians have striven to prove such a composer their countryman.' (5) A motet, 'Dum fabricator mundi suppliantium,' from Rau's 'Selecte Harmonie... de Passione Domini' (Wittenberg 1549). (6) Two 5-part motets, 'Benedic Domine,' and 'Corde et animo,' from Kriestine's 'Cantiones sex et quinque vocum etc.' (Augsburg 1545).

1 Benedictus Ducis, who is often called by his first name alone, must not be confused with Benedictus Appenzeller, a Swiss musician who lived in Belgium, but of later date and less genius.
DUDDYNGTON, Anthony, citizen of London, contracted in 1510 to build an organ for All-Hallows, Barking, for the sum of £50. [V. de P.]

DUET (It. Duetto; Fr. Duo). A composition for two voices or instruments, either with or without accompaniments. Some writers use the form ‘Duet’ for vocal, and ‘Duo’ for instrumental compositions; this distinction, however, is by no means universally adopted. Strictly speaking, a duet differs from a two-part song in the fact that while in the latter the second voice is mostly a mere accompaniment to the first, in the duet both parts are of equal importance. In cases where it is accompanied, the accompaniment should always be subordinate to the principal parts. The most important form of the duet is the ‘Chamber Duet,’ of which the old German and Italian masters have left many excellent examples (see especially Handel’s ‘Chamber Duets’). These duets were often in several movements, imitated by modern composers, and marked invariably in the polyphonic style. The dramatic duet, as we find it in the modern opera, is entirely unrestricted as to form, which depends upon the exigencies of the situation. The finest examples of operatic duets may be named those in the first act of ‘Guillaume Tell,’ in the fourth act of ‘Les Huguenots,’ and in the second act of ‘Messa- niello,’ in the more modern school; while the duets in ‘Fidelio’ and in the operas of Mozart and Weber are models of the older classical forms of the movement. Many of the songs in Bach’s cantatas in which the voice and the obligato instrument are equally prominent are really duets in character, but the term is not applied to the combination of a voice and an instrument. The word is now often employed for a pianoforte piece à quatre mains, of which Schuberti’s ‘Grand duo’ (op. 140) is a splendid example. [E. P.]

DUETTINO (Ital. dimin.). A duet of short extent and concise form.

DUGAZON, Mme. Rosalie, daughter of an obscure actor named Lefèvre, born at Berlin 1755, died in Paris Sept. 22, 1821. She and her sister began their career as ballet-dancers at the Comédie Italienne, and Rosalie made her first appearance as a singer at the same theatre in 1724. She had an agreeable voice, much feeling and finesse, and played to perfection ‘soubrettes,’ ‘paysannes,’ and ‘coquettes.’ Her most remarkable creation was the part of Nina in Dalayrac’s opera of that name. After an absence of three years during the Revolution, she reappeared in 1795, and played with unvarying success till 1806, when she retired. To this day the classes of parts in which she excelled are known as ‘jeunes Dugazon’ and ‘mères Dugazon.’—Her son Gustave (Paris 1782-1835), a pianist and pupil of Berton’s, obtained the second ‘Prix de Rome’ at the Conservatoire in 1806. His operas and ballets, with the exception of ‘Aline’ (1813), did not succeed. [G. C.]

DULCIMER (Fr. Tympanon; Ital. Cembalo, Timpanon, Salterio tedesco; Germ. Hackbrett). The prototype of the pianoforte, as the psaltery was of the harpsichord. These instruments were so nearly alike that one description might serve for both, were it not for the different manner of playing them, the strings of the dulcimer being set in vibration by small hammers held in the hands, while in the psaltery the sounds were produced by plectra of ivory, metal, or quill, or even the fingers of the performer. It is also no less desirable to separate in description instruments so nearly resembling each other, on account of their ultimate development into the harpsichord and pianoforte by the addition of keys. [See Harpsichord, and Pianoforte.]

Dr. Rimbaud (Pianoforte, p. 23) derives dulcimer from ‘dulce melos.’ Perhaps the ‘dulce,’—also used in the old English ‘dulasie’ and ‘dulascords,’—unknown instruments unless dulcimers—are, from the ability the player had to produce sweet sounds with the softer covered ends of the hammers, just as ‘piano’ in pianoforte suggests a similar attribute. The Italian ‘Salterio tedesco’ implies a German derivation for this hammer-psaltery. [See also Cembalo.] The roughness of description used by medieval Italians in naming one form of psaltery ‘strumento di porco,’ pig’s head, was adopted by the Germans in their faithful translation ‘Schweinskopf,’ and in naming a dulcimer ‘Hackbrett’—a butcher’s board for chopping sausage-meat.

The dulcimer is a trapeze-shaped instrument of not more than three feet in greatest width, composed of a wooden frame enclosing a wrest-plank for the tuning-pins, round which the strings are wound at one end; a soundboard ornamented, with two or more sound-holes and carrying two bridges between which are the lengths of wire intended to vibrate; and a hitchpin-block for the attachment of the other ends of the strings. Two, three, four, and sometimes five strings of fine brass or iron wire are grouped for each note. The dulcimer, laid upon a table or frame is struck with hammers, the heads of which are clothed on either side with hard and soft leather to produce the forte and piano effects. The tone, harsh in the loud playing, is always confused, as there is no damping contrivance to stop the continuance of the sounds when not required. This effect is well imitated in various places in Schuberti’s ‘Divertissement Hongrois.’ The compass of two or three octaves, from C or D in the base chief, has always been diatonic in England, but became chromatic in Germany before the end of the 18th century. As in most medieval musical instruments ornamentation was freely used on the soundboard, and on the outer case when one existed. The dulcimer and psaltery appear to have come to us from the East, it may be through the Crusades, for the dulcimer has been known for ages in Persia and Arabia, and also in the Caucasus, under the name of ‘santir.’ Its European use is now limited to the semi-oriental gypsy bands in Hungary and Transylvania. The Magyar name is ‘cimbélom.’ Mr. Carl Engel (‘Descriptive Catalogue,’ 1874) points out the remarkable resemblance between an Italian
DULCIMER.

DULCIMER. In South Kensington Museum of the 17th century and a modern Georgian santir; and refers to the use by the translators of the English Bible of the word ‘dulcimer’ as well as of the names of other instruments common in the Elizabethan epoch, to represent Hebrew musical instruments about which we have no sure knowledge. Pantaleon Hebenstreit of Eiselen, a distinguished violin-player, became about 1697 a virtuoso upon the dulcimer, which he quadrupled in dimensions and had constructed as a double hackenbrett with two soundboards, each with its scale of strings—on the one side overspun caturg, on the other, wire. There were 185 strings in all, costing 100 thalers a year to keep in order. With this powerful chromatic instrument, demanding herculean force to play, Hebenstreit travelled to Paris in 1705, where Louis XIV baptised it with his name, Pantaleon. Kühnau (in Mattheson’s ‘Critica Musicarum,’ Dec. 8, 1717) praises the instrument and its prerogative over harpsichords and clavichords in the properties it possessed of piano and forte. It was this, according to Schröter’s account, that led him to ponder over a keyed instrument to do the like, and to his notion of a pianoforte. [See Cembalo, Harpsichord, Pianoforte, Psaltery, Schroeter.]

DULCINKEN, MADAME LOUISE, a great pianoforte-player, younger sister of Ferdinand David, born at Hamburg, March 20, 1811. She was the pupil of Grund, and made her appearance in public at Hamburg as early as her 10th year. In 1823 she played at Berlin, and in 25 with her brother at Leipzig, always with the greatest success. In 1828 she married, and left Germany for London, where she resided for the rest of her life. Her first public appearance here was at one of Mr. Ella’s soirées in 1829. At the Philharmonic she played a concerto of Herz’s on March 1, 1830, and thenceforward was one of the most prominent features in the music of London. She was an executive pianist of the first order, with remarkable brilliancy of finger. Her intelligence and general capability were very great. She spoke four languages, and was au fait in the literature of Germany, France, Italy, and England. In teaching she was extraordinarily successful, and for her time no teacher could boast so large a number of pupils, at the head of whom was Queen Victoria. In fact she overtook her strength, and died after a short and severe illness April 12, 1850.

DUNI, EUGENO ROMAALDO, the founder of opéra comique in France; born at Matera, Naples, Feb. 9, 1780; brought up from his 10th year under Durante at the Conservatorio dei poveri di Gesù Cristo at Naples. His life was a varied one. At Rome he competed with Pergolesi, and his opera of ‘Nerone’ was successful, while Pergolesi’s ‘Olimpia’ was dammed. This shows how early and how strong was Duni’s gift of melody; for ‘Olimpia’ is Pergolesi’s capo d’opera. A political mission to Vienna gave him the chance of producing his music there. Returning to Naples he wrote ‘Artaserse’ for San Carlo, with great applause. He then visited Venice, Paris, and London. In London his health failed, and he was driven to Holland to consult the great Boerhaave. Boerhaave cured him, but in returning to Naples he was attacked by brigands, and the fright undid all that the physician had done, and made him a permanent invalid. In 1755 he was called to Parma, as music-master to the Duke’s daughter. The court was French, and here at last Duni found his place in life. His first attempt was on Favart’s ‘Ninette à la Cour,’ and it was thoroughly successful. France was evidently his field. To Paris in 1757 he went, and made his début in ‘Le Peintre amoureux’; and there he remained till his death, which took place June 11, 1775, after he had delighted the public with 18 pieces, full of gaiety and tune. Those in fact are his characteristics. His orchestration is poor, he is often weak in dramatic expression, but he is always charming and always melodious. His pen was taken up by Monsigny, and the Opéra Comique was established.

DUODRAMA. A kind of melodrama, of which Mozart speaks with enthusiasm and at some length in letters to his father from Mannheim and Kaisersheim in the end of 1778. The name would indicate a piece for two performers; and those which he heard—Benda’s ‘Medea’ and ‘Ariadne auf Naxos’—and that which he contemplated writing himself—‘Semiramis’—appear to have been pieces in which spoken dialogue was accompanied by the orchestra, as in Mendelssohn’s ‘Midsummer Night’s Dream’ and other pieces, and those called ‘Melodram.’ ‘Not a note is sung,’ says he, ‘only spoken; in fact it is a recitative with instruments, only the actor speaks instead of singing’ (Letter 120). There is no trace of ‘Semiramis’ having been composed, but Mozart acted on the idea in ‘Zaide’ (1780),

1 See the list in Fétis.
which contains two long monologues treated en melodrame. [G.]

DUPARC. See Francesina.

DUPORT. Two eminent cellists, brothers.
1. Jean Pierre—'Duport l'aîné'—born at
Paris, Nov. 27, 1741. Considered the best
pupil of Berthaut. Soon achieved a great reputa-
tion in Paris, but after 10 years of success
started on a lengthened tour through England
and Spain, and finally in 1773, on the invitation
of Frederick the Great, settled at Berlin as first
cello in the king's band, and after Frederick's
death director of Court concerts. After the
battle of Jena, his post was abolished, but he
continued to live at Berlin till his death in
1818. His publications are few and unimportant.

2. He was eclipsed by his brother, Jean Louis,
also born at Paris, Oct. 4, 1749. His fame, like
his brother's, came early, but it was the arrival
of Viotti in Paris (1782) that inspired him to
imitate the breadth and brilliancy of style of
that great violinist, and thus to become the
extraordinary player he was. About this time
he made the acquaintance of Crozal, and
at his invitation visited London for six months.
On the breaking out of the Revolution he joined
his brother in Berlin, and entered the king's
band. At that time he had the reputation of being one of the first cello players of the day,
and was much visited and sought after. He
had not the force and execution of Romberg,
but in tone and style was unrivalled. It was
either with him or his brother—probably with
him—that Beethoven played his two sonatas for
piano and cello (op. 5) at the Prussian Court in
1796. Duport returned to Paris in 1806 ruined
by the war. Though his playing was as fine
as it had ever been, he had great difficulty in
obtaining employment. He entered the service
of the ex-King of Spain at Marseilles, but
returned to Paris in 1812. At length fortune
smiled on him, he was admitted into the private
band of Marie Louise, then into that of the
Emperor, and at length as professor into the
Conservatoire. In the evening of his life he
composed a great deal, but the work by which
he will survive is his 'Essai sur le doigtier
du violoncelle et la conduite de l'archet, avec une
suite d'exercises.' A sentence from this work
exhibits the modesty of a great artist. 'Tout
le monde connait le coup d'archet martelé ou
staccato; c'est une affaire de tacte et d'adresse.
Il y a des personnes qui le saisissent tout de
suite, d'autres ne parviennent jamais à le faire
parfaitement. Je suis du nombre' (p. 171). His
cello became the property of Franchomme, who
purchased it for the enormous sum of 25,000
francs (£1,000). He died at Paris 1819. [G.]

DUPREZ, GILBERT, the 13th of the 22 children
of a Paris perfumer, was born Dec. 6, 1806.
Having completed his studies under Choron at
the Conservatoire, he made his début (Dec. 1823)
as tenor at the Odéon, where Castil-Blaze was
producing his translations of the favourite operas
of Rossini and Weber. His success was not
great, and when the theatre closed in 1828 he
went to Italy. At first he attracted little
attention; but having altered his style and
adopted the 'voix sombre' he became speedily
popular, and by his creation of the part of Edgardo
in 'Lucia di Lammermoor' (Naples, 1835) placed
himself at the head of the French dramatic
singers of his time. He was engaged for the
Grand Opéra in Paris, and made his first appear-
ance (April 17, 1837) in 'Guillaume Tell,'
when his novel and striking reading of his part
contributed greatly to the revival of the opera.
During the 12 years he remained at this theatre
he created the principal tenor part in 'Guido et
Ginevra,' 'Benvenuto Cellini,' 'Le Lac des fées,'
'Les Martyrs,' 'La Favorite,' 'La Reine de
Chypre,' 'Charles VII,' 'Dom Sebastien,' 'Othello,'
'Lucio,' and 'Jérusalem' ('a translation of 'I
Lombardi'), as well as playing the parts created
by Nourrit in 'La Muette,' 'Robert,' 'La Juive,'
'Les Huguenots,' and 'Stradella.' His physical
appearance was against him, and he had a
propensity to over-gesticulation; but in spite of
these defects he made his way as a tragedian,
and was frantically applauded for his excellent
dramatic declamation and the smoothness of his 'canto
sbianato.' His two most serious faults, the abuse
of the notes 'sombres,' so prematurely wearing
to the voice, and a habit of dragging the time,
which is as fatal to the interests of the composer
as it is to all artistic interpretation, have materially
affected French singing to the present day. Du-
prez was professor of singing at the Conservatoire
from 1843 to 1850, and in 1853 founded an
'Ecole spéciale de chant,' which still exists, and
has turned out many dramatic singers. He has
composed romances, chamber music, two masses,
and eight operas, of which the best are 'Joanita,
1848; 'La lettre au bon Dieu' (1851); and
'Jeanne d'Arc' (1857) though none of the eight
have any originality. He has also published
'L'Art du chant' (1845) and 'La Mélodie'
(1873), two Methods which deserve to be better
known. [G. C.]

DUPUIS, THOMAS SANDERS, Mus.D., was
born in England of French parents in 1733. He
received his early musical education as a chorister
of the Chapel Royal under Bernard Gates, and
subsequently became a pupil of John Travers,
then one of the organists of the Chapel Royal.
On the death of Dr. Boyce, in 79, Dupuis was
appointed his successor as organist of the Chapel
Royal. On June 26, 1790, he accumulated the
degrees of Bachelor and Doctor of Music at
Oxford. He died in 96. He published during
his lifetime several sonatas and concertos for
the pianoforte, some organ pieces, chants, anthems,
and glees. In the year after his death a selection
from his cathedral music was published under
the editorship of John Spencer, one of his pupils,
with which his portrait is prefixed. Dupuis was one
of the best organists of his time. [W. H. H.]

DURAND, alias DURANOWSKY, AUGUSTE
FRÉDÉRIC, violin-player, born at Warsaw about
1770. After having received his first instruction
on the violin from his father, a musician at the court of the king of Poland, he was sent in 1787 to Paris by a nobleman. Here he studied under Viotti, but appears not so much to have adopted the style of his master, as to have followed the bent of his own talent for the execution of technical tours de force. In 1794 and 95 he travelled in Germany and Italy, meeting everywhere with great success. Suddenly however, discarding the violin, he entered the French army, and became adjutant to one of the generals. Owing to some misconduct he was imprisoned at Milan, and had to quit the service. He then returned to the violin, and till 1814 led an unsettled life in Germany, continually changing his abode. He finally settled at Strassburg as leader of the band, and was living there in 1834. The date of his death is not known.

According to Fétis, Paganini confessed that his peculiar style and many of his most brilliant and popular effects were to a considerable degree derived from Durand, whom he had heard when young. There can be no doubt that Durand's technical skill was extraordinary and his treatment of the violin full of originality. The full development of his talent appears however to have been impeded by his irregular habits of life. It is amongst other things related that he often had no violin of his own, and would play in public on any instrument he could get hold of, however bad. His compositions—concertos, airs variés, and a number of smaller pieces for the violin—show him to have been but an indifferent musician. [P. D.]

DURANTE, Francesco, born at Frattamaggiore, Naples, March 15, 1684, a year before Handel and Bach. As a boy he entered the Conservatorio dei poveri di Gesù Cristo, passed to that of S. Onofrio under A. Scarlatti, then perhaps (though this is doubtful) to Rome for five years' study under Pitioni and Pasquini. In 1718 became head of S. Onofrio, and in 1742 relinquished that post to succeed Porpora at the Conservatorio Santa Maria di Loreto at Naples, in which position he died Aug. 13, 1755. Durante was a man of singularly reserved and uncouth manners, yet he was three times married, and his pupils were not only numerous and very distinguished, but appear to have been much attached to him. His salary at S. Maria was but to ducate a month—not £20 per annum—but out of it he contrived to add a chapel to the church of St. Antonio in his native town, with a statue of the archangel Gabriel, bearing his own name. He himself composed only for the church, but his scholars, Trastetta, Vinci, Jomelli, Piccinni, Sacchini, Guglielmi, and Paisiello, were all great opera writers, and may be said to have occupied the chief part of the operatic life in the last half of the 18th century to the exclusion of every one but Gluck and Mozart. The library of the Conservatoire at Paris contains a large collection of his works. The list, as given by Fétis, comprises 13 masses and creoles; 16 psalms; hymns, motets, litanies, etc., to the number of 28. These are written for various numbers of voices from 3 to 9, occasionally with orchestra, but usually without. The Vienna library has in addition his Lamentations of Jeremiah, a so-called 'Pastoral Mass' and other compositions.

His works have not been much published. The collections of Schlesinger, Rochlitz, and Conner, contain a few pieces—amongst them a Misericordias Domini for 8 voices, of which Hauptsman (Briefe an Hauer, ii. 112) speaks in high terms; and our own Fitzwilliam music has a Trio and a Chorus—but the bulk of them are still in MS. Durante and Leo are often spoken of as founders of the Neapolitan school, but it is difficult to understand this when they were preceded there by A. Scarlatti and Porpora. [G.]

DURASTANTI, Margherita, a prima donna at the King's Theatre in the Haymarket, during Handel's management. She was born about 1695, and, like Senesino, was engaged from the Dresden Theatre. She was a married woman when she came here, and the following quotation from the 'Evening Post' of March 7, 1721, shows that she soon acquired favour at court:—

'Last Thursday, his Majesty was pleased to send godfather and godmother to the Princess and Lady Bruce godmothers to a daughter of Mrs. DURASTANTI, chief singer in the Opera-house. The Marquis Visconti for the King, and the Lady Litchfield for the Princess.' This was so unusual a favour, that it seems likely that either she or her husband was of a noble family. She had already appeared in 1720 in company with Senesino. Her popularity continued: in 1721 she played the principal female parts in 'Muzio Scevola'; in 'Arscene'; and in 'Odio e l'amore,' probably a pasticcio. On Jan. 12, 1723, the 'Otho,' or 'Ottone,' of Handel was produced, and Durastanti played Gismonda, but a formidable rival had appeared in Cuzzoni, who sang the principal part of Theophane. Durastanti, however, continued to sing through this and the next season, in spite of Cuzzoni, and performed in 'Flavio,' 'Coriolano,' 'Erminia,' and 'Farnace.' In 1724 she played Sesto in 'Giuilio Cesare,' and appeared also in 'Calphurnia' and 'Vespasiano.' She took her leave of the public at her farewell performance in 'Calphurnia,' in a song written by Pope for her—some say at the desire of her patron the Earl of Peterborough—which ended with this couplet,

'But let old charmers yield to new; Happy soil, adieu, adieu!'

If she understood the meaning of the words, her modesty was astonishing, and sets a brilliant example to all singers. Durastanti returned to London in 1733, in company with Carastini, Scalzi, and the two sisters Negri, to help Handel to withstand the opposition of Cuzzoni and Farinelli at the other house. Against old Porpora, their composer in ordinary, Handel was strong enough to put on a bold front; not so his singers against the company commanded by Porpora. On Jan. 26, 1734, Handel produced his 'Ariodante,' on March 11 'Farnace in Festa,' and subsequently a revival of 'Ottone'; in all which Durastanti
took her part. She never appeared again in England, nor is she mentioned as having appeared subsequently on any other stage. She seems to have been an estimable and faithful artist, and her popularity in London only yielded, as it might well do, to the exceptional powers of Cuzzoni.

[D. M.]

DURCHFÜHRUNG — leading through, or taking through. Durchführung-satz is the German term for that portion of the first movement of a sonata or symphony—or other movement in similar form—which occurs between the double-bar and the reprise of the first subject; and in which the materials of the previous portion— with or without episodes, or other fresh material—are led through such changes and varieties of treatment and contrivance as the genius and knowledge of the composer may dictate. In England this portion is often called the 'fantasia,'—because the word in the German language, as 'fantasia,' suggests rather an entire movement than a part of one. Perhaps 'development' or 'working out' would be a better term. [FORM.]

D'URFEY, THOMAS, the son of a French Huguenot father, who fled from Rochelle before the siege in 1628 and settled at Exeter, was born (as is supposed, of an English mother) in Exeter about 1649. He was educated for the law, but abandoned that profession for poetry and the drama. Between 1676 and his death he produced upwards of thirty plays, which were at first very popular, but were in the course of a few years afterwards banished from the stage on account of their licentiousness and indecency. The songs in a few of them still survive, being preserved through having had the good fortune to be allied to the music of Henry Purcell. These are in 'A Fool's Preferrment,' 1688; 'Bussy d'Ambois,' 1691; 'The Richmond Heresess,' 1693; and the three parts of 'Don Quixote,' 1694-96. His comic opera, 'Wonders in the Sun,' 1706, was set by Giovanni Baptista Draghi. Much of his fame was owing to his songs and to the lively manner in which he himself sang them, which procured him the favour of Charles II, William III, and Queen Anne. In this he resembled Tom Moore, and like him he was particularly apt at adapting his verses to existing music. He published, between 1683 and 1685, three collections of songs written by himself, and set to music by the best composers of the period. About 1706 he collected and published, in four small volumes, a large number of songs by himself and others, many of them with the tunes prefixed, under the title of 'Wit and Mirth; or, Pills to purge Melancholy.' This he republished with variations and the addition of two more volumes in 1719-20. D'Urfey wrote several of the birth-day and New Year's odes which were set to music by Purcell and Blow, and supplied the former with the words for his fine ode known as 'The Yorkshire Feast Song.' In the latter part of his life he was reduced to great distress, from which he was relieved by the profits of a performance of his own comedy 'The Fond Husband; or, The Plotting Sisters,' which the managers of the theatre generously gave for his benefit on June 15, 1713. D'Urfey died Feb. 26, 1723, and was buried at St. James's, Piccadilly, where, against the outer south wall of the tower of the church, may be seen a tablet with the simple inscription, 'Tom D'Urfey, Dyed Feb'y 26th, 1723.' [W. H. H.]

DUSCHEK (DUSSEK), FRAZ, valued pianoforte teacher, performer, and composer, born Dec. 8, 1736, at Chotibor in Bohemia. Count von Spork had him educated in the Jesuit's seminary at Königratz, but after a fall which crippled him for life he gave up other studies and devoted himself to music. His patron sent him first to Prague and then to Vienna, where, under Wagenseil's instruction, he became an excellent pianist. On his return to Prague, he soon had numerous pupils, and exercised a powerful influence on the taste of his time. Reichardt, in his 'Briefe' (i. 116), speaks of him as one of the best pianists of that time (1773), 'who, besides his excellent reading of Bach, possesses a peculiarly pleasing and brilliant style of his own.' Among his best pupils may be numbered L. Kozeluch, Maschek, Wittassek, von Neitz, and his own wife Josephine. He was also esteemed as a composer of symphonies, quartets, trios, pianoforte concertos, sonatas, Lieder, etc., of which only a small part were published. In his compositions is reflected the gentleness of character which made him universally beloved. He was a kind-hearted man, and all artists, whether his own countrymen or foreigners, were sure of a kind reception at his house. His friendship with Mozart is well known, and it was in his villa and garden near Prague that the great composer put the finishing touches to the score of 'Don Giovanni.' In this very villa Bertramka, at Kochsirz near Prague, the present proprietor erected a bust of Mozart, which was solemnly unveiled on June 3, 1756. For further particulars of both husband and wife see Jahn's 'Mozart'; 'Jahrbuch der Tonkunst von Wien und Prag,' 1756; Cramer's 'Magazin für Musik'; and Mozart's Letters, edited by Nohl.

His wife JOSEPHINE, a celebrated singer, whose maiden name was HAMBACHER, was born at Prague 1756, and died there at an advanced age. Her husband taught her music, and she became a good pianist and composer, but above all a fine singer. Her voice was full and round, and according to Reichardt she sang with great expression, especially in recitative. She executed the most difficult bravura passages with ease, had a good portamento, and united grace and expression with force and fire. Mozart's father, however, was of a different opinion, as appears from a letter to his daughter (April 1786), whilst Schiller and Körner have recorded their unfavourable impression of her—the latter specially denying that she had expression (Schiller, 'Briefwechsel mit Körner,' i. pp. 280, 294). Mozart, from his first acquaintance with her in Salzburg in 1777, looked upon her as a true and sympathising friend, and wrote for her (Nov. 3,
DUSCHEK.

1787) at Prague the concert-aria 'Bella mia fiamma' (Köchel, No. 548). She sang at Vienna, Berlin, Weimar, Leipsic, and Dresden, where the Elector had her portrait painted life-size (1787). On her first visit with her husband to Vienna (March and April 1786), they gave no public performance, but were often invited to the houses of the aristocracy, especially to Prince Paar's, where Josephine sang with great success. They witnessed the downfall of the intrigues against the first representation of Mozart's Figaro in Vienna, and it was their partisanship and enthusiastic admiration of the work which prepared the way for its brilliant reception in Prague on Oct. 14, and that of 'Don Giovanni' on Oct. 29, 1787. Beethoven was at Prague early in 1796, and wrote his 'Ah perfido!' there; and as it was first sung by Madame Dussek on Nov. 21 of that year, we may infer that he composed it for her. On her second visit to Vienna, Madame Dussek gave a concert at the Johannshe Saal (March 29, 1797), at which she herself sang an aria by Danti and a rondo by Mozart, accompanied by Mozart's questionable friend stadler, with corno di bassetto obligato. Schuppanzigh played a violin concerto, and Beethoven a pianoforte sonata with accompaniment. Fétis's statement that she came to London in 1800 and died there, arises from a confusion with the wife of Dussek the pianist. [C. F. P.]

DUSSEK, JOHANN LUDWIG, or LADISLAW, one of the most renowned pianists and composers for the pianoforte of the latter part of the 18th and beginning of the 19th centuries, was born at Czislaw in Bohemia, Feb. 9, 1761. His father, John Joseph Dussek, a musician of considerable repute in his day, was organist and leading professor in that town, where he married the daughter of Judge Johann Stiebels, by whom he had three children, the eldest being Johann Ludwig. Although the brother, Franz Benedikt, and the sister, Veronika Rosaila, were more or less distinguished, the subject of this brief memoir is the only one of his children whose memory and works have come down to us. According to Dlabacz, there were various modes of spelling our composer's patronyme. It will be enough, however, to cite three, Duskoik, Duschek, Dussek, the last of which has long been recognised, and is unlikely henceforth to be disturbed in its prerogative, notwithstanding that the father of our English Dussek signed 'Johann Joseph Dussik.' When the son established himself in London, he altered the penultimate letter from j to c, and pronounced his name 'Duschek,' for which we have the authority of Pio Cianchettini, whose sire wedded Veronica Rosalla, already mentioned. Franz Dussek, not the least noted member of the group of artists bearing the cognomen in one or another form, was the intimate friend of Mozart. [See Duschek.]

According to Dlabacz, on the whole a far better authority than either the reticent Gerber, or Fétis, who, like Bayle, took anything he could find, no matter from what source, Johann Ludwig Dussek began to study the pianoforte in his fifth year, and the organ in his ninth, and in the capacity of organist soon gave valuable assistance to his father. From Czislaw he went to Iglau, where he was engaged as treble singer in the Minorite church, pursuing his musical studies with Father Ladislaw Spinari, and familiarizing himself with the 'humanities' at the College of Jesuits, subsequently for two years continuing the same course of instruction at Kuttenberg, where he was appointed organist of the Jesuit church. Thence he removed to Prague, where, if we may credit the naturally partial testimony of his father, he went through a course of 'philosophy,' and took the degree of 'Master.' Here Dussek cherished an earnest desire to join the Cistercian friars; but, happily, his youth was an obstacle to his admission as member of that respectable fraternity. In his straits he met with a patron — Count Manner, an artillery officer in the Austrian service, who took him to Mechlin (Malines), where he remained for some time as organist at the church of St. Rombout, and teacher of the pianoforte. Tired of Mechlin, he left for Berg-op-Zoom, again accepting the post of organist at one of the principal churches. Such a dreary spot, however, was not likely to suit one of Dussek's temperament, and he speedily went to Amsterdam, where he may be said to have laid the foundation of his after brilliant reputation as pianist and composer. It is worth remark that Dussek's last engagement as church organist was at Berg-op-Zoom; and at the same time—which more than one German critic (Professor Marx among others) has observed—that his early acquaintance with the organ had much to do with the peculiar style of not a few of the slow movements to be met with in his finest sonatas —among which may especially be cited the 'Invocation' (op. 77), his last great composition for the pianoforte—Dussek's brilliant success at Amsterdam soon obtained for him an invitation to the Hague, where he passed nearly a twelvemonth, giving lessons on the pianoforte to the children of the Stadtholder. Here he also devoted much time to composition, producing 3 concertos, and 12 sonatas for pianoforte, with accompaniments of stringed instruments, about which Craner's 'Magazin der Musik' (Hamburg) speaks in very favourable terms. From the Hague, Dussek, now twenty-two years of age, mindless of the praise that had been awarded to his early compositions, proceeded to Hamburg, obtaining further instruction from Emmanuel Bach, second son of the immortal John Sebastian. The advice and encouragement of this eminent master would seem to have exercised a salutary influence on our young musician. A year later, nevertheless, we find him at Berlin, astonishing the dilettanti of the Prussian capital with his pianoforte-playing, and also with his performances on an instrument called 'the Harmonia,' the qualities of which, in agreement with one Hessel, the soi disant inventor, he travelled through various parts of Germany to exhibit, exciting the admiration of Gerber (at Hesse-Cassel, 1785) both for

1 Fancy the afterwards bon-companion of Prince Louis Ferdinand.
the instrument and the performer. From Berlin it was the intention of Dussek to go to St. Petersburg; but here there is no credible account of his doings, except that he is believed to have accepted an advantageous offer from a certain Polish prince, Radziwill, at whose estate in Lithuania he remained more than a year, unheard of. We next meet with him at Paris (towards the end of 1786) playing before, and enchanting with his play, the lovely and unfortunate Marie Antoinette, whose seductive offers, however, could not dissuade Dussek from carrying out a long-considered project of visiting his brother, Franz Benesiik, in Italy. At Milan he earned new laurels as a performer, both on the pianoforte and harmines; but the volatile Italians showed a preference for the inferior instrument, which was by no means flattering to the gifted Bohemian. Returning to Paris in 1788, the threatening circumstances of the time caused him to quit the French capital almost immediately. His next residence was London, where he remained for a longer period (nearly twelve years) than at any other city he had temporarily chosen as a residence. In London his genius was rapidly appreciated; he became a fashionable teacher, the centre of a circle of eminent musicians, and looked up to by them all. One of the greatest compliments ever paid to Dussek, who would boast of so many, was contained in a letter addressed from London to the elder Dussek (Dusick) at Casalau, by the celebrated Joseph Haydn, then composing his imperishable symphonies for Solomon.

'Most worthy friend,—I thank you from my heart that, in your last letter to your dear son, you have also remembered me. I therefore double my compliments in return, and consider myself fortunate in being able to assure you, that you have one of the most upright, moral, and, in music, most eminent of men, for a son. I love him just as you do, for he fully deserves it. Give him, then, daily, a father's blessing, and thus will he be ever fortunate, which I heartily wish him to be, for his remarkable talents. I am, with all respect, your most sincere friend, Joseph Haydn.'

'London, Feb. 26, 1792.'

This from a man like Haydn meant something out of the common way. In 1792 Dussek married the daughter of Domenico Corri. 'This lady,' says Gerber, 'was principal singer at the London professional concerts; he [Dussek] being concerto-player to the same, and playing in a style of incredible perfection.' [See DUSSEK, SOPHIA.] The marriage brought about a joint speculation between Dussek and Corri, and the establishment of a music shop, which, in consequence of Dussek's habitual negligence and utter unassiduity with business habits, ended in failure, the upshot being that, in 1800, in order to elude his uncompromising creditors, he was obliged to leave the country surreptitiously, and once more seek shelter in his favourite

Hamburg. The story of the Northern Princess who, at this juncture, became enamoured of our pianist, carrying him off to a retreat near the Danish frontier, where they lived together in seclusion for nearly two years, may be discarded as a myth. At all events we find in a correspondence to the 'Leipziger Musik-Zeitung' accounts of various concerts given by Dussek at Hamburg, in 1800 and 1801, with references to Steibelt, Himmel, Weeß, and our own great singer, John Brahman, who, with Madame Storace, sang at Ottensen on the Elbe, in a concert at which Giarnowich was violinist, and Dussek pianist. In 1803, after appearing at the Concert Hall in Prague, where he played his concerto in G minor, Dussek, accompanied by his sister, Madame Gianchetti, paid a visit at Casalau to his father, whom he had not seen for more than a quarter of a century, and, after passing some months under the paternal domicile, resumed his professional wanderings, until in 1803, at Magdeburg, he became acquainted with Prince Louis Ferdinand of Prussia, with whom he lived for three years on terms of affectionate intimacy, to whom he gave advice both in pianoforte playing and composition, and whose premature death, on the field of Seafold, was the origin of the 'Elegie Harmonique' (op. 61), not only one of the finest works of Dussek, but one of the most pathetic and beautiful in the repertory of the piano. This was another turning-point in the somewhat tortuous life of our composer, and, for better or for worse, materially influenced his character. Much that is interesting with regard to the intercourse between Dussek and the Prince may be read in the 'Leipziger Musik-Zeitung' (1807); in Ludwig Rellstab's 'Reminiscences of Berlin Music,' in the 'Berlin Musik-Zeitung' (1810); and, most characteristic of all, in Spohr's 'Selbst-Biographia.'

In a review of the Elegy the 'Leipziger Musik-Zeitung' (1807, p. 741) says, among other things:—

'During the last few years of his (the Prince's) life, when he turned again to music with all the ardour of enthusiasm, the virtuoso Dussek arrived. He had studied music in his youth, and never wholly neglected it, but his soul was now for the first time open to its hidden worth, to its higher and more spiritual value. He had need of a man who could aid him to express fully and correctly what he wished to convey through musical tones, who could enter into the spirit of the artist and assist to afford him intellectual nourishment in productions suited to his taste and feelings, and lastly, away from their common art-study, prove an amiable and congenial companion. This he found in Dussek, who to the Prince was all in all, just as the Prince, in return, was to Dussek.'

Rellstab, in his 'Reminiscences,' gives an interesting account of the pianoforte 'virtuoses' who flourished at that period in Berlin, according the highest place among them to Himmel, Prince Louis Ferdinand, and Dussek, placing Dussek, however, in the first rank:—

'The favourite player at Berlin, and decidedly first in purity, elegance, and delicacy of style, was Himmel, a man formed by nature to be the central point in musical salon . . . ; but far greater, and emphatically so, was Dussek, both as "virtuoso" and composer, whose eminently technical resources afforded a much wider basis for varied development, and who, having accomplished a vast deal more for the art of the pianoforte than most of his contemporaries, occupied a position in the musical art of Berlin, which is vividly felt even now (1850), and obtained

1 Not Chopin's early patron, but probably his father.
a corresponding European fame, justly claims a place in the history of the most universal of instruments, to which Himmel, despite his exceptional ability and well-earned local eminence, had no legitimate pretensions.

A lively picture of how the three boomed companions clubbed together follows the above:—

"Louis Ferdinand played a great deal with Dussek several compositions for two pianofortes, and others for four hands on one pianoforte, deriving their origin from the relations between the distinguished "virtuosi" and his gifted patron. Himmel was often their companion, and he and Dussek were the Prince's favourite associates at the wine cup. What influence Dussek may have exerted upon the character of the Prince at these convivialities it is hard to say; but Himmel possessed that lively, joyous, good-natured, amiable view of life which as a rule is most welcome when intellectual brothers in art make the full glasses ring. Thus the Prince, Himmel, and Dussek, formed a musical triad, each exciting, enlivening, and fortifying the others, Dussek, in his artistic capacity, taking the foremost place."

Spohr (Selbstbiog. i. 85), describing a soirée at the Prince's, in the course of a visit to Berlin early in 1805, remarks:—

"Here I also met an old Hamburg acquaintance, the celebrated pianoforte virtuoso and composer Dussek, now the Prince's teacher and residing with him. The music began with a pianoforte quartet, which was played by Dussek in real artistic perfection."

In the autumn of the same year, when Prince Louis Ferdinand was at Magduburg, superintending the military manoeuvres, Spohr received, through Dussek, an invitation to be a guest and take part in the projected musical entertainments. His description of the early morning rehearsals is highly diverting—the end being raciest of all (Selbsth. i. 94). When the Prince was about to leave, Spohr was dismissed with hearty thanks, Dussek informing the young violinist that "Son Altesse Royale" had intended to make him a present, but his finances were at so low an ebb that he was compelled to defer it to some future occasion. "Such occasion, however," observes Spohr, "never arrived, the Prince next year meeting his fate at the battle of Staffeld."

[LOUIS FERDINAND, PRINCE.]

The death of Prince Louis Ferdinand threw Dussek once more upon his own unaided resources. It says no little for him that before thinking about future prospects he should have devoted time to composing the 'Harmonic Elegy' already mentioned, a fitting tribute to the memory of that royal friend whose close relations with him fully justified his giving expression to sentiments of deepest regret through the medium of the art they both so dearly loved. Nor could anything be more touching and appropriate than the few words which Dussek inscribed on the title-page of his sonata, 'L'auteur, qui a eu le bonheur de jouir du commerce très intime de S.A.R., ne l'a quitté qu'au moment où il a versé son précieux sang pour sa patrie.' At the same time the fact of the inscription being couched in the language of a friend whom the Prince called his, appears a little strange.

About the Prince von Ivensburg (or Ivensburg), into whose service, after the death of his illustrious patron, Dussek entered, as court and chamber musician, little is on record. A paragraph in the 'Leipzig Musik-Zeitung,' however (Sept. 2, 1807), states that 'Herr Dussek having resigned his situation with the Prince von Ivensburg, has entered the service of the Prince of Benevento (Talleyrand), and will remain henceforth in Paris.' More than two years later (Jan. 3, 1810) the same periodical published a letter from Paris in which we read: 'Herr Dussek is in the service of M. Talleyrand, Prince of Benevento. He appears to be treated in a very distinguished manner, and enjoys a respectable salary.' With this renowned diplomatist and highly accomplished gentleman Dussek resided till the last. His leisure was entirely at his own disposal. He would vouchsafe occasional instructions to favoured amateurs, such as Mlle. Charlotte (Talleyrand's adopted daughter), the Duchesses de Courland, Mlle. Betsy Ouvrard (to whom the grand sonata called 'L'Invocation' is dedicated), etc.; also now and then give a concert, at which he produced his latest works, the rest of his time being exclusively devoted to composition. The late M. Féries, who remembered well Dussek's performances at the Odéon (1808), writes:—

'The extraordinary sensation he produced was not forgotten. Until then the pianoforte had only been heard to disadvantage as a concert-instrument, but under the hands of Dussek it enjoyed all the adornments. The breadth and noble style of this artist, his method of singing on an instrument which possessed no sustained sounds, the tenderness, delicacy, and brilliancy of his play, in short, procured him a triumph of which there had been no previous example.'

With the Prince of Benevento, his latest patron, Dussek continued to reside until his last illness compelled him to seek another retreat, at St. Germain en Laye, where (not in Paris, as Féries and others have stated) he died on March 20, 1812. A letter from Paris, dated March 21, 1812, and printed in the 'Leipzig Musik-Zeitung' (xiv. 258), thus refers to the event:—

'We have just heard news which must grieve every friend of music.... Yesterday morning, at six o'clock, in the full vigour of manhood [in his 62nd year], he closed a career, despite ill-health, due to increasing age in culture, development, and strength of his great talents, and his astonishing industry, had not yet reached its culminating point. His life had been useful for some months, but was confined to bed only two days. His disease was gout, which suddenly attacked his brain, and in an hour or two carried him off. It was a blessing to his energetic spirit, his warmly sensitive and affectionate nature, that he could breathe his last in the arms of a faithful friend and countryperson like your noble Neukomm.'

In a very interesting series of papers about the Dusseks generally, which Mr. Alexander W. Thayer, to whom the lovers of Beethoven are so deeply indebted for his indefatigable researches into the actual life of that great composer, published simultaneously (1861) in Dwight's 'Journal of Music' (Boston, U.S.) and the 'Musical World' (London), we find quoted a general estimate, of which a more condensed abstract may suffice to convey some notion of what Dussek's contemporaries thought of him:—

'Dussek, the man of genius, the richly endowed and solidly trained artist was known, honoured, and loved by the entire musical world. . . . He has done nearly as much as Haydn, and probably not less than Mozart, to make German music known and respected in other lands.'
DUSSEK.

His earlier residence in London, and his later in Paris, have in this respect exercised great influence. As a "virtuoso" he is unanimously placed in the very foremost rank. In taste and execution, in a mastery of the greatest difficulties, it would be hard to find a pianist who surpassed him; in neatness and precision possibly one (John Crramer of London); in soul, expression, and delicacy, certainly none. As a man he was good and noble, just, impartial, and kindly, a real friend, sympathetic with all that was true and beautiful in those he knew. His failings, inseparable from an imagination so powerful and a sensibility so extreme, may readily be excused. However, through his strong mind and frequent intimate relations with the most distinguished persons, he had gained a vast amount of general culture, and a thoroughly polished manner. Such fact, combined with knowledge of the world, as fitted him for the highest circles of society; while his joyous disposition, liberal sentiments, and freedom from prejudice of any kind, endeared him especially to musicians.

This also came from Paris, and was printed in the same Leipzig periodical.

With regard to Dussek's style of playing, about which we of course can only gather a notion from the works he has left, many contemporaneous opinions could be cited, but perhaps not one more suggestive than that which J. W. Tomaschek, himself a pianist and composer of eminence, gives in his "Autobiography and Reminiscences".

"In the year 1808, my countryman, Dussek, came to Prague, and I very soon became acquainted with him. He gave a concert to a very large audience, at which he introduced his own Military Concerto. After the few opening measures, when the solo started, the hall was crowded. Ah! There was, in fact, something magical about the way in which Dussek carried all his charming grace of manner, though his wonderful touch, exerted from the instrument delicious and at the same time emphatic tones. His fingers were like a company of ten singers, endowed with the most exact, expressive powers, and able to produce with the utmost perfection whatever their director could require. I never saw the Prague public so enchanted as they were on this occasion by Dussek's splendid playing. His fine declamatory style, especially in contabile phrases, stands as the ideal for every artistic performance—something which no other pianist since has reached... Dussek was the first who placed his instrument sideways upon the platform, in which our pianoforte heroes now all follow him, though they may have no very interesting profile to exhibit."

That more than any contemporary special writer for the pianoforte, Dussek, through his strong and attractive individuality, impressed the age in which he lived, is unquestionable. Here, be it understood, no reference is intended to many-sided geniuses like Mozart and Beethoven, but simply to those who, making the pianoforte their particular study, have effected so much towards the influence, so materially aided the progress, and played so important a part in the history of the most universal of instruments—the musician's orchestra when in the solitude of his chamber. In the front rank of these deservedly stands Dussek. It has been urged that to Clementi, Dussek's predecessor and survivor, who has held the title of 'Father of the Pianoforte,' just as Haydn holds that of 'Father of the Symphony,' belongs the legitimate right of stamping with his name the epoch during which he flourished. To this it may be answered that, granting Clementi to have been a musician of more solid acquirement than Dussek, as the 'Gratios ad Parnassum' is enough to prove, he was inferior in invention and ideality, to say nothing about fascination of style. Unhappily for himself and his art, Dussek, whose unquestionable genius should have raised him to the highest eminence, was of a somewhat lax and careless temperament. His facility was so great that he could dispense with more than half the application requisite to form a thoroughly skilled musician; while Clementi, a model student and systematic economiser of time, though less bountifully gifted than his renowned contemporary, possessed habits of industry which served him in excellent stead.

In a conversation with the writer of this article, Mendelssohn once said, 'Dussek was a prodigy.' The meaning of this epigrammatic criticism is not far to seek. Dussek, who failed for want of striving to make the most of the endowments of nature, might have become a musician of the highest acquirements had the case been otherwise. He squandered away melody as a spendthrift would squander away money, not pausing for an instant to consider its value if put out to interest. It is said to reflect upon the number of genuine melodies that, coming so readily from his pen, were left, as Sancho Panza would say, 'bare as they were born,' though almost every one of them might have been developed into something beautiful and lasting. When, however, he applied himself to his task with earnest devotion, as happened not unfrequently from the earliest to the latest period of his career, Dussek was welcomed like the Prodigal Son. A legitimate child of Art, his mission was that of a true disciple—for which capacity he was eminently fitted, as the many compositions he has left suffice to prove.

Dussek came into the world five years later than Mozart, and nine years earlier than Beethoven, quitting it while the greatest of poet-musicians was at the zenith of his glory, just at the time when the fifth and last pianoforte concerto, the incomparable 'E flat' (written a year previously), was first introduced to the public. Between 1761 and 1812, the interval which spanned the existence of Dussek, a galaxy of famous pianists shone with varied lustre. To take them in chronological order, there were Clementi, Mozart, Hummel, Steibelt, 1 Woelfl, Beethoven, Cramer, Tomaschek, Hummel, Weber, J. Field ('Russian Field,' as he was called), and last, not least, Moscheles, who, though scarcely twenty years of age when Dussek died, had already made for himself a name. To these might be added Meyerbeer, who, as a youth, before he devoted himself exclusively to the composition of operas, was a rival even to Hummel in his 2 prime, and our own 3 G. F. Pinto (the Sterndale Bennett of his day), who died at the early age of 21. Among these it is no small thing to say that Dussek shone conspicuous. He never enjoyed the opportunity of encountering Mozart, as Clementi did, nor the equally important one of measuring his powers with those of Beethoven, as fell to Steibelt and Woelfl—to the absolute satisfaction of neither; but before the rest he was, as Schumann

1 Who died two years later than Dussek.
2 But none of whose compositions for the Pianoforte have unfortunately been published, though many exist in Ms.
3 About whom John Cramer used to speak with enthusiasm.
DUSSEK.

says of Schubert, 'a man'—who had cause to fear no rival.

There is much confusion in the Opus-numbers of Dussek's works, owing to the different systems adopted by French, English, and German publishers. The following is an imperfect attempt at a complete list:

1. 3 Sonatas, F. F. F., Bb, G, C min.
2. Grand Sonata, P. F., F., C, G.
3. Trio, Flute and Violin.
4. Sonata, F. F., Bb, C, G.
5. Bb, G.
6. 3 Sonatas, F., F., Bb, G.
7. 7 Sonatas, F., F., Bb, G.
8. 4 Sonatas, F., F., Bb, G.
9. 3 Sonatas, F., F., Bb, G.
10. 3 Sonatas, F., F., Bb, G.
11. 3 Sonatas, F., F., Bb, G.
12. 3 Sonatas, F., F., Bb, G.
13. 3 Sonatas, F., F., Bb, G.
14. 3 Sonatas, F., F., Bb, G.
15. 3 Sonatas, F., F., Bb, G.
16. 3 Sonatas, F., F., Bb, G.
17. 3 Sonatas, F., F., Bb, G.
18. 3 Sonatas, F., F., Bb, G.
19. 3 Sonatas, F., F., Bb, G.
20. 3 Sonatas, F., F., Bb, G.
21. 3 Sonatas, F., F., Bb, G.
22. 3 Sonatas, F., F., Bb, G.
23. 3 Sonatas, F., F., Bb, G.
24. 3 Sonatas, F., F., Bb, G.
25. 3 Sonatas, F., F., Bb, G.
26. 3 Sonatas, F., F., Bb, G.
27. 3 Sonatas, F., F., Bb, G.
28. 3 Sonatas, F., F., Bb, G.
29. 3 Sonatas, F., F., Bb, G.
30. 3 Sonatas, F., F., Bb, G.
31. 3 Sonatas, F., F., Bb, G.
32. 3 Sonatas, F., F., Bb, G.
33. 3 Sonatas, F., F., Bb, G.
34. 3 Sonatas, F., F., Bb, G.
35. 3 Sonatas, F., F., Bb, G.
36. 3 Sonatas, F., F., Bb, G.
37. 3 Sonatas, F., F., Bb, G.
38. 3 Sonatas, F., F., Bb, G.
39. 3 Sonatas, F., F., Bb, G.
40. 3 Sonatas, F., F., Bb, G.
41. 3 Sonatas, F., F., Bb, G.
42. 3 Sonatas, F., F., Bb, G.
43. 3 Sonatas, F., F., Bb, G.
44. 3 Sonatas, F., F., Bb, G.
45. 3 Sonatas, F., F., Bb, G.
46. 3 Sonatas, F., F., Bb, G.
47. 3 Sonatas, F., F., Bb, G.
48. 3 Sonatas, F., F., Bb, G.
49. 3 Sonatas, F., F., Bb, G.
50. 3 Sonatas, F., F., Bb, G.
51. 3 Sonatas, F., F., Bb, G.
52. 3 Sonatas, F., F., Bb, G.
53. 3 Sonatas, F., F., Bb, G.
54. 3 Sonatas, F., F., Bb, G.
55. 3 Sonatas, F., F., Bb, G.
56. 3 Sonatas, F., F., Bb, G.
57. 3 Sonatas, F., F., Bb, G.
58. 3 Sonatas, F., F., Bb, G.
59. 3 Sonatas, F., F., Bb, G.
60. 3 Sonatas, F., F., Bb, G.
61. 3 Sonatas, F., F., Bb, G.
62. 3 Sonatas, F., F., Bb, G.
63. 3 Sonatas, F., F., Bb, G.
64. 3 Sonatas, F., F., Bb, G.
65. 3 Sonatas, F., F., Bb, G.
66. 3 Sonatas, F., F., Bb, G.
67. 3 Sonatas, F., F., Bb, G.
68. 3 Sonatas, F., F., Bb, G.
69. 3 Sonatas, F., F., Bb, G.
70. 3 Sonatas, F., F., Bb, G.
71. 3 Sonatas, F., F., Bb, G.
72. 3 Sonatas, F., F., Bb, G.
73. 3 Sonatas, F., F., Bb, G.
74. 3 Sonatas, F., F., Bb, G.
75. 3 Sonatas, F., F., Bb, G.
76. 3 Sonatas, F., F., Bb, G.
77. 3 Sonatas, F., F., Bb, G.
78. 3 Sonatas, F., F., Bb, G.
79. 3 Sonatas, F., F., Bb, G.
80. 3 Sonatas, F., F., Bb, G.
81. 3 Sonatas, F., F., Bb, G.
82. 3 Sonatas, F., F., Bb, G.
83. 3 Sonatas, F., F., Bb, G.
84. 3 Sonatas, F., F., Bb, G.
85. 3 Sonatas, F., F., Bb, G.
86. 3 Sonatas, F., F., Bb, G.
87. 3 Sonatas, F., F., Bb, G.
88. 3 Sonatas, F., F., Bb, G.
89. 3 Sonatas, F., F., Bb, G.
90. 3 Sonatas, F., F., Bb, G.
91. 3 Sonatas, F., F., Bb, G.
92. 3 Sonatas, F., F., Bb, G.
93. 3 Sonatas, F., F., Bb, G.
94. 3 Sonatas, F., F., Bb, G.
95. 3 Sonatas, F., F., Bb, G.
96. 3 Sonatas, F., F., Bb, G.
97. 3 Sonatas, F., F., Bb, G.
98. 3 Sonatas, F., F., Bb, G.
99. 3 Sonatas, F., F., Bb, G.
100. 3 Sonatas, F., F., Bb, G.
101. 3 Sonatas, F., F., Bb, G.
102. 3 Sonatas, F., F., Bb, G.
103. 3 Sonatas, F., F., Bb, G.
104. 3 Sonatas, F., F., Bb, G.
and anthems, and a large number of hymn tunes, many of which have met with very general acceptance. Among these may be noted ‘Nearer my God to Thee,’ ‘The day is past and over,’ and ‘Jesu, lover of my soul.’ He was joint editor of ‘Hymns, Ancient and Modern.’ Beyond his musical repute he was much esteemed as a theologian. [W. H. H.]

DYNE, JOHN, a distinguished alto singer and glee composer. One of his glees, ‘Fill the bowl,’ obtained a prize from the Catch Club in 1768. In 1772 he was appointed a Gentleman of the Chapel Royal, and in 1779 a lay vicar of Westminster Abbey. He was one of the principal singers at the commemoration of Handel in 1784. A pistol-shot, by his own hand, terminated his existence Oct. 30, 1788. [W. H. H.]

DWIGHT’S JOURNAL OF MUSIC, Boston, U. S. A., 4to, fortnightly, was founded in 1852 by John S Dwight, whose name it bears, and is still edited by him. Mr. Dwight was one of the since somewhat famous little community at Brook Farm who did much in many ways to advance the interests of literature and philanthropy. Hawthorne, for a time, was one of them, and the names of others have since become famous. Mr. Dwight, though not an educated musician, was musical editor of the ‘Harbinger,’ a periodical published at Brook Farm, and a frequent contributor of musical critiques to the daily papers of Boston, where he did good service in directing attention to what was noblest and best in music.

For six years he was editor, publisher, and proprietor of the Journal, the publication of which was then assumed by Oliver Ditson & Co. During the war it was changed from a weekly to a fortnightly paper. Its object was to advocate music and musical culture in the highest sense, and to give honest and impartial criticisms, a purpose to which it has been always steadily devoted. As its title indicates, it is ‘Dwight’s Journal,’ expressing the convictions of its editor without fear or favour; and this course has gained for it the respect of many who differ widely from the opinions which it advocates. Mr. Dwight has been sole editor up to this day, although the volumes contain valuable contributions from other pens. Among the most noticeable are those from A. W. Thayer, the biographer of Beethoven, who has written for it many valuable biographical and historical articles, as well as musical tales. Especially noteworthy are his articles on some of the contemporaries of Beethoven—Salieri, Grynowitz, Gelinek, Hummel, and others. Prof. Ritter and his wife (now of the Vassar Female College), W. S. B. Mathews of Chicago, and C. C. Perkins of Boston, have also contributed frequent and valuable articles to its columns. Its republications of the best articles in European musical journals, and translations from valuable works, with its excellent foreign correspondence and well selected pages of classical music, make these volumes a valuable book of reference during the whole period of its existence, during which over 100 musical papers have arisen—and in great part disappeared—in the United States. Whatever is good and noble and earnest in art has never failed to find in ‘Dwight’s Journal of Music’ an enthusiastic advocate and staunch defender. And hence, while other journals have disappeared with the fashions of the day, it still pursues its course, in form and spirit the same that it was a quarter of a century ago. [H. W.]

E.

The third note of the scale of C. In French and in solfeggi, Mi. The first string, or chanterelle, of the violin, and the 4th of the double bass, are tuned to E in their respective octaves. The scale of E major has 4 sharps in the signature; that of E minor 1 sharp; and C# and G# are their relatives, minor and major. E is the key note of the ‘Phrygian’ mode in Gregorian music, and C (not B) its Dominant there.

E is not a frequent key in orchestral compositions—probably from difficulties connected with the Clarinets, Horns, and Trumpets. At any rate neither Haydn, Mozart, Beethoven, Mendelssohn, Spohr, Schubert, or Schumann, have written a symphony in E major. The overtures to Fidelio and Midsummer Night’s Dream, Doud Journées and Tammäuser, are exceptions among overtures. In chamber music it is more often employed. Mozart has a fine pianoforte trio in it; Beethoven uses it in 2 sonatas (op. 14, No. 1; 109). Bach’s fugue in E (Bk. 2) is perhaps the most widely known of all the immortal 48.

E flat (Fr. mi bémol; Germ. Es) on the other hand has a splendid progeny, of which we need only mention the Eroica Symphony, the Septet, the 5th Pianoquarte Concerto, 2 solo sonatas, op. 31, No. 3, and ‘Les Adieux,’ 2 string quartets, a pianoforte trio, and the ‘Liederkreis, among Beethoven’s works alone; the St. Ann’s fugue by Bach, with the noble Prelude which may or may not belong to it: Mozart’s well known Symphony; 2 of Haydn’s ‘Salomon Set,’ etc., etc. [G.]

EAGER, John, born 1782 at Norwich, where his father was a musical instrument maker and organ builder. Having learned from his father the rudiments of music, he was at twelve years old taken under the care of the Duke of Dorset, an amateur violinist, who carried him to his seat at Knole, where free access to the library enabled him to repair the defects of his early education. His patron dying he established himself at Yarmouth as a violinist and teacher.
of music. On the appearance of Logier's system of instruction Eager became one of its warmest advocates. He was appointed organist to the corporation of Yarmouth. He passed the remainder of his life in teaching. He is said to have possessed a knowledge of, and to have taught, nearly every instrument then in use. His compositions consist of a pianoforte sonata and a collection of songs. [W. H. H.]

EASTCOTT, REV. RICHARD, a resident in Exeter, was author of 'Sketches of the Origin, Progress and Effects of Music, with an Account of the Ancient Bards and Minstrels,' a well-executed compilation published at Bath in 1793, and which was so favourably received as to call forth a second edition in the same year. He also published some pianoforte sonatas. He died towards the end of 1838, being then chaplain of Livery Dale, Devonshire. He was the early patron of John Davy. [W. H. H.]

EBDON, THOMAS, born at Durham in 1738. It is presumed from the circumstance of the name and date 'T. Ebdon 1755,' still remaining, carved on the oak screen which divides the choir of Durham cathedral from one of the aisles, that he received his early musical education in that church as a chorister, and probably, after the breaking of his voice, as an articulated pupil of the organist. In 1763 he was appointed organist of Durham Cathedral, which office he held until his death, 48 years afterwards, on Sept. 23, 1811. Ebdon's published compositions comprise two harpsichord sonatas (about 1780), a collection of glees; and two volumes of cathedral music, the first of which appeared in 1790, and the second in 1810. Besides these he left many anthems etc., in MS., the last of them being date June 8, 1811. [W. H. H.]

EBERARDI, TERESA, a singer of mezzo-carattere parts in London, 1761. Among other rôles she sang that of Lena in Galuppi's opera 'Il Filosofo di Campagna,' adapted for the King's Theatre by Cocomi. [J. M.]

EBEL, ANTON, distinguished pianist and composer. born June 13, 1766, at Vienna. He was intended by his father, a well-to-do government employee, for the law, but his love for music broke through all obstacles, and started him as a pianist. His theoretical studies were slight, but his first opera, 'La Marchande de Modes' (Leopoldstadt 1797), is said to have pleased Gluck so much, that he advised the young composer to devote himself seriously to music. His friendship with Mozart was also of great service to him. His melodrama 'Pyramus and Thiabe' was produced at the court theatre in 1794, on his return from his first professional tour; but he soon undertook another in Germany, in company with Mozart's widow and Lange the singer. In 1796 he was appointed Capellmeister at St. Peters burg, where he remained for 5 years gre tly esteemed. On his return to Vienna he produced at the court theatre (May 1801) a romantic opera 'Die Königin der schwarzen Inseln,' which was however only a partial su ccess. In 1823 he went again to Russia, and in 1856 travelled to all the principal towns of Germany, where the brilliancy and fire of his playing were universally acknowledged. He returned to Vienna and died suddenly March 11, 1857. His compositions were long favourites. The following are among the most remarkable:—

'Grand Sonata,' op. 27, dedicated to Cherubini; 'Gr. Sonate caractéristique' in F minor, op. 12, dedicated to Hahn (Petere); 'Variations sur un thème Russe,' for Cello, op. 17; 3 Pianoforte Trios, op. 8, dedicated to Grand Duke Pavlovitch; Trio for Pianoforte, Clarinet, and Cello, op. 36 (Kühnel); Pianoforte Quartet in C major, op. 18, dedicated to Maria Theresa; ditto in G minor, op. 25 (Vienna); Clavier Quartet, op. 78 (Vienna); Pianoforte Concertos in C major, op. 33, and Eb major, op. 40 (Kühnel); and 3 String Quartets, op. 13, dedicated to Emperor Alexander I (Vienna, Mollo). He also published many smaller pianoforte pieces for 2 and 4 hands, and 6 Lieder, op. 4 (Hamburg); a Cantata with orchestral accompaniment, 'La gioia d'immenso,' op. 11, also arranged for pianoforte; and a Symphony in D minor (Breitkopf & Härtel). He left in MS. symphonies, serenades, concertos for 1 and 2 pianofortes, several pieces of chamber-music, and unpublished operas, besides the three already mentioned. Though he has now entirely vanished from the concert-room, Eberl must in his day have been a very considerable person. It is well known that several of his pianoforte works were long published, and popular, as Mozart's,—viz. the fine Sonata in C minor (finally published with his own name as op. 1 by Artaria); Variations on the theme 'Zu Steffen sprach'; Variations on 'Freundin sahner Herzenstriebe'; and on 'Andantino von Dittersdorf' (see Köchel's Mozart, anh. 287, 8). His Symphony in Eb would actually appear to have been played in the same programme with Beethoven's 'Eroica' (A. M. Zeitung, viii. 321); and the two are contrasted by the reviewer to the distinct disadvantage of the latter! [C. F. P.]

EBERLIN, JOHANN ERNST, court-organist and 'Truchsess' (or carver) to the Prince-Archbishop of Salzburg, and an eminent German composer of sacred music. His name, place and date of birth and death are here for the first time correctly given from official records. His original name was Eberle, which was turned, according to a custom then common with women, into Eberlin, and as such he retained it. He was the son of the land-steward to Baron von Stain, and was born March 27, 1716 (not 1716) at Jettingen (not Jettenbach), a market-village near Günzburg, in the Upper-Danube district of Bavaria. He died at Salzburg, June 21, 1762 (not 1776). He was court-organist to Archbishop Franz Anton, Graf von Harrach, as early as the time of his marriage, which took place in 1727 at Seekirchen on the Wallersee, near Salzburg. Of his early life or musical education nothing is known, and the number even of his many valuable contrapuntal works can only be imperfectly ascertained. Among the best known
are 'IX Toccate e fughe per l'organo' (Lottier, Augsburg 1747), dedicated to Archbishop Jacob Ernst. They passed through many editions, and are also printed in Commer’s 'Musica sacra,' vol. i. Nägeli's edition contains only the nine fugues. The last fugue, in E minor, was published (in Eb minor) as Bach's in Gripenkerl's edition of Bach's works (Book ix, No. 13), an error which has since been corrected. Haffner published sonatas in G and A, and Schott 2 motets, 'Qui confidunt' and 'Sicut mater consolatrix,' for 3 voices, with clavier accompaniment. To Leopold Mozart's collection for the Hornwerk at Hohen-Salzburg, 'Der Morgen und der Abend' (Lottier 1759), Eberlin also contributed 5 pieces. Pétis, in his 'Biographie universelle,' gives a list of his church compositions in MS. in the libraries of Berlin and Vienna, and of the Latin dramas he composed for the pupils of the Benedictine monastery at Salzburg (1745–60), of which, however, the words only are extant. Froehle's library contains the autographs of 13 oratorios, including the 'Componimento sacro,' performed with great success at Salzburg in 1747. The Gesellschaft der Musikfreunde at Vienna possesses a copy of a mass and a fugue for two choirs with double orchestra. Eberlin's strict writing was so much prized by Mozart, that about 1777 he copied 13 of his pieces (mostly church-music in 4 parts) together with some by M. Haydn, into a MS. book which he kept for his own instruction, and which still exists. He afterwards (1782) however wrote to his sister that Eberlin's fugues could not be ranked with those of Bach and Handel—'All honour to his 4-part pieces; but his clavier fugues are merely extended Versetti.' Marpurg was the first to proclaim his merit ('Kritische Beiträge,' Berlin 1757, vol. iii. Stissch 3, p. 183), and says that he wrote as much and as rapidly as Scarlatti and Telemann. [C.F.P.]

EBERS, CARL FRIEDRICH, son of a teacher of English at Cassel, born March 20, 1770, a man evidently of great ability, but as evidently of little morale, taking any post that offered, and keeping none; doing any work that turned up to keep body and soul together, and at length dying in great poverty at Berlin, Sept. 9, 1836. Some of his arrangements have survived, but his compositions—half-a-dozen operas, symphonies, overtures, dance music, wind-instrument ditto, and, in short, pieces of every size and form—have all disappeared, with the exception of a little drinking song, 'Wir sind die Könige der Welt,' which has hit the true popular vein.

One occurrence, in which he succeeded in annoying a still greater man than himself, is worth perpetuating as a specimen of the man. In the number of the Allgemeine Musikalishe Zeitung for 11 Dec. 1816 appears a notice from C. M. von Weber to the following effect:—'Herr Hofmeister of Leipzig has published a quintet of mine (op. 34) for clarinet and strings, arranged as a solo sonata for piano, with the following misleading title, "Sonata for the P. F., arranged by C. F. Ebers from a Quintuor for Clarinet by C. M. de Weber, op. 34." I requested Herr Hofmeister to withdraw the publication on the ground that it was inaccurate and unfair, and most damaging to the original work; but he has vouchsafed me only a curt statement that if the arranger is to blame I may criticise him as severely as I like, but that to him as publisher it is a matter of no moment. I have therefore no other course than to protest with all my might against the arrangement, abstaining from all comment, except to mention that without counting engravers' blunders, my melodies have been unnecessarily altered 41 times, that in 3 places one bar has been omitted, in another place 4 bars, in another 8, and in another 11.—C. M. von Weber, Berlin, Nov. 22, 1816.' This drew forth a reply from Ebers addressed to 'the lovers of music,' and appearing in the next No. of the 'Zeitung':—'Herr Schlesinger of Berlin has published as op. 34 of C. M. von Weber a Quintet for Clarinet and Strings—where five people play together I believe it is called a quintet—which is so absolutely incorrectly engraved that no clarinet player not previously acquainted with the work can possibly detect and avoid the mistakes in certain places—such as bar 60 of the second part of the first allegro. I took the trouble to put the thing into score, and found the melodies pretty and not bad for the piano; and, as every man is free to arrange as he likes, I turned it into a solo sonata, which I can conscientiously recommend to the lovers of music without any further remarks. As clarinet passages however are not always suitable for the piano, I have taken the liberty to alter and omit where I found mere repetitions without effect. This has been done with intelligence, and it is absurd to talk of disfigurement. Mozart and Haydn were great men, who sought their effects by other means than noise and display, oddity or absurdity; they gladly welcomed arrangements of their works, as Beethoven himself does every day. But should it still annoy Herr Weber to see his child in a new dress, and should he therefore withdraw his paternity from it, I shall then have to ask the public to acknowledge me as its foster father. But the public has a right to insist that Herr Schlesinger shall free his publications from mistakes, for as long as one work remains uncorrected he is open to the remark of ne suor ultra crepitandum.—Leipzig, 6 Dec. 1816.'

EBERS, JOHN, born in England of German parents about 1785, originally a bookseller; undertook the management of the opera at the King's Theatre in 1821, with Ayton as musical director. He engaged Garcia, Galli, Mine. Camporese, Pasta, and other celebrated singers, besides Rossini (1824), but the expenses were so enormous, that in seven years he was completely ruined. He published 'Seven Years at the King's Theatre' (London, H. Ainsworth, 1838), an interesting record of Italian opera at that time in London. [M. C. C.]

EBERWEIN, TRAUGOTT MAXIMILIAN, violinist and composer, of great note in his day, though now quite forgotten, born at Weimar 1775.
seven he played in the court band of Weimar. In 1797 he entered the service of the Prince of Schwarzenburg-Rudolstadt, but it was not till 1817 that he became his chapel-master. In the interval he travelled much, making the acquaintance of Adam Hiller and Zelter at Berlin, and of Beethoven and Salieri at Vienna. He was a man of some influence and position, and one of the original founders of the musical festivals in Germany. Goethe frequently mentions him in his correspondence. He died at Rudolstadt, Dec. 2, 1831. His works, more numerous than original, include 11 operas; 3 cantatas; a mass in Ab, his best work; a symphonie-concertante for oboe, horn, and bassoon; concertos, quartets, etc. [M.C.C.]

ECCARD, JOHANNES, born at Mühlhausen in Thuringia in 1552, was probably at first a scholar of Joschin Burgk, and afterwards of Orlando di Lasso at Munich, with whom he went to Paris in 1571. He was for some time in the employ of the Fuggers at Augsburg; in 1583 he was made vice-capellmeister, and in 1599 full capellmeister, at Königberg to the Margrave of Brandenburg. In 1608 he obtained the same post under the Kurfürst at Berlin, in which post he died in 1611. He composed 20 'Cantiones sacrae,' etc. (Mühlhausen, 1574); 'Crepundia sacrae' (Mühlhausen, 1577 and 86; 2nd ed. Erfurt, 1680); 24 Deutsche Lieder (Mühlhausen, 1578); Neue Deutsche Lieder (Königberg, 1589); 'Der erste Theil 5-Stimmiger geistlicher Lieder' (5 vols., Königsberg, 1597); and 'Preussische Festlieder, 5, 6, 7, 8 Stimmen' (Ibid. 1598). Eccard wrote both Hymns and Chorals, some of which are still in use (Düring's 'Choralkunde,' p. 47). There is a portrait of him, with a Latin inscription by G. Frühlich. A short motet by Eccard, on the Chorale 'O Lamm Gottes,' for 5 voices, and an 'O Freude' for 2 Choirs, are included in the Berlin Domchor Collection, 'Musica Sacra.' The whole of the 'Geistliche Lieder' and of the 'Preussische Festlieder' (with Stobain's additions) have been recently republished by Breitkopf & Härtel. [M.C.C.]

ECCLÉS, SOLOMON, born in the first half of the 17th century, whose ancestors for three generations had been musicians, was from about 1642 a teacher of the virginals and viols, a pursuant from which he for some years derived a considerable income, but embracing the tenets of quakerism, he abandoned his profession, broke all his instruments, and burned them, together with his music books (the value of the whole being more than £24), on Tower Hill, and adopted the trade of a tailor. In 1667 he published a curious tract entitled 'A Musick-Teacher, or, The Art of Musick ... discovered of, by way of dialogue between three men of several judgments, in answer to the Musick-Teachers ... seizes on the Church of England, who calls Musick the gift of God: the other a Baptist who did affirm it to be a decent and harmless practice: the other a Quaker (so called) being formerly of that art doth give his judgment and sentence against (c.)

ECCLESIASTICON. 381

it, but yet approves of the Musick that pleaseth God,—from which the foregoing particulars are gathered. He subsequently resumed his profession and contributed several ground basses with divisions thereon to 'The Division Violin.' The date of his death is unknown.

His eldest son, John, was born in London about the middle of the 17th century. He learned music from his father, and about 1685 became engaged as a composer for the theatre, in which occupation he continued for upwards of a quarter of a century. Of these to which he contributed, the most important (musically considered) were 'Don Quixote' (with Purcell), 1694; 'Europe's Revels for the Peace,' 1697; 'The Sham Doctor,' 1697; 'Rinaldo and Armida,' 1699; and 'Semee,' 1707. The composition of the music in 'Macbeth,' generally attributed to Matthew Locke, has sometimes been ascribed to Eccles. In 1698, upon the death of Dr. Nicholas Staggin, Eccles was appointed Master of the King's Band of Music, in fulfilment of the duties of which office he composed numerous birth-day and new-year's odes. In 1700 he gained the second of the four prizes given for the best compositions of Congreve's masque 'The Judgement of Paris'; the first being awarded to John Weldon, and the third and fourth to Daniel Purcell and Godfrey Finger. The score of Eccles' music for this piece was printed. In 1701 he set the ode written by Congreve for the celebration of St. Cecilia's day in that year. About 1710 he published a collection of nearly one hundred of his songs, comprising many of those which he had written for no fewer than forty-six dramatic pieces. The freshness and flow of Eccles' melodies rendered his songs universal favourites. In the latter part of his life he gave up all professional pursuits, except the annual production of the birth-day and new-year's odes, and retired to Kingston-upon-Thames for the diversion of angling, to which he was much attached. He died in January 1735.

Henry, second son of Solomon, was a violinist of considerable ability, who conceiving himself neglected in England, betook himself to Paris, where he was admitted a member of the French King's band. In 1720 he published at Paris, in two books, Twelve Solos for the Violin written in the style of Corelli.

Thomas, youngest of the three sons of Solomon, studied the violin under his brother Henry, and became an excellent performer. Being idle and dissipated, he gained a scanty and precarious subsistence by wandering from tavern to tavern in the city and playing to such of the company as desired to hear him. [W.H.H.]

ECCLÉSIASTICON. A collection of classical church music in score, published by Diabelli & Co. (now Schreiber) of Vienna. Its contents are as follows:

No. 1-60 Graduales by Michael Haydn.
No. 61-96 Offertoria and Graduales by Cherubini.
No. 97-141 Magnificats by Cesar and Michael Haydn.
No. 142-200 Motets by Corelli.
No. 201-400 Sonatas by Haendel.
No. 401-600 Concertos by Vivaldi.
ECKERT.

ECKERT, CARL ANTON FLORIAN, violinist, pianist, composer, and conductor, born at Potsdam Dec. 7, 1830. Left an orphan at an early age, he was brought up in barracks by his father's comrades, but owed his education to Hofrat Förster of Berlin. His early ability was remarkable, not only as a player, but as a composer. By the age of 10 he had completed an opera, by 13 an oratorio, and by 20 another, and both these were performed, and were warmly praised in the A.M.Z. of the time. He studied under various musicians, and in 1839 had the good fortune to become a pupil of Mendelssohn's at Leipzig. With characteristic sympathy for talent Mendelssohn gave him great encouragement, attached himself warmly to him, spoke of him as 'a sound, practical musician,' and corresponded with him. 1 His oratorio 'Judith' was performed by the 'Sing-Akademie' in Berlin in 1841, and in the following year the King of Prussia sent him to Italy for two years. On his return he composed an opera, 'Wilhelm von Oristan,' which was successfully performed in Berlin (1846) and at the Hague (1848). In 51 he became accompanist to the Italian theatre in Paris, then accompanied Sonntag on her tour in the United States, returning to Paris in 53 as conductor of the Italian Opera. In 54 he was called to Vienna to take the direction of the Court Opera, a post which he filled with great ability and distinction. But none of these things could satisfy him, and in 61 he went to Stuttgart as Capellmeister in Kücken's place. This too he threw up in 67; 1

1 See an excellent letter (Jan. 28, 1840) full of kind feeling and the most judicious advice and encouragement.
but in 68 he was suddenly appointed to the head directorship at Berlin in place of Dorn, who was pensioned to make way for him. This post he still retains. Eckert is one of the first conductors of the day, but as a composer he is hardly destined to live. He has composed three operas, much church music, a symphony, a trio, and many pieces of smaller dimensions; but none has made anything that can be called an impression, unless it be a few songs and a fine violoncello concerto. There must be something vacillating and wanting in earnestness in the nature of the man, to have so sadly disappointed the fair hopes entertained of him by Mendelssohn in the outset of his career.

[ M. C. C. ]

ECOSSAISE. A dance, as its name implies, of Scotch origin. It was at first accompanied by the bagpipes, and in its original form was in 3-2 or 2-4 time. The modern Ecoisse, however, is a species of contredanse in quick 2-4 time, consisting of two four-bar or eight-bar sections, with repeats. Franz Schubert has written a number of Ecoisses for the piano, which will be found in his op. 18, 33, 49, and 67. The following example of the first part of an Ecoisse dates from the commencement of the last century.

[ E. P. ]

EDINBURGH PROFESSORSHIP OF MUSIC. Founded by General John Reid, who died in 1507, leaving funds in the hands of trustees for various purposes, amongst others for endowing a chair of music in the University, and founding a concert to be given annually on his birthday, Feb. 13, in which a march and minuet of his composition should be included 'to show the taste for music about the middle of the last century, and to keep his name in remembrance.' The Professorship was founded in Dec. 1839, and Mr. John Thomson was the first professor. He was succeeded in 1841 by Sir H. R. Bishop; in 1844 by Henry Hugo Pierson; in 1845 by John Donaldson; and in 1865 by Herbert (now Sir Herbert) S. Oakeley. The portion of the Reid bequest set apart for musical purposes is £28,500, the annual revenue from which is divided as follows:—professor, £420; assistant, £200; class expenses, £100; expenses of the Concert, £300. A sum of £2,000 was bequeathed in 1871 by Signor Theophilus Bucker to be applied to bursaries or scholarships; but this will not come into operation till the death of an annuitant. The class fee for the session is 3 guineas. The duties of the professor consist in lectures and organ performances on an organ built by Hill of London at the instance of Professor Donaldson, and placed in the Class...
Beethoven, Mendelssohn, Schumann, Wagner, Weber, Schubert, Chopin, Berlioz, and Meyerbeer, which, without being technical, are often happily characteristic. These have been translated into English by F. R. Ritter (Boston, U.S., 1870). Still more valuable is his last publication, 'Aus den Tonwelt' (1877), containing his latest contributions to the 'Deutsche Rundschau,' etc. His compositions are ambitious, and embrace overtures to 'Hafiz' and 'The Winter's Tale,' a 'Spring symphony'—performed with success at Berlin and Leipzig—a Sonate romantique. Lieder, etc. [M.C.C.]

EIN FESTE BURG. Luther's version of Psalm xlii. The hymn was probably written at Coburg 1530; the tune seems to have appeared first in 'Psalmen und geistliche Lieder,' Strasburg, Wolfgang Köpfl, probably 1538. The form of the tune now in use is that given by Sebastian Bach in various cantatas, especially in that for the 'Festo Reformationis' (Bachgesellschaft, xviii. No. 80), and differs somewhat from Luther's original. The words have also been modernised. We give both words and melody in their first shape from von Winterfeld's 'Luther's deutsche geistliche Lieder.'

The tune has been used as the foundation of various pieces of music, such as Bach's cantatas just referred to; the Finale of Mendelssohn's 'Reformation Symphony'; a Fest-overture by O. Nicolai; an overture by Raff; and Wagner's 'Kaisermarsch.' It is also largely employed by Meyerbeer in the Hugenoten.

EISTEDDFOD (Welsh, 'a sitting of learned men'). These musical and literary festivals and competitions originated in the triennial assembly of the Welsh bards usually held at Aberfraw, the royal seat of the Princes of North Wales and Anglesey, at Dynevord in South Wales, and at Mathravel, Merionethshire, for the regulation of poetry and music, for the conferring of degrees, and electing to the chair of the Eisteddfod. The antiquity of this ceremony is very high, mention being made of an Eisteddfod in the 7th century at which King Cadwaladr presided. These bards only who acquired the degree of 'Penceredd' (chief minstrel) were authorised to teach, and the presiding bard was called Bardd Caderniawg—the bard of the chair—because after election he was installed in a magnificent chair, and was decorated with a silver or gold chain, which he wore on his breast as a badge of office. His emoluments from fees were considerable. Persons desiring to take degrees in music were presented to the Eisteddfod by a Penceredd, who vouched for their fitness, the candidates being required to pass through a novitiate of three years, and to study for further several periods of three years before advancement to each of the three higher degrees. It is now difficult to define the status of the titles conferred, but they cannot be considered more than historical names or complimentary distinctions, often bestowed by the Eisteddfodau upon persons who had but little knowledge of music. After being discontinued for some time the Eisteddfodau appear to have been revived in the reigns of Edward IV, Henry VII, Henry VIII, and Elizabeth. In 1450 what has been called 'The great Eisteddfod of Carmarthen,' was held in that town, with the king's sanction; and another meeting was held in South Wales in Henry VII's reign, of which no records are preserved. In 1523, at Caerwys, Flintshire, an Eisteddfod was held, at which many eminent men were present; and on May 26, 1567, there was another at the same place, under a commission granted by Queen Elizabeth. Still more memorable was the congress at Dewynter Castle in 1681, under the auspices of Sir Richard Bassett. In 1771 the Gwyneddigion, a society established in London for the cultivation of the Welsh language, promoted several of these meetings in North Wales; and in 1819 the Cambrian Society held a great Eisteddfod at Carmarthen, at which the Bishop of St. David's presided. Mr. John Parry, who was a chief promoter of this society, and its registrar, edited the Welsh melodies for it, and in recognition of his efforts a concert was given to him at Freemasons' Hall on May 24, 1826, at which Miss Stephens, Braham, Mori, Lindley, and others assisted, followed by a dinner, at which Lord Clive presided. In later years the revival of these meetings was promoted by Sir Benjamin Hall (afterwards Lord Llanover); and at one of them, held in 1838 at Denbigh, the Duke of Sussex was present, and Sir Edward Mostyn president. The Eisteddfodau are now annually held at several places in the Principality, the leading Welsh musicians, including Mme. Edith Wynne and Mr. Brinley Richards, taking part in the concerts, which usually follow the competitions for the prizes. There is no special day for holding the Eisteddfod, but according to an ancient regulation the meeting is not considered 'legal' unless it be proclaimed a twelvemonth and a day. Strictly speaking, the Eisteddfodau are no longer 'national,' except that they are held in Wales, and retain some of the quaint formalities which marked the ancient meetings.

EITNER, ROBERT, born at Breslau, Oct. 22, 1832, now living in Berlin; founder in 1863 of the 'Gesellschaft für Musikforschung,' and contri-
ELFORD.

485

... have simplified the system by devising a new form of pallet which offers no resistance in opening, and thus does away with the necessity for the pneumatic bellows. The action may be thus briefly described. Each key is furnished with a rocking lever provided with a copper point, which, when depressed, is plunged into a mercury cell and so establishes the electric current. The other end of the wire is furnished with an electro-magnet, acting directly on the pallet. The insulated wires of the several keys can be gathered up into a cable not more than an inch in diameter and carried in any desired direction, and to any distance, without there being any appreciable interval between the touch upon the keys and the response at the pipes. [E. J. H.]

ELEGY (ἐλέγχος). In its original sense a poem, always of a sad and touching character, and generally commemorative of some lamented decease (e.g. Gray's Elegy); subsequently such a poem with music; and still more recently a piece of music inspired by the same feeling and suggested by a like occasion, but without poem, or any words whatever. The elegy has taken many musical forms; that of the vocal solo, duet, trio, quartet, etc., with or without accompaniment; of the instrumental solo for the violin, pianoforte, or other instrument, and of the concerted piece for stringed or other instruments. One of the most beautiful specimens of the first class extant is Beethoven's quartet in memory of the deceased wife of his friend Baron Pasqualati ('Elegischer Gesang,' op. 118). In the score of Handel's 'Saul' the lament of the Israelites over the king and Jonathan is entitled 'Elegy.' Of the second we have Dussek's 'Élégie harmonique' on the death of Prince Louis Ferdinand of Prussia, for piano solo. Better known than either of these to the modern concert-goer is Ernst's 'Élégie' for violin solo with piano accompaniment. Of the third class a better instance can hardly be cited than Mr. Arthur Sullivan's overture 'In Memoriam,' which is in truth an elegy on the composer's father.

ELFORD, RICHARD, was educated as a chorister in Lincoln Cathedral. His voice changing to a fine counter-tenor he became a member of the choir of Durham Cathedral. About the commencement of the 18th century he came to London, and was engaged as a singer at the theatre. On August 3, 1702, he was sworn in as a gentleman of the Chapel Royal, a place being created expressly for him. He also obtained the appointments of vicar-choral of St. Paul's Cathedral and lay vicar of Westminster Abbey, after a few years he withdrew from the stage, and he was never successful, owing to his ungainly figure and awkward action. Weldon, in the preface to the first book of his 'Divine Harmony' (six solo anthems composed expressly for Elfard), and Dr. Croft, in the preface to his 'Musica Sacra,' speak in high terms of Elfard's voice and singing. He died Oct. 29, 1714.

[W. H. H.]
ELIJAH (Elia in German)—`an oratorio on words from the Old Testament' (op. 70)—was Mendelssohn's 2nd oratorio. The idea appears to have occurred to him when reading the passage `and the Lord passed by' (1 Kings xix. 11).

`Would not that be splendid for an oratorio?' said he to Hiller. This, if the case, must have been before Nov. 2, 1838, when, from his letter to Schubring, he had evidently gone far into the subject. The score has no dates. On Aug. 5, 1846, the orchestral parts were rehearsed by Mendelssohn at Leipzig; Aug. 10 he had a vocal rehearsal at Moscheles' house, London; then two full ones at Hanover Square; Aug. 24 a full rehearsal at Birmingham; and on Wednesday the 26th it was first performed. Various alterations and additions were made afterwards, including the trio `Lift thine eyes' and the last chorus. He was helped by Schubring in the selection of the words. The English words by Mr. Bartholomew were rejected by him, corrected, and were the subject of a long correspondence.

The first performance in Germany was at Hamburg in October 1847, conducted by Krebs.

ELISA, OU LE VOYAGE AU MONT BERNARD. Operas in two acts; words by Saint-Cyr; music by Cherubini; produced at the Théâtre Feydeau, Dec. 13, 1794.

ELISI, FILIPPO, a tenor singer in Italian opera in London, 1765. Among other parts, he sang that of Eumene in the pasticcio of the same name at the King's Theatre that season. [J.M.]

ELISIR D'AMORE, L', opera buffa in 2 acts; libretto by Romani, music by Donizetti, produced at Milan in 1823 (!); at Lyceum, London, Dec. 10, 1836. Also, as The Love Spell, at Drury Lane, June 24, 1839.

ELLA, JOHN, violinist, son of Richard Ella of Thirsk, was born Dec. 19, 1802. At the age of 19 he quitted the profession of the law for music. In 1832 he became a member of the orchestra of the King's Theatre, and subsequently of the orchestras of the Concerts of Antient Music, Philharmonic, etc., retiring finally in 1848. In 1819 he received lessons in violin-playing from M. Fémy, in 1826 he was a pupil of Attwood in harmony, and finally completed his education in counterpoint, instrumentation, and composition, under Féris at Paris, 1845. In 1845 he established, under the name of 'The Musical Union,' a series of morning concerts of instrumental chamber music at which the best classical works have been rendered by the best artists native and foreign. He has directed the Musical Union uninterruptedly for thirty-three years. In 1850 he established a similar series of concerts under the name of `Musical Winter Evenings,' which were given annually, under his direction, until 1859, after which they were discontinued. At both these concerts he introduced, and has continued, the `analytical programmes' (wholly written by himself), which have since been frequently adopted elsewhere. He has contributed many notices of music and musicians to the Morning Post, Musical World, and Athenæum. In 1855 he was appointed lecturer on music at the London Institution, where he has delivered several lectures, some of which have been published. He also published a Personal Memoir of Meyerbeer, with an analysis of Le Huguenot, and under the title of 'Musical Sketches abroad and at home,' a volume of interesting musical chit-chat, &c. [MUSICAL UNION.] [W.H.H.]

ELLERTON, JOHN LODGE, an amateur composer, born in Cheshire, Jan. 11, 1807, was a descendant from an ancient Irish family. In his childhood he showed a remarkable fondness for music, and notwithstanding his father's strong discouragement, soon attained by his own efforts to as much knowledge as enabled him to play the piano. Being sent to Oxford (where he graduated as M.A. in 1833), he lost no opportunity of pursuing music; devoting his attention chiefly to composition. While at Oxford he composed an English operetta and an Italian opera. On quitting the university he went to Rome, studied counterpoint for two years under a chapelmaster named Terriani, and composed several operas. Ellerton possessed nearly every species of composition. His works comprise 6 anthems; 6 masses; 17 motets; `Paradise Lost,' oratorio; `Issipile,' `Berenice in Armenia,' `Annibale in Capua,' `Il Sacrificio di Epiro,' `Andromaca,' `Il Carnovale di Venezia,' and `Il Marito a Vista,' Italian operas; Carlo Ross, German opera; `Lucinda,' `Dominica,' and `The Bridal of Triermain,' English operas; 61 glee; 83 vocal duets; 5 symphonies; 4 concert overtures; 3 quintets, 44 quartets and 5 trios for stringed instruments; and 8 trios and 13 sonatas for various combinations of instruments. In 1835 and 1838 the Catch Club awarded him prizes for glees. He died Jan. 3, 1873. [W.H.H.]

Elliott, Thomas, organ-builder, one of the early members of the firm of Hill & Son.

Elser, Joseph, composer, born June 7, 1799, at Grodgrau, in Silesia, son of a carpenter who made harpsichords, harps, and other musical instruments. Being intended for the profession of medicine, he had no regular instruction in music beyond a few lessons in harmony from Förster, director of the theatre at Breslau, but early began to compose. A visit to Vienna enabled him greatly to improve himself by studying classical scores, and by intercourse with the best musicians of his time. In 1791 he was appointed first violin in the theatre at Brunn, and in the following year Capellmeister at Lemberg, where he wrote 5 operas, 4 symphonies, quartets, sonatas, etc. In 1799 he was appointed conductor of the theatre at Warsaw, and here he established himself for life, composing 22 operas in the Polish language within the space of 20 years. During a visit to Paris some of his compositions were performed at the Tulleries. With the assistance of Countess Zamoiska he started in 1815 a society at Warsaw for the encouragement of music, which resulted in the
ELSVELL. [See Hatton, p. 712 e, note.]

ELVEY, Sir George Job, Knight, Mus. Doc. was born at Canterbury, March 27, 1816. He commenced his musical education as a chorister of Canterbury Cathedral under Highmore Skeats, the organist. After quitting the choir he pursued his studies under his elder brother, Stephen. In 1834 he gained the Gresham prize medal for his anthem, 'Bow down Thine ear.' In 1835 he was appointed to succeed Skeats as organist of St. George's Chapel, Windsor. In 1838 he graduated as Bachelor of Music at Oxford, his exercise being a short oratorio, 'The Resurrection and Ascension,' which was afterwards produced in London by the Sacred Harmonic Society on Dec. 2, 1840, and has also been given at Boston, U. S. A., and at Glasgow. In 1840 he proceeded Doctor of Music, his exercise being an anthem, 'The ways of Zion do mourn.' He composed an anthem for voices and orchestra 'The Lord is King' for the Gloucester Musical Festival of 1853, and a similar one, 'Sine, O heavens,' for the Worcester Festival of 1857. Elvey's compositions are chiefly for the church; many of his anthems are published. He composed a Festival March for the wedding of the Princess Louise in 1871, which was afterwards performed in public. In the same year he received the honour of knighthood. His tune for the harvest hymn, 'Come, ye thankful people,' is generally admired. [W. H. H.]

ELVEY, Stephen, Mus. Doc., the elder brother of the preceding, was born in Canterbury, June 27, 1805. He was entered as a chorister of the cathedral under Skeats, whose pupil he continued after the breaking of his voice. On the death of Alfred Bennett in 1830, Elvey was appointed his successor as organist of New College, Oxford. In the following year he took the degree of Bachelor of Music at Oxford, his exercise being the hymn from Thomson's 'Seasons,' 'These as they change.' In 1838 he proceeded Doctor of Music, his exercise being an anthem, 'Great is the Lord!' He was choragus of the University from 1840 till his death, Oct. 6, 1860. Stephen Elvey's compositions are not numerous; they consist chiefly of anthems and services. His Evening Service, composed in continuation of Dr. Croft's Morning Service in A, and his 'Psalter and Canticles pointed' (Oxford, Parker), are well known. Some years before his death he had to submit to the amputation of a leg, through a gun accident whilst shooting. [W. H. H.]

ELY CATHEDRAL. The music library of this church contains a very valuable and interesting collection of MSS., principally of English church music, due chiefly to the pious care and industry of James Hawkins, the organist for 47 years from 1681. It consists of 36 volumes—21 of anthems, services, and chants, in score, 11 of
voice parts, and 4 of organ parts. The number of compositions is over 580, and includes some of large dimensions, as Handel's Utrecht Te Deum and Jubilate for voices and orchestra, Croft's ditto, ditto. A catalogue of these works was prepared by the Rev. W. E. Dickson, Precentor of the cathedral, and published for the Dean and Chapter by Deighton, Bell, & Co., 1861.

EMBOUCHURE. The part of a musical instrument applied to the mouth; and hence used to denote the disposition of the lips, tongue, and other organs necessary for producing a musical tone.

To the embouchure are due, not only the correct quality of the sound produced, but also certain slight variations in pitch, which enable the player to preserve accurate intonation. In many instruments, such especially as the French horn and the Bassoon, almost everything depends upon the embouchure.

EMPEROR CONCERTO, THE, a title, like 'Jupiter Symphony' and 'Moonlight Sonatas,' gratuitously bestowed on Beethoven's P. F. Concerto in E5 (op. 75). Such titles are unnecessary, and the only excuse for them is that they enable non-professional persons to refer to musical works without using musical nomenclature.

EMPEROR'S HYMN, THE. A hymn written in 1796 by Lorenz Leopold Haschka during the patriotic excitement caused by the movements of the French revolutionary army, set to music for 4 voices by Haydn, and first sung on Feb. 12, 1797, at the Emperor's birthday. He afterwards employed it as the theme for 4 variations in his well-known quartet (op. 76, No. 3). (See A. Schmid, 'J. Haydn und N. Zingarelli,' Venice 1847.)

ENCORE—the French for 'again'—the cry in English theatres and concert-rooms when a piece is desired to be repeated. It has taken the place of the 'altra volta' of last century. The French and Germans use the Italian term 'bis,' and the French have even a verb, 'bisser.' 'Le public anglais est grand redemandeur, et exprime son voué par un mot français, comme nous par un mot latin' (A. Adam, Souvenirs, xxvii.).

ENFANT PRODIGUE, L', opera in 5 acts; words by Scribe, music by Aubert; produced at the Académie Dec. 6, 1850; in Italian, as 'Il Prodigo,' at her Majesty's June 12, 1851.

ENGEDI. See MOUNT OF OLIVES.

ENGLAND, GEORGE, and GEORGE FIKE (his son), organ-builders. The former flourished between 1740 and 1788, and married the daughter of Richard Bridge; the latter between 1788 and 1814. The elder England built many noble organs. Of Bridge little is known; he is believed to have been trained by Harris the younger, and to have lived in Hand Court, Holborn, in 1748. His best organ was at Christ Church, Spitalfields, 1730.

[VEL de P.]

ENGLISH HORN. The tenor oboe in F, intermediate between the ordinary oboe and the bassoon. It seems in great measure to have superseded an older instrument, the Corno di caccia, which occurs in the scores of Bach, and which was curved back on itself like a bassoon, or at an obtuse angle. [See COR ANNO LAMB.] [W.H.S.]

ENGLISH OPERA. An English opera may be defined as a regular drama, the most important parts of which are set to music and sung, the subordinate parts being spoken as ordinary dialogue, as in German and French operas. It differs from a musical play in the fact that in most cases the musical pieces may be omitted from the play without interrupting the progress of the action, whilst in an opera they form integral and essential portions of it. The exceptions from this rule will be noticed presently.

The earliest instances of the alliance of music with the English drama are probably to be found in the mysteries, or miracle-plays, anciently performed at Coventry, Chester, and other places. As the drama became developed, the associations of music with it became closer and more frequent. In several of Shakespeare's comedies the songs, etc., are absolutely essential to the piece, and cannot be omitted. Witness particularly 'The Tempest,' 'As You Like It,' 'Twelfth Night,' and 'A Midsummer Night's Dream.' In the masques performed at court, temp. James I and Charles I, a nearer approach was made to the opera—poetry, music, scenery, machinery, and characteristic dresses and decorations being combined in them. Alfonso Ferrabosco junior, Laniere, Copprario, Robert Johnson, Campion, Simon Ives, and William and Henry Lawes, were the principal composers employed. The first approaches towards the revival of dramatic entertainments, which had been suspended by the closing of the theatres during the Civil War, were made during the interregnum through the medium of musical pieces. On March 26, 1653, Shirley's masque, 'Cupid and Death,' with music by Matthew Locke, was performed before the Portuguese ambassador. Three years later Sir William Davenant produced, in a semi-public manner, 'The First Day's Entertainment at Rutland House by Declamations and Music,' with music by Colman, Cook, H. Lawes, and Hudson. In the prologue it is designated an opera, though not one in any respect. In the following year Davenant produced 'The Siege of Rhodes,' the dialogue of which was given in recitative, which Davenant describes as 'unpractised here, though of great reputation amongst other nations.' This piece, to which a second part was subsequently added, maintained its position for some years, but the music has not, so far as is known, been preserved. 'The Siege of Rhodes' was followed by the production by Davenant in 1658 of 'The Cruelty of the Spaniards in Peru,' expressed by tragical and vocal music, and the art of perspective in scenes, a performance said to have been not only connived at, but secretly encouraged by Cromwell, who was then supposed to be meditating some designs against the Spaniards. During the four
or five years which followed the re-opening of the public theatres in 1660, little, beyond occasional repetitions of 'The Siege of Rhodes,' appears to have been done to forward operatic performances on the English stage. The Plague in 1665 and the Great Fire of London in 1666 caused a temporary suspension of all theatrical performances, but a step onwards was made in 1667 by the production of an adaptation by Davenant and Dryden of Shakspere's 'Tempest' with large additions to the lyric portions. The vocal music of this version was supplied by Pelham Humphrey and John Banister, and the instrumental by Matthew Locke. Soon after the opening of the theatre in Dorset Gardens (1671), the proprietors resorted to opera as the principal attraction. In 1673 they brought out Shadwell's 'Psyche,' of which the author said 'the great desire was to entertain the town with variety of music, curious dancing, splendid scenes and machines. Matthew Locke composed the vocal, and Giovanni Baptista Draghi the instrumental music for 'Psyche,' the dances being arranged by St. Andre, and the scenery painted by Stephenson. In 1675 was 'performed at Mr. Josias Priest's Boarding School at Chelsea by young Gentlemen' the youthful Henry Purcell's first opera 'Dido and Aeneas,' the dialogue in recitative.

In 1677 Charles Davenant's 'Cithoe' was produced, with the music of John Banister. The Frenchman Gratuit's setting of Dryden's 'Albion and Albanius' appeared in 1685 and failed. A few years later the form of English opera had become definitively settled, and in 1692 Purcell wrote 'The Tempest,' revised for that purpose by Dryden, and composed the music for 'Dioclesian'—an adaptation by Betterton of Beaumont and Fletcher's 'Prophetessa,' 'with alterations and additions after the manner of an opera,' and for Dryden's 'King Arthur.' Two years later he set Dryden's alteration of Sir R. Howard's 'Indian Queen,' and 'The Fairy Queen,' an adaptation of Shakspere's 'Midsummer Night's Dream.' Purcell's contemporaries and immediate successors adhered to the form adopted by him, from which no deviation took place (with the exception of Clayton's setting of Addison's 'Rosamond' in 1707, Boyce's 'Chapel' 1749, and 'Shepherd's Lottery,' 1751, and Arne's 'Thomas and Sally,' 1760, in all which, and possibly in a few minor pieces, the dialogue was set as recitative) until 1765, when Arne produced his 'Artaxerxes,' set after the Italian manner, with the dialogue wholly in recitative. This departure from the established form produced however no immediate imitators, and Arne's contemporaries and successors, Dibdin, Arnold, Jackson, Linley, Hook, Shield, Storace, Attwood, Braham, Bishop, Barnett, Roote, etc., adhered for nearly a century to the established model, which, as already remarked, was also that of German operas and of French Opéra Comique.

Efforts have been made at different times and with very chequered results to establish theatres especially devoted to the production of English opera. In 1809 Samuel James Arnold, son of Dr. Arnold, obtained a licence for opening the Lyceum Theatre (which he named the English Opera House) for their performance, and for several years afterwards produced, besides the standard operas, new works by Graham, Horn, M. P. King, Davy, and other native composers. The great success of Weber's 'Der Freischütz,' produced in English in 1824, induced Arnold to change his plan, and for some years afterwards he brought forward principally English versions of German operas, until the success in 1834 of Barnett's 'Mountain Sylph' led him to revert to his original design, and to produce works by Loder, Thomson, and Macfarren. From about 1835 to 1850 successive managers of Drury Lane Theatre devoted much attention to the production of English opera, and many new works by Barnett, Bale, Wallace, Macfarren, Benedict, and others, were brought out there. In 1856 Miss Louisa Pyne and Mr. W. Harrison embarked in an undertaking for the performance of English operas; and under their management, which lasted about seven years, several new operas by Bale, Benedict, Wallace, and others, were produced. An 'English Opera Company, Limited,' was formed in 1865, and gave performances at Covent Garden Theatre, but proved unsuccessful. Macfarren's 'Helvellyn' was its sole English production. It should be noted that in this and some other of the later English operas the dialogue is set as recitative, and the general form of the works is that of the modern grand opera. A class of short musical pieces, mostly on subjects of a comic and even farcical character, has sprung into existence of late years, of which Sullivan's 'Cox and Box,' 'Trial by Jury,' and 'Sorcerer,' and Clay's 'Court and Cottage' may be cited as specimens.

There remains to be noticed a class of English operas, the songs of which are not set to music composed expressly for them, but are written to existing tunes, principally those of old ballads and popular songs, whence the works derived the name of Ballad Operas. The famous 'Beggars' Opera' was the first of these, and to its wonderful popularity its successors owed their existence. [BEGGAR'S OPERA.] The dialogue of these pieces is wholly spoken. The following is believed to be a complete list of them:—1728, The Quaker's Opera; The Devil to Pay; Peneioph; Love in a Riddle. 1730, The Village Oper; Momus turns a Fabulist; Flora, or, Hob in the Well; Damon and Phillida (an alteration of Love in a Riddle); The Beggar's Wedding; The Wedding; Folly. 1730, The Fashionable Lady, or, Harlequin's Opera; The Chambermaid; The Lover's Opera; The Female Parson; Robin Hood. 1731, Silvia, or, the Country Burial; The Jovial Crew; Ortese; The Generous Freemason; The Highland Fair (Scotch Tunes); The Lottery. 1732, The Devil of a Duke; The Humours of the Court; The Mock Doctor; Segal to Flora. 1733, Achille; The Boarding School; The Cobbler's Opera; The Livery Rake and Country Lass. 1734. The
Whim.—1735. The Plot; Trick for Trick; The Merry Cobbler.—1736. The Lover his own Rival.—1737. The Coffee House.—1739. The Tanner of York; The Hospital for Fools; Britons, strike home.—1750. The Intriguing Chambermaid.—1758. Galligantus. [W. H. H.]

ENTFÜHRUNG AUS DEM SERAIL, DIE, a comic operaetta (Singpiel) in 3 acts, by Mozart; words altered by Stephanie from Bretzner’s ‘Belmont und Constanze.’ Begun July 30, 1781; produced July 12, 82, at Vienna. Its French and Italian titles are, L’Enlèvement au Serail and ‘IL Seraglio.’ It was produced in English with additional airs by Mr. Kramer, as ‘The Seraglio,’ at Covent Garden, Nov. 24, 1827. [Andre, 66a.]

ENTREE. (1) A name formerly given to a small piece of music in slow 4-4 time, with the rhythm of a march, and usually containing two parts, each repeated. It received its name from the fact of its being largely used in theatrical and ballet music to accompany the entry of personages, etc. An example of this kind of Entrée may be found in J. S. Bach’s ‘Suite in A for piano and violin.’ (2) The word Entrée (or its Italian equivalent Intrada) is also used as synonymous with introduction, and is applied to the opening piece (after the overture) of an opera or ballet. [E. P.]

EPINE, FRANCESCZA MARGHERITA DE L’, in spite of her French-sounding surname, appears to have been an Italian singer. From Italy she came to England with a German musician named Greber, and was often, therefore, called ‘Greber’s Peg’ by the wits of the day. An advertisement in the ‘London Gazette’ (No. 2834), 1692, announces that the ‘Italian lady (that is lately come over that is so famous for her singing) though it has been reported that she will sing no more in the consort at York-buildings; yet this is to give notice, that next Tuesday, January 10th, she will sing there, and so continue during the season. A fortnight later, this lady is more familiarly called the Italian woman in the notice given in the Gazette, that she would not only sing at York-buildings every Tuesday, but on Thursday in Freeman’s-yard, Cornhill. She was the first Italian who sang in England. In the theatrical advertisement for London’s Inn Fields, June 1, 1703, it is said that ‘Signora Francesca Margarita de l’Epine will sing, being positively the last time of her singing on the stage during her stay in England.’ She continued, notwithstanding this, to sing during the whole of that month; nor did she ever quit England, but remained here till the time of her death, about the middle of the last century.

On Jan. 29, 1704, Margherita sang, for the first time, at Drury Lane. On her second appearance there was a disturbance in the theatre, while she was singing, the instigation of which was attributed to her rival, Mrs. Tofts, whose servant was indeed one of the principal agents in it. Mrs. Tofts, however, indignantly denied this in a letter to Rich, printed in the ‘Daily Courant’ Feb. 8, 1704. In 1705 ‘Arsinoe’ was produced, as announced in the ‘Daily Courant,’ a new opera, after the Italian manner, all sung, being set by Master Clayton, with dances and singing before and after the opera, by Signora F. Margarita del’Epine. This singing was probably in Italian. She sang in Greber’s ‘Temple of Love,’ the year after; and in 1707 in ‘Thomyris,’ the music taken from Scharlatti and Buononcini, the recitatives and accompaniments being added by Mr. (afterwards Dr.) Pepusch. She sang also in ‘Camilla,’ performing her part in Italian, while the English singers sang their own language. These rôles she repeated in 1708, and in 1709 added that of Marius in Scharlatti’s ‘Pyrrhus and Demetrius,’ arranged for the English stage by Swiny and Haym. In 1710 she sang in ‘Almahide,’ that opera, the first ever performed wholly in Italian on our stage, the names of neither poet nor composer of which are known; and again in ‘Hydaspe’s.’ In addition to these, she took part in ‘Antiochus’ and ‘Amblesi,’ and in Handel’s ‘Pastor Fido’ and ‘Rinaldo’ in 1712; and in the pasticcio ‘Ernelinda’ and Handel’s ‘Teseo’ in 1713. She continued to sing until 1718, when she married Dr. Pepusch, and retired from the stage. She has said to have brought him a fortune of £10,000. ‘Her execution was of a very different order from that of the English singers of that time, and involved real difficulties. Indeed, her musical merit must have been very considerable to have kept her so long in favour on the English stage, where, till employed at the opera, she sang either in musical entertainments, or between the acts, almost every night. Besides being out-laudata, she was so sarcastic and ill-favoured, that her husband used to call her ‘Hecate,’ a name to which she answered with as much good humour as if he had called her Helen’ (Burney). It was, perhaps, owing to this ugliness, that no portrait of her was ever made. She was a woman of perfectly good character; but Dean Swift, who was no respecter of persons, particularly musical, in his ‘Journal to Stella,’ Aug. 6, 1711, being at Wind- sors, says: ‘We have a music-meeting in our town to-night. I went to the rehearsal of it, and there was Margarita, and her sister [G. Maria Gallia], and another brav, and a parcel of fiddlers; I was weary and would not go to the meeting, which I am sorry for, because I heard it was a great assembly.’ She appears to have been an excellent musician, not only as a singer, but also as an extraordinary performer on the harpsichord, and marks an era in the history of music in England. [J. M.]

ERARD, is the name of the singer who performed the principal bass part in ‘Alexander’s Feast’ on its first production at Covent Garden, Feb. 19, 1736. He was probably a Frenchman; but nothing more is known of him than the above fact. [J. M.]

ERARD. The name borne by this firm of harp and pianoforte makers has been known almost as long in England as in France, its
workshops having been established in London near the close of the last century, not long after those in Paris. The reputation of Erard's house is as much due to successful improvements in the harp as in the pianoforte, those of the harp being of like importance to the perfecting of the violin, accomplished by the famous Cremona makers.

Sebastian Erard was born at Strasburg in 1732, and was early put to his father's handicraft of cabinet-maker. His father dying when he was sixteen he went to Paris and placed himself with a harpsichord-maker. He had soon the opportunity to display his practical ingenuity by the construction of a mechanical harpsichord, which was described by the Abbé Roussier in 1776. The Duchesse of Villeroi took notice of him, and allotted to him a workshop in her own château, where, in 1777, he made the first pianoforte constructed in France. According to him this was a square with two unisons and five octaves, similar to the English and German instruments that had been imported. He now established himself, with his brother Jean Baptiste, in the Rue de Bourbon. Their success exciting the jealousy of the Parisian musical instrument-makers known as Luthiers, and belonging to the Fan-makers' Guild, they used the power they possessed to seize Erard's workshops; Louis XVI, however, came to the aid of the brothers, and conferred upon Sebastian (A.D. 1785) a brevet permitting him to make 'forte-pianos' independent of the guild, but obliging him to employ workmen who had satisfied its regulations. (Rimbault, 'The Pianoforte,' 1866, p. 124.)

The French Revolution compelled Sebastian Erard to leave Paris, and we find him in London in 1794 taking out a patent for improvements in harps and pianofortes. He returned to Paris, after the Terror, in 1796, in which year he made his first grand piano, using the English action, which, FéUis informs us, he continued with until 1808. In 1809 he patented a repetition grand piano action, the first, and improvements in the construction of the harp, nearly completing that ingenious double action which was begun about 1786 and was perfected in 1810. A feature in the 1809 patent was the inverted bridge or upward bearing at the wrestplank bridge of the piano, since universally adopted. Advanced age made Sebastian leave to his nephew Pierre Erard (born 1796) the introduction of his perfected repetition action, the patent for which was taken out in London in 1811. Sebastian died in 1831. In 1835 the patent was extended to Pierre Erard for seven years on the plea of its great value and of the losses sustained in working it. The invention in 1838 of the Harmonic Bar is claimed for him (Dr. Oscar Paul, 'Geschichte des Claviere,' Leipzig, 1868). [See PIANOFORTE.]

Pierre Erard died at the Château de la Muette, Passy, near Paris, in 1855. His widow, Mme. Erard, succeeded him, and has maintained the high reputation of the house. [A.J.H.]

ERBA, DON DIONIGI, a much esteemed composer of Milan at the end of the 17th century. Like Marcello and Astorga he was of noble birth, and appears never to have filled any office. The title of Don given him by Quadrio, and that of 'Rd' mentioned below, show that he was in holy orders. In 1694 he took part with Valtellina in the composition of the opera of Arion, and in 1695 with Besozzi and Battestini in that of Artemio. But Erba's interest to us lies in the fact that he is not improbably the composer of a Magnificat for 2 choirs, from which Handel borrowed more or less closely for several pieces in the second part of Israel in Egypt. A complete copy of this work, entitled 'Magnificat,' by R. Sgr. Erba, is in the library of the Sacred Harmonic Society, and a partial one (ending in the middle of a sheet), in Handel's writing, without title or date, in Buckingham Palace. Opinions are divided as to whether it is an original composition of Handel's Italian time (1720-10), or of Erba. In favour of the former are Mr. Scholcher and Professor Macfarren (Preface to Israel in Egypt for the S. H. S.). It is obvious that but for the existence of the MS. by Handel the question would never have been raised. The whole evidence is examined at great length and pains by Dr. Chrysander (Händel, i. 168-178), whose conclusion is strongly in favour of its being Erba's. He shows that the date of Handel's MS. is probably 1735-40 (Israel was 1738); that it has marks of being a copy and not an original composition; that the paper is not Italian, but the same with that used for his English works; and that the style of the music differs materially from Handel's style whether early or late. In addition it might be urged that it is extremely improbable that in a copy of a work of Handel's his powerful name would be displaced on the title in favour of the insignificant one of Erba.

The pieces in which the Magnificat is employed are, according to Mr. Macfarren, as follows:—

The Lord is my strength. He is my God. The Lord is a man of war. The depths have covered them. Thy right hand, O Lord. Thou sentest forth thy wrath. And with the blast. The earth swallowed them. Thou in Thy mercy. [G.]

ERBACH, CHRISTIAN, born about 1560 at Algesheim in the Palatinate. About 1600 he became organist to the Fuggers at Augsburg, and in 1628 was appointed 'Rathsherr' of the same city. His 'Modi sacri seu cantus musicis vocibus 4, 5, 6, 7, 8 et pluribus, ad omne genus instrumenti musicorum accomodatis' was published in his lifetime at Augsburg. Boden'schatz's 'Florilegium Portense' and Schad's 'Promptuarium musicorum' (Strasburg) contain motets of his in 4, 6, and 8 parts. MS. compositions of his are in the cathedral library at Augsburg and in the Royal library at Berlin. [F.G.]
ERK.

ERK, Ludwig Christian, born Jan. 6, 1807, at Wetzlar, where his father was cathedral organist; has rendered very important services to German popular music. He studied music under his father and André of Offenbach, receiving his general education from Spiesi, a well-known teacher at Frankfurt. Here he remained for some years enjoying the society of the best Darmstadt musicians. In 1826 he was appointed professor at the teachers' seminary at Moers on the Lower Rhine, and it was here that his connection with popular music began. He started musical festivals at Reimscheid, Ruhrot, Duisburg, and other small towns, which largely contributed to the taste for sacred and secular part-music. In 1836 he was appointed musical professor of the royal seminary at Berlin, and in the following year conductor of the newly-formed cathedral choir, which post, for want of proper support, he relinquished in 1840 in favour of Neithardt. In 1843 he founded a Männergesangverein, which still exists in Berlin, for the express purpose of singing Volklieder. He himself states that, apart from the members of this choral society, he has given musical education to no less than 400 Prussian schoolmasters. While still at Moers he published some collections of Lieder harmonised by himself, and those now amount to forty, large and small—comprising chorals and other sacred and liturgical music—of which a list is given by Mendelssohn. Among them the most important is his 'Deutscher Liederhort,' of which vol. i. contains modern 'Volklieder,' and vol. ii., now in the press, those of the 13th-18th centuries. Jacob Grimm says of vol. i., 'Of all collections of our German Volklieder this is the fullest and most trustworthy.' Erk still continues his useful and indefatigable researches on this subject. In 1857 he was appointed director of music in the beginning of 1877 he resigned his post in the seminary at Berlin, and was succeeded by Diener. [F.G.]

ERNANI. Italian opera in 4 acts, by Verdi, founded on the Hernani of Victor Hugo; produced at Venice in March 1844. On its production at the Théâtre Italien, Paris—Jan. 6, 1846—the libretto was altered in obedience to the wish of Victor Hugo. The personages were changed from Spaniards to Italians, and the name of the piece was altered to 'IL Proscritto.' In England Ernani was first played at Her Majesty's Theatre, March 8, 1845.

ERNST, Heinrich Wilhelm, celebrated violin-player, was born at Brünn in Moravia in 1814. As a pupil of the Vienna Conservatorium he had Böhm for his master on the violin, and studied counterpoint and composition under Seyfried. He afterwards received instruction from Mayeder, and soon achieved great proficiency on his instrument. When sixteen he made his first tour and played with much success at Munich, Stuttgart and Frankfurt. At that time Pagani was travelling in Germany, and Ernst, greatly fascinated by this extraordinary artist, followed him from town to town in order to become familiar with the peculiarities of his style and technique. Towards the end of 32 he went to Paris, and lived there for six years, studying and repeatedly playing in public. Between 1838 and 44 he travelled over a great part of Europe, meeting everywhere with enormous success. On his appearing in Leipzig Schumann greeted him with one of those genial criticisms which are so characteristic of him ('Gesammelte Schriften,' Jan. 14, 1840.) On April 15, 1844 he made his first appearance at the Philharmonic, after which he regularly came to London for the season and soon settled there entirely. After some years however his health began to fail, and he had to give up playing in public. He died at Nice October 8, 1865, after a painful and protracted illness. Ernst's playing was distinguished by great boldness in the execution of technical difficulties of the most hazardous character. At the same time his cantilena was full of deep feeling, and his tone had a peculiar charm. The warm impulsive nature of the man was reflected in his fiery passionate style. But it must not be supposed that he was a mere virtuoso. Ernst was a thorough musician, and although critics have found fault with his reading of classical music, on the other hand very competent judges have pronounced him to have been an excellent quartet-player.

As a composer he started with salon-pieces and brilliant fantasias, which have not much intrinsic merit, but are extremely effective and well written for the instrument, and mostly very difficult. The 'Elégie,' which has had a long run of popularity, is perhaps the best specimen of the first, the fantasias on airs from Rossini's Otello, and on Hungarian airs, of the second kind. The Concerto in F sharp minor (op. 23) deserves special notice. It is a composition of no mean order, equally distinguished by the nobility of its ideas and its skilful treatment of the orchestra. That it is seldom heard is due to its enormous technical difficulties, which even Ernst himself did not always succeed in mastering. This work may well justify the assumption that Ernst, had he lived, might have made some valuable additions to the literature of the violin. The best-known among his compositions for the violin are: Deux nocturnes, op. 1; Elégie, op. 10; Fantasia on airs from Rossini's Otello, op. 11; Concertino in D, op. 12; Polonaise de Concert, op. 17; Variations on Dutch airs, op. 18; Introduction, caprice, and finale, on airs from II Pirata, op. 19; Rondo Papago, op. 30; Fantasia on Le Prophète, op. 24; Hungarian airs, op. 22; Concerto pathétique in F sharp minor, op. 23. In conjunction with S. Heller he wrote a number of very pretty duets for piano and violin, which were published under the title of 'Pensées fugitives.' He also published an imitation of Pagani's once famous 'Carnaval de Venise.' He wrote two string quartets, in Bb and A. The latter of these was his last work, and was played under Joachim's lead at the Monday Popular Concerts, June 6, 64. [F. D.]
EROTICA. The Sinfonia Erotica is the third of Beethoven’s Symphonies, the greatest piece of Programme music yet composed. The title is his own—‘Sinfonia erotica composita per festeggiaire il sovrinore di un grand’ uomo dedicata a sua Altezza Serenissima il Principe di Lobkowitz da Luigi van Beethoven. Op. 55. No. III. Partizione. Bona e Colonia presso N. Simrock.’ (N. B. the Italian: the titles of Symphonies 1 and 2 are in French.) But its original title was simply ‘Bonaparte.’ Louis van Beethoven. The subject was suggested to him—perhaps as early as 1798, two years before the known completion of the 1st Symphony—by Bernadotte, the French ambassador at Vienna; but there is no trace of his having set seriously to work at it till the summer of 1803. On his return to town in the autumn of that year he played the Finale to Mähler and Breuning (Thayer, ii. 235). Early in 1804 the work was finished, and the MS. lay on Beethoven’s table with the title-page as just given, waiting for transmission to the First Consul at Paris. But the news of Napoleon’s assumption of the title of Emperor reached Beethoven; his faith in his hero was at once destroyed, and he tore off the title in a rage. The cover of the MS. now in the Library of the ‘Gesellschaft der Musikfreunde’ at Vienna, a curious medley of ink and pencil—stands as given on page 183 of this work, and thus appears to have been an intermediate form between the original and the present title. But this point has not yet been investigated.

If we might venture to assume that Beethoven weighed his words as carefully as he did his notes, we might infer from the word ‘sovrenire’ in the final title that to him Napoleon, by becoming Emperor, had ceased to be a ‘hero’ or a ‘great man’ as much as if he were actually dead.

The work is in 4 movements: (1) Allegro con brio, Eb. (2) Marcia funebre. Adagio assai, C minor. (3) Scherzo and Trio. Allegro vivace, Eb. (4) Finale. Allegro molto; interrupted by a Poco Andante, and ending in a Presto, Eb.

Under EASTER the curious coincidence between the subject of the 1st movement and that of an early overture of Mozart’s has been pointed out. This movement may be a portrait of Bonaparte; it is certainly one of Beethoven himself. The Coda forms a epoch in composition.

The subject of the Scherzo is said by Marx (L. v. B. Leben & Schaff en i. 273) to be a Volkslied, beginning as follows:

```
| F | m /| | | | |
```

und was ich das Tage mit der Leit or ver did.

But this requires confirmation. There is reason to believe that Beethoven used the Austrian Volkslieder as themes oftener than is ordinarily suspected; but this one at least has not yet been identified with certainty.

The Finale is a set of variations, the theme of which, whether a Volkslied or not, was a singular favourite with Beethoven. He has used it 4 times, in the following order: (1) in the finale of Prometheus (1800); (2) in a Contretanz (1802); (3) as theme of a set of variations and a fugue, for Piano solo (op. 35, 1802); and (4) in the Symphony. The intention of this Finale has been often challenged, and will probably never be definitely ascertained; but the Poco andante, which interrupts the Allegro molto, and to which all the latter might well be a mere introduction, is at once solemn enough and celestial enough to stand for the apotheosis of a hero even as great as the one portrayed in the first movement.

The Symphony was purchased by Prince Lobkowitz. There is an interesting story of its having been played three times in one evening by the Prince’s band, to satisfy the enthusiasm of Prince Louis Ferdinand of Prussia, passing through Vienna in strict incognito; but the first known performance (semi-private) was in Dec. 1804, when it was preceded by the previous 2 Symphonies and the Pianoforte Concerto in C minor. The first public performance was at the Theatre ‘an der Wien’ on Sunday evening, April 7, 1805, at a concert of Clement’s, where it was announced as in D, and was conducted by Beethoven. Czerny remembered that at this performance some one in the gallery called out ‘I’d give a kreutzer, if it were over.’ In England it was played by the Philharmonic Society at the 2nd concert of the 2nd year—Feb. 28, 1814—and is announced as ‘containing the Funeral March.’ In France it was the opening work of the first concert of the Société des Concerts (Conservatoire), March 9, 1828. It was published by Simrock of Bonn, the publisher of the first 4 Symphonies, Oct. 29, 1806.

The unusual length of the Eroica is admitted by Beethoven himself in a memorandum prefixed to the original edition, in which he requests that it may be placed nearer the beginning than the end of the Programme—say after an Overture, an Air, and a Concerto—so that it may produce its proper and intended effect on the audience before they become wearied. He has also given a notice as to the 3rd horn part, a very unusual condensation on his part.

[...]

ERTMANN, THE BARONET. This lady, whose maiden name was Dorothea Cicilia Graumann, of Offenbach near Frankfurt, will go down to posterity as an intimate friend of Beethoven’s, and one of the most competent interpreters of his pianoforte music during his lifetime. She passed many years in Vienna. We hear of her there from Reichardt1 in Feb. 1809, when her husband was major of the ‘Hoch-und-deutschmeister’ infantry regiment. Reichardt met her at her sister’s, Mme. Franke’s, and at Zmeskill’s, and heard her play the Fantasia in C# minor (op. 27, no. 2) and a Quartet (perhaps an arrangement of the Quintet, op. 16); and his description implies that she had both great power and great delicacy of expression, and a beautiful singing tone. On the second occasion Clementi was present, and was so far surprised out of his usual taciturnity as to exclaim more than once ‘Elle joue en grand

maitre.' The Trio in D (op. 70) and the Sonata in E (op. 90) were also pieces of hers; and her playing of the Largo in the former and the 2nd movement in the latter are spoken of by Schindler as 'marvels of expression in different directions' (i. 247). In 1830 she was still in Vienna, and we have another report of her from W. E. Müller, of Bremen, who met her at the house of G. Müller, with four other ladies, all good players, but whom, in his opinion, she far surpassed, not so much in execution as in her rendering of the intention and character of the music, and in fancy and expression. Between these two dates she had had lessons from Beethoven, and had become very intimate with him. He visited the Ertmanns in the evenings, and she would play to him, while he made himself thoroughly at home.

Meine liebe werthe Dorothea Cáscilla' is the beginning of the only letter from him to her yet published, in which he conveys to her the dedication of the noble and imaginative Sonata in A, op. 101, which bears her name. During the Ertmanns' stay in Vienna she lost a child. Beethoven at first discontinued his visits, but after a length asked her to call on him, and saying 'we will talk in music,' played to her for more than an hour, 'in which he said everything; and at length even gave me comfort.'

It was the happy lot of Mme. von Ertmann, after having been thus intimate with one great composer, to make the acquaintance of another. Rather more than four years after Beethoven's death the regiment moved from Vienna to Milan, and General Ertmann became commandant; and there, in July 1831, she received a visit from Mendelssohn, then on his return from Rome. The account may be read in Mendelssohn's own delightful language in his Reisebriefe. She played him the C minor Fantasia and the Sonata in D minor (op. 31, no. 2), and his verdict is quite in accord with those we have already heard. 'She plays the Beethoven things very beautifully, although it is so long since she studied them; true, she often forces the expression a little, now retarding, and then again hurrying; but certain pieces she plays splendidly, and I think I have learnt something from her.'

In 1844, Mme. Ertmann was again living in Vienna, where Moscheles met her, and induced her to play him the C minor Fantasia (ii. 123). She died there in 1848, about 70 years old. [G.]

ESCUDEIR, MARIE, born June 22, 1819, and Lyon; born Sept. 17, 1821, at Castelnaudary, two brothers famous as littérateurs on music. They were the founders of 'La France musicale' (1839), a weekly musical periodical, and joint authors of 'Études biographiques sur les chanteurs contemporains' (Paris, Tissier, 1849); 'Rosetti sa vie et ses œuvres' (Paris 1854); and 'Vie ... des cantatrices célèbres' (Paris 1856), which contains a life of Paganini. Their 'Dictionnaire de musique' (5th ed., 1872) is compact but very unequal work, many articles in

which are admirable, while others can be of no interest to any one. [M.C.C.]

ESLAVA, MIGUEL HILARIO, distinguished Spanish musician, born Oct. 11, 1867, near Pamplona, where he was called a chorister. In 1874 he was appointed violinist in the cathedral at Pamplona, and in 1878 chapel-master at the monastery of that Osuna. Here he was ordained deacon, and took priest's orders when chapel-master at the metropolitan church of Seville (1832). In 1841 he produced at Cadiz his first opera, 'Il Solitario,' speedily followed by 'La Tregua di Ptolemaido' and 'Pedro el Cruel,' which were successfully performed in several Spanish towns. In 1844 he was appointed chapel-master to Queen Isabella. He has composed over 140 pieces of church music, including masses, motets, psalms, etc. The work by which he will live is his 'Lira sacro-hispánica' (Madrid, Salazar, 1869, 10 vols.), a collection of Spanish church music of the 16th-17th centuries with biographical sketches of the composers. Some of his organ music appears in another collection, his 'Musica organico español' (Madrid). His 'Metodo de Solfeo,' vol. 1, has been adopted throughout Spain. His 'Introducción a la armonía y composición,' in 3 parts, harmony, composition, and melody, the fruits of many years' labour, appeared at Madrid in 1861 (2nd ed.). He also edited the 'Gaceta musical de Madrid,' a periodical of considerable interest.

Eslava died July 23, 1878.

The following are the contents of the 'Lira sacro-hispánica':

VOL. I (1861).

Ramos. Ave Regina. 4 voices.
Do. Magnificat.
Anon. Domine Jesu.
Fevit, A. Sancius.
Do. Benedictus.
Do. Agnus.
Do. Deo.
Do. Ascedunt Christi.
Fajenla, F. Scansucci.

ESSER, HEINRICH, born at Mannheim 1818, appointed concert-meister 1838, and then musical director in the court-theatre at Mannheim; was for some years conductor of the 'Liedertafel' at Mayence, and in 1847 succeeded O. Nicolai as Kapellmeister of the Imperial Opera, Vienna, where he was honoured as an artist and beloved as a man. In November 1869, shortly after becoming art-member of the board of direction of the Opera, he was compelled by ill-health to resign, and retired on a considerable pension to Salzburg, where he died June 3, 1872. The Emperor honoured his memory by granting an annuity to his widow and two young children. Esser's character was elevated, refined, and singularly free from pretension, and his compositions bear the same stamp, especially his melodic and thoughtful 4-part songs for men's voices. As a conductor he was admirable —conscientious, indefatigable, and in thorough sympathy with his orchestra, by whom he was adored. Wagner showed his appreciation by entrusting him with the arrangement of his 'Meistersinger' for the piano. Esser was the first to discern the merit of Hans Richter, whom, while a member of his band, he recommended to Wagner as a抄写ist and arranger, and who, ultimately justified the choice by succeeding Esser at the Opera in May 1857.

As a composer Esser was industrious and successful. His works contain scarcely a commonplace thought, and much earnest feeling, well and naturally expressed. The stage was not his forte, and though three of his operas were produced —'Silas' (Mannheim, 1859), 'Riquiqui' (Aix-la-Chapelle, 43), and 'Die beiden Prinzen' (Munich, 44)— they have not kept the boards. His compositions for the voice are numerous and beautiful—some 40 books of Lieder, 2 of duets, 4 of choruses for men's voices, and 2 for mixed ditto, etc.—and these are still great favourites. His symphonies (Op. 44, 79) and Suites (Op. 70, 75), and orchestral arrangements of Bach's organ works (Passacaglia, Toccata in F), performed by the Philadelphia Society in Vienna, are published by Schott, and a string-quartet (Op. 5) by Simrock. [C.F.F.]

ESTE, EAST, or EASTE (as he variously spelled his name), Michael, Mus. Bac., is conjectured to have been a son of Thomas Este, the noted music printer. He first appeared in print as a composer, in 'The Triumphs of Oriana,' 1601, to which he contributed the madrigal, 'Hence, stars, too dim of light.' In 1604 he published a set of Madrigals, which was followed in 1616 by a second set; the preface to which is dated 'From Ely House in Holborne,' whence it may be inferred that he was then a retainer of Lady Hatton, the widow of Sir Christopher Hatton. In 1610 he published a third set of Madrigals. Between that date and 1618, when he published a set of Madrigals, Anthems &c., and a set of three-part songs, he had obtained his bachelor's degree and become Master of the Choristers of Lichfield Cathedral. In 1624 he published a set of Anthems, from the dedication of which to 'John Williams, Bishop of Lincoln and Keeper of the Great Seal,' we learn that that prelate some time before, on hearing one of Este's motets, had voluntarily settled an annuity on its composer, personally a stranger to him. Este's last publication was a set of Duos and Fancies for Viols, which appeared in 1638, and was many years afterwards re-issued by John Playford with a new undated title-page. One of the 3-part madrigals in Este's second set, 'How Merrily we live,' retained its popularity down to our days. [W.H.H.]

ESTE, EST, or EAST (as the name was variously spelled), THOMAS, was (having regard to the number of works printed by him) one of the most important of our early music typographers and publishers. He was probably born in the earlier part of the latter half of the 16th century. The first work printed by him with which we are acquainted was Byrd's 'Psalmes, Sonets and Songs of sadness and pietie,' which appeared in 1588, he then 'dwelling by Paules Wharf,' and describing himself as 'the Assigne of W. Byrd'; i.e. assignee of the patent granted to the latter for the sole printing of music and ruled music paper. In the following year Este removed to Aldergate Street, where he published at the sign of the Black Horse. In 1592 he edited 'The Whole Book of Psalmes, with their wonted tunes, in four parts.' The composers employed by him to harmonise the tunes were some of the most eminent men of the day, being ten in number, viz.: Richard Alison, E. Blanches, Michael Cavendish, William Cobbold, John Dowland, John
ESTE. Farmer, Giles Farnaby, Edmund Hooper, Edmund Johnson and George Kirby. Two other editions of the work were published in 1604 and 1606. This collection was the first in which some of the tunes were called by distinctive names—'Glassenburie,' 'Kentish,' and 'Cheshire.' Este was a member of the Company of Stationers, to which he was admitted in 1604. He gave a piece of plate of 31 oz. weight to be excused from serving some office of the Company. In the early part of 1609 he described himself on the title-pages of his productions as 'Thomas Este alias Snodham,' and before the end of the year and ever after used the latter name.

In 1600 he described himself as 'The Assignee of Thomas Morley,' and in 1609 as 'The Assignee of William barley,' having acquired the interest in the patent granted to Morley in 1598 and by him assigned, or perhaps only licensed, to barley. The latest work known to have been printed by Este appeared in 1614, and it is probable that he died shortly afterward. His widow, Lucretia Este, died in 1631, having bequeathed £20 to purchase a piece of plate to be presented to the Stationers' Company. The most important works published by Este were—

ESTES, in N. E. Italy, between Padua and Rovigo. Two musical academies—'Dagli Eccessi' and 'Dagli Atestini'—were established in Este in 1575. The family of the Este, always liberal patrons of the fine arts, encouraged especially the revival of music. Francesco Patrizi, a professor in the latter of these two academies (born 1530—died 1593), in dedicating one of his works to Lucretia d'Este, daughter of Ercolo II, the reigning Duke, ascribes the revival of music in Italy to the House of Este, because Guido d'Arezzo was a native of Pompoea in their dominions, and because such famous musicians as Fogliano, Giussino (Josequin), Adriano, and Cipriano, first found favour and support from the dukes of Este. [C.M.P.]

ESTHER. Handel’s first English oratorio; words by S. Humphreys, founded on Racine’s Esther. Written for the Duke of Chandos, who paid Handel £1000 for it, and first performed at Cannons Aug. 29, 1720. Performed again, in action, under Bernard Gates—in private Feb. 23, 1732, and in public at the King’s Theatre, Haymarket, May 2, 32, with „additions” not specified. It was occasionally performed up to 1757 (when „My heart is inditing” and „Zadok the Priest” were interpolated into the performance), and then lay on the shelf till Nov. 6, 1875, when it was revived at the Alexandra Palace. The overture was for long played annually at the „Festival of the Sons of the Clergy” at St. Paul’s.

ESTWICK, REV. SAMPSON, B.D., born 1657, was one of the children of the Chapel Royal under Captain Henry Cooke. Upon quitting the chapel on the breaking of his voice he went to Oxford, took holy orders and became one of the chaplains of Christ Church. In 1692 he was appointed a minor canon of St. Paul’s. On Nov. 27, 1696, he preached at Christ Church, Oxford, „upon occasion of the Anniversary Meeting of the Lovers of Musick on St. Cecilia’s day,” a sermon upon „The Usefulness of Church Music,” which was printed in the following year. In 1701 he was appointed vicar of St. Helen’s, Bishopsgate, which he resigned in 1714 for the rectory of St. Michael, Queenhithe. Estwick composed several odes for performance at the Acts at Oxford, and other pieces still in MS. He died Feb. 1739. [W.H.F.]

ETOILE DU NORD, L’, opera in 3 acts, principal characters Peter the Great and Catherine; words by Scribe, music by Meyerbeer, comprising many numbers from his „Feldlager in Schlesien.” Produced at the Opéra Comique Feb. 16, 1854; and in England, as „La Stella del Nord,” at Covent Garden, July 19, 1855.

ÉTUDES, studies, exercises, sonatas, caprices, lessons. The large number of works extant under these heads for pianoforte, violin, violoncello, and in sundry instances for other orchestral instruments, are in large measure mere supplements to the respective instruction-books. They may be divided into two kinds—pieces contrived with a view to aid the student in mastering special mechanical difficulties pertaining to the technical treatment of his instrument, like the excellent pianoforte Études of Clementi and Cramer; and pieces wherein, over and above such an executory purpose, which is never lost sight of, some characteristic musical sentiment, poetical scene, or dramatic situation susceptible of musical interpretation or comment is depicted, as in certain of Moscheles’ „Charakteristische Studien,” or the Études of Chopin, Liszt, or Alkan.

The distinction between these two classes of études closely resembles the difference recognised by painters between a tentative sketch for a figure, a group, or a landscape, which aims at rendering some poetical idea whilst attending particularly to the mechanical difficulties accruing from the task in hand, and a mere drawing after casts or from life with a view to practice and the attainment of manipulative facility.

An étude proper, be it only a mechanical exercise or a characteristic piece, is distinguished from all other musical forms by the fact that it is invariably evolved from a single phrase or motif, be it of a harmonic or melodious character, upon which the changes are rung. Thus many of Bach’s Preludes in the „wolfslempirerte Clavier,” and the like, could be called études without a misnomer.
The most valuable études for the pianoforte are the following:—

I. CLASSICAL SCHOOL.

BACH.
Inventions—À deux et à trois
parties. 100 Études.

CRANE.

CLEMENTI.
Grades ad Parnassum. Préludes et exercices dans tous les tons.
Touchés in 8.Used.

MOSCHELES.
26 Études, op. 70. Characteristische Studien, op. 26.

II. MODERN SCHOOL.

CHOPIN.
Trois Études. C.
26 Préludes.
Prélude in C$ minor.

HENSELT.

THALBERG.
12 Études.

LIETZ.
Grande Étude de Pagani, trans. orce, etc.

EBENSTEIN.
6 Études.

Besides these there exists an enormous number of études with comparatively little educational and less artistic value, which are for the most part written to the order of publishers, from whose shops they find their way to the schoolrooms and salons of amateurs; such are those by Czerny, Steinbalt, Hummel, Kessler, Bertini, Mayer, Döhler, Schulhof, Ravis, etc. [E.D.]

Of Études for the VIOLIN, the following four works are considered indispensable for the formation of a good technique and correct style, by the masters of all schools of violin-playing:—

R. Kreutzer, 40 Études or Caprices.
Fiorillo, Étude de Violon, formzat 36 caprices.
P. Rode, Vingt-quatre Caprices.
N. Pagani, 24 Caprices, op. 1.

to which may be added Gaviniës' 'Vingtquatre matinées.'

Of more modern études, those of Dott. Ferd. David, Alard, and Wieniawy, are amongst the most valuable. The violin-schools of Spohr, Ries, and others, also contain a great many useful études. Some movements from Bach's Solo Sonatas, such as the well-known Prélude in E major, fall under the same category. [P.D.]

EULENSTEIN.
CHARLES, was born in 1802 at Hellbronn, in Wurttemberg. His father was a respectable tradesman; but nothing could deter the son from following his strong predilection for music. After enduring all sorts of privations and ill-success, he appeared in London in 1827, and produced extremely beautiful effects by performing on sixteen Jew's-harps, having for many years cultivated this instrument in an extraordinary manner. [JEW'S HARP.] The patronage of the Duke of Gordon induced him to return in 1828; but he soon found that the iron Jew's-harp had so injured his teeth that he could not play without pain, and he therefore applied himself more and more to the guitar. At length a dentist contrived a glutinous covering for the teeth, which enabled him to play his Jew's-harp again. He was very successful in Scotland, and then went to Bath, to establish himself as teacher of the guitar, concertina, and the German language. After remaining there a considerable time he returned to Germany, and is now (1828) living at Günzburg, near Ulm. [V.deP.]

EUPHONIUM. A name given to the bass instrument of the Saxhorn family, usually tuned in Bb or C. It only differs from the bassone Saxhorn in the larger diameter of its bore, which thus produces a louder and somewhat deeper quality of tone. It is usually furnished with four valves, sometimes even with five, the first three worked by the fingers of the right hand, and severally depressing the pitch by a semitone, a tone, and a minor third; the fourth by the left hand applied to a different part of the instrument, and lowering the pitch by two tones and a semitone.

From the gradual disuse of the Serpent and Ophicleide, the Euphonium is becoming the chief representative of the eight-foot octave among the brass instruments; with the exception of the few notes attainable on the French horn in that register. In quality it is however less sympathetic than its forerunners, and less able to blend with the stringed instruments. It therefore serves chiefly as a solo instrument, in which capacity it affords considerable support to the brass or military band. It possesses the usual harmonic series of open notes. Its compass is to a considerable degree dependent on the lip of the individual player. The fundamental note is obviously C or Bb according to the pitch of the instrument, and the gap between this and the next harmonic above is more or less bridged over according to the number of the valves. The valves also admit of being used, together or separately, as integral parts of the tube, thus lowering the fundamental tone obtained, even to the extent of an octave.

The upper limit may be generally described as three octaves above the fundamental before named, although accomplished players obtain sounds very much more acute. It is usually written in the bass clef, and in orchestral usage the real notes are given. If the instrument be in C, which it commonly is, no change is necessary; if however it be a Bb instrument, the whole scale has to be really and systematically raised through the interval of a tone. [See TRANSPOSING.] Some French writers, however, transpose the part exactly as is done for the clarinets and cornet.

The Euphonium being a modern invention, is not written for by the older composers. It is however freely employed in more recent instrumentation. [W.H.S.]

EURYANTHE. The 6th of Weber's 7 operas. Text by Helmine von Chezy. Overture completed Oct. 19, 1823; produced Oct. 25, 23, at the Kärnthnerthor theatre, Vienna; in London, at Covent Garden, June 29, 33; at Paris, Grand Opéra, April 6, 1831, with interpolations from Oberon; at Théâtre Lyrique, with new libretto, Sept. 1, 57. The opera is damaged by its libretto, and is too little known. [G.]
EVANS, Charles Smart, born 1778, was a chorister of the Chapel Royal under Dr. Ayerton. On arriving at manhood he became the possessor of an unusually fine alto voice. On June 14, 1808, he was admitted a gentleman of the Chapel Royal. He was the composer of some anthems (two of them printed), and of many excellent glees and other pieces of vocal harmony, most of which have been published. In 1811 the Glee Club awarded him a prize for his Cheerful Glee, 'Beauties, have you seen a teacup?' and in the following year a second for his 'Fill all the glasses.' In 1814 he carried off the prize offered by the Catch Club for the best setting of William Linley's Ode to the Memory of Samuel Webbe, the eminent glee composer. In 1831 he obtained another prize for his glee, 'Great Bacchus.' He also produced several motets for the use of the choir of the Portuguese Ambassador's chapel in South Street, Grosvenor Square (of which he was a member), some of which are printed in Vincent Novello's Collection of Motets. Evans died Jan. 4. 1849. [W.H.H.]

EVERS, Carl, pianist and composer, born at Hamburg April 8, 1819, made his first appearance when 13, and shortly after went on long professional tours. Returning to Hamburg in 1837 he studied composition under Carl Krebs. On a visit to Leipzig in 1838 he made the acquaintance of Mendelssohn, whose influence affected him greatly, and started him in instrumental compositions on an extended scale. In the following year he went to Paris, and was kindly received by Chopin and Aubert, where he remained for some time working hard. In 1841 he was appointed chapel-master at Grätz, where he started a music business, taught, and otherwise exercised his profession. Since 1872 he has resided in Vienna. His compositions comprise 4 pianoforte sonatas, of which those in B minor, Bb, and D minor were much esteemed; 'Chansons d'amour' for Piano; fugues; fantasias; solo and part-songs, etc., etc. Haslinger of Vienna and Schott of Mayence are his publishers. His sister KATINKA, born 1822, was favourably known as an operasinger in Germany and Italy. [M.C.C.]

EXIMENO, Antonio, Spanish Jesuit, born 1733 at Balbastro in Arragon. Having studied mathematics and music at Salamanca he became professor of both sciences at Segovia. On the expulsion of the Jesuits from Spain he settled in Rome, and died there in 1798. His work 'Dell' origine della musica, colla storia del suo progresso, decadenza e rinnovazioni' contains the germ of the theories afterwards elaborated by Wagner, and at the time raised a host of polemical writings, to which even Padre Martini contributed his share. He proposed to abolish the strict laws of counterpoint and harmony, and apply the rules of prosody to musical composition. He was the first scientific exponent of the doctrine that the aim of music is to express emotion, and thus exercised considerable influence on musical aesthetics. His contemporaries stigmatized his book as an 'extraordinary romance, in which he seeks to destroy music without being able to reconstruct it'—a verdict which curiously anticipates that often passed upon Wagner in our own day. [F.G.]

EXTEMPORE PLAYING. The art of playing without premeditation, the conception of the music and its rendering being simultaneous. The power of playing extemore evinces a very high degree of musical cultivation, as well as the possession of great natural gifts. Not only must the faculty of musical invention be present, but there must also be a perfect mastery over all mechanical difficulties, that the fingers may be able to render instantaneous what the mind conceives, as well as a thorough knowledge of the rules of harmony, counterpoint, and musical form, that the result may be symmetrical and complete.

This being the case it is not surprising that the greatest extemore players have usually been at the same time the greatest composers, and we find in fact that all the great masters, including Bach, Mozart, and Beethoven, have shown much fondness for this form of art, and have even exercised it in public. Mozart improvised in public at the age of 14, as is shown by the programme of a concert given as an exhibition of his powers by the Philharmonic Society of Mantua on Jan. 16, 1770, which included an extemore sonata and fugue for the harpsichord, and a song with harpsichord accompaniment, to be sung to words given by the audience.

These extemporaneous performances were sometimes entirely original, but more frequently consisted of the development (often in the form of a fugue) of a theme given by the listeners, and they not unfrequently took the form of a competition between two players, each giving the other subjects on which to extemporise. Thus when Louis Marchand, banished from France, came to reside in Dresden in 1717, and was about to receive the appointment of organist to the King of Poland, Volumin, the court conductor, fearing Marchand as a rival, invited Bach to appear at a court concert in competition with him. Accordingly, after Marchand had played with great applause a French air with variations, Bach took his place, and extemporised a number of new variations on the same theme, in such a manner as incontrovertibly to prove his superiority.

Sometimes two players would extemporise together, either on one or two pianofortes. This appears to have been done by Mozart and Clementi at Vienna in 1781, and also by Beethoven and Wölfl, who used to meet in 1798 at the house of Freiherr von Wetzel, and, seated at two pianofortes, give each other themes upon which to extemporise, and, according to Seyfried ('Thayer, ii. 27), 'created many a capriccio for four hands, which, if it could have been written down at the moment of its birth, would doubtless have obtained a long existence.'

It is probable that in most of these competitions the competitors were but ill-matched, at least

1 The German term is curious—ese des Regreifs—'from the stink.'
EXTEMPOR PLAYING.

when one of them happened to be a Bach or Beethoven; and the wonder is that men were found willing to measure their strength against such giants. Occasionally their presumption was rebuked, as when Himmel extemporised before Beethoven in 1796, and Beethoven having listened for a considerable time, turned to Himmel and asked 'Will it be long before you begin?' Beethoven himself excelled all others in extempore, and according to the accounts of his contemporaries his playing was far finer when improvising than when playing a regular composition, even if written by himself. Czerny has left a most interesting account of Beethoven's extempor play, which is quoted by Thayer (ii. 347), and is worth reproducing here, since it helps us to realise to some extent the effect of his improvising. Czerny says — 'Beethoven's improvisation, which created the greatest sensation during the first few years after his arrival at Vienna, was of various kinds, whether he extemporised upon an original or a given theme. 1. In the form of the first movement or the final rondo of a sonata, the first part being regularly formed and including a second subject in a related key, etc., while the second part gave freer scope to the inspiration of the moment, though with every possible application and employment of the principal themes. In allegro movements the whole would be embellished by braceura passages, for the most part more difficult than any in his published works. 2. In the form of variation somewhat as in his Choral Fantasia, op. 80, or the last movement of the 9th Symphony, both of which are accurate realisations of this kind of improvisation. 3. In mixed form, after the fashion of a potpourri, one melody following another, as in the Fantasia op. 77. Sometimes two or three insignificant notes would serve as the material from which to improvise a complete composition, just as the Finale of the Sonata in D, op. 10, No. 3, is formed from its three opening notes.' Such a theme, on which he had 'göttlich phantasirt' at Count Browne's house, has been preserved (Nohl's 'Beethoven's Leben,' iii. 644):

Another given him by Vogler was the scale of C major, 3 bars, alia breve (Thayer, ii. 260).

Since Beethoven many great musicians have extemporised in public—Mendelssohn, Hummel, Moscheles, and, on the organ, our own Wesley, have all been celebrated for their improvisations; but the practice of publicly extemporising, if not extinct, is now very rare. Mendelssohn himself, notwithstanding his uniform success, disliked doing it, and in a letter to his father, written in Oct. 1831 (Reisebriefe, p. 283), even declares his determination never to extemporise in public again; while Hummel on the other hand says

('Art of playing the Pianoforte') that he 'always felt less embarrassment in extemporising before an audience of 2000 or 3000 persons than in executing any written composition to which he was slavishly tied down.' Even the Cadence of a concerto, which was once the legitimate opportunity for the player to exhibit his powers of improvisation, is now usually prepared beforehand. [F.T.]

EXTEMPORISING MACHINE. An invention for printing the notes of an extemporaneous performance, by means of mechanism connected with the keyboard of a pianoforte or organ. The idea of being able to preserve the improvisations of great musicians is certainly an attractive one, and has often engaged the attention of mechanicians, but without any very practical result. The earliest endeavour in this direction appears to have been made by an English clergyman named Creed, who wrote a 'Demonstration of the Possibility of making a machine that shall write Extempore Voluntaries or other Pieces of Music as fast as any master shall be able to play them upon an Organ, Harpsichord, etc.' This was communicated by John Freke to the Royal Society, after Creed's death, and was published in the Philosophical Transactions for 1747, vol. xlv. part ii. p. 445. A similar invention, called the Molograph, was conceived by Euler the mathematician, and was constructed according to his directions by Hohlfield of Berlin, about 1752. It consisted of two revolving cylinders with a band of paper passing over them, on which the notes were marked by means of pencils attached to the action of a pianoforte, their duration being shown by the relative length of the lines formed. The machine was placed in the Academy of Arts and Sciences at Berlin, but was subsequently destroyed in a fire. The priority of invention of the Molograph was disputed by Unger, of Kleinbeck, who, in a long correspondence with Euler (afterwards published), states that the idea occurred to him as early as 1745. There have also been several more modern inventions for the same end, notably one by Pape of Paris in 1834, which attracted much notice at the time; but the difficulty of expressing the varying rhythms of an elaborate piece of music by mechanical means has hitherto proved insurmountable. [F.T.]

EXTRAVAGANZA. Any work of art in which accepted forms are caricatured, and recognised laws violated with a purpose. A musical extravaganza must be the work of a musician familiar with the forms he caricatures and generally amenable to the laws he violates. Mozart's 'Musikalischer Spass' (Köchel, No. 522) is an instance on a small scale. The pantomime overture would seem to be the most legitimate field for the exercise or gratification of musical extravagance. In this, ludicrous effects might be produced by assigning passages to instruments inapt though not altogether incompetent to their execution; by treating fragments of familiar tunes contrapuntally, and the like. Perhaps no field for musical invention has been less worked than that of extravaganza. Of no

---

1 A less definite, but still highly interesting, account of his improvisations is given by Nohl in Nohl's 'Beethoven nach den Schilderungen seiner Zeitgenossen' (1877).
class of music does there exist so little as of that which is ludicrous in itself, and not dependent for its power of exciting risibility on the words connected with it, or the circumstances under which it is heard. Haydn's 'Toy symphonies are in a certain sense extravaganzas. His 'Farewell Symphony,' though open to a ludicrous interpretation, is, as Mendelssohn truly said of it, a melancholy little piece." Indeed, as orchestras now are, it cannot be performed as intended. Mendelssohn's own Funeral March for Pyramus is an exquisite piece of humour. [J. H.]

EYBLER, JOSEPH EDLER VON, Capellmeister to the Emperor of Austria, born at Schwechat, near Vienna, Feb. 8, 1765. His father, a schoolmaster and choir-master, taught him singing and the principal instruments, and a place was procured for him in the boys' seminary at Vienna. While there he took lessons (1777-79) from Albrechtsberger. On the dissolution of the seminary in 1782, Eybler turned his attention to the law, but was driven by the sudden impoverishment of his parents to earn his bread by music. Haydn now proved a true friend, not only encouraging him in his studies but recommending him to Artaria the publisher. In the meantime some of his symphonies were performed, and both Haydn (1787) and Mozart (1790) testified to his ability as a composer and his fitness for the post of Capellmeister. Eybler nursed Mozart during his last illness, and after his death it was to him that the widow at once committed the task of completing the Requiem. He accepted the charge in a letter dated Dec. 31, 1791, and began the work, but soon gave it up. He was appointed choir-master to a church in the suburbs in 1792, and in 1794 to the 'Schotten' monastery in Vienna itself. About this time his first work, 3 String Quartets dedicated in Italian to Haydn, was published by Treeg. In 1810 he was appointed music-master to the imperial children, in 1804 vice-capellmeister, and, on Salieri's retirement in 1824, chief capellmeister. In 1834 he was ennobled by the Emperor, whose meetings for quartet practice he had regularly attended. A year before he had been obliged to give up the exercise of his profession owing to a paralytic stroke while conducting Mozart's Requiem. He died July 24, 1846.

As a composer Eybler restricted himself entirely to sacred music, Mozart having confirmed his own conviction that his disposition was too simple and quiet for the intrigues and conflicts of the stage. For the 'Tonkünstler Societät,' of which he was many years president, he wrote the cantata 'Die Hirten bei der Krippe' (1794); and for the Emperor 'Die vier letzten Dinge,' an oratorio first performed at court (1810) and afterwards by the Tonkünstler-Societät. His printed works—chamber-music, pieces for pianoforte and other instruments, vocal music, and several symphonies—were favourites in their day, but his church-music is of greater value. Here, the devotional spirit with which the whole is penetrated, the flow of the voice-parts, and the appropriate if at times too powerful instrumentation—all remind us of Michael Haydn at his best. His best work, the Requiem in C minor, which is fine as a whole and even sublime in parts, has been brought into notice by Kochlitz (Allg. mus. Zeitung 1836, No. 19). Haslinger published the Requiem, 7 Masses, 2 Te Deums, 13 Offertories, Graduals, and Vespers, the greater part of which are still in use. Eybler's quiet life, undisturbed by jealousy or envy, made him respected by high and low. For many years he held an honourable post, and saw the great heroes of his art, Gluck, Mozart, Haydn, Beethoven, and Schubert, carried to the grave. —In England Eybler is hardly even a name; and it is probable that in the numerous and extensive collections of pieces and arrangements of Hullah, Novello, Best, Cooper, etc., not a single composition of his is to be found. [C. F. P.]

---

F

The 4th note of the natural scale, with Bb for its signature. In French and in solfegi, Fa. D is its relative minor.

The F minor is the base clef, the sign of which is a corruption of that letter.

F minor has a signature of 4 flats, and Ab is its relative major.

F is the tonic of the Aeolian church mode, with C for its dominant.

F# is in German Fis, in French Fa dièse. Beethoven has very much favoured these keys, having left 2 Symphonies (Pastoral and No. 8), 3 String Quartets (the 1st and last, and Rassomoffsky, No. 1), 2 F. F. Sonatas, etc., in F major, Overture to Egmont, Sonata appassionata, Quartet, op. 95, in F, in Haydn, on the other hand, very seldom composed for the orchestra in this key, major or minor.

F# is more rarely used; but we may mention Haydn's Farewell Symphony; a F. F. Sonata (op. 78) by Beethoven, for which he had a peculiar affection; and a charming Romance of Schumann's (op. 28).

f, for, or forte, is the well-known sign for loudness.

The holes in the belly of the violin are called the /f/ holes from their shape. [G.]

FABRI, ANNIBALE PIO, DETTO BALIMO, one of the most excellent tenors of the 18th century, was born at Bologna in 1697. Educated musically by the famous Pistocchi, he became the favourite of the Emperor Charles VI, and other Princes sought to engage him in their service. He was also a composer, and member of the Accademia Filarmonica of Bologna; received into that society in 1719, he was named its Prin-
of one has not passed from the mind before the other comes to contradict it with a new accidental, as at (b).

The disagreeable effect is produced by the contradictory accidentals belonging to different keys, or unequivocally to major or minor of the same key; and it follows that when the contradiction is between notes which can coexist in the same key the effect is not disagreeable. Thus chromatic passing notes and appoggiaturas do not affect the key, and are used without consideration of their apparent contradictions. Schumann uses the sharp and natural of the same note in the same chord in his 'Andante und Variationen' for two pianofortes, op. 46 (a), and Haydn uses the same in his Quartet in D, op. 71 (b).

Again, notes which are variable in the minor key do not produce any objectionable effect by their juxtaposition, as the minor 7th descending and the major 7th ascending or stationary; thus Mendelssohn in the Overture to 'Ruy Blas' has B♭ and B♮ in alternate chords.

And the treatment of notes which are interchangeable in chromatic and diatonic chords in the same key is equally free, as between a chromatic note of the chord of the augmented sixth and a succeeding diatonic discord.

The rule is further modified by so many exceptions that it is almost doubtful if the cases in which the effect is objectionable are not fewer than those in which it is not.

FALSETTO. The voices of both men and women contain two—or, as defined in the 'Méthode du Chant du Conservatoire de Musique,' three—registers, viz. chest voice (voce di petto); head voice (voce di testa); and a third which, as being forced or non-natural, is called by Italians and French faletto or fauset, or 'false' voice. The limits of these are by no means fixed. In every voice identical notes can be produced in more ways than one, and thus each register can be extended many degrees beyond its normal
limits. But it is all but impossible for a singer to keep both first and third registers in working order at the same time. The male counter-tenor, or alto voice, is almost entirely falsetto, and is generally accompanied by an imperfect pronunciation, the vowels usually partaking more or less of the quality of the Italian u or English oo, on which the falsetto seems to be most easily producible.

The earliest mention of the falsetto in musical Europe is in reference to the Sistine Chapel, where Spaniards exceptionally gifted with this voice preceded that artificial class to whom since the 16th century alto and even soprano parts have been assigned.

[J.H.]

FALSTAFF. A comic Italian opera in 2 acts; words by Maggioni, music by Balfe. Produced at Her Majesty’s Theatre July 19, 1838.

FANDANGO. An Andalusian dance, a variety of the seguidilla, accompanied by the guitar and castanets. In its original form the fandango was in 6-8 time, of slow tempo, mostly in the minor, with a trio in the major; sometimes, however, the whole was in a major key. Later it took the 3-4 tempo, and the characteristic Spanish rhythm \( \frac{4}{4} \). In this shape it closely resembles the seguidilla and bolero. One Fandango tune is given by Hawkins (Appendix, No. 33). Another has been rendered famous through its partial adoption by both Gluck and Mozart—the former in his Ballet of Don Juan, the latter in Figaro (end of Act 3). It is given in its Spanish form by Dohrn in the Neue Zeitschrift f. Musik (xi. 163, 7) as follows:

\[ \text{Andante.} \]

\[ \text{The rhythm of the castanets was} \]

Mozart’s version is known and accessible; Gluck’s will be found in the Appendix to Jahn’s Mozart.

There is a curious piece of history said to be connected with this dance. Soon after its first introduction, in the 17th century, it was condemned by the ecclesiastical authorities in Spain as a ‘godless dance.’ Just as the Consistory were about to prohibit it, one of the judges remarked that it was not fair to condemn anything unheard. Two celebrated dancers were accordingly introduced to perform the fandango before the Consistory. This they did with such effect, that, according to the old chronicler, ‘every one joined in, and the hall of the consistorium was turned into a dancing saloon.’ No more was heard of the condemnation of the fandango.

Similar dances to the fandango are the Tirana, the Polo, and the Jota Arragonesa. [E.P.]

FANFARE. A French term of unknown origin—perhaps Moorish, perhaps onomatopoeic—denotes in strictness a short passage for trumpets, such as is performed at coronations and other state ceremonies. In England they are known as ‘Flourishes,’ and are played by the Trumpeters of Her Majesty’s Household Cavalry to the number of eight, all playing in unison on E flat trumpets without valves. The following, believed to date from the reign of Charles II, is the Flourish regularly used at the opening of Parliament, and was also performed at the announcement of the close of the Crimean War, the visit of the Queen and Prince of Wales to St. Paul’s after the Prince’s recovery, and so on:

\[ \text{2. So picturesque and effective a feature as the} \]

Fanfare has not been neglected by Opera composers. No one who has heard it can forget the
of this kind by very ancient English composers, and some also for the 'Virginals' by Bird and Gibbons in 'Parthenia.' They seem to have been a very dry species of composition, and Dr. Burney quotes Simpson's 'Compendium' to the intent that in the year 1667 'this style of music was much neglected because of the scarcity of auditors that understand it, their ears being more delighted with light and airy music.'

In the works of Bach there are a great number of Fantasias both as separate works and as the first movement to a Suite, or conjoined with a Fugue. In the latter capacity are two of the finest Fantasias in existence, namely that in A minor called 'Grosse Fantasie und Fuga' (Dörffel, 158), and that in D minor, commonly known as the 'Fantasie cromatic.' Among his organ works also there are some splendid specimens, such as Fantasia et Fuga in G minor (Dörffel, 798), and a Fantasia of considerable length in G major, constituting a complete work in itself (Dörffel, 855). Among the works of his sons and other contemporaneous German masters are also many specimens of Fantasias. Some of them are very curious, as the last movement of a Sonata in F minor by Philip Emmanuel Bach, published in Rottsch's 'Alte Klavier Music,' in the greater part of which the division by bars is entirely dispensed with; and the same peculiarity distinguishes a Fantasia by Johann Ernst Bach which is published in the same collection. Two of those by Friedemann Bach in A and C have been revived at the Monday Popular Concerts. Mozart produced some fine examples of Fantasias, Beethoven apparently only two distinctly so called, namely Opus 77 and the Choral Fantasia; and two of the Sonatas (op. 27) are entitled 'quasi una Fantasia,' which implies some irregularity of form. In more modern times, apart from Schumann's fine example dedicated to Liszt (op. 17), the name has gone somewhat into disrepute, having been commonly employed to label vulgar effusions which consist of brilliant passages connected with popular airs strung together into a piece for the mere display of finger cleverness. But in these days of revivals there seems to be no reason why the name should not be given to more honourably conceived compositions, and yet play a rôle of some dignity in modern instrumental music; and the very fact that there are no rules for its formal construction would seem to be an inducement to composers of an independent turn of mind.

[C.H.H.P.]

FANTASIESTÜCK. A name adopted by Schumann from Hoffmann to characterise various fancy pieces for pianoforte, alone and with other instruments (P. F. solo, op. 12, 111; with Clarinet, op. 73; with Violin and Cello, op. 88). They are on a small scale, but several of them of considerable beauty.

FARCE (Ital. Farsia, probably from the Latin farcito to stuff—Plautus has cenones farcire, to insert falsehoods or tricks). A farsia was a canticle in the vulgar tongue intermixed with Latin, originating in the French church.
at the time when Latin began to be a tongue 'not understood of the people.' The farisa was sung in many churches at the principal festivals, almost universally at Christmas. It became a vehicle for satire and fun, and thus led to the modern Farce or Farce, an opera in one act, of which the subject is extravagant and the action ludicrous.

[J.H.]

FARINELLI. A serio-comic opera in 2 acts; words by C. Z. Barnett, music by John Barnett; produced at Drury Lane Feb. 8, 1839. Balfe acting Farinelli, and being forced by hoarseness to leave off at end of 1st act.

FARINELLI, a violin-player and composer, was either a brother or an uncle of the celebrated singer Farinelli (Carlo Broschi). Date and place of his birth and death are unknown. After living for some time in France we find him in 1680 at Hanover, side by side with Handel, as leader of the band. He appears to have enjoyed a great reputation as a performer, and considerable popularity as a composer of instrumental music in a light and pleasing style. He excelled especially in the performance of Lulli's airs and his own so-called 'Folia,' which was known in England during the last century as 'Farinelli's ground.' [See FOLIA.] Farinelli was knighted by the King of Denmark, and, according to Hawkins, was appointed by George I. his resident at Venice.

[F.D.]

FARINELLI, CARLO BROSCHI, DETTO; was born January 24, 1705, at Naples, according to his own statement made to Dr. Burney, who saw him at Bologna in 1770, though Padre G. Sacchi, his biographer, fixes his birthplace at Andria. Some say that he derived his sobriquet from the occupation of his father, who was either a miller or a seller of flour (farina); others contend that he was so named after three brothers Farina, very distinguished amateurs at Naples, and his patrons. It is, however, quite probable that he simply took the name of his uncle Farinelli, the composer. Sacchi declares that he saw in Farinelli's possession the letters of nobility which he was required to produce when admitted, by the favour of the King of Spain, into the orders of Calatrava and St. Iago. It seems scarcely credible that noble parents should have destined their son for the musical stage, or consented to the peculiar preparation necessary to make him a soprano; but this, as usual, is explained by the story of an accident having happened to the boy while riding, which rendered necessary the operation by which he retained his treble. The voice, thus manufactured, became the most beautiful ever heard. He soon left the care of his father, who taught him the rudiments, to enter the school of Porpora, of whom he was the first and most distinguished pupil. In spite of his now explicit statement to Dr. Burney, it is not possible that Farinelli could have made his début at Naples in 1720, at the age of 15, in Metastasio's 'Angelica e Medoro'; for the latter did not leave Rome till 1721, and 'Angelica e Medoro' was not written before 1722. (Fétis.) In that year Farinelli, already famous in southern Italy under the name of il ragazzu (the boy), accompanied Porpora to Rome, and made his first appearance there in 'Eomene,' composed by his master for the Teatro Aliberti. There was a German trumpet-player at that time in the capital, who excited the admiration of the Romans by his marvellous powers. For this artist Porpora wrote an obbligato part to a song in which his pupil vied with the instrument in holding and swelling a note of extraordinary length, purity, and volume. Although the virtuoso performed this in a wonderful manner, Farinelli excelled him in the duration, brilliancy, and gradual crescendo and diminuendo of the note, while he carried the enthusiasm of the audience to the highest pitch by the novelty and spontaneity of the shakes and difficult variations which he introduced into the air. It is probable that these were previously arranged by Porpora, and not due to the impromptu inspiration of the singer. Having remained under the instruction of his master until 1724, Farinelli made his first journey to Vienna in that year. A year later he sang for the first time at Venice in Albinoni's 'Didone abbandonata,' the libretto by Metastasio; and subsequently returned to Naples, where he achieved a triumph in a Dramatic Serenade by Hasse, in which he sang with the celebrated cantatrice, Tesi. In 1726 he appeared in Fr. Ciampi's 'Ciro' at Milan; and then made his second visit to Rome, where he was anxiously expected. In 1727 he went to Bologna, where he was to meet the famous Bernacchi, the 'King of Singers,' for the first time. Meeting this rival in a Grand Duo, Farinelli poured forth all the beauties of his voice and style without reserve, and executed a number of most difficult passages, which were rewarded with tumultuous applause. Nothing daunted, Bernacchi replied in the same air, repeating every trill, roulade, or cadenza, which had been sung by Farinelli. The latter, owning his defeat, untreated his conqueror to give him some instruction, which Bernacchi, with equal generosity, willingly consented to bestow; and thus was perfected the talent of the most remarkable singer, perhaps, who has ever lived.

After a second visit to Vienna in 1728, Farinelli went several times to Venice, Rome, Naples, Piacenza, and Parma, meeting and vanquishing such formidable rivals as Gizzi, Nicoli, Fanfina, and Cuzzoni, and everywhere loaded with riches and honours. In 1731 he visited Vienna for the third time. It was at this point that he modified his style, from one of mere brilliance and bravura, which, like a true pupil of Porpora, he had hitherto practised, to one of paths and simplicity. This change is said to have been suggested by the Emperor Charles VI. 'You have,' he said, 'hitherto excited only astonishment and admiration, but you have never touched the heart; it would be easy to you to create

1 D'Urney wrote his song 'Joy to great Caesar' in honour of Charles II. to 'divisions' on this bass: it must, therefore, have been composed before 1688.
emotional, if you would but be more simple and more expressive!' Farinelli adopted this admirable counsel, and became the most pathetic, as he was still the most brilliant, of singers.

Returning once more to Italy, he revisited with ever-increasing renown Venice, Rome, Ferrara, Lucca, and Turin. In 1734 he made his first journey to England. Here he arrived at the moment when the opposition to Handel, supported by the nobles, had established a rival Opera, with Porpora for composer, and Senesino, who had quarrelled with the great German, for principal singer. The enterprise, however, did not succeed, but made debts to the amount of £19,000. At this juncture Porpora naturally thought of his illustrious pupil, who obeyed the summons, and saved the house. He made his first appearance at the Theatre, Lincoln's Inn, in 'Artaserse,' the music of which was chiefly by Riccardo Broschi, his own brother, and Hase. The most favourite airs were 'Pallido il sole,' set by Hasee and sung by Senesino; 'Per questo dolce ampiesso,' by the same, and 'Son qual nave,' by Broschi, both the latter being sung by Farinelli. In the last, composed specially for him, the first note (as in the song in 'Eomene') was taken with such delicacy, swelled by minute degrees to such an amazing volume, and afterwards diminished in the same manner to a mere point, that it was applauded for full five minutes. After this, he set off with such brilliancy and rapidity of execution that it was difficult for the violins of those days to accompany him. He sang also in 'Onorio,' 'Polifemo,' and other operas by Porpora; and excited an enthusiastic admiration among the dilettanti which finally culminated in the famous execution of a lady in one of the boxes (perpetuated by Hogarth in the Rake's Progress)—

'One God and one Farinelli!' In his first performance at Court, he was accompanied by the Princess Royal, who insisted on his singing two of Handel's songs at sight, printed in a different clef, and composed in a different style from any to which he had ever become accustomed. He also confirmed the truth of the story, that Senesino and himself, meeting for the first time on the same stage, 'Senesino had the part of a furious tyrant to represent, and Farinelli that of an unfortunate hero in chains; but, in the course of the first song, he so softened the obdurate heart of the enraged tyrant that Senesino, forgetting his stage character, ran to Farinelli and embraced him in his arms.' The Prince of Wales gave Farinelli a 'fine wrought-gold snuff-box, richly set with diamonds and rubies, in which was enclosed a pair of diamond knee-buckles, as also a purse of one hundred guineas.' This example was followed by most of the courtiers, and the presents were duly advertised in the Court Journal. His salary was only £1,500, yet during the three years, 1734, 5, and 6, which he spent in London, his income was not less than £2,500 per annum. On his return to Italy, he built, out of a small part of the sums acquired here, 'a very superb mansion, in which he dwelt, choosing to dignify it with the significant appellation of the English Pott.'

Towards the end of 1736, Farinelli set out for Spain, staying a few months in France by the way; where, in spite of the ignorance and prejudice against foreign singers which then distinguished the French, he achieved a great success. Louis XV heard him in the Queen's apartments, and applauded him to an extent which astonished the Court (Riccoboni). The King gave him his portrait set in diamonds, and 500 louis d'or. Though the singer, who had made engagements in London, intended only a flying visit to Spain, his fortune kept him there nearly 25 years. He arrived in Madrid, as he had done in London, at a critical moment. Philip V, a prey to melancholy depression, neglected the affairs of the state, and refused even to preside at the Council. The Queen, hearing of the arrival of Farinelli, determined to try the effect of his voice upon the King. She arranged a concert in the next room to that which the King occupied, and invited the singer to perform there a few tender and pathetic airs. The success of the plan was instantaneous and complete; Philip was first struck, then moved, and finally overcome with pleasure. He sent for the artist, thanked him with effusion, and bade him name his reward. Farinelli, duly prepared, answered that his best reward would be to see the monarch return to the society of his Court and to the cares of the state. Philip consented, allowed himself to be shaved for the first time for many weeks, and owed his cure to the powers of the great singer. The Queen, alive to this, succeeded in persuading the latter to remain at a salary of 50,000 francs, and Farinelli thus separated himself from the world of art for ever. He related to Burney that during 10 years, until the death of Philip V, he sang four songs to the King every night without change of any kind. Two of these were the 'Pallido il sole' and 'Per questo dolce ampiesso' of Hasee; and the third, a minuet on which he improvised variations. He thus repeated about 40 or 50 times the same things, and never anything else: he acquired, indeed, enormous power, but the price paid for it was too high. It is not true that Farinelli was appointed prime minister by Philip; this post he never had: but under Ferdinand VI, the successor of Philip, he enjoyed the position of first favourite, superior to that of any minister. This king was subject to the same incontinence as his father, and was similarly cured by Farinelli, as Saul was by David. His reward this time was the cross of Calatrava (1750), one of the highest orders in Spain. From this moment his power was unbounded, and exceeded that ever obtained by any singer. Seeing the effect produced on the King by music, he easily persuaded him to establish an Italian opera at Buen-retiro, to which he invited some of the first artists of Italy. He himself was appointed the chief manager. He was also employed frequently in political affairs, was consulted constantly by the minister La Ensenada, and was especially con-
The Holy Father answered, 'Avete fatto tanto fortuna costa, perche vi avete trovato le gioie, che avete perdute in qua.'

When Bernocchi saw him at Bologna in 1771, though he no longer sang, he played on the viol d'amore and harpsichord, and composed for those instruments: he had also a collection of keyd instruments in which he took great delight, especially a piano made at Florence in 1730, which he called Rafael d'Urbino. Next to that, he preferred a harpsichord which had been given to him by the Queen of Spain; this he called Coraggio, while he named others Trittico, Gusto, etc. He had a fine gallery of pictures by Murillo and Ximenes, among which were portraits of his royal patrons, and several of himself, one by his friend Amiconi, representing him with Faustina and Metastasio. The latter was engraved by J. Wagnat at London (fol.), and is uncommon; the head of Farinelli was copied from it again by the same engraver, but reversed, in an oval (4to), and the first state of this is rare: it supplied Sir J. Hawkins with the portrait for his History of Music. C. Lucy also painted Farinelli; the picture was engraved (fol.) in mezzotint, 1735, by Alex. van Haecken, and this print is also scarce.

Fétis falls into an error in contradicting the story of Farinelli's suggesting to the Padre Martini to write his History of Music, on the ground that he only returned to Italy in 1761, four years after the appearance of the first volume, and had no previous relations with the learned author. The letter quoted above shows that he was in correspondence with him certainly as early as April 1756, when he writes in answer to a letter of Martini, and, after adventuring to the death of Bernocchi, orders twenty-four copies of his work, bound in red morocco, for presents to the Queen and other notabilities of the Court.

It is, therefore, quite possible that their correspondence originated even long before this. They remained in the closest intimacy until death separated them by the decease of Farinelli, July 15, 1782, in the 78th year of his age.

Martini speaks in glowing terms of this great artist, saying that he had 7 or 8 notes more than ordinary singers, and these perfectly sonorous, equal, and clear; that he had also much knowledge of music, and was a worthy pupil of Porpora. Mancini, a great master of singing and a fellow-pupil of Bernocchi with Farinelli, speaks of him with yet more enthusiasm. 'His voice,' he says, 'was thought a marvel, because it was so perfect, so powerful, so sonorous, and so rich in its extent, both in the high and the low parts of the register, that its equal has never been heard in our times. He was, moreover, endowed with a creative genius which inspired him with embellishments so new and so astonishing that no one was able to imitate them. The art of taking and keeping the breath, so softly and easily that no one could perceive it, began and died with him. The qualities in which he excelled were the evenness of his voice, the art of swelling its sound, the...
FARNABY, Giles, Mus. Bac., was of the family of Farnaby of Truro, and nearly related to Thomas Farnaby, the famous Kentish schoolmaster. He commenced the study of music about 1580, and on July 9, 1592, graduated at Oxford as Bachelor of Music. He was one of the ten composers employed by Thomas Este to harmonise the tunes for his 'Whole Book of Psalms,' published in 1592. In 1593 he published 'Canzonets to four voices, with a song of eight parts,' with commemorative verses prefixed by Antony Holborne, John Dowland, Richard Alison, and Hugh Holland. A madrigal by Farnaby, 'Come, Charon, come,' is extant in MS.

FERNANDEZ, Mariana, a seconda donna who appeared in London about the years 1776 and 7. She took part in Traetta's 'Germondo,' and also played Calipeo in his 'Telemaco.'

FARRANT, John. There were two musicians of this name, both who flourished about the year 1600. The elder was organist of Salisbury Cathedral, and the other organist of Christ's Hospital, London. Nothing more is known of their lives.

FARRANT, Richard, was one of the Gentlemen of the Chapel Royal in the sixteenth century. The date of his first appointment is not known, but he resigned in April, 1564, on becoming Master of the Children of St. George's Chapel, Windsor, of which he is said to have been also a lay vicar and organist. During his tenure of office at Windsor he occupied 'a dwelling house within the Castle, called the Old Commons.' On Nov. 5, 1569, he was re-appointed a Gentleman of the Chapel Royal, and remained such until his death, which occurred on Nov. 30, 1580. Farrant's church music merits all the eulogy which has been bestowed upon it for solemnity and pathos. His service printed by Boyce in G minor is given by Tudway (B. Museum, Harl. MSS. 7337 and 8) in A minor, and called his 'High Service.' His two anthems, 'Call to remembrance' and 'Hide not Thou Thy face' were for many years performed on Maundy Thursday during the distribution of the royal bounty. The beautiful anthem, 'Lord, for Thy tender mercies sake' (the words from Lydley's Prayers), has long been assigned to Farrant, although attributed by earlier writers to John Hilton. Tudway (Add. MSS. 7340) gives another anthem—'O Lord, Almighty,' full, 4 voices—as his, but this is questionable.

His son, Daniel, was one of the first authors who set lessons 'lyra way' for the violin, after the manner of the old English lute or basords, in the time of Charles I.

FARRENC, Aristide, born at Marseilles April 9, 1794, died in Paris Feb. 12, 1869, composed some pieces for the flute, but is best known as a writer on music. He took an important part in the 2nd edition of Fétis's 'Biographie universelle,' and wrote the biographical notices in Madame Farrenc's 'Traité des Pianistes.' He also contributed critiques to 'La France
musicale,' and 'La Revue de Musique ancienne et moderne' (Rennes 1858). Some of his valuable notes and unpublished articles are among the MSS. in the library of the Paris Conservatoire.

His wife LOUISE—born in Paris May 31, 1804; died there Sept. 15 1875—was a sister of the sculptor Auguste Dumont, and aunt of Ernest Reyer. She studied under REICH, and at an early age could compose both for the orchestra and piano. She married in 1821, and made several professional tours in France with her husband, both performing in public with great success. Madame Farrenc was not only a clever woman, but an able and conscientious teacher, as is shown by the many excellent female pupils she trained during the thirty years she was professor of the piano at the Conservatoire (Nov. 1842–Jan. 1873). Besides some remarkable études, sonatas, and pieces for the pianoforte, she composed sonatas for piano and violin or cello, trios, two quintets, a sextet, and a nonet, for which works she obtained in 1869 the prize of the Académie des Beaux Arts for chamber-music. She also wrote two symphonies and three overtures for full orchestra, and several of her more important compositions have been performed at the Conservatoire concerts. More than by all these however her name will be perpetuated by the 'Trésor des Pianistes,' a real anthology of music, containing chefs-d’œuvre of all the classical masters of the clavecin and pianoforte from the 16th century down to Weber and Chopin, as well as more modern works of the highest value. [TRÉSOR DES PIANISTES.]

[C. C.

FASCH, CARL FRITZER CHRISTIAN, founder of the 'Singakademie' at Berlin, born Nov. 18, 1736, at Zerbst, where his father was Capellmeister. As a child he was delicate, and much indulged. He made rapid progress on the violin and clavier, and in the rudiments of harmony. After a short stay in Berlin, when he made his first attempt at composition in church-music, he was sent to Strelitz. Here he continued his studies under Hertel, in all branches of music, but especially in accompaniment, at that time a difficult art, as the accompanist had so little to guide him. In 1751 Linicke, the court clavierist, having declined to accompany Franz Benda, Fasch offered to supply his place at the harpsichord, and Benda's praises invited him to still greater efforts. After his return to Zerbst he was sent to complete his education at Klosterbergen near Magdeburg. Benda had not forgotten their meeting, and in 1756, when just 20, Fasch was appointed on his recommendation accompanist to Frederic the Great. His condutor was to less a person than Emmanuel Bach; they took it in turns to accompany the King's flute-concertos, and as soon as Fasch had become accustomed to the royal amateur's impetuous style of execution his accompaniments gave every satisfaction. The Seven Years War put an end to Frederic's flute-playing, and as Fasch received his salary in paper, worth only a fifth part of its nominal value,—a misfortune in which he anticipated Beethoven—he was compelled to maintain himself by giving lessons. For his lessons in composition he made a collection of several thousand examples. About the same time he wrote several most ingenious canons, particularly one for 25 voices containing five canons put together, one being in seven parts, one in six and three in four parts. After the battle of Torgau the King granted him an audition of 100 thalers to his salary, but the increase covered the direction of the opera, which was put into his hands from 1774 to 76. After the war of the Bavarian succession Frederic gave up his practice, and Fasch was free to follow his natural inclination for church music. In 1783, invited by a 16-part Mass of Benevelli's, which Reichardt had brought from Italy, he wrote one for the same number of voices, which however proved too difficult for the court-singers. He retained his post after Frederic's death, but occupied himself chiefly with composition and teaching. In the summer of 1790, as he himself tells us, he began choral-meetings in the summer-house of Geheimrat Milow, which resulted in the 'Singakademie,' an institution which under his pupil and successor Zelter became very popular and exercised an important influence on musical taste in Berlin for many years. Before his death Fasch was twice visited by Beethoven, who spent some time in Berlin in the summer of 1796. On the first occasion, June 21, he heard a choral, the three first numbers of Fasch's mass, and several movements from his 119th Psalm, and he himself extemporized on one of the subjects of the latter. On the 28th he reappeared and again extemporised, to the delight of Fasch's scholars, who, as Beethoven used to say, pressed round him and could not applaud for tears (Thayer's 'Beethoven,' ii. 13). The Academy at that date was about 90 strong, but at the time of Fasch's death, Aug. 3, 1800, it had increased to 147. In accordance with his wish expressed in his will, the Academy performed Mozart's Requiem to his memory—for the first time in Berlin. The receipts amounted to 1200 thalers, an extraordinary sum in those days, and were applied to founding a Fund for the perpetual maintenance of a poor family. In 1801 Zelter published his Life—a brochure of 62 pages 4to., with a portrait. In 1839 the Academy published Fasch's best sacred works in 6 volumes. A 7th, issued by the representatives of Zelter, contains the mass and the canon above alluded to. Of his oratorio 'Giuseppe riconosciuto,' performed in 1774, one tercetto alone remains, Fasch having destroyed the rest, together with several other works composed before the 16-part mass. As a master of composition in many parts, Fasch is the last representative of the great school of sacred composers which lasted so long in Italy, and his works are worth studying. They combine the severity of ancient forms with modern harmony and a fine vein of melody, and constitute a mine which would well repay investigation. [F. G.]

FAUST. Opera in 5 acts; words after Goethe, by Barbier and Carre; music by Gounod. Pro-
duced at the Théâtre Lyrique Mar. 19, 1859; at Her Majesty's Theatre, as 'Faust' June 11, 63; at the Royal Italian Opera, Covent Garden, as 'Faust e Margherita,' July 2, 63; in English (by Chorley), as 'Faust,' at Her Majesty's, Jan. 23, 54. In Germany as 'Margarethe.'

Music to Goethe's Faust was composed by Lindpainter, and appears to have been produced at Stuttgart in June 1832; also by Prince Radziwill, the score of which was published in 1836. Spohr's Faust (words by Bernhard), a romantic opera in 2 acts, is in no wise connected with Goethe's play. It was composed at Vienna in 1813 for the Theatre an der Wien, but was first performed at Frankfort in March 1818, and was for many years a great favourite. It was produced in London by a German company at the Prince's Theatre May 21, 1840; and in Italian at Covent Garden under Spohr's baton July 15, 52. [G.]

FAUSTINA BORDONI. See HASSE, SIGNORA.

FAUX-BOURDON, or Falsebordone, a simple kind of Counterpoint to the Church Plain Song; in other words, a harmony to the ancient chant. The first kind of variation from strictly unisonous singing in the Middle Ages was the Organum, or simple aggrandisement of multitudinous choral effect by the additions of octaves above and below the Plain Song or melody, answering to the accompaniment of the diapasons by principal and bourdon stops in the modern organ. Other parallel concords were also (as in the mixture organ stops) blended with the octaves—as the fifth, and even the fourth. These appear to have been used as early as the 8th century. After the Organum the next improvement was the Diaphonum and 'Descant,' and by the 14th century there are historical intimations that these had led, by a natural development, to the use of 'Faux bourdon' at Aignjon, whence it was taken to Rome on the return of the Papal Court after its seventy years absence from that city. Hawkins (History, ch. 56) mentions an English MS. of 1415, which Chilston, bishop of Cheltenham, preserved in his 'Manuscript of Waltham Holy Cross,' most likely of the 14th century, giving rules and directions 'for the sight of descant . . . and of Faburdon.' Gaforius (1451-1532), who is justly considered the father of the artistic music of the great school which culminated in Counterpoint à la Palestrina, as also Adam de Fulda, about the same period, are among the earliest writers who speak of this kind of harmony. M. Danjon has discovered in the Library of St. Mark, Venice, treatises by Gulielmus Monachus, from which it is plain that in the 15th century the faux-bourdon was held in equal honour in England and in France.

The English term Fa-burden is evidently a corruption from the French and Italian. Burden, or Burthen, is used both for the refrain of a part song or chorus, and for a vocal accompaniment to dancing—

'Foot it fealy here and there,
And let the rest the burden bear.'
FELIX MERITIS.

Choron and himself (Paris 1810–11), a work to which Félix is much indebted. He collected materials for a History of the Violin, of which however only fragments appeared, under the title 'Notices sur Corelli, Tartini, Gaviniès, Paganini, et Viotti, et Notes d'une Cours de violon' (Paris 1810). After the fall of Napoleon, Fayolle came to England, where he taught French, and wrote for the 'Harmonicon.' On the eve of the Revolution of 1830 he returned to Paris, and resumed his old occupation as a musical critic. Among his later works may be mentioned a pamphlet called 'Paganini et Bériot' (Paris 1830), and the articles on musicians in the supplement to Michaud's 'Biographie Universelle.' He died Dec. 2, 1852, at Ste. Perrine, a house of refuge in Paris.

FAYRFAX, ROBERT, Mus. Doc., of an ancient Yorkshire family, was born in the latter part of the 15th century. He was of Bayford, Hertfordshire, and is supposed to have held the appointment of organist or chanter of St. Alban's Abbey early in the 16th century. It appears from the Privy Purse Expenses of Elizabeth of York that on March 28, 1502 (the Princess being then at St. Alban's), Fayrfax was paid 20s. "for setting an Antheme of oure lady and Saint Elizabeth." In 1504 he took the degree of Doctor of Music at Cambridge, and in 1511 was admitted to the same degree at Oxford. He was buried in St. Alban's Abbey, under a stone afterwards covered by the mayor's seat. Several of his compositions are extant in MS. in the Music School, Oxford, and the British Museum. In the latter library, Add. MSS. 5465, is a volume of MS. old English songs for 2, 3, and 4 voices by composers of the 15th and 16th centuries formerly belonging to him, and afterwards in the possession of General Fairfax, at whose death it passed into the hands of Ralph Thoresby of Leeds. Four three-part songs by Fayrfax are printed by John Stafford Smith in his Old English Songs, and others by Hawkins and Burney.

FELIX MERITIS, an institution in Amsterdam that includes with the performance of music the cultivation of letters, art, and science. It occupies a building architecturally important, with a large concert-room, library, and observatory, situated on the Ketzergracht, one of the larger canals. Orchestral concerts take place in the winter, similar to those of the London Philharmonic and the Crystal Palace; they are
at the present time conducted by the eminent Dutch musician, Heer Joh. J. H. Verhulst. The usual number is 10, and the subscription is equivalent to £5. The early history of Felix Meritis has been narrated by Professor Jorissen on the occasion of the Centenary, Nov. 2, 1877. It was founded in 1777, beginning its existence on the Leidsegracht (Lily Canal) of Amsterdam. The founders intended it to be 'for the furtherance of laudable and useful arts and sciences; the augmentation of reason and virtue; the increase and prosperity of trade, navigation, agriculture, and fishery,' etc., etc. But Felix began at once with music and fine art, adding literature to the scheme two years later. The original locale soon proved to be too small, and in May 1782 the members removed to the Vorburchwal. In 1785 continued increase determined the erection of the present building on the Keizersgracht, completed three years after, and with 400 members, instead of 200; at first, 40. (On May 1, 1786, the number of members for all classes was 324.) The wave of disturbance caused by the French Revolution washed over Felix Meritis, and in 1792, through want of funds, the concerts ceased. However, the leaders of the institution would not allow it to sink in the vortex of political speculation; and, in the abolition of societies throughout Holland this one was exempted. During the clatter of weapons the Museus were silent, but in 1800 the complement of members was again full, and in 1806 the reading-room, long closed during the prohibition of newspapers, opened again. In that year Louis Bonaparte, made King of Holland, offered his protection, which was declined, as was also the proposal that the public business of the country should be carried on in the building. Napoleon I. and Marie Louise, were however later received in it. In these troubled times the music of Felix Meritis was heard more than the foal of Dutch literature, almost despair of the Amsterdam patriots; yet that solace ceased more towards the close of 1813, the country being in a state of insurrection against the French. After 1815 came peace and the gentle arts again, and within the last thirty years great has been the spiritual harvest of the 'happy through their deserts!' The name Felix Meritis was more than once applied by Robert Schumann to Felix Mendelssohn; see 'Gesammelte Schriften' (Leipzig, 1854), ii. 219; also i. 191, 92, and 93. [A.J.H.]

FELTON, REV. WILLIAM, born 1713, vicar-choral of Hereford Cathedral in the middle of the 18th century, was distinguished in his day as a composer for, and performer on, the organ and harpsichord. He published three sets of concertos for those instruments in imitation of those of Handel. Burney, in the life of Handel prefixed to his account of the Commemoration, relates, on the authority of Abraham Brown, the violinist, a droll anecdote of Felton's unsuccessful attempt, through Brown, to procure the name of Handel as the designation of the second set of these concertos. Felton also published 'two or three sets of lessons for the same instru-

ments. He was one of the stewards of the Meeting of the Three Choirs at Hereford 1744, and at Gloucester 1745. "Felton's Gavot" was long highly popular. He died Dec. 6, 1769. [W.H.H.]

FENTON, LAVINIA, whose real name was Bewick, was an actress and singer who first appeared in 1746 at the Haymarket Theatre as the Parish Girl, in Gay's burlesque, 'The What 'dye call it,' and afterwards at Lincoln's Inn Fields Theatre, July 15, 1726, as Lucilla in Sir W. Davenant's comedy, 'The Man the Master.' She attracted no particular attention until she appeared as Polly Pes wom in 'The Beggar's Opera,' on the first night of its performance, Jan. 29, 1728, when she 'became all at once the idol of the town;' her pictures were engraved and sold in great numbers; her life written; books of letters and verses to her published; and pamphlets made of even her very sayings and jests. This success led to her being entrusted with more important parts than had before been assigned to her. At the end of the season she had played Polly upwards of 60 times, she withdrew from the stage and went to Live with Charles, third Duke of Bolton. On Oct. 21, 1751, his wife, from whom he had been separated many years, having died, the Duke married Lavinia Bewick at Aix, in Provence. She became a widow in 1754, died in January, 1760, at West Combe Park, Greenwich, and was buried in Greenwich Church, Feb. 3, 1760. [W.H.H.]

FIO, FRANCESCO, one of the masters of the Neapolitan school, was born at Naples in 1659. The traditions of Greco and Scarlatti were still fresh there, and it was at the suggestion of the last named that Domenico Gizzi had opened the private school at which Feo learnt the art of singing and the principles of composition. His bent was essentially dramatic, as indeed was that of nearly all the Neapolitans of his epoch, with the exception of Durante, whose colder and gloomier temperament was a part of his character, not of the ecclesiastical severities of the Roman style. Feo, like Durante and Leo, passed some time at the Vatican as the pupil of Piti, but the influence of his master was not sufficient to divert him from Opera. His 'Ipermestra,' 'Ariana,' and 'Andromache' were all published at Rome itself, and apparently during his residence there. In 1740 he succeeded his old master Gizzi at Naples, and did much to establish the school as a nursery of great singers. Though addicted to the stage, Feo did not altogether neglect Church Music, and his work is distinguished by elevation of style and profound scientific knowledge. But a certain sensuousness, even in his sacred pieces, is suggested by the fact that Gluck borrowed the subject of a Kyrie by him for a chorus in one of his operas. [E.H.P.]

FERIAL AND FESTAL. In the Christian Church from very early times the term feria seca was used to denote Monday, Feria tertia Tuesday, and so on. Hence the word Ferie, or Ferial day, came to denote a day marked by no special observance, either of a festal or a penitential character. So far as music is concerned,
the chief difference is that on the ferial days the music is less elaborate and ornate than on ferial days, when it is more florid, for more voices, accompanied by the organ, etc. The two kinds are known respectively as the ferial use and ferial use.

FERLENDIS, Signora, daughter of an architect named Barberi, born at Rome about 1778. Her voice was a strong contralto, but somewhat hard and inflexible. Having studied with a teacher called Moscheri, she made her début at Lisbon. Here she had the advantage of some lessons from Crescentini, and here also (1802) she married Alessandro Ferlendis, the oboist, member of a very distinguished Italian family of players on the oboe and English horn. She appeared at Madrid in the next year, at Milan in 1804, and in 1805 at Paris (Théâtre Louvois) in Fioravanti's 'Capriccioo penitita.' She achieved there, however, no success in any other role but that one. Soon after this, she made her first appearance in London with Catalani in Cimarosa's 'Orazii e Curiazzi.' She was a pretty good actress, and at that time first buffa; she was less liked than she deserved, for she had a very good contralto voice, and was far from a bad buffa. She would have been thought, too, to have acted the part of Orazia well, had it not been for the comparison with Grasini, and for Catalani's then eclipsing everybody.' (Lord Mount-Edgcumbe.) She accompanied her husband to Italy in 1810; her later career is not known.

FERMATA is the Italian name for the sign \( \hat{\cdot} \), which in English is commonly called a Pause, and signifies that the note over which it is placed should be held on beyond its natural duration. It is sometimes \( \hat{\cdot} \) put over a bar or double bar, in which case it intimates a short interval of silence. Schumann, in the first movement of his 'Faschingschwank in Wien' for the piano-forte, has the sign over the double bar in this manner, where the key changes from two flats to six sharps, and has also written 'Kurze Pause.'

FERNAND CORTEZ, OU LA CONQUÊTE DU MEXIQUE. Opera in 3 acts; words by Esménard and De Jouy, after Piron; music by Spontini. Produced at the Académie impériale Nov. 28, 1808; at Dresden, March 1812; after revision by the composer, at Paris, May 28, 1817, Berlin, Apr. 20, 1818.

FERABOSCO (or FERABOSCO), Alfonso, an Italian musician who settled in England in the middle of the 16th century, ranked among the first of the Elizabethan era. He composed motets, madrigals, and pieces for the virginals. His first book of madrigals was printed at Venice in 1544, and some of his motets at the same place in 1544. Morley (Introduction to Practical Music, 1597) speaks of a 'vertuous contention' between Ferabosco and W. Byrd in making each to the number of 40 parts upon the plain-song of Misere, 'without malice, envie, or backbiting,' 'each making other Censor of that which they had done.' And Pescham mentions another friendly contest between them which could best set the words of the madrigal, 'The nightingale so pleasant and so gay,' and awards the palm to Ferrabosco. Many of Ferrabosco's madrigals were printed in the two books of 'Musica Transalpina,' 1588 and 1597, and several of his other compositions are extant in MS.

FERRARA. FERRABOSCO, Alfonso, the younger, probably son of the preceding, born at Greenwich about 1580, was one of the extraordinary grooms of the privy chamber of James I. and the instructor in music of Prince Henry, for his services in which respect he was rewarded in 1605 with an annuity of £50. In 1609 he published a folio volume of 'Ayres,' dedicated to Prince Henry, and prefaced by commendatory verses by Ben Jonson, Dr. Campion, and N. Tomkins. This work contains many of the songs in Ben Jonson's plays and masques. In the same year Ferrabosco published some Lessons for Viols, with some introductory lines by Ben Jonson. He was one of the contributors to the collection published in 1614, by Sir William Leighton under the title of 'The Teares or Lamentacions of a Sorrowfull Soule.' He composed numerous Fantasies for viols. Antony Wood says he first set music lyra-way for the lute. In 1641 his name occurs in a warrant exempting the king's musicians from the payment of subsidies. He died in 1652. Pepys twice (1664 and 1667) mentions a lady named Ferrabosco as a good singer. At the latter date she was an attendant on the Duchess of Newcastle. She was probably a daughter of Alfonso the younger. A fine song by Ferrabosco, 'Shall I seek to case my grief,' from the 'Ayres' above mentioned, is published by Dr. Rimault (Novello).

FERRABOSCO, John, Mus. Bac., organist of Ely Cathedral from 1662 to his death in 1682, was probably a son of Alfonso Ferrabosco the younger. He obtained his degree at Cambridge in 1671 'per literas regias.' Eight complete services and eleven anthems by him are preserved in MS. in the library of Ely Cathedral, some of which have often been erroneously ascribed to his presumed father.

FERRARA. The earliest and best-known musical academy in Ferrara was that of the 'Intrepidi,' founded in 1600 by Giambattista Aleotti d'Argenta for dramatic musical representation. The magistrates of the city allowed the academicians 100 scudi a year for public celebrations in their theatre. Previous to the founding of this academy, Ferrara could boast one of the most magnificent theatres of Italy, opened in 1484 by Ercole I. Duke of Ferrara, in which were celebrated the 'Feste Musicali;' those earliest forms of the musical drama universal in Italy in the 15th century. While the 'Orfeo' of Poliziano was represented at Mantua, the theatre of Ferrara witnessed the 'Cefalo' of Niccolò da Correggio, the 'Feast of Amphitrite'
and Sosia,' and others. The 'Intrepidi' in 1607 represented with great pomp the Pastoral of 'La Fille di Sciro' by Guidabaldo Bonacelli.

Frescobaldi was a native of Ferrara and made his studies there. [C.M.P.]

FERRARESE DEL BENE, the sobriquet of Francesca Gabrielli, an Italian singer, native of Ferrara. When Burney was in Venice, in Aug. 1770, he heard at the Osseletto an orphan girl la Ferrarese with an 'extraordinary compass' and a 'fair natural voice.' She sang in London from 1822 to 1827 in Cherubini's 'Giulio Sabino' and other parts, but without much success. In 1789 she was prima donna in Vienna. Mozart wrote for her the Rondo 'Al desio,' introduced into the part of the Countess in Figaro on its revival Aug. 89, and she played Fiordiligi in 'Così fan tutte' at its production Jan. 26, 90. Mozart did not think much of her, for in speaking of Allegrandi he says, 'she is much better than the Ferrarese, though that is not saying a great deal.' She probably owed her good fortune to her pretty eyes and mouth, and to her intrigue with da Ponte, with whom she lived as his mistress for three years. In the end she quarrelled with the other singers, and was sent from Vienna by the Emperor. [G.]

FERRARI, BENEDETTO, called 'della Torba,' an Italian musician, and composer of words and music for the species of Italian drama called 'dramma per musica,' was born most probably at Reggio in 1597; as according to a letter, now in the archives of Modena, written by him to the Duke of Modena in 1613, his reputation as a musician, and especially as a player on the theorbo, was by that time considerable. It was largely owing to him that the 'dramma musicale' took such deep root in Italy and Germany, in both cases his chief interpreter for us. His opera 'Andromeda,' set to music by Manelli and brought out at the Teatro San Cassiano at Venice in 1637, was the first opera performed before a mixed audience. In 1639 followed his 'Adone,' set by Monteverde, and 'Armida,' of which he wrote both words and music. Its success induced Ferrari to devote himself more to composition than before. He remained in Venice till 1644, when he was invited to Vienna by the Emperor Ferdinand. A ballet by him was performed at the Diet of Ratisbon in 1653. In the same year he was appointed maestro di capella to Duke Alfonso of Modena, on whose death in 1663 he was dismissed, but reappointed in 1674, and died in possession of the post Oct. 25, 1681. His librettos were collected and printed at Milan and Piacenza, and passed through several editions; none of these editions have however been reprinted. The library at Modena contains several of his MSS., including the ballet 'Dafne in alloro' (Vienna, 1671). We have not sufficient materials to form any opinion on the style of his music. He published at Venice in 1638 'Musiche varie a voce sola,' in which, according to Burney, the term 'Cantata' occurs for the first time, although the invention of this kind of piece was claimed by Barbara Strozzi twenty years later. [F.G.]

FERRARI, DOMENICO, an eminent Italian violin-player, born at the beginning of the 18th century. He was a pupil of Tartini, and lived for a number of years at Cremona. About the year 1749 he began to travel, and met with great success at Vienna, where he was considered the greatest living violin-player. In 1753 he became a member of the band of the Duke of Württemberg at Stuttgart, of which Nardini was at that time leader. If Ferrari was a pupil of Tartini, he certainly, according to contemporary critics, did not retain the style of that great master in after life. He had an astonishing ability in the execution of octave-runs and harmonics, and appears altogether to have been more a player than a musician. He twice visited Paris, and played there with great success. He died at Paris in 1750, according to report, by the hand of a murderer. Ferrari published a set of 6 Violin-Sonatas (Paris and London), which however are now forgotten. [F.D.]

FERRARI, GIACOMO GOTTIFREDO, a cultivated and versatile musician, son of a merchant at Roveredo, born there 1759. He learned the pianoforte at Verona, and the flute, violin, oboe, and double-bass at Roveredo, and studied theory under Pater Marianus Stecher at the convent of Mariaberg near Chur. After his father's death he accompanied Prince Liechtenstein to Rome and Naples, and studied for two years and a half under Latilla at Paisiello's recommendation. Here also he made the acquaintance of M. Campan, Marie Antoinette's master of the household, and went with him to Paris, where he was appointed accompanist to the new Théâtre Feydeau. In 1793 the company was dispersed, and Ferrari shortly afterwards left France. Having travelled for some time he finally settled in London, where he composed a very large number of works, including 4 operas and 2 ballets. In 1804 he married Miss Henry, a well-known pianist. From 1809 to 1812 he suffered from loss of sight. In 1814 he went to Italy with Broadwood the pianoforte-maker, and visited Naples, Venice, etc., returning in 1816. He died in London Dec. 1842. He was an active teacher of singing, and published a 'Treatise on Singing' in 2 vols., of which a French translation appeared in 1837. His 'Studio di musica pratico e teorica' (London) is a useful treatise. Two of his French songs, 'Qu'il faudrait de philosophie' and 'Quand l'amour meurt à Cythère,' were extremely popular in their day. His acquaintance with almost every contemporary musician of importance gives a historical value to his book 'Anedotti . . . occorsi nella vita di G. G. Ferrari,' 2 vols. London, 1830. Besides the operas, ballets, and songs already named, Ferrari composed an extraordinary quantity of music for the voice, pianoforte, flute, and harp. [F.G.]

FERREL, JEAN FRANÇOIS, musician in Paris about the middle of the 17th century, wrote
FERRÉT, Giovanni, born at Venice about 1540, composed five books of 'Cazzonidi' in 5 parts (Venice 1567–91), 2 books in 6 parts (Venice 1576–86), and another of 5-part madrigals (Venice 1588), all excellent examples of their kind. A madrigal of his, 'Sìa' averetiti,' for 5 voices, is included in Webb's madrigals. [M.C.C.]

FERRI, Baldassare, one of the most extraordinary singers who ever lived, was born at Perugia, Dec. 9, 1610. He owed to an accident in his boyhood the operation by which he became a soprano. At the age of 11 he entered the service of the Bishop of Orvieto as a chorister, and remained there until 1625, when Prince Vladislav of Poland, then on a visit at Rome, carried him off to his father's Court. In 1625 he was transferred to Ferdinand III, Emperor of Germany, whose successor, Leopold I, loaded him with riches and honours. This prince had a portrait of Ferri, crowned with laurels, hanging in his bed-chamber, and inscribed, 'Baldassare Perugino, Re de Musici.' At the age of 65 he received permission to retire to his native country, with a passport, the terms of which indicated sufficiently the consideration in which he was held. He reached Italy in 1675, and died at Perugia, Sept. 8, 1680.

Ferri was made a Knight of St. Mark of Venice in 1643; and, therefore, probably visited Italy at that time. He aroused the greatest enthusiasm wherever he appeared; hundreds of sonnets were written in his honour, he was covered with roses in his carriage after simply singing a cantata, and at Florence a number of distinguished persons went three miles out of the town, to escort him into it. (Ginguené.) He is said also to have visited London, and to have sung here the part of 'Zephyr': but this must be a fable, as Italian opera did not begin here till 1692,–12 years after his death. It is true that in M. Locke's 'Pyces' (1671) there is a character called 'Zephyr'; but he has only four lines to speak, and none to sing. Ferri had, nevertheless, made one journey (before 1654) to Sweden, to gratify Queen Christina's wish to hear him. Ginguené says that his portrait was engraved with the inscription 'Quic fecit mirabilia multa;' but such a portrait (as far as the present writer knows) has never been seen. A medal was struck, bearing on one side his head crowned with bays, and on the other the device of a swan dying by the banks of Meander. Ferri was tall and handsome, with refined manners; and he expressed himself with distinction. He died very rich, leaving 600,000 crowns for a pious foundation.

His voice, a beautiful soprano, had an indescribable limpidity, combined with the greatest agility and facility, a perfect intonation, a brilliant shake, and inexhaustible length of breath. Although he seems to have surpassed all the evirati in brilliance and endurance, he was quite as remarkable for pathos as for those qualities. (Bontempi, Historia Musica.) [J.M.]

FERTE, Papillon de la, became in 1777, by purchase, 'Intendant des Menus-Plaisirs' to Louis XVI, and as such had the direction of the 'Ecole Royale de chant' founded by the Baron de Breteuil, and of the opera after the municipality had given up the administration of it. In 1790 he published a reply to a pamphlet by the artists of the opera—Mémorial justificatif des sujets de l'Académie royale de musique—in which they demanded a reform of the administration. His son occupied the same post after the Restoration. [M.C.C.]

FESCA, Friedrich Ernst, composer, born at Magdeburg, Feb. 15, 1789. His father was an amateur, and his mother a singer, pupil of J. A. Hiller, so he heard good music in his youth, and as soon as he could play the violin had taste enough to choose the quartets and quintets of Haydn and Mozart in preference to Pleyel's music, for which there was then a perfect rage in Germany. Having completed his elementary studies, he went through a course of counterpoint with Pitterlin, conductor of the Magdeburg theatre. On Pitterlin's death in 1804 he became a pupil of August Eberhardt Müller at Leipzig. Here he played a violin concerto of his own with brilliant success. In 1806 he accepted a place in the Duke of Oldenburg's band, but in the following year became solo violinist under Reichardt at Cassel, where he passed six happy years and composed his first seven quartets and first two symphonies, interesting works, especially when he himself played the first violin. In 1814, after a visit to Vienna, he was appointed solo violin, and in the following year concert-meister, to the Duke of Baden at Carlsruhe. During the next eleven years he wrote 2 operas, 'Cantemir' and 'Leila,' overtures, quartets, quintets, chorales, psalms and other sacred music. He died at Carlsruhe May 24, 1826, of consumption, after many years' suffering, which however had not impaired his powers, as his last works contain some of his best writing. His 'De profundis,' arranged in
4 parts by Strauss, was sung at his funeral. Fesca was thoughtful, earnest, and warm-hearted, with occasional traits of humour in striking contrast to his keen sensibility and lofty enthusiasm for art. He appreciated success, but steadfastly declined to sacrifice his own perceptions of the good and beautiful for popularity. Fesca's rank as a composer has been much disputed. There is a want of depth in his ideas, but his melodies are taking and his combinations effective. His quartets and quintets, without possessing the qualities of the great masters, have a grace and elegance peculiar to himself, and are eminently attractive. His symphonies are feebly instrumented, but his sacred works are of real merit. In richness of modulation he approaches Spohr. A complete edition of his quartets and quintets (20 and 5 in number) has been published in Paris (Rimbault). His son, ALEXANDER ERNST, born at Carlsruhe May 22, 1830, died at Brunswick Feb. 22, 1849, was a pupil of Hummel, Weber, Bach, and Taubert, and composer of trios for pianoforte, violin, and cello, and other chamber-music popular in their day. His best opera was 'Le Troubadour' (Brunswick, 1854). [M. C. C.]

FESTA, COSTANZO, one of the earliest composers of the Roman school, was born somewhere towards the close of the 15th century. He was elected a member of the Pontifical choir in 1517, and died April 10, 1545. He eventually became Maestro at the Vatican, and his nomination was so far singular that he was at that time the only Italian in a similar position throughout the Peninsula. His genius cannot be doubted, and Dr. Burney, who had been at the trouble of scoring a great number of his Madrigals, was astonished at the rhythm, grace, and facility of them. The Doctor calls one of Festa's Motetti, 'Quam pulchra es, anima mea,' a model of elegance, simplicity, and pure harmony, and says that 'the subjects of imitation in it are as modern, and that the parts sing as well, as if it were a production of the eighteenth century.' Festa, according to Reini, fell in his motets into a fashion which prevailed at the time, of setting distinct words to each voice. The Abbé ('Life of Palestrina,' vol. i. pp. 95-103) explains in great detail the lengths to which this absurd and undignified affectation was carried, and quotes with obvious and well-merited approval a rebuke administered by the Cardinal Capranica, in the pontificate of Nicolo V, to some singer who had asked him to admire the caprice. 'Mi pare,' said the Cardinal, 'di udire una mandra di porcelli, che grugniscano a tutta forza senza proferire però un suono articolato, non che una parola.'

The principal repertories for Festa's music are the collections which flowed from the presses of Gardiano and of Scotto at Venice in the middle of the 16th century, and for which the curious enquirer must be referred to the Bibliographie of Ettner. The archives of the Pontifical chapel are rich in MSS. and a celebrated Te Deum of his is still sung by the Pontifical choir at the election of a new Pope. Burney, in his History (iii. 245, 6) prints a motet and a madrigal of Festa's; and a Te Deum and motet are given in Booth's collection (vi. 31, 4). His madrigal 'Down in a flowery vale' ('Quando ritornò la mia pastorella') enjoys the distinction of being the most popular piece of this description in England. [E. H. P.]

Festing, Michael Christian, an eminent performer on, and composer for the violin, was the son of a flautist of the same names, who was a member of the orchestra of the King's Theatre in the Haymarket about 1727. Festing was at first a pupil of Richard Jones, leader of the band at Drury Lane, but subsequently studied under Geminiani. He first appeared in public about 1724. He became a member of the King's private band and first violin at an amateur association which met at the Crown and Anchor Tavern in the Strand, under the name of the Philharmonic Society. On the opening of Ranelagh Gardens in 1742 he was appointed director of the music as well as leader of the band.

Festing was one of the originators of the Society of Musicians. Being seated one day at the window of the Orange Coffee-house in the Haymarket in company with Weidemann, the flautist, and Vincent, the oboist, they observed two very intelligent looking boys driving milk asses. On inquiry they found them to be the orphans of Kytch, an eminent but imprudent German oboist, who had settled in London and then recently died, literally in the streets, from sheer want. Shocked by this discovery Festing consulted with Dr. Greene, his intimate friend, and other eminent musicians, and the result was the establishment of the Society of Musicians for the support and maintenance of decayed musicians and their families. Festing for many years performed gratuitously the duties of secretary to this institution. He died July 24, 1752. In September of that year his goods, books, and instruments were sold at his house in Warwick Street, Golden Square. He left an only son, the Rev. Michael Festing, rector of Wyke Regis, Dorset, who married the widow of his father's friend, Dr. Greene. From this union sprang many descendants to perpetuate the name of Festing, and not many years since an Hertfordshire innkeeper, bearing the names of Maurice Greene Festing, was living. Festing's compositions consist of several sets of solos for the violin; sonatas, concertos and symphonies for stringed and other instruments; part of the 3rd chapter of Habakkuk, paraphrased; Addison's Ode for St. Cecilia's day; Milton's Song on May morning; an Ode on the return of the Duke of Cumberland from Scotland in 1745; an ode 'For thee how I do mourn'; and many cantatas and songs for Ranelagh. Sir John Hawkins says that 'as a performer on the violin Festing was inferior to many of his time, but as a composer, particularly of solos for that instrument, the nature and genius of which perfectly suited him, he had but few equals.' Festing had a brother of the name of John, an oboist and teacher of the flute, whose success in his profession was such that he
died in 1772 worth £8,000, acquired chiefly by teaching. [W.H.H.]

**FESTIVALS.** The earliest musical festivals of which any trustworthy record exists were held in Italy. At an interview between Francis I, King of France, and Pope Leo X at Bologna in 1515, the musicians attached to their respective courts combined and gave a performance, but no details of the programme have been preserved. In the early part of the 17th century there was a thanksgiving festival at St. Peter's at Rome on the cessation of the Plague, when a mass by Benedetti for six choirs was sung by more than 200 voices with organ accompaniment, the sixth choir occupying the highest part of the cupola. In France the first festival recorded is that which took place as a thanksgiving for the recovery of the eldest son of Louis XIV, when Lulli's 'Te Deum' (written to celebrate a similar happy event in His Majesty's own life in 1666) was performed by 300 musicians. In Bohemia the earliest festival was held at Prague in honour of the coronation of the Emperor Charles VI as King of Bohemia, when an opera by Fux was performed in the open air by a band of 300 and a chorus of 100 voices—a somewhat singular proportion of orchestral to vocal resources—and of this an account is given by Burney in his German Tour, vol. ii. p. 178. French musicians united at Paris in 1797 in a solemn service at the funeral of Rameau; and at Naples in 1774, at the burial of Jommelli, the service was rendered by 300 musicians. In Austria the earliest festivals were given by the Musical Institution at Vienna (Tonkünstler-Societät), by whose members, to the number of 400, oratorios were performed twice annually in Advent and Lent, for charitable purposes, beginning with 1772. In the same city there was a festival in honour of Haydn in 1808, at which the 'Creation' was performed, and at which the composer bade farewell to the world. More important, and in its dimensions approaching more nearly to the modern festival, was a performance given at Vienna in 1811, also in Haydn's honour, when the numbers are said to have been upwards of 700.

The greatest of the German festivals, the Lower Rhineland, had its origin in a 'Thuringian Musical Festival, held at Erfurt in 1811, under the direction of Bischoff, the organist of Grammenhausen, whose example was imitated in 1817 when Johann Schorstein, the musical director at Elberfeld, gave a performance at that town in which the musicians of Düsseldorf also took part. At first the Lower Rhineland festivals were held alternately at Elberfeld and Düsseldorf, but in 1831 Cologne joined in the scheme, and the Musikfest took place there. In 1825 the festival was held at Aix-la-Chapelle, and, with the exception of 1827—the year of Beethoven's death—when Elberfeld once more took its place, it has been held at Dü-seldorf, Aix, or Cologne. [NIEDERRHEINISCHE MUSIKFESTE.]

In England the earliest festivals were those held at St. Paul's Cathedral in aid of the Sons of the Clergy Corporation, at which, since the year 1799, a full band and choir has annually assisted, the Royal Society of Musicians for many years undertaking to supply the orchestra. The second English festival established was that of 'The Three Choirs'—Gloucester, Worcester, and Hereford—which after having been held previously for some years for the enjoyment of the lay clerks and choristers, was in 1724 utilised as a means of securing an annual collection for the widows and orphans of the clergy of the three dioceses. [See THREE CHOIRS FESTIVALS.] In 1739 a festival, to which Handel lent his aid, was established in connection with the 'Fund for the Support of Decayed Musicians,' and this institution was in 1790 incorporated as 'The Royal Society of Musicians,' which still follows the ancient custom by giving an annual performance of the 'Messiah' in aid of its funds. In 1749 Handel conducted a festival at the Foundling Hospital in aid of that charity, and directed it annually until his death. [See FOUNDLING HOSPITAL.] Festivals were subsequently held at Cambridge in 1749 on the occasion of the Chancellor's installation; at Leeds in 1767 for the Leeds Infirmary then recently opened; at Birmingham in 1768 [see BIRMINGHAM]; at Beverly in 1769—at the opening of Snetzler's organ in the Minster; at Norwich in 1770 [see NORWICH]; at Westminster Abbey in 1784 [see HANDEL COMMEMORATION]; at Oxford in 1785; at Manchester in 1785; at Sheffield in 1786; at Derby, Winchester, and Salisbury—celebrations of the opening of Green's organ—in 1788; at Hull in 1789 in aid of the Infirmary; at Liverpool in 1790; at York in 1791 (held annually till 1802 and revived 1823) [see YORK]; at St. Margaret's, Westminster, in 1792—the first annual performance of the 'Messiah' in aid of the Westminster Hospital; and at Edinburgh in 1815. Many of these festivals were continued in subsequent years, and some are still held. The Sons of the Clergy Festival, the Three Choirs Festival, the Birmingham and Norwich Festivals, are now held triennially, and at Leeds, Liverpool, and Bristol, festivals of a similar character are also held every third year. So are the Handel Festivals of the Sacred Harmonic Society at the Crystal Palace, which after a preliminary trial in 1857 began their triennial existence in 1859. [HANDEL FESTIVAL.] The Edinburgh Orchestral Festivals are now held annually under the direction of the Reid Professor of Music, and festivals of importance have been established at Glasgow and Dundee.

Festivals of Parochial Choirs, which are now held annually in the majority of the cathedrals and at other large churches, were first organised about the year 1850, the Cheddle Association in the diocese of Lichfield being one of the earliest. The first festival of this nature on a large scale was held in Durham Cathedral in 1863. Next in order in the cathedral or diocesan festivals came Ely, Peterborough, Salisbury, and Norwich, and at York in 1861 there was a festival in the Minster with 2700 trained singers. Similar
services are now held annually in St. Paul's Cathedral, and the system has been adopted
in Scotland, Ireland, and in the United States. [See CHARTY CHILDREN.]

FÉTIS, FRANÇOIS JOSPEH, born March 25,
1784, at Mons, died March 25, 1871, at Brussels,
the most learned, laborious, and prolific musical
littérateur of his time. He was the son of an
organist at Mons, and early learned to play the
violin, piano, and organ, completing his studies
at the Paris Conservatoire. Boieldieu and
Pradher were his masters for the piano, and he
only succeeded in gaining the harmony prize in
1803, and the second "second prix" for com-
position in 1807, scarcely as much as might have
been expected from one who delighted to style
himselh the pupil of Beethoven. He married
in 1806, and in 1811 pecuniary difficulties,
caused by the loss of his wife's fortune, com-
pelled him to retire to the Ardennes, where he
remained till his appointment as organist and
professor of music at Douai in Dec. 1813. In
1821 he succeeded Eler as professor of counter-
point and fugue at the Paris Conservatoire, and
became librarian of that institution in 1827.
In March 1833 he was appointed director of the
Brussels Conservatoire and maître de chapelle
to the King of the Belgians, two important posts,
which, besides ensuring him many gratifying
distinctions, obliged him to take part in the
labours of the Belgian Académie Royale, for
which he wrote several interesting memoirs.

Fétis must be considered separately in his
various capacities of composer, author of theo-
retical works, historian, and critic. As a
composer he wrote much pianoforte music for
2 and 4 hands, chamber-music, duos, a
quartet, quintet, and a sextet, overtures and
symphonies for orchestra, operas and sacred
music. His operas 'L'Aııintam et le Mari'
(1820), 'Marie Stuart en Ecosse' (1823), 'La
Vieille' (1826), and 'Le Mannequin de Ber-
game' (1832) were produced at the 'Opéra
Comique' with some success, though they now
seem feeble and antiquated. Among his sacred
compositions we will only specify his 'Messe
céliales pour l'orgue,' and his 'Messe de Requiem'
composed for the funeral of the Queen of the
Belgians (1850). The greater part of his
church music is unpublished. Fétis's fame
however rests not upon his compositions, but
upon his writings on the theory, history, and
literature of music. His 'Méthode élémentaire
d'harmonie et d'accompagnement' (1824,
36, 41), which has been translated into English
(Cocks & Co.) and Italian; his 'Solféges pro-
gressifs'; 'Manuel des principes de musique';
'Traité élémentaire de musique' (Brussels 1831-
32); 'Traité du chant en chœur'—translated by
Helmore (Novello); 'Manuel des jeunes com-
positeurs'; 'Méthode des méthodes de piano';
and 'Méthode élémentaire de Plain Chant,' have
been of great service to teachers, though some of
them bear traces of having been written in haste
for the publishers. Far above these must be
ranked his 'Traité de l'accompagnement de la
partition' (1839); his 'Traité complet de la
théorie et de la pratique de l'harmonie' (1844),
which has passed through many editions and
been translated into several languages; and
his 'Traité du contrepoint et de la fugue'
(1824), a really classical work. These two last
Fétis considered his best original productions,
and looked to them for his permanent reputa-
tion. They were the more important in his
eyes because he believed in the infallibility of his
disciplines. Outside his own peculiar system
of harmonic generation—the 'omnitonic' system,
whose main principle is that harmonic combina-
tions exist by which any given sound may be
resolved into any key and any mode—he saw
nothing but error and confusion. As a historian
he was equally systematic and equally impatient
of contradiction. Nevertheless, in his 'Biographie
universelle des Musiciens,' and in his 'Histoire
générale de la Musique' errors of detail and
mistakes in chronology abound, while many of
the opinions he advances are open to question.
Easy as it may be however to find fault with
these two standard works, it is impossible to
do without them. The first edition of the
Biographie (Paris 1835-44) is especially de-
fective, but it contains a remarkable introduc-
tion founded on the writings of Forkel, Gerber,
Kiesewetter, Hawkins, and others. Fétis inten-
ted to use this introduction as material for a
'Philosophie de la Musique,' but had not time
to accomplish it. The second edition of the
Biographie (Paris 1850-5) is thought much more
complete and more satisfactory than its predecessor,
should still be consulted with discretion; its
dates are still often wrong, and there are mistakes,
especially in the articles on English musicians,
which are almost ludicrous, and might have been
avoided. [For Supplement see POUGIN.] Fétis
unfortunately allows his judgment to be biased
by passion or interest. It is a pity that in his
'Histoire générale de la Musique' (Didot, 5
vols. 1869-76) he is not more just to some of his
predecessors, such as Villetteau and Adrien de
la Fage, whom he quotes freely but never without
some depreciatory remark, thus forgetting the
poet's words:—

"Ah! doit-on hériter de ceux qu'on assassine?"

In spite of this defect, and of a strong ten-
dency to dogmatism, the 'Histoire générale de
la Musique, although a fragment—for it ceases
at the 15th century—exhibits Fétis at his best.
Another useful work is 'La Musique mise à la
portée de tout le monde' (Paris 1830, 34, 47,
which has been translated into German, Spanish,
and even Russian. The same elevation and
clarity appears in his innumerable articles
and reviews, which were all incorporated in the
Biographie, the 'Curiosités historiques de la
Musique' (Paris 1830), the 'Esquisse de l'histoire
de l'harmonie' (Paris 1840, now very scarce),
and other works already named. The 'Revue
musicale' which he started in 1827, and con-
tinued till 35, was the foundation of the musical
press of France. This short résumé of Fétis's
labours will suffice to show the immense services
he rendered to musical instruction and literature. Had he been a little less one-sided, and a little more disinterested and fair, he would have been a model critic and littératour.

His eldest son, ÉDOUARD, born at Bouvignes in Belgium, May 16, 1812, at an early age assisted his father, and edited the "Revue musicale" from 1833 to 35. He is now art critic of the "Indépendance Belge," has edited the 5th vol. of Histoire générale de la Musique," and has published "Légendes de Saint Hubert" (Brussels 1847), "Le Musicien Belge" (Brussels 1848), "useful work, and a "Casque à l'oraison" (1877) of his father's valuable library purchased by the Government for the "Bibliothèque Royale" of which E. Fétis is librarian. He is also professor of aesthetics to the Brussels Académie des Beaux Arts and member of the Académie Royale in Brussels.

FEVIN, ANTOINE, composer of the 16th century, whose works entitle him to a position amongst his contemporaries second alone to that of Josquin Deprez. We have only a few vague conjectures as to the actual circumstances of his life. Burney mentions Orleans as his birthplace, and later historians have accepted his statement. Indeed, there is little reason to dispute it, unless the existence of Fevin's compositions in MS. in the cathedral at Toledo, and the opinion of Spanish musicians, can make him a Spaniard, as Gevaert and Eslava would have him to be. There are some books of masses in the Vienna library containing three by "Antonius Fevin, pie memoria." Ambros, in his History of Music (iii. 274) shows that the date of these books lies between 1514 and 1516, and assuming that Fevin died about this time, and moreover (as Glarean leads us to infer) that he died quite young, places his birth about 1490. We may, at any rate, accept these dates as approximately true, and at once see that it is scarcely correct to call Fevin a contemporary of Josquin. Although he died a few years before the great master, he was probably born 40 years after the date of Josquin's birth. Had it not been for his premature death, might not the 'Felix Jodoci emulatore,' as Glarean calls him, have lived on to work by the side of Lassus and share with him the glory of a brighter period? Surely there was in that noble youth, whose modesty was equal to his genius (again we quote Glarean), every element of greatness, except perhaps physical strength, requisite for making his name stand with those of Clement and Gombert in the gap between Josquin and Lassus. But although Fevin can never be the hero of any chapter in musical history, there is little doubt that when the compositions of his time become once more generally known, the few works which he has left behind him will find favour as soon as any, on account of the peculiar charm which vells his most elaborate workmanship, and the simplicity of effect which seems to come so naturally to him, and so well agrees with the personal character for which Glarean admired him. We give the following list of his works, and the various collections in which they appear:—(1) 3 masses, "Sancta Trinitas," "Mente tota," and "Ave Maria," from a book of 5 masses (Petrucci, Fossombrone 1515). The only known copy of this work, with all the parts, is in the British Museum. Burney has given two beautiful extracts from the 1st mass in his History. (2) 3 masses, "Ave Maria," "Mente Tota," and "De Feria," in "Libri quindecim Missarum" (Andreas Antiquus, Rom. 1516), a copy of which is in the Mazarin Library at Paris. (3) 6 motets from the 1st book of the "Motetti della corona" (Petrucci, Fossombrone 1514). (4) 1 motet, "Deseende in heroum meum, and a fugue, "Quam es ista," from the "Cantiones selectae ultra centum" (Kriessentia, Augsburg 1540). (5) 2 lamentations, "Migravit Juda," and "Recordare est," from the collection by Le Roy and Ballard, Paris 1557. (6) Detached movements from masses in Eslava's 'Lira sacra Hispansa,' (7) 1 magnificent from Attaignant's 5th book for 4 voices, and 2 motets from his 11th book (Paris 1534). (8) 1 piece in the "Bicinia Gallica," etc. (Rhu, Wittenberg 1545). (9) 3 masses, "O quam gloriosas luce," "Requiem," and "Mente tota," in the "Ambros. Messen" at Vienna, and 3 MS. motets in same library. (10) A mass, "Salve sancta parens," the only copy of which is in the Royal Library at Munich. There is a song of his, "Je le tirray," in the Harlesian MSS. 5349, and fragments of two masses in Burney's musical extracts, Add. MSS. 11, 581-2—both in the British Museum. [J. R.-S. B.]

FIALA, JOSPHE, eminent oboist, born 1749 at Lobkowitz in Bohemia. He taught himself the oboe, for which he had a perfect passion, but being a serf was compelled to menial labour in the Schloss. He ran away, and was recaptured, upon which his mistress, the Countess Lobkowitz, ordered his front teeth to be pulled out that he might be incapable of playing; but some of the nobility of Prague interceded for him with the Emperor, who commanded him to be set free. He first entered Prince Wallerstein's band, and in 1777 that of the Elector at Munich. He was afterwards in that of the Archbishop of Salzburg, where he made the intimate acquaintance of the Mozarts. In 1785 he was suddenly discharged by the Archbishop, with a loss of 200 florins, on which Mozart not only urged him to come to Vienna, but offered him a good engagement. After a residence of some years in Russia he became in 1793 Kapellmeister to Prince Fürstenberg at Donauschingen, where he died in 1816. He published two sets of quartets (Frankfort and Vienna, about 1780-86), 'Six duos pour violon et violoncelle' (Augsburg 1759), and two sets of trios for flute, oboe, and bassoon (Ratiobon 1806), besides MS. concertos for flute, oboe, and cello. He played several other instruments well, especially the cello and double bass, and was evidently a man of mark. [M. C. C.]

FIASCO (a flask). 'Faire fiasco,' 'to make a fiasco,' i.e. a complete failure—a phrase of somewhat recent introduction. The term, though Italian, is not used by the Italians in this sense, but first by the French and then by ourselves.
The date and origin of the expression are unknown to Littré; but it is tempting to believe the image to be that of a flask falling and breaking—or, as our own slang has it, 'coming to utter smash.' [G.]

FIDDLE. The old English word, before 'viol' came in, and still more the idiomatic of the two. Both are possibly derived from the same root—vitula, a calf, from the springing motion of dancers (Diez and Littré; and compare the connection of Geige and jig). Fiddlesstick is the violin-bow, as in the Epigram on a Bad Fiddler:—

Old Orpheus play'd so well he mov'd Old Nick, Whist thou mov'st nothing—but thy fiddlesstick.

The Germans have three terms for the instrument—Fiedel, Geige, and Violino. [G.]

FIDELIO, ODER DIE EHELICHE LIEBE. Beethoven's single opera (op. 72); the words adapted by Joseph Sonnleithner from Bouilly's 'Léonore, ou L'Amour conjugal.' He received the text in the winter of 1804, and composed the opera at Heiligen-lorff in the summer. It was produced (1.) at the Theater an der Wien, Vienna, on Wednesday, Nov. 20, 1805, in 3 acts; the overture was probably that known as 'Leonora No. 2.' Cherubini was in the house. (2.) It was played again on the 21st and 22nd, and then withdrawn. (See p. 185 a.) The libretto was then reduced by Brenting to 2 acts; 3 pieces of music—said to have been an air for Pizzaro with chorus; a duet, Leonore and Marlzelle; and a terzet, Marlzelle, Jaquinot, and Rocco—were sacrificed, and the overture 'Leonora No. 3' composed. It was played again at the Imperial private theatre on Saturday, March 29, 1806, and April 10, and again withdrawn. (3.) Early in 1814 the opera, as again revived by Treitschke, was submitted to Beethoven; he at once set to work, and it was produced a third time, in 2 acts, at the Kärnthnerthor theatre, Vienna, on May 23, 1814, as Fidelio. The overture was that of the 'Ruins of Athens,' but on the 26th the overture in E, known as the 'Overture to Fidelio,' was first played. It was Beethoven's wish that the opera should be called Leonora, but it was never performed under that name. (4.) It was produced in Paris, at the Théatre Lyrique, translated by Barbier and Carré, and in 3 acts, May 5, 1855. In London by Chelard's German company (Schröder, etc.) at the King's Theatre, May 18, 1832. In English (Malibran) at Covent Garden, June 12, 35. In Italian (Crucelli and Sims Reeves, Recitatives by Balfe) at Her Majesty's, May 20, 1851. (5.) The chief editions are—a P. F. score of the 2nd arrangement (by Moscheles under B.'s direction) without Overture or Finale, 1810; with them, 1815; both entitled 'Leonora.' A ditto of the 3rd arrangement, entitled 'Fidelio,' Aug. 1814. A critical edition by Otto Jahn of the complete work as 'Leonora,' in P. F. score, showing the variations and changes (Breitkopf & Härtel, 1851). An English translation by Oliphant (Addison & Hollier), and another by Soane, with Preface (Boosey). The 4 overtures are given in the Royal Edition (Boosey). [G.]
menti and Co., and from whom, up to his 32nd year, he received regular instruction in pianoforte playing. In 1802 Clementi took Field to Paris, where his admirable rendering of Bach's and Handel's fugues astonished musicians; thence to Germany, and thereafter to Russia. Here he was encountered by Spohr, who gives a graphic account of him. Clementi kept him to his old trade of showing off the pianos in the warehouse, and there he was to be found, a pale melancholy youth, awkward and shy, speaking no language but his own, and in clothes which he had far outgrown; but who had only to place his hands on the keys for all such drawbacks to be at once forgotten (Sporh, Selbstbiographie i. 43).

On Clementi's departure in 1804 Field settled at St. Petersburg as a teacher, where his lessons were much sought after and extraordinarily well paid. In 1812 he went to Moscow and gave concerts with even greater success than in Peters burg. After further travelling in Russia he returned to London and played at the Philharmonic—a concerto of his own—Feb. 27, 1832. From thence he went to Paris, and in 1833 through Belgium and Switzerland to Italy, where at Milan, Venice and Naples, his playing did not please the aristocratic mob, and his concerts did not pay. Habits of intemperance had grown upon him; he suffered from fistula, and his situation at Naples became worse and worse. He lay in a hospital for nine months in the most deplorable condition, from which at last a Russian family named Raemanow rescued him, on condition that he should consent to return with them to Moscow. On their way back Field was heard at Vienna, and elicited transports of admiration by the exquisite playing of his Nocturnes. But his health was gone. Hardly arrived at Moscow he succumbed, and was buried there in Jan. 1837.

Field's printed compositions for the piano are as follows:—7 Concertos (No. 1, Eb; No. 2, Ab; No. 3, Eb; No. 4, Eb; No. 5, C, 'L'incendie par l'orage'; No. 6, C; No. 7, C minor); 2 Divertimenti, with accompaniment of two violins, flute, viola and bass; a Quintet and a Rondo for piano and strings; Variations on a Russian air for four hands; a grand Valse, 4 Sonatas, 3 of which are dedicated to Clementi; 2 'Air en Rondeau'; Fantaisie sur le motif de la Polonaise, 'Ah, quel dommage'; Rondeau Ecosais; Polonaise en forme de Rondo; deux airs Anglais, and 'Vive Henry IV' variés; and 20 pieces to which in recent editions the name of Nocturnes is applied, though it properly belongs to not more than a dozen of them.

FIERRABRAS. An opera in 3 acts by Schubert, words by Kupelwieser. It was commissioned by Barbaja, but owing to his failure was never performed, and remains in MS. in the Library of the Gesellschaft der Musikfreunde at Vienna. Act 1, 304 pages, is dated at beginning and end 25th and 31st May (1833); Act 2, 31st May and 5th June. The overture is occasionally played at concerts.

G.

FIGURE.

FIGURE. The smaller variety of the simple flute, possessing at most one key. It is made in several keys, F, Bb, and Eb. It is seldom used in Orchestral music, and only for the production of peculiar effects. Fifes are combined with drums in military use. They play simple melodies, without bass, of a marked character and rhythm, suitable to mark the time of marching. [W.H.S.]

FIFTEENTH is a stop or set of pipes in an organ sounding 2 octaves, or 15 notes, above the Open diapason. Thus when the Fifteenth and Open diapason stops are drawn out at the same time, and the finger is placed on the key of middle C, two notes are sounded—middle C and C two octaves above it.

FIFTH. A Fifth is the perfect consonance, the ratio of the vibrational numbers of the limiting sounds of which is 2:3. It is called fifth because 5 diatonic notes are passed through in arriving from one extreme of the interval to the other, whence the Greeks called it ἱδ στρες, Diapente. The interval consists of 3 whole tones and a semitone.

C.H.H.P.

FIGARO. See NOZZE DI FIGARO.

FIGURANTE. A ballet-dancer who takes an independent part in the piece; also, in France, a subordinate character in a play, who comes on but has nothing to say.

FIGURE is any short succession of notes, either as melody or a group of chords, which produces a single, complete, and distinct impression. The term is the exact counterpart of the German Motiv, which is thus defined in Reissmann's continuation of Mendel's Lexicon:—Motiv, Gedanke, in der Musik, das kleinere Glied eines solchen, aus dem dieser sich organisich entwickelt. It is in fact the shortest complete idea in music; and in subdividing musical works into their constituent portions, as separate movements, sections, periods, phrases, the units are the figures, and any subdivision below them will leave only expressionless single notes, as unmeaning as the separate letters of a word.

Figures play a most important part in instrumental music, in which it is necessary that a strong and definite impression should be produced to answer the purpose of words, and convey the sense of vitality to the otherwise incoherent succession of sounds. In pure vocal music this is not the case, as on the one hand the words assist the audience to follow and understand what they hear, and on the other the quality of voices in combination is such as to render strong characteristic features somewhat inappropriate. But without strongly marked figures the very reason of existence of instrumental movements can hardly be perceived, and the success of a movement of any dimensions must ultimately depend, to a very large extent, on the appropriate development of the figures which are contained in the chief subjects. The common expression that a subject is very 'workable,' merely means that it contains well-marked figures; though it must be observed on the other hand, that there are not a few instances in which masterly treatment
FIGURE.

has invested with powerful interest a figure which at first sight would seem altogether deficient in character.

As clear an instance as could be given of the breaking up of a subject into its constituent figures for the purpose of development, is the treatment of the first subject of Beethoven's Pastoral Symphony, which he breaks up into three figures corresponding to the first three bars. As an example of his treatment of (a) may be taken—

\( \text{Examples of this kind of treatment of the figures contained in subjects are very numerous in classical instrumental music, in various degrees of refinement and ingenuity; as in the 1st movement of Mozart's G minor Symphony; in the same movement of Beethoven's 8th Symphony; and in a large number of Bach's fugues, as for instance Nos. 2, 7, 15, of the Wohltemperirte Klavier. The beautiful little musical poem, the 18th fugue of that series, contains as happy a specimen of this device as could be cited.}

In music of an ideally high order, everything should be recognisable as having a meaning; or, in other words, every part of the music should be capable of being analysed into figures, so that even the most insignificant instrument in the orchestra should not be merely making sounds to fill up the mass of the harmony, but should be playing something which is worth playing in itself. It is of course impossible for any but the highest genius to carry this out consistently, but in proportion as music approaches to this ideal, it is of a higher order as a work of art, and in the measure in which it recedes from it, it approaches more nearly to the mass of base, slovenly, or false contrivances which lie at the other extreme, and are not works of art at all. This will be very well recognised by a comparison of Schubert's method of treating the accompaniment of his songs and the method adopted in the large proportion of the thousands of 'popular' songs which annually make their appearance in this country. For even when the figure is as simple as in 'Wohin,' 'Mein,' or 'Ave Maria,' the figure is there, and is clearly recognised, and is as different from mere sound or stuffing to support the voice as a living creature is from dead and inert clay.

Bach and Beethoven were the great masters in the use of figures, and both were content at times to make a short figure of three or four notes the basis of a whole movement. As examples of this may be quoted the truly famous rhythmic figure of the C minor Symphony (d), the figure of the Scherzo of the 9th Symphony (e), and the figure of the first movement of the last Sonata, in C minor (f). As a beautiful example from Bach may be quoted the Adagio from the Toccata in D minor (y), but it must be said that examples in his works are almost innumerable, and will meet the student at every turn.

A very peculiar use which Bach occasionally makes of figures, is to use one as the bond of connection running through a whole movement by constant repetition, as in Prelude No. 10 of the Wohltemperirte Klavier, and in the slow movement of the Italian Concerto, where it serves as accompaniment to an impassioned recitative. In this case the figure is not identical on each repetition, but is freely modified, in such a way however that it is always recognised as the same, partly by the rhythm and partly by the relative positions of the successive notes. This manner of modifying a given figure shows a tendency in the direction of a mode of treatment which has become a feature in modern music: namely, the practice of transforming figures in order to show different aspects of the same thought, or to establish a connection between one thought and another by bringing out the characteristics they possess in common. As a simple specimen of this kind of transformation, may be quoted a passage from the first movement of Brahms's P. F. Quintet in F minor. The figure stands at first as at (l), then by transposition as at (i). Its first stage of transformation is (j); further (k) (l) (m) are progressive modifications towards the stage (n),

which, having been repeated twice in different
positions, appears finally as the figure immediately attached to the Cadence in D♭, thus—

\[ \begin{array}{c}
\text{A similar very fine example—too familiar to need quotation here—is at the close of Beethoven’s Overture to Coriolan.}
\end{array} \]

The use which Wagner makes of strongly marked figures is very important, as he established a consistent connection between the characters and situations and the music by using appropriate figures (Leitmotiven), which appear whenever the ideas or characters to which they belong come prominently forward.

That figures vary in intensity to an immense degree hardly requires to be pointed out; and it will also be obvious that figures of accompaniment do not require to be so marked as figures which occupy positions of individual importance. With regard to the latter it may be remarked that there is hardly any department in music in which true feeling and inspiration are more absolutely indispensable, since no amount of ingenuity or perseverance can produce such figures as that which opens the C-minor Symphony, or such soul-moving figures as those in the death march of Siegfried in Wagner’s ‘Götterdämmerung’.

As the common notion that music chiefly consists of pleasant tunes grows weaker, the importance of figures becomes proportionately greater. A succession of isolated tunes is always more or less inconsequent, however deftly they may be connected together, but by the appropriate use of figures and groups of figures, such as real musicians only can invent, and the gradual unfolding of all their latent possibilities, continuous and logical works of art may be constructed; such as will not merely tickle the hearer’s fancy, but arouse profound interest, and raise him mentally and morally to a higher standard. [C.H.H.P.]

FIGURED. A translation of Figurato, another word for Florid. Figured Counterpoint is where several notes of various lengths, with syncopations and other ornamental devices, are set against the single notes of the Canto fermo; and Figured melody, or Canto figurato, was the breaking up of the long notes of the church melodies into larger or more rapid figures or passages. The Figurier Choral, or Figured chorale, of the German school was a similar treatment of their church tunes, in which either the melody itself or its accompaniments are broken up into ‘figures’ or groups of smaller notes than the original. Of this numberless examples may be found in the works of J. S. Bach.

FIGURED BASS is a species of musical shorthand by which the harmony only of a piece is indicated. It consists of the bass notes alone with figures to represent the chords. It seems to have been first employed by Peri, Caccini, Viadana, and Monteverde, about 1600, in the accompaniments of their Recitatives and Songs, and was afterwards for some time in universal use for accompaniment; songs such as the collection of the Orpheus Britannicus, and anthems such as Boyce’s collection, and great works like Bach’s Passion and Handel’s Messiah, having accompaniments indicated in this manner. The bass line consisted of the lowest part of whatever was going on at the time, whether treble, or tenor, or bass, and in choral works it often leapt about promiscuously in a manner that would be very harassing to a player unaccustomed to the process, as for example

\[ \begin{array}{c}
\text{from the last chorus of the Messiah.}
\end{array} \]

The figures represented the diatonic intervals counting upwards, without reference to the nature of the chord; thus 2 always meant the next diatonic note above—D above C, as in (a), and the next note but two, as (b), and so on up to the 9th, above which the figures of the lower octave were repeated; and the choice of the particular octave in which a note represented by a figure should be placed, as well as the progression of the parts, was generally left to the discretion of the player.

It was not customary to insert all the figures, as some intervals were looked upon as too familiar to require indication, such as the octave and the fifth and the third, or any of them in combination with other intervals; thus a 7 by itself would admit of any or all of them being taken without being indicated, as (c); and a 9 would admit of a fifth and a third, as (d); and a 6 of a third, but not of a fifth, as (e); and a 4 of a fifth and an octave, as (f). When a 2 was written alone over a note it admitted also of a sixth and a fourth, as (g); but more commonly the 4 was written with the 2, and the sixth only was understood; and this seems to be the only case in which notes other than the octave or fifth or third are left to be understood.

When notes were chromatically altered the accidental was added by the side of the figure representing that note (7°), or for sharpening a note a line was drawn through the figure or by its side, as at (b), and as it was not customary to write the 3, when the third was to be chromatically altered the accidental was placed by itself with the bass note—thus a simple 3, b, or h, implied a 3, b, or h, 3rd. When the bass moved and any or all
FINALE.

(1) The last movement of a symphony, sonata, concerto, or other instrumental composition.

(2) The piece of music with which any of the acts of an opera are brought to a close.

The finales of the first great master of the symphony, Haydn, though developed with extraordinary skill and inexhaustible invention, are mostly of a somewhat playful character. Though their treatment is learned, their subjects are often trite. They are almost uniformly cast in the 'rondo,' as contradistinguished from the 'sonata' form. The finales of more recent masters exhibit a somewhat severer purpose, and are cast in forms for which, seeing their variety, no name has been, or seems likely to be, devised. In the finale to Mozart's so-called 'Jupiter Symphony'—every conceivable contrapuntal resource is employed, with a freedom unsurpassed by the greatest masters of fugue, to give effect to ideas such as have been vouchedsafe to few other composers. In those of Beethoven the great musical poet goes 'from strength to strength,' and having, as he would seem to have thought, exhausted all the capabilities for effect of the instrumental orchestra, brings the chorus to bear on his latest symphony—a colossal monument of the invention, and command of invention, of its composer; surpassing in scale, variety, and effect all former and indeed subsequent efforts of the kind.

(2) In the earlier operas, of whatever nation, each act was commonly terminated by an aria or at the most a duet, constructed rather to exhibit the powers of the singer or singers employed in it, than to carry on or even emphasize the action. The last act was sometimes brought to a close with a chorus, generally brief and always of the simplest character. The finale proper—the great concerted piece in the course of which the interest of each act culminates—is a modern addition to the musical drama, having its origin in the earlier Italian opera buffa of the last century. The principal masters of this delightful variety of musical composition were Leo, Pergolesi, the Italianised German Hasse, and Logroscino; and it is in the operas of the last of these, otherwise greatly distinguished for their inventiveness and spirit, that the finale first appears, though in a somewhat primitive form. To Piccinni its development, if not its perfectionism, is subsequently due. His opera 'La Cecchina, ossia la Buona Figliuola' owed much of its extraordinary popularity to the introduction of finales in which the action was carried on, and which were first enlivened to the ear by the varieties of key and of rhythm given to the successive movements, and to the eye by the entrances and exits of the different persons of the drama.

Two of the finest specimens of this class form large portions of Mozart's 'Nozze di Figaro.' One of them—that to the second or, as it is commonly performed, the first act—consists of no less than eight movements, as various in character as are the nine personages who are concerned in it, and whose several accusations,
FINALE.

defences, protests, recriminations, and alternations of success and failure are wrought into a work of musical art which, as has been well said, 'begins on an eminence and rises to the last note.'

The great concerted piece, whether introduced at the end of an act or elsewhere, has not been made an essential feature of modern opera without strong protest; and this by the same writer whose amusing designation of baritone and basses has already been quoted. [BASS.] Lord Mount Edgecumbe (Musical Reminiscences, Sect. vii.) attributes its introduction to no other cause than the decline of the art of singing, and the consequent necessity for making compensation to the musical hearer for a deficiency of individual excellence by a superfluity of aggregate mediocrity.

'Composers,' he says, 'having (now) few good voices, and few good singers to write for, have been obliged to adapt their compositions to the abilities of those who were to perform in them; and as four, five, or six moderate performers produce a better effect jointly than they could by their single efforts, songs have disappeared, and interminable quartettes, quintettes, sextettes etc. usurp their place.' And again, 'It is evident that in such compositions each individual singer has little room for displaying either a fine voice or good singing, and that power of lungs is more essential than either; very good singers therefore are scarcely necessary, and it must be confessed that though there are now none so good, neither are there many so bad as I remember in the inferior characters. In these levelling days, equalisation has extended itself to the stage and musical profession; and a kind of mediocrity of talent prevails, which, if it did not occasion the invention of these melodramatic pieces is at least very favourable to their execution.' The most extraordinary thing connected with this passage is that written half a century after the production of Mozart's 'Nozze di Figaro,' with which the venerable critic was certainly well acquainted. From the most recent form of opera, that of Wagner, the finale, like the air, the duet, the trio or other self-contained movement, has entirely disappeared. Each act may be described as one movement, from the beginning to the end of which no natural pause is to be found, and from which it would be impossible to make a connected, or in itself complete extract. It is difficult to conceive that this 'system' should in its integrity maintain, or attain, extensive popularity; but it will no doubt more or less affect all future musical dramas.

J. H.

FINCH, HON. and REV. EDWARD, a prebendary of York in 1704, composed several pieces of church music. Of these a 'Te Deum' and an anthem 'Grant, we beseech Thee,' are included in Tudway's collection of church music in the British Museum (Harl. MSS. 1337-42). He died Feb. 14, 1738, aged 74.

W.H.H.

FINGERBOARD. The fingerboard is that part of the violin and other stringed instruments played with a bow, over which the strings are stretched, and against which the fingers of the left hand of the player press the strings in order to produce sounds not given by the open string.

The fingerboard of the violin is best made of ebony, as harder and less easily worn out than any other wood. Its surface is somewhat curved—corresponding to the top line of the bridge, but not quite so much—in order to allow the bow to touch each string separately, which would be impossible, if bridge and fingerboard were flat. On an average-sized violin it measures 10½ inches in length, while its width is about 1 inch nearest to the head of the violin and 1½ inches at the bridge-end. It is glued on to the neck, and extends from the head to about three-fourths of the distance between the neck and the bridge. At the head-end it has a slight rim, called the 'nut,' which supports the strings and keeps them at a distance sufficient to allow them to vibrate without touching the fingerboard. This distance varies considerably according to the style of the player. A broad tone and an energetic treatment of the instrument require much room for the greater vibration of the strings, and consequently a high nut. Amateur-players, as a rule, prefer a low nut, which makes it easier to press the strings down, but does not allow of the production of a powerful tone.

The fingerboard, getting worn by the constant action of the fingers, must be renewed from time to time. The modern technique of violin-playing requires the neck, and in consequence the fingerboard, to be considerably longer than they were at the time of the great Cremona makers. For these reasons we hardly ever find an old instrument with either the original fingerboard, bridge, sound-post, or bass-bar, all of which however could be made just as well by any good violin-maker now living as by the ancient masters.

The fingerboards of the Violoncello and Double-bass are made on the same principle as that of the violin, except that the side of the fingerboard over which the lowest string is stretched is flattened in order to give sufficient room for its vibration. Spohr adopted a somewhat similar plan on his violin by having a little scooping-out underneath the fourth string, which grew flatter and narrower towards the nut.

In the instruments of the older viola, gambe, and lyra-tribe, the fingerboard was provided with frets.

[F. D.]

FINGER, GOTTFRIED OR GODFREY, a native of Olmütz in Moravia, came to England about 1685, and was appointed chapel-master to James II. In 1689 he published 'Sonatas XII. pro Diversis Instrumentis. Opus Primum,' and in 1690 'Six Sonatas or Solos, three for a violin and three for a flute.' In 1691, in conjunction with John Banister, he published 'Ayres, Canones, Divisions and Sonatas for Violins and Flutes,' and shortly after joined Godfrey Kellor in producing 'A Set of Sonatas in five parts for Flutes and hautboys.' He subsequently published other sonatas for violins and flutes. In 1693 Finger composed the music for Theophilus Parsons' Ode for the annual celebration of St.
Cecilia's day. In 1696, in conjunction with John Eccles, he composed the music for Motteux's masque, 'The Loves of Mars and Venus,' and in the next year for Ravenscroft's comedy, 'The Anatomist, or, The Sham Doctor.' In 1701 he set to music Elkanah Settle's opera, 'The Virgin Prophetess, or, The Siege of Troy.' In the same year he was awarded the fourth prize for the composition of Congreve's masque, 'The Judgment of Paris,' the others being given to John Weldon, John Eccles, and Daniel Purcell. Finger was so displeased at the ill reception of his composition that he quitted England and returned to Germany, where in 1702 he obtained the appointment of chamber musician to Sophia Charlotte, Queen of Prussia. Whilst at Berlin he composed two German operas, 'Siege der Schonheit uber die Helden' and 'Robert,' both performed in 1706. In 1717 he became chapel-master at the court of Gotha. Nothing is known of his subsequent career. Besides the above-mentioned compositions Finger wrote instrumental music for the following plays—'The Wise' Excuse,' 1652; 'Love for Love,' 1655; 'The Mourning Bride,' 1657; 'Love at a loss,' 'Love makes a man,' 'The Humours of the Age,' and 'Sir Harry Wildair,' 1701. [W.H.H.]

FRINGERING (Ger. Fingere, Applicatur; Fr. Doigté), the method which governs the application of the fingers to the keys of any keyed instrument, to the various positions upon the strings of stringed instruments, or to the holes and keys of wind instruments, the object of the rules being in all cases to facilitate execution. The word is also applied to the numerals placed above or beneath the notes, by which the particular fingers to be used are indicated.

In this article we have to do with the fingering of the pianoforte (that of the organ, though different in detail, is founded on the same principles, and will not require separate consideration) for the fingering of wind and stringed instruments the reader is referred to each particular name.

In order to understand the principles upon which the rules of modern fingering are based, it will be well to glance briefly at the history of these rules, and in so doing it must be borne in mind that two causes have operated to influence their development—the construction of the keyboard, and the nature of the music to be performed. It is only in comparatively modern times, in fact since the rise of modern music, that the second of these two causes can have had much influence, for the earliest use of the organ was merely to accompany the simple melodies or plainsongs of the church, and when in later years instrumental music proper came into existence, which was not until the middle of the 16th century, its style and character closely resembled that of the vocal music of the time. The form and construction of the keyboard, on the other hand, must have affected the development of any system of fingering from the very beginning, and the various changes which took place from time to time are in fact sufficient to account for certain remarkable differences which exist between the earliest rules of fingering and those in force at the present time. Until the latter half of the 16th century there would appear to have been no idea of establishing rules for fingering; nor could this have been otherwise, for from the time of the earliest organs, the keys of which were from 3 to 6 inches wide, and were struck with the closed flat, down to about the year 1480, when, although narrower, the octave still measured about two inches more than on the modern keyboard, any attempt at fingering in the modern sense must have been out of the question. The earliest marked fingering of which we have any knowledge is that given by Ammerbach in his 'Orgel oder Instrument Tabulatur' (Leipzig, 1571). This, like all the fingering in use then and for long afterwards, is characterised by the almost complete avoidance of the use of the thumb and little finger, the former being only occasionally marked in the left hand, and the latter never employed except in playing intervals of not less than a fourth in the same hand. Ammerbach's fingering for the scale is as follows, the thumbs being marked 0 and the fingers with the first three numerals:

\[\text{Right Hand:}\]

\[\text{Left Hand:}\]

This kind of fingering, stiff and awkward as it appears to us, remained in use for upwards of a century, and is even found as late as 1718, in the third edition of an anonymous work entitled 'Kurzen jedoch gründlichen Wegweiser,' etc. Two causes probably contributed to retard the introduction of a more complete system. In the first place, the organ and clavichord not being tuned upon the system of equal temperament, music for these instruments was only written in the simplest keys, with the black keys but rarely used; and in the second place the keyboards of the earlier organs were usually placed so high above the seat of the player that the elbows were of necessity considerably lower than the fingers. The consequence of the hands being held in this position, and of the black keys being but seldom required, would be that the three long fingers, stretched out horizontally, would be chiefly used, while the thumb and little finger, being too short to reach the keys without difficulty, would simply hang down below the level of the keyboard.

But although this was the usual method of the time, it is highly probable that various experiments, tending in the direction of the use of the thumb, were made from time to time by different players. Thus Praetorius says ('Synagma Musicum,' 1619), 'Many think it a matter of great importance, and deepse such organisits as do not use this or that particular fingering, which in my opinion is not worth the talk; for let a player run up or down with either first, middle, or third finger, aye, even with his nose if that could help him, provided everything is done clearly, correctly, and gracefully, it does not much
matter how or in what manner it is accomplished.' One of the boldest of these experimenters was Couperin, who in his work 'L'art de toucher le clavecin' (Paris, 1717) gives numerous examples of the employment of the thumb. He uses it however in a very unmethodical way; for instance, he would use it on the first note of an ascending scale, but not again throughout the octave; he employs it for a change of fingers on a single note, and for extensions, but in passing it under the fingers he only makes use of the first finger, except in two cases, in one of which the second finger of the left hand is passed over the thumb, and in the other the thumb is passed under the third finger, in the very unpractical fashion shown in the last bar of the following example, which is an extract from a composition of his entitled 'Le Moucheron,' and will serve to give a general idea of his fingering.

![Finger Exercise Diagram]

About this time also the thumb first came into use in England. Purcell gives a rule for it in the instructions for fingering in his 'Choice Collection of Lessons for the Harpsichord,' published about 1700, but he employs it in a very tentative manner, using it only once throughout a scale of two octaves. His scale is as follows:

**Right Hand.**

![Finger Exercise Diagram]

**Left Hand.**

![Finger Exercise Diagram]

Contemporary with Couperin we find Sebastian Bach, to whose genius fingering owes its most striking development, since in his hands it became transformed from a chaos of unpractical rules to a perfect system, which has endured in its essential parts to the present day. Bach adopted the then newly invented system of equal temperament for the tuning of the clavichord, and was therefore enabled to write in every key; thus the black keys were in continual use, and this fact, together with the great complexity of his music, rendered the adoption of an entirely new system of fingering inevitable, all existing methods being totally inadequate. Accordingly, he fixed the place of the thumb in the scale, and made free use of both that and the little finger in every possible position. In consequence of this the hands were held in a more forward position on the keyboard, the wrists were raised, the long fingers became bent, and therefore gained greatly in flexibility, and thus Bach acquired such a prodigious power of execution as compared with his contemporaries, that it is said that nothing which was at all possible was for him in the smallest degree difficult.

Our knowledge of Bach's method is derived from the writings of his son, Emanuel, who taught it in his 'Versuch über die wahre Art das Clavier zu spielen.' But it would not be safe to conclude that he gave it literally and without omissions. At any rate there are two small pieces extant, the marked fingering in which is undoubtedly by Sebastian Bach himself, and yet differs in several respects from his own rules as given by his son. These pieces are to be found in the 'Clavierbüchlein,' and one of them is also published as No. 11 of 'Douze petits Preludes,' but without Bach's fingering. The other is here given complete:

![Finger Exercise Diagram]

In the above example it is worthy of notice that although Bach himself had laid down the rule, that the thumb in scale-playing was to be used twice in the octave, he does not abide by it, the scales in this instance being fingered according to the older plan of passing the second finger over the third, or the first over the thumb. In the fifth bar again the second finger passes over the first—a progression which is disallowed by Emanuel Bach.

The discrepancies between Bach's fingering and his son's rules, shown in the other piece mentioned, occur between bars 22 and 23, 34 and 35, and 38 and 39, and consist in passing
the second finger over the first, the little finger under the third (left hand), and the third over the little finger (left hand also).

Bar 22, 23.

Bar 34, 35.

Bar 38, 39.

From these discrepancies it would appear that Bach's own fingering was more varied than the description of it which has come down to us, and that it was free in the sense not only of employing every possible new combination of fingers, but also of making use of all the old ones, such as the passing of one long finger over another. Emanuel Bach restricts this freedom to some extent, allowing for instance the passage of the second finger over the third, but of no other long finger. Thus only so much of Bach's method has remained in practical use to the present day as Emanuel Bach retained, and as is absolutely essential for the performance of his works.

Emanuel Bach's fingering has been practically that of all his successors until the most recent times; Clementi, Hummel, and Czerny adopted it almost without change, excepting only the limitation caused by the introduction of the pianoforte, the touch of which requires a much sharper blow from the finger than that of the clavichord or harpsichord, in consequence of which the gentle gliding of the second finger over the third, which was allowed by Emanuel Bach, has become unsuitable, and is now rarely used.

In the teaching of all the above-named masters, one principle is particularly observed,—the thumb is not used on a black key except (as Emanuel Bach puts it) 'in cases of necessity,' and it is the abolition of this restriction which forms the latest development of fingering. Modern composers, and in particular Chopin and Liszt, have by their invention of novel passages and difficulties done once more for the thumb what Bach did for it, and just as he redeemed it from a condition of uselessness, so have they freed its employment from all rules and restrictions whatsoever. Hummel, in his 'Art of playing the Pianoforte,' says 'We must employ the same succession of fingers when a passage consists of a progression of similar groups of notes. . . . The intervention of the black key changes the symmetrical progression so far only as the rule forbids the use of the thumb on the black keys.' But the modern system of fingering would employ absolutely the same order of fingers throughout such a progression without considering whether black keys intervene or no. Many examples of the application of this principle may be found in Tausig's edition of Clementi's 'Gradus ad Parnassum,' especially in the first study, a comparison of which with the original edition (where it is No. 16) will at once show its distinctive characteristics. That the method has immense advantages and tends greatly to facilitate the execution of modern difficulties cannot be doubted, even if it but rarely produces the striking results ascribed to it by von Bülow, who says in the preface to his edition of Cramer's Studies, that in his view (which he admits may be somewhat chimerical), a modern pianist of the first rank ought to be able by its help to execute Beethoven's 'Sonata Appassionata' as readily in the key of F sharp minor as in that of F minor, and with the same fingering!

There are two methods of marking fingering, one used in England and the other in all other countries. Both consist of figures placed above the notes, but in the English system the thumb is represented by a x, and the four fingers by 1, 2, 3, and 4, while in Germany, France, and Italy, the first five numerals are employed, the thumb being numbered 1, and the four fingers 2, 3, 4, and 5. This plan was probably introduced into Germany—where its adoption only dates from the time of Bach—from Italy, since the earliest German fingering (as in the example from Ammerbach quoted above) was precisely the same as the present English system, except that the thumb was indicated by a cypher instead of a cross. The same method came into partial use in England for a short time, and may be found spoken of as the 'Italian manner of fingering' in a treatise entitled 'The Harpsichord Illustrated and Improved,' published about 1740. Purcell also adopted it in his 'Choice Collection' quoted above, but with the bewildering modification, that whereas in the right hand the thumb was numbered 1, and so on to the little finger, in the left hand the little finger was called the first, and the thumb the fifth. [F.T.]

FINK, GOTTFRIED WILHELM, theologian and musical critic, born March 7, 1753, at Sulz in Thuringia, was educated at Naumburg, where he was chorister, and Leipzig (1804–9). He began writing for the Allgemeine musikalische Zeitung in 1808, and in 1827 succeeded Rochlis as editor, a post he held till 1841. In 1842 he became for a short time professor of music to the University of Leipzig. He died at Halle Aug. 27, 1846. Fink's only musical works of value
were the 'Musikalischer Hammerschmuck,' a collection of Lieder, &c. (Leipzig 1843), and 'Die deutsche Liedertafel' (ibid. 46). As an author he published various volumes and pamphlets, but none of which the names are worth preserving. Besides the Zeitung, he was a prominent contributor, the Conversations-Lexicon of Erich and Gruber, and of Brockhaus, and to Schilling's 'Lexicon der Tonkunst.' He left in MS. a history of music, upon which he had been engaged for 20 years. Fink was at once narrow and superficial, and a strong conservative; and the Zeitung did not maintain under his editorship the position it held in the musical world under Rochlitz. [M.C.C.]

Fioravanti, Valentinó, composer, born in Rome 177G, studied under Sala at the 'Pietà de' Turchini' at Naples. His first opera 'Col mtti il savio si perde' produced at the Pergola in Florence 1791, was followed by at least 50 others, all comic. He was invited to Paris in consequence of the success of 'Le Cantatrice Villane' (1806) and there wrote 'I virtuosi ambulanti' (1807). These two were on the whole his best operas, though all possessed a genuine vein of comedy, a freshness, and an ease in the part-writing, which concealed their triviality and want of originality, and made them very popular in their day. In June 1816 he succeeded Jannacioni as maestro di capella to St. Peter's at Rome, and while in that post wrote a quantity of church music very inferior to his operas. His character was gentle and retiring; and the last few years of his life were spent very quietly. He died at Capua, on his way to Naples, June 16, 1837. Like Paisielo and other considerable Italian composers of that date, Fioravanti was extinguished by Rossini.

His son Vincenzo, born 1810, also composed operas with ephemeral success. [M.C.C.]

Fiorillo, Federigo, violin-player and composer, born in 1753 at Brunswick, where his father Ignazio, a Neapolitan by birth, lived as conductor of the opera. He appears to have been originally a player of the mandoline, and only afterwards to have taken up the violin. In 1786 he went to Poland, and about the year 83 we find him conductor of the band at Riga, where he stayed for two years. In 85 he played with much success at the Concert Spirituel at Paris, and published some of his compositions, which were very favourably received. In 1788 he went to London, where he appears to have been less successful as a violinist, as we conclude from the fact that he played the viola part in Salomon's quartet-party. His last appearance in public in London took place in the year 1794, when he performed a Concerto on the viola at the Antient Concert. Of the rest of his life but little is known, except that he went from London to Amsterdam, and in 1823 was in Paris. Place and date of his death are not known. His numerous compositions are Duos for Violins, for Piano and Violin, and Violin and Cello; Trios for Flute, Violin, and Tenor, for 2 Violins and Bass; Quartets and Quintets for Stringed In-

Fischer. Fischler. The family of singers of the 18th and 19th centuries. The founder was Ludwig a Bass, of whom Otto Jahn (Mozart, 2nd ed. 661, 630) speaks as 'an artist of extraordinary gift, for compass, power, and beauty of voice, and artistic perfection both in singing and playing, probably the greatest German bass-singer.' He was born at Mayence, 1745, and well known
at the theatres of Munich (1778), Vienna (79), Paris (83), Italy (84), Berlin (88), etc. He died at Berlin, July 10, 1825. He was the original Omin in the 'Entführung,' and had a compass of two octaves and a half 'all round, even, and in tune' (Reichardt).

Fischer was a great ally of Mozart's, who wrote for him 'Noon's, so, d'onde viene,' and often mentions him with affection—'A good friend, splendid voice, though the Archbishop told me he sang too low for a bass, and I assured him he should sing higher next time' (Sept. 26, 81); 'A man whose loss is irretrievable' (Feb. 5, 83); 'I went to see the Fischer; I cannot describe their joy, the whole family desire to be remembered to you' (March 17, 81). The others of the family were his wife Barbara, a more than respectable singer and actress; his son Joseph (1780-1862), also a bass of renown, but more known as an Impressario than a singer; his daughters Fischer-Vernier—who in 1835 founded a singing school of great repute for girls in Vienna—and Wilhelmine, and Joseph's adopted daughter, Fischer-Maraffa, all good efficient intelligent artists. [M.C.C.]

FISCHER, GOTTFRIED, son of a master baker of Bonn, born there July 21, 1780—ten years after Beethoven; the author of a narrative or collection of anecdotes on Bonn and the Beethoven family, their circumstances and connections, from the grandfather of Ludwig to Ludwig's own youth. The Fischers lived at 934 in the Rheingasse, in which the Beethovens also lived from 1775, and which was for long believed to be the birthplace of the composer. Fischer's narrative was not committed to writing till 1838, and though highly curious and interesting, and written with apparent bona fides, cannot be closely relied on as to dates. It has been sifted and employed by Thayer in his Life of Beethoven (see vol. i. Anhang viii.). [G.]

FISCHER, JOHANN CHRISTIAN, distinguished oboist, born 1733 at Freiburg (Breisgau), was for some years in the court band at Dresden, then in the service of Frederic the Great, and after a successful concert tour by Mannheim, Holland, and Paris, came to London, and made his first appearance at the Thatched House, June 3, 1768; J. C. Bach playing the pianoforte for the first time at the same concert. Fischer was for many years a great attraction at the Abel and Vauxhall concerts, and as a member of the Queen's band played frequently before the court. His playing of Handel's fourth oboe concerto at the Handel Commemoration in 1784 so delighted the King that he expressed his satisfaction in a note on his book of the works. (Memoir of Dr. Burney by Mme. D'Arblay, ii. 385.) His tone must have been very powerful since Giardini the violinist characterised it as 'such an impulsiveness of tone as no other instrument could contend with;' and according to the ABCDario 'it was very fine and inexpressibly well-managed.' On the death of Stanley, Master of the King's band (1786), Fischer competed with Burney and others for the vacant post, but Parsons was appointed, and Fischer soon after went abroad, probably in disgust at his failure. Mozart in 1786 as a boy had been enchanted with his playing in Holland, but on hearing him again in Vienna, severely criticises him (letter to his father, April 4, 1787), and condemns alike his tone, his execution, and his compositions. From 1790 he remained in London. While playing at court he was struck with paralysis, and died April 29, 1800 (see 'Times' of May 1). Kelly, in his 'Reminiscences' (vol. i. 9), gives an anecdote of Fischer's pride as an artist. A certain nobleman having invited him to supper much against his will, said when he arrived, 'I hope, Mr. Fischer, you have brought your oboe in your pocket;' to which he replied, 'No, my lord; my oboe never sups,' and instantly left the house. He was very intimate with Gainsborough, who was a great lover of music, and whose pretty daughter Mary he married, though the father gave a very unwilling consent, foreseeing the short duration of the marriage. (Fulcher's Life of Gainsborough.) There is a fine portrait of Fischer by Gainsborough at Hampton Court (private dining-room, No. 747). Thicknesses mentions a second in full uniform—scarlet and gold like a colonel of the Foot Guards.

Zuck and Kellner were his best-known pupils in London. J. C. Bach wrote a quartet for two oboes, viola, and cello, for him, which he often played. His own compositions (of which Félix and Gerber give a partial list) consist of solos, duets, concertos, quartets, etc. On this point the ABCDario says, 'as a composer his desire to be original often makes him introduce whimsical and outré passages, which nothing but his playing could cover.' Mozart, in spite of his unfavourable opinion of him, immortalised his minuet by writing variations for it (1773), which he often played to display his bravura (Kochel, No. 179). 'This minuet was then all the rage,' as Kelly writes, after hearing Fischer play it in Dublin (Rem. i. 9), and it continued to be the rage for many years. [C.F.P.]

FISCHHOFF. The Fischhoff MS. is the name of a collection of many and valuable particulars of Beethoven's life existing in the Royal Library at Berlin. A short biography of the composer was published soon after his death by Schlosser, which was even more imperfect and incorrect than such hasty compilations are wont to be. It was quickly followed (Oct. 6, 1877) by a public notice from Hoteshevsk, the local representative of the Beethoven family, to the effect that an adequate biography was in preparation which would correct the many and important errors to be found in Schlosser. This appears to have been the origin of the collection. On Carl van Beethoven's majority it came into his hands, and at length, after some vicissitudes, into those of Fischhoff, from whom it was acquired by the Berlin Library, where it remains.
still unpublished as a whole. It contains copies of a vast number of letters and documents, many of which no longer exist; of memoranda and remarks scribbled by Beethoven in pocket-books and journals; of the personal recollections of his intimate friend Zmeskall; and of a few printed materials dating from 1830 to 1847. Mr. Thayer appears to have been the first of Beethoven's biographers to make systematic use of this important source, and it is from the 1st volume of his Biography (p. ix) that the above information is obtained.

FINTA GIARDINIERA, LA. Opera buffa in 3 acts, author of libretto unknown; music by Mozart; produced at Munich Jan. 13, 1775.

FINTA SEMPLICE, LA. Opera buffa in 3 acts; libretto by Coltellini, music by Mozart; composed at Vienna in 1768, when he was only 12, but apparently never put on the stage.

FLADT, ANTON, eminent oboist, born 1775 at Mannheim, studied under Ramm, succeeded Lebrun in the orchestra at Munich (1795). He travelled much, visiting Vienna (1793), Italy, the Tyrol, the Rhine, Saxony, Prussia, England (1798), Bohemia, Hungary, and France. When in London the Prince of Wales made him liberal offers to remain in England. After 1810 he resided entirely at Munich. He composed three concertinos for oboe and orchestra, and some pieces for two flageolets.

[FLAGEOLET. The French and Italian term for the harmonic notes in the violin and other instruments of that tribe; doubtless so called because in quality they resembled the flageolet. [HARMONICS.]

FLAGEOLET (Old Fr. flajol). The modern form of the old Flute à bec or straight flute. The upper part consists of a plain mouthpiece, leading to a cavity, in which is a sounding-hole exactly resembling that of an open pipe in the organ. The air is shaped by a thin groove into a flat sheet, which strikes against the feather-edge of an aperture formed in the intermediate part of the instrument. The vibrations thus originated pass into a conical tube, which, unlike the organ-pipe, is furnished with lateral holes, and sometimes with keys. The fundamental note of the speaking throat, being coerced by different lengths of consonant tube, gives a simple scale; which can be extended by forcing wind in more strongly, and thus producing the first two or three harmonics of the ground-tone.

The simplest form of the Flageolet is the ordinary tin whistle with six holes. This consists of a conical tube of metal stopped at the top by a square block of wood, except in a narrow anterior fissure. Below the fissure is a gap, the lower edge of which is flattened so as to cut and intercept the stream of air. In more elaborate instruments a chamber is added containing moist sponge intended to hold back the condensed moisture of the breath.

In the whistle, and in the English Flageolet, the scale is simply that of the Flute; indeed, flutes are made from which the usual head can be removed and that of the Flageolet substituted. The French Flageolet is similar in its upper part, but possesses a more complicated scale, and an abundance of auxiliary keys.

The invention of the Flageolet is ascribed by Burney (Hist. iii. 278 note) to the Sieur Juvigny, who played it in the famous 'Ballet comique de la Royne,' 1581. In the time of Mersennus (1600-1648) the principal teacher and player was Le Vacher (Hawkins, chap. 125). It appears to have superseded the more ancient Recorder, much as the Violin did the Viol. The two were obviously for a time in use together in this country; for the 'Genteele Companion, being exact directions for the Recorder, carefully composed and gathered by Humphrey Salter,' is dated from the 'Lute in St. Paul's churchyard' in 1653, whereas the Pleasant companion, or new lessons and instructions for the Flageolet by Thomas Greeting, Gent,' was 'printed for J. Playford, and sold at his shop near the Temple Church' in 1652. The former work gives a plate of the long bulky Recorder, reaching halfway down to the player's knee, whereas the latter represents him sitting over a table on which lies his book, holding in his mouth and hands the 'Flageolet,' a pipe no more than nine inches long; on the table lies one somewhat larger, apparently about twelve inches in length. 'It may be carried in the pocket, and so without any trouble be a companion by land and by water.' In the same way the early Violins were termed piccoli Violini alla Francesce in opposition to the more bulky Viol. Both instruments read from a staff of six lines, each of which represents a hole to be stopped. In the Recorder music the tune, with proper notes and time, is placed on a staff above, whereas in the Flageolet a single symbol above the staff shows the time, but not the intervals of the melody. The recorder had a top hole stopped with the left thumb, followed by three for the first three fingers of that hand, a fifth stopped by the thumb of the right hand, and four more with the right fingers. It thus possesses a scale of eight notes. The flageolet has only six holes, stopped by a different arrangement; their closure being appropriated successively to the thumb, first, and second fingers of the left, followed in order by the first finger, thumb, and second fingers of the right hand. This fingering seems to be unique of its kind, and persists in the French Flageolet.

The Double flageolet was invented by a person named Bainbridge about 1800, and his Method for the instrument is supplemented after about 20 years by his son-in-law. It consists of two 'patent Flageolets, the sides close to each other; the one has seven holes in front and one behind; the other only four in front. The seven-holed Flageolet is played with the left hand, the four-holed Flageolet is played with the right hand; and in playing duets you will in general have the same number of holes covered on the second.
FLAGOELET.

Flagoelet as on the first.' From the examples it appears that in this case the two instruments play in thirds; intervals larger than this being possible in a few cases. The two tubes are set in a single block and blown by one mouthpiece. Contrivances were added for silencing one of the two pipes when required, but they seem to have been often blown in unison to a single note. The instrument, though still within the memory of some, has entirely and most deservedly gone out of use. No music of importance seems to have been composed for it.

The single English and French Flagoelets are still to be met with, chiefly in dance music. The former has been described as a simple form of Flute à bec. The latter is a far more complicated instrument, possessing two holes for the thumbs at the back and four in front for the two first fingers of the two hands. Indeed it is distinctly a descendant of the old Flagoelet given above. The half-stopping of the left hand thumb-hole by means of a grooved plate for the thumb-nail, and the introduction of the tip of the right little finger into the small everted bell at the bottom of the instrument, are devices peculiar to this difficult but rather ineffective instrument. Its compass is two octaves and three semitones from G on the treble stave. A full Method is published by Bouquet.

The Flagoelet is not found in orchestral scores, but there is a tradition of some authority that the solo part in 'O rudder than the cherry,' marked in the score as 'Flauto,' was played in Handel's time on the flagoelet; and Mr. Sullivan has introduced it with excellent effect in the part of Dr. Daly in his 'Sorcerer.' [W.H.S.]

FLAMAND-GRÉTRY, Louis Victor, born 1764, married the niece of Grétry, and bought 'l'Ermitage,' near Montmorency, long the alternate residence of Rousseau and Grétry, and the burial place of the latter. An offer he made, but subsequently withdrew, of presenting Grétry's heirs to a pension, was the last act of the composer, involved in a long and ruinous lawsuit, which finally went against him. He died in Paris, July 1843. [M.C.C.]

FLAT. A term employed in the sense of lowering; an artist sings or plays flat when his notes are below the right pitch. B flat is a semitone lower than B; E flat is not E, and so on; to flatten (diminuer) E flat or an instrument is to make it lower than before, just as to sharpen (aiguiser) is to raise it. The sign used to denote this flattening in music is b, called a flat—Fr. bémol; Ital. Bemolle; Germ. Bc. It has been already shown under Accidentals and B (p. 194 and 107) how the signs of the flat (b) and natural (♯) were derived from two forms of the letter b. A double flat is a descent of two semitones, and is marked by bb. The flat of a note is not the same pitch (does not give the same number of vibrations) as the sharp of the note a tone below it, though on a keyed instrument the two are represented by the same black key; nor are B and E the same as Cb and F♭—and so on. This will be explained under Interval.

In German musical nomenclature the notes are flattened by adding es to the letter, as Es, Ge, etc., A flat is Ås, and B flat B♭, though Ks has been used. Double flats are Deses, etc. The b and ♭ in German literature were formerly used to express minor and major, as Gb for G minor, D♭ for D major, and even Eb for B minor, and A♭ for A flat major. (See the earlier Indexes of the Allgemeine musikalische Zeitung for frequent instances of this strange usage.) Such ambiguities are now avoided by the use of the words dur and moll for major and minor.

FLAT FIFTH is an interval which is less by one semitone than a perfect fifth, and is dissonant.

FLAUTO TRAVERSO (Ital.; Fr. Flute traversière). The distinguishing name of the Flute with a lateral mouthpiece, held across the performer, as opposed to the Flute à bec or Flageolet, held straight in front. [Flute.] [W.H.S.]

FLEMING, Alexander, minister of the Scotch Church, author of two small treatises in favour of the introduction of organs into Scotch churches (Glasgow 1808), the first suggestion of the kind since the Reformation. [M.C.C.]

FLIEGENDE HOLLENDER, DER. Opera in 3 acts, words and music by Richard Wagner; produced at Dresden, Jan. 2, 1843. In London at Drury Lane, as L'Ollandese dannato, July 23, 1870; and by Carl Rosa, as the Flying Dutchman, at the Lyceum, Oct. 1876; at Covent Garden as Il Vasoello fantasma, June 16, 77.

The words were sold by Wagner to the manager of the Grand Opéra in 1841, set by Dietrich as Le Vaisseau fantôme, and brought out there Nov. 9, 1842. [G.]

FLIGHT, Benjamin, an eminent organ builder, born about 1767, was the son of Benjamin Flight, who, in the latter part of the last century, carried on, in partnership with John Kelly, under the style of 'Flight and Kelly,' the business of organ building at Exeter Change. Young Flight learned the art of constructing organs from his father. About the year 1800 he commenced business, in partnership with Joseph Robson, in Lime Street, Leicester Square, under the style of 'Flight and Robson.' They afterwards removed to St. Martin's Lane, where they constructed and for many years publicly exhibited the Alphonson. [See Alphonson,] The partnership was dissolved in 1833, after which Flight, in conjunction with his son, J. Flight, who had long actively assisted him, carried on business in St. Martin's Lane, as 'Flight and Son.' Flight invented many improvements in organ building which prepared the way for still superior mechanism. Amongst them was an apparatus for steadying the wind, added to the bellows during a repairation of Father Schmidt's organ at Trinity College, Cambridge, which preceded, and possibly suggested, the commissum bellows. R. Flights died
FLIGHT.

in 1847 aged 80, and Robeson in 1876. Flight's son continues the business in St. Martin's Lane under the name of 'Flight and Son.' [W.H.H.]

FLINTOFF, REV. LUKE, was appointed Gentleman of the Chapel Royal in 1715, having been Priest-Vicar of Lincoln Cathedral from 1704 to 1714. In July 1719 he was appointed Reader in Whitehall chapel. He was also a minor canon of Westminster Abbey. He died Nov. 3, 1737. He is presumed to have invented the double chant, his beautiful chant in G minor being the earliest known. [W.H.H.]

FLORENCE. Florentine music, although in point of great masters inferior to the other schools of music in Italy, can still claim her place among the earliest institutions for instruction in that science. Casella, the friend of Dante, was a native of Florence, and as early as 1310 there existed a philarmonic society there. Burney, writing in 1789, speaks of it still in existence, and which invented the Laudi Spirituali. Under the famous Lorenzo de' Medici, the streets of Florence resounded with the Canti Carnascialeschi, the gay and frivolous songs of the Carnival, against which Savonarola protested, and the music of which was often sacrificed on the pile of Vanità. To the history of Florentine music during that epoch may be added the name of Antonio Squarciapuppi, organist of the Duomo; but passing over the other masters of this first epoch of the Florentine school we come to the dawn of the opera music, which had a fitting birthplace in festive Florence. For the purpose of promoting this kind of music, a private musical academy called 'Degli Alterati' (the thirsters) was founded in 1568 at Florence by seven Florentine noblemen who assembled at the house of Giambattista Strozzi. They chose as their device a cask of grapes filled to overflowing, and the motto 'Quid non designat ebrietatis.' Giovanni Bardi Conte di Varno belonged to this academy, and, after the death of Strozzi, his house became the rendezvous of the academicians. Bardi had for many years studied the theory and practice of music till he became a correct and good composer; and he was often solicited to prepare for the stage those mythological representations which under the name of 'Feste musicali' were among the earliest forms taken by the musical drama. These entertainments were first represented at Florence on a scale of magnificence in keeping with the gorgeous character of the Medici feasts. Vincenzo Galilei—father of the great Galileo—was another member of the academy 'Degli Alterati.' He wrote a clever treatise, 'Dialogo della Musica antica e moderna' (Florence 1585) upon the abuse of modern music, in which he places in the mouth of Bardi an attack upon the madrigali and the researches after counterpoint. He was also a composer, and is supposed to be the first who composed melodies for a single voice. He set to music the speech of Ugozino (Inf. xxxiii.) beginning 'La bocca sollevò dal fero pasto'; also a portion of the Lamentations of Jeremiah.

Girolamo Mei was another member of this academy, and Emilio del Cavaliere, a composer of the Roman School who, previous to the composition of the first entire musical drama by Rinuccini, had divided into scenes and set to music two Pastorales—'La disperazione di Sileno' and 'Il Satiro'—the latter to words by Laura Guidiccini, a lady of Lucca.

When Bardi was summoned to Rome by Clement VIII. the society of the 'Alterati' assembled in the house of Jacopo Corsi, a Florentine nobleman, an enlightened lover of the fine arts, and passionately devoted to dramatic music. They soon added to their number the names of Ottavio Rinuccini the poet, Jacopo Peri, the composer, and Giulio Caccini, who, besides his talent for composition had the gift of a beautiful voice. These three occupied themselves in developing the first attempts at musical drama into the finished performance called the opera. They invented the recitative by which the Italian opera and the oratorio are distinguished from the opera of other countries, and from other species of theatrical music. Caccini's 'Dafne' was the first result of their united efforts. Rinuccini composed the poetry, Caccini and Peri the music, and the whole was represented in the house of Jacopo Corsi, 1596. 'This,' says Burney (Hist. iv. p. 18), 'seems the true era whence the opera or drama wholly set to music, and in which the dialogue was neither sung in measure nor declaimed without music, but recited in simple musical tones which amounted not to singing, and yet was different from speech—should be dated.' 'Dafne' was succeeded by 'Euridice,' represented with gorgeous splendour in 1600 at the feasts given in Florence in honour of the marriage of Henry IV. of France with Maria de' Medici. None of the subsequent compositions of the great masters of operatic music produced anything like the effect of these first representations, which introduced Italy as it were to the new theatre of a new musical parlante.' The poet Angelo Grillo (the friend of Tasso), writing to Caccini, observed: 'You are the father of a new kind of music, or rather singing, which is not a song, but a recitative song of a nobler and higher order than the popular song; which does not sever or maim the words, nor deprive them of life, but gives new force and vigour to both. It is then a new and wonderful invention, or rather a revival of the ancient Greek musical drama which has been lost to us for so many centuries' (Tiraboschi, vii. 1321). Rinuccini's next opera, 'Arianna,' composed by Monteverde, was represented at the nuptials of Francesco Gonzaga of Mantua with the Infanta Margaret of Savoy (Domi, Opere, ii. 25).

This first academy for theatrical music was succeeded by many others, as the passion for musical representation became universal in Italy. Quadrio (i. 71) mentions three in Florence, 'degli Infocati,' 'degli Immobili,' 'de' Sorgenti,' founded between 1550 and 1560 especially for

Published by Grauntini, Florence 1520.
promoting this kind of music. Each of these had its own theatre and vied with the others in the splendour and magnificence of its representations. Indeed, in the middle of the 16th century, the theatres of Italy, constructed in many cases by no less an architect than Palladio, and where the most melodious of all modern languages first appeared married to sweet harmony, were the wonder and admiration of the world.

The Florentine school of music differs from the other great schools of Italy in that the composers of dramatic music just enumerated were only amateurs, and had been for the most part trained in the great schools of Rome and Bologna. Nor did Florence ever produce any great composers of church music, although composer succeeded composer in that brilliant operatic music of which we have traced the first beginnings, until we arrive at the great Cherubini, who was a master in both the church and the theatre.

The present ‘Royal Musical Institute’ of Florence is of recent foundation, and was opened for public instruction in 1862. Its objects are, To teach the science, history, and practice of music; to maintain a public library of music; to grant rewards to deserving artists; to perform the best works of modern and ancient masters. It is an establishment for public and gratuitous instruction, and comprises three sections—that of administration; that of instruction; and the Academy. The administration is directed by a President, assisted by three Professors, who form the Council of Management. The department of instruction contains schools for the rudiments of music and musical reading; for solfeggio; for solo and part singing; for keyed, stringed, and wind instruments; for thorough bass, counterpoint, and composition; and for aesthetics and musical history. The Academy is composed of resident, corresponding, and honorary members. The Examiners are chosen from the resident members of the Academy, as are also the three members of the council of management. The number of pupils averages 220, and is regulated by the applications for admission, the result of the examinations, and the means available for imparting instruction.

C. M. P.

FLORID. Music in rapid figures, divisions, or passages, the stem of the simple melody bursting forth, as it were, into leaves and flowers. The image is the same as that in Fioriture. The Italian term is Figurato. Examples are hardly necessary; but the genesis of florid passages is highly interesting, and an instance or two, from the simplest form to the very highest art, may be forgiven.

BACH, Christmas Oratorio.

HAYDN, Quartet.

FLOTOW.

MOZART, G-minor Symphony.

BEETHOVEN, Concerto No. 5.

Do., Ninth Symphony (Adagio).

Such florid passages are essential to Variations, and the last of these examples is taken from the finest set of variations existing.

For FLORID COUNTERPOINT see p. 4085. [G.] FLORILEGIUM PORTENSE. A collection of sacred vocal music of the 16th century, in separate parts, published in 2 vols. by Bodenschatz in 1618 and 21, and containing in all 265 pieces. [BODENSCHEIT.]

FLOTOW, FRIEDRICH, FREIHERR VON, German opera composer, born April 27, 1812, son of a landed nobleman of the arch-duchy of Mecklenburg; was educated with a view to the diplomatic service. In 1857 he went to Paris, when music was at its best. The brilliant artistic life into which he was thrown aroused him to a consciousness of his own talent for music, and he devoted himself to a course of study under Reicha. The Revolution of 1830 drove him away for a time, but feeling that the atmosphere of Paris was necessary to his success, he soon returned, and produced his first dramatic attempts at the private houses of some of the aristocracy. ‘Stradella’ was brought out at the Palais Royal as a short piece lyrique in 1837; but Flotow’s first public success was at the Théâtre de la Renaissance, where he produced, May 31, 1839, ‘Le Naufrage de la Méduse,’ which ran for 53 nights in 12 months, and at once established his position. He afterwards re-wrote the piece, and produced it at Hamburg in 1845 as ‘Die Matrosen,’ whence it spread to the other theatres of Germany. Meantime he had composed for the Paris theatres several other operas, such as ‘L’Ecluse de Camois’ (1843), and ‘L’Ame en peine’ (1846), known in London as ‘Lesoline’ (Princes Theatre, Oct. 16, 1848). ‘Stradella’ was re-written as an opera, and brought out at Hamburg, Dec. 30, 44, and has had extraordinary success throughout Germany. In Paris, though published, it has never been produced. In London it was brought out in English at Drury Lane, June 6, 46—a dead failure—and in Italian
FLUTOW.

in 1864 at Covent Garden, when it lasted two nights only, killed by a joke of Ronconi's. It was followed by Martha's (Vienna, Nov. 25, 1847), which was remodelled from a ballet written in conjunction with Burgmüller and Delézé in 1844, and in its new form quickly spread all over the world (London, Covent Garden, 1848). These two works Flotow has never surpassed, and of his later operas Die Großerfurstin (1850), 'Indra' (1853), Rübezahl (1854), Hilda (1855), Der Müller von Morau (1856), La Veuve Grapin (1859), L'Ombre (1869), Naida (Milan, 73), Il Flor d'Harlem (Turin, 76), the only one which have attained any general popularity were 'Indra,' La Veuve Grapin, and L'Ombre, the last of which was enormously successful not only in Paris, but in Italy and Spain, and has been produced in London (Her Majesty's) Jan. 12, 1878, as The Phantom. His Enchanteresse is in rehearsal at the Italians, and his Roselliana is not yet complete (Feb. 1878).

In 1856 he was appointed Intendant of the court theatre at Schwerin, a post which he retained till 1863. The only important work introduced during this period, when he had so many inducements to compose, were a Fackeltanz, and some charming music to Shakespeare's Winter's Tale. After giving up the management of the theatre in 1863 he returned to Paris, and in 1868 removed to the neighbourhood of Vienna, where he still resides. His remaining compositions, overtures, songs, and chamber music, are little known, and call for no remark. In 1864 Flotow was elected corresponding member of the Institut de France.

The great success of 'Stradella' and 'Martha' must be mainly ascribed to the melody which pervades them, and to their light and attractive character. Flotow's comic talent is considerable, and he has great natural instinct for the stage. His early French experience taught him the virtue of lively and well-accented rhythm, and gave him dexterity in the construction of extended pieces, in which he writes pleasing harmony and piquant orchestration. On the other hand, his music has rarely anything below the surface, his rhythm frequently degenerates into that of mere dance-tunes, his modulations are poor, and he is prone to sentimentality, which, though popular in our days, is none the less morbid. In the scientific part of composition he too often betrays the amateur. On the whole the conclusion is forced upon us that, in spite of his popularity, Flotow will not live in the history of dramatic music.

FLOWERS, GEORGE FRENCH, Mus. Doc., son of Rev. Field Flowers, Rector of Partney, Lincolnshire, born at Boston 1811, studied music in Germany under C. H. Rinck and Schnyder von Wartensee, and was for some time organist of the English Chapel in Paris. Returning home he became organist of St. Mark's Church, Myddelton Square. In 1839 he graduated as Bachelor of Music at Oxford. For a period he was the music critic of the 'Literary Gazette.' In 1843 he was an unsuccessful candidate for the Professorship of Music at Oxford, as he was in 1863 for that in Gresham College. In 1851 he established 'The British School of Vocalization' for teaching singing on new principles, and in the two years following gave concerts for the purpose of exhibiting the progress made by his pupils, the most notable of whom was Miss Featherstone, now Mrs. Howard Paul. In 1865 Flowers proceeded Doctor of Music. He wrote an Essay on the construction of Fugue, with an Introduction containing new Rules of Harmony, and composed Fugues in the style of Sebastian Bach, and other organ music, and Tennyson's Ode on the death of the Duke of Wellington, and other vocal pieces. He was also a copious contributor to the musical periodicals.

He died of cholera, June 14, 1872.

[W.H.H.]

FLÜGEL (a wing). The German appellation of a grand pianoforte or a harpsichord, from the wing shape common to both. See Goethe's pun on geflügelte Geister in 'Goethe and Mendelssohn,' p. 24. STUTZ FLÜGEL is a short grand pianoforte. [See HARPSICHORD, GRAND PIANO.]

[A.J.H.]

FLÜGEL HORN. The German name for instruments of the Bugle family. Originally, say the dictionaries, a hunting horn (Waldborn, Jagdhorn), used by the huntsman whose duty it was to watch in the Flügeln, or paths cut through the wood, and give a signal on the approach of the game. The Flügel horn now used in the English and German armies is a Bb cornet with pistons and a horn mouthpiece. The pistons have superseded a clumpy kind of keys, from which it used to be called Klappehorn. The name is also applied to several instruments in the Alto, Tenor, and Bass clefs.

[W.H.S.]

FLÜGE-WORK. Organ-stops, in regard to the manner in which their sound is generated, are grouped in two great classes—RED-WORK and FLUTE-WORK. All organ-stops in which the sound is produced by the wind passing through a fissure, jet, or wind-way, and striking against an edge or plate, belong to the Flute-work, whatever may be the shape, make, or tone of their pipes. The peculiarities of shape or proportion, make, and tone, lead however to a subsequent division into PRINCIPAL-WORK, GEDACHT-WORK, and FLUTE-WORK.

[E.J.H.]

FLUTE (Germ. Flöte, Querflöte; Ital. Flauto, Flauto traverso; Fr. Flûte, Flûte traversière). An ancient instrument used in every part of the world. It has always had two principal forms, the direct flute or Flute à bec, now developed into the Flageolet, and the German flute or Flûte traversière, which appears to have superseded it about 1720. There is however evidence of an intermediate instrument, partaking of the characters of both, which will be described farther on.

The Flute, as now employed, consists essentially of a tube, conical from below upwards, terminating in the head, and stopped at the top by a cork. In the side of the head is a large orifice with sharp edges, situated less than an inch below the cork, through which the breath is forced
obliquely from the approximated lips. In the lower part are six holes—so to be stopped by the first three fingers of either hand and various intermediate keys; there are also on the lowest joint three, or even four, levers producing additional notes below the regular scale of the instrument. It is held transversely and sloping downwards against the lower lip, with the orifice in the head turned somewhat outwards, so that the stream of wind shall impinge upon its outer edge. By this impact of the current upon the wedge-like margin of the aperture sound is produced. Considerable practice is required to develop any note whatever, and much controversy exists as to the exact cause of the musical vibration. It is not however necessary that the feather edge should be at the side of the main tube; for in the Nay or Egyptian flute figured in the margin the extreme circular end of the tube itself (here made of bamboo) is thinned away so as to produce a linear termination, against which the current of breath is directed. Such a flute might be held straight in front of the player, like the Flageolet or flute à bec; in which, however, the simple combination of orifice and lip is replaced by a far more complicated arrangement, exactly similar to the mouth of a diapason organ-pipe. As a matter of fact it is held obliquely towards the right side of the player, like the modern transverse flute, except that its lower extremity bears considerably downwards, so as to enable the blast to enter a terminal instead of a lateral orifice. An almost similar instrument to the one here figured is in the ancient Egyptian collection in the British Museum, and from the absence of the usual lateral hole was considered to be a fife. Not only is the same instrument still in use at the present day, but the mode of playing and the position of the ancient instrument can be recovered from the plaster mural decorations still preserved. The only difference in the more ancient instrument is that the scale is one of four orifices, whereas the modern possesses the full complement of six. Either of these may be looked upon as intermediate between the flute and the flue-pipe of the organ, the foot and ‘languid’ being in this case supplied by the cavity of the mouth and the linear opening of the lips.

No instrument has undergone so many changes and improvements within the last half century as the Flute. The bore, instead of being conical, has been made cylindrical; the fingering and disposition of the keys have been entirely altered according to the system named after Boehm.

The flute, though not possessing a very extensive compass, is especially prominent in concerted music, from the acuteness of the sounds it is competent to produce. Indeed, the Piccolo, or small Octave variety, emits the sharpest notes ordinarily used in music. Its true Scale may be considered to begin on D (1) below the treble stave, and hence the Flute is often called a D instrument. The notes C, C#, B, and even Bb, below D, are obtained by associated levers set in motion by the two little fingers of either hand, but do not occur again in the higher registers. By the successive removal of the three first fingers of the right hand, followed by those of the left, the series of notes rising from D to C♯ (2) are elicited, and on D again (3) a new octave harmonic scale is commenced by closing all the holes except that beneath the forefinger of the left hand. In this respect the scale is similar to the Oboe and Bassoon, with the exception that the latter, being fundamentally in the key of G, change upon that note instead of upon D. The second octave is produced by a stronger pressure of wind and an alteration of embouchure, rising to D above the stave (4), and there remains a third still higher octave, obtained by cross-fingerings often of a complicated nature, rising to D♯ or even D♮ in all'uitarissimo (5).

The scale here described is that of the old eight-keyed Flute.

The principles of the Flute originally invented by Captain Gordon of Charles the Tenth’s Swiss Guards and introduced by Theobald Boehm in his new flute, constructed in 1822, were principally (1) that each note should speak independently out of a single hole, as though the remainder of the bore were entirely cut off; (2) that all keys in their position of rest should be permanently open. He also aimed at equalising the difficulty of the different keys, some of which, on the older flute, were notoriously inconvenient and all but impracticable. A subsequent improvement consisted in substituting a cylindrical for a conical bore. In its latest modification, the Boehm flute consists of a cylindrical tube terminating at the upper end, above the embouchure in a conical or ‘parabolic’ prolongation. For the left hand, which occupies the upper part of the instrument next to the head, are four open keys to be closed by the first finger, thumb (situated at the back of the instrument), second, and third fingers successively. For the little finger of this hand is an open key producing the G♯ or A♭. On the right hand joint are three open keys, for the first, second, and ring fingers respectively, with accessory or ‘shake keys’ (which are normally closed) interposed. For the right little finger are the closed key of D♯ and the two open keys of C♯ and C. In many flutes mechanism, still worked by the right little finger, is added to produce B♭ and even Bb. But from the D♯

1 See his pamphlet ‘Über den Flötenbauer und die neuesten Verbesserungen,’ Mainz, 1847.
downwards all the work is accessory, and not directly used in the production of the natural scale. For this reason the instrument is said to stand in the key of D. For the purpose of obtaining each sound by the closure of a single orifice, a somewhat new arrangement of the scale is necessary on certain notes. The G, for instance, in either octave is produced by closing the five holes of the left hand. For the F a whole tone below, the forefinger of the right hand is added. The intermediate F♯ is obtained by depressing the pad of the middle or ring fingers, that of the index being left open. In the Clarinet, Oboe, Bassoon, and other octave-scaled instruments, the B♭ a whole tone below C, which in a D instrument like the flute is represented by the F♯ below the middle G, has to be produced by closing the B♭ and A♭ holes and lifting an intermediate B♭ key, thus lowering the pitch a minor third and raising it a semitone. The same method as that for the F♯ is employed for the B♭ or A♭, which is produced by lowering the B♭ a semitone through the intervention of a lever actuated by the fingers of the right hand, those of the left, middle, and ring fingers being left open.

The compass of the Boehm Flute is from C to C three octaves higher, though the G♭ above this note, and even more acute sounds, can be obtained by exceptional players.

A variety of other Flutes, modified more or less from the old eight-keyed instrument or the Boehm model, are extant. Among these may be named those of Sicama, Clinton, and Carta. Their differences are chiefly mechanical. The main distinction between the older and the more modern instruments is the adoption of the cylindrical bore. There can be no doubt that this contrivance adds materially to the power of tone, and gives it a reedy quality closely approximating to that of the Clarinet. But it is a question if it does not to the same extent modify its peculiar orchestral character, and diminish its purity of intonation. This distinctive quality of tone has been shown by Helmholz (Ellis's Tr. 113, 141, 172) to be peculiar, and free from most harmonic 'upper-partialis' except the octaves.

The literature of the Flute is so extensive as hardly to admit of illustration within moderate limits. Each uses it freely both as an obligato instrument and in concerted passages, and ever since his time it has held a prominent place in the band. In the scores of his works it is sometimes marked Traversière to distinguish it from the Flute-a-bec.

Haydn, both in his Symphonies and in his Oratorios, awards it the same prominence. The Trio for three Flutes in the 'Creation' may be named as an illustration.

Handel usually specifies the 'German' Flute, and often indicates its importance by the words 'with the accompaniment of a German Flute.' It is difficult to understand how the players of his day were able to make themselves heard with the few Flutes then allotted to the Orchestra against the large numbers of Oboes and Bassoons.

In the Handel Commemoration in Westminster Abbey in 1784, there were 6 Flutes against 26 Oboes and 26 Bassoons, besides 2 Trumpets and the same number of Horns. Handel produces, however, a magnificent effect in the Dead March in 'Saul' by the simple employment of two Flutes moving in thirds against the reiterated bass of the kettledrum.

Mozart, except in some of his Symphonies, which were obviously written for a small band, freely scores for this instrument. The ope of the Zauberflöte derives its name from it. There are also two Concertos for solo Flute and Orchestra in G and D, and one for Flute and Harp among his works (Köchel, 373, 314, 399).

Beethoven, Mendelssohn, and all later writers, give it the leading part of the wind in all their compositions. The solo shortly after the trumpet flourish in the Overture to Leonora No. 3 will not be forgotten, or the lovely part for two flutes in the 2nd movement of the Italian Symphony. Schumann also has introduced a prominent cadenza for it in the Finale to his B flat Symphony. The difficult accomplishment to the Ranz des Vaches, played by the Oboe, in Rossini's overture to 'William Tell' affords a good illustration of the mechanical complexities which this flexible and agile instrument is competent, and consequently is expected, to surmount. In a dramatic sense it is used by Mendelssohn in the sacrificial chorus 'O God, that gratefui crown the holy city,' and by Gretry in 'Andromaque,' in which the part of Andromache is always accompanied by 3 flutes.

The most voluminous writer for the Flute was probably Quantz, who composed 200 solos and 300 concertos for Frederick the Great alone. But the instrument had a distinguished writer, Kuhlau, as the special exponent of its powers and beauty. This eminent contrapuntist devoted nearly the whole of his short life to Flute compositions. This singular fact has been accounted for by the statement that an amateur flute-player of position employed him constantly and liberally in writing them. Kuhlau has been termed the 'Beethoven of the Flute.' It will be seen from the list given below that Solos, Duets, Trios, and even Quartets for Flutes, are among his voluminous works. Indeed, but for a fire which destroyed the composer's manuscripts, their number would be at least threefold. Such as are extant afford inestimable models of construction and originality.

**Flute Music.**

**MOZART.**—Grand duo in G, op. 76; andante in C, Concerto in G, Rondo in D, op. 86.

**SPOHR.**—Concerto in modo di Scena Cantante, op. 47.

**WEBER.**—Romanza Siciliana in G minor, with Orchestra; trio for Flute, Cello, and Piano forte, op. 63.

**BEETHOVEN.**—Serenade for Flute, Violin, and Alto, op. 25.

**HAYDN.**—Two Trios for two Flutes and Cello,
KUHLAU.—Three grand Trios for three Flutes, op. 13; Do. do., op. 86; One do., op. 90; Three Quintets for Flute and String Quartet in D, E, A, op. 51; Grand Quartet for four Flutes in E, op. 103; Six sets of three Duets for two Flutes, op. 10, 36, 80, 81, 87; Solos, with Pianoforte, op. 57; Three Fantasies, Do. do., op. 95.

REICHA.—Quartet for four Flutes in D, op. 12; 24 Quintets for wind instruments.

SCHUBERT.—Introduction and Variations on ‘Trockne Blumen,’ for Flute and Piano, op. 160. [W. H. S.]

FLUTE D’AMOUR (Germ. Liebesflöte). An old form of flute with a narrow bore, standing in the key of A, and corresponding in pitch with the Oboe d’amore. Both were supposed to possess a smooth and fascinating quality of tone, whence the name is derived. [W. H. S.]

FLUTE-WORK. Under this head are grouped all the flute-stops of whatever kind, shape, or tone, that are not classed as Principal-work, or Gedact-work, and it also includes various modifications of these two classes of stops. [Flute-work.] Thus when the ‘scale’ of the pipes of a cylindrical stop is reduced below the proportion essential to secure the broad and full Diapason tone, and the sound becomes delicate as in a Dulciana, or crisp as in a Gamba; or when it is increased beyond the Diapason scale, and the tone becomes thick or less resonant as in the Block-flûte, the stop becomes a member of the flute-work. Also, if the covers of the pipes of a closed metal-stop be punctured, and a narrow tube—in Germany called a reed, in France a chimney—be inserted, the stop then becomes a member of the flute-work under the name Rohr-flûte, Flûte à cheminée, or Metal stopped—Diapason (or Flute) with chimneys. A unison cylindrical stop will be occasionally met with labelled as a member of the flute-work. All stops the pipes of which taper upwards, as the Spitz-flûte and Gemshorn; all three- or four-sided open wood pipes, as the Hohl-flûte, Clarabell, Wald-flûte, Oboe-flûte, and Suabe-flûte; and most string-toned stops, as Salicional and Viol d’amore—are members of the Flute-work.

The invention of the conical, the string-toned, and the other stops classified as flute-work, dates back no farther than the commencement of the 16th century. [E. J. H.]

FOCHETTI, a bass, who sang in London in 1775 and 6. In the former year he appeared in Sacchini’s ‘Motuzuma’; in the latter he played Nardo in the ‘Isola d’amore’ of the same composer, and in ‘La Sposa fedele.’ [J. M.]

FODOR, JOSEPH, violin-player, born in 1752 at Venlo. In 1766 he studied under Franz Benda at Berlin, and having acquired great proficiency, travelled for a number of years in Germany, the Netherlands, and France, establishing his reputation as an eminent violinist. In 1794 he went to St. Petersburg, and remained there up to his death in 1828. Spohr, who heard him in 1803, considers him wanting in feeling and taste, and objects to his unsteady manner of bowing, but acknowledges his great technical skill. His numerous compositions—Concertos and Solos for the Violin, Duos for Violins, and Quartets for Strings, are well written, and met with much success in their time. The famous singer, Mme. Fodor-Mainville, was his daughter, and his two younger brothers, Carl and Anton, were clever pianists and composers. [F. D.]

FODOR-MAINVILLE, JOSEPHINE, celebrated singer, born 1793 in Paris, where her father, Joseph Fodor the violinist, had settled in 1787. In 1794 her parents removed to St. Petersburg, where she played both pianoforte and harp when only eleven. Three years after she became known as a singer, and in 1810 made her first appearance at the Court Theatre in Fioravanti’s ‘Cantatrici villanelle,’ which was repeated 60 times, so successful was her performance. In 1812 she married the actor Mainville, and travelled with him to Stockholm, Copenhagen, returning to Paris, where she was engaged for the Opéra Comique. Her first appearance, Aug. 9, 1814, was a comparative failure; it was evident that French opera was not her province, and she was transferred in November of the same year to the Théâtre Italien, then under Mme. Cataliani’s management. Here she remained till the beginning of 1816, when she left for London. In London she sang for three seasons as prima donna, listened to with respect, though never a warm favourite. ‘Don Giovanni’ was brought out at the King’s Theatre in 1817, and Zerlina was her best character. In July 1818 she went to Paris, returning to Paris early in the following year, after Cataliani had given up the opera. Rosina’s ‘Barbiere’ was then given for the first time in Paris (Oct. 26, 1819) and she played Rosina, as well as Ninetta, Agnese, and other first-rate parts. In 1822, suffering severely from dyspepsia, she was advised to try the milder climate of Naples, which so completely restored her that she appeared at San Carlo as Desdemona, Semiramis, and Zelmira, creating in all 20 new parts. In the following year she sang for a whole season in Vienna, but returned to Naples and remained there till 1835, when she again went to Paris. On Dec. 9 she appeared in Semiramis, but her voice failed and she was compelled to leave the stage. This misfortune was followed by a hoarseness which prevented her singing again in Paris. The management having declined to fulfill their contract, she brought a succession of actions against them, and finally accepted a compromise in 1828. After her return to Naples her voice so far improved that she sang again at San Carlo, but its peculiar charm was gone though her style was as fine as ever, and served as a model for no less a singer than Henrietta Sontag. Mendelssohn saw a great deal of her at Naples in 1831, and his very favourable impression may be learned from his letters, (April 27, 1831). Her last appearance was at Bordeaux in 1833, after which she retired into private life.
When at her prime, Fodor's voice was not only powerful but extremely sweet and round, with a peculiarly charming accent, and a faultless intonation. She was very painstaking, and acquired by practice a flexibility with which she was not naturally gifted. Her daughter Emrichetta, also a singer of merit, was very successful at the Königstatt Theatre in Berlin between the years 1846–9 (not the Friedrich-Wilhelms-Theater). [F.G.]

FÖRSTEMANN, CARL EDUARD, antiquary, published 'Georg Friedrich Handel's Stamm- baum, nach original-Quellen und authentischen Nachrichten aufgestellt und erläutert' (Leipzig, Breitkopf & Härtel, 1844), a carefully compiled genealogy of the great composer. [M.C.C.]

FÖRSTER, EMANUEL ALOYS, composer of good chamber-music, born at Niederstein, Glatt, Silesia, Jan. 26, 1748. In his youth he studied music by himself, and composed industriously, while obeying his father by attending the Latin school, and working under him as an accountant at a tavern. He afterwards served in the Prussian army, and in 1776 resolved to go to Vienna in order to cultivate music thoroughly. There he soon became one of the most valued teachers of thorough-bass and composition, and his works were universally respected as the products of sound thought and earnest study. In 1802 he published his 'Anleitung zum Generalbass' (Træg) with 146 examples, a clear practical work still of value. In 1805 it was re-published by Breitkopf & Härtel, and a new edition by Artaria in 1824. Förster added three supplementary numbers of practical examples. His compositions consist of 48 violin quartets, numerous pianoforte sonatas, preludes and fugues for organ, Lieder, etc. He composed the variations in A on an air from Sarti's opera 'I fini Eredi,' which were long attributed to Mozart, and extremely popular; and which appeared in many editions of Mozart's works. (Köchel, p. 530. No. 289; compare Jahn's 'Mozart,' ed. 1, iv. 11; ed. 2, ii. 137.) Förster was held in high estimation by all the composers of his own time and his own. Particularly by Beethoven, who speaks of him in terms implying he had learnt much from him. He died at Vienna Nov. 12, 1823. His place and date of birth and death, much disputed points, are given here from the 'Transactions of the Tonkünstler-Societät,' of which he was a member. [C.F.P.]

FOGGIA, FRANCESCO, the last Italian church composer who remained faithful to the traditions of Palestrina; born in Rome 1604, studied under Cifra, Narina, and Agostini. He then entered the service of the Elector of Cologne, the Elector of Bavaria, and the Archduke Leopold of Austria in turn. After his return to Italy he was appointed maestro di capella successively at Narni, Montefiascone, and the following churches in Rome,—Santa Maria in Aquiro, Santa Maria in Trastevere, St. John Lateran (1636-61), San Lorenzo in Damaso, and Santa Maria Maggiore (1677), which last post he retained till his death, Jan. 8, 1688, when he was succeeded by his son Antonio. He is buried in the church of S. Praxede. He published much church music for from 2 to 9 voices (see the list in Fétis), and most of the churches in Rome possess some works by him in MS. Martini has analysed some of his motets in the 'Saggio di contrapunto.' Liberatori calls him 'il sostegno e il padre della musica e della vera armonica ecclesiastica.' He was one of the first musicians to write tonal fugues, while he was the last Italian capable of composing genuine church music in the polyphonic style. Mr. Hullah has printed a fine motet by him in his 'Vocal Scores.' [F.G.]

FOLIA. Said to be an old Spanish dance for a single dancer—'ces belles chaconnes, ces Folies d'Espagne,' which the son of the secrétaire of Rennes danced to such perfection (Mad. de Sévigné, July 24, 1659). But really all that is known of it is that the 22 variations, or the theme of them, which close Corelli's 12 solos (op. 5) are entitled Folia; that the same bass and air, but with different variations, are given in the 'Division Violin' as 'Farinelli's division on a ground'; that Vivardi's op. 1, no. 12, is a set of variations on the same; and that Hawkins (chap. 141) cites it as 'a favourite air known in England by the name of Farinelli's' Ground,' composed by Farinelli, the uncle of the singer, who was court musician at Hanover in 1654. It seems to follow from this that the ground, and not the treble part, was the 'air,' just as it is in the chaconnes of Bach and Handel (60 variations). The ground is one on which a skilful violin player and a skilful dancer might go on fiddling and dancing ad infinitum. The following is Corelli's theme:

Cherubini has introduced 8 bars of it in the opening of the Overture to the 'Hôtellerie Portugaise.' [G.]

FORBES, HENRY, born in 1834, studied music under Sir George Smart, Hummel, Moscheles, and Herz. He was an excellent pianist and organist, and conductor of the Società Armonica. He for some years held the appointment of organist of the parish church of St. Luke, Chelsea. His published compositions comprise several songs and a collection of psalm tunes for 4 voices called

1 The common English name was 'Fardellia,' as Madame de Quercouille was called 'Madame Carroll.'
FORLANA.

An Italian dance, a favourite with the Venetian gondoliers. It is in 6-8 or 6-4 time, but possesses no special characteristics. An example of this dance may be found in J. S. Bach’s suite for orchestra in C major. The following quotation of the opening bars of a forlana of the 17th century is from F. L. Schubert’s ‘Die Tanzmusik.’

\[\text{Music notation}\]

\footnote{After Forlana’s death, Schwickert, the publisher, offered the materials for completing the third volume to Fets and Choron, but they declined the task.}
FORM.

The means by which unity and proportion are arrived at in musical works are the relative distribution of keys and harmonic bases on the one hand, and of 'subjects' or figures or melodies on the other; and this distribution is called the Form of the work. The order of distribution varies greatly with the conditions. Music set to poetry with a 'burden' to each verse would naturally adopt the form of repeating the same melody to each recurrence of the burden; and when the words implied similar circumstances and feelings would adopt repetition of similar or allied phrases. In dramatic works the order of distribution must vary with the development of the emotional crises, and in such cases will be rather a distribution of culminations and gradations of intensity of passion and emotion, than the more obvious one of key and figure; though, if the relation between important figures of melody and the special circumstances to which they are appended be observed, the notion of form as defined by subjects will still continue to be perceptible. Analogously, in music which is supposed to represent some story or idea, such as is now known by the name of Programme Music, the form must be developed with the view of interpreting that programme truly and consistently. Such music may be compared in this to the work of a painter who trusts rather to the stirring nature of his subject than to the perfection of its composition to engage and delight the beholders, while in a portrait or picture of less vivid interest the element of composition, following generally and easily recognised principles, would be of vital importance. Similarly in programme music the composer may choose to follow the established so-called classical models, but it can hardly be doubted that a genius deeply impregnated with the spirit of his subject would seek to create a form of his own which should be more in consonance with the spirit of his programme—even as Beethoven did without programme, expressing some marvellous inner workings of his emotions, in the first movement of the Sonata in E, op. 109. But even with Beethoven, in the case of music without either programme or words to explain its purpose, such irregularity is rare. It is here especially that the nature and capacity of the minds of the auditors play an important part. Their attention has to be retained for a space of time, sometimes by no means insignificant; and connection has to be established for them without the aid of words or other accessories between parts of the movement which appear at considerable distance from each other, and the whole must be so contrived that the impression upon the most cultivated hearer shall be one of unity and consistency. In such a case Form will inevitably play an important part, becoming more and more complex and interesting in proportion to the development of readiness of comprehension in the auditors. The adoption of a form which is quite beyond the intellectual standard of those for whom it is intended is a waste of valuable work; but a perfect adaptation of it to their highest standard is both the only means of leading them on to still higher things, and the only starting point for further progress. From this it will be seen that in musical works which are connected with words or programme—whether choruses, songs, arias, or ballads, etc.—Form is dependent on the words; and such works, as far as they are reducible to any definable system, are reducible only to the simplest, and such as admits of infinite latitude of variation within its limits. But in instrumental music there has been a steady and perceptible growth of certain fundamental principles by a process that is wonderfully like evolution, from the simplest couplings of repeated ideas by a short link of some sort, up to the complex but consistent completeness of the great instrumental works of Beethoven.

There can hardly be any doubt that the first attempts at Form in music were essentially unconscious and unpremeditated. Therefore if any conformity be observed in the forms of early music derived from various sources, it would seem to indicate a sort of consensus of instinct on the part of the composers which will be the true starting point of its posterior development. It must be remarked by way of parenthesis that in the early days of modern music—apart from the ecclesiastical music of the Roman Church—the instrumental and vocal orders were not nearly so distinct as they are now, for the tendency to strongly and clearly marked distinction in kind is notoriously a matter of slow growth. Hence examples may be drawn with perfect safety from both kinds wherever they can be found.

The first basis of true Form, apart from the balance of groups of rhythms, is essentially repetition of some sort, and what is most vital to the question is the manner of the repetition. The simplest and most elementary kind is the repetition of a phrase or bit of melody with a short passage in the middle to connect the two statements. As an early example of this form may be taken an ancient German chorale, 'Jesus Christus unser Heiland, Der den Tod überwand' (1535), which is as follows:

In this the bars bracketed are the same, and the phrase which connects them is very short; and the whole presents about as simple and unsophisticated a specimen of Form as could well be conceived. The simple basis of which this is a type is the origin of the Rondo-form, which has survived with great variety and modification of treatment till the present day. The first advances upon the above example which offer

1 For instance, the old English madrigals were published as 'apt for Voice and Violin.'
any points of interest seem to be in cases where we find either a contrast aimed at in the passage which forms the link, or a number of repetitions succeeding one another, with differences in the passages connecting them. These two constitute the two great branches through which this primitive idea diverged into thousands of Arias, Lieder, Nocturnes, Romances, Scherzos, and other lyrical pieces on the one hand, and the movement which still retains its name of Rondo on the other. As an early example of the first we may take the song ‘Roland courbe aux armes’ from Lully’s operas ‘Roland,’ which is too long for insertion here, but will be found in the 136th chapter of Hawkins’ ‘History of Music.’ In this there are 12 bars of melody in C, concluding in that key; followed by 12 more bars, in which there is modulation first to the relative minor A, and then to the dominant key G major, in which key this portion concludes; after which the first twelve bars are resumed precisely as at first, and so the whole concludes. Here the employment of modulation in the connecting passage is a strong element of contrast, and indicates a considerable advance in musical ideas on the obscure tonality of the preceding example. On the other hand, almost contemporary with Lully, there are, in the works of Couperin, numerous specimens of the Rondo, consisting of a number of repetitions, with differences in the connecting passages. In these the passage with ‘which the movement commences is repeated over and over again bodily and without disguise, and separate short passages, of similar length but varying character, are put in between. Couperin was particularly fond of the Rondo-form, and examples may be found in profusion in his works. The one which is perhaps best known and most available for reference is the ‘Chaconne en Rondeau,’ published in the sixth number of Pauer’s ‘Alte Claviermusik.’ A point specially observable in that is the rigidity and absence of any attempt at sophistication in the process. The sections are like crude squares and circles fitted together into a design, and no attempt, or very little at best, is made to soften off the outlines by making the sections pass into one another. The chief subject is distinct and the episodes are distinct, and the number of repetitions seems to depend solely on the capacity of the composer to put something in between.

Still it is clear that the virtue of contrasts both of style and of key is appreciated, though the range of modulation is extremely limited. It is noticeable moreover, as illustrating the point of view from which Form at that time was regarded, when recognised as such, that the divisions of the Rondo are marked with extra emphasis by a Fermata or pause. From this to such a Rondo as we find in the Partita in C minor of Bach is a great step. Here there are no strongly marked divisions to stiffen the movement into formality, but it flows on almost interruptedly from first to last. The episodes modulate more freely, and there is not such rigid regularity in the reappearance of the main subject. It appears once outside of the principal key, and (which is yet more important) is brought in at the end in an extremely happy variation; which is prophetic of Beethoven’s favourite practice of putting identical ideas in different lights. The next stage of development of this form—and that probably rather a change than an improvement on the above beautiful little specimen of Bach—is the Rondo of Haydn and Mozart. Their treatment of it is practically the same as Couperin’s, but in many cases is strongly modified by the more important and elaborate ‘First-movement-form,’ which by their time had grown into clearness of system and definition. The Rondo-form pure and simple has remained till now much as it was in Couperin’s time, gaining more in expansion than in change of outline. Even the great Rondo of Beethoven’s ‘Waldstein’ Sonata (op. 53) consists of the repetition of a subject of some length interspersed with episodes; with modifications in the length of the episodes and the repetition of one of them, and a great Coda founded on the principal subject to conclude with. The further consideration of the Rondo as affected by the ‘first movement’ form must be postponed till after the examination of the latter.

By the side of the primitive Rondo above quoted a form more complex in principle is found. In this form the relations of harmonic roots come largely into play, but its most striking and singular feature is the manner of the repetition by which it is characterised. And in this case examples drawn from various early sources which agree in the peculiar manner of the repetition will be of value, as above indicated. In this form the movement is divided into two halves, and these again into two sections. The first half, or complete period, comprises a sort of rough balance between the amount which tends to the Tonic and the amount which tends to the Dominant, thereby indicating the division into two sections; and the second half begins with passages which have more freedom in the distribution of their roots, which constitutes its first section, and ends with a quotation of the last bars or figures of the first half, which constitutes its second section. This will be best understood from an example. The following is a very early specimen of the dance tune called a ‘Branle’ or ‘Brawl’ from the ‘Orchesographic’ of Thoinot Arbeau (Langres, 1545):——

\[ (a) \]

\[ (b) \]

\[ (c) \]

In this it will be observed that the first half of the little tune is divided at (a) by the strong emphasis on the Dominant, from which point it returns to the Tonic, and so closes the first
half. The second half, commencing at (b), can easily be perceived to have a freer harmonic basis than either of the first sections, and so leads the mind away from the Tonic and Dominant centres in order that they may come in fresh again for the conclusion; and having carried the figure on to an apparently disproportionate length (which serves the excellent purpose of breaking the monotony of constant pairs of bars), finally, at (c), resumes the little tail-piece of the first half and thereby clinches the whole into completeness. The manner in which this answers the requirements of artistic construction is very remarkable, and it will be found hereafter that it does so throughout on a precisely similar scheme, in miniature, to that of a 17th century Symphony movement. It would be natural to suppose that this was pure accident if there were not other ancient examples of the same form coming from the most opposite sources. The above Branelle is a French dance tune; if we turn from it and take the most famous German Chorale 'Ein feste Burg' (1529), the principles of its construction will be found to be identical. It is so well known that it is needless to quote it. It will be sufficient to point out that the first half of the tune ends at the conclusion of the second line; and of this half the first line ends on the Dominant and the second on the Tonic, precisely as in the Branelle; and it is then repeated for the third and fourth lines. The music to the fifth, sixth, seventh, and eighth lines answers to the passage between (b) and (c) in the Branelle, and like it presents a variety of harmonic bases; and to clench it all together the music of the second line is quoted to conclude with, precisely as is the little tail-piece of the first half in the Branelle. It is impossible not to feel the force of this as a point of musical form when it is once realised; it has the effect of completeness for a short tune which is unrivalled. If we turn to far other sources we shall find an early English specimen in the well-known 'Since first I saw your face' (1607), in which the second and last line will again be found to be identical, and the other lines show the scheme to conform in like manner. Even in Italy, where the value of form does not seem to have been so readily appreciated as by Teutons, we find a little Sinfonia for flutes in Giacomo Peri's 'Euridice' (1600)—the first musical drama performed in modern Europe—which at least has the one important feature of repeating a little characteristic figure of the cadence of the first half to conclusion the whole. It must not be supposed that this form was by any means universal so early as the middle of the 16th century—a time when notions of harmony proper, as apart from polyphony, were but dawning, and the musical scales and keys as we now know them were quite vague and unsettled. It is wonderful enough that there should be any examples of Form as now recognised depends greatly upon those two very elements of harmonic bases and relation of keys; so that what was then done in those departments must have been done by instinct. But by the middle of the 17th century musical knowledge in these respects was much more nearly complete, and the scope of composers proportionately widened. Accordingly we find a greater freedom in the treatment of forms; but the outline of the same form on a larger scale is found to predominate in the instrumental works of the time, especially such as pass under the names of dances; though it is probable that those sets of them which were called 'Suites,' or 'Sonatas,' or 'Ordres,' were rather purely Musical than Terpsichorean. In the ecclesiastical Sonatas (Sonate di Chiesa) the style still continues fugal and polyphonic.

It would be impossible to give even a faint idea of the number of examples of this form which are to be found in these dance-suites, but it will be well to take some typical specimens and indicate the points in which they show development. In Corelli's Chamber Sonatas there are many clear instances. Thus, in the Giga of Sonata IV of the 'Opera Quarta,' there is the usual division into two halves. Of these the first is again divided into two phrases, the first phrase all in the Tonic key, D; the second then modulating to the key of the Dominant and closing in it. The second half begins with a sort of development of the figures of the first part, then modulates to nearly related keys, and after passing back to the original key concludes with a quotation of the last few bars of the first half. In this scheme there are two points of advance on the previous examples; the first part concludes in what we will henceforward call the complementary key, or key of the Dominant, instead of merely passing to it and back and closing in the principal key—by that means establishing more clearly the balance between it and the principal key; and secondly, the first part of the second half of the movement presents some attempt at a development of the features of the subjects of the first part, and real free modulation. The Canzontes and Giga of the 7th Sonata of the 'Opera Seconda' are so remarkably clear specimens of repetition of the end of the first part as a conclusion to the whole, since full six bars in each are repeated. Both examples are however inferior to the above-quoted Giga in respect of the conclusion of the first part being in the principal key—like the older examples first quoted as typical—though like that Giga they are superior to the older examples in the free modulations and reference to the conspicuous figures of the subjects in the first section of the second half of the movements.

Domenico Scarlatti (1683-1757) was a contemporary of Handel and Bach, being but two years older than the former; nevertheless he must be considered as historically prior to them, inasmuch as the very power of their genius would make them rather the prophets of what was to come than representatives of prevalent contemporary ideas. Domenico Scarlatti left many examples of Studies or Sonatas which are
essentially expansions of the plan of the original Bransle. In some the first part concludes in the principal, and in some in the complementary key, either Dominant or relative major. A very extended example is found in a Study in D minor, Allegro (no. 7 of a set of 'Pièces pour le Clavecin' published by Cramer). In this there is first a section chiefly in D minor, which modulates to F, the relative major, and concludes in that key—altogether 22 bars; and then another section, of 21 bars, all in F major, and closing in that key. This concludes the first half, which corresponds with the first half of a modern Sonata movement. The second half sets out with a reference to the first subject in F, and then modulates freely to various keys, ultimately closing in the original key of D minor, and there taking up the thread of the latter section of the first half of the movement, and giving the whole 22 bars almost identically, transposed from the original key of F into the principal key of D. The descent of this movement from the dance type is sufficiently clear without again going over the ground. Its most conspicuous advance is in its relative extension, 22 bars corresponding to 2 in the original example, and the other divisions being in proportion. The free modulation of the second half of the movement is the strict counterpart on a large scale of the changing harmonic basis in the Branle, and this is an advance due to the great increase of musical knowledge and resources. In other respects the similarity between the typical progenitor and its descendant is sufficiently clear. D. Scarlatti's works are almost universally a great advance on Corelli in the clear definition of the subjects and the variety of the rhythms, which enables him to approach much more nearly to modern ideas in what is called the 'development' of the subjects; though it is true that a mere patchwork of short subjects stated one after another often serves the purpose with him of the more continuous and artistic modern development. It will also be noticed that Scarlatti generally abandons the names of the dance tunes while retaining their forms.

There were other contemporaries of Bach and Handel who must be noticed before them for the same reasons as Scarlatti. Their works generally present the feature of extensive repetition of the last section of the first part as a conclusion to the whole, in a very marked manner. Thus in a Corrente from a Suite by Domenico Zipoli (born 1665) precisely the same system is observable as in the example by Scarlatti. And in a Sonata by Wagnerseil (born 1688) in F, op. 1, the first movement is a very extended specimen of the same kind; and the last movement, a Minuetto, is remarkable for the great length of the phrase repeated. The first half of the movement is but 16 bars, of which the latter 12 are all in the Dominant key; and the whole of these 12 bars are repeated at the conclusion, the first 4 having been disposed of at the commencement of the preceding 'development,' as in the Study of Scarlatti.

Bach and Handel present an extraordinary variety of forms in their works. Some are identical with the form of the Bransle and 'Eins feste Burg'; others are like the primitive Rondo on a very extended scale; and many exhibit various stages of progressive development up to perfect types of the complete modern forms as used by Mozart.

A very large number of the movenents in the Suites of both Bach and Handel are in the same form as the previous examples. The first half is divided, not very strongly, into two sections, in which the principal key and the complementary key alternately predominate. The second half sets out with development and free modulation, and concludes with a quotation of the concluding bars or features of the first half. To take Bach's 'Suites Françaises' as examples, the following among others, will be found to conform to this simple scheme:—Gigue of No. 1, in D minor; Courante of No. 3, in C minor; Gigues of No. 3, in B minor; Courante of No. 4, in E♭; the Allemande and the Courante of No. 5, in G; and the Courante and the Bourrée of No. 6, in E. As examples of the same from Handel's Suites the following may be taken:—the Courante in No. 1, in A; the Allegro in No. 2, in F; the Courante in No. 4, in E minor; the Allemande in No. 5, in E major; and the Gigues in the 5th, 7th, 8th, and 10th Suites. In many of these there is a systematic development of the figures of the subject in the first section of the second half of the movement; but a tendency is also observable to commence the second half of the movement with a quotation of the commencement of the whole, which answers practically to the first subject. This was also noticed in the example quoted from Scarlatti. Bach not unfrequently begins the second half with an inversion of the characteristic figure of the commencement, or treats it in a free kind of double counterpoint, as he sometimes does in repeating the conclusion of the first half at the conclusion of the whole. (See the last 4 bars of the Allemande in the Partita No. 2, in C minor.) How the subject reappears is however a matter of subsidiary importance. What is chiefly important is the fact that the first subject gradually begins to make its appearance clearly and definitely in the second part as a repetition from the first half; and it is very interesting and curious to note that there was a long hesitation as to the position in the second half which this repetition should occupy. The balance for a long time was certainly in favour of its appearing at the beginning of the second half, and in the complementary key of the movement. A very clear and easily recognisable instance of this is the opening 'pompous movement of the Overture to Handel's 'Semele,' which differs in form from the first movement of a modern Sonata or Symphony in this one particular only. But there are specimens of form in both Bach and Handel which are prophetic of the complete modern system of Mozart. The fact is so interesting and instructive that it will be worth while to give an analysis of the shortest
example of Bach, in order that it may be compared with the scheme of Mozart's form, which will be given later. A little Air in the Suite Francaise No. 4, in Eb major, sets out with a clearly defined figure which may be called the 'first subject,' and modulates in the fourth bar to the key of the Dominant, in which the figure which may also be called by analogy the 'second subject' appears, and with this the first half of the movement concludes. The second half sets out with modulations and hints at the figures of the first half, after 10 bars comes to a pause on the Dominant of the original key, and from thence recommences the first subject; and the latter part of the section being deftly altered by a device of modulation—of which Mozart made great use in the same position in the movement—enables the whole of the last 4 bars of the first half of the movement to follow also in Eb, so concluding the Air.

There is no need to give a like detailed analysis of the Allegro in Handel's Suite No. 14, in G. It will suffice to point out that its form is identical with the preceding on a large scale; and that it is clearer and easier to recognise, no matter how the sections do not flow so closely into another, and the subjects are more definite. These two examples are not, however exceptional as regards both Bach and Handel and their immediate successors. The tendency was still or a time to adopt the form of reproducing the first subject at the commencement of the second half of the first movement; and in the fact it is not difficult to see why it was preferred, since nothing else could be said for it, it certainly seemed to keep the balance of the keys more equal. For in this system the subject which appeared in the principal key in the first half came in the complementary key in the second half, and the second subject vice versa, whereas in the later system the first subject always appears in the principal key. Moreover the still later system of merely repeating the ending of the first half still lingers on the scene after the name of Bach and Handel, for in a Sonata by Aluppi (1703–53) in D (published in Fauers Alte Clavier Musik) there is a charming little penning Adagio which seems to lack both forward and backwards at once; for its form is a near specimen of the mere repetition of the concluding phrase of the first part at the conclusion of the whole, while its soft melodic manner and characteristic definition of sections by cadences and semi-cadences (tending to cut it up to so many little tunes), make it in spirit a very near relation of Mozart's. And one might think this little movement, without much stretch of imagination, as the final connecting link between the movements which look back towards a primitive form as displayed in the original canons, and those which look on towards Mozart and Haydn epoch. The other movements of Galuppi's Sonata are in the more developed form, in which the first subject is quoted at the commencement of the second half of the movement.

In Galuppi's contemporary, P. D. Paradies, we find even a closer relationship to Mozart in many respects. The first movement of his Sonata in A, for instance, is on an extended scale. His subjects are clearly defined, and the growing tendency to cut the movement up into sections is still clearer than in Galuppi. The subjects are definitely restated, but after the earlier manner, with the first subject reproduced at the beginning of the second half. It is however noticeable that in the lively Finale of this Sonata the subjects both reappear at the end of the whole.

If we turn to the distinguished German composers of this epoch we find ourselves as it were among the immediate exemplars of Haydn. In them both the manner and form of their great successors are figured, and there is no longer any doubt about the basis of construction of the movement; the first part being as it were the thesis of the subjects, and the second part their discussion and re-statement; but there is still an uncertainty with regard to the respective positions of the restatements. If, for instance, we examine a Sonata of Johann Christian Bach, op. 17 (Fauers 'Alte Clavier Musik'), we find a very clear and extended specimen of the older system. The first half has a very long section in the principal key (Bb), and another section, also long, in the Dominant key (F)—all of which is as usual repeated. The second half commences with a clear statement of the first section in the Dominant key, followed by development and modulation, and passing on the Dominant of the original key of Bb, in which all the second section of the first part is reproduced with an exactness which is almost tiresome. It is worthy of remark that the last movement is in the Gigue time and style without being so named, and is a happy instance of the gradual complete merging of the old dance Suite in the Sonata. As a reverse to this picture there is a Boureée in a Suite by Johann Ludwig Krebs—a contemporary of Johann Christian Bach, and one of the most distinguished of his father's pupils—which, though called by the old dance name, is in perfect modern form, and shows so aptly the transition of the repeated ending of the first part into a second subject that it is worth quoting in outline.

The slow movement of Beethoven's Quartet in D major, op. 18, an example of this form.
This is followed by 7 more bars of development after the manner of this commencement, modulating to C minor and A♭ and thence back to E♭, in which key the first subject is resumed as follows:

In this the passage from (a) to (b) constitutes the first subject and section; and that from (b) to (c) the second, in the Dominant key, corresponding to a 'second subject'; then follow the development and modulation, from (c) to (d); and then the repeat of the first section in the principal key, with the little cadence figure (e), which is treated in precisely the manner that a second subject would be treated in a more extended movement, being given complete, transposed from the Dominant key to the original Tonic.

That Krebs had well defined his own objects in these matters is clear from the fact that the Polonaise from the same suite, and an Allemande from another in B♭ are constructed after precisely the same system.

There remains yet the most important predecessor of Haydn, namely Emmanuella Bach, in whose Sonatas Form reached a very remarkable pitch of perfection. Many of them stand in a very peculiar relation both to the old order and to the new which was destined to supplant it on the principle of the survival of the fittest; for they present examples of the reappearance of the first subject at the commencement of the second half of the movement, as well as after the section devoted to development and modulation—in other words, both in its older position and in its recognised place in modern instrumental works. This is the case in the Sonata in G in the first collection published at Leipzig in 1779, and in Bülow's little selection of Six. The same also in the last movement of the Sonata in A (which is both in Bülow's collection and in Pauer's 'Alte Meister'), and in the first movement of the Sonata in F minor from the third set of Clavier Sonatas, also edited by Bülow. The sonata in D minor approaches more nearly to modern ways in the position of the repetition of the first subject in the second part; but offers a marked instance of independent thought in reproducing the second subject in the key of the third below the Tonic (that is, in B♭ relative to D), and afterwards passing back to the principal key, and reproducing the rest of the materials of the section after the usual manner—thus in some respects anticipating Beethoven.

A great deal more might be said on the individual and thoughtful use of Form which is observable in the works of Emmanuella Bach; but it will be merely necessary to point out that the study of them as works of art, by those who are as yet unacquainted with them will throw quite a new light on Haydn and Mozart. He has been called their forerunner, and he thoroughly justifies the title not only by the clearness and distinctness of his form, but by certain indefinable qualities of style and sentiment. Something of this may be due to his view that music should be interpreted as vocally as possible (see Burney, vol. iv. chap. x.), which is also a very distinguishing trait of the Mozart school. It must also be noted that in him the continuous fugal manner seems finally to have yielded before the growing predominance of the essentially distinct modern harmonic style. The forms of the fugal style, such as they were, were rather relative than positive, and depended upon certain laws—not very clearly defined or consistently observed—as to the modes of recurrence of the subjects; whereas the forms of the modern harmonic style are positive and systematic.

The forms of the fugal style may be compared to the composition of lines and curves in a drawing, in which they are not perceived but grow into completeness by the attention which is bestowed by the artist on their relations to one another. Whereas the forms of the harmonic style are architectural, and are governed by certain necessary prior considerations as vital as that of roof and walls to the architect, whereby the movement comes to be divided into sections chiefly based upon the succession of keys, in which the various subjects are rather indicators of outline than positive elements of construction. In Emmanuella Bach we find a number of figures and subjects characteristic of each of the primary sections, as we do in Beethoven; and the spirit of his great father, though attenuated enough, is yet perceptible in his manner of treating short and pregnant figures, and in some peculiarities of phraseology. These are probably the chief point of connection between the spirit of the great giant and the grace of the less austere style of Haydn and Mozart.

It can hardly be doubted that the realisation of this practically new discovery of the element of positive harmonic or Tonal form in music must have acted like many other fresh discoveries in the realms of art, and tended to swamp the other elements of effect; making composers look to form rather as ultimate and preeminence than as inevitable but subsidiary. It seems not improbable that the vapid and meaningless commonplace which often offends the sensitive musician in the works of Haydn and Mozart, and appears like just so much rubbish shot in to fill up a hole, was the result of this strong new feeling for form as paramount, and that it remained for Beethoven to reestablish definitely the principle of giving equal intensity to every part of the piece in proportion to its importance. With Haydn and Mozart it is frequent to find very sweet tunes, and sometimes very serious and pregnant tunes, in each of the primary sections, and then a lot of scurrying about—'brilliant passages' as they are often called—the only purpose of which is to mark the cadence, or point out that the tune...
FORM.

which is just finished is in such or such a key. Haydn's early Quartets are sometimes very little more than jingle in one key and more jingle in another, to fill up his recognized system of form, without ever rising to the dignity of a tune, and much less to a figure with any intensity of meaning; and some of Mozart's instrumental productions are but little better.

That Haydn studied the works of Emmanuel Bach is well known, for he himself confessed it; and the immediate connection between him and his predecessors is nowhere more clear than in the similarity of occasional irregularities of construction in the second half of his movements. There is more than one instance of his first subject reappearing clearly at the beginning of the second half of a movement instead of in its latter portion (Quartet in F major, op. 2, No. 4; No. 67 in Trautwein); and further than this, and corroborative of the continuous descent, is the fact that when the first subject reappears in what we should call its right place, there are conspicuous irregularities in the procedure, just as if Haydn were half apologising for a liberty. For the section is often prolonged and followed by irregular modulations before the second subject reappears, and is then far more closely followed than the first subject and the materials of the first section. Another point illustrating a lingering feeling for the old practice of repeating the conclusion or cadence-figures of the first part at the conclusion of the whole, is that a sort of premature coda is occasionally inserted after the earlier figures of the second section on its repetition in this place, after which the concluding bars of the first part are exactly resumed for the finish. Of this even Mozart gives a singular and very clear instance in the first movement of his G minor Symphony.

Of the minor incidental facts which are conspicuous in Haydn's works the most prominent is his distribution of the subjects in the first part. He conforms to the key-element of Form in this part with persistent regularity, but one subject frequently suffices for both sections. With this principal subject (occasionally after a short independent introduction in slow time) he commences operations; and after concluding the first section and passing to his complementary key for the second, he reproduces it in that key, sometimes varied and sometimes quite simply—as in the well-known Symphony in D, No. 7 of Salomon's set (first movement), or in that in Eb, No. 9 of the same series (also-first movement), or in the Quartet in F minor, op. 54, or the Finale of the Quartet in C, op. 75 (No. 1 in Trautwein). And even where the second section has several new features in it the first subject is often still the centre of attraction, as in the first movement of the Quartet in C (No. 16, Trautwein), and the same movement of the Quartet in F (No. 11, Trautwein). On the other hand Haydn is sometimes profuse with his subjects, and like Beethoven gives several in each section; and again it is not uncommon with him to modulate into his complementary key and go on with the same materials for some time before producing his second subject, an analogous practice to which is also to be met with in Beethoven.

A far more important item in Haydn's development of Form is the use of a feature which has latterly become very conspicuous in instrumental compositions, namely the Coda, and its analogue, the independent episode which usually concludes the first half of the movement.

Every musician is aware that in the early period of purely formal music it was common to mark all the divisions of the movements clearly by close and half close; and the more vital the division the stronger the cadence. Both Haydn and Mozart repeat their cadences in a manner which to modern ears often sounds excessive; and, as already pointed out, they are both at times content to make mere 'business' of it by brilliant passages, or bold chords; but in movements which were more earnestly carried out the virtue of making the cadence also part of the music proper, and not a mere rigid meaningless line to mark the divisions of the pattern, was soon recognised. There were two ways of effecting this; either by allusion to the figures of the subjects adapted to the form of the cadence, or by an entirely new figure standing harmonically on the same basis. From this practice the final episode to the first part of the movement was developed, and attained at times no insignificant dimensions. But the Coda proper had a somewhat different origin. In the days before Haydn it was almost invariable to repeat the second half of the movement as well as the first, and Haydn usually conformed to the practice. So long as the movements were of no great length this would seem sufficient without any addition, but when they attained to any considerable dimensions the poverty and want of finish in ending twice over in precisely the same way would soon become apparent; and consequently a passage was sometimes added after the repeat to make the conclusion more full, as in Haydn's well-known Quartet in D minor, op. 76, the first movement of the Quartet in C (Trautwein, No. 56), the last movement of the Quartet in E, No. 17, and many others. It seems almost superfluous to point out that the same doctrine really applies to the conclusion of the movement, even when the latter half is not repeated; since unless an addition of some sort is made the whole concludes with no greater force than the half; the conclusion being merely a repetition of the cadence figure of the first half of the movement. This case however is less obvious than the former, and it is probable that the virtue of the Coda was first observed in connection with movements in which the second half was repeated, and that it was afterwards found to apply to all indiscriminately. A Coda in both cases is to be defined as the passage in the latter part of a movement which commences at the point where the substance of the repeated first part comes to an end. In Haydn codas are tolerably plentiful, both in movements in which the latter half is repeated and in movements in

(Continued on next page.)
which it is not. They are generally constructed out of materials taken from the movement, which are usually presented in some new light, or associated together in a fresh manner; and the form is absolutely independent. Modulation is rarely to be found, for the intention of the Coda was to strengthen the impression of the principal key at the conclusion, and musicians had to be taught by Beethoven how to do this without incessantly reiterating the same series of chords in the same key. As an instance of the consideration and acuteness which characterise Haydn's very varied treatment of forms may be taken the Coda of the first movement of the Symphony in C, No. 1 of the Salomon set. In this movement he misses out certain prominent figures of the first section on its repetition in the second half, and after passing on duly through the recapitulation of the second section he takes these same omitted figures as a basis whereon to build his Coda. Many similar instances of well-devised manipulation of the details of form are scattered throughout his works, which show his remarkable sagacity and tact. They cannot be brought under any system, but are well worth careful study to see how the old forms can be constantly renewed by logically conceived devices, without being positively relinquished.

Haydn represents the last stage of progress towards clear and complete definition of abstract Form, which appears in its final technical perfection in Mozart. In Mozart Form may be studied in its greatest simplicity and clearness. His marvellous gift of melody enabled him to dispense with much elaboration of the accepted outlines, and to use devices of such extreme simplicity in transition from one section to another that the difficulty of realising his scheme of construction is reduced to a minimum. Not that he was incapable of elaborating his forms, for there are many fine examples to prove the contrary; but it is evident that he considered obviousness of outline to be a virtue, because it enabled the ordinary hearer as well as the cultivated musician to appreciate the symmetrical beauty of his compositions. Apart from these points of systematic definition Mozart was not an innovator, and consequently it will not be necessary to point out his advances on Haydn. But inasmuch as he is generally recognised as the perfect master of the formal element in music it will be advisable to give an outline of his system.

The first section, which tends to mark clearly the principal key of the movement, sets out with the principal subject, generally a tune of simple form, such as 8 bars divided into corresponding groups of four (see the popular Sonatas in C minor). This is either repeated at once or else gives place to a continuation of less marked character of figure, generally commencing on the Dominant bass; the order of succession of this repetition and continuation is uncertain, but whichever comes last (unless the section is further extended) usually passes to the Dominant key, and pauses on its Dominant; or pauses without modulation on the last chord of a half close in the original key; or, if the key of the whole movement be minor, a little more modulation will take place in order to pass to the key of the relative major and pause on its Dominant. The second section—which tends to define clearly the complementary key of the movement, whether Dominant or Relative major to the original—usually starts with a new subject, somewhat contrasted with the features of the first section, and may be followed by a further accessory subject, or derivative continuation, or other form of prolongation, and so pass to the frequent repetition of the cadence of the complementary key, with either brilliant passages, or occasionally a definite fresh feature or subject which constitutes the Cadence episode of the first part. These two sections—constituting the first half of the movement—are usually repeated entire.

The second half of the movement commences with a section which is frequently the longest of all; it sometimes opens with a quotation of the first subject, analogous to the old practice common before Haydn, and proceeds to develop freely the features of the subjects of the first part, like a discussion on themes. Here cadences are avoided, as also the complete statement of any ideas, or any obvious grouping of bars into fixed successions; modulations are constant, and so irregular that it would be no virtue to find the succession alike in any two movements; the whole object being obviously to produce a strong formal contrast to the regularity of the first half of the movement; to lead the hearer through a maze of various keys, and by a certain artistic confusion of subject-matter and rhythm to induce a fresh appetite for regularity which the final return of the original subjects and sections will definitely satisfy. This section Mozart generally concludes by distinctly modulating back to his principal key, and either pausing on its Dominant, or passing (perhaps with a little artistically devised hesitation), into the first subject of the movement, which betokens the commencement of the fourth section. This section is usually given without much disguise or change, and if it concludes with a pause on the Dominant chord of the original key (i.e. the final chord of a half close), will need no further manipulation, since the second subject can follow as well in the original key as in that of the Dominant, as it did in the first part. If however the section concludes on the Dominant of that Dominant key in the first half of the movement, a little more manipulation will be necessary. Mozart's device is commonly to make some slight change in the order of things at the latter part of the section, whereby the course of the stream is turned aside into a Sub-dominant channel, which key standing in the same relation to the principal key that the principal key stands to the Dominant, it will only be necessary to repeat the latter part of the section with that key and pause again on the Dominant of the original key, in which the

1 In the first movement of the 'Jupiter' Symphony so exact is the repetition, that in one of the editions a passage of 21 bars is not reprinted, but a reference 'Da Capo' is made to its occurrence as the beginning of the Allegro.
second section of the first half then follows simply in the same order as at the first. If the principal key of the movement happens to be minor, and the second section of the first part to be in the relative major, its reappearance in either the major or minor of the principal key depends chiefly on its character; and the passage that led to it by modulation would be either omitted altogether or so manipulated as not to conclude out of the principal key.

With this simple order of reproduction of the first two sections Mozart is generally contented, and the little alterations which he does occasionally make are of a straightforward nature, such as producing the second subject before the first (as in Sonata in D major composed in 1778), or producing the second subject in the Dominant key first and repeating it in the principal key (as in Sonata in C composed in 1779). The whole of the latter half of the movement is frequently repeated, and in that case generally followed by a Coda—as in the last movements of Quartets in a minor No. 1, and A, No. 6, and D, No. 10; first movements of Quartets in E♭, No. 2, and D, No. 1; slow movement of Quartet in F, No. 8; last movement of Sonata in C minor; and of Quintet in G minor, D, and E♭; and last movement of the Jupiter Symphony. The Coda is generally constructed out of prominent features of the movement, presented in some new light by fresh associations and fresh contrasts. It is seldom of any great length, and contains no conspicuous modulation, as that would have been held to weaken the impression of the principal key, which at the conclusion of the movement should be as strong as possible. In a few instances there are codas without the latter half of the movement having been repeated. Of this there is at least one very beautiful instance in the short Coda of the slow movement of the Quartet in E♭, which is constructed out of ejaculatory fragments of the first subject, never touching its first phrase, but seeming like a sweet broken reminiscence. It must be borne in mind that this scheme is but a rough outline, since to deal with the subject completely would necessitate so much detail as to preclude all possibility of clearness.

It is commonly held that the influence of Mozart upon Beethoven was paramount in his first period; but strong though the influence of so great a master must inevitably have been upon the unfolding genius, his giant spirit soon asserted itself; especially in that which seems the very narrow of his works, and makes Form appear in an entirely new phase, namely the element of universally distributed intensity. To him that byword 'brilliant passages' was as hateful as 'Cant' o Carlyle. To him bombast and gesticulation at a particular spot in a movement—just because certain supposed laws of form point to that spot as requiring bustle and noise—were impossible. If there is excitement to be got up at any particular point there must be something real in the bustle and vehemence; something intense enough to justify it, or else it will be mere vanity; the cleverness of the fingers disguising the emptiness of the soul—a fit accompaniment to 'the clatter of dishes at a princely table,' as Wagner says, but not Music. Such is the vital germ from which spring the real peculiarities and individualities of Beethoven's instrumental compositions. It must now be a Form of spirits as well as a Form in the framework; it is to become internal as well external. The day for stringing certain tunes together after a certain plan is past, and Form by itself ceases to be a final and absolute good. A musical movement in Beethoven becomes a continuous and complete poem; or, as Mr. Dannreuther says, 'an organism' which is gradually unfolded before us, marred by none of the ugly gaps of dead stuff which were part of the 'form' of his predecessors. Moreover Form itself must drop into the background and become a hidden presence rather than an obvious and pressing feature. As a basis Beethoven accepted the forms of Mozart, and continued to employ them as the outlines of his scheme. 'He retained,' as the same writer has admirably said, 'the triune symmetry of exposition, illustration, and repetition,' which as far as we know at present is the most perfect system arrived at, either theoretically or empirically; but he treated the details with the independence and force of his essentially individual nature. He absorbed the principle in such a fashion that it became natural for him to speak after that manner; and greatly as the form varies it is essentially the same in principle, whether in the Trio in E♭, opus i, or the Quartet in F, opus 135.

In estimating the great difference between Mozart and Beethoven in their manner of treating forms it must not be forgotten that Mozart, as has been before observed, wrote at a time when the idea of harmonic form was comparatively new to the world of music, and to conform to it was in itself a good, and to say the merest trifles according to its system a source of satisfaction to the hearer. It has been happily suggested that Mozart lived in an era and in the very atmosphere of court etiquette, and that this shows itself in the formality of his works; but it is probable that this is but half the cause of the effect. For it must not be forgotten that the very basis of the system was clear definition of tonality; that is to say, the key must be strongly marked at the beginning and end of a movement, and each section in a different key must be clearly pointed out by the use of cadences to define the whereabouts. It is in the very nature of things that when the system was new the hearers of the music should be but little apt at seizing quickly what key was at any given moment of the highest importance; and equally in the nature of things that this faculty should have been capable of development, and that the auditors of Beethoven's later days should have been better able to tell their whereabouts with much less indication than could the auditors of Mozart. Hence there were two causes acting on the development of form. On the one hand, as the system grew familiar, it

FORM.

The act plan of baldly passing to its Dominant, causing, and re-commencing operations. The **reprise** of the first subject is sufficient indication to the hearer as to what part of the movement he has arrived at, and the approach to it require to be so fined off, that it may burst upon him with the extra force of a surprise. Sometimes a similar effect is obtained by the totally opposite course of raising expectation by hints of what is to come, and then deferring it in such a manner that the suspended anticipation of the mind may heighten the sense of pleasure in its gratification, as in the last movement of the Waldstein Sonata. Again the return is not uncommonly made the climax of a grand culmination of increasing force and fury, such as that in the first movement of the Waldstein Sonata where the return is pp) and the 4th and 8th symphonies, a device which is as moving to the hearer as either of the former ones, and equally intense and original.

In the recapitulation of his subjects, as might be anticipated from his intensity in all things, there is a growing tendency to avoid the apparent platitude of repeating them exactly as at first. Sometimes they appear with new features, or new orders of modulation, and sometimes altogether as variations of the originals. As instances of this may be taken the recapitulation of the first subjects in the first movements of the Eroica Symphony, D minor Sonata (op. 31, No. 2), the Waldstein, the Appassionata, and the Bb Sonata, op. 106, the first movement of the Quartet in Eb, op. 127, and of the Kreutzer Sonata, the slow movements of the Violin Sonata in C minor, op. 30, and of the great Bb Sonata just named, all which present the various features above enumerated in great perfection. No system can be defined of the way in which Beethoven connects his first and second subject in this part of the movement, as he particularly avoids sameness of procedure in such matters. As a rule the second subject is given more simply than the first; no doubt because of its being generally of less vital importance, and less prominent in the mind of the hearer, and therefore requiring to be more easily recognisable. With regard to the key in which it appears, he occasionally varies, particularly when it has not appeared in the first part in the orthodox Dominant key. Thus in the first movement of the great Quartet in Bb, op. 130, the second subject, which had appeared in the first part in the key of the third below (Gb relative to Eb), appears in the recapitulation in the key of the minor third above—Db. And in the Sonata in G major, op. 31, the second subject, which appeared in the key of the major third in the first part, appears in the **reprise** in that of the minor third below. These and other analogous instances seem to indicate that in the statement and restatement of his subjects, when they did not follow the established order, he held the balance to be between the third above and the third below, major and minor. The reason for his not doing so in the Bb Sonata (op. 106) is no doubt because in the very elaborate repeat of the first section he had modulated so far away from the principal key.

The last point to which we come in Beethoven’s treatment of the Sonata-forms is his use of the Coda, which is, no doubt, the most remarkable and individual of all. It has been before pointed out that Mozart confines himself chiefly to Codas after repetition of the second half of his movements, and these are sometimes interesting and forcible; but Codas added for less obvious reasons are rare; and as a rule both his Codas and Haydn’s remain steadily in the principal key of the movement, and strengthen the Cadence by repetition rather than by leading the mind away to another key, and then back again up to a fresh climax of key-definition. That is to say, they added for formal purposes and not for the sake of fresh points of interest. Beethoven, on the other hand, seemed to look upon the conclusion of the movement as a point where interest should be concentrated, and some most moving effects produced. It must have seemed to him a pure absurdity to end the whole precisely as the half, and to conclude with matter which had lost part of its zest from having been all heard before. Hence from quite an early period (e.g. slow movement of D major Sonata, op. 10, No. 3) he began to reproduce his subjects in new and interesting phases in this part of the movement, indulging in free and forcible modulation, which seems even from the point of pure form to endow the final Cadence with fresh force when the original key is regained. The form of the Coda is evidently quite independent. He either commences it from an interrupted Cadence at the end of the preceding section, or passes on from the final chord without stopping—in the latter case generally with decisive modulation. In other cases he does not conclude the preceding section, but as it were grafts the Coda on to the old stock, from which it springs with wonderful and altogether renewed vigour. As conspicuous instances may be quoted the Coda of the Sonata in Eb, Op. 81a (‘Les Adieux, L’Absence, et le Retour’), which is quite the culminating point of interest in the movement; the vehement and impetuous Coda of the last movement of the Appassionata Sonata, which introduces quite a new feature, and the Coda to the last movement of the Waldstein Sonata. The two climactic Codas of all, however, are those to the first movements of the Eroica and the 9th Symphony, which are sublime. The former chiefly by reason of its outset, for there is hardly anything more amazing in music than the drop from the piano Tonic Eb which concludes the preceding section, to a **forte** Db, and then to the chord of C major **fortissimo**. But the whole Coda of the first movement of the 9th Symphony is a perpetual climax and a type of Beethoven’s grandest conceptions, full of varied modulation, and constant representation of the features of the subjects in various new lights, and ending with a surging, giant-striding specimen of ‘Tonic and Dominant,’ by way of enforcing the key, which is quite without rival in the whole domain of music.
There can be no object in following the development of the system of Form further than Beethoven, for it can hardly be said that there is anything further to trace. His works present it in its greatest variety and on the grandest scale; and his successors, great as many of them have been, have not even approached him, less added to his final culmination. The main tendency observable in later instrumental works is to develop still further the system above discussed of taking one key as central in a group comprising many subsidiary transitions. Schumann's works present remarkable instances of this; Mendelssohn adopts the same practice, but with more moderation; Brahms again is extremely free in the same direction; as may be observed, for instance, in the first section of the first movement of the pianoforte Quartet, op. 35, which is nominally in G minor. This is apparently a recognition of the hypothesis above proposed, that the mind is capable of being more and more educated to recognize the principal key in a chain of transitions which to the audiences of Mozart's day would have been quite unintelligible.

It is now time to return to the consideration of the Rondo-form as found in the works of Haydn and Mozart, in which it was frequently affected by the more important and interesting First-movement-form. It will be obvious that its combination with that form does not offer much difficulty. For that alternation of subject and episode, which is the very essence of the Rondo, opens the way to the adoption of a second subject in the complementary key as the fittest antithesis to the first statement of the principal subject; and the main point of distinction of the Rondo-form from the First-movement-form pure and simple, is that the first subject reappears after the second in the original key, instead of bringing the first half of the movement to a conclusion in the complementary key. After this deviation the form again follows the system of the first movement; for—as we have already sufficiently pointed out—no fitter place is found to develop the figures and features of the subjects and to modulate freely. In the simpler system of the Rondo this again takes the place of an episode; in both systems the first subject would here recur, and nothing could more fitly follow it than the recapitulation of that subject which occupied the place of the first episode. It is worthy of remark that in the Rondo of the Waldstein Sonata, Beethoven has in this place reproduced the subject which opens the first episode, though the movement is not cast on the system of a first movement. Finally, the subject may reappear yet again in the original key without deviating strongly from that system; so that, as just mentioned, the only marked point of deviation is the return to the principal key after the appearance of the second subject. This complete adaptation is more commonly abbreviated by replacing the 'Development' by a short episode (as in Beethoven's Sonata in E, op. 90); and even further (as in the Finale of Mozart's Quartet in Eb, No. 4), by passing immediately from the second subject to the recapitulation of both subjects in the principal key, and ending with one further final quotation of the real Rondo-subject. This latter in point of fact is to be explained rather as a simple method of establishing the balance of keys by giving an episode in a complementary key, than as based on any preconceived notion of amalgamation with the First-movement-form.

One of the most prominent features in the Rondos of Haydn and Mozart is the frequent rigidity of the subject. It is common to meet with a complete dance-tune divided into two halves, each repeated after the accepted system, and closing formally in the principal key. So that it is in fact a complete piece in itself, and stands out as markedly as Couperin's subjects do with fermatas over the concluding chords. In these cases the tune is not given in extenso at each repetition, but is generally fixed and rounded off so as not to affect the continuity of the movement so conspicuously as in its first statement.

The angularity and obviousness of outline which often mark the Rondo form in works prior to Beethoven, were to a certain extent alleviated by the use of ingenious playful treatment of the figures of the chief subject by way of episode; but nevertheless the formality remains, and marks the Rondo of Haydn and Mozart as a thing of the past, and not to be revived in that particular manner in the present day without perpetrating an artistic anachronism. Beethoven's treatment of the Rondo offers great differences, but they are chiefly in point of sentiment, and difficult to define. Prior to his day there had evidently been a persistent tradition that final Rondos were bound to be gay, jaunty, light, or even slippant. With Beethoven such a dogma was impossible; and he therefore took the line of developing the opportunities it offered, either for humorous purposes, in the persistent repetition of a quaint phrase (Sonata in D, op. 10, No. 3), or in the natural and desirable recurrence of a melody of great beauty (Sonata in E, op. 90, and Waldstein). In every case the system is taken out of the domain of mere observance of form, and its basis vitalised aforesay by making it the vehicle of thoughts which can appear in such an order without losing their true significance. In point of fact the Rondo form is elastic enough notwithstanding its simplicity, and if the above sketch has not sufficiently indicated that fact, the study of the movements mentioned, and those in Beethoven's Eb and G Concertos and Bb Trio, will lead to the perception of the opportunities it offers to the composer better than any attempt at reducing the various features to a formula.

The Minuet and Trio survive as pure and undeveloped examples of the original source of the larger movements, in immediate contact with their wonderfully transformed descendents. They offer no systematic difference whatever from the dances in the Suites which preceded the perfected
Sonatas. The main points of form in the two are similar. The first half of each generally establishes some sort of balance between the principal key and its complementary key, and is then repeated. The second half begins with a passage in which harmonic roots vary on a more extended scale than they do in the first half, proceeding not infrequently, if the dance be on a large scale, as far as transient modulations; and the last and culminating section is a repetition of some notable feature of the first part. Short as the form is, it admits of a great amount of variety, and it is one of Haydn’s triumphs to have endowed his innumerable specimens with ever-changing freshness. The alternation of Minuet and Trio (which are in fact two minuets) is obviously in itself an element of Form, and derives some force from the contrast of the keys in which the two are written, as well as from the contrast of their styles. In Haydn’s early Quartets—in which he still closely followed the order of the Suites—the two are frequently in the same key, or in major and minor of the same key; but in his later works he takes advantage of contrasts of key and puts his Trio in the Subdominant, or even in the third below, as in the Quartet in G, op. 77. The system of alternating dances after this manner, probably with a view to formal completeness, is evidently of old standing, being found even in Lully’s works, and later, as well as more generally remembered by musicians, in Juck’s Iphigenie in Aulis, and in Handel’s Overture to Samson. It is chiefly in this respect that we can still trace the relation of the Minuet and Trio to the modern Scherzo, which is its legitimate successor, though in other respects it has not only changed its characteristics and time, but even its style and form.

The Scherzo is in fact the most free and independent of all the movements of a modern instrumental work, being characterised rather by its portative and playful style than by any fixed and systematic distribution of subjects and keys. Occasionally it falls into the same order of distribution as a first movement, but there is no necessity whatever that it should do so, and its whole character,—happiest when based upon the incessant repetition in varying lights and circumstances of a strongly rhythmic figure,—is deadlorn abandon rather than the premeditated reign of the serious First movement. Beethoven was the real creator of the modern Scherzo, for all that a few examples exist prior to him; for these are essentially in unsophisticated dance form and belong to the old order of things. In Beethoven’s infinitely various Scherzi are all marked by a certain intimate quality of style, which has been the real starting-point of his successors, rather than any definite formal basis. Mendelssohn created quite a new order of Scherzi of a light, happy, fairytale character, in which his right genial nature spontaneously expressed itself. But to him the like remark applies, for he are essentially characterised rather by spirit than form. Schumann was fond of putting two Trios in his Scherzi; as in two of his Symphonic, and in the very popular pianoforte Quintet in Eb. This was prefigured in Beethoven by the repetition of the Trio in the Symphonies in A and Bb.

The form of the Slow movement in Sonatas and Symphonies is decidedly variable. It is most commonly based on the same system as a first movement, but owing to the length of time necessary to go through the whole series of sections in the slow tempo, it is common to abbreviate it in some way, as by omitting the portion usually devoted to ‘development’ and modulation, and passing by a short link only from the presentation of the subjects to their recapitulation—as in the slow movement of Beethoven’s Sonatas in D, op. 106, and that of Mozart’s Quartet in Bb, No. 3. There are a few instances of Slow movement in Rondo form—as in Mozart’s Sonatas in C minor, C major (1778), and D (1777); Beethoven’s Sonata pathetique, and that in G (op. 31, No. 1)—and several in the form of a set of Variations. Another happy form of this movement is a species of aria or melody, cast in the old Rondo form, like the example of Lully quoted at the commencement of this article. Of this the beautiful Cavatina in Beethoven’s Bb Quartet (op. 130) is a very fine example, its form being simply a section consisting of the aria or melody continuously developed, followed by a section consisting of impassioned recitative, and concluding with a return to the original section somewhat abbreviated. This form resolves itself practically into the same formal basis as the Minuet and Trio or Scherzo, though so different in character; for it depends almost entirely on the repetition of a long complete section with a contrasting section in the middle. And the same simple basis will be found to predominate very largely in Music,1 even in such widely different classes as modern Nocturnes, like those of Field and Chopin, and Arias of the time of Handel, of which his ‘Waft her, Angels’ is a very clear example.

The idea of Variations was very early arrived at by musicians; for Dr. Burney points out that in the age of Queen Elizabeth there was a perfect rage for this kind of music, which consisted in multiplying notes, and disguising the melody of an easy, and, generally, well-known air, by every means that a spaccato note, or note-splitter, saw possible.2 This primitive kind of variation was still a form of some sort, and is based upon the same principle as that of ground basses, such as are found in Purcell’s ‘Dido and Æneas,’ and were very popular in those days; and of such forms again as Bach’s Passacaglia, or Chopin’s Berceuse in D, or even the wonderful continuous recitative on a constant repetition of a short rhythmic figure in the bass, in Bach’s Italian Concerto. In all these cases the principle is that of constant and continuous repetition as a basis for superimposed variety. Into Variations as Variations the question of Form does not enter,
or at least only in such a special way that its consideration must be left to that particular head. But as a form in itself it has been employed largely and to a degree of great importance by all the greatest masters in the department of Instrumental Music; as by Handel, Bach, Beethoven, Schubert, Mendelssohn, Schumann, and Brahms. In most cases sets of Variations are not continuous, but each Variation is detached from its fellow, making a series of little movements like the Theme, each in the same key. But this is not invariable; for on the one hand, Beethoven produced a very remarkable set of Variations on a Theme in F (op. 34), in which the key changes for each variation; and on the other hand there are many examples of Variations which are continuous, that is, run into one another consecutively, without pause, as in the last movement of Beethoven's Sonata in C minor, op. 111, and (on a smaller scale) the slow movement of Haydn's Quartet in B minor, op. 64. It is very common for sets of Variations to have a grand Coda—frequently an independent movement, such as a Fugue or free Fantasia based upon some conspicuous figure of the Theme; as in Beethoven's Prometheus Variations, op. 35, and Schumann's Etudes Symphoniques. There can be no possible reason for tiring down composers by any rigid dogmas as to key or order of succession in the construction of a work in the form of Variations. Change of key is eminently desirable, for the succession of a number of short clauses of any sort with a cadence to each, runs sufficient risk of monotony without the additional incubus of unvarying tonality. Moreover it is impossible to resist the conclusion, based on the development of the great variations in the finale of Beethoven's Sonata in C, op. 111, those in the Sonata in G (op. 14), and those on an original theme in F (op. 34), that the occasional introduction of an episode or continuation between two variations is perfectly legitimate, provided it be clearly connected with the series by its figures. For if the basis of form which underlies the Variations as a complete whole be kept in mind, it will be obvious that the system of incessant repetition, when thoroughly established, would rather gain than lose by a slight deviation, more especially if that which follows the deviation is a clearer and more obvious version of the theme than has appeared in the variations immediately preceding it.

It will be best to refer the consideration of the general construction of Symphonies, Overtures, Concertos, Sonatas, etc., to their respective heads, merely pointing out here such things as really belong to the general question.

The practice of prefacing the whole by an Introduction probably originated in a few preliminary chords to call the attention of the audience, as is typified in the single forte chord which opens Haydn's Quartet in E\textsuperscript{b} (No. 33 in Trautwein). Many examples of more extensive and purely musical introductions are to be found in Haydn's and Mozart's works, and these not infrequently contain a tune or figure of some importance; but they seldom have any closer connection with the movement that follows than that of being introductory, and whenever there is any modulation it is confined within very small limits, generally to a simple alternation of Tonic and Dominant. Beethoven has occasionally made very important use of the introduction, employing free modulation in some instances, and producing very beautiful tunes in it, as in the Symphony in A. The most important feature in his use of it is his practice of incorporating it with the succeeding movement; either by the use of a conspicuous figure taken from it as a motto or central idea, as in the Sonatas in E\textsuperscript{b}, op. 81a; or by interrupting the course of the succeeding movement to reintroduce fragments of it, as in the Quartet in Bb, op. 130; or by making it altogether part of the movement, as in the 9th Symphony, where it has an immediate and very remarkable connection with the first subject.

The order of succession, and the relation of the keys of the different movements of which each complete work is composed, passed through various stages of change similar to those which characterised the development of the form of the several movements, and arrived at a certain consistency of principle in Mozart's time; but contrast of style and time is and has been, since the early Suites, the guiding principle in their distribution. In the Suites and early examples of instrumental music, such as some of Haydn's early Quartets, all the movements were in the same key. Later it became customary to cast at least one movement in another key, the key of the Subdominant predominating. No rigid rule can be given, except that the key of the Dominant of the principal key seems undesirable, except in works in which that key is minor; and the use of very extraneous keys should be avoided. In Sonatas prior to Beethoven the interest generally seems to centre in the earlier movements, passing to the lighter refection at the conclusion. Beethoven changed this, in view of making the whole of uniform interest and equal and coherent importance. Prior to him the movements were merely a succession of detached pieces, hitched together chiefly with consideration of their mutual contrasts under the name of Sonata or Symphony—such as is typified even in Weber's A\textsuperscript{b} Sonata, of which the two last movements were written full two years before the two first, and in the similar history of some of Mozart's works. With Beethoven what was a whole in name must be also a whole in fact. The movements might be chapters, and distinct from one another, but still consecutive chapters, and in the same story. Helmholtz points out the scientific aspect of a connection of this kind in the Sonata in E, op. 90, of which he says, 'The first movement is an example of the peculiar depression caused by repeated "Doric" cadences, whence the second (major) movement acquires a still softer expression.' In some cases Beethoven connected the movements by such subtle devices as making disguised versions of
an identical figure reappear in the different movements, as in the Sonatas in Bb, op. 106, and in A, op. 109, and the Quartet in Bb. Such a device as this was not altogether unknown to Mozart, who connects the Minuet and Trio of the Quintet in G minor, by making a little figure which appears at the final cadence of the Minuet serve as the basis of the Trio—the Minuet ending

and the Trio beginning

In a little Symphony of Haydn's in B major part of the Minuet reappears in the Finale; and the same thing is done by Beethoven in the C minor Symphony. In his Sonata called 'Les Adieux,' 'L'Absence, et le Retour' (which is an instance of programme music), the last two movements, slow and fast, pass into one another; as is also the case in the Sonata Appassionata. In his Quartet in C# minor all the movements are continuous. The same device is adopted by Mendelssohn in his Scotch Symphony and Concertos, by Schumann in the D minor Symphony—the title of which expressly states the fact—and by Liszt in Concertos. Schumann also in his Symphonies in C and D minor connects his movements by the recurrence of figures or phrases. [C.H.F.]

FORMES, KARL, bass singer, son of the sexton at Mühlheim on the Rhine, born Aug. 7, 1810. What musical instruction he had he seems to have obtained in the church choir; but he first attracted attention at the concerts for the benefit of the cathedral fund at Cologne in 1841. It was obvious that he was unused to the stage, and that he was unable even to manage his début at Cologne as Sarastro in the Zauberflöte, Jan. 6, 42, with the utmost success, ending in an engagement for three years. His next appearance was at Vienna. In 1849 he came to London, and sang first at Drury Lane in a German company as Sarastro on May 30. He made his appearance on the Italian stage at Covent Garden, March 16, 1850, as Caspar in 'Il Franco Arciero' (Der Freischütz). At the Philharmonic he sang first on the following Monday, March 18. From that time for some years he was a regular visitor to London, and filled the parts of Bertram, Marcel, Rocco, Leporello, Beltramo, etc. In 1857 he went to America, since which he has led a wandering life here and there.

For volume, compass, and quality, his voice was one of the most magnificent ever heard. He had a handsome presence and excellent disposition for the stage and with self-restraint and industry might have taken an almost unique position.

His brother THEODORE, 16 years his junior, born June 24, 1826, the possessor of a splendid tenor voice and great intelligence, made his début at Osten in 1846, and from 57 to 64 was one of the most noted opera singers of Germany. He too has been in America, and is now singing second-rate parts at small German theatres. [G.]

FORNASARI, LUCIANO, a bass singer, who made his appearance about 1848 on second and third-rate stages in Italy. In 1851 he was singing at Milan; the next three years he passed at New York. He sang at the Havana in 1835, and in 1836 in Mexico. Returning to Europe he obtained an engagement at Lisbon in 1840, and remained there two years. After this he made a tour in his native country, singing with success at Rome, Modena, Palermo, Turin, and Trieste. In 1843 (Fétis is wrong in fixing it in 1845) Forfasari appeared in London. Fétis says he had a good voice and sang with method. Mr. Chorley writes, 'The new baritone—as substitute for Tamburini—was a tall dashing man: he possessed a very handsome face, a sufficient voice, though its quality was not pleasant—and pretension enough and to spare. He sang with bad method and confidence.' He continued to sing in London until 1846, after which he did not again appear. [J.M.]

FORSTER & ANDREWS have been established at Hull as organ-builders since 1843. Amongst many instruments from their factory may be quoted the organs in the Kincairn Hall, Dundee; St. Mary's, Leicester; Holy Trinity, Hull; and the 'City Temple' Congregational Chapel, London. [V.d.F.]

FORSTER, WILLIAM, eminent instrument maker, born May 14, 1739, at Brampton, Cumberland, was son of William, and grandson of John Forster, makers of spinning wheels and violins. He was taught both trades by his father, and also learned to play on the violin. He came to London in 1759 and took up his residence in Pockrill Street, Holborn, and for a time endured much privation from inability to obtain suitable employment. Ultimately he was engaged by a music seller on Tower Hill named Beck, and the violins made by him being much approved and quickly sold, he started in business on his own account in Duke's Court, St. Martin's Lane, whence he shortly removed into St. Martin's Lane, and speedily attained great reputation. Forster afterwards added to his business that of a music seller and publisher, and in that capacity in 1781 entered into an agreement with Haydn for the purchase and publication in England of that master's compositions, and between that date and 1787 published 83 symphonies, 24 quartets, 24 solos, duets and trios, and the 'Passions,' or 'Seven Last Words.' About 1785 he removed into the Strand (No. 349), where the business was carried on until the pulling down of Forster's Change. In 1784 he issued a copper medal or token, halfpenny size, bearing—Obverse, 'Wm. Forster, Violin, Tenor and Violoncello Maker, No. 348, Strand, London.' Prince of Wales's feathers in the field. Reverse, The melody of 'God save the King' in musical notation in the key of G. A crown in the field, above it 'God save the king,' beneath it '1795.'
William Forster died at the house of his son, 22, York St., Westminster, Dec. 14, 1808. [W.H.H.]

Forster, William, (No. 2), son of the above-mentioned, and generally known as 'Royal' Forster, from his title 'Music Seller to the Prince of Wales and the Duke of Cumberland.' Born 1754, died 1824. Like his father, he made large numbers of instruments, which once enjoyed a high reputation. By making the bellies of their instruments thin, and increasing the weight of the blocks and linings, the Forsters obtained, while the instrument was still new, a strong and penetrating tone, which found high favour with Lindley and his school. Being well made and finished, and covered with excellent varnish, their instruments have much that commands them to the eye. The Forsters copied both Stainer and Amati. 'Royal' Forster had two sons: William Forster (No. 3), the eldest, devoted himself to other pursuits, and made but few instruments; but the second, Simon Andrew Forster, carried on the business, first in Frith Street, afterwards in Macclesfield Street, Soho. Simon Andrew Forster made instruments of high model and no great merit. He is best known as the author (jointly with W. Sandys, F.S.A.) of 'The History of the Violin and other Instruments played with the Bow,' 1864. He died Feb. 3, 1870. [E.J.P.]

Forté, loud: an Italian word, usually abbreviated into $f$. A lesser degree of loudness is expressed by $mf$—mezzo forte; a greater one by $p$ (soft) and $f$, and the greatest of all by $ff$—fortissimo, as in Beethoven's 7th Symphony (Finale), 5th dito (1st movement), Overture, op. 115 (at end), Leonore, No. 1, which sounds, pp. 46, 75, &c., at the grand climax near the close of the Finale of Schubert's Symphony in C, at the end of the extraordinary long crescendo. $fff$ has been occasionally used by later composers, as in the Overture to 'Charlotte Corday,' by Benoit.

Fortepiano—afterwards changed to Piano-forte—was the natural Italian name for the new instrument which could give both loud and soft sounds, instead of loud only, as was the case with the harpsichord.

$fp.$ is a characteristic sign in Beethoven, and one which he often uses; it denotes a sudden forte and an equally sudden piano. It will require it in the space of a single crotchet or even quaver, as in the Overture to Leonore, No. 2 (8vo score, pp. 3t, 43, 51—$fp.$) Again, he was very fond of a forte passage succeeded suddenly, without any diminuendo, by a $p$, as in bars 64 to 66 of the Allegro of the same work, where the sudden $p$ on the $f$ is miraculous; or in the reprise of the subject after the trumpet fanfares, where if the $p$ is not observed the flute solo is overwhelmed. In a fine performance of his works half the battle lies in the exact observance of these nuances. No one marked them before him, and no one has excelled them since. [G.J.]

FORTI, Anton, distinguished baritone singer, born at Vienna June 8, 1790. He made his début at Presburg with so much success that towards the end of 1807 Prince Esterhazy engaged him almost at the same time as the tenor Wild for his celebrated band. Forti soon forfeited the favour of the Prince, who suddenly enrolled him as a soldier, and only released him at the intercession of several of the nobility. He next appeared (June 29, 1811) at the Theatre à der Wien as Don Juan, a part for which his very sonorous voice, commanding presence, and elevated refined style of acting eminently fitted him. In April 1813 he was engaged at the court theatre, and speedily became a favourite. Besides Don Juan he specially excelled in Figaro (Mozart and Rossini), Telaseco (Ferdinand Corne, etc.), and in French dialogue-operas. He was Pizarro at the revival of 'Fidelio' in 1814; and Lynxart at the first performance of 'Euryanthe' (1823). When Count Gallenberg undertook the direction of the court theatre in 1829 Forti was pensioned, and made starring tours to Prague, Hamburg, and Berlin, where he also took a short engagement. On his return to Vienna his voice had lost its charm, and his increasing corpulence spoiled his acting. He retired finally from the stage after winning the first prize at one of the public lotteries, and died July 16, 1859. [C.P.]

FOUNDLING HOSPITAL. The connection of Handel with this charitable institution (founded by Captain Coram in 1739) forms a pleasant episode in the composer's life in England, and gives a signal illustration of his benevolence. Following the example of the master of the sister art of Painting, who organised an exhibition on its behalf, and of Hogarth and others who presented paintings for its decoration, Handel on May 4, 1749, attended a committee at the Hospital, and offered a performance of vocal and instrumental music in aid of the fund for finishing the chapel. The Gentleman's Magazine records that 'Saturday 27th [May] the Prince and Princess of Wales, with a great number of persons of quality and distinction, were at the chapel of the Foundling Hospital to hear several pieces of vocal and instrumental music, composed by George Frederick Handel, Esq., for the benefit of the foundation: 1st, the music of the late Fire Works and the anthem on the Peace; 2nd, select pieces from the oratorio of Solomon relating to the dedication of the Temple; and 3rd, several pieces composed to the occasion, the words taken from Scripture, applicable to the charity and its benefactors. There was no collection, but the tickets were at half-a-guineas, and the audience above a thousand.' For this act Handel was at once enrolled as one of the governors and guardians of the Hospital, and during every subsequent year, while his health permitted, he directed the performance of the Messiah in the chapel, which yielded to the charity a net result of £7,000 in all. The governors, under a misapprehension, imagined that he intended to present
them with the copyright of the oratorio, and prepared a petition to parliament praying that a bill might be passed to secure to them the right in perpetuity; but Handel indignantly repudiated any such intention, and the petition never reached the House. On the completion of the chapel Handel presented it with an organ, which he opened on May 1, 1750, when the attendance was so large that he was compelled to repeat the performance. The composer by his will bequeathed 'a fair copy of the score and all the parts of the Messiah' to the Hospital, and on his death a dirge and funeral were performed in the chapel on May 26, 1759, under the direction of his amanuensis, John Christopher Smith, who, with his full concurrence, had been appointed the first organist. In July 1774 Dr. Burney proposed to the governors a scheme for forming a Public Music School at the Hospital for the training of the children; but strong opposition was raised to it, and it was never proceeded with. The chapel services are still noteworthy for their music, in which the professional choir is assisted by the children, under the direction of Mr. Willing, the organist. (1878.) [C.M.]

FOURNEAUX, NAPOLEON, born May 21, 1808, at Léard (Ardenne), originally a watchmaker, improved the Accordion. In 1830 he settled in Paris; and in 36 bought Chameroy's organ factory, and introduced great improvements in the manufacture of all reed instruments blown by wind. At the exhibition of 1844 he received a silver medal for his 'orgues expressives.' He originated the idea of the percussion action in harmoniums. He died at Aubanton (Alme), July 19, 1846. [M.C.C.]

FOURNIER, PIERRE SIMON, engraver and type-founder, born in Paris Sept. 15, 1712, died there Oct. 8, 1758. He greatly improved the engraving of music in France, which up to his day was still effected by punches on the model of those cut by Hautin in 1525. He replaced the lozenge-shaped round by one, and made music altogether easier to read, although his notes were still thin and poor compared to those of his forerunners. He published an Essay on a new instrument of a kind for the performance of music, etc. (Paris 1756), and a 'Traité historique et critique sur l'origine et les progress des caractères de fonte pour l'impression de la musique, etc.' (Paris 1765), which, though incomplete and occasionally incorrect, contains interesting information on music printing in France. Giacomo Falcioni of Venice seems to have attained a similar result almost simultaneously with Fournier. Falcioni published at Venice in 1765 'Manifesto d'uno nuovo impresa di stampare la musica, etc.'; and Paolocchi's 'Arte pratica di contrapunto' (1765) was printed in the new characters. [M.C.C.]

FOURTH is an interval comprising two whole tones and a semitone. It is called a fourth because four notes are passed through in going from one extreme of the interval to the other, for which reason the Greeks called it θέραβός—Diatesarmon. The ratio of the vibrational numbers of its limiting sounds is 3:4. It is in fact a perfect consonance, though regarded as a discord in the old Diatonic style. [C.H.H.P.]

FRA DIAVOLO, OU L'HOTELLERIE DE TERRACINE. Opéra comique in 3 acts; words by Scribe, music by Auber. Produced at the Opéra comique Jan. 28, 1830; in London—in English, adapted by Rophino Lacy—at Drury Lane, Nov. 3, 1831; in Italian, at the Lyceum by the Royal Italian Opera July 4-11, 1857.

FRANZL, FERDINAND, eminent violinist and composer, born in 1770 at Schwetzingen in the Palatinate. He was a pupil of his father, Ignaz Franzl, and performed, when only seven years of age, a concerto at a court-concert in Mannheim, where he entered the band of the Elector in 1783. From 1785 he began to travel with his father. During a prolonged stay at Strasbourg he studied composition under Richter and Pleyel, and later under Padre Mattei at Bologna. He appears to have been less successful at Paris than at Rome, Naples, and Palermo. Returned to Mannheim in 1792, he took C. Cannabich's place as leader of the band, but in 1802 again started for a tour to Russia. At this period Franzl was generally acknowledged to be one of the best of living violin-players, and his compositions enjoyed great popularity. Spohr heard him in 1803 at St. Petersburgh, and gives an interesting account of him:—'Franzl was at that time the foremost of violin-players in St. Petersburgh. He still follows the old method of holding the violin on the right side of the tail-piece, and is therefore obliged to play with his head bent down. [VIOLIN.] He also lifts the right arm very high, and has a bad habit of raising his eyebrows whenever he plays something expressive. His execution is neat and clear. In the slow movements he performs a great many runs, shakes, and cadenzas, with rare precision and distinctness; but as soon as he plays forte his tone is rough and unpleasant, owing to his drawing the bow too slowly and too close to the bridge, and pressing it too much on the string. Quick passages he executes with good intonation and very clearly, but invariably in the middle of the bow, and consequently without light and shade.' On a later occasion Spohr comments less favourably on him, and describes both his style and his compositions as old-fashioned; but this only shows that Franzl had not kept pace with the progress made by violin-playing towards the end of the last and beginning of the present century, and could not stand comparison with the great masters of the Paris school, still less with Spohr himself.

In 1806 Franzl returned to Munich, and was appointed conductor of the opera. He did not however give up travelling, and played at various times in Paris, Amsterdam, Vienna, and Leipzig. In 1823 he made a second journey to Italy. He then retired to Geneva, but finally settled at Mannheim, and died there in 1833. Franzl was a fertile composer. He published 8 concerto and 4 concertos for the violin, x concerto-
tante and 3 duos for 2 violins, 9 quartets for strings, 3 trios for 2 violins and bass, several overtures, a symphony, and a number of songs. He also wrote operas, which were performed with much success at Munich and elsewhere. All these works are written in an easy and correct style but, being without higher artistic value, are now entirely forgotten. [P. D.]

FRAMERY, NICOLAS ÉTIENNE, author and musician, born March 25, 1745; when quite young was appointed ‘Surrinctand de la musique’ to the Comte d’Artois. He wrote both words and music of ‘La Sorcière par hasard’ (1783), a comic opera, and of ‘Médée,’ a prize libretto, which was to have been set by Sacchini, had no his death intervened. It was never performed. Framery was a skilful adapter of French words to Italian operas. As an author he published—a criticism on Gluck in the ‘Mercure’ for Sept. 1776; ‘Le Musicien pratique’ (Paris 1786), a poor translation of Azopardi’s ‘Il Musico pratico,’ rearranged by Choron in 1824; articles on Haydn, Della-Maria, etc.; besides editing from 1771 to 78 the ‘Journal de Musique,’ founded by Mathon-de-la-Cour in 1764; the ‘Compendium of Mathon-de-la-Cour’s Almanach musical’ (1775); and taking part with Gingué and Feytou in the musical dictionary of ‘l’Encyclopédie méthodique,’ afterwards completed by Momigny; and in the ‘Dictionnaire des beaux-arts’ of the Académie. He was a Correspondant of the Institute. After copyrights had been recognised by law Framery established an agency for enforcing the rights of authors throughout France. He died in Paris Nov. 26, 1810, leaving MS. notices of Gavinie and various other musicians. [M.C.C.]

FRANCESINA, LA, ELIZABETH DUPARC, DETTA, a French singer, who sang for some years in Italy, where she acquired her sobriquet. In the autumn of 1736 she came to London, and ‘had the honour to sing (with Merighi and Chimenti) before her majesty, the duke, the princesses, at Kensington, and met with a most gracious reception; after which she the Francesina performed several dances to the entire satisfaction of the court.’ (London Daily Post, Nov. 18.) The accomplishment of dancing, however, she does not seem to have kept up. Her name as a public singer is not found until Jan. 7, 1738, when she played Clotilda in Handel’s ‘Faramondo’ on its first representation, the first part ever written for her by the great German. She seems to have had an easy, warbling, style of execution, which Burney calls ‘lark-like,’ and pleased both composer and public. La Francesina appeared again in Pescetti’s ‘Conquista del Vello d’Oro’ and in Handel’s ‘Sarse’ that same year; and in 1739 she took part in ‘Acis,’ ‘Saul,’ ‘Israel,’ and ‘Dryden’s Ode.’ In 1740 she reappeared in ‘L’Allegro’ and in ‘Imeneo’ by the same composer; the latter ‘advertised for Nov. 29, but deferred for near a fortnight, on account of the indisposition of Francesina.’ (Burney.) On January 10, 1741, she sang in Handel’s last opera ‘Deidamia,’ in which, according to Burney, ‘Nascondi l’ingenu, which finishes the first act is a light, airy, pleasing movement, suited to the active throat of the Francesina.’ In 1744 and 45 she took part in Handel’s ‘Joseph,’ ‘Bolhazzar,’ and ‘Hercules;’ she had quit the stage, ‘but constantly attached herself to Handel, and was first woman in his operas for many years.’ (Burney.) She enjoys the double honour of having sung the four Italian songs which Handel was compelled to ‘intermix’ in ‘Israel in Egypt’ in 1739, to carry it over a third performance. In 1737 her portrait was engraved by J. Faber in mezzotint from a painting by George Knaptin. It is a half-length, and represents a pleasant, intelligent woman; she holds a book, on a page of which are the words, ‘Us sei amabile speranza,’ the beginning, probably, of one of her favourite songs. [J.M.]

FRANCHOMME, AUGUST, born at Lille April 10, 1808, learned the rudiments of the Cello from a player named Mas, entered the Paris Conservatoire in March 1825, at once attracted the notice of Levasseur and Norblin the Professor, and in his first year took the first prize for his Instigation of the Cello. He then joined the orchestra of the Ambigu-comique, in 1828, that of the Opera-comique in 1828 fixed himself at the Theatre des Italiens. In conjunction with Alard and Ch. Halle he formed an annual series of classical quartets, which held the highest rank. Franchomme was in Paris at the time of Mendelssohn’s visit, in the winter of 31, and is mentioned by Hiller (Mendelssohn, 19) as one of the artists who most warmly appreciated him. They were just of an age, and knowing Mendelssohn’s predilection for the cello it is not difficult to believe that they often ‘made music’ together. He was very intimate with Chopin, and was one of those who witnessed his last sufferings and received his latest words. Franchomme has travelled very little, and a visit to England in 1856, when he played at the Musical Union, appears to be almost his only journey. He has been Professor of the Conservatoire since Jan. 1, 1846. Franchomme’s playing is remarkable for a command over technical difficulties of all kinds, very pure intonation, and a beautiful and expressive singing tone. He is the possessor of the cello of Dupont, said to be the finest Stradivarius in existence, for which he gave £1000. His compositions consist chiefly of pot-pourris and variations, with one concerto. He has also published with Chopin a Duo on airs from ‘Robert le Diable,’ another with Bertini, and a third with our own Osborne. His Adagios are much esteemed. [G.]

FRANCISCHELLO, a great violinist of the early part of last century, but of whom neither the date nor place of birth or death are known, and who in fact would have left no trace of his existence but for the fact that he was heard by Quantz, Benda, and Gemmiani. He seems to have first appeared in Rome shortly after the death of Corelli (1712). He was at Naples in 1725; Quantz heard him there, and Gemmiani, there or in Rome, was witness to the rapture
FRANCISCOLO.

with which the great Alessandro Scarlatti accompanied him on the harpsichord. In 1730 he was at Vienna, where F. Benda, then a young man, was so struck by his style as to say that it influenced him for ever after. He is heard of afterwards at Genoa, where he may have died about 1750, but nothing is known.

FRANCOEUR, FRANÇOIS, violinist and composer, born in Paris in 1698. He entered the band of the Opera in 1710, was for many years a member of the king's private band, and for some time, conjointly with Rebel, manager of the Opera. He died at Paris in 1757. He published two sets of sonatas, which, according to Wasięłewski, show considerable progress in form and in treatment of the instrument, when compared with similar works by Rebel and other French composers of the period. It is worth mentioning as a peculiarity of his, that he occasionally employs the thumb of the left hand on the fingerboard for taking the bass note of a chord—a proceeding hardly in accordance with legitimate treatment. He also composed a number of operas conjointly with Rebel, which however do not rise above the level of the period.

His son, Louis Joseph, an eminent violinist and clever conductor, was born at Paris in 1738, and died in 1804. He was first leader and afterwards conductor and manager of the Opera and of the royal band, and composed a number of operas. He also published a treatise on instrumentation, which Fétis considers a meritorious work.

FRANK, MELCHIOR, prolific composer of church music and Lieder, born, according to Wetzel's 'Lieter-Historic,' at Zittau on the borders of Saxony and Silesia, lived at Nuremberg in 1600, and was Capellmeister to the Duke of Coburg at the time of his death, June 1, 1639. Gerber gives in his 'Lexicon' a list of 44 works by him, now become very scarce. He did much to improve the instrumental accompaniment of songs, a point to which little attention was paid before his day. Döring ('Choralkunde,' p. 84) gives a list of 13 of his Chorales which survived him, among which 'Jerusalem du hochgebaute Stadt' and 'Wenn ich in Todesmüthen bin' are still sung. He is also said to have written the words of several hymns, 'O Jesu wie ist deine Gestalt,' 'Der Bräutigam wird bald rufen,' etc.

FRANKLIN, BENJAMIN, born 1706 at Boston, U.S., died at Philadelphia 1790, claims mention here for his connection with the Harmonica, or musical glasses, which he invented or so far improved as to make the instrument practically available. The invention is described in a letter to Beccaria dated London, July 13, 1763, and printed in Sparks's edition of his works (vi. 245). That Franklin had considerable musical faculty is evident from his letters on Scotch music and on the subjects of modern music (vi. 265, 266). He was also full of his happy mother-wit.

FRANZ, KARL, player on the French horn (Waldhorn) and the Baryton; born in 1738 at Langenbielau in Silesia. His first post was under the Archbishop of Olmütz in 1758; his next under Prince Nicholas Esterhazy at Eisenstadt, where he remained from 1763 to the end of 76. His adoption of so difficult an instrument as the baryton probably arose from the fact that the Prince himself played it, and that Haydn composed much for it for his use. At any rate Franz played it very finely, and on leaving the Eisenstadt band made several tours, in which his performance on it excited the greatest enthusiasm. Like Abel with the guitar, Franz was accustomed to call the baryton the king of instruments. In 1787 we find him established in Munich as 'Kammermusik,' and he died there in 1802. That he was greatly esteemed by Haydn is proved by a cantata for voice and baryton, composed by that master for him, and which he performed on his tours, singing and accompanying himself. The cantata was written 'à propos to the death of Frederick the Great, and begins 'Es ist nicht mehr! Tön traurend, Baryton!' [C.F.P.]

FRANZ, ROBERT, born June 28, 1815, at Halle, Handel's birthplace, is the most important living representative of the German Lied. His reputation has been of tardy growth, and has apparently not yet reached its height. It can however be asserted, without fear of dissent from any competent judge, that his best songs will stand their ground by the side of those of Schubert and Schumann, to which they are closely related. Over and above their uniform and elaborate perfection of workmanship, in which it is difficult to equal and impossible to surpass them, they have a peculiar physiognomy and subtle charm of their own that is sure to endear them to singers and players able to deal with them at all. It is true that they have hitherto been 'ochiavole to the general,' and are likely to remain so for some time, and that 'the general,' as Franz has found to his cost, includes the majority of professional vocalists and pianists.

Nearer akin to the warm but contemplative enthusiasm of Schumann than to the passionate spontaneity of Schubert, Franz's songs are anything but cold, nor do they in any case smell of the lamp; they are restictive rather than outspoken, timid rather than bold, pathetic without conscious pathos, eloquent without studied rhetoric; always true, giving more than they seem to give, saying more than they seem to say; frequently half yet far from trivial, here and there profound, rarely ecstatic or voluptuous, not once perverse or dry or commonplace. All forms and phases of lyrical speech, as far as the German language, peculiarly rich in songs, has been able to furnish the groundwork—from Luther's sturdy hymns to the love-ditties of Heine, from the primitive weal and woe of huntsman and soldier, the simple sounds of forest and field, to the classic finish and spring-like grace of Goethe and the nocturnal melancholy of Lenau—Robert Franz has set and sung. Without touching the highest heavens or deepest depths, he has illustrated with his music the entire world of German lyrical poetry.
If Schubert at his best grasps a poem with the intense grip of a dramatist, and sings as though he struck up from the centre of some dramatic situation; if Schumann declaims his verse like a perfect reader, or illuminates it as an imaginative draughtsman might grace the margin of some precious book, or dreams over it as a tender and poetic musician is prone to dream over some inexpressible sentiment,—Franz pursues a path of his own; he translates the poem into music, that is to say, he depicts in musical outlines the exact emotional state from which it appears to have sprung; and contrives to reproduce closely, with photogenic truth, the very essence of the poem, following strictly in the wake of the poet’s form and diction. Franz never repeats a word or a line, never garbles the sense of a sentence, never muddles a phrase or mars any rhetorical emphasis. Without Schubert’s dramatic passion, or Schumann’s concentrated heat or ecstatic sentiment, with far less specifically musical invention—melodic, harmonic, or rhythmical—than Schubert, or even than Schumann, Franz impresses one nevertheless as a rare master—a marked individuality, complete and perfect in its way.

The son of a respectable citizen of Halle, Robert Franz, had fair opportunities of getting a good schooling, and might have gone through the regular university curriculum if it had not been for his strong musical predilections. He had to gratify his taste for music on the sly, and it was only after years of delay and much against the grain that his parents could be brought to see that he was destined to be a musician. As a lad he had contrived to play the pianoforte and organ enough to be able to act as accompanist in the choral works of Handel, Haydn and Mozart. In 1835 he obtained the consent of his parents to make a trial of his musical gifts as pupil of Schneider at Dessau. There he continued for two years, playing, studying harmony and counterpoint, and making ambitious attempts at composition, all of which he afterwards destroyed.

On his return to Halle as the black sheep of the family, with whom his mother alone had any sympathy, Franz vegetated in a dreary manner for some six years, unable to get any sort of musical employment, yet obstinately unfit for anything else. But he made good use of his time, studying Bach, Beethoven and Schubert. In 1843 he published his first set of twelve songs, which at once attracted the attention of Schumann (Neue Zeitschrift, July 31), whose frankly expressed admiration was soon shared by Mendelssohn, Gade, Liszt, and other eminent masters. At length the authorities at Halle thought fit to appoint Franz organist at the Ulrichskirche, and conductor of the ‘Sing-académie’; and in due course of time he obtained the titles of ‘Königlicher Musikdirector’ and doctor of music, which latter title was offered by the University of Halle, on his lecturing to its students on musical subjects. Unfortunately as early as 1841 his sense of hearing began to decline, his troubles were aggravated by serious nervous disorders in 1853, and became so grave that in 1868 he had to relinquish his employments, and give up writing altogether. The distressing pecuniary difficulties which arose in consequence were, however, effectually overcome by the generous exertions of Liszt, Joachim, Frau Halene Magnus, and others, who in 1872 got up concerts for Franz’s benefit, and realised a sum of £5000.

In his latter years Franz has devoted much time to editing and arranging the works of Bach and Handel, by furnishing proper polyphonic accompaniments in cases where the composer’s intentions are only indicated by a figured bass, rewriting the part sketched for the organ for a group of wind instruments, so as to facilitate performance in concert rooms, supplying proper substitutes for parts written for obsolete instruments, etc. Detailed critical essays upon and about Robert Franz’s songs and arrangements, have been published by Saran, Schäffer, Ambroe, Hueffer and Liszt, of which the first and last are the most important.

Franz’s later contributions to the literature of music are:—‘Mittheilungen über J. S. Bach’s Magnificat’ (Halle 1863); and ‘Offener Brief an Eduard Hanlick über Bearbeitungen älterer Tonwerke, namentlich Bach’scher und Handel’scher Vocalmusik’ (Leipzig 1871). His compositions and arrangements consist of 257 songs for a single voice with pianoforte accompaniments, in 45 sets; 4 Kyrie, 8 capellas, for four-part chorus and solo voices; the 117th Psalm, a capella, for double choir in 8 parts, and a liturgy for the evangelical service; 6 chorales; four-part songs for mixed voices, and 6 ditto for male chorus. His arrangements are as follows:—

Of Sebastian Bach—the Passion according to St. Matthew; Magnificat in D; Trauerode; 10 cantatas; 6 duets and numerous arias. Of Handel—the Jubilate; L’Allegro il Penseroso ed il Moderato; 24 operatic arias and 22 duets; Astorga’s Stabat Mater; and Durante’s Magnificat. Of Mendelssohn—a Hebrew melody for piano and violin; 6 two and four-part songs arranged for one voice with piano; Mozart’s quintets in C minor and major, and Schubert’s quartet in D minor, transcribed for piano & 4 mains. (1878.) [E.D.]

FRASCHINI, GAVATTO, was born at Pavia in 1815. Originally intended for the study of medicine, he soon found himself possessed of a most powerful tenor voice, and devoted himself to its cultivation. Having received some instruction from a master named Moretti, he made his first attempt (1837) in the cathedral of his native city, and was immediately engaged to sing the second tenor role in ‘Belisario’ at Pavia, and Rodrigo in ‘Otello’ at the fair at Bergamo. In 1840 he sang at Milan; and from thence went to Naples, where he remained several years attached to the Opera. Félici heard him there in 1841, and admired his voice, and the bold style in which he attacked the most difficult notes; nine years later he heard him again at Bergamo, and found to his surprise not only that his
energy and purity of tone were undiminished, in spite of the violence of the music which he had been executing during that period, but that he had learned to sing better than before. Fraochini visited Bologna, Venice, Turin, Padua, Vicenza, London, and Vienna; and sang frequently at the latter place down to 1852 with constant success. In 1847 he made his début at Her Majesty's Theatre. 'Though originally gifted with greater vocal power' than another singer, says Mr. Chorley, 'Signor Fraochini was less fortunate... The new-comer, naturally anxious to recommend himself by the airs which had delighted his own people, seemed to become more and more violent in proportion as the "sensation" failed to be excited. But he "piled up the agony," *forte on forte*, in vain.' Continued to appear till a recent date, and now (1878) lives at Pavia, where the theatre is called after him, Teatro Fraochini. [J. M.]

FRASI, GIULIA, appeared in London in 1743 with Galli, and remained in public favour for many years. 'She was young and interesting in person, with a sweet, clear voice and a smooth and chaste style of singing, which, though cold and unimpassioned, pleased natural ears and escaped the censure of critics' (Burney). She took part that year in the revival of Handel's 'Alessandro,' and in the first performance of Galuppi's 'Enrico.' Her instructor was a musician named Brivio; but she doubtless owed much more of the formation of her taste and style to Handel and his singers, than to her first master. In 1746 she was still in an inferior position, but in 1748 played a more important part in the pasticcio 'Lucio Vero,' in operas by Hasse, and in the comic operas instituted by Croza. Frasi, however, now entered on a career which will do more to render her memory lasting than any small successes she ever achieved in opera. In 1749 she sang in Handel's Oratorios for the first time, taking part in 'Solomon' and 'Susanna'; she sang in 'Theodora' in 1750, in 'Jephtha' in 1752, in 'Joshua' at Oxford in 1756, and in the 'Triumph of Time and Truth' in 1757. She did not, meanwhile, sever her connection with the stage, but appeared in 1750 in Ciampi's 'Adriano in Siria' and Pergolesi's 'Serva Padrona.' In 1755 Frasi was called upon, in consequence of the indisposition of Mingotti, to perform her part in Jommelli's 'Andromaca,' as she had been twice in 'Ricciomero,' the preceding season. Smith's 'Fairies' in this year owed its success principally to Guadagni and Frasi, but his house Dr. Burney at that time 'attended her as her master.' In 1758 she appeared in 'Isaipile' by G. Cocchi. She sang also in the City at both the Swan and Castle concerts.

Dr. Burney relates that 'when Frasi told him [Handel], that she should study hard, and was going to learn Thorough-Bass, in order to accompany herself: Handel, who well knew how little this pleasing singer was addicted to application and diligence, said, 'Oh—vast may we not expect!' There is a portrait of Frasi, in mezzotint (folio), in which she is turned to the left, singing from a sheet of music held in both hands, on which is engraved a song beginning with the words 'Voi amante che vedete.' It has neither name nor date, and is very rare. [J. M.]

FRATESANTI, SIGNORA, the name of a singer who performed the part of Clito, formerly sung by Boechi or Montagnana, both basses, in Handel's 'Alessandro,' revived in 1743. Nothing else is known of her. [J. M.]

FREDDIE R THE GREAT (Friedrich II.), king of Prussia, a distinguished amateur, born at Berlin, Jan. 24, 1712, died at Sana-Souci near Potsdam, Aug. 17, 1786. He passionately admired German music while detesting that of Italy and especially of France, which was the more remarkable from his well-known love of French literature. He said on one occasion, 'la musique française ne vaut rien.' His first musical instructor when Crown Prince was Gottlob Hayne the cathedral organist, for whom he always retained a regard, and who presented him with a composition every year on his birthday. In 1718 he began to learn the flute from Quantz, who was a strict master, while Frederic was a docile pupil. [Quantz.] He was afterwards, however, compelled to study in secret, as his father, Frederic William I., considered music an effeminate pastime, and declined to allow him instructors or musicians of any kind. He was therefore driven to engage musical servants, and often played duets with his valet Frederdsdorf, until he was able in 1734 to have a private band at his own castle of Reinsberg. On his accession to the throne in 1740, he established a court-band at Berlin, and sent Graun to Italy to engage singers. [Graun.] He also had designs made for a new opera-house, which was opened Dec. 7, 1742. An amusing account of his difficulties with Barberina the ballet dancer will be found in Carlyle (Bk. xiv. chap. 8). His expenditure on music was lavish, though it has been exaggerated. Quantz's salary amounted to 3000 thalers, besides 25 ducats for each of his compositions for flute solo, and 100 ducats for every flute he made for the king. According to Reichardt, Frederic practised perseveringly, playing the flute four times a day. It is in one of these eager practisings that Gérome has represented him in an admirable picture. Quantz died in 1773 while composing his 300th concerto for the king, who completed the work. Frederic's execution of an Adagio is said by Fauch to have been masterly, but in quick movements he betrayed a want of practice, and in matter of time his playing was so impetuous and irregular, that to accompany him was an art in itself. In later years he again took up the clavier, not having sufficient breath, it is stated, for the flute. He invited Sebastian Bach to Potsdam, and the visit of, which Forkel gives an account, and the result of which was Bach's 'Musikalisches Opfer,' took place on April 7, 1747. He particularly admired Silbernmann's pianofortes, and bought all he could hear of, to the number, according to Forkel, of 15. One of these is perhaps still to be seen in the Schloss at
Potsdam. Frederic was also a composer. The Hohenfriedberg March was nominally by him, as well as a march inserted in Lessing’s play, ‘Minna von Barnhelm.’ He also composed a ‘Sinfonia’ for ‘Galatea ed Acide’ and one for ‘Il Re pastore;’ an Aria for ‘Il trionfo della fedelet;’ another for Graun’s ‘Coriolano’ (of which he wrote the libretto); and added forture for Hubert the singer to an air in Hasse’s ‘Cleofide.’ In 1825 a search was instituted by King Frederic William III, and 120 pieces composed for Frederic the Great were found, but they were interesting only from their history, and not suited for publication. He had an eye to the improvement of the singing in the public schools, and an official decree of his, dated Oct. 18, 1746, contains the following passage: ‘Having received many complaints of the decline in the art of singing, and the neglect of it in our gymnasia and schools, His Majesty commands that the young people in all public schools and gymnasia shall be exercised more diligently therein, and to that end shall have singing-lessons three times a week—a command which has doubtless materially contributed to the prevalence of music in Germany. (See ‘Friedrich d. G. als Kenner und Pillettant’, . . . . . by C. F. Müller, Potsdam, 1847.) [F.G.]

FREE REED. Organ stops of the Free-reed class are more frequently made by continental than by English artists. The sound-producing part of a pipe of this species is formed thus: A surface of metal or wood has a vertical opening made through it as a passage for the wind: in front of this a strip or tongue of metal—in some large examples wood—is adjusted, fastened at the upper end and left at liberty at the lower, which is so slightly smaller than the opening as almost exactly to fit into it. This tongue is by the current of air carried a short way through the opening, when it springs back from its own elasticity; and the sound results from the periodical and regular beats which the tongue, vibrating to and fro, imparts to the passing air. The ‘vibrators’ of a harmonium are really free reeds; but in the case of an organ-pipe the tongue is furnished with a tube, which, upon the principle of a speaking-trumpet, greatly augments and amplifies the sound produced. There are some free-reed 16- and 32-foot posaunes in the pedal organ of Schulze’s fine instrument at Doncaster parish church.

FREGE, MADAME (née Livia Gerhard), was born at Gera, June 13, 1818, received her musical education at Leipzig, and was taught to sing by Fohlenz. She made her first appearance in public on July 9, 1832, when just entering her 15th year, at a concert given at the Gewandhaus by the still more juvenile Clara Wieck, then only 14. She had at that time a cultivated voice of lovely quality, especially in the upper register, perfect intonation, and good style. She was engaged for the next series of Gewandhaus Concerts, and began with a very large repertoire, as is evident from the pieces ascribed to her in the reports of the concert. She first appeared on the stage at Leipzig, in Jessonda, in March 1833. A residence in Dresden enabled her to profit by the example and advice of Schroder Devrient. In 35 she entered the regular company of the theatre royal of Berlin. After delighting the public by a large range of characters, in which her acting was equal to her singing, she made her last appearance on June 25, 1858 (as Elvira), and left the boards to be married to Dr. Frege of Leipzig. Since that time she has sung only at concerts. Her house has always been a centre of the best music. She had a singing society there of 50 voices, with a select band, led by David, and conducted by Lange, at which the best and least known music, old and new, was performed in perfection. Mendelssohn was her intimate friend, often consulted her on his music, and took her songs to try before making them public. ‘You don’t know my songs,’ said he to a friend in London: ‘come to Leipzig and hear Mme. Frege, and you will understand what I intended them to be.’ A letter to the ‘Frau Doctorin Frege,’ dated London, Aug. 31, 1846, and describing the first performance of ‘Elijah,’ is printed in the second volume of his Letters. It was at her house, on Oct. 9, 1847, in trying over the songs which form op. 77, that he was struck with the first of the attacks which ended in his death on Nov. 4.

Mme. Frege’s characteristics were delicacy and refinement—not a large voice, but a great power of expression in singing her words, a perfect style, and the highest musical intelligence.

FREISCHÜTZ, DER. Romantic opera in 3 acts, words by Kind, music by Weber (his 8th opera); completed, as ‘Die Jagd in Braut,’ May 13, 1820. Produced at Berlin June 18, 1821; at Paris as ‘Robin des Bois,’ with new libretto by Castile Blaze and Sauvage, and many changes, at Odéon, Dec. 7, 1824, but with accurate translation by Pacini, and recitatives by Berlioz, at Académie royale, June 7, 1841, as ‘Le Franc Archer.’ In London, as ‘Der Freischütz,’ or the seventh bullet,’ by Hawes, at English Opera-house, with many ballads inserted, July 22, 1834; in Italian as ‘Il Franco arciero,’ at Covent Garden, March 16, 1850 (recitatives by Costza, not by Berlioz); in German, at King’s Theatre, May 9, 1832.

FRENCH HORN. The designation of ‘French’ is commonly added to the name of the orchestral Horn, from the fact that a circular instrument of this nature, without crooks or other appliances, was, and still is, used in France for hunting. It is carried over one shoulder, and beneath the arm of the other side, usually on horseback. The great length of tube enables a long series of harmonic sounds to be obtained: 1 Freischütz, say the dictionaries, free marksman, one who shoots with charmed bullets. There is no equivalent English word. 2 ‘Amazant’ is Berlioz’s word for this outrageous proceeding his singularity in France, nor indeed in London, half a century ago, by which he states that Castile Blaze made more than houses burn (Mémoires de Berlioz, 57, 61). There were Diversements made by of the Dance music in Preciosa and Oberon, and of the Invitation to the Walls scored by Berlioz for the purpose.
and these, organised into ‘calls’ or signals, serve to direct the order of the chase. At the first introduction of the Horn into the Orchestra it was much objected to on this account; and its tones were considered coarse and boisterous, only fit for the open air and for woodland pastimes. [Horn.]

FRENCH SIXTH. The name formerly used for the chord of the Augmented or extreme sixth, when accompanied by the third and augmented fourth of its bass. [See Sixth; German Sixth; Italian Sixth.] [C.H.H.P.]

FRESCOBALDI, GIROLAMO, the most distinguished organist of the 17th century, born at Ferrara 1587 or 8, as is conjectured from the date on his first composition—1608. He studied under Alessandro Millelve, also a native of Ferrara. Quadrio tells us that he possessed a singularly beautiful voice; and it is certain that while still a youth he enjoyed a great reputation both as singer and organist. In 1603 he was at Antwerp, as he dates from there the preface to his first book of 5-part Madrigals (Antwerp, Phalesius) dedicated to Guido Bentivoglio, Archbishop of Rhodes; but he must have quickly returned to Italy, as his second book was published at Milan in the same year. In 1614 he was in Rome, and by the following year was regular organist at St. Peter’s. His first performance there attracted, according to Balmi, an audience of 30,000 persons. Froberger was his pupil from Sept. 30, 1637, to April 1641, and thus the noble style of his organ playing was handed on to other schools. The date of his death is unknown.

Frescobaldi’s compositions are important, and give us a high idea of his powers. He was the first to play tonal fugues on the organ, if we except Samuel Scheidt, a German contemporary but little known. His works comprise, besides the two named above, ‘Ricercari e canzoni Francesi’ (Rome, Borboni, 1615); ‘Toccate per partite d’intavolatura’ (1613–27–37–57); ‘Secondo libro di toccate etc.’ (Rome 1616); ‘Primo libro delle canzoni a 1, 2, 3, 4 voci’ (Rome 1628); ‘Primo libro, Arie musicali’ (Florence 1630); ‘Fiori musicali,’ op. 12 (Rome 1635); and ‘Capriccio sopra diversi soggetti’ (Rome 1627, Venice 1626). An extract book of Dr. Burney’s in the British Museum (Add. MSS. 11,588) contains a copy of the first of these works. A Canzona for the organ will be found in Hawkins (chap. 130), and many other pieces in Commer’s ‘Musica Sacra,’ and ‘Collection des compositions,’ etc., and F. Riegli’s ‘Praxis Organandi’ (1869). [F.G.]

FRETS (Fr. Les tons; Ital. Tasto; Ger. Bunde, Bünde, Tombunde, Bänder, Griffe, Bundelseg). On stringed instruments that have fingerboards, like the lute or guitar, the small pieces of wood or other material fixed transversely on the fingerboard at regular intervals are called frets. The object they serve is to mark off the length of string required to produce a given note. Pressure upon a string immediately above a fret makes at the point of contact of string and fret a temporary ‘nut,’ and the string, set in motion as far as the bridge on the soundboard by plucking with plectrum or finger, or bowing, gives a higher note in proportion to the shortening of the string. Frets therefore correspond in their use with the holes in the tube of a wind instrument.

The use of frets to give certainty to the fingers in stopping the notes required is of great antiquity, the Chinese in a remote age having had moveable frets for the strings of their Chê. The Hindu Vina, a fingerboard instrument with nineteen frets, is of divine and therefore remote origin. And the Egyptians, as may be seen in the British Museum, depicted by themselves about the time of Moses, had either frets or coloured lines serving a like purpose on the fingerboards of their lutes. In the present day the Balakta of the Russian country people has coloured lines that serve for frets. It is most likely that the use of frets came into Europe through Spain and Southern France from the Arabs. In the Middle Ages bow instruments had them, as well as those played with plectrum or finger. The Rebec, the Viola da gamba, da braccio, d’amore, the Italian Lira, Liron, all had them. But the French Gique of the 12th–14th centuries, like our modern fiddles, had none. In the modern highly-developed technic they would be an impediment, and the feeling for temperament has only been satisfied by their rejection. In lutes, guitars, and zithers, however, they are retained. In performance the end of the finger must be placed immediately above the fret, and not upon it, as vibration would be interfered with; while if too much above, the string would jar upon the fret.

The fingerboard has been differently divided in different epochs and countries according to the scale—system prevailing. In Persia and Arabia there would be smaller division than our chromatic, third tones as well as half. To mark off the hemitonic division, the eighteenth part of the length of the string to the bridge must be measured off from the nut or ledge at the top of the fingerboard over which the strings pass in Italian cope to ‘secondo frite’ (‘secondo fret’). This gives the place to fix the first fret. Another eighteenth from this fret to the bridge gives the place of the second, and so on until the division is complete. The method implies a nearly equal temperament and uniform tension, but in practice there is room for some modification by the finger. High frets demand a greater finger pressure, and slightly sharpen the pitch of the notes. To correct this the frets must be shifted towards the nut. The Hindu uses finger pressure, or in other words, greater tension, to get his half-tones from a diatonic fret system. To the instrument maker the disposition of the frets is a difficult task, requiring nice adjustment. On the side that the strings are thicker the frets should be higher, and the fingerboard must be concave in the direction of its length to allow the thicker strings to vibrate. The frets are gradually lowered as they descend towards the bridge; the chanterelle, or melody-string, being often a
longer series extending only partly across the fingerboard. The personal peculiarity of the hand or touch finally modifies the adaptation of the frets.

Narrow slits of wood are generally glued up the sides of the fingerboard to prevent the frets projecting. The convex fingerboards of bow instruments requiring convex frets, fretted viols had catgut bound round the fingerboard and neck at the stopping distances. Hence the German 'Bünde'-binds. (See the cut of Gamba.) The French 'ton' indicates the note produced; the German 'ton' the touch-stringing it. The English 'fret' perhaps implies the rubbing or friction of the string at the point of contact, but the derivation of the word is doubtful. Some take the original meaning of 'fret' to have been a note, and thence the stop by which the note was produced. Shakspeare puts upon the word in Hamlet, 'though you can fret me you cannot play upon me.' The writer has been much assisted by the exhaustive article of Herr Max Albert on 'Bünde' in Mendel’s 'Lexicon.'

[A. J. H.]

FREZZOLINI, ERMINIA, was born at Orvieto in 1818; received her first lessons in singing from her father, a *buffo cantante*; and afterwards from Nuncini at Florence. She had further instruction from the elder Ronconi at Milan, and from Manuel Garcia; and completed her musical education under Tacchinardi at Florence. In this town she made her *debut* in 1838, in 'Beatrice di Tenda' and in the 'Marco Visconti' of Vasacl. She sang also in that year at Siena and Ferrara, and in 1839 at Pisa, Reggio, Perugia, and Bologna. She played 'Lucrezia Borgia' at Milan in 1840 with brilliant éclat, and then went to Vienna. Returning to Turin, she married the tenor, Poggi; but continued to be known on the stage as Frezzolini. In 1842 (not 1841, as stated by Fétes) she came with her husband to London, during Griak’s temporary absence, but did not succeed in seizing the popular sympathy. ‘She was an elegant, tall woman, born with a lovely voice, and bred into great vocal skill (of a certain order); but she was the first who arrived of the ‘young Italians’—of those who fancy that driving the voice to its extremities can stand in the stead of passion. But she was, nevertheless, a real singer; and her art stood her in stead for some years after nature broke down. When she had left her scarce a note of her rich and real *soprano* voice to scream with Madame Frezzolini was still charming’ (Chorley). In London, however, she never took root. She returned to Italy, and in 1848 was engaged for St. Petersburg. But the climate drove her back to Italy in two years. In 1850 she reappeared in London at Her Majesty’s Theatre, and in 1853 was at Madrid. In November of that year she made her first appearance in Paris, in the ‘Puritani’; but notwithstanding her stage-beauty, and her nobility of style and action, she could not achieve any success; her voice had suffered too much from wear and tear, and showed signs of fatigue. She subsequently met with the usual enthusiastic reco-

FRITZ, BARTHELD, celebrated mechanic and maker of instruments, son of a miller, born near Brunswick 1697. He had no education, but found out for himself the principles of organ-building, and made in all nearly 500 organs, clavecins, and clavichords, beginning in 1711 with a clavichord of 4 octaves. The tone of all his instruments was good, especially in the bass. He died at Brunswick July 17, 1766. He pub-
lied 'Anweisung, wie man Clavire... in allen schwölf Tönen gleich rein stimmen künde, etc.' (Leipzig 1756-7-80), a new system of tuning keyed instruments by means of fifths and octaves, which, though erroneous, had much success, having gone through 3 editions, and being translated into Dutch by no less a person than Hummel. [M.C.C.]

FROBERGER, 1 JOHANN JACOB, eminent organist, born, according to Matthaeus, at Halle in Saxony, where his father was Cantor, but at what date is unknown. On the accession of the Emperor Ferdinand III (Feb. 15, 1637) he was appointed court organist at Vienna. There are entries of his salary in the accounts of the Hofkapelle, from Jan. 1 to Sept. 30, 1637, from April 1, 1641, to Oct. 1645, and from April 1, 1653, to June 30, 1657. The interval from 1637-41 was occupied by his stay in Italy as Frescobaldi's pupil, and a grant of 200 florins for his journey is entered in the accounts under June 22, 1637. In 1657 he left the Emperor's service. In 1662 he journeyed to London, where he was twice robbed on the way, and arrived in so destitute a condition, that he thankfully accepted the post of organ-blower at Westminster Abbey, offered him by Christopher Gibbons, then organist of the Chapel Royal and the Abbey. Gibbons was playing before the Court on the occasion of Charles II's marriage, when Froberger overblow the bellows, and thus interrupted the performance, on which the enraged organist overwhelmed him with abuse and even blows. Froberger seized the opportunity a few minutes after to sit down to the instrument, and improvised in a style which was at once recognised by a foreign lady who had formerly been his pupil and knew his touch. She presented him to the King, who received him graciously, and made him play on the harpsichord to the astonishment of all. This curious anecdote is not mentioned by English writers, but is given by Matthaeus (Ehrenforte) from Froberger's own MS. notes. Matthaeus states that he became a Roman Catholic during his visit to Rome, but it is almost certain that he was already one when he entered the Emperor's service in 1637. The late Anton Schmidt, Custos of the Imperial library, maintained that he again became a Lutheran after his visit to London, and was dismissed from his post of Court organist on that account. The contradiction has never been explained, but that he died a Catholic we know, from an autograph letter of Sibylla, Duchess Dowager of Wurttemberg, who was his pupil, and who offered him an asylum in her house at Héricourt, near Montbéliard, where he died May 7, 1667. See 'Zwélf Briefe über J. J. Froberger... von Dr. Edmund Schebek' (Prague 1874). His printed works—here first given accurately—are 1. 'Diverse ingegnozissime e rarissime Partite di Toccate, Canzoni, Ricercari... Stampato da Lodovico Bourgeat... Mungont. 1693'—two copies in possession of the author,
purest ideal, and who inspired him with many of his poems. She died Mar. 3, 1879. [C.F.P.]

FROTTOLE, early Italian songs, of which nine books, containing each on an average 64, were published by Petrucci at Venice between 1504 and 1509. Many of them are by Tromboncino, who so far may be called the Gordigiani of his day. As far as can be gathered from the account of Ambros 1 the Frottola was essentially a popular melody, or street-song, treated with a certain amount of contrivance. It stood midway between the strict and complicated Madrigal, and the Villotta or Vilanelle, which was a mere harmonisation of a tune; and in fact as the use of counterpoint increased it disappeared, its better elements went into the Madrigal, its lower into the Vilanelle. The words of the Frottole were often comic (in fact the word is a synonym for a joke) but still often extremely sentimental. Ambros (478) cites some in which the song of the cicada and the mewing of a cat are imitated. The poem was in verses, sometimes very numerous. The music was set almost exclusively for 4 voices. Besides those printed at Venice a book of 32 was published at Rome by Junte in 1526. See Ambros, as below, and Eitner 'Bibliographie.' [G.]

FRUTTIERS, JAN, Flemish poet and musician of the 16th century, was living at Antwerp in 1565. He was a Lutheran, and author of the words and music of 'Ecclesiasticus oft de wije sproken Jesu des soons Syrach, etc.' (Antwerp, Selvius, 1565), a metrical translation of the book of Ecclesiasticus. The music is printed in the fine type of Plantin. This scarce book is the more remarkable as it was published by permission of Margaret of Parma, Governess of the Netherlands, only a few months before she enforced the decrees against the heretics which brought about the War of the Gueux. The melodies are chiefly popular Flemish airs. The 35th Cantique (Ecclus. xxiv) is set to a French dance of the 15th century, called 'L'homme armé,'—not to be confounded with the celebrated song of the same name, so often used as a theme for entire masses by composers of the 15th and 16th centuries. The song is in 3-2 time, the dance in 2-4, and in the form of a round. [L'homme armé.] [M.C.C.]

FUCHS, ALOYS, bass-singer in the Imperial chapel since 1836, and government employed in the war department at Vienna, born June 23, 1799, at Rease in Austrian Silesia, remarkable as an ardent collector of autographs. His collection of music, books, portraits, etc., purchased out of a small salary by dint of rigid economy, has often been described in detail. It contained specimens from all nations, though the Italian and German masters were most fully represented, and especially Mozart. These materials were partly used by Otto Jahn in his Life of that Master. Fuchs contributed articles to several musical periodicals, and took a keen interest in everything connected with the history and literature of music. Severe illnesses compelled him to part with his treasures one by one, and thus his whole collection was scattered. Thalberg bought the remaining autographs; the Mozarteum a fair copy of Mozart's works; Gramlick of Berlin the collection of portraits; the ecclesiastical institution of Göttweig the library; and Butzch the bookseller of Augsburg the rest of the papers and biographical articles. Fuchs died at Vienna March 20, 1853. [C.F.P.]

FÜHRER, ROBERT, born at Prague, 1807; in 1840 succeeded Wittasek as organist to the Cathedral there. His irregular life however lost him the poet, and in 43 he left Prague. In 57 he was organist at Gmunden and Ischl for a short time, and then settled in Vienna, where he died Nov. 28, 1861, in great distress in a hospital. His compositions, published since 1830 in Prague and Vienna, are numerous and good. (For list see Fétis.) They comprise masses, gradualies, offertories, preludes, fugues, a method for the pedal-organ, a handbook for choirmasters, a 'Praktische Anleitung zu Orgelcompositionen,' etc. Whatever his merits as a musician, however, he was a dishonest man, for he actually published Schubert's Mass in G under his own name (March 1846), a fact which requires no comment. [M.C.C.]

FÜRSTENAU, a family of distinguished flutists and good musicians.

1. CASPAR, born Feb. 26, 1773, at Münster, where his father was in the Bishop's band; was early left an orphan under the care of A. Romberg, who tried to force him to learn the bassoon, as well as the oboe, which he had already taught; but his preference for the flute asserted itself, and he shortly became so proficient, as to support his family by playing in a military band, and in that of the Bishop. In 1793-4 he made a professional tour through Germany, and settled at Oldenburg, where he entered the Court band, and gave lessons to the Duke. In 1811 the band was dispersed, and Caspar again travelled with his son. He died at Oldenburg May 11, 1819.

2. ANTON BERNHARD, a finer flutist than his brother, born Oct. 20, 1792, at Münster; first appeared at a Court concert in Oldenburg when only 7. He remained with his father, the two taking long journeys together. In 1817 he was engaged for the municipal orchestra of Frankfort, from whence he removed in 1820 to Dresden, where he remained in the service of the King of Saxony till his death, Nov. 18, 1842. In 1836 he accompanied Weber on his last sad journey to London, tended him with anxious care, and assisted him to undress the night before his death. (See Max Maria von Weber's Life of his father, ii. 703.) He composed several pieces and two Methods for the flute.

3. His son MORITZ, born in Dresden, July 26, 1824, also a flutist, at 17 entered the royal band, in which he has remained ever since. He has made some valuable contributions to the history of music, such as 'Beiträge zur Ge-
it is obvious that we should have left the original key of C altogether, and modulated towards the supertonic; to avoid this the answer would have to be modified thus—

so as to keep in the key of C, and the change of the concluding note is called a Mutation. Thus the dominant answers the tonic, and the tonic answers the dominant. Example—

Subject.  

A few more examples of mutations will exemplify the principle of tonal answers.

1. Subject.  

Answer.  

2. Subject.  

Answer.  

3. Subject.  

Answer.  

Rules for the finding of correct tonal answers may be found in all the treatises on the construction of fugues. Sometimes it is no easy matter to find the proper answer; and there are subjects which will admit of more than one correct answer.

Into these details it is impossible to go in such an article as the present. But the following general rules may be useful:—(1) Wherever the subject has the tonic, the answer should have the dominant; and vice versa. (2) Wherever the subject has the 3rd of the tonic, the answer should have the 6th of the dominant; and vice versa. (3) Wherever the subject has the 6th of the tonic, the answer should have the 4th of the dominant; and vice versa. (4) Wherever the subject has the 4th of the tonic, the answer should have the 3rd of the dominant; and vice versa. (5) In the minor mode, if the subject has the interval of a diminished 7th, that interval is unaltered in the answer. (6) If the subject, in either mode, goes from the dominant up to the subdominant in the upper octave, the answer constitutes the interval of an octave; thus—

Subject.  

Answer.

1 This is the modern meaning. In the early days of counterpoint a Tonal fugue was one in which the relations of the subject and answer were governed by the old Church modes, in which each Authentic mode had its related Plagal mode. [See REAL FUGUE.]
(7) Every mutation should be made in approaching or quitting the tonic or dominant.

The countersubject is primarily to be regarded as an accompaniment to the subject or answer. But it is more than this, for it ought to be made so melodious as to be an available foil to the subject when used in alternation with it, or with the answer. It should also be, in most cases, so constructed as to work in double counterpoint with the subject. It usually makes its first appearance as an accompaniment to the first entry of the answer, after the subject has been duly announced by itself. We now proceed to give an example of the commencement of a fugue, containing subject, answer, and counter-subject. Such a commencement is called 'the Exposition.'

When the countersubject is introduced simultaneously with the subject at the beginning of a fugue, it should be looked on rather as a second subject, and treated strictly as such throughout the fugue. In such a case the piece would be properly described as a Double fugue, or Fugue with two subjects. Similarly there are fugues with three or more subjects; the only limitation being that there should always be fewer subjects than parts; though there are exceptions to this rule, as e.g. 'Let old Timotheus' in Handel's 'Alexander's Feast,' where there are four subjects and only four voice-parts.

It is very often desirable to interpose a few notes to connect the subject and answer, and to facilitate the necessary modulations from tonic to dominant, and back again. Such connecting notes are named the Codetta, conduit, or copula, and are very useful in rendering the fugue less dry and cramped.

The following is the exposition of a two-part fugue, including a codetta:

After the exposition is completed by the successive and regular entry of every part, it is well to make use of fragments of the materials already announced, working them up contrapuntally into passages of imitation, and modulating into nearly related keys for a few bars, before returning again to the subject and answer. These may then be introduced in various kindred keys, according to the taste of the composer, so as to secure variety and contrast, without wandering too far from the original key of the piece. As the fugue goes on, it is important to keep the interest of it from flagging by the introduction of new imitations, formed of fragments of the original materials. These passages are termed Episodes. With the same object in view it is customary to bring the subject and answer nearer to one another as the fugue draws towards its conclusion. The way to effect this is to make the entries overlap; and this is called the Stretto (from stringere, 'to bind'). Thus the above subject would furnish a stretto as follows:

Some subjects will furnish more than one stretto. In such cases the closest should be reserved for the last. [STRETTO.]

But there are many other devices by which variety can be secured in the construction of a fugue. For the subject can sometimes be inverted, augmented, or diminished. Or recourse may be had to counterpoint at the 10th or 11th. The inversion of the above subject would be as follows—
and this might be treated with its appropriate answer and countersubject, if desired. Some subjects will furnish a stretto in strict canon, and this should be always reserved for the concluding portion of the fugue, by way of climax. If the fugue ends with an episode, such concluding episode is called the Coda (or tail-piece).

It is also customary, in fugues of more than two parts, to introduce a Pedal, or point d’orgue, towards the end, which is a long note held out, almost always in the bass part, on which many imitations and strettos can be built which would often be otherwise impracticable. The only notes which can be thus held out as pedals are the dominant and the tonic. The tonic pedal can only be used as a close to the whole piece. The dominant pedal should occur just before the close. It is not necessary to use a tonic pedal in every fugue, but a dominant pedal is almost indispensable.

Fugues for instruments may be written with more freedom than those for voices, but in all kinds the above rules and principles should be maintained. The fugue-form is one of the most important of all musical forms, and all the great classical composers have left us samples of their skill in this department of the art of music. At the same time it must be observed that in the early days of contrapuntal writing the idea of a fugue was very different from that which we now understand by that term. In Morley’s ‘Plain and easie Introduction to practical Musick,’ published in 1597, at p. 76, we find the following definition:—’We call that a fugue, when one part beginneth, and the other singeth the same, for some number of notes (which the first did sing), as thus for example:

This we should now-a-days call a specimen of simple imitation at the octave, in two parts; yet it is from such a small germ as this that the sublime structure of a modern fugue has been gradually developed. Orazio Benevoli (d. 1672) was probably the first of the Italian composers who wrote fugues containing anything like formal development. Later, in the 17th century, however, every Italian composer of church music produced more or less elaborated fugues, those of Leo, Clari, Alessandro Scarlatti, Colonna, Durante, and Pergolesi being among the best.

But it was in Germany that fugue-writing, both vocal and instrumental, reached the highest development and attained the greatest perfection. It would fill a volume to enumerate all the great fuguists of that wonderfully musical nation during the 17th and 18th centuries. Two or three names, however, stand out in bright relief, and cannot be passed over. Sebastian Bach occupies the very pinnacle among fugue-composers, and Handel should be ranked next him. The student should diligently study the fugal works of these great masters, and make them his model. Bach has even devoted a special work to the subject, which is indispensable to the student. [See Art of Fugue.]

The treatises of Mattheson, Marpurg, Fux, Albrechtsberger, and André, are also valuable. Among more modern writers may be mentioned Cherubini, Fétis, and Reicha. We abstain from mentioning the works of living authors who have contributed much valuable matter to the literature of this subject. Mozart should be quoted as the first who combined the forms of the sonata and the fugue, as in the overture to ‘Die Zauberflöte,’ and in the last movement of his ‘Jupiter Symphony.’

It is perhaps difficult for a composer at the present day to find a great variety of original fugue-subjects. But the possible ways of treating them are so inexhaustible that a fugue can always be made to appear quite new even though the theme on which it is based be trite and hackneyed. And here we have one of the great advantages of this form of composition—namely, that it does not so absolutely require the origination of really new melodies as every other form necessarily does. But, on the other hand, it does require a command of all the resources of harmony and counterpoint to produce fugues which shall not be mere imitations of what has been done by previous composers; and it also needs genius of a high order to apply those resources so as to avoid the reproach of dryness and lack of interest so often cast upon the fugal style of composition. [F.A.G.O.]

FULL ORGAN. This term, when standing alone, generally signifies that the chief manual, or Great Organ, is to be used, with all its stops brought into requisition. Sometimes the term is employed in an abbreviated form, and with an affix indicating that a portion only of the stops is to be played upon—as ‘Full to Fifteenth.’ In the last century the expressions ‘Full Organ,’ ‘Great Organ,’ and ‘Loud Organ,’ were severally used to indicate the chief manual organ. [E.J.H.]

FUNDAMENTAL BASS is the root note of a chord, or the root notes of a succession of chords, which might happen to be the actual bass of a short succession of chords all in their first positions, but is more likely to be partly imaginary, as in the following short succession of complete chords, which has its fundamental bass below on a separate stave:

\[\begin{align*} & \text{Fundamental Bass.} \\
& \text{Rameau was the first to develop the theory of a fundamental bass, and held that it might be as} \end{align*}\]
a general rule proceed only in perfect Fourths or Fifths upwards or downwards.' Helmholtz defines it as 'the compound tone which represents the chord, as distinguished from its base, that is, the tone which belongs to the lowest part.'

[C. H. H. P.]

**FUX. JOHANN JOSEPH.** Born 1660 of a peasant family in the hamlet of Hirtenfeld, near Graz in Styria. Nothing is known of his early life or studies, as he refused to give information on the subject even to Matthew for his 'Grundlage einer Ehrenforte' (Hamburg 1749; see p. 340, letter dated 1718). From 1696, however, all is clear. In that year he was appointed organist to the ecclesiastical foundation 'zu den Schotten' in Vienna; and married a Viennese, by whom he had no children. In 1698 he became court composer, and in 1705 Capellmeister to the cathedral of St. Stephen. He was also appointed vice-Capellmeister to the court, and in 1713 Capellmeister to the Dowager Empress Wilhelmine Amalie. This post he resigned in 1718, as he had done that at the cathedral in 1715 upon his promotion to be head Capellmeister to the court. He received many proofs of court favour. To the King of the Romans, Arch-duke, afterwards Emperor Joseph I—he dedicated his first opera 'Concertus music instrumentationis, in 7 parts (Felsecker, Nuremberg 1701), and the 'Missae Canonicæ' (1718); and to the Emperor Charles VI his most important work 'Gradus ad Parnassum' (1725). In 1723, when laid up with gout, the Emperor Charles had him conveyed in a litter to Prague, that he might be present at the performance of his opera 'Costanza e Fortezza,' written for the coronation. Fux died at Vienna Feb. 13, 1741, and was buried at St. Stephen's. Among his best pupils were Zelenka, Mußfaff, Tuma, and Wagemell. An oil-painting of him in the costume of the period is in the museum of the 'Gesellschaft der Musikfreunde' at Vienna. Fux considered his art in a serious light, and was held in general respect. He was a moderate man of the kind not just in his dealings with the musicians under him. As a composer he was most industrious: 405 works by him are still in existence—50 masses; 3 requiems; 57 vespers and psalms; 22 litanies and complotions; 12 graduals; 14 offertories; 22 motets; 106 hymns; 2 Dies irae; 1 Domine; 1 Libera (200 church-works in all); 10 oratorios; 18 operas (of which 6 were grand operas—dramma per musica—and the other 12 'componimenti per camera' and 'feste teatrali per musica'); 29 partitas and overtures; and 8 pieces for clavier. The greater part of these compositions, either copied or in autograph, are in the Imperial Library at Vienna; and the 'Gesellschaft der Musikfreunde' also possesses a considerable number.

Of his works only a few are printed: his 'Concentus,' already mentioned, 'Elisa,' festa teatrale (Jeane Roger, Amsterdam, 1719), and the 'Missae canonicæ' (see below). Frotsker's 'Musica divina,' vol. ii. and iii., contain seven church-works. 36 Trios for 2 violins and bass (published about 1700) are lost. His dramatic works are now valueless, though in their day they contributed much to the lustre of the court; while his oratorios, written for Lent, were still more quickly forgotten. Among his Masses are 38 sacred 'Sonate a tre,' which were often played in Divine Service, and are masterpieces of freshness, invention, and variety. It is evident that Fux enjoyed 3-part writing, for in his 'Gradus' he says 'the master's hand may always be detected even in 3-part writing,' and 'I have often written in 3 parts, and not unsuccessfully,' a statement which even Matthew endorses ('Critica Musica,' i. p. 131), though as a rule no friend to Fux. In his church music he was always reverent, and though polyphonic writing was second nature to him, he usually abstained from unnecessary subtleties in sacred music. One exception to this must however be made. His 'Missae canonicæ,' written throughout 'a capella,' a masterpiece containing every species of canon, is unique in its way. Here Fux displays his marvellous knowledge of counterpoint, combined with the richest modulation and superrhythmics ('Christo Fuga,' p. 130), speaking specially of the double canon in the 'Christe eleison,' his harmony is gorgeous, and at the same time thoroughly in keeping with the sacredness of the occasion. The mass is dedicated to the Emperor as a proof 'that classic music, far from being extinct, has here gained one more step in advance' (see dedication in Italian). The Imperial Library at Vienna contains a copy of it by Michael Haydn (1757), and the Royal Library at Dresden another by Zelenka, Fux's pupil. It has been printed at Leipzig by Peters and Kühnel. The frequent performances of this mass at the cathedral and the court speak well for the efficiency of the singers. The most convincing proof of Fux's ability as a teacher is his 'Gradus ad Parnassum,' a masterpiece in Latin in four parts, consisting of a dialogue between master and pupil, and consisting of two parts, the first on the theory, and the second on the practice, of composition. It has passed through innumerable editions, and been translated into four languages. The dates of publication are as follows:—the original, in Latin, Vienna 1725; German edition, by Lorenz Metzler, Leipect, 1743; Italian, by Alessandro Mannfredi, Carpi, 1761; French, by Sieur Pietro Denis, Paris, 1773; and English, anonymous, London, 1791. Its usefulness has been attested by such men as Pecini, Durante, P. Martini, the Abbé Vogler, Paoloucci, Gerbert, Cherubini, and in our own day by Heinrich Bellermann ('Der Contrapunct,' etc., Berlin 1862). Mozart used it in his contrapuntal exercises, and Haydn repeatedly studied it, and founded his teaching upon it. An exhaustive bibliography of the master, with a thematic catalogue of his compositions, has been drawn up with his usual accuracy by Dr. von Köchel from authentic information, with the title 'J. J. Fux, Hofkompozitor und Hofkapellmeister der Kaiser Leopold I, Joseph I. und Karl VI, von 1698 bis 1740 (Hölder, Vienna 1872).
FZ. The abbreviation of the Italian word forzando, meaning that the note or chord against which it is played should be forced beyond the normal sound of the passage. It is always pro-

gionate; and thus a fz in a piano passage will be far less loud than in a forte passage. Sfz or sf (forzando) is more commonly used than fz.

FAURE, JEAN-BAPTISTE, son of a singer in the church at Moulins, where he was born Jan. 15, 1830. When he was 3 the family removed to Paris, and when he was 7 his father died. In 1843 he entered the solfeggio class in the Conservatoire, and soon after the maître of the Madeleine, where he was under Treluard, an excellent teacher, to whom he owes his sound knowledge of music. After the breaking of his voice he took up the piano and double bass, and was for some time a member of the band at the Odéon theatre. When his voice had recovered he joined the chorus of the Théatre Italien, and in Nov. 1850 again entered the Conservatoire, and in 52 obtained the first prizes for singing and for opéra comique. He made his début Oct. 20, 52, at the Opera Comique, in Maasé's Gala-thée, after which he advanced steadily through various rôles until his creation of the parts of Crésuscoeur in Gevaert's 'Quentin Durward' (March 58) and Hoël in Meyerbeer's 'Pardon de Ploermel' (April 59) placed him in the first rank. In the winter of 1861 he made his first appearance at the Grand Opéra, since which time he has been regularly retained there. In London he first appeared at Covent Garden, April 10, 1860, as Hoël in 'Dinorah,' and has since that time been a regular visitor at one or other of the Italian opera houses. At Brussels also he is often heard, and in 1874, during the war, he undertook the first class of singing in the Brussels Conservatoire. In 1861 he appeared in Berlin at Meyerbeer's request, but the tremolo in his voice did not please the Germans, and he has not revisited that country.

Faure is a good musician and a fine actor. He is also a collector of pictures and a man of great culture. His voice is a baritone of great extent and of very fine quality. His characters comprise Mephistopheles, Hamlet, Nélusco (Africaine), Posa (Don Carlos), Don Giovanni, and many more. In 1857 he was for a short time Professor of Singing at the Paris Conservatoire, and in 1859 he married Mlle. Lefevbre (born Dec. 21, 1838), the chief actress of Dugazon rôles at the Opéra Comique. He has published 2 books of songs (Hegel).

G.

The fifth note of the natural scale—the dominant of C, the relative major of E minor. It is sol in French and in solfa-
sing. It has F♯ for its signature. G minor has B♭ and E♭ for the signature, and is the relative minor of B flat major. G gives its name to the treble clef, the sign for which is nothing but a corruption of the letter. The Greek G gives its name to the gamut or scale.

As to its use in composition—two of Haydn's 12 Grand Symphonies are in G, and there are several others of note in the same key ('Oxford,' 'Letter V,' etc.), but there is no remarkable one by Mozart, and not one by Beethoven, nor by Schubert, Schumann, or Mendelssohn. Of Bee-
thoven's 16 Quartets one (No. 2), and of his 11 Overtures one (Ruins of Athens), the Sonata op. 31, No. 1, two Violin Sonatas, and the P. F. Con-
certo No. 4, do something to restore the balance, but it is singular how much he avoids the key.

G minor has Mozart's Symphony and Mendel-
ssohn's Concerto to ennoble it.

GABLER, JOHANN, of Ulm, built the cele-
brated organ in the abbey of Weingarten in 1750. It has 4 manuals, and 76 speaking stops, and is credited with 6666 pipes. It is also said that the monks were so pleased with it that they gave Gabler a florin per pipe over and above the contract price. He died about the year 1784. [V.de P.]
him to write the music to be performed at the reception of Henry III. King of France; for which occasion he composed several pieces, one being for 12 voices in 2 choirs, 'Ecco Vinea bella,' printed in the 'Gemma Musicalis' (Venice, Gardano, 1588). Though much addicted to counterpoint, his style is elevated and dignified. His finest work is 'Psalmi Davidicìi poenitentiales, tum umnis generis instrumentorum, summis ad vocis modulationum accomodatis, sex vocum' (Venice 1583). Among his numerous compositions may be mentioned—'Sacrae cantiones quinque vocum, liber primus' (1565); 'Missarum sex vocum, liber primus' (1570); 'Madrigalis a 5 voci, liber primus,' containing 24 madrigali and 6 canzoni (1572); 'Libro secondo di Madrigali a 5 e 6 voci, con un dialogo da 8', (1572); 'Canzoni alla francese per l'organo' (1571); and 'Canti concerti a 6, 7, 8, 10, e 16 voci' (1587). In the last are some pieces by his nephew. His organ music was printed with his nephew's in 3 vols. of Ricercari. Andrea seems to have strongly felt the necessity of executing vocal music by instruments. He also composed the first 'real fugues,' a species of composition for which his nephew showed great facility. Proske's 'Musica divina' contains a missa brevis and no fewer than 10 motets of his, all for 4 voices.

2. Giovanni, born in Venice 1557, pupil of his uncle Andrea, by 1575 already well known as a composer, succeeded Claudio Merulo as first organist of St. Mark's, Jan. 1, 1585. He died probably in 1612, as Gianpaolo Savii succeeded him on August 12 of that year, but his monument in San Stefano gives Aug. 12, 1613, as the date of his death. Although he seems never to have left Venice he was well known throughout the civilised world. The works of his pupils, Heinrich Schütz, Alois Gran, and Michael Praetorius, testify to the deep respect they all entertained for him. His contrapuntal facility was extraordinary; his 'Sacrae symphoniae' (1597) contains a piece for 3 choirs, each of different composition. (This or a similar noble work is printed by Mr. Hullah in his 'Vocal scores.') The first part of the Symphoniae is dedicated to Count George Fugger, in acknowledgment of his having invited Gabrieli to his wedding. The necessity for the orchestra is still more marked in Giovanni than in his uncle Andrea; his modulations are often so bold and difficult that we can scarcely believe they were ever intended for voices. In this respect he may be called the father of the chromatic style. For particulars of his times and contemporaries see Winterfeld's 'Johann Gabrieli und seine Zeit,' 2 vols. of text and 1 vol. of examples, containing 23 pieces for voices (from 4 to 16), one for organ, and one for quartet. Others will be found in Bodenachts; Rochlitz; in Musica sacra (Schlesinger 1834), etc. Rochlitz's Collection (Schott) contains an In exæsibus of his for Soprano and Tenor solo, and chorus (a 4), with violins, 3 horns, and 2 trombones; also a Benedictus for 3 choirs.

3. Domenico, dramatic composer and violoncellist, known as 'il Menghino del violoncello,' born at Bologna 1640; first in the band of San Petronio, then in the service of Cardinal Pamphilii. In 1676 he became a member, and in 1683 President, of the Società Filarmonica in Bologna. He appears to have died before 1691. Of his operas, produced in Bologna, Padua, and Venice, 'Cleobulo' was the most successful. His instrumental compositions 'Balletti, gigue, correnti, sarabande, a due violini e violoncello con basso continuo,' op. 1 (Bologna 1793), are interesting.

[F.G.]

GABRIELLE, CHARMANTE, that is, Gabrielle d'Estrées, mistress of Henri IV. The reign of Louis XVIII. revived an artless little romance, which, like the song 'Vive Henri IV.' [see Henri], recalled pleasant memories of the Béarnais. 'Charmante Gabrielle' was not only sung far and wide at that loyal epoch, but the authorship of both words and music was attributed to the gallant king, and the mistake is still often repeated. True Henri suggested the song to one of the poets of his court, but we have his own authority for the fact that he did not himself write the stanzas. The letter in which the king sent the song to Gabrielle is in the 'Recueil des Lettres missives' of Berger de Xivry (iv. 998, 9), and contains these words:—'Ces vers vous représenteront mieux ma condition et plus agréablement que ne pourit la prose. Je les ay dites, non arranges.' The only date on the letter is May 21, but it was written in 1597 from Paris, where Henri was collecting money for his expedition to Amiens, and making preparations to leave Gabrielle for the campaign against the Spaniards. It was probably Bertaut, Bishop of Séez, who, at the king's 'dictation,' composed the four couplets of the romance, of which we give the first, with the music in its revived form:

\[\text{\textit{Jen-man-te Gab-re-le, Per cé de mil-le dards, Quand la glo-rre m'appel-le Doss les sen-tiers de Mars, Cru-el-le dé-par-}t si el Mal-heu-reux jour! Que ne suis-je mais \textit{vi-e, On sans a-mour!}}\]

The refrain is not original; it is to be found word for word in the 'Thesaurus harmonicus' of Besard (1623), and in the 'Cabinet ou Trésor des nouvelles chansons' (1601), and as at that time it took more than five or six years for an air to travel from the court to the people, we may safely conclude that it was no novelty.
Fétis attributes the air to Eustache Du Caurroy, maître de chapelle to Charles IX, Henri III, and Henri IV; but the music of that 'Prince of musicians,' as Mersenne calls him, is so imbued with science, not to say pedantry, that it is impossible to suppose the author of the contrapuntal exercises in his 'Mélanges' to have had anything in common with the composer of so simple and natural a melody. Its origin is undoubtedly secular; and there is the more reason to believe it to have been borrowed from an air already popular that the words 'Crueille départie, Malheureux jour' occur in the 'Chansons sur les airs mondains.' In the book of cantiques entitled 'La pieuse Alouette avec son tirelire,' (1619) we find a proof that the church borrowed the air and prevailing idea of this song from the world, rather than the reverse, for the religious refrain,

Donc vierge Marie,
Secouez-le moi! Otez-moi ou la vie,
On bien semble,

is obviously founded on the love-song of 1597. Such is all the positive information we have been able to obtain about 'Charmante Gabrielle'; but the mystery which surrounds its origin rather increases than diminishes the attraction of this celebrated song.

[G.C.]

GABRIELLI, CATERINA, born at Rome Nov. 12, 1730, daughter of Prince Gabrielli's cook, one of the most beautiful, accomplished, and accomplished singers that ever lived. At the age of 14, the Prince, walking in his garden, heard her singing a difficult song of Galuppi, sent for her, and after listening to her performance, promised her his protection and a musical education. She was placed first under Garcia, lo Spagnoletto, and afterwards under Porpora. A great success attended her début (1747) as prima donna, at Lucca, in Galuppi's 'Sofonisba.' Guadagni gave her some valuable instruction in the style in which he himself excelled,—the pure and correct cantabile. This she was therefore now enabled to add to her own, which was the perfection of brilliant bravura, with a marvellous power of rapid execution and an exquisitely delicate quality of tone. At other theatres in Italy she met with equal success, singing in 1750, at Naples, in Jomelli's 'Didone,' after which she went to Vienna. Here she finished her declamatory style under the teaching of Metastasio, and fascinated Francis I, who went to the Opera only on her nights. Metastasio is said to have been not indifferent to the charms of this extraordinary singer, still known as la Cochetta or Cochettinga, in memory of her origin; but she did not respond. Her capricious treatment of her numerous adorers gave rise to hundreds of stories, among which one may be quoted. By this it appears that the ambassadors of France and Portugal were both desperately enamoured of her at Vienna. The former, concealing himself in her apartments, saw enough to confirm his suspicions, and rushed upon her with his sword, with which he would doubtless have transfixed her, had not the bust of her boddice turned aside the point of the blade. She pardoned the Frenchman, who had thrown himself on his knees before her, on condition of her retaining his sword, on which she determined to have the words engraved, 'Ejide de M. . . . qui osa frapper la Gabrielli, &c.;' but Metastasio prevailed upon her to give up this design. In 1765 she quitted Vienna, laden with wealth, and went to Sicily, where she excited the same furore, and exhibited the same caprices. She was imprisoned by the King, because she would not sing her part in the opera above a whisper. During the twelve days of her imprisonment, she gave sumptuous entertainments, paid the debts of poor prisoners, and distributed alms in profusion. Each evening she assembled the other inmates of the gaol, to whom she sang her favourite songs in the most painstaking manner. The King was obliged to set her free, and her reputation with the public stood higher than ever. In 1767 she went to Parma, where the Infant Don Philip fell madly in love with her, and persecuted her so far as sometimes to shut her up in a room of which he kept the key. Terrible scenes occurred between them, and she called him on one occasion gobbo maledetto. Having escaped from Parma in 1768 she went to Russia, where she astonished Catherine II. by demanding 5000 ducats as salary, a sum, as the Empress objected, larger than the pay of a field-marshall; to which Gabrielli simply replied, 'Thorouly your field-marshalls sing for you'—as Caffarelli once replied in similar circumstances. She appeared in London in the season of 1775–6. Burney says of her that 'she had no indications of low birth in her countenance or deportment, which had all the grace and dignity of a Roman matron.' The public here was prejudiced against her by the stories current of her caprice; and she only remained during one season¹. Burney extols the precision and accuracy of her execution and intonation, and the thrilling quality of her voice. She appeared to him 'the most intelligent and best bred virtuosa with whom he had ever conversed, not only on the subject of music, but on every subject concerning which a well-educated female, who had seen the world, might be expected to have information.' She sang with Faschierotti at Venice in 1777, and at Milan in 1780 with Marchesi, with whom she divided the public into two parties. After this Gabrielli retired to Rome with her sister Francesca, who had followed her everywhere as seconda donna, and lived upon her savings, which amounted to no more than 12,000 francs per annum. She died in April 1796 of a neglected cold. A beautiful little portrait of her in mezzotint, now very rare, was engraved by D. Martin in 1796 from a painting by Pompeo Battoni.

[G.J.M.]

GABUSSI, VINCENZO, composer and teacher of singing, born at Bologna early in the present

¹ Fétis is mistaken in saying that she never came to England, and the whole of his narrative of her residence and engagements in London. He also erroneously calls her sister Anna.
century, studied counterpoint under Padre Mattei. He brought out his first opera at Modena in 1825 and then came to London, and remained there for about 15 years teaching singing and accompaniment. After this he retired to Bologna. In 1834 he produced 'Ernani' at the Théâtre des Italiens, Paris, and in 1841 'Clemenza di Valois' at the Paris Opera, with success. He composed chamber music for instruments, but is best known by his vocal duets, which are still sung in England. He died in London Sept. 12, 1846. [M.C.C.]

Gade, Niels W., one of the most gifted and accomplished of living composers and conductors, was born Oct. 22, 1817, at Copenhagen, the son of a maker of musical instruments. His first instruction in music was obtained from a teacher who esteemed mechanical industry beyond talent, and it seems was not very well satisfied with the progress of his pupil. Gade learned a little about guitar, violin, and pianoforte, without accomplishing much on either instrument. Later on he met with more able masters in Wershall, Berggreen, and Weyse. Various compositions were the result, of which their author now thinks little. He afterwards entered the royal orchestra at Copenhagen as violinist, and in that practical school attained that rare degree of mastery in instrumentation which his publications show from the first. Through his 'Oesian' overture, which, on the approval of Spohr and Schneider, was crowned in 1841 with the prize awarded by the Copenhagen Musical Union, he attracted the attention of the music-loving king, and at once received, like many other men of talent in Denmark, a royal stipend, intended to assist him in a foreign journey. Thus equipped, Gade turned towards Leipzig, where by Mendelssohn he was introduced to the musical public at large. (See Mendelssohn's letters Jan. 13, March 3, 43.)

After the production of his first symphony (March 2, 1843) and the cantata 'Comala' at Leipzig (March 3, 46). Gade travelled in Italy, and on his return in 1844, Mendelssohn, who was then staying at Berlin and Frankfort, entrusted him with the conducting of the Gewandhaus concerts. In the winter of 1845-46 he acted as sub-conductor to Mendelssohn at Leipzig, and after the death of the latter conducted alone till the spring of 1848, when he returned to Copenhagen for good, to occupy a post as organist and to conduct the concerts of the Musikverein. In 1861, at the death of Glaser, he was appointed Hofcapellmeister, and received the title of Professor of Music; and he is still busy composing, teaching, and conducting. He visited England for the first time in 1876, to conduct his 'Zion' and 'The Crusaders' at the Birmingham Festival.

The intimate friend of Mendelssohn and Schumann, Gade is in some sense their disciple; his earlier works showing faint traces of the influence of the former as his later works do that of the latter. Still Gade's distinguished and amiable musical physiognomy is far from a mere reflex of theirs; he has always had something to say for himself, and has from the first contrived to say it in a manner of his own. His musical speech is tinged with the cadences of Scandinavian folk-song, and almost invariably breathes the spirit of northern scenery. All his works show the same refined sense for symmetry, for harmonious colouring and delicate sentiment. His themes, if rarely vigorous or passionate, are always spontaneous as far as they go, and never without some charm of line or colour. As with a landscape painter the fascination of his pieces lies in the peculiar poetical impression conveyed by the entire picture rather than by any prominent details; and as in a landscape this fascinating total impression is always the result of perfect harmony of colour, so in Gade's works it is traceable to the gentle repose and proportion of his themes and the suave perfection of his instrumentation.

Gade has published 7 symphonies, op. 5, 10, 15, 20, 25, 32, 45, in C minor, E, A minor, B flat, D minor (with Piano), G minor, and F respectively; five overtures — Nachklang aus Oesian' (op. 11), 'Im Hochland' (op. 7), in C (op. 14), 'Hamlet' (op. 37), 'Michael Angelo' (op. 39); the cantatas 'Comala' (op. 13), 'Frühling fantasie' (op. 23), 'Erlkönig' 'Toscher' (op. 30), 'Die heilige Nacht' (op. 40), 'Frühlingshobezehaft' (op. 35), 'Die Kreuzfahrer' (op. 50), and Zion; and an octet (op. 17), sextet (op. 17), and quintet (op. 8) for strings; a trio called 'Novelleiten' for pianoforte and strings; two sonatas for pianoforte and violin in A and D minor, of which the second is particularly good; many choral songs for mixed and for male voices; songs for one voice with pianoforte, and a number of solo pieces for the pianoforte for two and four hands, of which the sonata (in E minor, op. 28) the sketches called 'Aquarell,' and the Volkslände (op. 31) are the best. [E.D.]

Gadbsby, Henry, son of a musician, born at Hackney Dec. 15, 1842, entered St. Paul's choir in 1849, at the same time with Dr. Stainer, and remained till 58. The instruction in harmony which he and Stainer, as an exception due to their musical faculty, received from Mr. W. Bayley, the then master of the boys, is virtually the only teaching that Mr. Gadbsby ever received, the rest is due to his own perseverance.

Mr. Gadbsby's published works are the 13th Psalm; a Cantata (1862); 'Alice Brand,' Cantata (1870); Festival Service for 8 voices (1872); Concert overture, 'Andromeda' (1873); String Quartet (1875); Andante and Rondo piacevoi, F. P. and Flute (1875); music to Alcestis (1876). In addition to these he has (1878) in MS. 3 Symphonies, in C, in A — portions of which have been played at the Crystal Palace — and in D; Overtures to the Golden Legend and 'Witches' Frolic,' and an Intermezzo and Scherzo (all performed at the Crystal Palace), as well as many Songs, Part-songs, Anthems, and Services. [G.]

Gänsbacher, Johann, Capellmeister of the Cathedral at Vienna, born May 8, 1778, at Sterzing in the Tyrol. At 6 years old he was a chorister in the village church of which his father was choirmaster. Later he learnt the organ, piano, cello, and harmony at Innspruck, Halle,
GÄNSBACHER.

and Botzen. In 1795 he entered the University of Innsbruck, but on the formation of the Landsturm in 1796 served as a volunteer, and won the gold ‘Tapferkeits-medaille.’ In 1801 he was in Vienna, studied under Vogler and Albrechtsberger, and was recommended as a teacher by Haydn, Gyrowetz, and distinguished patrons. He next accompanied Count Firmian to Prague, and devoted himself entirely to composition. In 1809 he was at Dresden and Leipzig, revisited his home, and in the following year settled for a time in Darmstadt to renew his studies under Vogler. Weber and Meyerbeer were his fellow-pupils, and the three formed a lasting friendship. Weber especially retained a sincere affection for him, took him to Mannheim and Heidelberg, where Gänbsacher assisted in his concerts, and at a later time proposed to him to compete for the vacant post of Court Kapellmeister in Dresden. Meantime Gänbsacher lived alternately in Vienna, where he became acquainted with Beethoven, and Prague, where he assisted Weber with his ‘Kampf und Sieg.’ He also served in the war of 1813, went to Italy as captain in military service, and was even employed as a courier. This unsettled life at length came to a satisfactory end. At the time that Weber was suggesting his settling at Dresden, the Kapellmeistership of the cathedral at Vienna fell vacant by the death of Preindl (Oct. 1823); Gänbsacher applied for it, was appointed, and remained there for life. He died July 13, 1844, universally respected both as a man and an artist. As a composer he belongs to the old school; his works are pleasing but betray by their solidity the pupil of Vogler and Albrechtsberger. His compositions number 216 in all, of which the greater part are sacred,—17 masses, 4 requiems, 2 Te Deums, offertories, etc. He wrote also a symphony, several serenades, marches, and concerted pieces; pianoforte pieces with and without accompaniment; songs accompanied by various instruments; music to Kotzebue’s ‘Die Kreuzfahrer’; a Liederspiel, etc. Two requiems, 3 masses, and several smaller church works were published by Spina and Haslinger; 3 terzettes for 2 sopranis and tenor (op. 4) by Schlesinger; Schiller’s ‘Erwartung’ by Simrock; and songs and trios by various publishers. A song of his is given in Ayrtom’s ‘Sacred Minstrelsy.’

His son Dr. Joseph, born 1829, is now a valued teacher of singing in Vienna, and professor at the Conservatoire.

[C. F. P.]

GAFORI, FRANCHINO, or FRANCINUS GAFRITUS, born at Lodi Jan. 14, 1451, a priest and a writer on music. His first instructor was Goodenag, or, as he latinised his name, Bonadies. Circumstances led him to Mantua, Verona, Genoa, and in 1478, in company with the fugitive doge Adorno, to Naples. There he found Tintor and two other great Italian musicians, Garnier and Hycart; and there he remained for more than two years till driven back to Lodi by war and the plague. He passed a short time as maestro di capella at Monticello and Bergamo, and in 1484 became attached to the cathedral at Milan, where he died June 24, 1522, still in full vigour. His works are as follows:—‘Theoriciun opus harmonice discipline’ (Naples 1480); ‘Practica musice’ (Milan 1496); ‘Angelicum et divinum opus musicum’ (Milan 1508, in Italian); ‘De harmonia musicorum instrumentorum opus’ (Milan 1518); ‘Apologia adversus Spatarium’ (Turin 1520). Works with other titles are but editions or abridgments of the above. Though a man of much learning and research, and in some respects a pedant—witness the headings of his chapters and the terms he coined—Gafori was no mere archaologist. He addressed himself to the wants of his time, and in consequence enjoyed for long a wide and special authority. His great drawback was his overweening conceit, often displayed in the very titles of his books. Hawkins has devoted chapters 72, 73, 74, and 75, of his History to him, and has given copious extracts from the ‘Practica musice,’ his most important work, and the ‘Apologia.’

Gagliano, a celebrated family of violin-makers at Naples. ALESSANDRO, the first, worked from about 1695 to 1725. His work, like that of his sons, is good and substantial, but it exhibits the same unattractive greyish-yellow varnish which was used by the sons. Alexander calls himself ‘alumnus’ of Stradivarius, and all the Gaglianos worked more or less on the Stradivari model. His sons, NICOLO (1700-40) and GIOVANNI (1710-50), made a large number of good instruments. His grandson, FERDINANDO (1736-81), son of Nicholas, like all his Italian contemporaries, exhibits a marked decline. The later Gaglianos established a manufactory of violin-strings, which to this day enjoys a worldwide reputation.

[O. D.]

GALEAZZI, FRANCESCO, a violin-player, born at Turin in 1738 (Fétis says 1758) and for many years leader of the band at the Teatro Valle at Rome. He deserves special notice, not so much as a composer of numerous instrumental works, as the author of one of the earliest methodical instruction-books for the violin, which bears the title of ‘Elementi teoretico-practici di musica, con un saggio sopra l’arte di suonare il violino, analizzata,’ Rome 1791 e 1796. He died, according to Fétis, in 1819.

[O. D.]

GALERATTI, CATERINA, a contralto singer, who appeared in the early times of Italian Opera in London. In 1714 she made her début, Jan. 9, in the pasticcio ‘Dorinda.’ She sang also in ‘Creso,’ in a revival of ‘Rinaldo,’ and in ‘Arminio,’ and had a benefit, ‘by command,’ that year. In 1713, Mar. 16, she signed a petition (in the possession of the writer), together with Mrs. Barbier, Margherita de l’Epine, T. Robinson, and Valentino Urbain, for the better regulation of their benefits. Six years later, we find her again singing in ‘Astarto,’ ‘Radamisto,’ and ‘Numitor.’ In the next year, 1721, she took prominent parts in ‘Muzio Scevola,’ ‘Arsinoe,’ and ‘L’Odio e L’Amore,’ after which her name does not occur again.

[J. M.]

GALIMATHIAS. A French term of very
doubtful derivation (Littéré), meaning a confused unintelligible affair. 'Galimathias musicum' is a comic piece of music for Orchestra with Clavier and other instruments obligato, composed by Mozart in 1766 at the Hague, for the festivities at the coming of age of William of Orange the Fifth (March 8). Mozart, then on his road from London, was just 10 years old. The piece is in 13 short numbers, ending with a variation on the Dutch national air of 'Wilhelmus van Nassau' (Kochel, No. 32; O. Jahn, 2nd ed. i. 44.) In a letter of Feb. 5, 1783, Mozart speaks of a galimathias opera—'Gallicus cantans, in arbore sedens, gigiri faciens.'

GALITZIN.

NICOLAS BORISOWITSCH, a Russian Prince who is immortalised by the dedication to him by Beethoven of an overture (op. 124) and 3 quartets (ops. 127, 130, 132). Of his birth nothing is known; he died on his estates in the province Kurski in 1866. In 1804-6 he was in Vienna, and doubtless made the acquaintance of Beethoven and his music at the house of Count Rasomowsky, the Russian ambassador, for whom at that very date Beethoven wrote the 3 quartets (op. 59) and at that of the Count von Browne, an officer in the Russian service, for whom Beethoven had written several works (ops. 9, 10, 22, etc.). In 1816 Moscheles met him at Carlsbad, and speaks of him as a practical musician (Leben, i. 27). In 1812 he was married and living in Petersburg in very musical society, his wife an accomplished pianoforte-player and he himself a cellist and an enthusiastic amateur. At this time, Nov. 9, 1812, he wrote to Beethoven a letter full of devotion, proposing that he shall compose new quartets at his own price, to be dedicated to the Prince. Beethoven accepts the offer (by letter, Jan. 25, 23), and fixes 50 ducats (say £23) per quartet as the price. Feb. 19 the Prince replies, that he has 'given an order' for 50 ducats to his banker, and will immediately remit 100 more for the two others. May 5, 23, he writes again, 'you ought to have received the 50 ducats fixed for the first quartet. As soon as it is complete you can sell it to any publisher you choose—all I ask is the dedication and a MS. copy. Pray begin the second, and when you inform me you have done so I will forward another 50 ducats.'

From this time the correspondence continues till Beethoven's death. Galitzin's further letters—in French, 14 in number—are full of enthusiasm for Beethoven, pressing money and services upon him, offering to subscribe for mass, symphony, and overture, and volunteering his willingness to wait for 'the moments of inspiration.' In fact he had to wait a long time. The first quartet (in Eb, op. 127) was first played at Vienna, March 6, 1825, and is acknowledged by the Prince on April 29. The second (in A minor, op. 132) was first played Nov. 6, 25, and the third (in Bb, op. 130) on March 21, 26. These were received by the Prince together, and were acknowledged by him Nov. 22, 26. He also received a MS. copy of the Mass in D and printed copies of the 9th Symphony and of the two overtures in C, the one (op. 124) dedicated to him, the other (op. 115) dedicated to Count Radziwill. Thus the whole claim against him was—Quartets, 150 ducats; Overture (op. 115), 25 ducats; Mass, 50 ducats; loss on exchange, 4 ducats; total, 292 ducats, not including various other pieces of music sent. On the other hand he appears, notwithstanding all his promises, to have paid, up to the time of Beethoven's death, only 104 ducats. It should be said that in 1826 war and insurrections had broken out in Russia, which occupied the Prince and obliged him to live away from Petersberg, and also put him to embarrassing expenses. After the peace of Adrianople (Sept. 14, 49), when Beethoven had been dead some years, a correspondence was opened with him by Hotschevar, Carl van Beethoven's guardian, which resulted in 1833 in a further payment of 50 ducats, making a total of 154. Carl still urges his claim for 75 more to make up the 150 for the quartets, which Galitzin in 1835 promises to pay, but never does. In 1852, roused by Schindler's statement of the affair (ed. i., pp. 162, 3), he writes to the Gazette Musicale of July 21, 1852 a letter stating correctly the sum paid, but incorrectly laying it all to the account of the quartets. Other letters passed between him and Carl Beethoven, but they are not essential to the elucidation of the transactions. There can be no doubt that Galitzin's intentions were excellent, that the world owes to him the existence of the three Quartets, and that he was lavish of admiration and promises to pay. No doubt, too, he had to wait a long while, and to undergo a great deal of disappointment, but this he ought to have known was inevitable in dealing with a man of Beethoven's temperament, whose mode of production has been elsewhere shown to have been so slow and uncertain. [See p. 174]. For the payments of 50 and 25 ducats he had more than ample compensation in the copies of the Mass and the Overture, the pleasure he derived from them, and the credit and importance they must have given him in the musical circles of Russia. For the copies of Sonatas, Overture (op. 115), Terzet, and other works sent him by Beethoven, he appears to have paid nothing, nor can he justly demur to Beethoven's having sold the quartets to publishers, or performed them in public, after the carte blanche which he gives him in his third letter, where all he stipulated for was the dedication and a MS. copy.

The son of the preceding Prince GEORGE GALITZIN, was born at St. Petersburg in 1823, and died in Sept. 1872. He was not only a great lover of music, like his father, but was a composer of various works for orchestra, chamber, and voices, and an able conductor. In 1842 he founded in Moscow a choir of 70 boys, whom he fed, clothed, and educated. It was for long one of the sights of the city. He also maintained an orchestra, with which he gave
GALITZIN, public concerts, visited England and France in 1860. [A.W.T.]

GALLENBERG, Wenzel Robert, Graf von, of an old Carinthian family, born at Vienna Dec. 28, 1783, died at Rome March 13, 1839, has his place in musical history as a prolific composer and in virtue of his indirect connexion with Beethoven.

His passion for music, manifested at a very early age, led him to forego the advantages of an official career and to devote himself to the art. His master in the science was Albrechtsberger. On November 3, 1803, being then not quite twenty, he married the Countess Julie Guicciardi, who had been the object of one of Beethoven’s transient but violent passions. [GUICCIARDI.]

During the winter following, young Gallenberg made his appearance in Wirth’s Sunday Concerts as author of several overtures, which made no impression. In 1805 we find the youthful couple in Naples, where at the great festival of May 31, 1805, in honour of Joseph Bonaparte, Gallenberg prepared the music, which was mostly of his own composition — 3 overtures, 8 pieces for wind band, and dances for full orchestra. It was greatly applauded, and was doubtless one cause of his being appointed a year or two later to the charge of the music in the court theatre. The ballet troupe was one of the finest in Europe, and Gallenberg embraced the opportunity of improving the Neapolitan school of instrumental music by giving frequent adaptations of the best German productions—complex movements from Mozart, Haydn, Cherubini, and others, which opened new sources of delight, and afforded young composers new standards of excellence. Thus what the Neapolitan school had done for opera in Germany during the last century, was in some degree repaid by Gallenberg in this.

When Barbeia undertook the management of the court theatre at Vienna (Dec. 21, 1821), he introduced Gallenberg to assist in the management—an arrangement which, however, existed but two years. In Jan. 1829 Gallenberg himself became lessee of this theatre on a contract for 10 years, which, though at first successful, soon came to an end from want of capital. From the autumn of 1816 to the spring of 1838 we again find him in Naples employed by Barbeia as ballet composer and director; and in March, 1839, we read of his death at Rome at the age of 56.

Gallenberg wrote from forty to fifty ballets, but the local records alone retain even the names of most. We add the titles of a few which in their day were reported as of some interest to the general musical public.

‘Samson’ (Naples and Vienna, 1811); ‘Arinace and Telemaco’ (Milan, 1813); ‘I Riti Indiani’ (Do. 1814); ‘Amleto’ (Do. 1815); ‘Alfred der Grosse’ (Vienna, 1820); ‘Joan d’Arc’ (Do. 1821); ‘Margaret’ (Do. 1822); ‘Imsaans Grab’ (Do. 1823); ‘La Caravana del Cairo’ (Naples, 1824); ‘Ottavio Pinelli’ (Vienna, 1828); ‘Das befruite Jerusalem’ (Do. Do.); ‘Cesar in Egypten’ (Do. 1829); ‘Theologia’ (Do. 1831); ‘Orpheus und Eurydice’ (Do. Do.); ‘Agneas und Frit Henri’ (Do. 1833); ‘Biancas Wahl’ (Do. 1835); ‘Laetons Rache’ (Do. 1838). [A.W.T.]

GALLI, CORNELIO, a native of Lucca, one of the Gentlemen of the Chapel to Queen Catharine in the time of Charles II. Mr. Berenclow told Humphrey Wanley, that he was a great master of the finest manner of singing, and was one of the first who introduced it into England. [J.M.]

GALLI, FILIPPO, was born at Rome in 1783. Though destined for the clerical profession, young Galli’s strong taste for music proved insurmountable. When only ten, he had developed a musical talent beyond his age, and was remarked as a player and accompanist. His voice, when formed, was a fine tenor. At the age of 18 he married. Compelled by circumstances to choose a career, he selected that of Opera, and made his début, in the carnival of 1804, at Bologna. He met with a brilliant success, and became one of the first of Italian tenors; but six years afterwards a serious illness changed his voice completely, and made it a bass. Fainiello persuaded him to cultivate his new voice, and profit by the change. This he did, and became one of the greatest bass cantanti that his country has produced. His first appearance in his new quality was in the carnival of 1812 at S. Moeb in Venice, in the ‘Inganno Felice’ of Rossini. He sang next at Milan, and then at Barcelona. Rossini wrote for him the parts of Fernando in ‘La Gazza Ladra’ and of ‘Maometto.’ Galli appeared for the first time at Paris, Sept. 18, 1821, in the former, and, though singing out of tune in the first act, achieved a considerable success on the whole. He returned to Paris in 1825, and made a great sensation; but his vocalisation had become rather slow and heavy. This defect was noticed when he came to London. Ebers engaged him with Zuechelli for the season of 1827, and his salary was fixed at £100. He made his first appearance, as usual, in ‘La Gazza Ladra.’ His voice was less flexible than Zuechelli’s, but its tone was deep and full, and, according to Rossini, he was the only singer who ever filled the part of Assur satisfactorily. In 1828 Galli went to Spain; thence to Rome and Milan in 1830. In the following year he went to Mexico, and remained attached to the Opera in that city from 1832 to 1836. In 1839 and 40 he was singing at Barcelona and Milan, but was at length obliged to accept the place of chorus-master at Madrid and Lisbon. Amiable and cultivated, Galli had but one fault, that of boundless extravagance. At the end of 1842 he arrived at Paris in the greatest want, and, as a charity, obtained a professor’s place at the Conservatoire. His chief income was derived from a yearly benefit concert, at which the Italian singers performed. Of this he was deprived in 1848. He then fell into great misery, and died June 3, 1853. [J.M.]

GALLI, SIGNORA, a mezzo-soprano, who made her début in Galuppi’s ‘Enrico,’ Jan. 1, 1742, in London. She and Frazi, ‘after transplantation
from Italy, took root in this country, and remained here in great public favour, for many years’ (Burney). Galli was frequently employed in male parts on the stage. Though her manner was spirited and interesting; she was little noticed by the public till she ‘sung in Handel’s ‘Judah,’ 1746, when she gained such applause in the air ‘Tis Liberty,’ that she was encored in it every night, and became an important personage among singers. She had already sung in ‘Joseph,’ 1744, and she subsequently performed principal parts in ‘Joshua,’ ‘Solomon,’ ‘Susanna,’ ‘Theodora,’ ‘Jephtha,’ &c. She is said to have been a favourite pupil of Handel (Cradock). Twenty years later she sang in Sacchini’s ‘Perseo’ (1774) and ‘Motezuma’ (1775). She became the companion of the celebrated Miss Ray, and was with her when she was assassinated by Hackman, April 7, 1779. She afterwards fell into extreme poverty, and, about the age of seventy, was induced to sing again in oratorios. She appeared at Covent Garden as late as 1797. Lord Mount-Edgcumbe had dressed her curiously to go, and heard her sing ‘He was despised’ in the Messiah, cracked and trembling, but it was easy to perceive that her school was good. She died in 1824. [J.M.]

GALLIA. A ‘Motet’ for Soprano solo, Chorus, and Orchestra; the words from the Lamentations, music by Gounod: first performed at the Opening of the International Exhibition, Albert Hall, London, May 1, 1871. [G.]

GALLIA, MARIA, incorrectly called MARIA MARGHERITA by Burney, was a sister of Margherita de l’Epine, and pupil of Nicolao Haym. She appeared for the first time at the Lincoln’s Inn Fields Theatre in 1703. She sang in 1706 and 8 in ‘Camilla,’ in the libretto of which she is called JOANNA MARIA. In the former year she also performed the principal role in the ‘Temple of Love’ by Saggione, to whom she was then married. Documents (in the possession of the present writer), signed by this composer, and by his wife as Maria Gallia Saggione, show that they received respectively £150 and £700 for a season of nine months,—large sums at that early date. Gallia appeared in Clayton’s ‘Rosemond’ at its production in 1707. She sang songs also at the Haymarket Theatre in ‘Italian and English,’ to strengthen the attraction (Daily Courant). At this time she must have been very young; for we find her singing in ‘Alexander Balus,’ ‘Joshua,’ &c. in 1748; unless, indeed, her name is incorrectly put for that of Galli. [J.M.]

GALLIARD (Ital. Galliarda; Fr. Gaillarde). An old dance, as its name implies, of a merry character. ‘I did think,’ says Shakespeare, ‘by the excellent constitution of thy leg that it was formed under the star of a galliard.’ It was generally in 3-4, but sometimes in common time. It was described by Praetorius as ‘an invention of the devil,’ and ‘full of shameful and obscene gestures, and immodest movements.’ From the fact of its coming from Rome it was also called

ERRONEOUSLY attributed to Greber by Burney.

ROMANESCA. Its rhythms were strongly marked. The following quotation gives the opening bars of a gagliarda of the 17th century:

[Music notation]

GALLIARD. JOHN ERNEST, son of a per- ruquier of Zell, in Hanover, where he was born about 1687. He studied composition under Farnelli—uncle of the singer, and director of the concerts at Hanover—and Steffani. He soon attained distinction as a performer on the oboe, and coming to England about 1760 was appointed chamber musician to Prince George of Denmark. On the death of Dragli, the then sinecure appointment of organist at Somerset House was bestowed upon him. He speedily learned English, and composed a Te Deum and Jubilate and three anthems (‘I will magnify Thee, O Lord,’ ‘O Lord God of Hosts,’ and ‘I am well pleased’), which were performed at St. Paul’s and the Chapel Royal on occasions of thanksgiving for victories. In 1772 he composed the music for Hughes’s opera ‘Calypso and Telemachus,’ which was performed at the Queen’s Theatre in the Haymarket. From about 1717 he was employed by Rich to furnish the music for the curious adumrations of masque and harlequinade which he exhibited under the name of pantomime, and produced several excellent compositions for pieces of that description. In 1728 he set for two voices, cantata-wise, the Morning Hymn of Adam and Eve from Milton’s ‘Paradise Lost.’ This admirable composition was afterwards enlarged by Dr. Benjamin Cooke by the addition of orchestral accompaniments and the expansion of some of the movements into choruses. In 1742 Galliard published a translation of Pier Francesco Tozzi’s ‘Opinioni di Cantori Antichi e Moderni, o sia Raccolta di Raccolte sopra il Canto Figurato,’ under the title of ‘Observazioni sopra il Florio Song; or, Sentiments on the Ancient and Modern Singers. In 1745 he had a benefit concert at Lincoln’s Inn Fields Theatre, at which were performed his music for the choruses in the tragedy of ‘Julius Cesar,’ by John Sheffield, Duke of Buckinghamshire, and a piece for 24 bassoons and 4 double basses. Galliard died early in 1749, leaving a small but curious collection of music, which was dispersed by auction after his decease. Besides the pieces mentioned he composed music for ‘Pan and Syrinx,’ opera, 1717; ‘Jupiter and Europa,’ pantomime, 1723; ‘The Necromancer;’ or, Harlequin Dr. Faustus,’ pantomime, 1723; ‘Harlequin Sorcerer, with The Loves of Pluto and Proserpine’ (the second title afterwards changed to ‘The Rape of Proserpine’), pantomime, 1725; ‘Apollo and Daphne;’ or, The Burgomaster tricked, pantomime, 1726; ‘The Royal Chace;’ or, Merlin’s Cave, a musical entertainment, 1736, in which occurred the famous hunting song ‘With early born’; which
the singing of Beard rendered so extremely popular; music for Lee's tragedy 'Edipus'; several cantatas, songs, solos for violin, bassoon, etc. At the time of his death he had nearly completed the composition of an Italian opera, 'Oreste e Pilade, overà la Forza dell'Amicizia.' Sir John Hawkins conjectured, from internal evidence, that Galliard made the translation of the Abbé Ragueneau's 'Parallel,' published in 1709 under the title of 'A comparison between the French and Italian Music and Operas, with Remarks,' and was the author of 'A Critical Discourse upon Operas in England, and a means proposed for their improvement,' printed at the end of that translation; whilst Dr. Burney, judging from the same evidence, was of a contrary opinion.

[W.H.H.]

GALLUS, JACOB, whose real name was HANDEL, born about 1550, a native of Kran (or Carniola); Capellmeister first to Staunius Pawlowski, Bishop of Olmütz, and afterwards to the imperial chapel at Prague, where he died much respected and bewailed July 4, 1591. He had a special privilege from the Emperor to publish his great work 'Handl Jac. Musici operis, harmoniarum 4, 5, 6, 8, et plurium vocum' (Prague, 4 vols. 1586, 7, 90), a collection of the greatest value. Gallus wrote in the old Church tunes, before the modern distinction between major and minor came into existence. His well-known motet (a 4) 'Ecce quomodo moritur justus' (which Handel borrowed for his Funeral Anthem), is contained in the collection just named, and is also printed (with 18 others) by him for 5, 6, and 8 voices in Bodenchatz's 'Florilegium Portense.' Froize's 'Musica divina' contains 11 motets, 3 Responsoria, a Missae, a Christus factus est, and a Te Deum, all by him.

[F.G.]

GALOP. A very spirited quick round dance in 2-crotchet time. The following bars from the opening of Schulhoff's Galop di bravura—now almost a classical composition—will give an idea of its rhythm:

\[\text{etc.}\]

Galops have one and sometimes two Trios, and are often written with an Introduction and Coda. The dance is of German origin, and its old name was Hopser or Rutscher—describing the step. It appears to have received that of Galop on its introduction into France about the beginning of the century, where it soon took root. [G.]

GALUPPI, BALDASSARE, born Oct. 18, 1706, on the island of Burano near Venice—whence he was known as Il Buranello—was first taught by his father, a barber, who played the violin at the theatre. At 16 he came to Venice, and earned his bread by organ playing. Through the intervention of Marcello he was admitted into the Conservatorio degli Incorabili, where he studied under Lotti. His first dramatic attempt, 'Gli amici rivali,' was hissed off the stage, but he was more fortunate with 'Dorinda' (1729) for which Marcello wrote the libretto. From this time his operas were performed throughout Italy. On April 8, 1762, he was appointed maestro di capella of St. Mark's and director of the Incorabili; but he shortly gave up these posts in order to go to St. Petersburg, where he had been invited by the Empress Catherine II. Having first improved the orchestra, no easy task, he produced his 'Didone abbandonata' with extraordinary success. He returned in 1768 to Venice, where Dr. Burney found him in 1770 prosperous and respected, and maestro of the Incorabili. Burney speaks of his 'fire and imagination,' and of the 'novelty, spirit, and delicacy' of his music. (Present State, 155, 174, 184.) His fecundity must have been remarkable; Fétis gives a list of 54 operas, 5 of which were written in one year. Though written with taste, and never overloaded, none of them have survived the Revolution of Rossini, fatal to so many of Galuppi's contemporaries. The autograph of the opera 'Il vilano Geloso,' which he composed conjointly with Gasmann, Marcello, Scarlatti, Franchi, Sacchini, Monse, and Venti, is now in Vienna; also a grand 'Credo,' 'Gloria,' and other church works. His church works are still occasionally performed in Venice. He also wrote for the Harpsichord, and a sonata of his of great beauty is printed in the 'Alte Clavier musik' of Pauer. He died Jan. 3, 1785.

[F.G.]

GAMBA, VIOLA DA. 579

GAMBA, VIOLA DA (gamba, Ital. for leg), —a knee-violin, as distinguished from viola da

braccio (braccio, Ital. for arm), or the viola to be played on the arm—is an obsolete stringed

P 2
instrument, played with a bow and held between the knees: a predecessor of the violoncello. It is of about the same size as the violoncello, but has a flat back, like a double-bass; the openings in the belly have not the f-shape, but are variously shaped, generally in a tin-cup fashion. The fingerboard was originally provided with frets, which were afterwards discontinued; it was mounted with 6 catgut strings, which were ultimately increased to 7, the lowest covered with wire. The two kinds were thus tuned:

GAMBUT. A word fast becoming obsolete in England, and meaning the Scale. It is derived from gama, the Greek name of the letter G, which was adopted by Guido d'Arezzo as the lowest note of his system, and thence became employed for the entire compass of a voice or instrument. The French word gama means strictly the scale. [See HAXACCOURD.]

In the old English Church writers 'Gamut' signifies the key of G; 'Blow in Gamut', for instance, being Blow's service in G. [G.]

GANDO, NICOLAS, type founder, born at Geneva early in the 18th century, resided first in Berne and then in Paris, where he established a foundry for a new musical type. His son, Pierre François, born at Geneva 1733, was his assistant and successor. They published "Ob-
reservations sur le traité historique et critique de M. Fournier, etc.' (Paris 1766), with the view of showing that Ballard's process was an imitation of Breitkopf's. It contained, amongst others, specimens of 6 pieces of ancient music printed by Ballard, and a Psalm by Roussier in Ganso's own characters, and printed by his process, the notes and the lines requiring a separate impression, and the effect resembling copper plate. Fournier replied (see his 'Manuel typographique,' pp. 289–366), criticising the Ganso and their type, which was however superior to his own, though inferior to those of Breitkopf in their own day, and still more to those of Duverger and others since. The father died in 1767, the son in 1800, both in Paris. [M.C.C.]

GANZ. A musical family of Mayence.
1. ADOLF, born 1740, 1796, a violinist, studied harmony under Holthusen; conductor at Mayence (1819), Capellmeister to the Grand Duke of Hess at Dusseldorf (1815); he composed melodramas, overtures, marches, Lieder, and choruses for men's voices.

2. His brother, MORITZ, a cellist of the old school, born 1804, was first cello under Adolph at Mayence, and (1816) in the royal band at Berlin, where he succeeded Duport and Romberg. In 1833, he visited Paris and London, returning to the latter in 37, when he and his brother Leopold played at the Philharmonic on May 1. In 1845, he led the violoncellos at the Beethoven Festival at Bonn. His tone is full and mellow, and his execution brilliant, though his style is of the old school. His compositions for his instrument are numerous, but few only have appeared in print.

3. The third brother, LEOPOLD, violinist, was born at Mayence 1806, played much with Moritz in the style of the brothers Bohrer, whom they succeeded in the royal band at Berlin (1825). Leopold was well received at the Hague, Rotterdam, and Amsterdam, and in 1837 visited England with his brother. They published duets in which their polished and brilliant execution had excited so much admiration. Leopold died in Berlin in 1869. Two sons of Adolph are known in the musical world—Edward, born at Mayence April 29, a pianoforte-player and pupil of Thalberg, died Nov. 26, 1869; and William (born 1830), who is well known in London as a teacher and accompanist. [M.C.C.]

GARAT, PIERRE JEAN, born at Ustarritz, April 25, 1764, died in Paris March 1, 1823, the most extraordinary French singer of his time. He was the son of an advocate, and destined for the bar, but early manifested a passion for music, which he studied under Franz Beck, composer and conductor at Bourdeaux. He seems however never to have gone deeply into the subject, for he was a poor reader, and owed his success to his natural gifts and the opportunity he enjoyed of hearing Gluck's works and of comparing the artists at the French and Italian operas in Paris. He possessed a fine-toned expressive voice of unusual compass, including both baritone and tenor registers, an astonishing memory, and a

prodigious power of imitation, and may fairly be said to have excelled in all styles; but his great predilection throughout his life was for Gluck's music. Having been the favourite singer of Marie Antoinette, who twice paid his debts, he fled from Paris during the Terror, and with Rode took refuge at Hamburg, where the two gave very successful concerts. On his return to France he appeared at the 'Concert Fédérale' (1795) and the 'Concert de la rue Cléry' with such brilliant success that he was appointed professor of singing at the Conservatoire in 1799. Among his pupils were Roland, Nourrit, Despréamons, Ponchard, Levasseur, Minis. Barbier-Walbonne, Chevalier-Branchu, Duret, Boulanger, Rigault, and Mlle. Duchamp, whom he married when he was 55. He retained his voice till he was 90, and when that failed him tried to attract the public by eccentricities of dress and behaviour. He composed several romances, 'Béliosare,' 'Le Ménestrel,' 'Je t'aime tant,' etc., extremely popular in their day, but now so monotonous and uninteresting as to make it evident that the style in which Garat sang them alone ensured their success.

GARCIA, a Spanish family of musicians, who have been well characterised as 'representative artists, whose power, genius, and originality have impressed a permanent trace on the record of the methods of vocal execution and ornament' (Chorley). The founder of the family, MANUEL DEL POPOLO-VICENTE, was born at Seville Jan. 22, 1775. Beginning as a chorister in the Cathedral at the age of 6, at 17 he was already well known as composer, singer, actor, and conductor. By 1804 he had established his reputation at home, and his pieces—chiefly short comic operas—were performed all over Spain. He made his début in Paris, Feb. 12, 1808, in Paër's 'Griselda,' singing in Italian for the first time. Within a month he had become the chief singer at that theatre. In 1809 he produced his 'Poeta calumniado,' originally brought out at Madrid in 1805. In 1811 he set out for Italy. At Naples Murat appointed him (1812) first tenor in his chapel. There he met Anzani, one of the best tenors of the old Italian school, by whose hint he profited largely. There also, still combining the rôles of singer and composer, he produced his 'Califo di Bagdad,' which obtained an immense success. In 1815 Rossini wrote for him one of the principal rôles in 'Elisabetta,' and in 1816 that of Almaviva. About the end of 1816 he returned from Naples to England, and thence to Paris, where he revived his 'Califo,' and produced 'Le Prince d'occasion,' and sang in Catalani's troupe, where he made a great hit as Paolino in the 'Marracini Segreto.' Annoyed by Catalani's management, he left Paris for London about the end of 1817. In the ensuing season he sang in the 'Barbiere' with Mme. Fodor, and in other operas, with much éclat. In 1819 he returned to Paris, and sang in the 'Barbiere,' not till then heard there. There he remained till 1823, performing in 'Othello,' 'Don Giovanni,' etc., and composing 'La mort du Tasse' and 'Florestan' for the
Grand Opéra, besides 'Faziolettto' at the Italienne, 'La Mounière' at the Gymnase, and others which never reached the stage. In the spring of 1823 he reappeared in London, where he was still a most effective singer (Ebers). Here he founded his famous school of singing. He sang in London again in 1824 in 'Zelmira' and 'Ricciardo e Zoraida.' In the same year his 'Deux contrats' was given at the Opéra Comique. In 1825 he was here again, his salary having risen from £260 (1823) to £1250. He continued to gain still greater fame by teaching than by singing, and his fertility as a composer was shown by at least 2 Italian operas, 'Astuzia e prudenza' and 'Un Avertemiento.' The education of his illustrious daughter Marie, subsequently Mme. Malibran, was now completed, and under his care she made her début. [See Malibran.] He then realised the project he had long entertained of founding an opera at New York, and set out with that object from Liverpool, taking with him an Italian company, which included the young Crivelli as tenor, his own son Manuel and Angriani, De Rosich, Mme. Barbieri, Mme. Garcia, and his daughter. At New York he produced no less than 11 new Italian operas in a single year. In 1827 he went to Mexico, where he brought out 8 operas, all apparently new. After 18 months' stay, he set out to return with the produce of this hard toil; but the party was stopped by brigands, and he was denuded of everything, including nearly £600 in gold.

Garcia now returned to Paris, where he reappeared at the Italienne. He then devoted himself to teaching; and died June 2, 1832. Garcia was a truly extraordinary person. His energy, resource, and accomplishments may be gathered from the foregoing brief narrative. His singing and acting were remarkable for verve and intelligence. He was a good musician, and wrote with facility and effect, as the list of his works sufficiently shows. Fétis enumerates no less than 17 Spanish, 19 Italian, and 7 French operas. Words and music seem to have been alike easy to him. His most celebrated pupils were his daughters Marie—Mme. Malibran, and Pauline—Mme. Viardot, Mmes. Rimbaud, Ruiz-Garcia, Mérimée-Lalande, Favilli, Comtesse Merlin; Adolphe Nourrit, Gérardly, and his son Manuel Garcia.

Manuel Garcia was born at Madrid, March 17, 1805. His education began early, and at 15 he received instruction in harmony from Fétis, and in singing from his father. In 1825 he accompanied his father to America. Once more in Paris (1829) he quitted the stage, and devoted himself to teaching. A little later he undertook a serious scientific inquiry into the conformation of the vocal organs, the limits of registers, and the mechanism of singing; of which the results were two—(1) his application of the Laryngoscope, the value of which is now universally recognised by physicians and artists, and (2) his 'Mémoire sur la voix humaine,' presented to the French Institut in 1840, which obtained for him the congratulations of the Academy, and may be said to be the foundation of all subsequent investigations into the voice. Appointed professor of singing at the Conservatoire, he published in 1847 his 'Traité complet de l'art du chant, en 2 parties,' 4to, which has been translated into Italian, German, and English, and has gained a world-wide reputation. Among his pupils may be mentioned Mmes. Jenny Lind, Catherine Hayes, and Henriette Nissen (afterwards Mme. Saloman), and M. Bataille. In 1850 Garcia resigned his position at the Conservatoire, and came to London. He is still a Professor at the Royal Academy of Music and one of the leading teachers of singing in London. [See also Malibran, and Viardot.]

GARDANE, Antonio, a composer, printer and publisher of music in Venice from 1538 to 1569. From and after 1557 his name is given as Gardano. After his removal his sons Cipriano and Annibale published a few works, and an Angelo Gardano, whose relationship does not appear, many more. There was an Alessandro in a small way at Rome. The Venice house lasted till 1619. Their publications consist of the Masses, Psalms, Motets, Madrigals, Canzonets, and other compositions, of Archilei, Jacquet, Lasso, Pror, Nanino, and other great Flemish and Italian writers, and fill many volumes. See Eitner, Bibliog. der Sammelwerke, etc. [G.]

GARDINER, William, the son of a stocking manufacturer at Leicester, was born in that town March 15, 1770. He became an assistant to his father in his business, to which he afterwards succeeded, and which he carried on during the rest of his life. But the taste for music never forsook him. His business occasionally required him to visit the continent, and he availed himself of such opportunities to become acquainted with the works of the best foreign composers, particularly of the great German masters, so that for a long period he knew more about their productions, especially those of Beethoven, than the majority of English professors. (See Thayer, Beethoven, i. 441.) Both at home and abroad he sought and obtained the acquaintance of the best musicians of all ranks, both professors and amateurs. In his youth he composed some songs and duets, which were published as the productions of 'W. G. Leicester.' He next produced, under the title of 'Sacred Melodies,' a selection of pieces by the best masters, chiefly foreign, adapted to English words, which he hoped might be adopted in our churches to the exclusion of the clumsy verses of Sternhold and Hopkins, and Brady and Tate. Six volumes of this work appeared at distant intervals, and it included a volume of selections from the works of English cathedral composers. It must be confessed that the Puritan plan was followed with the music in order to fit it to the words; yet, notwithstanding, the work had the merit of introducing to the notice of the English public many fine compositions. In 1817 Gardiner added notes to the translation of Bye's Life of Haydn' by Robert Brown, his fellow-townman, published in conjunction...
with translations of Schlütergroll's 'Life of Mozart,' and other pieces. He next compiled an oratorio, entitled 'Judah,' by adapting English words to music selected principally from the masses of Haydn, Mozart, and Beethoven, and connected by compositions of his own. He wrote to Beethoven offering him 100 guineas for an overture to this work, but received no reply, owing, as he supposed, to the miscarriage of his letter. In 1830 he published a work, entitled 'The Music of Nature; or, an attempt to prove that what is passionate and pleasing in the art of singing, speaking, and performing upon musical instruments, is derived from the sounds of the animated world.' The musical examples were published separately. In 1838 he published two volumes called 'Music and Friends; or, Pleasant Recollections of a Dilettante,—the utility of which is much impaired by its frequent inaccuracy,—with a third volume in 1853. In 1840 he adapted Pope's 'Universal Prayer' to music by Haydn, Mozart, and Beethoven. 'Sights in Italy, with some Account of the present state of music and the sister arts in that country' appeared in 1847. Besides these works Gardiner composed a few anthems. He died Nov. 16, 1853, in the 84th year of his age.

[Source: W.H.H.]

GARDONI, ITALO, born at Parma late in 1821, studied singing under De' Cesari. He made his début at Viadana in 1840 in 'Roberto Devereux.' In the same year he was engaged by Ronzani, with whom he went to Turin and Berlin, where he sang the rôle of Rodrigo, with Rubini as Otello. Rubini took a great fancy for the young artist, and predicted for him a brilliant career. Gardoni sang during two seasons at Milan, and afterwards at Brescia. Thence he went to Vienna, and sang, in company with Viardot, Albini, and Tadolini, in the 'Barbier,' 'Linda,' etc. In 1844–5 he appeared at the Académie Royale, creating the tenor parts in 'Murat Stuart,' 'L'Amour en perdue,' and 'L'Amour sans amour.' In Paris Gardoni remained for three years, singing the principal rôles in the 'Favorite,' 'Robert le Diable,' 'Charles Six,' etc. In 1847 he went to the Théâtre des Italiens, and in the same spring made his first appearance at Her Majesty's Theatre, and by his charm of person and of voice (somewhat slight though the latter has proved) did more to reconcile the public to the loss of Signor Mario than could have been expected. A word is his due,—as the due of a real artist, who has finished every phrase that he has sung, and has pointed every word that he has said. There has always been the real Italian elegance,—and that more universal elegance which belongs to no country,—in Signor Gardoni ('Chorley). Here he created the tenor rôle in Verdi's 'Masnadieri.' Since then, with the exception of a few seasons spent at St. Petersburg, Madrid, Amsterdam, and Rome, Gardoni has come every spring to London, and returned to Paris (Italiens) for the winter. Gardoni belonged to the mezzo carcattere class of tenors. His répertoire was rather exceptionally large; for he sung in the 'Barbier,' 'L'Italienne in Algeri,' and 'Le Comte Ory,' as well as in the 'Puritani,' 'Sonnambula,' 'Robert le Diable,' 'Masnadieri,' and Gounod's 'Faust.' He is a member of the Société de Bienfaisance Italienne of Paris, and a chevalier of the Contarina d'Italia.' He married a daughter of Tamburini Aug. 14, 1847; and in 1874 retired from the stage.

[J. M.]

GASPARINI, FRANCESCO, born at Lucca in 1665, according to Fétis, but the date is possibly somewhat too early. He was a pupil, first of Corelli and afterwards of Bernardo Pasquini, was Maestro di Coro at the Ospedale di Pietà in Venice, and a member of the Accademia Filarmonica. In 1735 he was elected maestro by the Chapter of St. John Lateran, but he was already in broken health at the time of his appointment, and retired upon half-pay in August of the following year. He retained his post nominally, with Girolamo Chiti for a conductor, until April 1772, when he died. The celebrated Benedetto Marcello was his pupil. His works were printed both at Venice and at Rome, and a correspondence between them, continued up to a few weeks before the death of Gasparini, testifies to the esteem in which the great scholar held his master. A professional conflict between Gasparini and A. Scarlatti, the origin of which was unknown to Bini, took the form of an exchange of cantatas, by no means a regrettable method of retort between rival and disputative artists.

Gasparini wrote equally well for the church and for the stage, and Fétis gives a list of no less than thirty-two of his operas. Several of them were favourites in London in the early part of the century. He also composed several cantatas. But the work by which he is now best remembered is his treatise upon accompaniment intituled 'L'Armonico pratico al cembalo, ovvero regole, osservazioni ed avvertimenti per ben suonare il basso e accompagnare sopra il cembalo, spinetta ed organo.' This work was republished so lately as 1802 at Venice, and has maintained its position in Italy even since the appearance of the clearer and better arranged treatise of Fenaroli.

[E.H.P.]

GASSMANN, FLORIAN LEOPOLD, born May 4, 1723, at Brix in Bohemia: in 1736 ran away from his father who wished to educate him as a merchant. By playing the harp he worked his way to Bologna, where he studied for two years under Padre Martini. He then entered the service of Count Leonardi Veneri at Venice, and his compositions were soon in general request. In 1753 he was invited to Vienna as a ballet-composer. On the death of Reutter in 1771, the Emperor Joseph II. appointed him Court Capellmeister with a salary of 800 ducats. Very soon after entering on his new office he suggested the formation of the 'Tenkünstler Societat,' a Fund for the Widows and Orphans of Vienna musicians, a society which in 1762 was reorganised under the name of the 'Haydn.' See Pohl's 'Denkschrift,' etc. (Vienna 1871). Gassmann died Jan. 21, 1774, owing to a fall from his carriage. He composed 23 Italian operas, of which two were translated into German, 'L'Amor
artigiana’ by Neefe, and ‘La Contessina’ by Hiller. He also composed much church music, which Mozart thought more of than of his opera (Letter, Feb. 5, 1783). When at Leipzig, he said to Doles, who could not quite join in his praises, ‘Papa, if you only knew all we have of his in Vienna! As soon as I get back I shall study him in earnest, and hope to learn a great deal.’ Gassmann cannot be said to have exercised any special influence on the development of musical form effected during his time by Emanuel Bach, Haydn, and Mozart. His best pupil was Salieri, who after their father's death educated Gassmann's daughters as opera-singers. [F.G.]

GASTOLDI, GIOVANNI GIACOMO, born at Caravaggio about the middle of the 18th century; maestro di capella in Mantua, and later in Milan (1802). He was the author of ‘Balli da suonare, cantare e ballare’ (Venice 1591–2; Antwerp 1596), which are said to have served Morley as models for his ‘Ballets or Faux las.’ Two of them are well known to English amateurs under the names of ‘Maidens fair of Mantua’s city,’ and ‘Soldiers brave and gallant be.’ Two others, ‘Viver lieto Voglio,’ and ‘A lieta vita,’ are given by Burney in his History of Music. These were adopted as Hymn tunes by Lindemann in 1802 to the words ‘Jesu, wohlt uns weisen,’ and ‘In dir ist Freude’ respectively (Düring, Choralkunde, 45). [F.G.]

GATES, BERNARD, Second son of Bernard Gates of Westminster, Gent. Born probably in 1685; is mentioned in 1702 as one of the Children of the Chapel Royal; was made a Gentleman of the same in 1708 in place of John Howell, who died July 15, and Master of the Choristers, Michaelmas 1740, vice J. Church; resided in James Street, Westminster. In 1758 he retired to North Aston, Oxford, where he died, Nov. 15, 1773, aged 83. He was buried in the North Cemetery, Westminster, near his wife and ‘daughter.’ He held the sinecure office, now abolished, of Tuner of the Regals in the King's household—see his epitaph at Aston.

His chief claim to mention is his connexion with Handel, whose ‘Esther’ was acted under Gates’s care by the Children of the Chapel Royal at his house Feb. 23, 1732, and afterwards at the King’s Theatre, Haymarket. He also sang one of the airs in the Döttingen Te Deum on its first performance. [G.]

GAUNTLETT, HENRY JOHN, eldest son of the Rev. Henry Gauntlett, was born in 1806 at Wellington, Salop. He was educated by his father, and at an early age evinced an aptitude for music, especially for playing on the organ. His father was presented to the vicarage of Olney, Bucks, and there, at the age of nine, young Gauntlett entered on the duties of his first organist appointment. In 1826 he was articled to a solicitor. During his clerkship he pursued the study of law and music with equal assiduity, and in 1827 obtained the post of organist of St. Olave’s, Southwark, which he held for upwards of 20 years. In 1831 he was admitted a solicitor, and commenced practice in the City of London in partnership with a brother. About 1836, having attained a high reputation as an organist, he commenced his advocacy of a reform in organ building by the adoption of the C organ in the place of the old F and G instruments. He met with the strongest opposition, but finding a valuable auxiliary in William Hill, the organ builder (who, under his superintendence constructed the organs in St. Luke’s, Cheetham, Manchester; St. Peter’s, Cornhill; Ashton-under-Lyne church; Dr. Raffles’s chapel, Liverpool; and St. John’s, Calcutta; and reconstructed the large organs in Birmingham Town Hall, and Christ Church, Newgate Street), he attained his aim, and through his exertions the C organ was firmly settled in England. In 1836 he became organist of Christ Church, Newgate Street. In 1842 Dr. Howley, Archbishop of Canterbury, conferred on him the degree of Doctor of Music. About the same time he gave up the law and devoted himself wholly to music. In the year 1844 Gauntlett, in conjunction with Charles Child Spencer, drew attention to the subject of Gregorian music by the publication of the Hymnal for Matins and Evensong (Bell & Dalby). He took an active part in promoting the extension of choral worship, and composed many chants and anthems. With equal labour he laboured to increase the study of the works of Handel, Bach, Beethoven, Spohr and Mendelssohn, publishing arrangements of the choral and instrumental fugues of Bach; Beethoven’s choral works; Cherubini’s dittos; the Overtures and Choruses in Spohr’s ‘Crucifixion,’ etc., for the organ, with pedals. But it is as a composer and editor of psalm and hymn tunes that he will be best remembered. For upwards of 40 years he worked in that field with unwearyed enthusiasm, and there was scarcely a publication of any note issued during that period in which he was not engaged as editor, assistant, or contributor. Gauntlett also appeared as a lecturer on music and as a critic and reviewer, and able articles from his pen, abound in learning and spirit (the opinions confidantly expressed), will be found in the first 6 volumes of ‘The Musical World,’ in ‘The Morning Post,’ ‘The Orchestra,’ and ‘The Church Musician.’ After quitting St. Olave’s and Christ Church, Gauntlett was successively organist of a church at Kensington Park, of Union Chapel, Islington (for 13 years), and of St. Bartholomew the Great, Smithfield. He was chosen by Mendelssohn to play the organ part in his oratorio, ‘Elijah,’ on its production at Birmingham, Aug. 26, 1846. He died suddenly, from heart disease, Feb. 21, 1876.

Gauntlett’s principal publications, besides those mentioned, were ‘The Church Hymn and Tune Book’ (with Rev. W. J. Blew), 1845–51; Cantus Melodici, 1845; ‘The Comprehensive Tune Book’ (with Kearns), 1846–7; ‘The Hallelujah’ (with Rev. J. J. Waite), 1848–55; ‘The Congregational Psalmist’ (with Dr. Allen),

[St. Olave’s, Southwark, which he held for upwards of 20 years. In 1831 he was admitted a solicitor, and commenced practice in the City of London in partnership with a brother. About 1836, having attained a high reputation as an organist, he commenced his advocacy of a reform in organ building by the adoption of the C organ in the place of the old F and G instruments. GAVOTTE.

585

formed by the composer. On the foundation of the Conservatoire in 1794, Gaviniés was appointed to a professorship of the violin. He died at Paris in 1800.

In France Gaviniés is generally considered the founder of the great French school of violinists. This is true in one sense, as he was the first professor of the violin at the Conservatoire, but with such a predecessor as Leclair, the title appears at least disputable. Viotti is said to have spoken of him as the French Tartini. But, although there can be no doubt that Gaviniés did more than any one before him towards transplanting into France the true and earnest style of the great Italian school of violin-playing, it is impossible to rank him in any way with Tartini as a composer for the violin or even as a performer. His works, while not devoid of a certain pathetic dignity, do not shew an individual original style, and are in every respect inferior to Tartini's masterpieces. They are on the whole rather dry and laboured. On the other hand it must be granted that they indicate considerable advance in technical execution. His most celebrated work, "Les vingt-quatre Matinées," surpases in difficulty anything ever written by Tartini, and as we are assured that Gaviniés used to play them even in his old age with the greatest perfection, we must assume him to have possessed an eminent execution. But it cannot be denied that his manner of writing for the violin, and the peculiar class of difficulties which his studies contain, allow a tendency to go beyond the resources of the instrument—in fact, a tendency to exaggeration, such as invariably makes its appearance after a classical period in any art, and such as, in the art of violin playing in particular, is represented towards the end of the last century by the masters who lived after Tartini and before Viotti. It is for this reason that Gaviniés' Matinées cannot be ranked with the classical studies of Rode, Kreutzer, and Fiorillo. This however does not preclude their being both of interest and use to advanced students.

Capron, Robineau, and Le Duc ainfé, are the best known of Gaviniés' numerous pupils. Besides the Matinées he published 6 Concertos for the Violin, 2 sets of Sonatas for Violin and Bass (some of which have been recently republished by Alard and David), 3 Sonatas for Violin Solo (one of them entitled 'Le Tombeau de Gaviniés'). He also composed an opera which was played at the Comédie-Italienne in 1760.

GAVOTTE. A French dance, the name of which is said to be derived from the Gavots, or people of the pays de Gap in Dauphiné. Its original peculiarity as a danse gracie was that the dancers lifted their feet from the ground, while in former danse graces they walked or shuffled—(Litré). It is in common time, of moderately quick movement, and in two parts, each of which is, as usual with the older dances, repeated. In the original form of the dance the first part consisted of four and the second of eight bars; when introduced as one of the movements of a suite, it has no fixed number of bars. The following is
GAVOTTE.

The gavotte should always begin on the third beat of the bar, each part finishing, therefore, with a half-bar, which must contain a minim, and not two crotchets. Occasional exceptions may be found to the rule that the gavotte is to begin on the third crotchet, as, for instance, in that of No. 3 of Bach's 'Suites Françaises,' which commences on the first crotchet, of which, however, it should be noticed that in some editions it is termed an 'Anglaise.' In any case it is not strictly a gavotte. The same may be said of the 'gavotte' in Gluck's 'Orphée,' which begins on the fourth beat of the bar, and should therefore rather have been marked 'Tempo di Gavotte.'

A second gavotte frequently succeeds the first as a 'trio,' in the modern sense of that term. This second gavotte is either similar in construction to the first, as in Bach's Suite in B minor ('Französische Ouvertüre'), or is a Musette, i.e. founded on a 'drone-bass,' as in the third and sixth of Bach's 'Suites Anglaises.' The position of the gavotte in the suite is not invariable, but it usually follows the sarabande, though occasionally (as in Bach's Suite in B minor above referred to), it precedes it.

GAWLER, an organist in London in the early part of the present century, published a collection of psalm tunes with interpolations, under the title of 'Harmonia Sacra'; 'Dr. Watts's Divine Psalms'; 'Lessons for the Harpsichord,' and two sets of 'Voluntaries for the Organ.'

GAWTHORN, NATHANIEL, clerk at the Friday Lecture in East Cheap, published in 1730 a collection of psalm tunes in 4 parts under the title of 'Harmonia perfecta,' containing also some hymns and anthems, and an Introduction to Psalmody.

GAZZA LADRA, LA (the thievish magpie). A comic opera in two acts; libretto by Gherardini; music by Rossini; produced at La Scala, Milan, in the Spring of 1817, in London at the King's Theatre, March 10, 1821, and in Paris Sept. 18. In English (adapted by Bishop) as 'Ninetta, or, the Maid of Palaisseau,' at Covent Garden, Feb. 4, 1830.

GAZZANIGA, GIUSEPPE, one of the most celebrated opera composers of his time, born at Verona, Oct. 1743; pupil of Porpora, both in Venice and at San Onofrio in Naples. He also studied under Piccinni. Through Sacchini's influence his first opera 'Il finto cieco' was performed in Vienna (1770). Among his many operas may be mentioned 'Il conviastato di pietro,' the forerunner of 'Don Giovanni,' which had an extraordinary success in Venice (1787), Ferrara, Rome, Bergamo, and London, where it was performed repeatedly. Gazzaniga was afterwards maestro di capella at Cremona, where he devoted himself entirely to church music.

GEBAUER, FRANZ XAVER, born in 1784 at Eckersdorf, Glatz, Prussian Silesia, received his early musical education from his father, the village schoolmaster. In 1804 he became organist at Frankenstadt; and in 1810 went to Vienna, where he soon became known for his extraordinary execution on the Jews-harp, and lived by giving excellent pianoforte lessons, and playing the cello. In 1816 he was appointed Church-director of the church of St. Augustin, and there, thanks to his indefatigable efforts, the larger works of the great masters were satisfactorily performed. He was also one of the earliest and most active members of the 'Gesellschaft der Musikfreunde,' founded in 1812. In 1819, through his endeavours, were started the Spiritual Concerts, which continued in existence until 1848, and into the programmes of which none but sterner works were admitted. [See SPIRITUELLE CONCERTS.]

Gebauer was the first conductor, but did not long enjoy the fruit of his labours. In Oct. 1821 he returned from a journey to Switzerland seriously ill, and died in Vienna on the 13th Dec., sincerely regretted as a sterling musician and an upright man. He published a few Lieblieder, and left a small number of choral compositions in MS. He was intimate with Beethoven, who in a note preserved by Seyfried ('Beethovens Studien,' Anh. 36, and Nohl's Briefe, No. 254), pung upon his name in his favourite style, calling him 'Gebauer' and 'der Bauer.'

GEDACKT-WORK (i.e. gefedelt). All the Flue-stops of an Organ composed of pipes that are entirely covered or closed in at the top are members of the 'Gedackt' or 'Covered Work.' To this class therefore belong the Sub-Bourdon, 32; Bourdon, 16; Stopped Diapason, 8; and Stopped Flute, 4 feet. tone. When made to a 'small scale,' and voiced so as to produce a sweet tone, the adjective 'Lieblich' is prefixed, as Lieblich Bourdon, 16, Lieblich Gedackt, 8, Lieblich Flute, 4 feet. tone. Large stopped pipes are generally made of wood; the smaller ones either of wood or metal. Covered Stops were first made in Germany, in the early part of the 16th century.

GEIGEN-PRINCIPAL, i.e. Violin Division. An organ stop of 8 feet or unison pitch; crisp in tone, and much resembling the violin in quality. A 'viol and violin' stop originally formed one of the features in the choir organ of the instrument in the Temple Church, built by Father Smith in 1688; but seems to have been removed shortly afterwards to make room for an additional reed stop. The geigen-principal was first brought under notice in England in recent times by Herr Schultze, who introduced two, one of 8 feet and another of 4, into the admirable little organ he sent to the Great Exhibition of
GEIGEN-PRINCIPAL.

GEİN人为 KING.-E.I.H.

GELINEK, JOSEPH, secular priest, composer of variations for pianoforte, born Dec. 3, 1728, at Selcz in Bohemia, where his father was school-master. He was well-grounded in music at home, and on going to Prague to complete his philosophical studies took lessons from Segert in composition and organ-playing. In 1783 he became a divinity student at the General Seminar, the orchestra of which at that time executed standard works so well as to elicit praise from Mozart himself when in Prague. Mozart also applauded Gelinek's pianoforte playing, and encouraged him to persevere. In 1786 he was ordained priest, and became domestic chaplain and pianoforte teacher to Prince Joseph Kinsky, who settled an income upon him for life, and took him to Vienna, where he studied with Albrechtsberger. He then accompanied Prince Poniatowski to Rome, with the view to obtain further instruction, but illness obliged him to return to Vienna. There he became the favourite pianoforte teacher of the nobility, and was liberally paid. In 1795 he entered Prince Esterhazy's household as chaplain and music master, and remained there till his death, which took place in Vienna April 13, 1825. For Gelinek's relations with Beethoven see p. 1684; and Czerny in Pohl's 'Jahresbericht des Conservatoriums in Wien,' 1869-70.

Gelinek composed with ease and rapidity; both he and his publishers made large profits from his works, the variations in the fashionable style of the day especially having a ready sale. Of these alone there is a thematic catalogue (Offenbach, Andre) containing 98, with spaces for more. The monody which was one of their weak points is well hit in Weber's opusgram:—

"An den berühmten Variationen-Schmidt Gelinek.
Kein Thema in der Welt verschonte dein Genie,
Das simpelste allein—Dich selbst—variirt Du nie!"

Although at that time the rage, they are shallow and superficial; and like his fantasies, rondos, marches, dance-music and arrangements, his few sonatas, songs, etc. are all now forgotten. Notwithstanding considerable losses, Gelinek left 42,000 gulden (about 2,000) among his poor relations.

C.E.P.

GEMINIANI, FRANCESCO, an eminent violin-player and composer, was born at Lucca in 1660. His first teacher on the violin was Carlo Ambrogio Lonati, surnamed 'il Gobbo,' at Milan. He afterwards studied under Corelli at Rome, and is said to have had instruction in composition from Alessandro Scarlatti. Geminiani must be considered one of the foremost representatives of the school of Corelli, however different, owing to the peculiarity of his character and talent, he proved himself to be as a performer and composer from his great master. While classical beauty and imperturbable dignity were the main characteristics of Corelli's style, Geminiani's unbounded vivacity of temperament showed itself in his performances, which contemporary critics invariably describe as eccentric. Tartini is said to have spoken of him as 'il furibundo Geminiani.' This easily accounts for the fact that, however great his success as a solo-player, he failed as a leader and conductor, from want of the necessary calmness and control. Burney, on the authority of Barbella, that he lost the post of leader of the opera-band at Naples because 'none of the performers were able to follow him in his tempo rubato and other unexpected accelerations and relaxations of measure,' and that 'after this discovery he was never trusted with a better part than tenor during his residence in that city.'

In 1714 he came to England, and quickly gained a great reputation as a virtuoso, although he appears to have but rarely played in public, and to have supported himself by teaching and playing in the houses of his rich pupils. When invited to play at a court-concert, he only consented under the condition that Handel should accompany him. If nevertheless he failed to gain an established and secure position in life, this again is attributable to the peculiarity and eccentricity of his character, which did not allow him to make the best of his opportunities or to pursue any definite plan of life. While he made but rare use of his really great talent as a performer, he spent much time in writing theoretical works of but doubtful value. He also indulged in a foolish passion for dealing in pictures, without, we are assured, having much knowledge of the subject. This at one time involved him in difficulties and brought him even into prison, from which he was only extricated by Lord Essex, his friend and pupil. This same nobleman procured for him the post of conductor of the Viceroy's band at Dublin. It is supposed that Horace Walpole objected to this appointment on account of Geminiani being a Roman Catholic. At all events it was not Geminiani, but Dubourg, his pupil, who went to Dublin.

In 1748 he made a journey to Paris, where he remained till 1755. Nothing however is known about his doings there, except that he brought out a new edition of his Solo-Sonatas. From Paris he returned to London, and he died in 1761 at Dublin, where he was visiting Dubourg.

Geminiani and Versaeni (see that name), coming at about the same time to England, found the art of violin-playing in every respect in its infancy. Corelli's Solos were considered to afford almost insurmountable difficulties of execution. Now Geminiani not only played these, but in his own compositions shows considerable progress in the technique of the violin, by freely employing the shift, and by frequent use of double-stops. Burney naive enough to say that some of Geminiani's Sonatas were too difficult to be played by any one. His published compositions—Sonatas and Concertos for the violin—show him to have been a clever musician, but, with all his impetuosity, wanting in originality and individuality. His slow movements are more modern in feeling than most of Corelli's, bearing a certain likeness to Tartini's style, though without ever
equaling the best of that great master.
His Allegros have a more developed and freer form than those of Corelli, but it is gross exaggeration of Burney, to describe them as eccentric and rhapsodic.

The most valuable contribution however which he has made to the literature of the instrument is his 'Art of Playing the Violin. London, 1749.' This book, written in English, was the very first of its kind ever published in any country; six years earlier than Leopold Mozart's Violin-School. It has the great merit of handing down to posterity the principles of the art of playing the violin, as they were finally established by Corelli. The rules which Geminiani gives for holding the violin and bow, the management of the left hand and the right arm, are the same as are recognized in our day. In one particular point he even appears to have been in advance of his time, since he recommends the holding of the violin on the left hand side of the tail-piece—a practice now universally adopted and indispensable for a higher development of the technique—but, strange as it seems, not adopted either by Leopold Mozart or by the masters of the German school until the beginning of the present century.

His other theoretical works—a 'Treatise on Memory,' a 'Treatise on Good Taste,' 'The Art of Playing the Guitar,' 'The Art of Accompaniment'—are of little value, although they appeared not only in English, but in Italian, French, German, and Dutch.

Of original compositions he published the following:—XII Solos, op. 1. London 1716; Six Concertos in seven parts, op. 2. London 1732, and Paris 1755; in score; 6 Concertos, op. 3, London and Paris 1775; XII Solos, op. 4, London 1739; 6 Solos for Violoncello(731,1001),(786,1027)(780,1001),(837,1027)(841,1001),(896,1027); 5 (those are arrangements from the violin-solos); 6 Concertos, op. 6. London 1741; Six Concertos in 8 parts, op. 7; XII Sonatas for Violin, op. 11, London 1758; XII Trios and VI Trios, the latter arrangements of op. 1; Lessons for the Harpsichord, London. He also made and published in London an arrangement of Corelli's Solos, op. 5, as 'Concerti grossi.'

GEMSCHORN (i.e. Chanois horn), an organ-stop 8, 4, or 2 feet in length, the pipes of which, generally of metal, are taper shaped, being only about one-third the size at the top that they are at the mouth, with a tone somewhat lighter than that of a cylindrical stop of the same scale at the mouth; and very musical. It was first introduced here by Father Smith, who placed one in the choir organ at the Temple. It passed out of sight for many years; but was reintroduced by the late Mr. William Hill, and has remained in great favour among organists. [E J H]

GENELI, PIETRO, born Oct. 4, 1785, at Masserano, near Vercelli. His real name was Mercandetti, but his father becoming bankrupt changed his name and removed to Rome. Pietro studied music under Giovanni Massi, a pupil of Durante, and soon wrote masses and church music. In 1800 he produced his first opera, 'Gli Amanti ridicoli,' after which he travelled to Southern Italy, and coming back to Rome in 1801 composed a cantata, 'Roma Liberata,' and two operas, 'Il Duca Notolone' and 'Le Villans al cimento.' These were followed by 'Le Gelosie di Giorgio' (Bologna 1802); 'Pamela nubile' and 'La Calzolaja' (Venice 1802); 'Missantropia e pentimento,' after a play of Kotzebue's; 'Gli Effetti della somiglianza' (ibid 1805); and 'Don Chisciotto' (Milan 1805). These are for the most part opere buffe; and an attempt at opera semi-seria, 'Orgoglio e Umiliazioni' (Venice), was a failure. In 1807 he wrote 'L'Idolo Cinese' for San Carlo, and 'Lo Spesso in Beragio' for Florence. Many other comic operas were well received in Venice, especially 'Adelina,' a farce, 'La Moglie di tre mariti,' and his chief-d'œuvre 'I Bacanali di Roma' (Venice 1815). In the meantime Rossini had come to the front, and Geminiani's popularity suffered. After several doubtful successes he withdrew to Novara, and accepted the post of maestro di capella to the cathedral. In his retirement he studied Paganini's style, appropriating as much of it as he could; and in 1827 reappeared, first at Trieste and then at Venice, where his 'Francesca di Rimini' (Dec. 26, 1829) was a total failure. He returned to Novara, and died there Nov. 3, 1832. His operas number in all more than 45. Generali's reputation, says Fétis, rests on his having been the first to employ certain harmonies and modulations of which Rossini took advantage. In fact he was the true precursor of Rossini, but the latter possessed genius, while Generali had only talent. An 'Elogio' of him by C. Piccoli was published at Novara in 1833.

GENET, ELEAZAR, also called CARPENTRAS, after the French town in which he was born, was priest, singer, and composer, attached to the papal court in the time of Leo X. He was made a bishop in 1518, and was soon afterwards sent by the Pope on a mission to Avignon, where he seems to have spent the rest of his life. He once revisited Rome, and during his stay there his 'Lamento per la Lossa del Santo' for Holy Week were performed by his former colleagues. Struck by many defects, he made considerable alterations in his work, had a magnificent copy made, which is still preserved in the Pontifical Chapel, and wrote a dedication to Clement VII, who was Pope at the time. Of detached pieces by Genet in the various collections of the time, we know very few. Two motets from the 1st and 3rd books of the 'Motetti della Corona' (Petrucci, Fossatibrone, 1514), 2 psalms from the 'Psalmodia Selectorum Tom. II.' (Petrusius, Nuremberg 1539), and a few two-part motets printed by Gardano in 1543, a slender legacy, if in truth these had been all the works—and they were very nearly being all—that were to come to us; for Genet's position and the powerful patronage he enjoyed made him independent of the usual collections and publishers, and enabled him to bring out his works in an exceptional way, which almost resulted in their being lost to posterity. It was only a few years ago that a copy, the only one
known at present, of 4 splendid volumes, printed by De Channay for Genet at Avignon, was found in the Imperial Library at Vienna. These books are remarkable for being the first to introduce Briard's new types, in which the notes are round instead of square and diamond shaped, and, what is much more important, ligatures are abandoned, and the complicated system in which the same notes have different meanings at different times gives place to a simple method, such as we use at present, in which the notes bear at all times a fixed ratio to each other. This improvement, first introduced in the publication of Genet's works, may, we think, be fairly attributed to his suggestion. Of the 4 volumes the 1st contains 5 Masses—"Se misulex ne vient," 'A l'ombre d'un buissonnet,' 'Le cœur fut mien,' 'Forsoulement,' and "Encore iray je jouer." The 2nd volume contains Hymns for the principal church festivals of the year, the 3rd, Lamentations, and the 4th a collection of Magnificats. The composer, who was so beloved for a wide popularity in his lifetime, and wrote with the learned virgins of the Papal Chapel in his mind's eye rather than the general public, who scorned the popular editions and published his works for a chosen few, does not belé his character in the works themselves. We have in them music that appeals to serious and learned musicians alone. Solemn and dignified, the bishop-musician writes as if from his episcopal throne, unbending and severe in style, but appealing not in vain to the sympathy of his Roman colleagues, who indeed valued so highly and cherished so long the works he gave them, that 50 years after his death nothing less than the special command of Pope Sixtus IV could shake their firm adherence to the 'Lamentations' of Genet or cause them to recognize in place of them those of the popular Palestrina. Much of Genet's music was written in his spare hours while of conservative habits, his health allowed him by an igniting complaint which attacked him in the ears and brain, was beyond the experience of his physicians, and embittered the last years of his life.

[ J. R. S. B. ]

GERBER, Heinrich Nicolaus, born 1703 in the principality of Schwarzburg; son of a peasant, studied at the University of Leipzig, where his love of music found encouragement in the teaching and conversation of Sebastian Bach; in 1728 he was organist at Heringen, and 1731 court organist at Sondershausen. Here for the first time he felt himself safe, as, on account of his extraordinary height, he had been constantly pursued by the recruiting officers of Frederic William I. He composed much for clavier, organ, and harp; a complete Choralbuch, with figured basses; and variations on chorales, long and widely used. He also made musical instruments, and planned many improvements and new inventions. Among others a kind of rebeck, harpsichord-shaped, with a compass of 4 octaves; the keys liberated wooden balls which struck on bars of wood, and thus produced the notes. From 1749 Gerber was also court-secretary. He died Aug. 6, 1775.

His son Ernst Ludwig, was born at Sondershausen Sept. 30, 1746; learned singing and clavier from his father, and studied music from an early age. In 1765 he went to the University of Leipzig, but returned home in order to assist his father in his office, and succeeded him on his death. He then entered on those labours which finally conducted him to an end he himself scarcely contemplated, and by which he has earned the gratitude of all lovers of music. His love of musical literature suggested to him the idea of making a collection of portraits of musicians, for which he wrote biographies, mainly on the authority of Walther's Lexicon (1732). As Walther was at that time out of date, he procured the necessary additions, obtained biographical sketches of living musicians, took journeys, and tried to fill up the gaps by consulting all the books then in existence on the subject. Thus the idea suggested itself of adapting Walther's work to the wants of the time, and of writing a completely new work of his own, which eventually became the 'Historischer biographischer Lexikon der Tonkünstler' (2 vols. Leipzig, Breitkopf, 1790 & 92) translated into French by Choron (1819, 11). While writing musical articles and reviews for various periodicals (Erfurter Gelehrten Zeitung; Leipzig Allg. Musik. Zeitung from 1798, etc.; Becker's 'Literatur der Musik' contains a list of his scattered articles) he received from all quarters corrections and information of all kinds, which enabled him, or rather made it his duty, to prepare an enlarged edition. Accordingly his 'Neues hist. biogr. Lexicon der Tonkünstler' appeared in 4 vols. with 5 appendices (Leipzig, Kühnel, 1812, 14). This new edition did not supersede the former one, to which it often refers the reader; but rather completed it. Gerber took pains to keep up with the times, recorded events for after use, was continually adding to his collection of facts and music, and composed industriously pianoforte sonatas and organ preludes. Hoping to keep together the collection he had made at the cost of so much labour and pains, he offered it for sale to the Gesellschaft der Musikfreunde in Vienna, with the solitary stipulation that he should retain it during his own life. The price was fixed, and the negotiation completed in January 1815, but he still continued his additions, encouraged doubtless by the knowledge that his treasures would be in safe keeping, in a city so famed for its musical tastes. He was still court secretary at Sondershausen when he died, June 30, 1819, in universal respect; leaving behind him the reputation of one who, with singular disinterestedness and out of a true love for music, had devoted the energies of his whole life to a single end. His Lexicon forms the foundation of every undertaking of the same kind; and if new Dictionaries are to satisfy the wants of the age to the same extent that his did, their authors must possess industry as persevering, knowledge as eclectic, and a love of music as devoted, as that which inspired Gerber. [ C. F. P. ]

GERBERT vor HORN, Martin, an emi-
GERBERT.

Former writer on the history of music, born Aug. 12, 1720, at Horb on the Neckar. He received a thorough literary education, including music, at Ludwigshafen. In 1736 he entered the Benedictine monastery of St. Blaise in the Black Forest, was ordained priest in 1744, and appointed Prince-Abbot Oct. 15, 1764. Historical research was his favourite pursuit, and a taste for this he endeavoured to infuse into the convent. The library afforded him ample materials, and much valuable matter hitherto unused. But this was not enough. Between the years 1759-65 he travelled through Germany, France, and Italy, making important discoveries, and establishing relations with various learned societies. His acquaintance with Padre Martini at Bologna was of special service to him. Their objects were closely connected—Gerbert's work being a history of Church music, Martini's one of music in general. In 1762 Gerbert published his prospectus, and invited contributions, which were furnished him in abundance. The first volume was nearly complete when a fire at the monastery in 1768 destroyed all the materials which had been collected; in 1774, however, the complete work appeared at St. Blaise, in 3 vols. 4to, with 40 engravings, under the title 'De cantu et musica sacra prima ecclesiastica etate usque ad praesen temus'; a book which has ever since formed the foundation of all musical scholarship, although naturally requiring much correction at the present day. A description of it appears in Forkel's 'Geschichte der Musik,' which without Gerbert's work would possibly never have been written, or would at any rate have been published later and in a far less complete form. Ten years after, in 1784, appeared Gerbert's second great work 'Scriptores ecclesiastici de musica sacra potissimum,' 3 vols. also printed at St. Blaise; a collection of treatises by the most important writers on music, recently continued by Coussenmaker. Three monastic works, also printed at St. Blaise, deserve special mention, 'Itecm de musica, sacrorum et gloriarum' (1765); 2nd ed. 1773; German ed. by Köchler, Ulm 1767), which contains the account of his travels, and abounds in interesting particulars; 'Vetus liturgia alemanica' (3 vols. 1776); and 'Monumenta veteris liturgiae alemanica' (2 vols. 1777). He also made the Latin translation of 'Opusculum theologiam de Musica,' a treatise in 4 chapters written in old German by Notker (Labe) a monk of St. Gall in the 10th century (see Becker's 'Literatur der Musik,' p. 68). His other writings are mainly theological. Some oratorio was his composition were published at Augsburg.

Gerbert died May 13, 1793. He realised the ideal of virtue and industry in his illustrious order; his gentle character and engaging manners secured the friendship of all who came in contact with him. Bonnord (4 leagues from St. Blaise, and the chief town of the principality) is indebted to him for a hospital and house of correction, over the entrance of which is the inscription 'Dedicated by Martin II. to the poor, and to the improvement of mankind.' He also built the fine church of the Convent (after the model of the Pantheon at Rome), and founded and endowed an orphanage for the 5 surrounding districts. The peasants of the neighbourhood, of their own accord, erected his statue in the market-place of Bonnord, a most unusual tribute of respect. His memory still lives in the district. Carl Ferdinand Schmalholz, the able musical director of the Cathedral at Constance, possesses an excellent half-length oil picture of Gerbert. [C.F.P.]

GERMAN SIXTH. The third of the three varieties of sixth called in the old books French, Italian, and German sixths. It is the chord of the Augmented or Extreme Sixth when accompanied by the major third and fifth of its bass. [C.H.H.P.]

GERO, Jhan, commonly known as Maistre Jan, Jhan, or Jehan, and styled 'Joannes Gallus' in the title of one of his publications, was probably a native of France or Belgium. His earliest known work is a motet, 'Benignissem Domine Jesus,' in the 'Motetti della Corona' (Petrucci, Fossombrone 1519), so we may assume that he was born towards the close of the 15th century. He was chapel-master of the cathedral at Orvieto, and afterwards held a similar position at the court of Hercules II., Duke of Ferrara, and his successor Alfonso. Gero was a most voluminous composer of motets and madrigals. For the former, like Josquin and Lassus, he made choice of most important subjects, setting to music the ten commandments, the conversion of St. Paul, and parables from the New Testament. As a madrigal composer he was very successful, and enjoyed a lasting popularity. In a collection of madrigals for 3 voices printed by Gardane in 1597 (of which the bass part is in the British Museum) 20 numbers, more than a third of the whole, are by Gero. Eitner's 'Bibliographie der Musik-Sammelwerke' (Berlin, 1877) gives a list of more than 100 of Gero's motets and madrigals. Of these 32 appear in the 'Trium vocum canticiocentum' (Nuremberg, Petrucci, 1541), 14 in the Second Book of Madrigals (Venice, Gardane, 1543); and 9 in the 'Madrigals for 3 Voices' (Venice, Gardane, 1561). The rest appear in smaller numbers in various collections printed between 1519 and 1590. [J.R.S.B.]

GERNSHEIM, FRIEDRICH, eminent player, composer, and conductor, born of Hebrew parents at Worms July 17, 1839. He received his first instruction in music from his mother, an able pianiste, and was then put successively into the hands of Liebe, Pauer, and Rozenheim. He also learned the violin, and under Hauff the theory of music. His ability might have tempted him to become a virtuoso, but he fortunately preferred the different path, and took the Conservatorium at Leipzig, under Moscheles, Hauptmann, Ries, and Richter, during the years 1842-5. He underwent a thorough musical education. He followed
this up by a residence in Paris, where he was much esteemed as a teacher and player. Since then he has been successively at Saarbruck (1861); Cologne, as Professor of Pianoforte, Counterpoint, and Fuge (1865); Rotterdam, as conductor of the ‘Eruditio Musica,’ and of the Theatre (1874). His works consist of a Symphony, an Overture, a P. F. Concerto, 3 String Quartets, 2 P. F. ditto, several small works for Chorus and Orchestra. Songs, etc. His name is now well known in England, his trio for P. F. and Strings in F (op. 28) having been repeatedly given at the Popular Concerts, and a Quartet for ditto (op. 6) once, and other works at Chas. Halle’s and other concerts.

GESELLSCHAFT DER MUSIKFREUNDE at Vienna. This institution, now of world-wide celebrity, was suggested in 1812, and founded in 1813, mainly through Dr. Joseph von Sonleithner, after two great performances of Handel’s ‘Alexander’s Feast,’ by all the first artists of Vienna, in the Imperial Riding-school, on Nov. 29 and Dec. 3, 1812. In 1814 the statutes received the Imperial sanction, a president (Count Apponyi) and board of directors were appointed, the formation of a musical library and museum decided upon, and four annual subscription concerts announced. These took place in the Residenzgarten—the first (Dec. 3, 1815) in the Small Hall, the others in the large one. The ‘Musikfestes’ (oratorios only, with 1000 performers) were repeated in the Riding-school every year until 1847, when Mendelssohn would have conducted his ‘Elijah,’ but for his death a few days before the date fixed for the performance. Since 1859 two extra concerts have been given every year, besides the original four. For some years past the number of performers has been about 50 in the orchestra, and 300 to 350 in the chorus; the latter form the ‘Singverein,’ founded in 1852. The ‘Orchesterverein,’ established in 1860, gives a few soirees annually. Soirees, with miscellaneous programmes, were held regularly from 1818 to 1840. At the four general concerts all masters worthy of note have been and are still represented. Beethoven himself was invited to write a concerto for the Society, but was unfortunately at the time too busy with other works (the Mass in D, etc.) to comply with the request. The Society has twice had a well-known patron of music at its head—the Archduke and Cardinal Archbishop Rudolf from 1814 to 1831, and the Archduke Anton from 1831 to 1835. Down to 1848 the concerts were conducted by the best musicians among the members in turn; but in 1851 Hellmesberger was appointed as professional conductor. His successors were—Herbeck in 1859, Rubinstein in 1871, Brahms in 1872, and Herbeck again in 1875. Herbeck died Oct. 28, 1877, and Hellmesberger is discharging the duties of the office in the interim (1878). The formation of the ‘Singverein’ under Herbeck added greatly to the interest of the concerts. Besides such works as Beethoven’s Mass in D, and Bach’s Passion-music (both St. Matthew and St. John) several of Schubert’s works—Der häusliche Krieg, ‘Lazarus,’ the B-minor Symphony, etc.—have been produced.

The possessions of the Society in works of art have gradually increased, and are now of enormous extent. The library, the foundation of which was formed by Gerber’s valuable collection, acquired in 1819, now contains nearly 4000 printed vols. and about 40,000 numbers of music, printed or manuscript. [GERBER.] Among the latter are many valuable autographs and literary curiosities, including Mozart’s P. F. concerto in D minor, a quintet (1768), his last cantata (Nov. 1791); Schubert’s 9th Symphony, Masses in A flat and G, the opera ‘Alfonso und Estrella,’ the Singspiele ‘die Zwillingsbrüder,’ and ‘der vierjährige Posten,’ 4 stringed quatuors, and many songs; Haydn’s ‘Ten Commandments,’ Mass in B flat, a great cantata (1768), six stringed quatuors (1771); Beethoven’s first violin concerto (a fragment), many songs, the sonata op. 81 (first part), a quantity of sketches, the Eroica (a copy, revised by Beethoven); choruses by Gluck and Handel, and other treasures. The museum includes a large collection of pictures and engravings of celebrated musicians, and a collection of ancient musical instruments, medals, busts, etc. In 1830 the Society built a house of its own (Tuchlauben), but having far outgrown the accommodation there, removed in 1870 to the present large building ‘an der Wien,’ where the concerts are now held.

The ‘Conservatorio,’ founded by the Society in 1817, and still in connection with it, has grown to great importance from very small beginnings. It includes instruction in every branch which a pupil can possibly require. In 1870 an opera school was opened, which holds operatic performances. To this was added in 1874 a dramatic school, which gives theatrical representations. At present (1878) the Institution is attended by over 2000 pupils, who receive instruction from 50 professors. Hellmesberger was appointed professional director in 1851, and has continued at the post ever since. Amongst the innumerable artists who have been educated there we may mention Ernst, Joachim, Goldmark, Staudigl, and Hans Richter, as representatives of a number too large for our space.

[GEVAERT, FRANCOIS AUGUSTE, Director of the Brussels Conservatoire, born July 31, 1828, at Huyse, a village near Oudenarde. His father, a baker, wished to bring him up to his own trade, but his great musical ability becoming apparent, he was sent in 1841 to the Conservatoire at Ghent, where he studied under Sommere and Mengal. He was then appointed organist of the Jesuits’ Church, and in 1846 a Christmas cantata of his composition was performed in Ghent. In June 1847 his Psalm ‘Super flumina’ was performed at the festival of the ‘Zangverband;’ and Spohr, who was present, congratulated the young composer. In the May previous he had won the first prize for composition at the national competition in Brussels, but was allowed to postpone his foreign tour for two years, during which he produced in Ghent his first opera,
GEWAERT.

Hughes de Somerghen' (March 23, 1848), followed by 'La Comédie à la ville,' a decided step in advance. In 1849 he started on his tour, and after a short stay in Paris proceeded to Spain, where he composed an orchestral fantasia 'Sobre motivos españoles,' which is said to be still popular there. His reports on Spanish music, regularly forwarded to the 'Ministre de l'Intérieur,' were printed in the bulletin of the Académie de Brussel for 1851. From Spain he went to Italy, and returning through Germany reached Ghent in the spring of 1852. On Nov. 27 of that year he produced 'Georgette' (1 act) at the Théâtre Lyrique in Paris; and in Oct. 1854 'Le Billet de Marguerite,' in 3 acts, libretto by Leuen and Brunswick—both with extraordinary success. 'La Lavandière de Santarem' (Oct. 28, 1855), however, was a fiasco. Gevaërt received the order of Leopold for his cantata 'De nationale verjaersdag,' composed in honour of the 25th anniversary of King Leopold's reign. 'Quentin Durward' (March 25, 1858), 'Château Trompette' (1860), and 'Le Capitaine Henrirot' (Dec. 29, 1864), were all successes at the Opéra Comique in Paris. So also was 'Les Deux Amours, opéra comique at the Theatre de Baden-Baden, 1861. In 1867 he was appointed 'Chef de chant' at the Académie de Musique, Paris, a post resigned by Halévy in 1845. This post Gevaërt retained till the Opéra in the Rue Le Pelletier was closed (Sept. 1870) on account of the war. From that time he devoted his attention to the history of music, and in 1875 brought out the first part of his 'Histoire et Théorie de la musique dans l'Antiquité' (Hexel, Paris, 1 vol. 8vo.), a work remarkable for much new matter, the result of careful and original research. This had been preceded by his 'Leerboek van den Gregoriaanschen zang' (Ghent 1856), his 'Traité d'instrumentation' (1863), and 'Les Gloires d'Italie' (Paris 1868), a collection of secular vocal music by Italian composers of the 17th and 18th centuries, with introduction and biographies, etc. In 1871 he succeeded Féris as director of the Conservatoire at Brussels; a post which gave scope for his remarkable powers of organisation. One of his reforms consisted in placing the singing-classes under the annual inspection of some celebrated singer. Faure was the first engaged. In 1873 Gevaërt was elected a member of the Académie des Beaux Arts in place of Morcarante; an appointment hailed with satisfaction in France. Gevaërt is incontestably a musician of a very high order; and his fame rests on the solid foundation of a thoroughly good early education.

We embrace the opportunity of giving some notice of the Brussels Conservatoire which was omitted before.

The Conservatoire de Musique et de Diction, established Feb. 13, 1834, by an order in council, is an offshoot of the École royale de Musique founded in 1823. By another order in Council, April 15, 1833, the directorship of the new institution was conferred on Mons. F. J. Féris, who continued in office till his death (March 25, 1871), and was succeeded by M. Gevaërt. Under his direction the institution steadily increased in importance. Its annual income, which amounted at first to only 8000 francs, has been augmented by endowments from the government, city, and province, to 108,040 francs (£4,320) in 1870, and it has now three times outgrown its accommodation. In 1855 it removed to an hotel in the Rue de Bodenbroeck. In 1847 to the ancient Hôtel de Croy in the Petit Sablon, and on Feb. 12, 1876, to the present Conservatoire, in the continuation of the Rue de la Régence, which was inaugurated by the King and Queen. The last enlargement is a proof of the popularity and influence of the present director. There are about 350 pupils in attendance, distributed as follows:—solfeggio proper, 3 superior classes and 4 preparatory; singing, 3 classes; organ and canto fermo, 1; pianoforte, 3 preparatory and 2 superior; violin, 3; viola; violoncello; double bass; flute; oboe; clarinet; bassoon; saxophone; horn; trumpet and cornet à pistons; trombone; bugle and cornet à pistons; orchestral ensemble; string quartet; chamber music; composition; counterpoint; harmony, theoretical and practical—1 class each; declamation, 2 classes; Italian declamation, and dancing and deportment, 1 class each. Among the professors we will mention by name—M.M. Gevaërt (composition), J. Dupont (harmony), Kufferath (counterpoint), Mailly (organ), Auguste Dupont and Brassin (pianoforte), Cohn and Wiencewski (violin), Warnot (singing), Joseph Servais (cello), Dumon (flute), Poncelet (clarinet), Merc (horn), Dubem (trumpet), and Van Hoesen (bugle). Further details may be obtained from the 'Annales du Conservatoire royal de Musique de Bruxelles,' of which the first number was published in 1877. We need only add that, like the Paris Conservatoire, on which it was modelled, the institution has a library and museum, to which the upper storey of the building is devoted. According to the catalogue of 1870 the library then contained nearly 5000 volumes; M. Victor Mahillon is preparing a catalogue of the instruments in the museum.

GEWANDHAUS CONCERTS. So called from their being held in the Hall of the Gewandhaus, the ancient armoury of the city of Leipzig. They date from the time when Bach was Cantor of the Thomasschule (1723-50), and the original title was 'das grosse Concert.' The first performances were held in a private house in 1743; the conductor was Dössel, afterwards Cantor of the Thomasschule (1756-87), and the orchestra consisted of 16 performers. They were interrupted by the Seven Years War, but resumed on its termination in 1763, under the direction of J. A. Hiller, who conducted them at his own risk, and gave them the title of 'Liebhaberconcerte.' The orchestra was increased to 30, and regular performances held down to Easter 1778. After a pause of three years the concerts were resumed and located in the Gewandhaus, to which a hall for balls and concerts had lately been added.

[G.C.]
GEWANDHAUS CONCERTS.

The credit of this change is due to Bürgermeister Karl Wilhelm Müller, who has a right to be considered as the founder of the institution in its present form. He and eleven of his friends constituted themselves a board of directors, appointed J. A. Hiller as conductor, and opened a subscription list for 24 concerts. The first concert in the new rooms took place on Sept. 29, 1781; the first regular subscription concert on Nov. 25. At present there are 20 winterconcerts and 2 benefit-concerts, one for the orchestra pension-fund, the other for the poor.

The programmes are miscellaneous—orchestral pieces, instrumental and vocal solos, and choruses. Since 1809 eight soirées devoted to chamber-music have also been given. The orchestra now numbers about 70 performers; Karl Reinecke is the conductor; and there are 12 directors. The most brilliant period of the Gewandhaus Concerts was during Mendelssohn's conductorship.

The names of the conductors are as follows:—Johann Friedrich Döles (1743–44); Johann Adam Hiller (1763–85); Johann Gottfried Schicht (1785–1810); Johann Philipp Christian Schulz (1810–27); Christian August Pohlzen (1827–36); Felix Mendelssohn Bartholdy (1835–43); Ferdinand Hiller (1843–44); Niels W. Gade (1844–48); Julius Rietz (1848–60); Karl Reinecke (1860).

GHAZEL. A short form of Persian poetry in which the rhyme of the two first lines is repeated in every alternate line throughout the piece. The name has been adopted by F. Hiller for a Pianoforte piece (Op. 54, 130) in which a phrase recurs occasionally as a refrain.

GHEYN, VAN DEN. A Flemish family of bell founders, who originally belonged to the town of Malines, and afterwards spread to Saint Trond, Tirlemont, Nivelles, and Louvain. Their names are found on bells in the chimes of Malines and Louvain with various dates ranging from 1516 to 1757, that of the second great bell of the church of St. Rombaut at Malines. The present representative of the house is André Louis van Aerchot, aëtle, Rue de Namur, Louvain.

The ornament of the family, Matthäus van den Gheyn, son of André Francois, was born April 7, 1721, at Tirlemont, removed to Louvain, was appointed organist of the church of St. Peter 1741, and on July 1, 1745, became by public competition carillonneur to the town of Louvain, which two posts he retained till his death, June 22, 1785. As carillonneur his duties were to play on all movable feast days and other public occasions, to keep the chimes in tune and to set fresh tunes for hours and half-hours on the drum of the carillon, whenever so required by the authorities; for this the salary was 100 'pattacos' a year. For private festivities extra fees were paid. His habit was, in addition to his regular duties, to extemporise on the carillon for half an hour every Sunday. Matthias married Feb. 24, 1745, and had seventeen children, one of whom, Josse Thomas (born 1753), succeeded him as organist after his death.

Chev. van Elewycz, from whose pamphlet ('Matthias van den Gheyen,' Louvain, Peeters, 1862) the foregoing account has been condensed has collected 51 compositions by Matthäus. Of these three were printed—'Fondements de la basse continue,' etc. (Louvain, Wyberechts); '12 petites sonates pour l'orgue ou le clavecin et violon' in continuation of the foregoing; 'Six Divertimentos pour clavecin' (London, Welcker, Gerrard-street, Soho). The rest remained in MS. during his lifetime; they consist of a second treatise on harmony and composition, Preludes and Fugues for the organ, Sonatas for Clavecin, and Airs, Rondos, Marches, Menuets, Fugues for 3 and 4 parts, etc., for the carillons. Dr. Elewycz has published a volume selected from these (Schott, 1863), forming vol. i. of his 'Anciens Clavecinistes Flamandes.'

GIARDINI, FELICE DE', an eminent violinist, was born at Turin in 1716. He entered the choir of Milan Cathedral as a boy, and became a pupil of Paladini in singing, composition, and the harpsichord. He afterwards returned to Turin, and studied the violin under Somis. He was still very young when he entered the opera-band at Rome, and soon afterwards that of S. Carlo at Naples. In possession of a brilliant execution, he appears to have been fond of displaying it by interpolating in the accompaniments of the airs all sorts of runs, shakes, and cadenzas, and thereby eliciting the applause of the house. Of this habit, however, he was cured in an emphatic manner. During the performance of an opera of Jomelli's, the composer came into the orchestra and seated himself close to young Giardini. Giardini, ambitious to give the maestro a proof of his cleverness, introduced into the ritornell of a pathetic air a brilliant cadenza of great length, at the end of which Jomelli rewarded him with a sound box on the ear. Giardini in after years was fond of relating this incident, and used to add that he never had a better lesson in his life. He certainly proved himself not only an eminent virtuoso, but an equally good leader and conductor.

From Naples he started for a tour through Germany and thence to London. The date of his first public appearance here is variously given. According to Burney it took place in 1750, at a concert of Cuzzoni's. His success was immense, and Burney affirms that no artist, Garrick alone excepted, was ever so much applauded as Giardini. His powerful yet mellow tone, the brilliancy and boldness of his execution, the spirited and expressive style in which he played the grand works of Tarini, as well as his own lighter but pleasing compositions, created a perfect furor, and he became at once the declared favourite of the London public. We may form an idea of the peculiarity of his style from the fact that when De Bériot came to England, the old musicians, who still remembered Giardini, were greatly struck by the similarity of De Bériot's style to his. After Festing's death in 1752, Giardini took the place of leader at the
Italian Opera, and appears to have infused new life and spirit into the band, which had much deteriorated under Festing's languid leadership. In 1756 he undertook the management of the Italian Opera, but thereby suffered great losses. Nevertheless we find him as impresario in 1763, 64, and 65. After this he devoted himself once more to playing and teaching the violin, and leading at concerts and musical festivals. At this period F. Cramer became his formidable rival, though the two remained on most friendly terms. From 1774 to 80 he was leader at the Pantheon Concerts, and in 1782 and 83 once more at the Italian Opera. In 84 he left England, apparently resolved to retire from public activity and spend the rest of his life in Italy. But his restless spirit brought him back to London in 1790, when he started a Comic Opera at the Haymarket. This proving a failure, he went with his troupe to Russia, and died at Moscow Dec. 17th, 1796.

Giardini's immense success on his first appearances in London was no doubt greatly due to the fact that he really was the first violin-virtuoso of eminence that had been heard there, and his star went down as soon as Salomon and Cramer became his rivals; but notwithstanding this, his influence on musical and operatic life in England was considerable. He brought out a number of operas, though with little success. His oratorio of 'Ruth' was several times performed in London. His numerous compositions for the chamber include, according to Félicis, Four sets of 6 Violin Solos (op. 1, 7, 8, 16); Twelve Solos (op. 19); Six Violin Duets (op. 2); Six Sonatas for Piano and Violin (op. 3); Twelve Violin Concertos (op. 4, 5, 15); Three sets of Trios for Stringed Instruments (op. 6, 14, 20); Six Quintets for Piano and Stringed Instruments (op. 11); Twelve Quartets for Stringed Instruments (op. 20 and 29). [F.D.]

**GIBBONS.**

The name of a noted family of English musicians.

1. **The Rev. Edward Gibbons**, Mus. Bac., born about 1570, was probably son of William Gibbons, one of the Waits of the town of Cambridge. He graduated as Bachelor of Music at Cambridge, and on July 7, 1593, was incorporated at Oxford. About the same time he was appointed organist of Bristol-Cathedral and also priest-vicar, sub- chanter, and master of the choristers there. He resigned these appointments in 1611 on receiving those of organist and custos of the college of priest-vicars in Exeter Cathedral, which he retained until the silencing of the organ and choir in 1644. Hawkins says he was sworn a gentleman of the Chapel Royal March 21, 1604; but that is a mistake, as his name is not to be found in the cheque book of the Chapel, and the date given is that of the admission of his younger brother, Orlando, as organist. Some compositions of his are preserved in the Music School at Oxford; and an anthem, 'How hath the city sate solitary?' which is a prelude for the organ and accompaniments for solo is contained in the Tudway collection, British Museum (Harl. MS. 7349).

He is said to have advanced £1000 to Charles I. during the civil war, for doing which his estate was confiscated, and himself and three grand- children compelled to quit his house when he was upwards of 80 years of age. Matthew Locke was his pupil at Exeter.

2. **Ellis, brother of the preceding, was organ- ist of Salisbury Cathedral at the latter end of the 16th century. He contributed two madrigals— 'Long live fair Oriana,' and 'Round about her chariot'— to 'The Triumphs of Oriana,' 1601. About the same time he ceased to be organist of Salisbury, but whether by death or resignation does not appear.

3. **Orlando Gibbons**, Mus. Doc., younger brother of the two preceding, born at Cambridge 1583, was one of the finest organists and com- posers of his time, and indeed one of the greatest musical geniuses of our country. It is probable that he received his early musical education in the choirs of some of the college chapels at Cambridge. On March 21, 1604, he was admitted to the place of organist of the Chapel Royal in the room of Arthur Cock, deceased. About 1610 he published 'Fantasies in three parts,' composed for viola, 'cut in copper, the like not heretofore extant,' being the first music printed in England from engraved plates. In the following year he joined with Byrd and Dr. Bull in the production of the collection of music for the vir- ginals published under the title of 'Parthenia.' (Both these works were republished by the Musical Antiq. Society in 1843 and 4.) In 1613 he published 'The first set of madrigals and motets of 5 parts.' In 1614 he contributed two pieces to Leighton's 'Teares or Lamentations of a Sorrow- full Soule.' He also composed some tunes in two parts for George Wither's 'Hymns and Songs of the Church.' In May, 1622, he accumulated the degrees of Bachelor and Doctor of Music at Oxford, a distinction conferred at the request of his friend Camden, the historian. His exer- cise on the occasion was the eight-part anthem, 'O clap your hands,' printed in Boyce's 'Cathedral Music.' It has been asserted that this anthem was so allowed to serve as the exercise of William Heyther, who was admitted to the same degrees at the same time, but it is highly improbable that such an absurdity was perpetrated. The probability is that Heyther, being at the time the bearer to the University of the deed of endowment of the professorship of hist-ray founded by Camden, had his degrees conferred on him 'honoris causs,' and was not called upon to produce an exercise. In 1633 Gibbons was ap- pointed organist of Westminster Abbey in suc- cession to John Parsons. In 1635 he was sum- moned to Canterbury to attend the marriage of Charles I, for which he had composed an ode and some instrumental music, and whilst there was attacked by the smallpox, which terminated his existence on Whitunday, June 5, 1625. He was buried in the cathedral, where a monument to his memory is placed against the wall of the north side of the nave. Gibbons had by his wife, Elizabeth Patten, seven children, six of whom
GIBBONS,

(two sons and four daughters) survived him. Both his surviving sons, Christopher and Orlando, became musicians. Besides the before-named compositions Gibbons wrote some 'Fancies & Songs made at K. James's first's being in Scotland,' 'A Song for Prince Charles for 5 voices to be sung with wind instruments,' and some 'Toys in five parts,' and canons. A MS. Madrigal 'The Cry of London' in 3 parts for 5 voices, is in the Library of the Sacred Harmonic Society, No. 1881. But Gibbons's reputation as a composer will ever rest on his magnificent church music, which for fine harmony and simple solemn grandeur stands unexcelled, and has gained for its composer the title of 'The English Palestrina.' Much of it was printed in Barnard's Church Music (1641), and in Boyce's Cathedral Music. The remainder was published in 1873 in a volume edited by the Rev. Sir F. A. G. Ouseley. His Madrigals (re-published by the Musical Antiquarian Society in 1841), are among the best of the English school.

A portrait of Orlando Gibbons is preserved in the Music School, Oxford. His printed works are as follows:

First Poems. 8 voices, in F.
Second Poems. 8 voices, in G.
 morning and Evening Service. 8 voices, with words and organ parts. D minor.
Full Anthem, O clap your hands.

Do. (2nd. Pt.) God is gone up.
Do. (2nd. Pt.) Holy Name.
Do. Lift up your hands, 4 voices.
Do. O Lord in Thine. 5 voices.
Do. Almighty and everlasting. 4 voices.
Do. Why art thou so heavy. 4 voices.
Do. Blessed be the Lord God. 4 voices.
Do. O Lord, increase my faith. 6 voices.
Do. Deliver us, O Lord. 4 voices.
Do. (2nd. Pt.) Blessed be the Lord God.

Yr. Lord. 1 br. 8 voices

Psalm 1 to First Poem, Thone oppos.

Hymn tunes.

Madrigals and Motets. 8 voices.

The Silver Swan. 8 voices.

I thank the learned poets.

Tell me not your thoughts.

Sigh no more, sigh no more.

Now shall every man.

Lisp now old.

What is our life?

Ah! dear heart.

Fair is the rose.

Have ye but a soul?

(2nd Pt.) Never let the sun.

(3rd Pt.) Yet if that age.

Treat not too much.

I will not praise thee, O Father.

Glittering and powerful (God, 8.

Seas, see, the Word is incarnate.

Places (cv-2cv) for the Virginals in 'Piano.'

Galateau.

Fantasie of 4 parts.

The Lord of Salisbury his Passion.

The Queen's Command.

The Grammarian.

Hymn, O Lord, how do we 4 voices.

CHRISTOPHER GIBBONS, Mus. Doc., second son of the celebrated Orlando Gibbons, was born in 1615. He was educated in the choir of Exeter Cathedral under his uncle, Edward. About 1640 he succeeded Randal Jewitt as organist of Winchester Cathedral, which appointment he was compelled to quit in 1644, when he joined the Royalist army. In 1660 he was appointed organist of the Chapel Royal, private organist to Charles II, and organist of Westminster Abbey. On July 7, 1664, the University of Oxford conferred on him the degree of Doctor of Music, 'for literatum et insitutum,' on which occasion the Dean and Chapter of Westminster made him a present of £5. He died Oct. 20, 1676, and was buried in the cloisters of Westminster Abbey. Some anthems of his composition are extant in MS., and some of his hymns are printed in the second set of Dering's 'Cantica Sacra,' 1674, but he excelled more as a performer than a composer. A portrait of him is preserved in the Music School at Oxford.

W. H. E.

GIGUE or GIGA is an old Italian dance which derives its name (or vice versa) from the Giiga, Gigia, Geige, or early fiddle. It was written indiscriminately in 3-8, 6-8, 3-4, 6-4, and 12-8 time, and was in two strains or sections, each of which was repeated. The time was lively, and it was usually employed to finish up a Suite. A good example is that which winds up No. 8 of Corelli's 12 solos.

Bach also employs them to close his Suites, and has left an immense variety, not a few of which are in common time, as well as 9-16 and 12-15. The well-known one in the Partita in Bb is in 4-4, and that in the last Partita of the same set in 8-4. Handel's 16 Suites contain 13 Gigue's, one of which fills 6 pages. Mozart has left a very fine little specimen (Kochel 574) which he wrote in an album at Leipsic after a surfeit of Bach.

English Jigs seem to have no special characteristics. The word came to be synonymous with any light irreverent rhythm, giving the point to Pope's line "Make the soul dance upon a jig to heaven."

GILES, NATHANIEL, Mus. Doc., was born in or near Worcester about the middle of the 16th century. In 1559 he was admitted a chorister of Magdalen College, Oxford, which office he resigned in 1561. In 1577 he was appointed a clerk in the same chapel, but retained the place only until the next year. He graduated at Oxford as Bachelors in Music June 26, 1586. On Oct. 2, 1594, he received the appointment of clerk, organist, and master of the choristers of St. George's Chapel, Windsor. On the death of William Hunnis in June, 1597, he was appointed gentleman and master of the children of the Chapel Royal. Having supplicated for the degree of Doctor of Music in 1597, but from some unknown reason not having performed the exercise for it, he proceeded to it July 5, 1622. It has been asserted that on the accession of Charles I. he was appointed organist of the Chapel Royal, but there is no record of such an appointment in the Cheque Book. Giles contributed to Leighton's 'Teares or Lamentations of a Sorrowfull Soule,' 1614; a service and an anthem by him were printed in Barnard's Church Music, 1641, and other anthems are extant in MS. A curious 'Lesson of Descant of thirteene sightes Proportions of sundrie kindes' by him is printed in the appendix to Hawkins's History of Music. Giles died Jan. 24, 1653, and was buried in one of the aisles of St. George's. Q q 2
Chapel, Windsor, where an inscription was placed over his grave which stated him to have been master of the children there 49 years, master of the children of the Chapel Royal 38 years, and to have been 75 years of age. A comparison with the dates given above, which are all derived from authentic records, will show that all three statements on the gravestone were erroneous.

[ W. H. H. ]

GIORDANI. An Italian musical family of the 18th century, consisting of a father, three sisters, and two brothers, who played little comic operas in one of the Neapolitan theatres till 1763, when the whole troupe migrated to London, with the exception of the younger brother, GIUSEPPE, then but nine, who remained behind to learn composition in the Conservatorio di Loreto, where he had Cimarosa and Zingarelli for his fellow students. The Giordani family came out at the Haymarket Theatre, and made a great success. In 1772 they were joined by their brother, who had by that time obtained the sobriquet of Giordanello, and who became composer to the troupe. His best-known opera was 'Il Baccio,' which seems to have kept the boards from 1774 to 79. In addition to composing he was much in vogue as a teacher, and Fétis gives a list of 6 P. F. quintets, 3 ditto quartets, 12 ditto trios, 6 string quartets, 3 Concertos for Viol and Orchestra, besides preludes, sonatas, and lessons for the harpsichord, all which he published in London between 1776 and 1782. In the latter year he returned to Italy, and remained there for 10 years, producing in that time no less than 24 operas and oratorios, besides other compositions for the chamber, some published in London and some in Berlin. He died at Lisbon in May 1794, having gone there to conduct the Italian Opera.

His elder brother TOMMASO, who is not clearly distinguishable from Giuseppe, remained in England, acted, taught, played, and composed. In 1779, however, he went to Dublin, and in partnership with Leoni the singer took the theatre in Chapel Street as an opera house. At the end of four years they were bankrupt. Giordani however had plenty of teaching, he married, and composed an opera 'Perseverance' and an oratorio 'Isaac,' both of which appear to have been successful, as well as pianoforte pieces and songs, Italian and English, which last had a great sale. An air by one of the brothers, 'Caro mio ben,' is still sung at concerts.

[ G. ]

GIOVANELLI, Ruggero, born 1560 at Velletri, near Rome. Nothing is known of his circumstances or early studies. In 1587 we find him maestro di capella to San Luigi de' Francesi on the Corso in Rome; from thence he passed to the Chiesa dell' Anima, belonging to the German College; and, March 12, 1594, was appointed Palestrina's successor at St. Peter's, entering on his duties three days later. On April 7, 1599, he was made a member of the Sistine choir. He was living in 1615, as in that year he published the second volume of his new edition of the 'Graduale,' undertaken at the request of Pope Paul V, and magnificently printed at the Medici press, but disfigured by many arbitrary alterations of the text. Proke has inserted a 'Dixit' of Giovannelli's, in his 'Musica Divina' (Tom. iii.) and speaks of his works as 'graceful, pure in style, and very pleasing in harmony, and able to bear comparison with those of the greatest masters.' Baini's 'Palestrina' also contains many allusions to Giovannelli. Amongst his works preserved in the Pontifical Chapel at Rome, Baini specially mentions a 'Miserere' for 4 and 5 voices, and a Mass, k 8, on Palestrina's madrigal 'Vestiva i colli; but he does not seem to have known of a particularly fine Mass k 12, characterised by Proke as full of beauty and imagination. Giovannelli was a great composer of madrigals, even in that fertile age. He published 5 books of them, with 2 of Canzonette and Villanelle, between the years 1586 and 92. Others are to be found in the collections of Scotto and Phalèse (Kitten, 'Sammelwerke'). The date of his death is unknown.

[ F. G. ]

GIPSY'S WARNING, THE. An opera in 3 acts; words by Linley and Peake; music by Jules Benedict. Produced at Drury Lane April 19, 1838. It was much acted in Germany. 'Rage, rage, thou angry storm,' and 'Blest be the home,' were long favourites in concert rooms.

[ G. ]

GIRARDEAU, Isabella, detta la Isabella, an Italian singer, married to a Frenchman, who performed in the early Italian Operas in London. She is, perhaps, the same as the Isabella Calliari mentioned in Quinny's list among the female singers who flourished from 1700-30. She succeeded 'the Baroness' at the Haymarket, and appeared first in 'Almahide.' She sang in the first and succeeding performances of Handel's 'Rinaldo.' In this, one of her songs, 'Bel placer,' was wholly unaccompanied even by a bass,—a severe trial for any voice. On Dec. 12 of the same year, Gasparini's 'Antiochus' was produced, in which La Isabella took a part, as she did also in the following January in his 'Amleto.' In the latter she had 'a noisy song for trumpets and hautbois obligati' (Burney), from which it may be inferred that her voice was very strong.

[ J. M. ]

GIRELLI AGUILAR, Signora, an Italian prima donna, who took part in the 'grand dramatic serenata' composed by Mozart (1771) in honour of the nuptials of the Archduke Ferdinand, celebrated at Milan on Oct. 17 of that year. 'The archduke and his bride, not only frequently inclined their heads from their box and applauded the maestro, but encored two airs sung by Manzuoli and Girelli' (Holmes, p. 79). After this, Girelli married a Frenchman named Aguilar, and visited London, succeeding Grasi, and singing the principal role in Vento's 'Sophonisba' (1772-3); after which her name is not found again in London.

[ J. M. ]
GISELLE, O U LES WILIS. A Ballet by Adolphe Adam on a plot adapted from Heine by Théophile Gautier; produced at the Grand Opera July 4, 1841, at Her Majesty's March 12, 1842. It contained one of Carlotta Grisi's greatest parts.

The subject was employed by Loder in his opera of 'The Wilis, or The Night Dancers.'

GIMONDI, CELESTE, a mezzo-soprano engaged at the opera in London from 1732-34. She made her first appearance (Dec. 1733) as Lisaura in Handel's 'Alessandro.' She played a small part in the 'Orlando' (1733), one of her songs in which ('Amor è qual vento') contains Handel's first venture at a 'diminished seventh.' Parts were assigned to her (1733) also in 'Deborah,' 'Tolomeo,' and 'Ottone,' but, after this, she is said by M. Schoelcher to have assisted in setting up the rival theatre in Lincoln's Inn Fields. The newspapers of the day (Nov. 3, 1735), however, give another account of her secession, by announcing the death of 'Signora Celeste Gimondi ... Wife to Mr. Hensom an English Gentleman, on Tuesday [Oct. 28], after a lingering illness. She performed in Mr. Handel's Operas for several Winters with great Applause, but did not sing this season on any stage, on Account of her Indisposition.' [J.M.]

GIULIANI, ANTONIO, appeared here first in 1857 at Her Majesty's Theatre. He possessed a sweet and high tenor voice, which was 'a welcome variety after the stentorian exhibitions of recent singers before him; and an elegance of style of which some critics, nevertheless, complained as cold, languid, and over-drawn'- (Chorley). He was the best that had been heard since the arrival of Tamberlik, and remained singing here for some years. His career was not long, and terminated in a very melancholy manner; in 1865 he became insane, and he died at Tenero, Oct. 12, 1865. [J.M.]

GIULIANI, CECELIA, née BIANCHI, a somewhat distinguished prima donna in the latter years of the 18th century. She appeared in London (April 5, 1788) in 'Giulio Sabino' with the great Marchesi. With a good figure, face, and style, she had a voice too thin and small for the theatre; and this caused her to force its tones so much that she sang out of tune. Burney says she had 'a bad shake, and affectation.' She continued to sing during another season, after which her place was taken by Mara. In 1790 she was at Milan; and in 91 at Vienna, where she remained till 96. Félicis speaks of her as a brilliant singer, a judgment differing widely from that of Burney and Lord Mount-Edgcumbe. [J.M.]

GIURAMENTO, IL. A Drama serio; libretto by Rossi from V. Hugo's 'Angelo'; music by Mercadante. Produced at La Scala, Milan, in the spring of 1837; at Her Majesty's, London, 1840; and at the Théâtre-italien, Paris, Nov. 22, 58. [O.]

GIUSQUINO. The form which the name of JOSQUIN sometimes takes in Italian; see for example one of the chants from the 'Studii di Palestrina,' in Burney's 'Extracts, Brit. Mus., Add. MSS. 11,589. [G.]

GIUSTO, correct, suitable—'Tempo giusto,' in suitable time; as the fugues in Israel in Egypt, 'Egypt was glad, He led them through the deep'; and also 'Thy right hand, O Lord,' and 'The horse and his rider.' Also used in the sense of 'strict,' to restore the time after a tempo rubato. [G.]

GIZZIELLO, gioacchino conti, detto, so-called after his master, D. Gizzi, was one of the greatest singers of the 18th century. Born Feb. 28, 1714, at Arpino (Naples), he early underwent the preparation for the career of a soprano. He gained a round, full, sweet voice of great extent and penetrating quality, which was united to a strong natural taste and feeling in music. At the age of 15 he made his début at Rome, with immense success. In 1731 he excited the greatest enthusiasm, when he sang in Vinci's 'Didone' and 'Artaserse.' An anecdote is related of this occasion, showing how much other singers were already affected by his fame. [See FARINELLI.] He sang at Naples in 1732 and 33 with the same success. Three years later (April 13, 36), he is announced in the London Newspapers as 'expected here in a few days.' This was the critical moment at which the split occurred in Handel's company, and the great master was at a loss for artists to replace those who had secended. On May 5, he began with 'Ariodante,' and Gizziello, who then made his first appearance in London, 'met with an uncommon reception; in justice to his voice and judgment, he may be truly esteemed one of the best performers in this kingdom' (Daily Post). In presence of Farinelli, no more could be said of the young singer, who was still 'so modest and diffident, that when he first heard Farinelli, at a private rehearsal, he burst into tears, and fainted away with despondency' (Burney). 'Atalanta' was brought out May 12, Gizziello again singing the principal man's part, as he did, a little later, in 'Poro.' In 1737 he appeared in 'Arminio,' 'Berenice,' 'Giustino,' and 'Partenope.' In 1743 he went to Lisbon, where the improvement in his style, due to the example of Farinelli, was at once perceived. Charles III, King of Naples, engaged both him and Caffarelli to sing in the 'Achille in Sciro' of Pergolesi. Caffarelli came from Poland, and Gizziello from Portugal, and met for the first time. The former sang the first song with splendid effect, and Gizziello thought himself lost, as he listened to the continued applause; but he sang his own song, which followed, with such pathos and expression that he divided the honour of the performance. In 1749 he was invited by Farinelli to sing at Madrid with Mingotti, and stayed there three years. He then returned to Portugal. About the end of 1753 he quitted the stage, and settled at his native place. He died at Rome Oct. 25, 1761. An excellent mezzotint portrait of him was engraved by Alex. Van Haecken, after a picture by C. Lucy, in 1736, folio. A good impression of it is scarce. [J.M.]
GLEANEANUS, HENRICUS, so called because he was born, 1488, in the Canton of Glarus, his real name being LOBIS or, Latinised, LORITUS; a celebrated teacher of music. He is said to have been a shepherd-boy in his youth; but he studied music under Cochlaüs at Cologne, where he was crowned poet-laureate in 1512 for a poem in honour of the Emperor, which he composed and sang to his own accompaniment. In 1515 he was teaching mathematics at Basle, and in 1517 was appointed, at the recommendation of Erasmus, professor of philosophy and ‘artes liberales’ in Paris. He soon however returned to Basle, where he is said to have set up a school, and from whence he removed to Freiburg im Breisgau. Heinrich Schreiber, in an excellent monograph on Glarneanus (Freiburg 1587), proves that it was not at the University of either Paris, Basle, or Freiburg, that he was professor. He died May 28, 1593, at Freiburg. His friends, Erasmus, Justus Lipsius, and Vossius, wrote panegyrics on him. His principal works on the theory of music are ‘De musica divisione ac definitione’ (Basel 1549); but as the headings of the chapters are identical with those in the ‘Dodecachordon,’ it can scarcely be a separate work. His theory of the 12 church modes, as parallel to the ancient Greek modes, will assure for Glarneanus a lasting place among writers on the science of music. [F.G.]

GLEE. A piece of unaccompanied vocal music in at least three parts, and for solo voices, usually those of men. The glee, though possibly suggested by the madrigal, to which this description also applies, is separated from it, so far as its origin is concerned, by a long interval of time. The production of madrigals ceased altogether, both on the Continent and in England, in the course of the first quarter of the seventeenth century. The first glees are due to the beginning of the 18th century, and the finest specimens of them to the seventy-five years between the middle of the last century and the end of the first quarter of this. Vocal compositions by masters of the latter part of the seventeenth century are sometimes found, in collections printed after their decease, to which the word Glee is appended. These are not glees, in the now accepted sense of the word, but simply airs by those masters, harmonised subsequently for three or four voices; or choruses, mostly from operas, from which the original orchestral parts are simply omitted. Two eminent English composers, Arne and Boyce, wrote each a few pieces which they or their subsequent editors called glees; but their productions in other styles altogether surpassed these, both in excellence and number. The earliest, possibly the greatest, master of the glee proper is Samuel Webbé, during whose long life (1740—1816) the best specimens of this class of composition were produced. Webbé actually outlived many of the most eminent practitioners in the school of which he was the founder.

The word ‘glee’ in no way describes or characterises the kind of composition to which it gives a name. It is simply the Anglo-Saxon glæg—the music. A glee is not therefore necessarily of a cheerful character, as the name might seem to imply. That music was in early times commonly associated with cheerfulness is possibly true. The ‘Gligman,’ according to Warton, was identical with the ‘Joculator.’ But the words of a glee may be mournful or sprightly, and the music such as will express them becomingly. The ‘serious glee’ is no more a misnomer than the ‘cheerful.’ Both terms have been used by glee composers again and again.

The glee differs from the madrigal, as might be expected from the distance apart of their epochs, in its tonality, which is uniformly modern. Not only so. Whereas the ‘subjects’ of the madrigal are generally few, always contrapunctally treated, and this often at considerable length, those of the glee are generally many, and only rarely at all developed. Masses of harmony, rare in the madrigal, are common in the glee; and indeed give it some of its best effects. The characteristic figure of modern tonality, the ‘perfect cadence,’ rarely and timidly introduced in the former, is of frequent occurrence in the latter—sometimes indeed of such frequent occurrence as to give to many of these compositions a halting and disconnected character, as though they were continually about to come to an end. Indeed the short phrases, incessant cadences, frequent changes of rhythm and pace of the average glee, contrast unfavourably with the ‘long resounding’ phrases of the madrigal, never brought to an end in one part till they are begun in another, overlapping one another, bearing one another up, and never allowing the hearer to anticipate a close till everything that can be done with every subject has been done, and the movement comes to a natural end.

In so far as the glee composer exhibits this power of sustentation, this strength of wing—the highest and the rarest qualification for every kind of polyphonic composition—his productions will be lasting in their attraction. Every one of the best glee writers, such as Webbe, Stevens, Calcott, Horace—has exhibited it frequently
and in very high perfection; and this together with a constructive power which we should seek in vain in the musical compositions of the madrigalian era. Stevens's glee, 'Ye spott'd Snakes,' is a model of construction, and if not the earliest, is one of the earliest specimens of pure vocal music in the 'sonata form.'

The glee proper is wholly independent of instrumental accompaniment. The name, however, is occasionally given to compositions like 'The Chough and Crow,' by Sir Henry Bishop. These would be better entitled 'accompanied trios, quartets, or choruses. The principal glee composers, over and above those already named—without exception Englishmen—are Atwood, Battishill, Cooke, Danby, Hindle, Lord Mornington, Paxton, and Spofforth. [MADRIGAL; PART-SONG.] [J. H.]

GLEE CLUB, TIX. This club originated in some meetings at the house of Mr. Robert Smith in St. Paul's Churchyard, commenced in 1783, at which motets, madrigals, glee, canons, and catches, were sung after dinner. The meetings were subsequently held at Dr. Beever's and other houses until, in 1787, it was resolved to establish a society to be called 'The Glee Club,' the first public meeting of which took place at the Newcastle Coffee House on Saturday, Dec. 22, 1787. The original members were, R. Smith, Dr. Arnold, Dr. Beever, Rev. J. Hinckes, T. S. (afterwards Dr.) Dupuis, J. Roberts, J. Heselton, T. Aylyard, C. Wright, T. Gregory, H. Deedler, L. Atterbury, and T. Linley. The professional members were, S. Webbe, J. Dyne, F. Hobler, J. W. (afterwards Dr.) Callcott, J. Hindle, J. Bartleman, S. Webbe, jun., and S. Harrison. In 1788 the Club removed to the Freemasons' Tavern, thence to the Crown and Anchor until Feb. 1790, when it returned to the Freemasons' Tavern but removed once more, on July 6, 1791, to the Crown and Anchor, and again returned to the Freemasons' Tavern. In 1790 Mr. S. Webbe composed for the Club his 'Glorious Apollo,' which was ever after sung at the meetings as the opening glee, while Byrd's canon 'Non Nobis' was sung immediately after dinner, often followed by Dr. Cooke's canon 'Amen.' After 'Glorious Apollo' (first sung with three voices to a part and then full) the chairman, vice-chairman, conductor, sub-conductor, and secretary, each named a glee, and then the members according to seniority. Among the eminent visitors who have contributed to the music of the meetings were Samuel Wesley (who played Bach's fugues upon the pianoforte, or an extract from the same during the course of the conspicuous passage in a glee recently sung), Moscheles, and Mendelssohn. The Club was dissolved in 1857 and the Library sold. The Club must be distinguished from another Glee Club formed in 1793, the original members of which were Shield, Johnstone, Charles Bannister, Incledon, Dignum, C. Ashley, and W. T. Parke, the last of whom ('Musical Memoirs,' ii. 175) states that 'it was held on Sunday evenings at the Garrick's Head Coffee House in Bow Street, Covent Garden, once a fortnight, when we amused ourselves by singing the works of the old and modern masters, after which we sat down to supper.' [C.M.]

GLEN. An eminent Scotch firm of musical instrument makers. Thomas Glen, the founder, was born at Inverkeithing, Fife, in 1804; commenced business in the Cowgate, Edinburgh, in 1826; in 1836 removed to North Bank Street, and died July 12, 1873. Amongst the instruments invented by him was a wooden Ophicleide, of which a large number were made, and known as 'Serpentceildes.' The business is still carried on by his sons John and Robert. The Glenes are now chiefly noted for their Bagpipes, of which they are the recognised best makers. [G.]

Glinka, Michael Ivanovitch, born 1803 near Novospaskoi in Russia, died Feb. 1, 1857, at Berlin. Of late years several northern composers, not German by birth but German as far as their musical method goes—like Gade the Dane, Grieg and Svendson the Norwegians, Glinka, Anton Rubinstein, and Peter Tchaikowsky the Russians—have made their mark more or less strongly. Glinka is the earliest of the Russians, as gifted as any, perhaps, but not so accomplished; there has always been a dash of dilettantism about his productions, spite of his obvious talents, his gift of spontaneous, and (to those who do not know much of Russian folk-songs and dances) original melody, and his undeniable cleverness in the manipulation of the voice and of orchestral instruments. Glinka's two Russian operas are held to be of national importance by his countrymen. They were among the first musical works in Russian, and for a long time the best of their kind, though their value has undoubtedly been exaggerated from patriotic motives.

In early youth Glinka enjoyed the advantage of lessons in pianoforte paying from John Field. In 1830 he visited Italy, and made a close study of Italian singing and of the Italian method of composition for the voice; but, feeling himself helpless as regards harmony and counterpoint, he went, in 1833, to Berlin for some months, and worked hard as the pupil of S. W. Dehn. Thence he returned to Russia, and became court conductor, and director of the opera and the choral performances at the imperial churches. From 1840 to 50 he again led an itinerant life, the centre of which was Paris, and the extent the confines of Spain. In the autumn of 1856 he came back to Berlin, had much intercourse with his old master Dehn upon the subject of ancient church tunes connected with the Eastern Church, and died there, unexpectedly, early in 1857.

Glinka's name is associated with the titles of two Russian operas, 'La Vie pour le Czar' and 'Russlan et Ludmilla,' neither of which, spite of repeated trials, have been able to gain a firm footing outside their native land. A number of orchestral arrangements or transcriptions, such as 'La Jota Aragonese,' etc., as well as many romances and songs, complete the list of his productions. Of these a catalogue is given by Gustav Bertrand in the Supplement to Fétis. He left his own memoir in Russian, and sketches
of his life, also in Russian, have been published by Stanoff and Soloviev. [E. D.]

GLORIA is the name which is generally applied in England to the short hymn Gloria Patri, and in the Roman Church to the longer hymn Gloria in Excelsis, which is also called the 'Great Doxology,' or 'Angelical Hymn,' because its first words are those of the angels who appeared to the shepherds. The former is of unknown origin, and was in use in the Anglo-Saxon offices. The custom of singing it after each psalm is peculiar to the Eastern Church. The Gloria in Excelsis is probably of Eastern origin. In the Western Church it was formerly used at the beginning of the Liturgy when the Te Deum was used at the end. In the Mass it follows the Kyrie. It now comes at the conclusion of the Communion Service in the English Church, immediately before the blessing. It appears in the Common Prayer Noted of 1550 with an adaptation of the old church melodies by Marbeck, but it does not appear to have been sung in the early days after the Reformation in England, and received little attention from English composers. At the present day it is set equally with the other portions of the Communion Service. [C.H.P.]

GLOVER, CHARLES W., born February 1806, was a pupil of T. Cooke. He became a violin player in the orchestras of Drury Lane and Covent Garden Theatres. In 1832 he was appointed musical director at the Queen's Theatre, Tottenham Street, and continued so for some years. He was the composer of numerous songs and duets, some of which were very popular, as 'Jeannette and Jeannot,' 'Sing not that song to me, sweet bird,' 'O love, pretty maidens, beware.' He died in London, March 22, 1863. [W. H. H.]

GLOVER, WILLIAM, was born in London in 1822. In 1829 he became a chorister of Trinity College, Cambridge, where he remained until 1838. He then became a pupil of Professor Walton. He was in 1843 appointed the organist of the newly erected Christ Church, Cambridge. This post he vacated in the next year on being appointed organist of St. Matthew's, Manchester. In 1846 he was chosen organist of St. Luke's, Chestham, which appointment he still holds in conjunction with that of St. Matthew's. Glover attained to much distinction in the higher style of organ playing, and in April 1847, when Mendelssohn went to Manchester for the purpose of conducting a performance of his 'Elijah,' there, he received a visit from the great composer (with whom he had formerly corresponded), who performed before a select audience on the organ at St. Luke's—a fine instrument by Hill on the German CC scale—being, in all probability, the last time he touched an organ in England. In 1847 Glover composed an oratorio entitled 'Jerusalem,' which was produced at the Manchester Mechanics' Institution on Feb. 12, 1848. In 1850 he composed another called 'Emmanuel,' which was performed at the Free Trade Hall in 1851. He is also the composer of 'The Corsair,' a cantata, written in 1849 and published in 1856 but never performed, and of a third oratorio, quartet and quintet for stringed instruments, pianoforte trios, etc., all still in MS. In 1847 he published a collection of 'Psalm Tunes and Chants,' and 'The Complete Daily Service of the Church, as chanted at St. Matthew's, Manchester.' Glover re-established the St. Matthew's first surplice choir seen in Manchester except that of the cathedral. He has lately devoted much of his attention to mechanical inventions connected with weaving. [W. H. H.]

GLOVER, WILLIAM HOWARD, born at Kilburn June 6, 1819, was a son of Mrs. Glover, the celebrated actress. He learned the violin under Wagstaff, leader of the Lycueum band, and began life by a long tour on the continent, after which he returned to England and led a desultory career for some years in London and the provinces—teaching, playing, conducting, composing, and even appearing on the stage in opera. He was for many years musical critic to the Morning Post. His chief works were 'Tam O'Shanter,' a cantata produced by the New Philharmonic Society, July 4, 1855, and performed at the Birmingham Festival of the same year, the operas of 'Ruy Blas,' produced at Covent Garden, Oct. 31, 1861, and 'Aminta,' at the Haymarket Theatre; 'Once too often,' operetta at Drury Lane; 'The Coquette'; Overture to 'Manfred'; numerous songs, romances, etc. In 1868 Glover quitted England for the United States, and died at New York, Oct. 26, 1875. [W. H. H.]

GLUCK, CHRISTOPHE WILLIBALD, RITTER, born July 2, 1714, baptised July 4, at Weidenwang, near Neumarkt, in the Upper Palatinate. His father, Alexander, and his mother, Walburga, belonged to the household of Prince Lobkowitz, and it was at his castle of Eisenberg that the future reformer of the lyric drama passed his early days. At 13 he was sent for six years to the Jesuit school of Komotow or Chamutow in Bohemia, where he studied classics, and had his first lessons in singing, the violin, clavecin, and organ. In 1732 he went to Prague, where he continued his musical education under Czernhorsky, and also learned the cello; maintaining himself in the meanwhile by singing in church, playing the violin at the peasants' dances in the neighbouring villages, and giving concerts in the larger towns near Prague. In 1736 he went to Vienna, and at the house of Prince Lobkowitz was fortunate enough to meet Prince Melzi, a distinguished amateur, who engaged him for his private band, took him to Milan, and placed him with G. B. Sammartini to complete his studies in harmony. Gluck soon began to write operas—'Artaserse' (Milan) 1741; 'Demofonte' (Milan), 'Cleopatra' (Munich), 'Deidamia,' and 'Ipermestra' (Venice) 1743; 'Artamene' (Cremona) and 'Sifaco' (Milan) in 1743; 'Fedra' (Milan) in 1744;
and in the spring of 1745 'Poro' or 'Alessandro nell' Indie' (Turin). All these were well received, and in consequence of their success he was invited in 1745 to London as composer for the opera at the Haymarket. Here he produced 'La Caduta de' Giganti' (Jan. 7, 1746), 'Artamene' (re-written), and a pasticcio, 'Piramo e Tisbe,' all without success. Handel declaring that the music was detestable, and that the composer knew 'no more contrapoint than his cook' —Walza, who, however, was a fair bass singer. Counterpoint was never Gluck's strong point, but the works just named had not even originality to recommend them. He also appeared on April 23, 1746, at the Haymarket Theatre in the unexpected character of a performer on the musical glasses, accompanied by the orchestra (see the 'General Advertiser,' March 31, and H. Walpole's letter to Mann, March 28). [HARMONICA.] But his journey to England, mortifying as it was to his vanity, exercised an important influence on Gluck's career, for it forced him to reflect on the nature of his gifts, and eventually led him to change his style. The pasticcio taught him that an air, though effective in the opera for which it was written, may fail to make any impression when transferred to a different situation and set to different words. A visit to Paris shortly after gave him the opportunity of hearing Rameau's operas; and in listening to the French composer's admirably appropriate recitatives, he came to the conclusion that the Italian opera of that time had but a concert, for which, as the Abbé Arnaud happily expressed it, the dramas furnished the pretexts. Returning to Vienna by way of Hamburg and Dresden towards the end of 1746, he applied himself to the study of aesthetics as connected with music, and of the language and literature of various countries, taking care at the same time to frequent the most intellectual society within his reach. 'Semiramide riconosciuta' (Vienna 1748) is a decided step in advance, and in it may be detected the germ of Gluck's distinctive qualities. His next work was 'Filide' (1749), a serenade, or more properly cantata, in 3 acts, written at Copenhagen for the birthday of Christian VII. It is now in the library at Berlin, but being a mere pièce de circonstance scarcely deserves a place in the list of his works. Far otherwise is it with 'Telemaco' (Rome 1750) and 'La Clemenza di Tito' (Naples 1751), which deserve special attention, as from them Gluck borrowed many a page for his French operas 'Armide' and 'Iphigénie en Tauride'; from which fact it is evident that when they were written his style had already changed. These operas were followed in 1754 by 'L'Erode Cinese,' first performed at Schönbrunn, 'Il Triunfo di Camillo' (Rome), and 'Antigono' (ibid.). From 1755-61 Gluck was stationary in Vienna, and to all appearance failing; he wrote divertissements for the palaces of Laxenburg and Schönbrunn; composed airs for the comedies or comic operettas performed at the court theatre; and produced only one opera in 3 acts, 'Tetide' (1750), of which nothing has survived. These six years however, far from being wasted, were probably most useful to him, for by these apparently insignificant works he was acquiring flexibility of style, and securing powerful patrons, without losing sight of his ultimate aim. His opera 'Orfeo ed Euridice' (Vienna Oct. 5, 1753)—the libretto not as heretofore by Metastasio, but by Calzabigi—showed to all capable of forming a judgment what the aims of the reformer of the lyric stage were. After the production of this fine work, however, he returned to Metastasio and to pièces de circonstance for the court theatre—'Estro' (1753); 'La Rencontre imprévue,' afterwards produced in German as 'Die Pilgerin von Makka,' (1754); 'Il Parnasso confuso,' 'La Corona,' and 'Telemaco,' partly re-written (1756); in fact he was obliged to bend to circumstances, and before all things to please the princes who protected him and sang his music. 'Il Parnasso' was played by four archduchesses, the archduke Leopold accompanying them on the clavecin. It was probably between this date and the departure of Marie Antoinette for France (May, 1770) that Gluck acted as singing master to that princess.

At length, thinking the time had come for bringing his ideas before the public, and finding in Calzabigi a poet who shared his taste for strong dramatic situations, he produced in Vienna 'Alceste' (Dec. 16, 1767) and 'Paride ed Elena' (1769). The scores of these operas were published in Vienna (1769-70) and dedicated respectively to the Archduchess Leopold and the Duke of Braganza. Each contains a dedicatory epistle, briefly explaining Gluck's views on dramatic music. As far as theory went, his system was not new, as it rested on the outlines already sketched by Benedetto Marcello in his 'Teatro alla Moda' (1720); but theory and practice are two different things, and Gluck has the rare merit of showing in his 'Alceste' and 'Paride' that he was both composer and critic, and could not only imagine but produce an opera in which all is consecutive, where the music faithfully interprets each situation, and the interest arises from the perfect adaptation of the ensemble of the music to the whole of the drama. The composition of these two great works did not prevent his writing the intermezzi of 'Le Feste d' Apollo,' 'Baci e FILEmone,' and 'Ariette,' produced at the court theatre of Parma in 1769, but not published.

In spite of the favour he enjoyed at the court of Vienna, and of the incontestable beauties contained in 'Orfeo,' 'Alceste,' and 'Paride ed Elena,' Gluck's countrymen criticised his new style in a manner so gallant, that, conscious of his own power, and by no means devoid of vanity, he resolved to carry out elsewhere the revolution he had determined to effect in dramatic music. In the Baili du Rollet, an attaché of the French embassy in Vienna, he found an enthusiastic partisan and a valuable auxiliary; they consulted as to a drama in which music

2 Printed in folio by G. T. Traithem with moveable types.
might be employed for enhancing the expression of the words and the pathos of the situations; and their choice fell upon Racine's 'Iphigénie.' This opera, 'Iphigénie en Aulide,' was written in French in 1772, partially rehearsed at the theatre in Vienna towards the end of the same year, and produced at the Opera in Paris, April 19, 1774. Gluck left no means untried to ensure success — statements of his views, public announcements ('Mercure de France,' Oct. 1772 and Feb. 73), public tributes of respect to J. J. Rousseau, letters to authors whose good will it was desirable to propitiate — in short, everything that ability and experience in such matters could suggest. And yet if it had not been for the all-powerful protection of his former pupil, Marie Antoinette, he would in all probability have failed in getting his work performed, so strong was the opposition which his arrival in France had roused, especially amongst those interested in keeping him out of the 'Académie de Musique.' The Dauphiness seems to have been really attached to her old singing master. In a letter to her sister Marie Christina (May 3, 1777) she calls him 'notre cher Gluck;' and after the success of 'Orphée' she granted him a pension of 6,000 francs, and the same sum for every fresh work he should produce on the French stage.

The appearance of 'Iphigénie en Aulide' marks a new era in the history of French opera. This severe and deeply conceived work transports us bodily into Greece; it is pervaded throughout by an antique atmosphere, of the days of Sophocles rather than of Euripides. What a bold innovation is the overture, with the inexorable voice of the oracle making itself heard, and with the striking unison passage, which at once forces the ruling thought of the drama into notice, while it closely connects the symphony with the action on the stage! Then again, how grand, how just, how pathetic is the declamation of all the airs! These airs, it must be confessed, succeed each other too rapidly, and one cannot but regret that the librettist did not perceive how much the action is retarded by making three airs follow each other in one act, a mistake which might easily have been avoided. But how ingenious are the artifices to which Gluck resorts in order to give variety to the recitative and the declamatory passages! How skilfully he brings in his short incisive symphonies, and how much effect he produces by syncopation! How appropriately he introduces the orchestra to emphasise a word, or to point a dramatic antithesis! How graceful is the chorus 'Que d'attrait!' and how startling and attractive are the brilliancy, force, and boldness of the harmony in the hymn of triumph 'Chantons, célèbres notre reine!' While listening to the air of Agamemnon, 'Au fait des grands rieurs,' the enthusiastic Abbé Arnaud exclaimed, 'With that air one might found a religion.' What a depth of expression is contained in the air 'Par un père cruel à la mort condamné!' and what heart-rending emotion in the recitative

'J'entends résonner dans mon sein
Le cri plaintif de la nature!'

not to speak of the scene in which Olympeensarants, the duet between Achille and Iphigénie which gave rise to so many discussions, the quartet, or the dance music!

Owing to the support of the court and the pains taken by Gluck to obtain a thoroughly satisfactory performance, 'Iphigénie' was most favourably received. Its success gave the finishing stroke to the antiquated works of Lully and Rameau, and introduced into grand opera the revolution already effected in opera comique by Philidor, Monsigny, and Grétry.

'Iphigénie' was speedily followed by 'Orphée et Eurydice,' adapted from the 'Orfeo' already mentioned, and produced at the Académie, Aug. 2, 1774. This opera made a profound impression, although Gluck was compelled to transpose the music of Orpheus to suit Logres, as there was no contralto capable of taking the part. The second act is still accounted a masterpiece.

In accordance with a desire expressed by Marie Antoinette, and which Gluck was too good a courtier to refuse, 'Le Poirier,' a comedy by Voltaire, which he had composed in 1751, and 'Cythère Assiégée,' a piece of Favart which he had converted into an opera in 1750, were produced at the court theatre at Versailles in 1775. The latter work was also produced in Paris (Aug. 1, of the same year) with a dissertation by P. M. Berton, and with a want of success which compelled Arnaud to admit that 'Hercules was more at home with the club than the distaff.'

For this failure, however, Gluck was consoled by the brilliant success of his 'Alceste,' which he rearranged for the French stage (April 23, 1776), and which created quite as much enthusiasm as 'Orphée' had done, notwithstanding a want of variety in the libretto. It is in this fine work that the oracle of Apollo pronounces its stern decree on a reiterated note which strikingly pictures the immutability of the infernal deities. This touch of deliberate inspiration was not lost on Mozart in 'Don Giovanni,' nor on Ambroise Thomas in 'Hamlet.'

In order to prove that it was not in tragedy alone he excelled, but that he also possessed the descriptive faculty, and could depict scenes of luxury, and express tender and graceful sentiments, Gluck composed 'Armide' (Sept. 23, 1777). He had been reproached with having no melody, and with making his singers 'shriek'; this work, which contains many charming passages, and a duet magnificent for passion and tenderness, was his answer. The excitement it aroused is almost incredible. Piccinni had recently arrived in Paris, and, under Marmontel's superintendence, was composing his 'Roland,' to be produced

---

1 In this as in other more important points, how like is Gluck to Wagner!
2 There are here in parallel with Wagner's judicious methods of procedure.
3 The same accusation, rightly or wrongly, is made against Wagner.
four months after 'Armide.' His admirers, and the partisans of the old Italian music, were furious at Gluck's success, and every one knows the lengths to which the war of the Gluckists and Piccinnians was carried. It was even more violent than the old conflict of the Bouffons, since the combatants were encouraged by the bodily presence of the rival masters. Marmontel, Le Harpe, Ginguené, d'Allemont, the Chevalier de Chastellux, Frameroy, and Coqucarn, were among the attacking party, while the chief defenders were Suard and the Abbé Arnaud. Not content with disparaging Gluck's genius in his 'Essai sur les révolutions de la Musique,' Marmontel went the length of writing an entire poem, 'Polymnie,' in praise of the Italian school and his favourite Piccinni. Space will not permit us to enumerate the pamphlets, epigrams, and satires, which emanated from both sides in this contest; nearly all that are of any importance may be found in the collection of the Abbé Leblond—'Mémoires pour servir à l'histoire de la révolution opérée dans la musique par M. le Chevalier de Gluck' (Naples and Rome). In short, the possession of Gluckism was, by Saint Aubin, the champions of the Italian school accused him of composing operas in which there was 'little melody, little nature, and little elegance or refinement.' They declared that the noise of his orchestra was necessary to drown b's clumsy modulations; that his accompanied recitative was nothing but an overloaded imitation of the Italian recitativo obbligato; that his choruses were less dramatic than those of Rameau; and that his duets were borrowed, and badly borrowed, from the 'duetti à dialogo' which he had heard in Italy. They could not forgive what Marmontel calls his 'harsh and rugged harmony, the incoherent modulations, mutilations, and incongruities contained in his airs,' but they were most offended by his 'want of care in choosing his subjects, in carrying out his designs, and giving completeness and finish to his melodies.' In short, he accused him of being the accessory, rather than the cause, of any creative genius whatever. They might as well have denied the existence of the sun—but passion invariably blinds its votaries.

The Abbé Arnaud, on the other hand, met the systematic disparagement of Marmontel and Le Harpe with his 'Profession de foi en musique,' an excellent treatise on musical aesthetics, though little more than a paraphrase of the celebrated dedication which Gluck himself had prefixed to the score of 'Alcestis.' This statement of the great reformer's principles is well worth transcribing.

'When I undertook to set the opera of Alcestis to music,' he begins, 'I resolved to avoid all those abuses which had crept into Italian opera through the mistaken vanity of singers and the unwise compliance of composers, and which had rendered it wearisome and ridiculous, instead of being, as it once was, the grandest and most imposing stage of modern times. I endeavoured to reduce music to its proper function, that of seconding poetry by enforcing the expression of the sentiment, and the interest of the situation, without interrupting the action, or weakening it by superfluous ornament. My idea was that the relation of music to poetry was much the same as that of harmonious colouring and well-dioosed light and shade to an accurate drawing, which animates the figures without altering their outlines. I have therefore been very careful never to interrupt a singer in the heat of a dialogue in order to introduce a tedious ritornelle, nor to stop him at the purpose of displaying the flexibility of his voice on some favourable vowel, or that the orchestra might give him time to take breath before a long sustained note.

'Furthermore, I have not thought it right to hurry through the second part of a song if the words happened to be the most important of the whole. In order to repeat the first part regularly four times over; or to finish the air where the sense does not end in order to allow the singer to exhibit his power of varying the passage at pleasure. In fact, my object was to put an end to abuses against which good taste and good sense have long protested in vain.

'My idea was that the overture ought to indicate the subject and prepare the spectator for the character of the piece they are about to see; that the instruments ought to be introduced in proportion to the degree of interest and passion in the words; and that it was necessary above all to avoid making too great a disparity between the recitative and the air of a dialogue, so as not to break the sense of a period or awkwardly interrupt the movement and animation of a scene. I also thought that my chief endeavour should be to attain a grand simplicity, and consequently I have avoided making a parade of difficulties at the cost of clearness. I have set no value on novelty as such, unless it was naturally suggested by the situation and suited to the expression; in short there was no rule I did not consider myself bound to sacrifice for the sake of effect.'

It can never be out of place to recall such precepts as these—precepts which will be worth following to the end of time. Gluck himself bore them carefully in mind in composing his 'Iphigénie en Tauride,' produced in Paris (in 4 acts) with immense success May 18, 1779. It is the highest and most complete expression of his genius. Amongst its many beauties must be specified the air of Thoas; the airs 'Je t'imploire et je tremble' (borrowed from 'Telemaco'), 'O malheureuse Iphigénie' (originally written for 'La Clemenza di Tito'), 'Unis dès la plus tendre enfance,' sung by Pylades; and, beyond all, the sleep of Orestes—the heart-breaking remorse of the deceitful parricide, the spirited choruses, and the barbarous Scythian dances. These passages all glow with colour, those of the melodies by which they are accompanied are of the simplest kind. By this chef-d'œuvre Gluck amply vindicated his superiority over Piccinni, whose 'Iphigénie en Tauride' (Jan. 23, 1781) could not make way against that of his rival. The last work which Gluck composed for the Opéra in Paris was 'Echo et Narcisse' (Sept. 21, 1779). Though not very successful it was revived in August 1780, and one of the airs, and the 'hymne à l'Amour,' have since been introduced into 'Orphée.' It was however with 'Les Danaides' that Gluck intended to close his laboursome career; but an apoplectic seizure compelled him to relinquish the task, and he transferred the libretto to his pupil Saliéri. He then retired to Vienna, where he passed his last years in the enjoyment of the position secured by his fame and his large fortune, until a second stroke of apoplexy carried him off, Nov. 15, 1787 (not the 25th, as Pécoul has written). The authorities for this sketch of Gluck's career, and for the notices of the most remarkable passages in his operas, are various historical
documents, and the biographies and critiques of Leblond, F. J. Riedel (‘Über die Musik des Ritters Christoph von Gluck, verschiedene Schriften,’ Vienna 1775), Siegmeyer (‘Über den Ritter Gluck und seine Werke,’ Berlin 1835), Miel, Solici, Anton Schmid (‘Chr. W. Ritter von Gluck,’ Leipzig 1854), Fétils, Hector Berlioz (‘A travers chants’), Ad. Adam (‘Derniers Souvenirs’), Desmoularetas (‘Gluck et Piccinni,’ Paris, 1872), etc. For more minute details the reader is referred to Schmid’s work, which is most complete as regards the catalogue of Gluck’s compositions. To his list must be added the magnificent edition of Mlle. Pellestain, evidently the work of an ardent admirer; of which the full scores of the two ‘Iphigénies,’ with a portrait, and preface in three languages, are all that have appeared at present. For those who wish to study the physiognomy of this diplomatic composer, impetuous artist, and amusingly vain man, there are the engravings of Miger and Sichiling from the portrait painted by Duplessis in 1775, Saint Aubin’s engraving from Houdon’s celebrated bust, and Philippeaux’s from the picture painted by Houderville. There is a full-length statue of Gluck by Cavaleri at the new Opera House in Paris. Under Miger’s portrait are the words of Pythagoras: ‘He preferred the Muses to the Sirens,’ words applied to him by Wieland, and, as such, in striking contrast to the many bitter remarks of earlier German critics.

Before summing up our opinion of Gluck’s works as a whole, we have only to remark that, according to Fétils, he failed in sympathy proper, and was by no means distinguished as a composer of sacred music. He wrote indeed but little for the church; the psalm ‘Domine, Dominus noster’ for choir and orchestra, a ‘De profundis’ for the same (engraved), and a part of the cantata ‘Le Jugement dernier,’ completed by Salieri, being all his known works in this style.

Gluck’s fame therefore rests entirely on his dramatic compositions. Padre Martini said that he combined in the musical drama all the finest qualities of Italian, and many of those of French music, with the great beauties of the German orchestra— in other words, he created a cosmopolitan music. He was not satisfied with introducing a correct style of declamation, and banishing false and useless ornaments from the stage; and yet if he had merely carried to perfection the work begun by Lully and Rameau; if his efforts had been limited to removing the harpsichord from the orchestra, introducing the harp and trombones, employing the clarinets, scoring with skill and effect, giving more importance and interest to the overture, and employing with such magic effect the articulate of momentary pauses to vary or emphasise speech in music,—if he had done no more than this he would have earned our gratitude, but he would not in that case have been one of the monarchs of art. What then did he accomplish that was so extraordinary? He grasped the idea that the mission of music was not merely to afford gratification to the senses, and he proved that the expression of moral qualities is within her reach. He disdained all such tricks of the trade as do not appeal to the heart,—in fact he ‘preferred the Muses to the Sirens.’ He aimed at depicting historic or legendary characters and antique social life, and in this work of genius he put into the mouth of each of his heroes accents suited to their sentiments, and to the spirit of the times in which they lived. He made use of the orchestra to add to the force of a dramatic situation, or at one noble instance, to contrast external repose with the internal agitation of a remorseful conscience. In a word, all his French operas show him to have been a noble musician, a true poet, and a deep thinker.

Like Corneille he has endowed France with a series of sublime tragedies; and if the author of ‘Le Cid,’ ‘Les Horaces,’ ‘Cinna,’ ‘Polyense,’ and ‘Pompeé’ may be justly reproached with too great a preference for Lucan and Seneca, there is perhaps also cause for regret that Gluck was too much influenced by the declamatory school then prevalent in France. But, like the father of French tragedy, how nobly has he redeemed an occasional inflexion or monosyleny, a few awkward phrases, or trifling inaccuracies in style! There is another point of resemblance between these two men, whose main genius was reflective rather than spontaneous; all their works have in common the element of grandeur, but they differ from one another in physiognomy, form, and character. The influence of such Art as theirs is anything but enervating; on the contrary it elevates and strengthens the mind, and is thus placed beyond the reach of the caprices of fashion or the attacks of time.

GLYN & PARKER were organ builders at Salford, near Manchester. Their instruments date from 1730 to 1749. Amongst them is the organ at Poynton, Lancashire, which so pleased Handel that he ordered Parker to build one for the Foundling Hospital (1749).

GODDARD, ARABELLA, the most distinguished of English pianoforte-players, of an old Salisbury family, was born at S. Servans, St. Malo, Jan. 12, 1838, at the age of six was placed under Kalkbrenner in Paris, and afterwards had a few lessons from Mrs. Anderson and from Thalberg in England. She made her first appearance in public at the Grand National Concerts at Her Majesty’s Theatre, of which Balfe was conductor. On Oct. 22, 1850, where her style and mechanism at once made a great impression. On Thalberg’s recommendation, she was placed in the hands of Mr. J. W. Davison, who led her to the study of those great compositions, many of which she played for the first time. On April 14, 1853, she made her début, and at once fixed her position as a classical player, at the concert of the Quartet Association, in Beethoven’s immense solo sonata in D, op. 106, a work which till that moment had probably not been performed in

1 An edition of this by Le Roi forms the frontispiece to Part IV of Lizard’s admirable ‘Bibliothèque musicale du Théâtre de l’Opéra.’
public in England, but which she played without book. The winter of 1854 and the whole of 55 were passed by Miss Goddard in Germany and Italy. She carried her classical répertoire with her; played Inter alia at the Gewandhaus Concert Oct. 1855; and was received with enthusiasm by some of the best critics of Germany. Returning to this country, she made her first appearance at the Philharmonic on June 9, 1856, in Sternsdey Bennett’s Concerto in C minor (then in MS.); at the Crystal Palace (in Moscheles’ Concerto in E) on March 13, 58, and at the Monday Popular Concerte on March 9, 59.

In 1857 and 58 Miss Goddard played in London all the last sonatas of Beethoven (from op. 101 to 111)—at that time almost absolute novelties to most of her hearers—as well as many other masterpieces by Clementi, Dussek, Mozart, Mendelssohn, and other masters, either solo or with accompaniment of instrumental additions, in addition to the usual classical Concertos, Trios, Sonatas, etc. In 1860 she married Mr. Davison, who, as already stated, was her real master and the former of her taste. In 1873 Madame Goddard left this country for a lengthened tour through America, Australia, and India, returning in the autumn of 76, and making her first reappearance in two recitals at St. James’s Hall on Oct. 12 and 19.

GODFREY. A family of English military band-masters. CHARLES GODFREY, the founder, was born in 1750 at Kingston, Surrey; in 1813 joined the Coldstreamers as a cornet-player, and soon became band-master, a post which he filled with honour till his death, Dec. 12, 1863, at his house in Vincen Square, Westminster, after 50 years’ service. He was appointed Musician in Ordinary to the King in 1831, and was one of the Court of Assistants of the Royal Society of Musicians. The first journal of military music published in this country, under the name of ‘Jullien’s Journal,’ was arranged by Mr. Godfrey. His three sons were educated at the Royal Academy of Music. DAMIEL, the eldest, was born in 1821, and has been band-master of the Grenadiers Guards since 1856. In 1872 he took his band to the United States—the first visit of an English military band since the Independence. He is well known here and abroad by his Waltons for military band—‘Guards,’ ‘Mabel,’ ‘Hilda,’ etc.

The second, ADOLPHUS GODFREY, born in 1827, succeeded his father in the Coldstreamers, and is still band-master of that regiment. CHARLES, the third, born in 1830, joined the Scots Fusiliers as band-master in 1859 and left that regiment in 1868 for a similar position in the Royal Horse Guards, which he now fills (1878).

GOD SAVE THE KING. The so-called ‘National Anthem’ of England, a tune in two sections, the first of 6 bars, the second of 8.

1 See Chappell’s ‘Popular Music,’ 1704.
Drury Lane; Burney harmonised it for the former, and Arne for the latter. Both words and music were printed, the latter in their present form, in the Gentleman's Magazine, Oct. 1745.

How far God save the King was compiled from older airs will probably never be known. Several exist with a certain resemblance to the modern tune.

1. An 'Ayre,' without further title, at p. 98 of a MS. book attributed to 'Dr. Jan Bull, and dated 1619. The MS., formerly in possession of Pepusch and of Kitchener, is now in the hands of Mrs. Clark, who refuses to allow it to be seen, but the following is copied from a transcript of Sir G. Smart's:—

This is in 2 strains of 6 and 8 bars, and besides its general likeness it has both the rhythm and the melody of the modern air in the first four bars of the second strain; but the minor mode makes an essential difference in the effect.

A piece entitled 'God save the King' occurs in the same MS., p. 66, but this is founded on the phrase

and has no resemblance whatever to the national melody.

2. A Scotch carol, 'Remember, O thou man,' in Ravenscroft's 'Meliomata,' 1611.

This is the air on the ground of which 'God save the King' is sometimes claimed for Scotland. It is in 2 strains of 8 bars each, and has the rhythm and melody of the modern tune in the first and third bars of the second strain. But it is in minor.

3. A ballad, 'Franklin is fled away' (first printed in 1669).

Here the similarity is confined to the recurring rhythm in the first and third bars of each section. Thus the rhythm and phrases of God save the King, and even the unequal length of the two strains (its most essential peculiarity), had all existed before. So also did some of the phrases of the words. 'God save the king' is found in the English Bible (Coverdale, 1535), and the phrase is in no sense a rendering of the Hebrew words, which literally are 'Let the king live,' it seems to follow that the phrase must have been employed in the translation as one familiar to English readers. Mr. Froude has also quoted a watchword of the navy as early as 1545: 'God save the king,' with the countersign 'Long to reign over us!' (Hist. chap. 22). 'God save King James' is the refrain of a ballad of 1606; and God save Charles the king, Our royal Roy, Grant him long to reign, In peace and joy,' is the opening of another ballad dating probably from 1645.

Both words and tune have been considerably antedated. They have been called 'The very words and music of an old anthem that was sung at St. James's Chapel for King James the Second' (Victor's letter, Oct. 1745). Dr. Arne is reported to have said that it was a received opinion that it was written for the Catholic Chapel of James II. This is the date given it by Burney in his 'History of Music' (Chap. 69), and Dr. Benjamin Cooke had heard it sung in the words 'Great James our King.' But Dr. Cooke was not born till 1724, and his 'James' must have been (James III.) the Pretender. And as to the Catholic Chapel of James II., to have been sung there it must surely have been in Latin, of which certainly no traces are found.

Lully's (1633-87) claim to the 'God save,' sometimes put forward, rests on the 'Souvenirs de la Marquise de Créqui,' which is now known to be
a mere modern fiction. The tune however quickly crossed the Channel. It is found in 'La Lire Maçonne... de Vignolles et du Bois... a la Haye' as early as 1756, and it is worth noting that 'the first bar has there taken its present form, and that the close is as follows:—

It was employed as the Danish National Air, to words which afterwards became 'Heil dir im Siegerkranz!' (Flensburgener Wochenblatt, Jan. 27, 1790.) As a Berlin 'Volk洌ie' the words first appeared in the 'Spenerische Zeitung,' Dec. 17, 1793, and both words and music have since become the Prussian and German National Air.

Mr. Chappell has quoted more than one additional occasional stanza as well as parody of 'God save the King.' But perhaps none are so curious as the extra stanza which is said to have been sung at Calais at the banquet given in honour of the Duke of Clarence, when, as Lord High Admiral of England, he took Louis X VIII. across the Channel—

God save noble Clarence, Who brings her king to France,
God save Clarence!
He maintains the glory
Of the British navy,
O God make him happy
God save Clarence!

The tune was a great favourite with Weber. He has introduced it into his Cantata 'Kampf und Sieg' (No. 9) and his 'Jubel Overtura,' and has twice harmonised it for 4 voices—in D and Eb (both MS.—Jahne, Nos. 247, 271). With Beethoven it was at least equally a favourite. He wrote 7 variations on it for Piano (in C; 1804), and has introduced it into his Battle Symphony; and à propos to the latter the following words are found in his journal: 'I must shew the English a little what a blessing they have in God save the King' (Nohl, 'Beethoven-Feier,' p. 55). Our own Attwood harmonised it in his anthem 'I was glad' for the coronation of George IV, as he did 'Rule Britannia' for the coronation of William IV.

Since these pages were in print Mr. Cummings has published an investigation of the subject in the Musical Times (March to August, 1878) more complete than any preceding it. I have only been able to avail myself of his copy of Bull's Ayre, and must refer my readers to the Musical Times for the rest. [G.]

Goetz, Hermann, born at Königberg, Dec. 17, 1840, died at Rottingen, Zürich, Dec. 3, 1876, a composer of some performance and greater promise. Though evidencing great musical ability at an early age, he did not receive any regular instruction till he was 17. After passing some time at the University of Königberg, he at length decided on a musical career, and placed himself at the school of Stein at Berlin, where he was the pupil of Bülow in playing and Ulrich in composition. In 63 he succeeded Kirchner as organist at Winterthur,
him opportunities of hearing his chamber music performed, and he produced orchestral and choral works at various concerts on his own account. His overture Salomons, his grand opera Die Königinn von Saba, produced at Vienna March 10, 1875, and more recently his so-called symphony 'Die Ländliche Hochzeit' (the country wedding), have been much played, and have given Goldmark a more or less European reputation.

He has published several overtures and a Scherzo for Orchestra, a quintet and a quartet for Strings, Pianoforte pieces, and various Songs. The 'Country Wedding' was played by Charles Halle at Liverpool Nov. 27, 1877, and at the Crystal Palace March 2, 1878. [G.]

GOLDSCHMIDT, Otto, pianist, composer, and conductor, born Aug. 21, 1829, at Hamburg, where his father and grandfather resided as merchants; studied the piano and harmony under Jacob Schmitt and F. W. Grund. At the age of 14 he entered the Leipzig Conservatorium, where amongst his fellow students were Joachim and von Bülow. From 1843 to 46 he studied the piano and composition as a pupil in Mendelssohn's class. In 1848 he was sent to Paris, with the view of continuing his studies under Chopin, whose acquaintance he made, and was present at the last concert given by him in the Salle Pleyel. He came to England in 1848, and in the following year played at the Musical Union, and at a concert of Mlle. Lind's at H. M. Theatre. In 1851 he went to America, succeeding Mr. Benedict as conductor of a series of concerts given by Mlle. Lind. He married that lady at Boston, U.S.A., on Feb. 5, 1852. From 52 to November 55 he and his wife resided at Dresden, and since 58 have lived in or near London. He conducted the Festivals held at Düsseldorf and Hamburg in 1863 and 66, and in 63 was appointed Vice-Principal of the Royal Academy of Music, then presided over by Sir Sterndale Bennett, with whom he edited 'The Chorale Book for England,' a collection of Chorales set to translations of German hymns by Miss C. Winkworth (Longmans, 1863). He composed the Oratorio 'Ruth' for the Hereford Festival of 1867, and it was subsequently performed in London, Düsseldorf, and Hamburg. He wrote additional accompaniments for Handel's 'Allegro' and 'Penseroso,' as well as for the 'Ode to St. Cecilia's Day,' and introduced these works for the first time in their entirety to English and German audiences since Handel's death. In 1875 the Bach Choir, an association of amateurs, was formed under his direction. At its first concert on April 26, 76, Bach's Mass in B minor, with additional accompaniments by Mr. Goldschmidt, was performed for the first time in England. The marked success of that performance, and the subsequent prosperity of the Choir, are due in a large measure to the earnestness and devotion of the conductor. Besides his Oratorio Mr. Goldschmidt has published a Pianoforte Concerto; a piano trio; Pianoforte Studies; Songs, and Part-songs. In 1861 he was elected Honorary Member of the Philharmonic Society, in 64 a Member of the Swedish Royal Academy of Music, and in 76 the King of Sweden conferred on him the Royal Order of Vasa. [A. D.C.]

GOLDFWIN, John, was a pupil of Dr. William Child. On April 12, 1697, he was appointed successor to his master as organist of St. George's Chapel, Windsor. In 1703 he became also master of the choristers. He died Nov. 7, 1719. His Service in F is printed in Arnold's Cathedral Music, and Boyce and Page also printed some of his anthems; others remain in MS. in Tul- way and at Ely Cathedral, where he is entered as Golding: 'I have set God—Goldwin' is a very favourite little anthem at cathedrals, melodious and agreeable. [W. H. H.]

GOLTERMANN, Georg Eduard, a player and composer on the cello of some eminence, whose name is occasionally seen in concert programmes, born in Hanover 1825, and educated there and in Munich. He has held posts in Würzburg and in Frankfort, where he is now residing, and where on May 1, 1878, he celebrated his 25th anniversary as conductor. His concerto and other contributions to the repertoire of the cello are of value, since though not of great originality they are thoroughly well written for the instrument, pleasing, and effective. Another Goltermann—Louis, born also in 1825, but in Hamburg, and apparently no relation to the former—was for some time Professor of the Cello at Prague and afterwards a member of the court band at Stuttgart. [G.]

GOMBERT, Nicolas, one of the most important and prolific composers of the 16th century, was born at Bruges, as we learn from the title-page of his motets, and was attached to the service of Charles V, though in what exact capacity is not known. That Josquin was his master is testified by Hermann Finck in his 'Practica Musica,' and M. Péters has given us the quotation from the copy of this rare work in his possession. 'Nostro vero tempore' (the book was published in 1556) 'novi sunt inventores, in quibus est Nicolas Gombert, Josquin pis memorias discipului, qui omnibus musicis ostendit viae, iam semitam ad querendae fugas ac subltitatem, et est author musices plane diversae a superiori. Est enim vitat pausas, et illius compositio est plena omn concordantiarum tum fugarum.' Gombert set to music a poem by Avidius on the death of Josquin, which was also set by Benedictus Burney gives us the music of this, but 'after performing the tedious task of scoring the setting by Gombert, found its chief merit to consist in imitations of his master.' A great merit nevertheless, for Gombert, a mere lad when Josquin died, persevered in his imitations so successfully that he not only came to be looked upon as his master's greatest pupil, but was able in due time, and when his own genius became mature, to engrave his name on a separate link in the chain of musical history. In the hands of his predecessors, in Josquin's especially,

1 The introduction of frequent passus had become very common in music. Philip Astley is censured for giving way to this 'foolish a folly' (Burney, vol. ii. p. 593).
contrapuntal skill had already become subservient to the beauty of the music. A further improvement was making itself visible in the art. Composers began more and more to vary the character of their music according to the subject of the words. No one worked with this end more in view than Gombert, and nothing helped him so much as the increasing love for secular chamber music. Musicians of his time, far from looking down upon secular music, were beginning to make it one of their great specialties. It gave them full scope for their fancy, they were hampered by no prescribed forms, they had no prejudices to overcome. It gave them free access and welcome into half the educated homes in Europe. Gombert seems to delight in it. He chooses the prettiest pastoral subjects, and sets them to descriptive music, and while the birds are discharging the pleasures of Spring in notes imitating their natural language, while shepherd and shepherdess sing of love and the wolf meantime attacks their flock, or while all the stirring incidents of the 'chasse à courre' are vividly depicted to us, there is no extravagance, only the simple happy treatment which our own Haydn or Mozart would have employed when in such a mood. Gombert's love for nature is apparent in the very titles of his songs—'En ce mois deliceux'; 'Joyeux verger'; 'Le chant des oiseaux'; 'L'été chaud bouillot'; 'Je m'en vais au vert bois,' etc. His power of description he carries into all the higher forms of his art, and his motets and psalms were not, in their time, surpassed for the wonderful manner in which the noble music blends itself with the ideas the words convey. Gombert has had one piece of good fortune in the last three centuries, of which few of his contemporaries can boast. One of his motets, the 'Pater Noster,' has been performed. M. Félix tells us of the profound impression it created on the Paris audience at one of his historical concerts.—Eitner's Bibliographie der Musik-Sammelwerke (Berlin, 1877) mentions nearly 250 of Gombert's compositions, printed in upwards of 90 different collections between 1529 and 1573. A single motet, 'In nomine Jesu,' printed 26 years before any of these under the name Gomperz in the Motetti B (Venice, Petruci, 1503) must surely be the work of another composer. [J.R.S.B.]

GOMEZ, A. CARLOS, a Portuguese by parentage and a Brazilian by birth, was born at Compinos July 11, 1839, was sent to Europe by the Emperor, and received his musical education at the Conservatorio of Milan. His début as a composer was made at the Teatro Fossati in Jan. 67 in a little piece called 'Se sei amigo,' which had a remarkable success. His next was 'Il Guarany,' produced at La Scala March 19, 1870, and shortly after brought out at Genoa, Florence, and Rome. In this country it was first performed on July 13, 1872, at Covent Garden. This was followed by 'Fosca' at the Scala, which was unsuccessful; and that by 'Salvator Rosa' (Genoa, Feb. 21, 74), again unsuccessful. Besides these operas Señor Gomez composed an ode entitled 'Il Saluto del Brasile,' which was performed in the Exhibition Building at Philadelphia in 1876. Gomez's music is full of spirit and picturesque effect, and is therefore popular, but it is wanting in originality, and too obviously indebted to Verdi and Meyerbeer. The best parts of Il Guarany—a Brazilian story—are said to have been those which are concerned with native subjects. [G.]

GONG. (Fr. Tam-tam, from the Indian name.) This is a Chinese instrument, made of bronze (80 copper to 20 tin); in form, a thin round plate with the edges turned up, like a shallow sieve or tambourine. It is struck with a stick, ending in a large padded leather knob. The effect produced is an awful crash or clang, which adds considerably to the horrors of a melodramatic scene. Meyerbeer has even used it pianissimo with the orchestra, in 'Robest le Diable' (scene of the resurrection of the nuns); and Cherubini has one stroke of it in his Requiem in C minor, absolutely solo (Dies irae, bar 7). If a long-continued and loud noise is desired, it should first be struck very gently, and the force of the stroke gradually increased until the effect becomes almost terrific.

It is a remarkable property of the alloys of copper and tin, that they become malleable by being heated and then plunged into cold water. Gongs are thus treated after being cast, and are then hammered. This was a secret in Europe until found out some years ago by M. d'Arcet, an eminent French chemist. [V. de P.]

GOODBAN, THOMAS, was born at Canterbury about 1780. His mother was a vocalist, and his father combined the three qualifications of violinist, lay vicar of the cathedral, and host of the Prince of Orange tavern, where in 1779 he founded the Canterbury Catch Club. At seven years old Goodban became a chorister of the cathedral under Samuel Porter. After leaving the choir he was placed in a solicitor's office, but on his father's death, about 1798, changed the legal profession for that of music. In 1809 he was appointed a lay clerk in the cathedral, and in 1810, on the retirement of his cousin, Osmond Saffrey, was made leader and director of the Catch Club. In 1819 the members of the club presented him with a silver bowl and salver as a token of esteem. Goodban was author of some instruction books for the violin and pianoforte, and of 'The Rudiments of Music,' published about 1825, a work once highly popular. He was also the inventor of a 'Musical Game' for imparting elementary instruction, and of 'Musical Cards' for teaching the theory of music. He died in his 70th year, May 4, 1863, leaving three sons, all members of the musical profession, viz. Charles, Mus. Bac. Oxon. (now retired from practice), Henry William, violincellist, and Thomas, viola player. His nephew, James Frederick, is a violinist, and organist of St. John's, Paddington. [W. H. H.]

GOODGROOME, John, born about 1630, was a chorister in St. George's Chapel, Windsor. On the accession of Charles II in 1660 he was appointed a Gentleman of the Chapel Royal, and on
Nov. 28, 1664, on the death of Purcell's father, was made Musician in Ordinary to the King. He composed several songs, some of which appeared in 'The Treasury of Music,' 1669, and died June 27, 1704. A John Goodgroome, probably his son, was organist of St. Peter's, Cornhill, about 1725. Theodore Goodgroome, the singing-master of Samuel Pepys and his wife, was probably his brother. [W. H. H.]

GOODSON, RICHARD, Mus. Bac., on July 19, 1683, succeeded Edward Lowe as organist of Christ Church, Oxford, and Professor of Music in the University. Some Odes composed by him for performance at the Acts at Oxford are still extant. He died Jan. 13, 1718. His son, RICHARD, Mus. Bac., was the first organist of Newbury, to which post he was appointed August 24, 1709. He graduated Mus. Bac. March 1, 1716. On the death of his father he succeeded him in both posts, and was also organist of New College. He died Jan. 9, 1741. [W. H. H.]

GORDIGIANI, LUIGI, the son of one musician (Antonio) and the younger brother of another (Giovanni Battista), has been called the Italian Schubert. He was born at Modena June 21, 1806. His musical education was most desultory, but his talent was great, and while still in his teens he had written three Cantatas. In 1820 his father died, and he was forced to make a living by writing pianoforte pieces under such German noms de plume as Zeuner and Von Fürstenberger. His start in life was due to two Russian princes, Nicholas Demidoff and Joseph Poniatowski, the latter of whom not only furnished him with the libretto of an opera, 'Filippo,' but himself acted in it with his wife and brother at the Standish Theatre, Florence, in 1740. Between the years 1835 and 1849 Gargigian composed or produced nine other operas all at different theatres in Florence. But it is by his 'Canzonette' and 'Canti populari' for voice and piano that he will be remembered—delicious melodies, of a sentimental, usually mournful, cast, in the taste or on the actual melodies of old Italian national tunes, and often set to words of his own. They are more than 300 in number, and were published in parts, usually of 8 or 10 each, with characteristic titles—'In cima al monte'; 'Le Farfalle di Firenze'; 'In rivals al Arno'; 'Mosaico Etrusco,' etc. They have been published everywhere and in all languages. He also published a collection of Tuscan airs with accompaniments in 3 books. Gargigian was odd and fantastic in manners and disposition. He died at Florence in 1860. [G.]

GORDON, JOHN, the son of an eminent watchmaker of the same name, was born in the parish of St. Martin, Ludgate, March 26, 1702. He was admitted a foundation scholar at Westminster, and elected thence to Cambridge, where he became pensioner of Trinity College June 18, 1720. In 1721 he obtained a scholarship in the same college. He left Cambridge June 1, 1723, and returned to London to study law, in view of which he had on Nov. 9, 1725, entered as a student at Gray's Inn. On Jan. 16, 23, he was elected Professor of Music in Gresham College, which place had become vacant by the death of Dr. Edward Shippen. On Feb. 10, 25, he was called to the bar at Gray's Inn, but continued to hold his professorship till his death, Dec. 12, 1739. [W. H. H.]

GORDON, W., a Swiss of English descent, born about the end of the 18th century. In his youth he studied music as an amateur, and was a pupil of Dronet, the celebrated flutist. After the fall of the first French Empire he obtained a captain's commission in one of the regiments of Swiss Guards in Paris. In 1826 he began his improvements in the construction of the flute. The Swiss Guards being disbanded after the revolution of 1830, Gordon devoted his whole attention to his favourite object. In 1833 he went to Munich, where he had some flutes made on a novel plan. He circulated prospectuses of his invention in Germany, Paris, and London. He came to London in the hope of finding a large demand for his instruments, but was doomed to disappointment, and returned to Lausanne. In 1836 he became deranged, and (with the exception of a short interval in 1839) remained so until his death. His modifications were carried out by Boehm, and resulted in the flute which bears that name. [BOEHM; FLUTZ, 5365.] [W. H. H.]

GORGHEGGI. [See SOLFEGGI.]

GOSS, JOHN JEREMIAH, born at Salisbury in 1770, received his musical education as a chorister of the cathedral there, of which he subsequently became a lay vicar. On Nov. 30, 1788, he was appointed a gentleman of the Chapel Royal, and about the same period obtained the places of vicar choral of St. Paul's Cathedral and lay vicar of Westminster Abbey. His voice was a pure alto of beautiful quality, and his skill and taste in part-singing remarkable. He was for many years the principal alto at the Meetings of the Three Choirs. He died in May 1817. [W. H. H.]

GOSS, Sir John, Knight, Mus. Doc., son of Joseph Goss, organist of Fareham, Hants, where he was born in 1800. In 1811 he became one of the children of the Chapel Royal under John Stafford Smith, and on leaving the choir became a pupil of Attwood, under whom he completed his musical education. About 1824 he was appointed organist of the new church of St. Luke, Chelsea, and in 1838 succeeded Attwood as organist of St. Paul's Cathedral. On the death of William Knypsett in 1860, Goss was appointed one of the composers to the Chapel Royal. He was knighted in 1872, and shortly afterwards resigned his appointment at St. Paul's. He graduated as Doctor of Music at Cambridge in 1876. Goss's compositions consist of services and anthems, chants, psalm-tunes, glees, songs, orchestral pieces, etc. Of his anthems the best known are 'If we believe,' written for the funeral of the Duke of Wellington; 'Praise the Lord, O my soul,' composed for the bicentenary festival of the Sons of the Clergy; 'The wilderness'; and 'The Lord is my strength,' composed, together with a 'Te Deum,' for the Thanksgiving for the
GOSS.

recovery of the Prince of Wales (Feb. 27, 1872). Of his glees, 'There is beauty on the mountain' is a charming specimen of truly graceful composition. In 1853 he published 'An Introduction to Harmony and Thorough bass,' a second edition of which appeared in 1847, and which has now reached a 13th edition. In 1841 he edited a collection of 'Chants, Ancient and Modern'; and in 18 the 'Church Psalmier and Hymnbook,' in conjunction with the Rev. W. Mercer. He also published 'The Organist's Companion,' a series of voluntaries and interludes, besides other works. His music is always melodious and beautifully written for the voices, and is remarkable for a union of solidity and grace, with a certain unaffected native charm which ought to ensure it a long life.

W.H.H.

GOSSEC (so pronounced), FRANÇOIS JOSEPH, born Jan. 17, 1733, at Vergnies, a village in Belgian Hainault, 5 miles from Beaumont. He was the son of a small farmer whose name is spelt Gossé, Gosees, and Gosset, in the registers of his native place. From early childhood he showed a decided taste for music, and there is a story that while herding the cows he made himself a fiddle out of a sbat with strings of horse-hair. He was always particularly fond of the violin, and studied it specifically after leaving the cathedral of Antwerp, of which he was a chorister till the age of 15. In 1751 he came to Paris, and was fortunate enough to make the acquaintance of Rameau, and to become conductor of the private band which was maintained by the Fermier-général La Papelinière for the express purpose of trying the new works of his protégé and friend, the author of 'Castor et Pollux.' It was while conducting these performances, and observing the poverty of French instrumental music, that Gosses conceived the idea of writing real symphonies, a species of composition then unknown: his first was performed in 1754, five years before the date of Haydn's first.1 It was some time before the public appreciated this new style, but his quartets, published in 1759, became rapidly popular. By this time he was attached to the household of Prince de Conté, who gave him the opportunity of making himself known both as composer and conductor. Under this encouragement he entered upon the departments of sacred and dramatic music, and quickly gained a reputation in both. In his 'Messe des Morts,' which made a great sensation when first performed at St. Roch, 1760, he has produced an effect which must have been not only quite new but also very mysterious and religious, by writing the 'Tuba mirum' for two orchestras, the one of wind instruments concealed outside, while the strings of the other, in the church, are playing an accompaniment piúissimo and tremolo in the upper registers. In his oratorio of 'La Nativité'2 he closes the same with a chorus of angels, which is sung by an invisible choir at a distance.

1 The date of Haydn's first Orchestral Symphony, for 3 Violins, 2 Violas, Bass, 2 Oboes and 3 Horns, is 1792; it was published in 1795.
2 'Echos d'Ohl's Haydn,' p. 197, 263.
3 Worry of Chablon de Maugria, who died in 1790.

GOSSEC. 611

In writing for the stage he was less of an innovator. He produced successively 'Le Faux Lord' (1765), a three-act opera, left unfinished owing to the badness of the libretto; 'Les Pecheurs' (1766), long and successfully performed; 'Toinon et Tonnette' (1767); 'Le double déguisement' (1767), withdrawn after the first representation; 'Sabinus' (1774); 'Alexis et Daphné' produced the same night with 'Philémon et Baucis' (1775); 'La Fête de village,' intermezzo (1778); 'Thésée' (1782), reduced to three acts, with one of Lully's airs retained and re-scored; 'Rosine' (1786); 'L'Offrande à la liberté' (Oct. 2, 1793); and 'Le Triomphe de la République, ou le Camp de Grandpré' (Jan. 27, 1793). In the two last works he introduced the 'Marseillaise,' with slight alterations in the air and harmony, and very telling instrumentation.

The ease with which Gosses obtained the representation of his operas at the Comédie Italienne and the Académie de Musique, proves how great and legitimate an influence he had acquired. He had in fact founded the 'Concert des Amateurs' in 1770, regenerated the 'Concert Spirituel' in 1773, organised the 'École de Chant,' the predecessor of the 'Conservatoire de Musique,' in 1774, and at the time of the Revolution was conductor of the band of the National Guard. He composed many pieces for the patriotic fêtes of that agitated period, among which the 'Hymne à l'Étre suprême' and 'Peuple, réveille-toi,' and the music for the funeral of Mirabeau, in which he introduced the lugubrious sounds of the gong, deserve special mention. On the foundation of the Conservatoire in 1795 Gosses was appointed joint inspector with Cherubini and Méhul, and professor of composition, a post he retained till 1814, Catel being one of his best pupils. He wrote numerous solfège, and an 'Exposition des principes de la Nat,' several of the classical publications of the Conservatoire. He was a member-of the Institut from its foundation (1795), and a Chevalier of the Legion of Honour (1803). He retired from his professorship in 1815, but until 1833 continued to attend the meetings of the Académie des Beaux Arts, in which he took great interest. He died at Passy, where he had long resided, Feb. 16, 1829.

Gosses's works are both numerous and important, and include, besides the compositions already named, 26 symphonies for full orchestra, one of which, 'La Chasse,' suggested to Mehul his 'Ouverture du jeune Henri'; 3 symphonies for wind; a symphonie-concertante for 11 instruments; overtures; quartets, trios, and other chamber music; masses with full orchestra; a 'Te Deum,' then considered very effective; motets for the 'Concert Spirituel,' including a 'Dixit Dominus' and an 'Exaudi,' several oratorios, among them 'Sal,' in which he inserted an 'O salutaris' for 3 voices, composed for Roussel, Lais, and Chéron, during a country walk on Sunday; a set of five choruses for Racine's 'Athalie'; and finally a 'Dernière Messe des Vivants' (1813), and the ballet héroïque of 'Calisto.'
GOSSEC.

This partnership lasted for a short time, probably only for the purpose of bringing out this particular work, for we find in the next year Duchemin’s name alone on the title-page of his publications.

Goudimel commenced writing music to the whole psalms of David in the form of motets, but did not live to complete the work. He also put music to the French metrical version of the Psalms of Marot and Beza, the music being in 4 parts, the counterpoint note against note, and the melody in the tenor (Lyons, Jaqui, 1565). The melodies are those used by Claude Le Jeune in a similar work, and were probably of German origin. The translation had not been originally intended for any particular religious sect, or for any form of public worship. The Sorbonne saw nothing in it contrary to the faith, and the Catholics at first used it freely. It is thus doubtful whether Goudimel’s work, which he expressly states in his preface is for private use only, is enough to prove that he became a Protestant. It is certainly not enough to justify Hawkins (Hist. ch. 88) in denying the possibility of his having lived at Rome or having taught Palestrina. But Calvin’s introduction of psalms singing into the public worship of his followers stamped it as heretical, and Goudimel fell a victim to his connection with it. He was killed at Lyons in the massacre on St. Bartholomew’s day, Aug. 24, 1572, by ‘les ennemis de la gloire de Dieu et quelques mechantes envieuses de l’honneur qu’il avait acquis.’

GOLDING & DALMAINE, a noted English firm of music publishers. Thomas Dalmaine, late of 20 Soho Square, commenced his career by joining Messrs. Goulding and Phipps, ‘Music Sellers to their Royal Highnesses The Prince and Princess of Wales,’ at 45 Pall Mall and 76 St. James’s Street, about 1800. Mr. Goulding, however, was in that line of business in the year 1794 in James Street, Covent Garden (Musical Directory of that date). They published songs and ballads composed by Massinghi, Reever, Shield, etc. In 1806, 7, 8 we find the firm at 124 New Bond Street. In 1809, on the accession of Phipps, they removed to 20 Soho Square, where they secured the publication of the works of Bishop. The house eventually became the most prominent publishing firm in London for the production of works of English composers, up to about the period when Auber produced his opera ‘La Muette’ (Feb. 1818), the publication of which induced Mr. Dalmaine to purchase the rights to publish for England of Auber’s future works, though by the death of the House of Lords (1854) he was unable to maintain that right. The firm did not concern itself with classical music, and although its catalogue contains no less than 300 pages, we look in vain for the great works of Bach, Beethoven, Haydn, Mozart, or Mendelssohn. Under the management of his nephew Mackinlay, Dalmaine retired on an annuity of £600, after which the house dwindled down to a fourth-rate establishment, and in 1858 removed to 104 Bond Street, where Dalmaine died at the age of 82.
and in 1866 was followed by Mackinlay. In 67
the plates and copyrights were brought to the
hammer. The printed stock sold for little more
than waste paper. The plates of all Bishop's
opera were melted, and his popular songs and
gloss are published by anybody who chooses. [C.H.P.]

GOUNOD, CHARLES FRANCOIS, born in Paris
June 17, 1818. He received his early musical
education from his mother, a distinguished pianist,
and having finished his classical studies at the
Lyceé St. Louis, and taken his degree as Bache-
ler-de-lettres, in 1836 entered the Conservatoire,
where he was in Halévy's class for counterpoint,
and learned composition from Paër and Lesueur.
In 1837 his cantata 'Marie Stuart et Rizio'
obtained the second 'prix de Rome,' which he
shared with the pianist Louis Chollet; and in
1839 he won the 'Grand prix' for his cantata
'Fernand.' No artist or literary man can tread
the soil of Italy with indifference, and Gounod's
residence in Rome exercised an influence on his
ardent imagination, of which his whole career
bears traces. The years he spent at the Villa
Medici as a pensioner of the Académie de France,
were chiefly occupied with the study of the music
of the old masters, especially Palestrina; and his
first impressive compositions were a mass for 3
equal voices and full orchestra, performed May 1,
1841, at the Church of San Luigi dei Francesi
(the unpublished MS. is in the Library of
the Paris Conservatoire), and a mass for 3 voices
without accompaniment, produced in Vienna in 1843.
It was while visiting Austria and Germany on
his way back to Paris, that he first heard the
compositions of Robert Schumann, of which he
knew nothing previously; the effect they must
have had on the impressionable mind of the
young composer may be imagined. The ideas
imbibed in Rome however prevailed, he remained
faithful to Palestrina, and on reaching Paris
became organist and maître de chapelle of the
'Missions étrangères.' It was at this period that
he attended for two years a course of theology,
in 1846 he even became an out-pupil at the
'Seminaire,' and it was generally expected that
he would take orders. Fortunately he perceived
the mistake in time, and renounced the idea of
the priesthood; but these years of theological
study had given him a love of reading, and lit-
erary attainments of a kind rarely possessed by
modern musicians. M. Gounod still delights to
quote not only St. Augustine and other Fathers,
but passages from the Latin sermons of St. Léon
and St. Bernard—indeed he would almost seem
to have appropriated the words of the latter,
'ardere et lucere,' as the motto of his life.

How he passed the years 1845-50, he will
himself perhaps inform us, if he writes the
history of his life, as he is said to intend doing.
We may believe that he employed these five
years of silence in studying the works of Schu-
mann and Berlioz—the former then almost un-
known in France; the latter encountering nothing
but opposition and unmerited abuse. With his
keen intellect, refined taste, and aptitude for
subtle analysis, M. Gounod would have no diffi-
culty in appreciating both the leading charac-
teristics and the defects of these two original
composers; he would doubtless next endeavour
to discover the best method of creating an
individual style for himself, profiting by the
study of models so dangerous if followed too
closely. It was probably during this time that
he wrote his 'Messea solennelle' in G, for solos,
chorus, orchestra, and organ, and which gave
him his first appearance before the world—
strangely enough in London! Four numbers
from that work, included by Mr. Hullah in a
Concert at S. Martin's Hall, Jan. 15, 1851, form
the text of various articles in the English papers,
and especially of one in the 'Atheneum' (Jan. 18)
which was reprinted in Paris and elsewhere, and
caused much discussion. 'Whatever the ultimate
result, here at any rate was a post and musician
of a very high order.'

But the theatre was destined mainly to occupy
M. Gounod for many years. His first opera,
'Sapho,' in 3 acts, was given at the Académie
Musique, April 16, 1851, with M. Massard in the
chief part. It contains many passages rich in
colour, though scarcely dramatic; the grand scene
of Sapho, 'Héro sur la tour,' and the hero'sman's
air, have alone survived. In writing the numer-
ous choruses for Ponsard's tragedy of 'Ulysse'
(1852), M. Gounod again attempted to produce
an antique colouring by means of rhythmical
effects and modulations of an obsolete character;
but the music—though betraying a master hand,
was stigmatised as monotonous, and the charm-
ing chorus of the 'Servantes infideles' was the
only piece received with real enthusiasm.
In 1853 he became conductor of the Orphéon
in Paris; and the eight years he was there en-
gaged in teaching choral singing gave him much
valuable experience both of the human voice in
itself, and of the various effects to be obtained
from large bodies of voices. For this Orphéoniste
he composed several choruses, and a Mass for
men's voices; but such works as these were not
calculated to satisfy the ambition of so exception-
ally gifted an artist. Anxious to try his strength
in all branches of music, he wrote several sympho-
nies (one in D, a second in Eb), which were
performed with success at the concerts of the
'Association des jeunes Artistes,' but are of no
importance. In France however the stage is the
sole avenue to fame and fortune, and accordingly
his main efforts were made in that direction.
The 'Nonne Sanglante' (Oct. 18, 1854) a 5-act
opera founded on a weird legend in Lewis's
'Monk,' was only given 11 times; although it
contains a 2nd act of a high order of merit
as music, and a very striking duet—that of the
legend. After this second failure at the Aca-
démie Gounod was compelled to seek success
elsewhere, and accordingly produced 'Le Médecin
malgré lui,' an opera comique arranged by Carré
and Barbier from Molière's comedy, at the
Théâtre Lyrique (Jan. 15, 1858). The music is
refined, but not in the least comic. The most

1 The second of these was played by the Thilharmonic, 1860, and both
have been repeatedly heard at Sydenham.
successful number was the septet of the consultation; as for the charming couples sung by Sganarelle when in liquor, they are delightful from a musical point of view, and essentially lyric, but contain not a particle of the vis comica. Under the title of the 'Mock Doctor' the piece has had fair success in London. Faust, however, also produced at the Théâtre Lyrique, March 19, 1859, with Mme. Miolan-Carvalho as Marguerite, placed Gounod at once in the first rank of living composers. The fantastic part of Faust may not be quite satisfactory, and the stronger dramatic situations are perhaps handled with less skill than those which are more elegiac, picturesque, or purely lyric, but in spite of such objections the work must be classed among those which reflect high honour on the French school. The Kermesse and the garden-scene would alone be sufficient to immortalise their author. 'Philémon et Baucis,' a one-act opera composed for the theatre at Baden, was re-written in three acts for the Théâtre Lyrique, and performed Feb. 18, 1860. The score contains some charming passages, and much ingenuity and elegance of detail; but unfortunately the libretto has neither interest, movement, nor point, and belongs to no well-defined species of drama. After the immense success of 'Faust,' the doors of the Académie were naturally again opened to Gounod, but the 'Reine de Saba' (Feb. 28, 1862) did not rise to the general expectation. The libretto, written by Gérard de Nerval, embodies ideas more suitable for a political or a psychological exposition, than for a lyric tragedy. Of this great work nothing has survived but the dialogue and chorus between the Jewesses and Sabeans, in the 2nd act, the air of the Queen in the 4th act (afterwards inserted in Faust), the choral march, the choral dance, and above all the elegant and picturesque airs de ballet. Under the name of 'Irene' an English version of the opera was occasionally performed in London. The success of 'Mireille' (Théâtre Lyrique, March 19, 1864), a 5-act opera founded on the Provençal poem of F. Mistral, was secured by the cast, especially by the splendid performance of Mme. Miolan-Carvalho, whose part contains one of the most remarkable airs of modern times ("Mon cœur"). Mmes. Faure-Lefebvre— as Andreloun— and the other artists combined to make an excellent ensemble. Still 'Mireille' is descriptive and lyric rather than dramatic; accordingly by Dec. 15, 1864, it was reduced to 3 acts, in which abridged form it was revived in 1875. Its overture is admirable, and a great favourite in English concert rooms. This charming pastoral was succeeded by 'La Colombe' (June 7, 1866) originally written for the theatre at Baden, and known in England as the 'Pet Dove,' and by 'Roméo et Juliette' (April 27, 1867), a 5-act opera, of which the principal part was again taken by Mme. Miolan. The song of Queen Mab, the duet in the garden, a short chorus in the 2nd act, the page's song, and the duel scene in the 3rd act, are the favourite pieces in this opera. Since these Gounod has written incidental music for Legouvé's tragedy 'Les deux Reines,' and for Jules Barbier's 'Jeanne d'Arc' (Nov. 8, 1873).

He has also published much church music, besides the 'Messe Solennelle' already mentioned, and the 2nd Messe des Orphéonistes; a 'Stabat Mater' with orchestra; the oratorio 'Tobie,' 'Gallia,' a lamentation, produced at the Albert Hall, London (May 1, 1871), a De Profundis; an Ave Verum; Sicut cervus; and various other hymns and motets, two collections of songs, and many single songs and pieces, such as 'Nazareth,' and 'There is a green hill.' For orchestra a Saltarello in A, and the Funeral march of a marionette. A jeu de plume, on the propriety of which we will not decide, but which is unquestionably extremely popular, is his ' Meditation' for soprano solo and orchestra on the 1st Prelude of Bach's C.

After a stay of some years in England, during which he appeared in public at the Philharmonic, the Crystal Palace, and Mrs. Weldon's concerts, Gounod recollected that he had been elected a member of the 'Institut de France' on the death of Clapison (1866); and returning to Paris, resumed the position to which his genius entitled him. On the 4th of April, 1877, he produced 'Cinq Mars' at the Théâtre de l'Opéra Comique, a work which bears traces of the haste in which it was designed and executed. His last opera, Polytioc, produced at the Grand Opera, Oct. 7, 1878, though containing some fine music will hardly add to the fame of the author of Faust.

To sum up, Gounod is a great musician and a thorough master of the orchestra. Of too refined a nature to write really comic music, his dramatic compositions seem the work of one hovering between mysticism and voluptuousness. This contrast between two opposing principles may be traced in all his works, sacred or dramatic; and gives them an immense interest both from a musical and psychological point of view. In the choirs of his orchestra, majestic as those of a cathedral organ, we recognise the mystic—is his soft and original melodies, the man of pleasure. In a word, the lyric element predominates in his work, too often at the expense of variety and dramatic truth.

[GC]

GOUVY, THEODORE, prolific composer, born of French parents, July 2, 1819, at Gofftaine, Saarbruck, where his father was a large iron-founder. He took his degree at the college at Metz, and then proceeded to Paris to study the law. Hitherto, though possessing an unmistakable talent for music, he had had no instruction in it, and had probably not heard a single classical piece. But being at the Conservatoire he happened to hear Beethoven's 7th Symphony. This at once fired his mind, and he wrote home to announce his determination to be a musician. His parents' consent obtained, he placed himself under Elwart for 3 years, then resided at Berlin, where he published his 'Opus 1,' and thence went for more than a year to Italy. In 1846 he returned to Paris, which since then has been his
home, with visits to Cologne and Leipsic, where his music has been frequently played with success.

His published and unpublished works (of which a list is given by Fétis and Fougia) extend to op. 56, containing more than 750 numbers, many of them of large dimensions. They comprise 6 Symphonies for full orchestra; 2 Concert overtures; String quartets and a quintet; 5 P. F. trios and one ditto Quintet; 18 Serenades for P. F. solo; Sonatas for ditto; choruses, songs, and other pieces in large numbers. His music appears to be much relished in Paris, and to be esteemed even in Germany. In England, however, it is not at all known.

[G.]

GOW, N. X. T., was born at Strathearn, Perthshire, in 1727, of humble parents. At a very early age he showed a taste for music, and at nine began to play the violin. He was self-instructed until the age of thirteen, when he received some lessons from John Cameron, a retainer of Sir George Stewart, of Grandtully. He became distinguished by his performance of Scotch tunes, particularly strathspeys and reels, in which he has probably never been excelled or equalled. His fame soon reached London, and his assistance was long sought at fashionable balls and assemblies. He had an uncommonly powerful bow hand, particularly in the up stroke. He was ably supported by his brother, Donald, on the violincello. Gow died at Inver, near Dunkeld, in 1807. He published several collections of Scotch tunes, including many of his own composition. He had four sons, all excellent violinists in the same style as their father. The eldest, Nathaniel, published 'The Beauties of Neil Gow,' in six books, and several other collections of Scotch melodies. [G.H.]

GRACE NOTES, or GRACES, the English name for the ornaments in vocal and instrumental music—appoggiaturas, assiccaturas, mordents, turns, shakes, and many more—which are treated of in this work under the general head of AGREMENTS, as well as under their own separate names.

GRADUAL (Lat. Graduale; from gradus, a step). A short anthem sung at High Mass, between the Epistle and Gospel for the day.

In the early ages of the Church, the Gradual was chanted, by the Deacon, from the steps of a primitive species of reading-desk, called the Ambo, or Amov; from which steps this portion of the Service derives its peculiarly characteristic name. It is now sung by the Choir: the first clause, by two Cantors only; the remainder, in full chorus. On Sundays, and Festivals, it is usually supplemented by the Alleluia and Versus. During the Seasons of Septuagesima, and Lent, and on some few other occasions, these are omitted, and the Gradual, properly so called, is sung alone. On the Sundays after Easter, the Gradual itself is omitted, and the Alleluia, and Versus, are sung alone. Special forms of both are appointed, for daily use throughout the ecclesiastical year. The words are taken, with very few exceptions, from the Book of Psalms; and the Plain Chant melodies to which they are invariably sung form part of the volume called the Graduale Romanum, to which the reader must be referred for their general style. Before the 13th century, the Gradual proper was repeated, in full, after the Alleluia, and Versus.

The so-called 'Graduals' of Haydn, Mozart, and some other modern composers, are Graduals in name only; and will be more properly discussed in the article Motet. [W.S.R.]

GRADUAL, THE ROMAN (Lat. Graduale Romanum; Old Eng. Glyyte). A well-known volume of Ritual Music, containing a complete collection of the Plain Chant melodies appointed to be sung at High Mass throughout the year. The first idea of the Graduale Romanum, as well as that of its sister volume, the Vesperale, was undoubtedly suggested by the treasury of ancient music, arranged, for the first time, in a systematic form, during the latter half of the 4th century, by Saint Ambrose, Bishop of Milan, whose method of chanting exercised a lasting influence upon medieval art, notwithstanding the neglect to which it was consigned, when, some two hundred and thirty years later, that set forth in the famous Antiphonarium of Saint Gregory the Great was brought into almost universal use. Throughout the entire Western Church, this celebrated Antiphonary was all but unanimously accepted as the norm to which all other Office Books, of like scope and intention, must, of necessity, conform. It was, indeed, well worthy of the admiration it excited; but, unhappily, the uncertain and rudimentary character of its notation led to so much misunderstanding, and consequent corruption of the musical text, that, in process of time, every Diocese of importance claimed to have its own peculiar 'Use.' Hence, we find the Paris, Sarum, York, Hereford, and innumerable other Graduals, all differing widely in their details, though always exhibiting sufficient resemblance, in their general plan, to point to a common original. Attempts were made, from time to time, to restore a purer and more uniform practice: but, until after the revision of the Liturgy, by the Council of Trent, no real progress was made in the right direction. The first decisive step was taken by Pope Gregory XIII; who, in the year 1576, commissioned Palestrina, assisted by his friend and pupil, Guidetti, to revise, and restore to its original purity, the entire system of Plain Chant then in common use. This gigantic task, though never fully carried out, indirectly led to the publication of other invaluable works. A splendid folio Gradual was also printed at Venice in 1579-1580, by Pet. Liechtenstein. Another very fine copy—the Editio Plantiniana—was brought out, at Antwerp, in 1599: while, in 1614-1615, the celebrated Medicean edition, which (though not free from error) has always been regarded as the most correct hitherto given to the world, was printed, at Rome, at the express command of Pope Paul V. It is needless to say that copies of these magnificent editions have long since become exceedingly rare, and costly. One of the best
modern reprint—or, rather, re-compilations—is a Grand Opera, based upon the editions of 1599 and 1614, and printed, at Mochlin, in 1848, under the patronage of Cardinal Sterckx. A similar volume, intended for the use of the Dioceses of Rheims, and Cambrai, appeared in 1851; and a third, prepared for the press by Pierre Lambillotte, was published, by his executors, in 1857. Far more important, however, than any of these, is the latest edition, carefully revised by the Sacred Congregation of Rites, and first printed, at Ratisbon, by Friedrich Pustet, in 1871, under special privileges granted by His Holiness, Pope Pius IX.¹

The contents of the Gradual—always printed in Gregorian notation—are classed in five principal divisions: viz. the 'Proprium de Tempore,' 'Proprium de Sanctis,' 'Commune Sanctorum,' 'Ordinarium Missae,' and 'Modus Respondendi.' Of these, the first three contain the words and music of the Introit, Gradual, Alleluia, Versus, Tract, Sequence, Offertory, and Communion, for every day throughout the ecclesiastical year. The 'Ordinarium Missae' contains the Asperges me, Kyrie, Gloria in Excelsis, Credo, Sanctus, Benedictus, Agnus Dei, and Agnus dei, for festivals of every degree of solemnity. The 'Modus respondendi' contains the Sursum corda, Sed laceras nos a malo, and other Responsories usually sung at High Mass. The notation of the Prefations, and Pater noster, being given, in full, in the Missal, is not repeated in the Gradual; which, indeed, is intended rather for the use of the Choir, than that of the Celebrant. [W.S.R.]

GRADUS AD PARNASSUM. The title of two eminent progressive works on music. 1. Fux's treatise on composition and counterpoint—'Gradus ad Parnassum, sive manuductio ad compositionem musicae regularem, methoda nova expedientia, nonnulla ante tam exacto ordine in lucem edita: elaborata a Joanne Josepho Fux' (Vienna 1725; 1 vol. folio). It was translated into German by Mühler (Leipsic 1743), into Italian by Manfredi (Carpì 1761), and into English, 'Practical rules for learning Composition translated from a work entitled Gradus ad Parnassum, written originally in Latin by John Joseph Fux, late chief composer to the Roman Emperor Charles VI.—Welcker, 10 Hay Market' (a thin folio with no date). This contains, in addition to the exercises in the text, a Kyrie and Amen from the Missa Vicensiudiniania. 2. Clementi's well-known work 'Gradus ad Parnassum, ou l'art de jouer le pianoforte démontré par des exercices dans le style sévère et dans le style élégant. Composé et dédié à Madame la Princesse Woloksny, née Woloksny, par Muzio Clementi, membre de l'Académie Royale de Stockhom.' (Milan, Ricordi.) It is in two parts or volumes, containing in all 100 exercises. Some of these are marked as having been published before, and extended and revised by the author. Thus Ex. 14 is headed 'extrait par l'auteur de ses Duos à 4 mains, ouvrage xiv, publié à Londres en 1784. Tuliit alter honoros. Virg. apud Donat.' Ex. 39, Adagio in Bb, is entitled 'Scena pasticca,' and so on. The work has at the beginning an English motto from Dr. Johnson—'Every art is best taught by example.' Clementi published an Appendix to the Gradus, containing 134 Exercises, Galanties, Gigue, Airs with Variations, etc., partly his own, but chiefly by other composers. They are arranged, each with its relative minor—usually a prelude or preludes by Clementi, followed by pieces. [G.]

GRAND OPERA. A reference to the articles COMOIndiana Opera and ACADÉMIE DE MUSIQUE will show that Grand Opera, like Comic, owes its

GRANDHAM, George Farquhar, son of Lieut. Col. Humphrey Graham, was born in Edinburgh in 1750 and educated in the High School and University there. He studied music as an amateur, and was to a great degree self-taught. In 1815 he and George Hogarth acted as joint secretaries of the first Edinburgh Musical Festival, and in the next year Graham published 'An Account of the First Edinburgh Musical Festival, to which is added Some General Observations on Music.' He passed some years in Italy in pursuit of musical knowledge. He composed and published some ballads, and contributed the article 'Music' to the 7th edition of the 'Encyclopædia Britannica.' The article was reprinted separately in 1838, with the addition of an Introduction and Appendix under the title of 'An Essay on the Theory and Practice of Musical Composition.' About the same time he assisted in bringing out the 'Skene MS.' and contributed an interesting paper to the appendix. [See Dauney.] He wrote the article 'Organ' for the 8th edition of the 'Encyclopædia Britannica.' In 1848-9 he furnished historical, biographical, and critical notices to 'The Songs of Scotland,' adapted to their appropriate melodies. He died in Edinburgh, March 12, 1867. [W.H.H.]

GRANCAIA OR GRANTAMBURGO, the Italian term for the bass-drum. [DRUM, 3.] [V.de P.]

GRANCINO, Paolo, a violin-maker of the second rank. Born at Milan, he learnt his art under Nicolo Amati at Cremona. His violins are dated from 1665-1690. His son Giovanni (1669-1715), who dates from the sign of the Crown in the Contrada Larga of Milan, was a maker of higher merit. His violins, tenors, and violoncellos, are usually of a large flat pattern, and present a development of the Amati model analogous to that of Stradivari. His sons Gian-Battista and Francesco carried on his business (1715-1746) under the title of 'Frati Grancini.' [P.D.]

GRAND. A word much in use in England till within a few years to denote a classical composition of full dimensions or for full orchestra. Thus the 12 Symphonies written by Haydn for Salomon were known as 'Grand.' A grand sonata or a grand concerto meant one in complete classical form. It probably originated in the French grand or German grosse. (See Beethoven's Sonatas, Op. 13, 26, 28, 106, 115, and most of his symphonies, etc.)

GRAND OPERA. A reference to the articles COMOIndiana Opera and ACADÉMIE DE MUSIQUE will show that Grand Opera, like Comic, owes its
GRAND OPERA.

origin and its present form to the French. That in the Florentine Academy were produced, very early in the 17th century, lyric dramas in which music was employed for the illustration of noble subjects, and that these were presented with considerable effect, is no doubt true. The condition at that epoch of the musical art was new, and the means of giving effect to any specimens of it, were however both too imperfect to justify the application of the epithet 'grand' to any music or any performances that could then possibly have been forthcoming. Grand opera begins nearly half a century later, with the school of Lully; a school which, the birthplace of its founder notwithstanding, was in all respects essentially French. To Lully, without however altogether displacing him in public favour, succeeded Rameau, and to Rameau, Gluck and Piccinni, the one a German, the other an Italian; but both of whom, from the times of their respective beginnings in Paris, worked on French libretti, with the cooperation of French singers, dancers, instrumentalists, machinists, scene painters, and the like, and, more than all, of French audiences. The model too on which these great masters worked was in its essentials still that of Lully.

The term—fast becoming obsolete—is French and purely conventional, and denotes a lyric drama in which spoken dialogue is excluded, and the business is carried on in melody or recitative throughout. It may contain any number of acts, any ballets or divertissements, but if spoken dialogue is introduced it becomes a 'comico' opera.

Grand opera, though till lately all but exclusively written for the French stage, has from its origin to the present time been contributed to by the musicians of every musical country but our own; among Italians by Piccinni, Guglielmi, Sacchini, Salieri, Zingarelli, Cherubini, Spontini, Rossini, and Donizetti; among Germans by Gluck and Meyerbeer. To native genius, which has shone with such splendour in 'Opera Comique,' Grand Opera owes little. One attempt only of Auber in this class of composition still keeps the stage, 'La Muette de Portici.' The popularity of the grand operas of Halévy seems to have expired with their author; the reception of Berlioz's single dramatic essay, 'Benvenuto Cellini,' never inspired him to make another; and the most successful lyric productions of Gounod have not been among those bearing the name of 'grand' operas.

The Italian theatre has not been prolific in successful grand operas. The best works of this kind of some of the best Italian composers have, as we have seen, been written for the French stage. Zingarelli, Rossini, Donizetti, and Mercadante, are the most important of those Italians who have contributed to their own repertory. Their grand operas, however, with the exceptions of those of Rossini and Donizetti, scarcely fulfil the French conditions, and few, even of the most successful among them, are now, or are likely again to be, heard in or out of the country. Exception may be made, perhaps, in favour of some of the productions of our contemporary Verdi, which at least approximate in their subjects and their scale to the French model; but the two grandest operas of this admirable master, 'Les Vêpres Siciliennes' and 'La Favorite,' were written for the French stage.

The romantic and mixed lyriic drama of modern Germany—richer beyond all comparison in musical invention and science than the lyric drama, of whatever kind, of whatever country—does not here fairly come under consideration. Neither 'Don Giovanni,' 'Euryanthe,' nor even 'Fidelio,' whatever their places in the world of art, are what is understood by 'grand operas.' Wagner alone has attempted this kind of art—on conditions, self-imposed, which are discussed elsewhere.

[J.H.]

GRAND PIANO (Fr. Piano à queue; Ital. Piano a coda; Germ. Flügel). The long horizontal pianoforte, the shape of which, tapering along the bent side towards the end, has suggested the French, Italian, and German appellations of 'queue,' and 'wing,' the latter of which was borne also by the predecessor of the grand piano, the harpsichord.

The inventor of the pianoforte, Cristofori, had as early as the year 1711 made four 'gravicembali col piano e forte,' three of which we learn by the account of Scipione Maffei were of the usual, that is long harpsichord shape; they were therefore grand pianos, although the prefix 'grand' does not occur as applied to a piano until Stodart's patent of 1777. The Cavaliere Lato Pultiti, to whose researches we owe the vindication of Cristofori's claim to be the first inventor, saw and examined in 1874 a grand piano in Florence made by Cristofori in 1720. Farinelli's 'Rafael d'Urbino,' described by Dr. Burney as the favourite piano of that famous singer, was a Florentine piano of 1730, and appears to have been also a grand. Cristofori had followers, but we hear no more of pianoforte making in Italy after his death, in 1731.

We are not told whether the Silbermann pianos bought up in 1747 by Frederick the Great, were grand or square in shape, and those instruments, which were described by Forkel as existing in 1802, recent researches have not been successful in finding. There is an anonymous grand in the New Palace at Potsdam, said to have been one on which J. S. Bach played when he visited the King. If so this would be a very early German grand, and one of Silbermann's, but absence of name or date leaves us in doubt.

It is certain the pianos made in London between 1760–70 by Zumpe and other Germans were of the 'table' or square shape. James Shudi Broadwood (MS. Notes 1838, printed 1862) states that the grand piano with the so-called English action was invented by Americus Backers, a Dutchman, and a note appended claims for John Broadwood and his apprentice Robert Stodart, the merit of assisting him. The writer has seen a nameboard for a grand piano—referred to by Dr. Pole in 'Musical Instruments of the Exhibition of 1851'—inscribed 'Americus
Backers, Factor et Inventor, Jermy St. London, 1776." His action, since known as the 'English Action,' is shown in the drawing to Stoddart's patent of 1777, already referred to, for coupling a piano with a harpsichord. It is the same in the principle of the escapement as that of Cristofori, 1711.

There is no reference in Mozart's letters to the shape of the pianos he played upon, those of Späck or Stein being examples. The one preserved in the Mozartaeum at Salzburg, made by Walter of Vienna, is a grand, and the date attributed to it is 1780. It was Stein's grand piano that became subsequently known as the 'Viennese,' and we should derive it from Silbermann's could we trust implicitly the drawings in Weckler von Gontershausen's 'Der Clavierbau' (Frankfort 1870). The probability is that Stein submitted this action to Mozart, and that it was the one so much approved of by him (Letter, Oct. 17, 1777).

According to Fétis the first grand piano made in France was by Sebastian Erard in 1796, and it was on the English model. But Erard's London patent for one was earlier, being dated 1794, and the drawing was allied rather to Silbermann's idea. Perhaps the instrument was not made. The difference introduced into Pianoforte playing by the continued use of the very different grand actions of London and Vienna, has been explained by Hummel in his Pianoforte School. Sebastian Erard set himself the problem of his famous Reputation Action apparently to combine the advantages of both. The Viennese action is still adhered to in Austria for the cheaper grands, but the English (Broadwood) and French (Erard) actions are used for the better classes, and their various modifications occupy the rest of the field of grand piano making in other countries. The enormous advance due to the introduction of iron into the structure of the instrument began with James Shudi Broadwood's tension bars in 1808: the latest development we enjoy in the magnificent concert grands of contemporary makers. [See CRISTOFORI and PIANOPHILE.] [A. J. H.]

GRAND PRIX DE ROME. The Académie des Beaux Arts, a branch of the Institut de France, holds annual competitive examinations in painting, sculpture, engraving, architecture, and music. The successful candidates become pensioners of the government for a period of four years, and as such are sent to Rome, where they reside at the Villa Medici, in the 'Académie des Francs' founded by Louis XIV in 1666. Hence the term 'Grand Prix de Rome' is applied to those musicians who have obtained the first prize for composition at the Institut de France. The Prize was established on the reorganisation of the Institut in 1803. The judges consist of six musician-members of the Institut who belong to the Académie, and three of the most eminent composers of the day. The competition takes place in May or June. The prize composition was originally a cantata for one voice and orchestra; subsequently for one male and one female voice; but for the last forty years three characters have been required, and it has now attained to the importance of a one-act opera. The libretto is also furnished by competition, in which distinguished writers often take part; while the most popular singers take pleasure in performing these first compositions of the young aspirants. In the event of no composition proving worthy of the Prize, it stands over till the next year, when two may be adjudged (see 1805, 1819, etc.).

We append a complete list of the musicians who have gained this gratifying and eagerly coveted distinction; adding the titles of their cantatas, and, where obtainable, the dates of birth and death.

The successful cantata is performed at the annual sance of the Académie des Beaux Arts at the Institut, usually in October; it has sometimes been sung in costume at the Opera. A few of the cantatas have been engraved, but the greater part are unpublished. At the instance of the writer of this article, and by his endeavours, the whole of the autographs of these interesting compositions have been deposited in the Library of the Conservatoire in Paris, under the title of 'Fonds des Prix de Rome.'

GRANDSIRE. The name given to one of the methods by which changes in ringing are
produced. It is supposed to be the original method. [See Change Ringing.] [C.A.W.T.]

GRANJON, ROBERT. Born about the beginning of the 16th century at Paris, a type-founder who was one of the first to introduce round notes instead of square and losenge-shaped ones, and at the same time to suppress the ligatures and signs of proportion, which made the notation of the old music so difficult to read—and thus to simplify the art. His efforts, however, appear to have met with little or no success. His first publications are said to be dated 1533, and the first work printed on his new system, 1559, at which time he had left Paris for Lyons; he was at Rome in 1582, where he printed the first edition of Guidetti’s Directorium, having been called to Rome by the Pope in order to cut the capital letters of a Greek alphabet.

Whether he or Briard of Bar-le-duc was the first to make the invention mentioned above is uncertain. Briard’s Carpentras (printed in the new style) was published at Avignon in 1532, but Granjon appears to have made his invention and obtained letters patent for it many years before he had an opportunity of exercising it. See Fétis for more details. [G.]

GRANOM, LEWIS C. A., a composer who flourished about the middle of the 18th century, and produced many songs and pieces which were popular in their day. His first work was ‘Twelve Sonatas for the Flute,’ published in 1751. He afterwards published ‘Six Trios for the Flute,’ 1755, and a collection entitled ‘The Monthly Miscellany,’ consisting of duets for flutes, songs, etc. His ‘Second Collection of 40 favourite English Songs, with string accompaniments, in score; dedicated to Dr. Boyce,’ bears the opus number xii. Nothing is known of his biography. [W.H.H.]

GRAS, MADAME JULIE AIMÉE DORUS, whose family name was Steenkiste, was born at Valenciennes in 1807. Dorus was the name of her mother. She was the daughter of the leader of the band, and educated by her father. At the age of 14 she made a début in a concert with such success as to obtain a subsidy from the authorities to enable her to study at the Conservatoire at Paris. There she was admitted Dec. 21, 1821; and received instruction from Henri and Blangini. With a good voice and much facility of execution, she obtained the first prize in 1822. Paër and Bordogni then helped to finish her education. To the former she owed her appointment as chamber-singer to the king. In 1825 she began her travels, going to Brussels first, where she sang with such success as to receive proposals for the opera. She now gave six months to study for the stage, and made a brilliant début. After the revolution of 1830 she went to the opera at Paris, and made her first appearance in the ‘Comte Ory’ with great applause. On the retirement of Mme. Damouroe-Cinti (1835) Mlle. Dorus succeeded to the principal parts in ‘La Muette,’ ‘Guillaume Tell,’ ‘Fernand Cortez,’ etc. She had already created the rôle of Thérésina in ‘Le Philtre,’ of Alice in ‘Robert le Diable,’ and the page in ‘Gustave.’ In 1839 she visited London, where she had a very warm reception. Having married M. Gras, one of the principal violins at the Opéra, April 9, 1833, Mlle. Dorus for some years kept her maiden-name on the stage. The management of the theatre having passed into the hands of M. Stolz, she had the mortification to see her chief parts given to Mme. Stolz, and consequently retired in 1845. She continued however, to sing occasionally in Paris and in the provinces. In 1847 she reappeared in London, and renewed her former triumphs; as she did again in 1848 and 9, singing in the latter year Aubé’s Italianised ‘Masaniello.’ In 1850-1 Mme. Dorus-Gras remained in Paris, singing in a few concerts; but since then her artistic career has ended. [J.M.]

GRASSET, JEAN-JACQUES, a distinguished violin-player, born at Paris about 1769. He was a pupil of Berthauze, and is reported to have excelled by a clear, though not powerful tone, correct intonation and technique. After having been obliged to serve in the army for several years—which he appears to have spent not without profit for his art in Germany and Italy—he returned to Paris and soon gained a prominent position there. On the death of Gaviniès in 1800 he was appointed professor of the violin at the Conservatoire, after a highly successful competition with a number of eminent performers. Soon afterwards he succeeded Bruni as ‘chef d’orchestre’ at the Italian Opera, which post he filled with eminent success till 1820, when he retired from public life. He published three Concertos for the Violin, five books of Violin Duos, and a Sonata for Piano and Violin, which are not without merit. He died at Paris in 1839. [P.D.]

GRASSHOPPER or HOPPER, in a square or upright pianoforte of ordinary London make, is that part of the action known technically as the escapement lever or jack, so constructed with base mortised into the key and backpiece, that it may be taken out or replaced with the key, without disturbing the rest of the mechanism. There is a regulating screw perforating the jack, tongue, or fly, as it is variously called, of the grasshopper, drilled into the backpiece and bearing a leather button, the position of which and the pressure of a spring determine the rake of the jack, and consequently the rise and rebound of the hammer; the rebound being further regulated by a contrivance attached to the jack, when not an independent member, and used for checking or arresting it after the blow. In grand pianofortes, and in upright ones with crank lever actions, the escapement apparatus is less easily detached from the action.

It is not recorded by whom the Grasshopper was introduced, although the escapement part of it existed in Cristofori’s ‘linguetta mobile’; but the tradition which attributes it to Longman and Broderip, pianoforte makers in London, and predecessors of the firm of Clementi and Collard, may be relied upon. John Geib patented in
GRASSHOPPER.

London in 1786 a square action with the jack, and the setting off button acting upon the key, also, in another form, the screw holding the button perforating the jack—but with the button in front of it. The improved form with which we are acquainted, with the button behind the jack, was adopted by Messrs. Longman and Broderip, and soon became general. [A.J.H.]

GRASSI, Cecilia, who afterwards became the wife of John Christian Bach ('English Bach'), was born in 1746. She came to London with Guarducci in 1766, as 'first woman,' and remained in that capacity at the opera for several years. Burney thought her 'inanimate on the stage, and far from beautiful in her person; but there was a truth of intonation, with a plaintive sweetness of voice, and innocence of expression, that gave great pleasure to all hearers who did not expect or want to be surprised.' She was succeeded in 1772 by Girelli, but remained in England until the death of her husband in 1782, when she returned to Italy, and retired from public singing. [J.M.]

GRASSINEAU, James, born of French parents in London, about 1715; was first employed by Godfrey, the chemist, of Southampton Street, Strand, then became Secretary to Dr. Pepusch, at whose instance he translated the "Dictionnaire de musique" of Brossard (Paris, 1703), with alterations and additions, some of which are said to be by Pepusch himself:—"A musical dictionary... of terms and characters," etc., London, 1740, an 8vo of 343 pages, with a recommendation prefixed, signed by Pepusch, Greene, and Galliard. A 2nd edition is said to have been published in 1769 by Robson with an appendix taken from Rousseau. [G.]

GRASSINI, Josephina (as she signed herself), was born at Varese (Lombardy) in 1773, of very humble parents. The beauty of her voice and person induced General Belgioioso to give her the best instruction that could be procured at Milan. She made rapid progress in the grand school of singing thus opened to her, and soon developed a powerful and extensive contralto, with a power of light and finished execution rarely found with that kind of voice. She had the great advantage of singing in her first operas with such models as Marchesi and Crescentini, Grassini made her début at Milan, in the carnival of 1794, in Zingarelli's 'Artaserse,' and the 'Demofonte' of Portogallo. She soon became the first singer in Italy, and appeared in triumph on all the chief Italian stages. In 1796 she returned to Milan, and played in Traetta's 'Apelle e Campase,' and with Crescentini and Bianchi in the 'Giulietta e Romeo' of Zingarelli. The year after she excited the greatest enthusiasm at Venice as 'Orazio.' In 1797 she was engaged to sing at Naples during the fête held on the marriage of the Prince. In 1800, after Marengo, she sang in Milan in a concert before Buonaparte, and was taken by him to Paris, where she sang (July 21) at the national fête in the Champ de Mars, and in concerts at the opera.

In 1803 she was engaged to sing in London from March to July for £3000, taking the place of Banti. Here she had to contend with Mrs. Billington in popular favour, though their voices were very different. Lord Mount-Edgcumbe speaks in disparaging terms of that of Grassini, though he gives her credit for great beauty, 'a grace peculiarly her own,' and the excellence of her acting. Her style was then 'exclusively the cantabile, and bordered a little on the monotonous. She had entirely lost all her upper tones, and possessed little more than one octave of good, natural notes; if she attempted to go higher, she produced only shrill, quite unnatural, and almost painful to the ear.' Her first appearance was in 'La Vergine del Sole,' by Mayer, well suited to her; but 'so equivocal was her reception, that when her benefit was to take place she did not dare encounter it alone, but called in Mrs. Billington to her aid.' The tide then turned, and Grassini became the reigning favourite. 'Not only was she rapturously applauded in public, but she was taken up by the first society, féte, caressed, and introduced as a regular guest in most of the fashionable assemblies.' Very different from this was the effect produced by Grassini on other hearers, more intellectual, though less cultivated in music, than Lord Mount-Edgcumbe. De Quincey found her voice 'delightful beyond all that he had ever heard.' Sir Charles Bell (1805) thought it 'only Grassini who conveyed the idea of the united power of music and action. She died not only without being ridiculous, but with an effect equal to Mrs. Siddons. The 'O Dio' of Mrs. Billington was a bar of music, but in the strange, almost unnatural voice of Grassini, it went to the soul. Elsewhere he speaks of her 'dignity, truth, and affecting simplicity.' Such was her influence on people of refined taste, not musicians. In 1804, she sang again in Paris; and, after 1806, when she quitted London, continued to sing at the French Court for several years, at a very high salary (altogether, about £2,600). Here the rôle of 'Didone' was written for her by Paër. After the change of dynasty, Mme. Grassini, whose voice was now seriously impaired, lost her appointment at Paris, and returned to Milan, where she sang in two concerts in April 1817. In 1822 she was at Ferrara, but died at Milan in January 1850.

In 1806 a fine portrait of her was scraped in mezzotint (folio) by S. W. Reynolds, after a picture by Mme. Le Brun. It represents her in Turkish dress, as 'Zaira' in Winter's opera. [J.M.]

GRAUN. The name of three brothers, one of whom made his mark on German music, sons of an Excise collector at Wahrenbrück near Dresden.

The eldest, August Friedrich, born at the end of the 17th century, was at the time of his death canon of Merseburg, where he had passed the greater part of his life, 1727-1771.

Johann Gottlieb, born 1698, was an eminent violinist, and composer of instrumental music much valued in his day. He was a pupil of Pisendel. After a journey to Italy, where he
had instruction from Tartini, he became Concertmeister at Merseburg, and had Friedemann Bach for some time as his pupil. In 1737 he entered the service of Prince von Waldeck, and in 1748 that of Frederick the Great, then Crown Prince at Reinsberg. On the King's accession he went to Berlin, and remained there till his death in 1771 as conductor of the royal band. Of his many compositions only one, '6 Klavier-trios mit Violine,' has been printed. Burney in his 'Present State' (ii. 229) testifies to the great esteem in which he was held. The excellence of the then Berlin orchestra is always attributed to him.

[P.D.]

The most celebrated of the three is the youngest, Karl Heinrich, born May 7, 1701. He was educated with Johann Gottlieb at the Kreuzschule in Dresden, and having a beautiful soprano voice, was appointed, in 1733, 'Rathe's-discantist,' or treble-singer to the town-council. Grundig the cantor of the school, the court-organist Petzold, and the capellmeister Joh. Christoph Schmidt, were his early musical instructors, and he profited by the friendship of Ulrich König the court-post, and of Superintendent Lischow, who defended him from the pedantic notions of his unerrant Burgomaster. His career both as a singer and composer was largely influenced by his study of the vocal compositions of Keiser, the then celebrated composer of Hamburg, and of the operas of the Italian composer Lotti, who conducted in person a series of performances in Dresden, with a picked company of Italian singers. Even during this time of study, Graun was buoyantly engaged in composing. There still exist a quantity of motets and other sacred vocal pieces, which he wrote for the choir of the Kreuzschule. In particular may be cited a 'Grosse Passions-Cantata,' with the opening chorus 'Lasset uns aufsehen auf Jesum,' which, as the work of a boy of barely 15, is very remarkable. Upon König's recommendation he was appointed tenor to the opera at Brunswick when Hassel was recalled to Dresden in 1757. The opera chosen for his first appearance was by Schumann the local capellmeister, but Graun being dissatisfied with the music of his part replaced the airs by others of his own composition, which were so successful that he was commissioned to write an opera, and appointed vice-capellmeister. This first opera 'Pollidoro' (1756) was followed by five others, some in Italian, and some in German; and besides these he composed several cantatas, sacred and secular, two 'Passions-Musiken,' and instrumental pieces. His fame was now firmly established. In 1757 he was invited to Reinsberg, the residence of the Crown-Prince of Prussia, afterwards Frederick the Great. This powerful amateur continued Graun's friend and patron till his death. Here he composed about 50 Italian cantatas, usually consisting of two airs with recitatives. They were highly valued at the time, and contain ample materials for an estimate of Graun's style of writing for the voice. When Frederick came to the throne in 1740, he gave Graun the post of capellmeister, with a salary of 2000 thalers, and despatched him to Italy to form a company of Italian singers for the opera at Berlin. In Italy he remained more than a year, and his singing was much appreciated. After his return to Berlin with the singers he had engaged, he spent some years of remarkable activity in composing operas. Those of this period amount to 27 in all (a complete list will be found in Pötsch); 'Rodelinda, Regina di Longobardia' appeared in 1741, and 'Merope,' his last, in 1746. In his operas he gave his chief consideration to the singer, as indeed was the case with all Italian opera at that time. His forte, both in singing and in composition, resided in the power he possessed of executing adagios, and of expressing tenderness and emotion. Although his operas, as such, are now forgotten, they contain airs which merit the attention of both singers and public, a good instance being 'Mi pavan'ti' from 'Britannicus' (1754), with which Mme. Viardot-Garcia used to make a great effect. A collection of airs, duets, terzetos, etc., from Graun's operas was edited by the celebrated theorist Kirnberger, in 4 vols. (Berlin 1773).

Towards the end of his life Graun again devoted himself to church-music, and two of the works belonging to this period have carried his name down to posterity; and are indeed those by which he is now almost exclusively known. These are the 'Te Deum' which he composed for Frederick's victory at Prague (1756)—first performed at Charlottenburg at the close of the Seven Years War, July 15, 1753—and still more, 'Der Tod Jesu,' or Death of Jesus, a 'Passions-Cantata,' to words by Ramler, a work which enjoyed an unprecedented fame, and placed its author in the rank of classical composers. In Germany the 'Tod Jesu' holds in some degree the position which is held by the Messiah in England. It was first executed in the Cathedral of Berlin on March 26, 1755, and has since then been annually performed in Passion-week. A centenary performance took place in 1855 in presence of Frederic William IV. Of late years some opposition has been raised to this annual repetition of an antiquated work, but it may to a great extent be justified by the complete and masterly form in which it embodies the spirit of a bygone age. Looked at from a purely musical point of view, and apart from considerations of age or taste, the 'Tod Jesu' contains so many excellencies, and so much that is significant, that no oratorio of the second half of the last century, excepting perhaps Mozart's 'Requiem' and Haydn's 'Creation' can be compared to it. Graun was a master of counterpoint; his harmony—as his biographer, J. A. Hiler, says—was always 'clear and significant, and his modulation well regulated.' His melodies may be wanting in force, but they are always full of expression and emotion. That he possessed real dramatic ability may be seen from his recitatives, and these are the most important parts of the 'Tod Jesu.' An English edition of the work has recently been published by Messrs. Novello, so that it has now a fair chance of attaining that popularity in England
to which its merits entitle it. Hitherto we are not aware of its having ever been performed here in public.

Graumann's instrumental compositions, trios, piano-ftorte concertos, etc., have never been published and are of little value. He wrote 31 solfeggi, which form an excellent singing method, and he invented the so-called 'Da me ne satio' - a putting together of the syllables, da, me, ni, po, tu, la, be, for the practice of solfeggio, which however has been little used. Graumann died at Berlin Aug. 8, 1759, in full enjoyment of the king's favour, illustrious among his contemporaries, and, after Hase, undoubtedly the chief composer of Italian opera of his time. [A.M.]

GRAUPNER, Christophe, composer, born 1683 or 84 at Kirchberg in Saxony, near the Erzgebirge; came early to Leipzig, where he studied nine years at the Thomas-schule under Cantors Schelle and Kuhnau. He began to study law, but was driven by the Swedish invasion to take refuge in Hamburg, where he passed three years as harpsichord player at the opera under Keilmann. The Landgrave Ernest Ludwig of Hanover then engaged him; he remained in Hanover, then went to Darmstadt, where he was a private teacher. After the Landgrave had died, he went to Hesse as Kapellmeister. Here he did much to elevate both sacred and dramatic music, and greatly improved the court performances, the excellence of which is mentioned by Telemann. In 1723 he was proposed, together with Bach and Telemann, for the post of Cantor at the Thomas-schule (when Bach was elected), but he died before remaining in Darmstadt. In 1750 he lost his sight, a great trial to so active a man, and died May 10, 1760, in his 78th year.

Graupner worked almost day and night; he even engraved his own pieces for the clavier, and so well that they were very pleasing. Of his opera, the following were produced in Hamburg: 'Dido' (1707), 'Hercules und Theseus,' 'Antiochus in Stratonicis,' 'Bellerophon' (1708), and 'Sismon' (i.e. Samson-1709). After this he only composed religious and chamber music. Between the years 1719 and 45 he composed more than 1300 pieces for the service in the Schloss-kirche at Darmstadt—figured chorales, pieces for one and more voices, and chorales with accompaniment for organ and orchestra. The court library at Darmstadt contains the autograph scores and the separate parts of these, which were printed at the Landgrave's expense; Superintendent Lichtenberg furnished the words. The same library also contains in MS. 50 concertos for different instruments in score; 80 overtures; 116 symphonies; several sonatas and trios for different instruments in various combinations, mostly in score; 6 Sonatas for the harpsichord, with gigue, preludes, and fugues. Of his printed works there also exist 8 'Partiten' for the Clavier (1718); 'Monatliche Clavier-Fröhle,' consisting of preludes, altemps, courantes, sarabandes, minuets, and gigue (Darmstadt 1722); 'Die vier Jahreszeiten,' 4 suites for clavier (Frankfurt 1733); and 'VIII Partien auf das Clavier,' dedicated to the Landgrave Ernest Ludwig (Darmstadt 1726). We must also mention his 'Neu vermehrtes Choralbuch' (Frankfurt, Gerhardt, 1728). Graupner's autobiography is printed in Mattheson's Ehrenfeste, p. 410. [C.F.P.]

GRAVE. One of the slow Tempos, indicating perhaps rather character than pace. As familiar instances may be given the opening movement of the Overture to the Messiah, the short Choruses in plain counterpoint in Israel in Egypt—'And Israel saw,' 'He is my God,' etc.; the two recitatives, 'As God the Lord,' in Elijah; 'The nations are now the Lord's' in St. Paul; 'What ailed thee' in the 114th Psalm; the 'Rex tremendae' in Mozart's Requiem; the Introduction to the Sonata Pathetique, and that to the Prison scene in Fidelio. In Elijah Mendelssohn marks it with 60, but in St. Paul with 66. [G.]

GRAVICEMBALO. An Italian corruption of the term Clavicembalo, a harpsichord. [A.J.H.]

GRAY & DAVISON. Robert Gray established an organ factory in London in 1774, was succeeded by William Gray, who died in 1820, and then by John Gray. In 1837-38 the firm was John Gray & Son, after which John Gray took Frederic Davison into partnership. Gray died in 1839, but the firm continues to bear the same name. Amongst the many organs erected by these famous makers all over the country, we may mention those in the Crystal Palace (Hendal orchestra), St. Paul's, Wilton Place, and St. Peter, Oxford; Magdalen College, Oxford; and the Town Halls of Leeds, Bolton, and Glasgow. In 1856 they took up the business of Robinson, and have also a factory in Liverpool, having succeeded Bewahurst in that town. [V.de.P.]

GRAZIANI, Signor, a singer who appeared in London first at the Royal Italian Opera in 1855. He made his début in the 'Trovatore,' then also produced there for the first time. In this 'the song II balen exhibited to its best advantage one of the most perfect baritone voices ever bestowed on mortal. Such an organ as his is a golden inheritance; one, however, which has tempted many another beside himself to rely too exclusively on Nature' (Chorley). Graziani has continued to sing in London and Paris, with almost undiminished powers, since that time. His voice, though not extensive downwards, has still beautiful and luscious tones, reaching as high as G, and even A. He appeared with great effect as Nerusco in the 'Africaine' when that opera was first produced in London. [J.M.]

GREATOREX, Thomas, son of a professor of music, was born at North Wingfield, near Chesterfield, Derbyshire, on Oct. 5. 1758. In 1771 he became a pupil of Dr. Benjamin Cooke. In 1774, at a performance of sacred music in St. Martin's church, Leicester (of which his sister was then organist), on occasion of the opening of the Leicesterians Infirmary, he had the good fortune to make the acquaintance of the Earl of Sandwich and Josiah Bates. The earl invited him to become an inmate of his house, and
in 1774, 5, and 6, he assisted at the oratorios which were given at Christmas, under Bates's direction, at his lordship's seat, Hinchinbrook House, near Huntingdon. On the establishment of the Concert of Ancient Music in 1776 Greatorex sang in the chorus. In 1780 he was appointed organist of Carlisle cathedral, a post which he held until about 1784, when he resigned it and went to reside at Newcastle. In 1786 he went to Italy, returning home through the Netherlands and Holland at the latter end of 1788. At Rome he was introduced to the Pretender, Charles Edward Stuart, with whom he so ingratiated himself as to induce the Prince to bestow him a large quantity of valuable manuscript music. On his return to England Greatorex established himself in London as a teacher of music, and soon acquired a very extensive practice. On the retirement of Bates in 1793 he was, without solicitation, appointed his successor as conductor of the Concert of Ancient Music. In 1801 he joined W. Knypvet, Harrison, and Bartleman in reviving the Vocal Concerts. In 1819 he was chosen to succeed George Ebenezer Williams as organist of Westminster Abbey. For many years he conducted the triennial musical festivals at Birmingham, and also those at York, Derby, and elsewhere. Greatorex published a collection of Psalm Tunes, harmonised by himself for four voices, and a few harmonised airs. Besides these he arranged and composed orchestral accompaniments to many pieces for the Ancient and Vocal Concerts, which were never published. His knowledge was by no means limited to music; he was well-skilled in mathematics, astronomy, and natural history, and was a fellow of the Royal and Linnean Societies. He died July 18, 1831, and was buried in the West cloister of Westminster Abbey. [W.H.H.]

GREAT ORGAN. This name is given, in modern instruments, to the department that generally has the greater number of stops, and those of the greater power, although occasional exceptions are met with as to one or other of these particulars; as when a Swell of more than proportionate completeness, or a Solo organ, composed of stops of more than the average strength of tone, forms part of the instrument.

The use of the term 'Great Organ' in England can be traced back for upwards of 400 years. In the 'Fabric Rolls of York Minster,' under date 1469, the following entry occurs:—'To brother John for constructing two pair of bellows for the great organ, and repairing the same, 15s. 2d.' English Organists at that period, and for nearly a century and a half afterwards, were invariably single manual instruments. This is clearly intimated in numerous old documents still in existence. Thus the churchwardens' accounts of St. Mary's, Sandwich, contain the following four memoranda:—'1496. Payd for mending of the lytell organys, ijjs. ivd.' 'Item, for shepskyn to mend the grete organysse, ijijd.' More clearly still:—'1502. Payd for mending of the gret organ bellowis and the small organ bellowis, vd.' 'Item, for a shepir skyn for both organysse, ijjd.'
an instrument for Worcester Cathedral, the two
departments of which were referred to collectively
in the following year—1660. All the
materials and workmanship of the new double-
organ in the Cathedral Church of Worcester by
Thomas Dalham, organ-maker, came to £211.
The name 'Chayre organ' is also given to the
smaller one. At length, in the contract for the
York Cathedral Organ, dated 1632, we find the
word 'great' applied to an organ as a whole—
'touchinge the makeinge of a great organ for the
said church,'—although farther on in the agree-
ment a 'great organ' and 'chaire organ' (in front)
are specified. [E.J.H.]

GREATNESS, THOMAS, a lutenist, published in
1604 a work intituled 'Songs of Sundrie Kindes;
first Aires to be sung to the Lute and Base
Violl. Next, Songs of Sadnesse, for the Viols
and Voyces. Lastly, Madrigalles for five Voyces.'
It consists of 21 pieces; 15 songs and 6 madri-
gals. On the title-page the composer describes
himself as 'Lutenist to Sir Henrie Pierpoint,
Knight,' to whom he dedicates his work. No-
thing is known of his biography. [W.H.H.]

GRECCO, GAETANO, born at Naples about
1680, pupil of A. Scarlatti, whom he succeeded
as teacher of composition in the Conservatorio
del Povert, where he had Perugolesi and Vitali
for his pupils. From thence he passed to the
Conservatorio di San Onofrio. The date of his
death is unknown. None of his music appears
to have been printed, and only a very few pieces
are known in MS. [G.]

GREEN, JAMES, an organist at Hull, pub-
lished in 1734 'A Book of Psalmody, containing
Chanting Tunes for the Canticles and the reading
Psalms, with eighteen Anthems and a variety of
Psalm tunes in four parts,' which was very
favourably received, and ran through many edi-
tions. The eleventh appeared in 1751. [W.H.H.]

GREEN, SAMUEL, a celebrated organ builder,
born in 1740, studied the art of organ building
under the elder Byfield, Bridge, and Jordan.
After commencing business on his own account
he erected many instruments in conjunction with
the younger Byfield, with whom he was for
some years in partnership. Green became the
most esteemed organ builder of his day, his in-
struments being distinguished by peculiar sweet-
ness and delicacy of tone. There exist more
cathedral organs by him than any other builder;
though most of them have been since altered
and added to. He erected those in the cathe-
drals of Bangor, 1779; Canterbury, 1784; Wells,
1786; Cashel, 1789; Lichfield, 1789; Roches-
ter, 1701; and Salisbury, 1792; in Winchester
College chapel, 1780; St. George's chapel, Wind-
sor, 1750; and Trinity College chapel, Dublin :
in the following churches, chapels, etc. in
London, viz. St. Botolph, Aldersgate; Broad
Street, Islington; St. Catherine-by-the-Tower;
Freemasons' Hall; The Magdalen Hospital; St.
Mary-at-Hill; St. Michael, Cornhill; St. Olave,
Hart Street; and St. Peter-le-Poor in the fol-
lowing provincial cities and towns, Aberdeen;

Ardivick, near Manchester; Bath; Bolton-le-
Moors; Chatham; Congresbury; Cranbourne;
Greenwich Hospital; Hertford; Leigh; Lound-
borough; Macclesfield; Nayland; Sleaford;
Stockport (St. Peter's); Tamworth; Tunbridge;
Walsall; Walton; Wisbech; Wrexham; and
Wycombe: at St. Petersburg, and Kingston,
Jamaica. He also repaired the organ erected by
Dallans in 1632 in York Minster (destroyed by
fire in 1829) and that in New College, Oxford.
Green died at Isleworth, Sept. 14, 1796. Although
always fully employed he died in strained cir-
cumstances, and left little, if any, provision for his
family, having invariably expended his gains in
the prosecution of experiments with a view to
the improvement of the mechanism of the organ.
After his death his widow continued to carry on
the business for some years. [W.H.H.]

GREENE, MAURICE, Mus. Doc., one of the
two younger sons of the Rev. Thomas Greene,
D.D., vicar of the united parishes of St. Olave,
Old Jewry, and St. Martin, Ironmonger Lane
(or Fosmary), and grandson of John Greene,
Recorder of London, was born in London about
1656. He received his early musical education
as a chorister of St. Paul's Cathedral, under
Charles King. On the breaking of his voice he
was articled to Richard Brind, then organist of
the cathedral. He soon distinguished himself
both at the organ and in composition. In 1716
he obtained (it was said chiefly through the
interest of his uncle, Serjeant Greene) the ap-
pointment of organist of St. Dunstan's in the
West, Fleet Street, and, on the death of Daniel
Purcell, in 1717, was chosen organist of St.
Andrew's, Holborn. He held both these places
until the following year, when, on the death of
Brind, he became organist of St. Paul's, and in
1727, on the death of Dr. Croft, organist and
composer to the Chapel Royal. Greene had a
strong admiration for the genius of Handel, and
assiduously courted his friendship; and, by ad-
mitting him to perform on the organ at St.
Paul's, for which instrument Handel had an especial
liking, had become very intimate with him.
Handel, however, discovering that Greene was
paying the like court to his rival, Buononcini,
cooled in his regard for him, and soon ceased
to have any association with him. In 1728,
by the artifice of Buononcini, Greene was made
the instrument of introducing to the Academy
of Ancient Music a madrigal ('In una siepe ombrosa')
as a composition of Buononcini's. This
madrigal was three or four years later proved
to have been composed by Lotti. The discovery
of the fraud led to the expulsion of Buononcini
from the Academy, and Greene, believing, or affect-
ing to believe, that his friend had been unjustly
treated, withdrew from it, carrying off with him
the St. Paul's boys, and, in conjunction with
another friend, Festing, established a rival concert
in the great room called 'The Apollo' at the

1 A hard fate; for it is difficult to see that Buononcini was more dis-
honest than Handel when he included a fugue of Ker's in Israel in
Egypt as 'Egypt was glad, without a word to show that it was not
his own,
Devil Tavern near Temple Bar; a proceeding which gave rise to the joke, attributed to Handel, that 'Toctoor Greene had gone to the devil.' In 1730, on the death of Dr. Tudway, Greene was elected Professor of Music in the University of Cambridge, with the degree of Doctor of Music. As his exercise on the occasion he set Pope's Ode on St. Cecilia's Day, altered and abbreviated, and with a new stanza introduced, expressly for the occasion, by the poet himself. This composition was performed at Cambridge at the Commencement on Monday, July 6, 1730. (A duet from it is given by Hawkins in his History, chap. 191.) In 1735, on the death of John Eccles, Dr. Greene was appointed his successor as Master of the King's band of music, in which capacity he produced many odes for the king's birthday and New Year's Day. In 1743 he published his 'Forty Select Anthems,' the work on which his reputation mainly rests. These compositions, it has been remarked, 'place him at the head of the list of English ecclesiastical composers, for they combine the science and vigour of our earlier writers with the melody of the best German and Italian masters who flourished in the first half of the 18th century' (Harmonicon for 1829, p. 72). In 1750 Greene received a considerable accession of fortune by the death of a cousin, a natural son of his uncle, Serjeant Greene, who bequeathed him an estate in Essex worth £200 a year. Being thus raised to affluence he commenced the execution of a long meditated project, the formation and publication in score of a collection of the best English cathedral music. By the year 1755 he had amassed a considerable number of services and anthems, which he had reduced into score and collated, when his failing health led him to bequeath by will his materials to his friend Dr. Boyce, with a request that he would complete the work. [See Boyce.] Dr. Greene died Sept. 1, 1755, leaving an only daughter, who was married to the Rev. Michael Festing, Rector of Wyke Regis, Dorset, the son of her father's friend the violinist.

In addition to the before-named compositions, Greene produced a Te Deum in D major, with orchestral accompaniment; composed, it is conjectured, for the thanksgiving for the suppression of the Scottish rebellion in 1745; a service in C, composed 1737 (printed in Arnold's 'Cathedral Music'); numerous anthems—some printed and others still in MS.; 'Jephthah,' oratorio, 1737; 'The Force of Truth,' oratorio, 1744; a paraphrase of part of the Song of Deborah and Barak, 1734; Addison's ode, 'The spacious firmament,' 'Florimel;' or, 'Love's Revenge,' dramatic pastoral, 1737; 'The Judgment of Hercules,' masque, 1740; 'Phoebe,' pastoral opera, 1748; 'The Chaplet,' a collection of twelve English songs; 'Spenser's Amoretti,' a collection of twenty-five sonnets; two books each containing 'A Cantata and four English songs'; 'Catches and Canons for 3 and 4 voices, with a collection of Songs for 2 and 3 voices'; organ voluntaries, and several sets of harpsichord lessons. It must not be forgotten that Greene was one of the founders of that most valuable institution 'The Society of Musicians.' [Festing, p. 515 b.] [W. H. H.]

GREENSLEEVES. An old English ballad and tune mentioned by Shakespeare (Merry Wives, ii. 1; v. 5). The ballad—'A new Northern ditry of the Ladye Greene Sleeves'—was entered in the Stationers' Register Sept. 1580 (2nd of Elizabeth); but the tune is probably as old as the reign of Henry VIII. It was also known as 'The Blacksmith' and 'The Brewer' (Cromwell), and was a great favourite with the Cavaliers. Mr. Chappell (from whom the above is taken, Popular Music, etc., Plate 3, and p. 327–233) gives the tune in its oldest form as follows:

A - lás my love, you do me wrong to cast me o - f dis - courtesly, And I have lov - ed you so long, de - light - ing in your com - pa - ny, Green-sleeves was all my joy, Green-sleeves was my delight, Green-sleeves was my heart of gold, and who but my Le - dy Green-sleeves.

A modified version is found in the Beggar's Opera, to the words 'Since laws were made for ev'ry degree,' and the tune is still sung to 'Christmas comes but once a year,' and to songs with the burden 'Which nobody can deny.' [G.]

GREETING, THOMAS, was a teacher of the flagelet in London in the latter half of the 17th century, when the instrument appears to have been played on by ladies as well as gentlemen, as we gather from Pepys's 'Diary,' which informs us that in 1667 Mrs. Pepys was a pupil of Greeting. He also taught Pepys himself. In 1675 Greeting issued a thin oblong small 8vo. volume entitled 'The Pleasant Companion; or, New Lessons and Instructions for the Flagel't, consisting of 8 pages of letter-press containing 'Instructions for Playing on the Flagelet,' signed by Greeting, followed by 64 pages of music printed from engraved plates. The music is in a peculiar kind of tablature, dots being placed in the spaces of a stave of 6 lines to indicate which holes of the instrument were to be stopped to produce each note. The duration of each note is shown above the stave in the same manner as in tablature for the lute. The music consists of the popular song and dance-tunes of the day. The work was reprinted in 1680. [W. H. H.]

GREGORIAN MODES are the musical scales as set in order by St. Gregory the Great (A.D. 590).
GREGORIAN MODES.

1. Four scales, traditionally ascribed to St. Ambrose (A.D. 354), existed before the time of St. Gregory. These, known as the 'Authentic' modes, and since the 13th century named after the ancient Greek scales (from which they were supposed to be derived) are as follows: 1. Dorian, 2. Phrygian, 3. Lydian, 4. Mixolydian.

   ![Dorian](image1) ![Phrygian](image2) ![Lydian](image3) ![Mixolydian](image4)

Each mode thus consists of 8 natural notes of the Diatonic scale—a perfect fifth, or diapente, below, joined to a perfect fourth, or diatessaron, above. The lowest note of the scale is called the 'Final' (corresponding to the Tonic of the modern scale) because though the melody may range through the entire octave it ends regularly on that note; and the fifth note above the final, that which forms the junction of the diapente and diatessaron, is called the Dominant, 'except in the Phrygian mode, where C was substituted for B♭.'

The term Dominant in the ancient scales has not the same meaning that it has in modern tonality, but means the predominating sound in each mode, the note on which the recitation is made in each Psalm or Canticle tone.

One peculiarity of these ancient scales to modern ears is, that the place of the semitones varies in each; in the Dorian occurring between the 2nd and 3rd, 6th and 7th notes; in the Phrygian between the 1st and 2nd, 5th and 6th, and so on. The range of notes, from the lowest to the highest, in any ancient melody (seldom exceeding 8 or 9 notes) partly determines the mode to which it belongs. In some cases, melodies of small compass have their Tonic determined by the Final of other portions of Plain Song preceding and following them. To the Dorian scale, for example, belong melodies extending from D (or C) upwards and having D as their Final.

The well-known tune, Luther's 'Ein feste Burg' (see p. 484a), ranging from F, its key-note or final, to the octave, may be mentioned in illustration of a modern tune in a quasi-Authentic mode.

2. To the 4 Authentic, St. Gregory added 4 'Plagal,' i.e. collateral or relative modes. Each is a 4th below its corresponding original, and is called by the same name, with the prefix hypo (below), as follows: 5. Hypo-dorian, 6. Hypo-phrygian, 7. Hypo-lydian, 8. Hypo-mixolydian. Each scale here also consists of a perfect fifth and a perfect fourth; but the positions are reversed; the fourth is now below, and the fifth above.

   ![Hypo-dorian](image5) ![Hypo-phrygian](image6) ![Hypo-lydian](image7) ![Hypo-mixolydian](image8)

In the Plagal scales the 'Final' is no longer the lowest note, but is the same as that in the corresponding Authentic scale. Thus the Final of the Hypo-dorian mode is not A but D, and a melody in that mode, though ranging from about A to A, ends regularly on D, as in the Dorian. As an exemplification of this, we may mention Handel's 'Hanover,' among modern tunes, which ranges from F to F, but has its Final on B♭. 'Should auld acquaintance be forgot' is also a specimen of a tune in a Plagal mode descending about a fourth below its final, and rising above it only six notes, closing upon the final of its tone. The semitones in each scale naturally vary as before. The Dominants of the new scales are in each a third below those of the old ones, C being however substituted for B♭ in the Hypo-mixolydian, as it had been before in the Phrygian, on account of the irregularity of the relations between B♭ and the F above and below.

3. The system was afterwards further extended by the addition of two more Authentic scales having their Finals on A and C, and their Dominants on E and G, and called the Aeolian (No. 9) and Ionian (No. 10)—

   ![Aeolian](image9) ![Ionian](image10)

and two corresponding Plagal modes the Hypo-aeolian (No. 11) and Hypo-ionian (No. 12):—

   ![Hypo-aeolian](image11) ![Hypo-ionian](image12)

and the whole formed one great scheme, in which the Authentic modes were the 1st, 3rd, 5th, 7th, 9th and 11th, and the Plagal ones the 2nd, 4th, 6th, 8th, 10th and 12th.

4. Some inventors or innovators have however broken from the trammels of the perfect diapente and diatessaron law, and make the

---

1 In all these examples the Final is marked by a breve, and the Dominant has a * above it.

2 As a result of this the Authentic scales are sometimes called Hyper (above) — Hypo-phrygian, etc. — but it is a nomenclature which only leads to confusion.
natural diatonic modes 14 in number—2 to each of the 7 natural notes—admitting the proscribed B♮ as a Final for a quasi-Authentic and quasi-Plagal pair of modes—Locrian and Hypo-locrian. It does not however appear that more than 12 or 13 at the most have ever been found in any Ritual Service-books. In some of these books we find the 9th, 10th, 11th, and 12th transposed and placed under the head of one or other of the first eight with the title 'formerly the 9th, 10th,' etc. In the recent Ratisbon editions of Ritual music all 14 modes are however counted, so that the 11th and 12th above are styled the 13th and 14th.

5. Such is the basis on which the arrangement of the whole body of Ritual music of the Western Churches, including the Reformed Church of England—and probably that of the Eastern Churches also—is founded. The 'Accents' for Collects, the Verses and Responses, Psalm and Canticle tones, Introits, Antiphons, Kyries, Sanctus, Gloria in Excelsis, Agnus, Osanns, Benedictus, Communio, Sœcum corda, Proses or Sequences, Prefaces, Odes, hymns, the Nicene Creed, and special Offices and Services as printed by authority in the various Antiphonals, Processional Hymnals, Graduals, and Rituals in Latin, and in the English Book of Common Prayer noted, all belong to this species of sacred music.

[See MODES, PLAINSONG, TONES.] [T.H.]

GRESHAM MUSICAL PROFESSORSHIP.

In the will of Sir Thomas Gresham, the founder of the college bearing his name in the city of London, provision was made for several professorships, and for the 'sallarie' of a person 'mete to rede the lecture of musice' in the college. Sir Thomas died on Nov. 21, 1579, and his widow on Nov. 3, 1596, upon which the provision for the lectures took effect, the civic authorities requesting the Universities of Oxford and Cambridge to nominate persons properly qualified as professors. Dr. John Bull was appointed the first Professor of Music by the special recommendation of Queen Elizabeth. The ordinance adopted concerning the music lecture, according to Stowe (Strype's edition), ran as follows:—

'The solemn music lecture is to be read twice every week in manner following: viz.—the theoretique part for half an hour, and the practique, by concert of voice or instruments, for the rest of the hour; whereas the first lecture to be in the Latin tongue and the second in the English tongue.

The days appointed for the solemn lectures of music are Thursday and Saturday in the afternoon between the hours of three and four; and because at this time Dr. Bull is recommended to the place by the Queen's most excellent Majesty being not able to speak Latin, his lectures are permitted to be altogether in English so long as he shall continue the place of the music lecturer there.' At first the professors were given apartments in the college and a stipend of £50 a year, but in the 5th of Geo. III an Act was passed enabling the lecturers to marry, any restriction in Sir Thomas Gresham's will notwithstanding, and also giving them £50 a year in lieu of their apartments. For many years the Professors had no knowledge of music, and were utterly unqualified to lecture upon it. The following is a list of the professors, with the date of their appointments:—(1) John Bull, Mus. Doc., 1596 (resigned on his marriage); (2) Thomas Clayton, Doctor of Medicine, 1607; (3) Rev. John Taverner, M.A., 1610, elected at the age of 25, subsequently Rector of Stoke Newington; (4) Dr. Richard Knight, physician, 1638; (5) Sir W. Petty, Doctor of Medicine, 1650; (6) Sir Thomas Baynes, Doctor of Medicine, 1660, ejected from office by a vote of the committee; (7) Rev. John Newey, M.A., incumbent of Itching Abbey and Astonington, Hants, 1666; (8) Rev. Dr. R. Shippen, Principal of Brasenose College, Oxford, and Rector of Whitechapel, 1705; (9) Edward Shippen, Doctor of Medicine, 1710; (10) John Gordon, barrister at law of Gray's Inn, 1723; (11) Thomas Browne, M.A., Fellow of Trinity College, Cambridge, 1739, elected by an equality of votes, and the committee proceeded to a second election; (12) Charles Gardiner, 1739; (13) Thomas Griffin, 1763; (14) Theodore Aylward, assistant director of the Handel Commemoration and organist of St. George's, Windsor; (15) R. J. S. Stevens, the composer, 1801; (16) Edward Taylor, 1827; (17) Henry Wylike, Mus. Doc., 1862. In 1832 and for some years after, a medal was given in commemoration of Sir Thomas Gresham for the best choral work, the judges being the Oxford Professor, Dr. Crotch; the Gresham Professor, Mr. Stevens; and Mr. Horsley; and the work was sung at a commemoration service at St. Helen's, Bishopsgate, which had been Sir Thomas's parish church. The Music Lectures at the College are now given in the evening, in English, on days announced in the newspapers, and the admission to them is free. For an instance of the manner in which the intentions of the founder were at one time set at naught see Griffin, Thos. [C.M.]

GRÉTRY, ANDRÉ ERNEST MODESTE, born Feb. 11, 1741, at Liége, on the ground-floor of a small house in the Rue des Récollets, now No. 28. His father, a poor violinist, placed him at 6 years old in the choir of St. Denis; but under the harsh treatment of his master the little chorister showed no aptitude for music, and at 11 was dismissed as incapable. His next master, Leclerc, as gentle as the former had been cruel, made him a good reader; and Renékin, organist, taught him harmony. His taste for music was however developed by listening to the operas of Pergolesi, Galuppi, Jommelli, etc., performed by a company of Italian singers with Resta as conductor. After a year spent in this manner an irresistible impulse urged him to compose; in vain the maître de chapelle tried to teach him counterpoint—he longed to give expression to the thoughts that were burning for utterance; and as his first attempt, produced at Liége in 1758 six small symphonies, and in 1759 a 'messe solennelle' for 4 voices, none of which have been published. These compositions secured him the protection of the Chanoine du Harlez, who furnished him with the means of going 
to Rome. Leaving his native city in March 1759, he travelled on foot, with a smuggler for his companion. On his arrival at Rome he was received into the 'Collège de Liège,' founded by a Liégeois named Darcis for the benefit of his townsmen, who were permitted to reside there for five years while completing their specific studies. His master for counterpoint and composition was Casali, who dismissed him as hopelessly ignorant. Grétry never did understand the science of harmony; his mission was to enforce the expression of words by melody, and to compose operas. During his stay in Rome he composed a 'De profundis' and some motets which have not been published, and an intermezzo called 'Le Vendemmiant,' for the Aliberti theatre. Although the work of a foreigner this opera was successful, and might have introduced him to more important theatres; but Grétry having read the score of Monsigny's 'Rose et Colas' came to the conclusion that French opera-comique was his vocation. To get to Paris now was his main idea. He left Rome Jan. 1, 1767, and having reached Geneva asked Voltaire to write him a good libretto for an opera-comique, a task which Voltaire was incapable of performing and had the tact to decline. At Geneva he supported himself for a year by teaching singing; and produced 'Isabelle et Gertrude,' a one-act opera by Favart on a subject suggested by Voltaire, and previously set to music by Blaise. At length, by the advice of the owner of Ferney himself, Grétry went to Paris, where he obtained from an amateur the libretto of 'Les Mariages Sammites,' in three acts. This work was not performed at that time, but its public rehearsals procured him the patronage of Count de Creutz, the Swedish Ambassador, and as a consequence of that, a two-act libretto by Marmontel, 'Le Huron,' successfully performed Aug. 1768. This opera was followed by 'Le Lys de M. Favart' (1769), which contains the duet 'Oh peut-on être mieux qu’au sein de sa famille,' which became so popular and played so singular a part on more than one historical occasion; and by 'Le Tableau parlant,' an original and extremely comic piece, and one of Grétry's very best. What life and spirit there are in this refined jesting! How natural and charming are the melodies, with their skilfully varied, but always animated rhythm! How prettily does Isabelle make fun of old Cassandre and his antiquated love making! How appropriate, and how thoroughly in keeping is the action of each individual on the stage! How pointed and dramatic the duet between Pierrot and Columbine! Grimmel was right in proclaiming 'Le Tableau parlant' a real masterpiece.

Grétry now showed his versatility by composing no less than 3 operas, all produced in 1770—'Le Sylvain,' of which not even the over-rated duet

1. These details are taken from Grétry's 'Mémoires.'
2. An autograph 'Conducto' for four voices and orchestra is in the library of the Bibliothèque Conservatoire.
3. Performed in Paris in Mr. 1766. Blaise's ariettes are printed in the 'Théâtre de M. Favart.'
4. See the article 'De profundis' in the Encyclopædia Britannica.
manifester perplexed by the entrance of a third, as a glance at the trio-duet in ‘Zémiire et Azor’ will show. ‘You might drive a coach and four between the bass and the first fiddle’ was wit-
tily said of his thin harmonics. But though it may be thought necessary at the present day to reinforce his measre orchestration, his basses are so well chosen, and form such good harmony, that it is often extremely difficult to add complementary parts to the two in the original score. And Grétry’s instrumentation though poor is not wanting in colour when occasion serves. Moreover he was aware of his defects as well as of his capacities. ‘In the midst of popular applause how dissatisfied an artist often feels with his own work!’ he exclaims at the end of his analysis of ‘Huron.’ Elsewhere in speaking of his works as a whole, he puts the following words into Gluck’s mouth, ‘You received from Nature the gift of appropriate melody, but in giving you his talent he withheld that of strict and complicated harmony.’ This is true self-knowledge, and by such remarks Grétry has shortened and simplified our task.

The qualities in his music which most excite our admiration are, his perfect understanding of the right proportions to be given both to the ensemble, and to each separate part of an opera, and his power of connecting and evolving the scenes, faithfully interpreting the words, and tracing the lineaments, so to speak, of his characters by means of this fidelity of expression in the music. While thus taking declamation as his guide, and believing that ‘the most skilful musician was he who could best metamorphose declamation into melody,’ Grétry little thought that the day would come when Méhul would say of him that ‘what he wrote was very clever, but it was not music’ (‘Il faisait de l’esprit et non du musique’). He could not have carried his system to its logical consequence, he did not see that by trying to follow the words too literally a composer may deprive his phrases of ease and charm, and sacrifice the general effect for the sake of obtaining many trifling ones—a most serious fault. But in spite of his weakness for details—the defect of many a painter—Grétry is a model one never weary of studying. He excelled in the simple pastoral style, in the touching and pathetic, and in comic opera at once comic and not trivial. By means of his rich imagination, thorough acquaintance with stage business, and love for dramatic truth, he created a whole world of characters drawn to the life; and by his great intelligence, and the essentially French bent of his genius he almost deserves to be called the ‘Molière of music,’ a title as overwhelming as it is honourable, but which his passionate admirers have not hesitated to bestow on him. A witty and brilliant talker, and a friend of influential literary men, Grétry possessed many powerful patrons at the French court, and was

1 ‘Guillaume Tell’ was reinstrumented by Berton and Ebnat;
2 ‘Richard’ by Adolphe Adam: ‘L’Epreuve villageoise’ by Aubert; and
3 ‘La Danse Magique’ by Eugène Frévert.
the recipient of pensions and distinctions of all kinds. In 1785 the municipality of Paris named one of the streets near the Comédie Italiene after him, and in the previous year the Prince-Bishop of Liége had made him one of his privy-councillors. On the foundation of the Conservatoire he was appointed an inspector, a post which he resigned in a year. When the Institut was formed at the same time (1795) he was chosen to fill one of the three places reserved for musical composers. Napoleon made him a Chevalier of the Legion of Honour, on the institution of the order in 1802, and also granted him a pension to compensate for his losses by the Revolution.

A career so successful was likely to intoxicate, and it is not to be wondered at that Grétry had a firm belief in his own merits, and thought himself almost infallible. He has left us several records of his vanity both artistic and intellectual. The first is his 'Mémoires ou Essais sur la musique,' published in 1 vol. in 1789, and reprinted in 1797 with two additional vols., said to have been edited by his friend Legrand, a professor of rhetoric. The first part only is interesting, and as has been aptly said, it should be called 'Essais sur ma musique.' In 1803 he brought out 'Méthodes simple pour apprendre à préluder en peu de temps avec toutes les ressources de l'harmonie,' a pamphlet of 95 pages with lithograph portraits, in which he exhibits both the insufficiency of his studies, and his want of natural talent for harmony. His 3 vols. 'De la Verté: ce que nous fumès, ce que nous sommes, ce que nous dorvions être' (1803) are simply a pretentious statement of his political and social opinions, with remarks on the feelings, and the best means of exciting and expressing them by music.

Grétry had bought 'l'Ermitage' near Montmorency, formerly the residence of Rousseau, and it was there he died, Sept. 24, 1813. Three days afterwards (27th) Paris honoured his remains with a splendid funeral; touching and eloquent eulogiums were pronounced over his grave by Bouilly on behalf of the dramatic authors, and Méhul in the name of the musicians. A year later, at a special meeting on Oct. 1, 1814, Joscelin de Breton, permanent secretary of the Académie des Beaux-Arts read a 'Notice sur la vie et les ouvrages d'André Ernest Grétry.' Since then many biographies and critiques have been published; the most important are—'Grétry en famille' (Paris 1815, 12mo.) by A. J. Grétry, his nephew; 'Recueil de lettres écrites à Grétry, ou à son sujet,' by the Comte de Livry (Paris, 1809, 8vo.); 'Essai sur Grétry' (Liége 1821, 8vo.) by M. de Gerlache, and Félix's article. [See Frau-Mery.]

There are many portraits of Grétry. One of the best was drawn and engraved by 'his friend' Moreau the younger. Another engraving is by Cathelin (1785), from the portrait by Madame Lebrun, with the lines:

1 Par des plaisirs riels et de fumeuses alarmes
   Ce puissant Enchanter calme ou trouble nos sens;

Mais de son amitié peut-on goûter les charmes
Sans égaler au moins son cœur à ses talents?

Besides these there are Isabeau's portrait engraved by P. Simon; that taken by the 'phy- sionotrace' and engraved by Quenedey in 1808; those of Forget and P. Adam; and finally Maurin's lithograph from the portrait by Robert Melville. In his youth he is said to have resembled Pergolesi both in face and figure. Comte Livry had a statue made of him in marble, and placed it at the entrance of the old Théâtre Feydeau; it is not known what has become of it. The 'foyer' of the present Opéra Comique, contains only a bust of him. In 1842 a statue by Geeas was inaugurated at Liége; being colossal it is not a good representation, as Grétry was small in stature, and of delicate health.

Grétry had three daughters. The second, Lucile, born in Paris 1773, was only 13 when her one-act opera 'Le Mariage d'Antonio,' instrumented by her father, was successfully performed at the Opéra Comique (1786). In 1787 she produced 'Toinette et Louis,' in 2 acts, which was not well received. This gifted young musician made an unhappy marriage, and died in 1792.

We may mention in conclusion that Grétry spent his last years in writing 6 vols. of 'Réflexions sur l'art,' which however have not been published. He also left 5 MS. operas in 3 acts—'Alcindor et Zaïde'; 'Ziméo'; 'Electre'; 'Digòne et Alexandre'; 'Les Maures d'Espagne'; and 'Zelmar, ou l'Asile,' in one act. [G.C.]

GRIEG. EDWARD, composer and pianist, born June 15, 1843, at Bergen in Norway, and now conductor and teacher at Christiania. He came to Leipzig in 1858, and remained at the Conservatorium for four years, having Hauptmann and Richter as masters for harmony and counterpoint, Rietz and Reincke for composition, and Moscheles for pianoforte playing. During the term of his studies he lived mostly in the romantic worlds of Schumann, Mendelssohn, and Chopin, whose works then gave the tone to the entire musical life of the town, and especially of the Conservatorium. He has since become aware of other older and newer masters, without however showing very distinct traces of their influence in his compositions. The characteristic Scandinavian features of Grieg's musical talent took a tangible shape soon after his return to the north. Danish, Swedish, and Norwegian Volkstider and dances absorbed his fancy more than the study of any great composer's works; and henceforth his compositions are marked with the stamp of a particular nationality more clearly than that of any man, except perhaps Chopin.

Grieg has hitherto published the following works:—4 Clavierstücke (op. 1); 4 Lieder (op. 2); Poetische Tonbilder (op. 3); 6 Lieder (op. 4); 'Melodien des Herzens'—on Hans Andersen's songs—(op. 5); Humoresken für Pianoforte (op. 6); Sonate für Pianoforte (op. 7); Sonate für Pianoforte und Violin (op. 8); Romanzen und Balladen (op. 9); Kleine Romanzen (op. 10); 'Im Herbst,' Phantasiè für
Pianoforte, à quatre mains (op. 11); Lyrische Stückchen für Pianoforte (op. 12); Sonate für Pianoforte und Violino (op. 15); 2 symphonische Stücke für Pianoforte, à quatre mains (op. 14); Romanzen (op. 15); Concert für Pianoforte und Orchester (op. 16); Norwegische Volks-Lieder und Tänze für Pianoforte behandelt (op. 17); Romanzen und Lieder, 2 Hefte (op. 19); Bilder aus dem Völkclieben, neue Humoresken über Pianoforte (op. 19); 'Vor Sidens Kloster', für Soli, Damenchor und Orchester (op. 20). [E.D.]

GRIEPENKERL, Friedrich Conrad, professor at the Carolinum College in Brunswick, born at Peine, near Hanover, in 1762; long tutor in the Follenberg Institution at Hofwyl in the Canton of Berne; died at Brunswick, April 6, 1849. He wrote 'Lehrbuch der Ästhetik' (Brunswick 1827), in which he applied Herbert's philosophical theory to music; and was the author of the preface to the excellent edition of J. S. Bach's instrumental compositions, edited by himself and Roitsch, and published by Peters of Leipzig. This work has made his name familiar to many in England.

His son Wolfgang Robert, born May 4, 1810, at Hofwyl, studied at Brunswick and Leipzig, was also an enthusiastic amateur, and an ardent admirer of Meyerbeer's 'Huguenote' and the later works of Berlioz. He wrote 'Das Musikfest, oder die Beethoven' (1838 and 41); 'Ritter Berlioz in Braunschweig' (1843); 'Die Oper der Gegenwart' (1847); and two dramas, 'Robespierre' and 'Die Girondisten,' to which Lidolf composed overtures. He died at Brunswick, Oct. 17, 1868. [F.G.]

GRIEBACH, John Henry, born at Windsor, June 20, 1798, was eldest son of Justin Christian Griesbach, violoncellist in Queen Charlotte's band, and nephew to Friedrich Griesbach, the oboe player. He studied music under his uncle, George Leopold Jacob Griesbach, and at 12 years of age was appointed violoncellist in the Queen's band. He then studied for some years under Kalkbrenner. On the breaking up of the Queen's band at her death he came to London and appeared at concerts as a pianist. In 1822 he composed a symphony and a capriccio for pianoforte and orchestra, and shortly afterwards a second symphony for the Philharmonic Society. Although he was after this time principally engaged in tuition he found time to produce numerous compositions of various kinds, and also to attain to some mean skill in astronomy, painting in water colours, entomology, and mathematics. His principal compositions were 'Belshazzar's Feast,' an oratorio, written in 1835 with a view to stage representation, but such performances being interdicted he some years afterwards remodeled the work, and it was performed, under the title of 'Daniel,' by the Sacred Harmonic Society on June 30, 1854; 'Overture and Music to Shakespeare's Tempest'; 'James the First, or, The Royal Captive,' opera; 'The Goldsmith of West Cheap,' opera; 'Eblis,' opera (unfinished); 'Raby Ruins,' musical drama; several overtures and other instrumental pieces, anthems, songs, cantatas, &c. He also wrote 'An Analysis of Musical Sounds' (published), and 'The fundamental elements of Counterpoint, 'The Acoustic Laws of Harmony,' and 'Tables showing the variations of musical pitch from the time of Handel to 1850' (unpublished). He was 14 times a director of the Philharmonic Society. He died Jan. 9, 1875. [W.H.H.]

GRIESSINGER, Georg August, deserves a word of grateful mention for his charming little work on Haydn—'Biographische Notizen über Joseph Haydn' (126 pages)—which was originally communicated to the Allg. Musik. Zeitung from July to Sept. 1809, and then published by Breitkopf & Härtel in 1810. Griesinger was a 'Legations-Rath' of the Saxon government, and possibly attached to the embassy at Vienna. At any rate he was on intimate terms with Haydn for the last ten years of the life of the latter, and he claims to report directly from his lips, often in his very words. His work was used by Frameroy for his 'Notice sur Haydn' (Paris, 1810), but Griesinger complains that his statements have often been widely departed from, and in one case an absolute invention introduced.

Whether he was the same Griesinger who founded singing societies and public concerts in Stuttgart 10 or 12 years after Haydn's death, is not apparent. He died April 27, 1828. [G.]

GRIFFIN, George Eugene, pianist and composer, was born Jan. 8, 1781. At sixteen years of age made his first appearance as a composer by the production of a concerto for pianoforte and orchestra, in which the melody of 'The Blue Bell of Scotland' was introduced. He next published a P. F. sonata, with ad libitum violin, and an 'Ode to Charity,' inscribed to the supporters of the Patriotic Fund, and published in 1806. His remaining compositions, with the exceptions to the three quartets for violins, all for the pianoforte, either alone or in conjunction with other instruments. They comprise two concertos for P. F. and orchestra; a quartet for pianoforte and strings; four sonatas; five divertimentos; four rondos; six marches; six airs; a capriccio; an introduction to an arrangement of the military movement from Haydn's 12th symphony; and two sets of quadrilles. Griffin was one of the original members of the Philharmonic Society. One of his stringed quartets was given by that body on Feb. 28, 1814, and his P. F. quartet on April 14, 1817, he himself playing the P. F. part. Griffin was stricken with mortal illness whilst attending one of the Society's concerts, and died a few days afterwards in May 1833. His compositions were formed upon classical models, and were esteemed in their day, although now forgotten. [W.H.H.]

GRIFFIN, Thomas, an organ builder, in 1741 erected an organ in St. Helen's, Bishopsgate, and engaged 'to play himself or provide an organist.' He is said to have also built organs in other City churches. On Jan. 11, 1763 (being then a Common Councilman for Langbourn Ward and
one of the Gresham Committee), he was appointed Professor of Music in Gresham College in the room of Charles Gardner, deceased. He seems to have been totally incapable of performing the duties of the office, since we learn from a contemporary newspaper that on Jan. 29, 1763, the day appointed for his first lecture, John Potter, who had acted as deputy to his predecessor, appeared to lecture for him, but the audience refused to hear him, and compelled him to retire; that on Feb. 13 following Griffin himself appeared, apologised for his absence on Jan. 29, which he assigned the audience was too young; he had not having had sufficient time to prepare a proper lecture, and then retired without saying more; and that he soon afterwards delivered a lecture, which lasted 11 minutes, in an almost inaudible tone of voice. He died in 1771. Hawkins asserts him to have been a barber. He was more probably of the Barber-Surgeons' Company. [W.H.H.]

GRIMALDI. See Niccolini.

GRIMM, JULIUS OTTO, German pianist and composer of some note; born 1830 at Pernau in Saxony; was a pupil of the Conservatorium of Leipzig. When Grimm had finished the course of instruction there, he found employment as a conductor at Gottingen, and was subsequently appointed conductor of the Musikverein at Munster, where he is still living as a teacher of singing and pianoforte playing. He has hitherto published pieces for the pianoforte, songs, and a few orchestral compositions, of which latter his 'Suite in canon-form' has made the round of German concert-rooms successfully, and in point of clever workmanship deserves all the praise it has met with. [E.D.]

GRISAR, ALBERT, born at Antwerp, Dec. 26, 1808, was intended for commerce, and with that view was placed in a house of business at Liverpool. The love of music was however too strong for him, and after a few struggles with his family he ran away to Paris, and reached it only a day or two before the Revolution of July 1830. He began to study under Reiche, but the revolution spread to Belgium, and Grisar was obliged to join his family in Antwerp. His first public success was 'Le Mariage impossible' at Brussels in the spring of 1833. It attracted the attention of the government, and procured him a grant of 1200 francs towards the completion of his musical education. He returned to Paris and henceto he had himself up almost entirely to the theatre. His first appearance there was at the Opera Comique with 'L'amant.' Though not unsuccessful he was dissatisfied with himself, and in 1840 or 1841 went to Naples to study composition under Mercadante; and there he remained for several years. In 1848 he was again in Paris, and did not leave it till his death, which took place at Asnieres on June 13, 1850. Nineteen of his comic operas were produced on the stage, and a dozen more remained in MS. A list will be found in Poug's supplement to Fetis. He also published more than 50 melodies and romances. His statue, by Brackelee, is in the vestibule of the Antwerp Theatre, and a Life of him by Poug has been published by Hachette. With the Parisians he was a great favourite. 'A charming delicate natural musician, several of whose works will remain to attest the rare excellence of his talent' is the judgment of a French critic in the Menestrel. On an Englishman however—and one who knew him and liked him—he made a different impression; 'His music,' says Mr. Chorley, 'leaves not the slightest trace on the memory. I cannot recall from the whole list a melody, a touch of instrumental music, or a single indication of local colour.' M. Chouquet (Musique Dramatique, 286), while praising his fresh and graceful melody and his sympathy with the scene and the situation, will not allow him a place above the second rank. [G.]

GRISI, GIULIA. This famous operatic vocalist, daughter of Gaetano Grisi, an officer of engineers under Napoleon, was born at Milan in 1812; others say 1810, others even 1806. She belonged to a family of artists. Her maternal aunt was the celebrated Grassini; her eldest sister, Giuditta (born at Milan, July 28, 1805), was a singer of high merit; and her cousin, Carlotta Grisi, originally educated as a singer, became, under the tuition of Perrot, the most charming dancer of her time. Probably her mother, like the rest of the family, had before marriage made music her profession. If so, with a soldier for a father and a singer for a mother, it may be said that the future 'dramatic soprano' came indeed of suitable parentage. Her earliest instructors were successively her sister Giuditta, Filippo Celi, afterwards resident professor in London; Madame Boccadadi; and Guglielmi, son of the composer of that name. At the age of seventeen she made her first appearance in public as Emma in Rosini's 'Zelmira.' In 1830 Mr. C. C. Greville saw her at Florence with David in 'Ricciardo,' and says, 'She is like Pasta in face and figure, but much handsomer. She is only eighteen.' Rossini took a great interest in the young and promising Giulietta, for whom he predicted a brilliant future. 'Youth, uncommon personal attractions, a beautiful voice, and indications already of that stage talent afterwards so remarkably developed, combined,' says one who speaks with authority on the subject, 'to obtain a reception for their possessor more hearty and more unanimously favourable than often falls to the lot of a débutante.' One of Giulia's warmest admirers was Bellini, who, composing at Milan the opera of 'Norma' for Pasta, recognised in the young artist all the qualifications for a perfect Adalgisa. Strangely enough, when the opera was first brought out, the first act proved almost a fiasco; and it was not until the duel for Norma and Adalgisa in the 2nd Act that the audience began to applaud. Dissatisfied with her engagement at Milan, and unable to get herself released from it by ordinary means, the impulsive Giulia took to flight, and escaping across the frontier reached Paris, where she found her aunt, Madame Grassini, her sister Giuditta, and Rosini,—at that
time artistic director of the Théâtre des Italiens. She had no trouble in obtaining an engagement. Rossini, who had not forgotten her performance in 'Zelmira,' offered her the part of Semiramide in his own admirable opera of that name; and in 1832 Mdlle. Grisi made her first appearance at the Italian Opera of Paris in the character of the Assyrian Queen. Mdlle. Eckerlin representing Arsace, and Signor Tamburini Assur. Nothing could have been more perfect than Mdlle Grisi's success; and for sixteen consecutive years, from 1832 to 1849, she was engaged and re-engaged at the Théâtre des Italiens. Mdlle. Grisi passed the winter of 1833 at Venice, where Bellini wrote and produced 'I Montecchi ed I Capuleti' for the two sisters, Giuditta and Giulia. She did not visit London until 1834, where she made her first appearance, amid general admiration, as Ninetta in 'La Gazza Ladra' (April 8th). Her first great London success, however, was achieved in the part of Anna Bolena. The chief characters in this work—which Donizetti had written for Galli, Rubini, and Madame Pasta—became identified in London with Lablache, Rubini, and Mdlle. Grisi. Strangely enough, the opera itself, which was at one time looked upon as its composer's masterpiece, seems now all but forgotten. Those however who saw Grisi in the part of the heroine will never forget it. On the occasion of her first appearance in London, the 'Times' critic described her voice as 'a pure, brilliant, powerful, flexible soprano ... one of the finest we ever heard.' 'As an actress,' added the writer, 'Mdlle. Grisi exhibits discriminative powers of no common order.' When she undertook the part of Semiramide, at the King's Theatre, it was said by everyone that Pasta having now retired her only successor was Grisi. In the year 1835 Bellini wrote 'I Puritani' for Grisi, Rubini, Tamburini, and Lablache; that memorable operatic quartet of which she was the last survivor. It is true that after Rubini had been replaced by Mario the quartet was still incomparable; and it was for the new combination—Grisi, Mario, Tamburini, and Lablache—that Donizetti, in 1843, composed 'Don Pasquale.' 'Don Pasquale,' like 'Anna Bolena,' visited London and soon became naturalised; and year after year the Mario quartet, like the Rubini quartet, spent the winter in Paris, the summer in London. Fortunately the Paris season does not interfere with our own. Indeed, owing to the Paris and St. Petersburg seasons taking place in the winter, it is possible to form in London the summa in operatic triumph superior to that of either St. Petersburg or Paris, and which shall, in fact, include the most distinguished ornaments of both the great European winter companies. But between Paris and London in particular an entente cordiale had long existed; and Madame Grisi, with her attendant tenor, baritone, and basso, must have been as much at home in one of these capitals as in the other.

When, in 1846, Mr. Lumley's company was broken up by the sudden departure of his principal singers, together with Mr. Costa, and nearly the whole of the orchestra, the second of the great quartets came to an end. It struggled on for a time in the reduced form of a trio: Grisi, Mario and Tamburini, without Lablache. Then the trio became a duet; but Grisi and Mario still sang the dou concertante which Donizetti had written for them in 'Don Pasquale,' as no other singers could sing it. They were still 'the rose and the nightingale' of Heine's Parisian Letters, 'the rose the nightingale among flowers, the nightingale the rose among birds.' Mr. N. P. Willis had heard Grisi in London in the year 1834, and, as he tells us in his 'Pencillings by the Way,' did not much like her. On the other hand, Heine heard her in Paris in the year 1840, and, as he assures us in his 'Lutetia,' liked her very much. The unbounded admiration of the German poet would probably have consolced Madame Grisi, if she had ever troubled herself about the matter, for the very limited admiration expressed for her by the American prose-writer.

From the year 1834, when she made her début at the King's Theatre, London, until the year 1861, when she retired from the Royal Italian Opera, Madame Grisi only missed one season in London—that of 1842. And it was a rare thing indeed when she was engaged that illness or any other cause prevented her from appearing. She seldom disappointed the public by her absence; and never, when she was present, by her singing. There is some significance in styling such vocalists 'robust,' for there are robust sopranos as there are robust tenors. Indeed no one who has not really a robust constitution could stand such wear and tear, which are the indispensable accompaniments—which form, one might almost say, the very substance—of the life of a great singer. In the year 1854 she made an artistic tour in the United States, in company with Signor Mario. In 1859 she accepted an engagement at Madrid, which was not successful, and was rapidly broken off. In 1861 Madame Grisi signed an agreement with Mr. Gye binding her not to appear again in public within a term of five years. Mr. Gye thought, no doubt, that in this case five years were as good as fifty. But he had reckoned without his prima donna, who, in the year 1866, to the regret of her friends, and to the astonishment of every one, came out at Her Majesty's Theatre in her old part of Lucretia. After that Madame Grisi still continued from time to time to sing at concerts, and as a concert singer gained much and deserved applause. She had for years made London her head-quarters, and on leaving it in 1869 to pay a visit to Berlin had no intention of not returning to the capital where she had obtained her greatest and most prolonged successes. She did not however return. Inflammation of the lungs seized her, and after a short attack she died at the Hotel du Nord, Berlin, on the 25th Nov. 1869. Her artistic life had lasted about 35 years; and considering that fact,
and the vigorous constitution which such a fact indicates, it may safely be inferred that but for the accident of a severe cold, which appears to have been neglected, she would have lived to something like the age attained by so many distinguished members of the profession to which she belonged, and of which for an unusually long period she formed one of the brightest ornaments.

Mlle. Grisi was married on April 24, 1856, to Comte de Melcy, but the union was not a happy one, and was dissolved by law. Later on she was again married to Signor Mario, by whom she had three daughters.

[H.S.E.]

GROSSE CAISSE and GROSSE TROMMEL are respectively the French and German terms for the bass-drum. [DRUM, 3.] [V. de P.]

GROSSI. See SIFACK.

GROSSO. Italian for 'great.' The 'Concerto Grosso' of the first half of the 18th century, said to have been invented by Corelli in 1709, is a piece for a combination of several solo instruments with the full band. Thus Corelli's Concerti Grossi (op. 6) are described in the title as 'con due violini e violoncello di concertino obligati, e due altri violini e basso di concerto grosso, ad arbitrio che si potramo radoppiare. The same is the case with Handel's '12 Grand Concertos,' which are for 2 solo violins and a cello, accompanied by and alternating with a band of 2 violins, viola, cello, and bass. The piece contained 4, 5, or 6 movements of different tempo, one being usually a fugue and one a dance, and all in the same key.

The name does not occur in the works of either Haydn or Mozart. It was lastly used by Geminiani, who, before his death in 1761, arranged Corelli's solos as Concerti Grossi. [G.]

GROSSVATER-TANZ, i.e. grandfather-dance. A curious old German family-dance of the 17th century, which was greatly in vogue at weddings. Spohr had to introduce it into the Festival march which he wrote by command for the marriage of Princess Marie of Hesse with the Duke of Saxe Meiningen in 1825 (Selbstbiog. ii. 165). It consisted of three parts, the first of which was an andante in triple time, sung to the words

'Tand als der Grossvater die Grossmutter nahm,
Da war der Grossvater ein Brautigam,'

to which succeeded two quick phrases in 2-4 time—

As this dance usually concluded an evening, it was also called the 'Kehrhaus' (clear-out). Its chief musical interest arises from the fact that it is the 'air of the 17th century,' which Schumann in his 'Carnaval' introduces in the 'March of the Davidsbündler against the Philistines.' He also uses it in the finale of his 'Papillons,' op. 2. [E.P.]

GROUND BASS. The most obvious and easily realisable means of arriving at symmetry and proportion in musical works is by repetition, and a large proportion of the earliest attempts in this direction took the safe side of making the symmetry absolute by repeating the same thing over and over again in the form of variations; and of this order of form a Ground Bass, which consisted of constant repetition of a phrase in the Bass with varied figures and harmonies above it, is a sub-order. At an early period of Modern Music this was a very popular device, resorted to alike by Italians, such as Carissimi and Astorga, and by our English Purcell. In the works of Purcell there are a great number of examples, both in his songs in the Orpheus Britannicus, and in his dramatic works, as in the Dido and Æneas, in which, though not a lengthy work, there are three songs on a Ground Bass; the best of which 'When I am laid in earth,' has often been pointed out as a fine example.

An expansion of the idea was also adopted by him in the 'Music before the play' of King Arthur, in which the figure after being repeated many times in the bass is transferred to the upper parts, and also treated by inversion. Bach and Handel both made use of the same device; the former in his Passacaglia for Clavier with Pedals, and the 'Crucifixus' of his Mass in B minor; and the latter in his Choruses 'Envy eldest-born of Hell' in Saul, and 'O Baal monarch of the skies' in Deborah. In modern times Brahms has produced a fine example in the Finale to the Variations on a Theme of Haydn in B♭ for Orchestra.

At the latter part of the 17th century Ground Basses were known by the names of their authors, as 'Farinelli's Ground,' 'Purcell's Ground,' etc., and extemporising on a Ground Bass was a very popular amusement with musicians. Christopher Simpson's 'Cheelys Minuritionum, or Division Viol' (1665), was intended to teach the practice, which he describes as follows—'Diminution or division to a Ground is the breaking either of the bass or of any higher part that is applicable thereto. The manner of expressing it is thus:—

'A Ground, subject, or bass, call it what you please, is pricked down in two several papers: one for him who is to play the ground upon an organ, harpsichord, or what other instrument may be apt for that purpose; the other for him that plays upon the viol, who having the said ground before his eyes as his theme or subject, plays such variety of descent or division in concordance thereto as his skill and present invention do then suggest unto him.'

A long extract and a specimen of a 'Division, on a Ground' are given in Hawkins's History, chap. 149. [C.H.H.P.]

GRÜTZMACHER, FRIEDRICH WILHELM LUDWIG, a distinguished violoncellist of our day, son of a musician, born at Dessau, March 1, 1834.
GRÜTZMACHER.

His musical faculty showed itself very early, and he was thoroughly instructed in theory by F. Schneider, and in the cello by Drechler. In 1848 he went to Leipzig, where he at once attracted the notice of David, and in 1849, when only 17, became first cello and solo player at the Gewandhaus, and a teacher in the Conservatorium. In 60 he was called to Dresden, where he still resides as 'Kammer-Virtuos' to the King of Saxony. He has visited most of the northern capitals of Europe, and was in England in 67 and 68, playing at the Philharmonic (May 20, 1867), Musical Union, and Crystal Palace. His compositions embrace orchestral and chamber pieces, songs, etc., besides concertos and other compositions for the cello. His exercises and studies are specially valuable ('Tägliche Uebungen' and 'Technologie des Violoncellspiels,' used in the Leipzig Conservatorium). We are also indebted to him for many careful editions of standard works (Beethoven's Sonatas for Piano-forte and Cello, Romberg's Concertos, Boccherini's Sonatas, etc., etc.), and for the revival of some forgotten works of considerable interest.

As a player he has an extraordinary command of difficulties, and his style is remarkable alike for vigour, point, and delicacy. As a teacher he is greatly and deservedly esteemed, and has formed a number of fine players of all the nations of Europe. Amongst them his brother LEOPOLD, born Sept. 4, 1835, and now (78) first cello in the Duke of Meiningen's band, is one of the most remarkable. [T.F.H.]

GUADAGNI, GABRIELE, one of the most famous male contralti of the last century, was born at Loddi about 1725 (Fétis) or, perhaps, later. Nothing is known of his early history. In 1747 he was singing at Parma: in 48 he came, very young, to London as 'serious man,' in a burletta troupe, with Pertici, Laschi, Frasi, etc. 'His voice attracted the notice of Handel, who assigned him the parts in the Messiah and Samson, which had been originally composed for Mrs. Cibber,' in the studying which parts, says Burney, 'he applied to me for assistance. During his first residence in England, which was four or five years, he was more noticed in singing English than Italian. He quitted London about 1753.' A year later he sang at Paris and Versailles, after which he went to Lisbon to sing under Gazzotti, and in 1755 narrowly escaped destruction during the earthquake. To Gazzotti he owed much of his improvement and refinement of singing. His ideas of acting were derived much earlier from Garrick, who took as much pleasure in forming him as an actor (for 'The Fairies' of Smith), as Gazzotti did afterwards in polishing his style of vocalisation. After leaving Portugal, he acquired great reputation in all the principal theatres of Italy. There he sang the part of 'Telamoc,' written for him by Gluck, who procured his engagement in 1766 at Vienna, as 'Orfeo.' Having excited both admiration and disturbance in that capital, he returned to London in 1769. 'As an actor he seems to have had no equal on any operatic stage in Europe: his figure was uncommonly elegant and noble; his countenance replete with beauty, intelligence, and dignity; and his attitudes and gestures were so full of grace and propriety, that they would have been excellent studies for a statuary. But, though his manner of singing was perfectly delicate, polished, and refined, his voice seemed, at first, to disappoint every hearer, for he had now changed it to a soprano, and extended its compass from six or seven notes to fourteen or fifteen (Burney). The same writer gives a curious criticism of his style, too long to quote here, from which it appears that he produced his best effects by singing unaccompanied and by fining off his notes to a thread. He had strong resentments and high notions of his own importance, which made him many enemies. He sang under J. C. Bach in the Lent of 1770, and later in the same year was heard at Verona by the Electress of Saxe, who brought him to Munich, where he remained in great favour with the Elector till the death of that prince. In 1766 he sang at Potsdam before Frederick II, who gave him a handsome gold snuffbox studded with brilliants—the finest he had ever given. In 1777 he returned to Padua. There Lord Mount-Edgcumbe heard him (1784) in a motetto, and found his voice still full and well-toned, and his style excellent. He insisted on Lord Mount-Edgcumbe going to his house, where he entertained him with festoons, which he exhibited on a little stage, and in which he took great delight. This writer puts his death in the next year, 1785; but Fétes fixes it much later, in 1797. He died possessed of considerable wealth, which he spent liberally and charitably. [J.M.]

GUADAGNI, signora, the sister of the above, came to London, as one of a burletta company, with Lovattini, Morigt, etc., in 1766. She appeared as 'Cecchina' in the 'Buona Figliuola,' a part which she had previously played in Italy with great applause. She sang for several seasons in the 'Viaggiatori ridicoli' (1768), and other operas. Her husband was the operatic composer, Felice Alessandri, of Rome. [J.M.]

GUADAGNINI, a numerous family of Italian violin-makers, of the Cremona school, though probably originating from Piacenza. The first generation consists of Lorenzo and John-Baptist: the latter seems always to have been a family firm. Their exact kinship is uncertain. They worked from about 1690 to 1740. Both claimed to be pupils of Stradivarius. The violins of John-Baptist fully justify this claim. They are finely designed, and covered with a rich dark varnish, easily distinguishable from the glaring scarlet varnish used by the second John-Baptist, and are in all respects worthy of the Stradivarian school. John-Baptist dated from Milan, Piacenza, and Turin: he sometimes describes himself as 'Cremonensis,' sometimes as 'Piacentinus.' The violins of Lorenzo are of high sterling merit, despite their divergence from the Strad-
GUARDINI.

The design is often bold to the verge of uncouthness; the corners are heavy and obtrusive; the scroll is quite unlike that of Stradivarius: the varnish, though rich and good, is less brilliant. Both of these makers are highly esteemed, and good specimens command prices varying from £20 to £80. In the second generation a marked decadence is observable. The second John-Baptist (probably a son of Lorenzo) made a large number of useful violins of the common sort. They are mostly of the Stradivarian pattern. The second John-Baptist introduced that unpleasantly high-coloured varnish which is often supposed to be the special characteristic of a 'Guardagnini.' He used excellent wood, and his instruments are in good repute among orchestral players. He usually dates from Piacenza. To the same generation belongs Joseph (1740-1750), who usually dates from Milan, and claims to be from Cremona. He was probably a brother of the second John-Baptist. His work is massive and full of character, but distinguished by a certain rudeness, in which he probably imitated Joseph Guarneri. His brownish-yellow varnish contrasts oddly with that of his contemporary John-Baptist and those used in the earlier generation. The third and following generations of the Guardagnini family exhibit a lamentable falling off. Now and then they did their best to imitate the work of their predecessors: more often they seem to have worked at hap-hazard. The third generation had quite lost the art of varnishing. Sometimes the varnish is a hard and cold imitation of that of John-Baptist the second: sometimes it is a thick, dull, opaque mass, resembling paint: sometimes merely a thin albuminous wash. In the make little often remains of the Cremonese character at all. They nevertheless made a certain number of useful instruments. Members of the family are believed to be still engaged in the violin trade at Turin. [E.J.P.]

GUARDIANI. See CAMPOIOLI.

GUARDUCCI, TOMMASO, TOSCANO, born at Montefiascone about 1720, was afterwards a pupil of the famous Bernaschi at Bologna, and became one of the best singers of his time. He appeared at most of the chief theatres of Italy with success from 1745 to 1770. In the autumn of 1766 he was brought over by Mr. Gordon, one of the managers, to the London Opera as 'first man,' with Grassi. In the spring of 1767, two serious operas, 'Caratterio' by J. C. Bach and Vento's 'Conquista del Messico,' were produced; and in these the two new singers excited more attention, and acquired more applause, than before. Guarducci was, according to Burney, 'tall and awkward in figure, inanimate as an actor, and in countenance ill-favoured and morbid; but a man of great probity and worth in his private character, and one of the most correct singers. His voice was clear, sweet, and flexible. His shake and intonations were perfect, and by long study and practice he had vanquished all the difficulties of his art, and possessed himself of every refinement.' Prejudice at first ran high against him, but his merit made its way, and his highly-polished style was very much admired. He paid a high compliment to the then state of taste in London, by which (he told Dr. Burney) he had profited largely, in discarding superfluous and ill-selected ornaments from his singing. He was, perhaps, the simplest of all the first class of singers. All his effects were produced by expression and high finish. He sang in the English oratorio as short notice, with very little knowledge of our language. He received, however, £600 for twelve oratorios, a larger sum than was ever given on a like occasion until the time of Miss Linley. In 1771 he retired, and lived with his family, passing the winter at Florence and the summer at Montefiascone, where he had a handsome country-house. [J. M.]

GUARNIERI or GUARNERIUS, a celebrated family of violin-makers of Cremona. Their pedigree is as follows:

1. ANDREAS GUARNIERI, the first of the family, worked with Stradivari in the workshop of Nicholas Amati, and like Stradivari developed out of his master's model an entirely original style. Excellent instruments of his make, not very highly finished, but covered with fine orange varnish, are dated from the sign of 'St. Theresa,' in Cremona, where he was succeeded by his son.

2. JOSEPH, 'FILIOUS ANDREAE,' who so described himself to distinguish himself from his cousin. At first he followed his father's pattern; but he soon developed a style of his own, in which the narrow and rapidly-widening waist, the peculiar set of the soundholes, and a more brilliant varnish, are prominent features. Good specimens command prices varying from £30 to £80. Some points first traceable in his work were adopted by his cousin. His brother,

3. PETER GUARNIERI, commonly called 'PETRI DE CREMONA'—from his describing himself in his tickets as 'Cremonensis,' i.e. from Cremona—emigrated from Cremona to Mantua, where he also worked 'sub signo Sancte Teresae.' The originality of the Guarneri knew no limits: Peter of Cremona has scarcely a point in common with his father or brother. 'There is,' says Mr. Hart, in his work on the violin, 'increased breadth between the sound-holes: the sound-hole is rounder and more perpendicular; the middle bouts are more contracted, and the model is more raised.' His varnish is often equal to that of his brother. The instruments of Peter of Cremona are valued by connoisseurs, but in a lesser degree than those of his nephew,

4. PETER OF VENICE, son of Joseph filius Andreae, who adopted his uncle's method, and carried the 'Petrine' make to perfection. Unlike the rest of his family, Peter of Venice had
the advantage of that splendid Venetian varnish which astonishes the beholder in the work of Montagnana. His violins, though of high model, have a fine rich tone, and are in their way complete masterpieces. But all the Guarneri family yield in fame to the celebrated

5. JOSEPH DEL GESU, so called from the I.H.S. which is added to his name on his tickets. Sometimes erroneously said to have been a pupil of Stradivari, with whom his work has nothing in common, he was probably a pupil of his cousin and namesake. His attention seems to have been early diverted from the school of the Amaties, in which all his relatives, and Stradivari himself, imbibed their first ideas. He fixed on the works which the early Brescian makers had produced before the Amati family brought into fashion geometrical curves, extreme fineness of finish, and softness of tone. Whoever may have been the instructor of Joseph Guarnerius, his real master was Gaspar di Salo. He revived the bold and rugged outline, and the masterly carelessness, and with it the massive build and powerful tone, of the earlier school. Perfection of form and style had been attained by others: tone was the main quality sought by Joseph, and the endless variety of his work, in size, in model, and in cutting of sound-holes, probably merely indicates the many ways in which he sought it. He was sedulous in the selection of sonorous wood. He is supposed to have obtained a piece of pine of vast size, possessing extraordinary properties, from the mountains on the most of his bellies. The bellies made from this wood have a stain or sap-mark running parallel with the finger-board on either side. This great block of wood, says Mr. Hart, ‘he regarded as a mine of wealth.’ He often finished an instrument more carefully, perhaps to special order: the finer examples are well characterised by Mr. Hart as ‘a strange mixture of grace and boldness.’ These finer examples predominate in what has been termed the ‘second epoch’ of his life: but the truth is that throughout his career he worked with no uniformity as to design, size, appearance, or degree of finish, and without any guide but his own genius, and the scientific principles he had wrought out by experiment. The story of Joseph Guarnerius making rude instruments while in prison out of chance pieces of wood provided by the daughter of his gaoler, who ‘sold them for what they would fetch, in order to alleviate the misery of his confinement,’ rests upon no satisfactory evidence. Joseph Guarnerius made instruments often of very rude appearance, and he may or may not have been at some time imprisoned: but the story of the ‘prison Josephs’ has probably been invented to explain the hosts of spurious instruments which have found their way all over Europe since the middle of the last century. The great tone-producing powers of the ‘Joseph’ were thus early very well known; but the softer quality of the Amati and the Stradivarius violin was usually preferred by amateurs until the present century, when Paganini’s extraordinary perform-

ances on an unusually fine ‘Joseph’ sent them up at once three-fold in the market. The value of a good ‘Joseph’ now varies from £150 to £400, according to size, power of tone, finish, and condition. Only extraordinary specimens fetch higher prices.

No contemporary copyist imitated Joseph Guarnerius with much success. Landolfi was the best: the productions of the Testores and of Lorenzo Storioni could never be mistaken for their original. No violoncello of Joseph Guarnerius has ever been known to exist. [E.J.P.]

GUERRERO, FRANCISCO, one of the chief representatives of the early Spanish school of composers, was born at Seville in 1528, and received his education first from an elder brother, and then from the great Morales. At the age of 18 he was made chapel-master at Jien, a few years afterwards obtained a similar position at Malaga; and finally succeeded Fernandez in the cathedral at Seville. At the age of 60 he undertook a pilgrimage to Palestine, an account of which was afterwards published with the title El viaje de Jerusalem que hizo Francisco Guerrero, etc. (Alcala 1611). Guerrero died in 1599 at the advanced age of 81. His most important works were published under the title, ‘Liber primus Missarum F. Guerrero Hispalensis Oedi phonasco autore’ (Paris, Du Chemin 1566). This contains 4 masses in 5 parts, viz. ‘Sancta et immaculata’; ‘In te Domine speravi’; ‘Congratulamini mihi’; ‘Super flumina Babylonis.’ 5 masses in 4 parts, viz. ‘De B. Virgin’; ‘Dormendo un giorno’; ‘Inter vestibulum’; ‘Busta Mater’; and ‘Pro Defunctis.’ Also the motets ‘Ave virgo sanctissima’ (5 parts), ‘Usquequo Domine’ (6 parts), and ‘Pater Noster’ (5 parts).

There is a copy of the book in the Imperial Library at Vienna. Sandoval, in his life of Charles V, tells us that Guerrero presented this volume to the Emperor, and that monarch’s musical reputation chiefly rests on the fact that, after hearing one of these compositions, he called Guerrero ‘a thief and a plagiarist, while his singers stood astonished, as none of them had discovered these thefts till they were pointed out by the Emperor.’ But they may possibly have discovered, notwithstanding their respectful astonishment, that Guerrero was guilty of nothing more than using the ordinary manners of a particular school.

The Vienna library also possesses a collection of Magnificats by Guerrero, printed at Louvain, by Phalesius in 1563. Eslava has printed in his ‘Lira-sacro-Hispana’ the Passion according to St. Matthew for 4 voices, for Palm Sunday, and that according to St. John (5 voices) for Good Friday. Also 3 motets for 5 voices and a 4-part mass, ‘Simile est regnum celorum.’ [ESLAVA.]

GUEST, RALPH, was born in 1742 at Basely, Shropshire. At a very early age he became a member of the choir in the church of his native place. On attaining his majority he came to London and engaged in commercial pursuits;
but the love of music induced him to enter in addition the choir of Portland Chapel. After five years he removed to Bury St. Edmunds, and entered into business on his own account. From Ford, organist of St. James's Church, Bury, he learned organ-playing, and in 1805 was appointed choir-master at St. Mary's there, and later, on the erection of an organ there, its organist. He then devoted himself entirely to the profession of music. He published "The Psalms of David," arranged for every day in the month, retaining most of the original tunes and adding about sixty new ones. He subsequently published a supplement under the title of "Hymns and Psalms," with music composed and adapted by him. He also composed many songs. He resigned his appointment as organist in 1822, and died, at the advanced age of 88 years, in June 1830.

His son, George, was born at Bury St. Edmunds in 1771. He was initiated in music by his father, and subsequently became a chorister of the Chapel Royal under Dr. Nares and Dr. Aytoun. On the breaking of his voice he obtained in 1787 the appointment of organist at Eye, Suffolk, but gave it up in 1789 for that at Wisbeach, Cambridgeshire, which he held during the remainder of his life. His compositions include anthems, hymns, glees, duets, songs, organ pieces, and pieces for a military band. He died at Wisbeach, Sept. 19, 1831. [W.H.H.]

GUGLIELMI, Pietro, born at Massa-Carrara in 1777. His father was an accomplished musician and Maestro di Capella to the Duke of Modena. At the age of 18 he was sent to supplement his home training at the Neapolitan Conservatorio, where he had the advantage of the tutelage of Durante. Volatility of temperament rather than stupidity hindered his progress in harmony, and it only required a single incident, sufficiently exciting to induce twenty-four hours of self-concentration, to make him at once evince his superiority to all his class-fellows. As soon as he left the Conservatorio he started on a tour through the principal cities of Italy, beginning with Turin, where he brought out his earliest opera (1755). Everywhere his genius was cordially acknowledged, and his best works met with general applause. He is known however to have made a great number of failures, which were probably the result of that careless workmanship to which artists of his self-indulgent and pleasure-loving habits are prone. From Italy he went to Dresden, Brunswick, and finally to London, whither his wife appears to have accompanied him, and where his success seems to have been checked by the intrigues of a musical cabal. In 1777 he returned to Naples to find that Cimarosa and Paisiello, each in the height of his fame, had eclipsed between them a reputation which his own fifteen years of absence had allowed to wane. It is to his credit that the necessity of struggling against these two younger rivals spurred Guglielmi to unwonted effort, and that the decade during which he divided with them the favour of the Neapolitan public was the culminating epoch of his mental activity. Weared of the stage, Guglielmi finally in 1793 accepted the post of Maestro at the Vatican, and died in harness at Rome in 1804.

He was a spendthrift and a debauchee: a bad husband, and a worse father. He abandoned a faithful wife, neglected his promising children, and squandered on a succession of worthless mistresses, most of whom were picked up in the green room, a fortune which it was his one trait of worldly wisdom to have known how to amass. But he stands high among composers of the second order, and he had the fecundity as well as the versatility of genius. His operas were numerous and their style was varied, and he composed masses, motets, hymns, and psalms, for the church, besides a great deal of important chamber-music for the clavecin, violin, and violoncello. Fétis gives a list of 79 of his operas, and assumes that this number is incomplete owing to the habit then prevalent in Italy of preserving only the scores of such works as had been fairly successful. Of these by far the greater number would be uninteresting now-a-days, but his "I due Gemelli," "La Serva innamorata," "La Pastorella Nobile," "La Didone," "Enea e Lavinia," "Deborah e Sisera," "I Viaggiazioni," and "La Bella Fiescatrice," will always hold a considerable place in the history of music. A bravura air of Guglielmi's, "Gratiae agimus," for high soprano, with clarinet obligato, was long a favourite in English concert programmes. [E.H.P.]

GUGLIELMI, Signora, sang in London in Lent, 1770, in Italian oratorios, under J. C. Bach, with Grasi and Guadagni. She remained for another season or two, singing (1772) in Piccini's "Schiva" and the "Virgilio" of Guglielmi. She was, perhaps, the wife of the latter composer, who was in England at the time, having come to London in 1768. [J.M.]

GUICCIARDI. Giulietta or Julie, Countess (Gräfin) Guicciardi—born Nov. 24, 1784, married Count Gallegen, Nov. 3, 1803, died March 22, 1855—was a Viennese lady, to whom Beethoven dedicated his 'Sonata quasi fantasia' in C minor (Op. 27, No. 2), published in the beginning of March 1802. She was his pupil, and in a conversation with Otto Jahn in the year 1852 (reported by Thayer, Life, ii. 171), she stated that he had given her the Rondo in G (Op. 51 No. 3), but that he withdrew it, and dedicated it to Countess Lichnowsky, and then dedicated the Sonata to her instead. The Countess Guicciardi, has, on the authority of Schindler, been believed to be the person to whom Beethoven addressed the passionate letters so often printed (see Moscheles's Schindler, i. 101--106). They were found after his death in the secret drawer of his writing-desk, with his treasured bank-shares. They are all written with pencil on one piece of paper, and the accurate dates are as follow: 'am 6 Juli Morgens'; 'Abends Montags am 6 Juli'; 'Guten Morgen am 7 Juli'—no year named in either, though Schindler adds 1806 to each. In his later editions he adopts 1803 as the year. Thayer however, after an elaborate investigation (Life, ii. 173--180; and Appendix to vol. iii. in Musical World for 1878,
noe. 8 and 11), comes to the conclusion that the letters were not written in any year from 1800 to 1803 inclusive, and that the Countess Guicciardi was not the object of them. Beethoven however had been deeply in love with her, and believed that his passion was returned. At least such was his impression in Feb. 1823, when he wrote in a conversation-book preserved in the Berlin Library, ‘J’etois bien aimé d’elle et plus que jamais son epoux.’ A few lines further on he states that he had seen her again after her marriage—‘mais je la méprise.’

[GH]

GUIDETTI, GIOVANNI, born at Bologna in 1532; according to Baini came to Rome, and was a pupil of Palestrina. Palestrina being commissioned by Gregory XIII to revise the services of the Roman Church, associated his pupil with him in the task, as having an intimate knowledge of the MSS., both in St. Peter’s and in the other principal churches of Rome. Thus the real labour of the work, which he himself styles ‘opus nullius ingenii, multarum tamen vigiliarum,’ fell upon him. It was begun in 1576, and occupied him till 1581. The work was published in 1582—‘Directorium chori... Opus Joannis Guidetti Bononiensis,’ etc., and Guidetti had the right of sale for ten years. His preface makes the respective shares of the labour of himself and Palestrina clear. He had the drudgery, while Palestrina had the final revision and completion of all portions requiring it. It is quite consistent with Palestrina’s character that he should have thus given Guidetti his full credit. The ‘Directorium’ went through many subsequent editions down to 1737, and was succeeded by ‘Cantus ecclesiasticus passionis,’ etc. (1586); ‘Cantus ecclesiasticus officii majoris,’ etc. (1587); and ‘Praelationes in cantu fermo,’ etc. (1588), all published in Rome. The aim of these works was to revive Gregorian singing in its pristine purity, and free it from the arbitrary additions and alterations then in vogue. Guidetti was a priest, and died at Rome Nov. 30, 1592.

[FG]

GUIGNON, JEAN-PIERRE, the last man who bore the title of ‘Roi des violons.’ Born at Turin in 1702, he was still very young when he went to Paris and began to study the violoncello, which however he soon exchanged for the violin. He is said to have excelled by a fine tone and great facility of bowing, and to have been a formidable rival of Leclair. In 1733 he entered the King’s service, was appointed musical instructor of the Dauphin, and obtained the revival in his favour of the antique title of ‘Roi des violons et ménétriers.’ He further endeavoured to revive certain obsolete regulations by which all professional musicians in France were compelled to become members of the guild of minstrels (confrérie des ménétriers) on payment of a fee to him. This however raised universal opposition; and the case was brought before the Parlement, and decided against him. On this occasion Guignon dropped his unprofitable title and retired from public life. He published several books of Concertos, Sonatas, and Duos. [P.D.]

GUILLAUME TELL. Rosmini’s 37th and last opera; in 4 acts, libretto by Bis and Jouy. Produced at the Académie Aug. 3, 1829; in London, in English, as ‘Hofer the Tell of the Tyrol,’ arranged by Bishop, words by Planché, Drury Lane, May 1, 1830, and as Guillaume Tell at the same house, Dec. 3, 38; in Italian, as Guglielmo Tell at Her Majesty’s, July 11, 39. It is usually much curtailed, but in 1856 was performed entire in Paris, and lasted from 7 till 1.

GUILMANT, FELIX ALEXANDRE, son of an organist of Boulogne, and born there March 12, 1837. He took to the organ at an early age, and before he was sixteen was made organist of St. Joseph, in 1847 Maître de Chapelle of St. Nicolas, and shortly after professor of solfeggio in the local Ecole communale. In 1866 he became for some months a pupil of Lemmens, who heard him play and was struck by his ability. In 1871 he removed from Boulogne to Paris, and was appointed organist of the church of the Trinity, a post which he still fills. He is one of the leading organ players of France, and has considerable extempore power. For his instrument he has published a sonata and two collections of arrangements—‘Pièces de différents styles,’ and ‘L’.organiste pratique’; also various masses, motets, and airs, arrangements and original pieces for the harmonium. Guilmain is no stranger to England, having played at the Crystal Palace, at Sheffield, and elsewhere.

[GH]

GUIMBARDE. A French name, of unknown derivation, for the JEW’S-HARP. [V.deP.]

GUIRAUD, ERNEST, son of a French musician, was born at New Orleans, June 23, 1837, brought up amongst music, and saw his first opera ‘Roi David’ on the stage when only 15. He then came to Europe and entered the Conservatoire, where he obtained various distinctions, ending as his father had done before him, with the Prix de Rome in 1859. His first appearance before the public was made with a one-act opera, ‘Sylvie,’ which he wrote while in Rome, and which was brought out at the Opéra Comique May 11, 1864. This was followed after a long interval by ‘En Prison,’ also in one act (Theatre Lyrique, March 5, 1869), and ‘Le Kobold’ (July 2, 1870). M. Guiraud served during the war, and was in the engagements of Champigny and Montreout. His other operas have been Madame Turlupin (1873), Piccolino (1875), Gretta Green, a ballet (1873). He has also composed two Suites for Orchestra, the second of which was performed at the Concerts populaires, January 28, 1872. In November 1876 M. Guiraud was chosen professor of harmony and accompaniment at the Conservatoire, in room of Baptiste, deceased.

[GH]

The Spanish guitar is the most generally...
known modern representative of the numerous family which includes also the lutes and cithers. The identity of the name with the Greek κύθνος is not to be mistaken, but the resemblance of the Spanish and ancient Greek instruments is too remote to imply derivation. The guitar is at once known by its flat back, the sides curving inward after the pattern of violins and other bowed instruments, and suggesting its descent from some instrument to which a bow was used. The shape has however varied according to fashion or the fancy of the maker. The woods commonly used for the sides and back are maple, ash, service, or cherry tree, not unfrequently adorned with inlays of rosewood or fancy woods. Old instruments of the seventeenth century are often highly ornamented with ivory, ebony, tortoise-shell, and mother of pearl. The sound-board or face is of pine, and has a soundhole, which shares in the general decoration. Hard woods, such as ebony, beech, or pear-tree, are employed for the neck and fingerboard. The bridge should be of ebony, and has an ivory or metal 'nut' above the fastenings of the strings, similar to the nut of the fingerboard, the open strings vibrating between. Modern guitars have six strings, three of gut and three of silk spun over with silver wire, tuned as (a)

![Guitar Diagram](image)

The lowest is said to have been a German addition dating about 1790. The written notation is an octave higher, as (b). Metal screws are now used for tuning, instead of the ebony pegs of the true Spanish instrument. The intervals are marked off by metal frets upon the fingerboard, and transposition to the more remote keys is effected by a capo tasto or d'astoro. [See Frets; Capo Tasto.] Old instruments had often ten, twelve, or more strings, arranged in sets of two, tuned in unison. The Spanish guitar is always played with the fingers. The deepest strings are made to sound by the thumb, the three highest by the first, second, and third fingers, the little finger resting upon the soundboard.

The guitar and its kindred were derived from the East. In the famous Gate of Glory of Master Mateo, to the church of Santiago da Compostella in Spain, a cast of which is in South Kensington Museum, among several musical instruments may be seen one guitar shaped, which may be assumed to represent the original Viuhela, the old Spanish viol or guitar. The sides are curved, but there is no bow held by the player; still this is no proof that a bow was not used, since the sculptor may have omitted it. The date of this masterpiece (A.D. 1188) is perhaps not more than a hundred years subsequent to the introduction of the instrument by the Moors into Spain. Mr. Engel tells us (Musical Instruments, etc., 1874, p. 117) that a hundred years later than this date, there were several kinds of viuhelas, to some of which the bow was certainly not used. There were instruments for the bow, the plectrum, and the fingers, all in use at the epoch of the outburst of romantic song in Southern Europe. At the close of the last century and beginning of this, the Spanish guitar became a fashionable instrument on the continent. Ferdinand Sor, a Spaniard, after the Peninsula War, brought it into great notice in England, and composing for it with success banished the English guitar or Citara (Fr. Césta; Ital. Cetara; Germ. Zither). This was an instrument of different shape, a wire-strung Citara, with six open notes, two being single spun strings, and four of iron wire in pairs tuned in unison. The scale of the English Guitar thus strung was written

![Guitar Strings](image)

in real pitch an octave lower. The technique of the instrument was of the simplest, the thumb and first finger only being employed, if not a plectrum.

Sor's most distinguished rival was an Italian, Mauro Giuliani, who composed a concerto with band accompaniment for the 'Terra chitarra' or Third-guitar, an instrument with a shorter neck, tuned a minor third higher. This concerto, published by Diabelli, Vienna, was transcribed by Hummel for the pianoforte. Other popular composers were Legnani, Kreutzer, Nußle, Regondi, and that wayward genius Leonard Schulz. Berlioz and Paganini were both guitarists.

There is also an octave guitar, the little Portuguese MACHE, with four strings, tuned

![Octave Guitar Diagram](image)

or by guitar-players often.
GUITAR.

In Madeira, after work in the vineyards is done for the day, the country people return playing the Machete, perhaps twenty together, with occasionally a larger five-stringed one accompanying.

There is an English Guitar Tutor by Mme. Sidney Pratten (Boosey, London), but those who wish to know more about the instrument technically are referred to 'Learning the Guitar simplified,' by the same authoress. The price of a good guitar of French make, the best for playing, is from £5 to £10. [A.J.H.]

GUNGL, JOSEPH, popular composer of dance music, born at Zsmbliek in Hungary Dec. 1, 1810; son of a stocking-weaver; began life as a schoolmaster. He received his first instruction in music from Semann in Buda, and having enlisted in the Austrian army, was first oboist and then bandmaster to the 4th regiment of artillery. His Hungarian March, op. 1, was the first of a long series of marches and dance music. Up to 1843 Gunl made concert-tours with his regimental band. In Munich, Augsburg, Nuremberg, Wurzburg, and Frankfurt, performing chiefly his own pieces, but in that year he established a band of his own at Berlin, and his publishers, Bote and Bock, are said to have made large sums by his music. On his return from America in 1840, he was appointed music-director to the King of Prussia; and in 1858 Capellmeister to the Emperor of Austria. In the meantime he and his band had visited nearly every capital on the continent. Gunl has been stationary at Munich since 1864. His works are very numerous. It is stated that down to the end of 1873 he had composed 300 dances and marches, for the most part distinguished by charming melody and marked rhythm.

His daughter Virginia, an opera-singer of merit, made her first appearance at Munich in 1871, and is now engaged at the Schwerin.

His nephew Johann, also well known as a composer of dance music, was born, like his uncle, at Zsmbliek in 1819, and, like him, made professional tours to every capital in Europe. He retired in 1862, and lives at Rünfmorken in Hungary. [F.G.]

GUNN, BARNABAS, noted for his extemore playing, was organist of St. Philip's, Birmingham, which he quitted in 1730 to succeed Hine as organist of Gloucester Cathedral. A Te Deum and Jubilate in D of his composition are extant in MS. He published 'Sonatas for the Harpsichord,' and in 1736, at Gloucester, a thin 4to. volume containing 'Two Cantatas and Six Songs,' the music printed on one side of the leaf only, and prefaced by a poetical address 'To all Lovers of Music,' and a remarkable list of 464 subscribers (including Handel and most of the principal musicians of the day), subscribing for 617 copies. He died in 1743.

Barnaby Gunn, probably a relation of the above, was organist of Chelsea Hospital from April 16, 1730, until early in 1753. [W.H.H.]

GUNN, JOHN, born in Edinburgh about 1765, in 1790 established himself in London as professor of the violin-cello and flute, and whilst there published 'Forty Scotch Airs arranged as trios for flute, violin, and violoncello': 'The theory and practice of fingering the Violoncello,' 1793, with a dissertation on stringed instruments; and 'The Art of playing the German Flute on new principles.' In 1795 he returned to Edinburgh. In 1801 he published an 'Essay theoretical and practical, on the application of Harmony, Thorough-bass, and Modulation to the Violoncello.' In 1807 he brought out his most important work, viz. 'An Historical Inquiry respecting the performance on the Harp in the Highlands of Scotland from the earliest times. Until it was discontinued about the year 1754,' written at the request of the National Society of Scotland. His wife, Anne, before her marriage Anne Young, was an eminent pianist. She was the authoress of a work entitled 'An Introduction to Music ... illustrated by musical games and apparatus and fully and familiarly explained' (Edinburgh about 1815). The games and apparatus were of her invention. A second edition appeared in 1820, and a third (posthumous) in 1827. [W.H.H.]

GUSIKOW, Michael Joseph, an artist of rare musical faculty—'a true genius' says Mendelssohn—born of poor Jewish parents and of a family which had produced musicians for more than a century, at Sklow in Poland, Sept. 2, 1806. He first played the flute and tynamon, a kind of dulcimer. At the age of 17 he married, and a few years after discovered that weakness of the chest would not allow him to continue playing the flute. He thereupon took up the Strunfibel, an instrument of the dulcimer kind, composed of strips of fir on a framework of straws, which he improved and increased in compass. Upon this he attained extraordinary facility and power. In 1832 he and four of his relatives began a long tour, through Odessa—where he was heard by Lamartine; Kiew—where he was much encouraged by Lipinski; Moscow, and thence to south and north Germany, Paris, and Brussels. He travelled in the dress and guise of a Polish Jew—long beard, thin, pale, sad, expressive features—and excited the greatest applause by his astonishing execution and the expression which he threw into his unlikely instrument. Mendelssohn heard him at Leipzig, and called him 'a real phenomenon, a killing fellow (Mordkeri); who is inferior to no player on earth in style and execution, and delights me more on his odd instrument than many do on their pianos, just because it is so thankless . . . . . I have not enjoyed a concert so much for a long time' (and see the rest—Letter Feb. 18, 1836). But it wore him out; he was laid up at Brussels for long, and died at Aix la Chapelle, Oct. 21, 1837, adding another to the list of geniuses who have died shortly after thirty. (See Fétis, who saw much of him.)

GUSTAVE III., ou le Bal masqué, opera in 5 acts; words by Scribe, music by Aubert. Produced at the Académie Feb. 27, 1831; in London, as Gustavus the Third, at Covent Garden, Nov. 13, 33; in French (as above) at Her Majesty's, March 29, 1833.
GUZLA. A kind of rebab, a bow instrument with one string only, used in Illyria. The name was adopted by Prosper Merimee as the title of his Servian poems.

GYE, FREDERICK. [See Royal Ital. Opera.]

GYMNASE DE MUSIQUE MILITAIRE. A school for educating musicians for the French military bands, founded in 1836 under the directorship of F. Berr, who died Sept. 24, 1838. Finding himself unable to carry out his views in the new school, he detailed them in a pamphlet, ‘De la nécessité de reconstituer sur de nouvelles bases le Gymnase de musique militaire’ (Paris 1832). Carafa succeeded Berr, and under him the Gymnase moved to the Rue Blanche, and attained to considerable dimensions, giving a complete musical education from solfeggio to counterpoint to nearly 300 pupils. It was suppressed in 1846, but it was agreed between the Ministres d'État and de la Guerre that 50 military pupils should be taught at the Conservatoire, and for these the masters of the Gymnase were retained. This arrangement has since terminated, but the examinations for conductors and subconductors of regimental bands are still held at the Conservatoire.

GYROWETZ, ADALBERT, prolific composer, born Feb. 19, 1793, at Budweis in Bohemia. His father was a choir-master, and taught him music at an early age; and on leaving school he studied law at Prague, though still working hard at music and composing much. A long illness left him destitute, and compelled him to take the post of private secretary to Count Franz von Fünfkirchen. The Count insisted on all his household being musical, so Gyrowetz had abundant opportunity not only of composing, but of having his compositions performed. The reception they met with induced him to visit Italy, and complete his education there. Passing through Vienna he made the acquaintance of Mozart, who had one of his symphonies performed, and himself heard Gyrowetz before the applauding audience. In Naples he studied for two years under Sala, maintaining himself by his compositions, among which were a number of concerted pieces for the lyre, written for the king, with whom it was a favourite instrument. He next went to Paris, and established his claim to the authorship of several symphonies, hitherto performed as Haydn's. In consequence the publishers bought his other compositions at high prices. The Revolution was rapidly approaching, and Gyrowetz went on to London, arriving in Oct. 1795. His reception was an honourable one; both the Prince of Wales and the Duke of Cumberland paid him marked attention; the Professional Concerts and Salomon placed his name in their programmes, and the latter engaged him as composer at the same time with Haydn. He wrote industriously and met with liberal publishers; but he was most pleased by the arrival of Haydn, whom he warmly welcomed. Gyrowetz was also engaged to write an opera, in which Mme. Mara and Paschierotti were to have sung at the Pantheon, then recently turned into an opera-house during the rebuilding of the King's Theatre. After 2 or 3 rehearsals however the Pantheon was burnt down (Jan. 13th, 1792), and the score of 'Semiramis' perished in the flames. On the 9th of February he gave a benefit concert at the Hanover Square Rooms, which was brilliantly attended; but the ultimate disagreement with him, and he shortly after left London for Vienna. On his return, after 7 years, he received an appointment in the War Department. In 1804 Baron Braun, Intendant of the two court theatres, offered him the Capellmeistership, which he retained till 1831, producing a great number of operas, Singspiele, and operettas, besides music for melodramas and ballets. Gyrowetz was wonderfully industrious in all branches of composition, and his works, though now forgotten, were long popular. His symphonies and quartets were successful imitations of Haydn's, but still they were imitations, and were therefore bound to disappear. In 1843 his artist friends, pitying the poverty to which he was reduced—for his pension afforded him a bare subsistence—arranged a concert for his benefit, at which his 'Dorf schule' was played by Staudigl and the choristers. This really comic cantatas was repeated with great success in the following year at the last concert he himself ever arranged. Shortly before his death he published his autobiography, an interesting book in many respects (Vienna, 1847).

Gyrowetz composed about 30 operas, large and small, operettas, and Singspiele; and more than 40 ballets. His first opera was 'Selico' (1804). The most successful have been 'Agnes Sorel' (1806); 'Der Augenarzt' (1811); 'Die Prüfung' (1813), approved by Beethoven himself; 'Helene' (1816), and 'Felix und Adele' (1831). Of his operettas and Singspiele, generally in one act, 'Die Junggesellen Wirtschaft,' 'Der Sammt rock,' 'Aladin,' and 'Das Ständchen' were long favourites; of the melodramas 'Mirinae' (1806) was most liked. Besides 'Semiramis,' he wrote four grand Italian operas for Vienna, of which 'Federica e Adolfo' (Vienna 1812) was especially well received. 'Die Hochzeit der Thetiis' was his most successful ballet. He composed cantatas, choruses for women's and boys' voices, Italian and German canzonets, and several songs for one and more voices. He wrote his 10th mass at the age of 84. Of his instrumental music there are over 60 symphonies, a quantity of serenades, overtures, marches, dance-music (for the Redoutensaal); quintets; and about 60 string-quartets, most of them published in Vienna, Augsburg, Offenbach, Paris or London. For the pianoforte he wrote about 40 sonatas, 30 books of trios, 12 Nocturnes, much dance-music, and many smaller pieces of different kinds. It is sad to think of so much labour, energy, and talent, and so little lasting fruit; but Gyrowetz possessed the fatal gift of facility which so often implies the want of permanence. None of his works, either for the concert-room or the stage have survived. 'Der Augenarzt' kept the boards longer than the others. He died at Vienna March 19, 1850, aged 87.

[C.F.P.]
H.

(pronounced Ha) is the German name for B natural, B flat being called by them B. It was originally ‘B quadratum,’ or b, a letter which would easily slip by degrees into h or h. [See ACCIDENTALS, 19a.] In solfaing it is Si.

H major is a key rarely used. Beethoven’s principal movement in it is the Adagio of the P.F. concerto in E flat. H minor is the key of Schubert’s very fine unfinished Symphony, and of his equally fine Entracte in Rosamunde; of Mendelssohn’s Capriccio brilliant; and of Chopin’s 1st Scherzo. In a sketch-book of 1815–16, in the margin of a passage intended for the finale of the Cello Sonata op. 102, No. 2, Beethoven has written ‘a molt schearze Tenart.’ [G.]

HABENECK, FRANÇOIS ANTOINE, born at Mésières, Jan. 22, 1781, eldest of three brothers (Joseph and Corentin), violinists, sons of a German musician in a French regimental band. He was a pupil of Baillot, obtained the first violin prize at the Conservatoire in 1804, and soon showed remarkable aptitude as a conductor—his real vocation. He was successively appointed assistant professor at the Conservatoire (1808–16), solo violin at the Opéra (1815), director of the ‘Académie de Musique’ (1821–24), conductor of the theatre of the opera, conjointly with Valentino from 1824 to 31, and alone from 31 to 47. In 1825 a special violin class was formed for him at the Conservatoire, which he retained till Oct. 1848. Among his pupils may be mentioned Cuillivon, Alard, Clapisson, and Léonard. Habeneck has the merit of having founded (1828) and conducted for 20 years the ‘Société des Concerts du Conservatoire.’ He was also the first to introduce Beethoven’s symphonies in France, steadily persevering against all opposition, and at length executing them with a force, sentiment, and delicacy, which are not likely to be soon surpassed. As a conductor he was exacting, and unmerciful to singers who did not keep strict time. Out of respect to Cherubini he never exercised his office of ‘Inspecteur général des classes du Conservatoire,’ but he was an energetic director of Louis Philippe’s concerts at the Tuileries. He composed violin music, several pieces for ‘Aladin’ (1822), and a ballet ‘Le Page inconstant’ (1823). This distinguished musician and conductor died in Paris, Feb. 8, 1849. He received the Legion of Honour in 1832. For many curious anecdotes of Habeneck, see the ‘Memoires’ of Berlioz. [G.C.]

HAESER, AUGUST FERDINAND, born at Leipzig, Oct. 15, 1779; was educated at the Thomaschule, and in 1797 appointed professor and cantor at Lemuo. From 1806 to 1813 he passed in Italy, then returned to Germany, and settled in 1817 at Weimar, where he was music-master in the Duke’s family, and taught mathematics and Italian at the gymnasium. He was also chorus-master at the theatre, and director of music at the principal church (1829). He composed an oratorio, ‘Der Glaube,’ to Klopstock’s words; masses, motets, and other church music; an opera, ‘Die Mohren’; overtures; P.F. music for 2 and 4 hands; and 18 songs. Two motets, in plain counterpoint throughout, melodious and finely harmonized though somewhat chromatic, are included in Mr. Hullah’s Vocal Scores. He published ‘Vorber einer systematischen Uebersicht der Gesanglehre’ (Breitkopf & Härtel, 1820); and ‘Lehrbuch des Gesanges’ (Schott, 1831), translated into French by Jelensperger; and contributed to various musical periodicals. He died at Weimar, Nov. 1844. [M.C.C.]

HÄUSER, JOHANN EINSTEIN, born at Quedlinburg 1803, deserves mention as author of ‘Musikalisches Lexicon’ (Meissen, 1828; 2nd ed. enlarged, 1833), a useful work in two small volumes. His other works are ‘Der musikalische Gesellschaft’ (Meissen, 1830), a collection of anecdotes; ‘Neue Pianoforte Schule’ (Halberstadt, 1832; 2nd ed. Quedlinburg, 1836); ‘Musikalisches Jahrbüchlein’ (Quedlinburg and Leipzig, 1833); and ‘Geschichte des Kirchen- gesanges, und der Kirchenmusik’ (Quedlinburg and Leipzig, 1834), 1 vol. with examples, said to be a good book. [M.C.C.]

HAFFNER. A name sometimes given to Mozart’s Symphony in D (Kochel, No. 385),

\[ \text{Alle con spirito.} \]

\[ \text{tr} \]

\[ \text{un.} \]

to distinguish it from his r3 others in the same key. It was composed at the end of July and beginning of Aug. 1782, for the wedding of a daughter of the Haffners at Salzburg, one of the great merchant families of Germany. On July 21, 1776, another daughter of the same house had been married, and for that occasion Mozart furnished a March and Serenade (Kochel, Nos. 249, 250) for Orchestra, also in the key of D. [G.]

HAGUE, CHARLES, Mus. Doc., was born at Tadcaster in 1769. He was taught music and the violin by an elder brother. In 1779 he removed with his brother to Cambridge, where he was placed under Manini for the violin, and Hellendaal, sen., for thorough base and composition. On the death of Manini in 1785, Hague
HAGUE.

removed to London and became a pupil of Salom on and Dr. Cooke. A few years afterwards he returned to Cambridge, and in 1794 took the degree of Mus. Bac., composing as his exercise an anthem with orchestral accompaniments, 'By the waters of Babylon,' which he soon afterwards published in score. In 1799, on the death of Dr. Randall, he was elected professor of music in the University. In 1801 he proceeded doctor of music. At the installation of the Duke of Gloucester as Chancellor of the University, June 29, 1817, Hague produced an ode written by Prof. William Smyth, which was greatly admired. His other compositions were two collections of glees, rounds and canons, some songs, and arrangements of Haydn's twelve grand symphonies as quintets. Dr. Hague died at Cambridge June 18, 1821. His eldest daughter, HARRIET, was an accomplished pianist, and the composer of a collection of 'Six Songs with an accompaniment for the pianoforte,' published in 1814. She died in 1816, aged 23. [W.H.H.]

HAIGH, THOMAS, born in 1769, violinist, pianist, and composer; studied composition under Haydn in 1791 and 1792. He shortly afterwards went to reside at Manchester, but early in the present century returned to London. His compositions comprise a concerto for the violin, sonatas and other pieces for the piano, and a few songs. His arrangements of Haydn's symphonies, and music by other composers, are very numerous. [W.H.H.]

HAINL, GEORGES, born at Issoire, Nov. 19, 1807, died in Paris, June 2, 1873; gained the first cello prize at the Conservatoire in 1830; became in 1840 conductor of the large theatre at Lyons, where he remained till his appointment in 1863 as conductor of the 'Académie de Musique,' Paris. From January 1864 to 1873 he also conducted the 'Société des Concerts' at the Conservatoire. He was no great musician, but as a conductor he had fire, a firm hand and a quick eye, and possessed in an eminent degree the art of controlling large masses of performers. Hainl composed some fantasies for the violoncello. He was a generous man, and bequeathed an annual sum of 1000 francs to the winner of the first violoncello prize at the Conservatoire. [G.C.]

HAYDZINGER, ANTON, born in 1796 at Wilcradorf, Lichtenstein, Austria, was sent at the age of 14 to the college of Cornenburg, whence he returned with the degree of licentiate; and soon after found a professor's place at Vienna. He continued to study music, and took lessons in harmony from Wolkert; while his tenor voice was daily developing and improving. Having received some instructions from Mozzati, the master of Mme. Schröder-Dervient, he decided to give up his profession for that of a public singer. He was first engaged at the An der Wien Theatre in 1821 as primo tenore, and made triumphant début as Gia netto ('Gazza Ladra'), Don Ottavio (Don Giovanni), and Lindoro ('L'Italiana in Algieri'). His studies were continued under Salieri. His reputation becoming general, several new rôles were written for him, among others that of Adolaf in 'Euryanthe'; and he paid successful visits to Prague, Presburg, Frankfurt, Carlsruhe, etc. The last-named place became his head-quarters until his retirement.

In 1831 and 32 he created a deep impression at Paris with Mme. Schröder-Dervient, in 'Fi delio,' 'Oberon,' and 'Euryanthe.' In 1832 he appeared in London, with the German company conducted by M. Chevard. His voice, described by Lord Mount-Edgcumbe as 'very beautiful, and almost equal to Tamezzani's,' seemed 'throaty and disagreeable' to Mr. Chorley. The latter describes him as 'a meritorious musician with an ungainly presence; an actor whose strenuousness in representing the hunger of the imprisoned captive in the dungeon trenchcd closely on burlesque.' (See Moscheles' Life, i. 270 etc.) Hatzinger sang here again in 1833 and also in 1841, and in 1835 at St. Peters burg. He died at Carlsruhe Dec. 31, 1869.

Owing to the late beginning of his vocal studies, he never quite succeeded in uniting the registers of his voice; but his energy and intelligence stoned for some deficiency of this kind. There is a song by him, 'Vergis mein nicht,' published by Fischer of Frankfort. He married Mme. Neumann, 'an actress of reputation,' at Carlsruhe; and established a school of dramatic singing there, from which some good pupils came forth, including his daughter. [J.M.]

HALÉVY, JACQUES FRANÇOIS FROMENT ELIAS, a Jew, whose real name was LÉVI, born in Paris May 27, 1799; entered the Conservatoire 1809, gained a prize in solfège 1810, and the second prize for harmony 1811. From Berton's class he passed to that of Cherubini, who put him through a severe course of counterpoint, fugue, and composition. In 1816 he competed for the 'Grand Prix de Rome,' and gained the second prize for his cantata 'Les derniers moments du Tasse'; in the following year the second Grand Prix for 'La Mort d'Adonis,' and in 1819 his 'Herminie' carried off the 'Grand Prix' itself. Before leaving for Rome, he composed a funeral march and 'De Profundis' in Hebrew, on the death of the Duc de Berry (Feb. 14, 1820), for 3 voices and orchestra, with an Italian translation; it was dedicated to Cherubini, performed March 24, 1820, at the synagogue in the Rue St. Aways, and published. During his stay in Italy Halévy studied hard, and in addition not only wrote an opera, and some sacred works, still in MS., but found time to learn Italian. On his return to France he encountered the usual difficulties in obtaining a hearing. 'Les Bohémiennes' and 'Pygmalion,' which he offered to the Grand Opera, and 'Les deux Pavillons,' opera comique, remained on his hands in spite of all his efforts; but in 1827 'L'Artisan,' which contains some pretty couplets and an interesting chorus, was produced at the Théatre Feydeau. This was followed in 1828 by 'Le Roi et le Batelier,' a little pièce de circonstance, composed conjointly with his friend Ribaud for the fête of Charles X.
A month later, Dec. 9, 1828 (not 1829) he produced 'Clari,' 3 acts, at the Théâtre Italien, with Malibran in the principal part. It contains some remarkable music. 'Le Dilettante d'Avignon' (Nov. 7, 1829), a clever satire on the poverty of Italian librettos, was very successful, and the chorus 'Vive, vive l'Italie' speedily became popular. 'La Langue musicale' was less well received, owing to its poor libretto, but the ballet 'Manon Lescaut' (May 3, 1830) had a well-merited success at the Opéra, and for the farewell appearances of Martin the baritone; and on May 16 of the same year 'Ludovico,' a lyric drama in 2 acts which had been begun by Hérold. At length however his opportunity arrived. To produce successfully within the space of 10 months two works of such ability and in such opposite styles as 'La Juive' (Feb. 23), and 'L'Eclair' (Dec. 16, 1835), the one a grand opera in 5 acts, and the other a musical comedy without choruses, for 2 tenors and 2 sopranos only, was indeed a marvellous feat, and one that betokened a great master. They procured him an entrance into the Institut, where he succeeded Reicha (1836), and were followed by a large number of dramatic works, of which the following is a complete list:

1. Guido et Ginevra, 5 acts (March 1, 1825).
2. Les Tyrans, 3 acts (April 10, 1825).
3. Le Chevalier, 3 acts (Sept. 2, 1826).
4. Le Dragon, 5 acts (Jan. 6, 1846).
5. Le Guitarrero, 3 acts (Jan. 21, 1826).
7. Opéra Vilains, 5 acts (March 18, 1843).
8. Les Laveuses, 3 acts (March 29, 1844).
9. Les Mon斯特reuses de la Reine, 3 acts (Feb. 9, 1845).
10. Le Val d'Andorre, 5 acts (March 10, 1846).
11. L'Odipe, 3 acts (May 14, 1855).
12. Le Marché d'Aubigny, 5 acts (May 5, 1856).
13. La Magicienne, 5 acts (March 17, 1856).
14. Not an opera in 5 acts, for 'Prometheus upbraided, left unfinished: 'Les Plaisirs du XII,' a cantata with orchestra and chorus; many vocal pieces, and Piano music also.

By devoting his life to the production of such varied and important works, Halévy proved his versatility; but the fact remains that throughout his long and meritorious career, he wrote nothing finer than 'La Juive' or more charming than 'L'Eclair.'

He was unfortunately too easily influenced, and the immense success of 'The Huguenots' (Feb. 29, 1836) had an undue effect upon him. Instead of following in the direction of Hérold, giving his imagination full play, hindering his resources, and accepting none but interesting and poetic dramas, he over-exhausted himself, took any libretto offered him, no matter how melancholy and tedious, wrote in a hurry and carelessly, and assimilated his style to that of Meyerbeer. It must be acknowledged also that in 'Guido et Ginevra,' 'La Reine de Chypre,' and 'Charles VI,' side by side with scenes of ideal beauty, there are passages so obscure that they seem imperceptible to light or air. His chief defects are—the abuse of the minor mode; the too frequent employment of sustained low notes in the orchestra previous to a sudden explosion on the upper registers; too constant repetition of the contrast between darkness and brilliancy; vague melodic strains instead of definite rhythmic airs; and morceaux d'ensemble rendered monotonous by the same phrase being put into the mouths of characters widely opposed in sentiment. In spite however of such mistakes, and of such inexcusable negligence, even in his most important works, his music as a whole compels our admiration, and impresses us with a very high idea of his powers. Everywhere we see traces of a superior intellect, almost oriental in character. He excelled in stage pagentry—the entrance of a cortège, or the march of a procession; and in the midst of this stage pomp his characters are always sharply defined. We are indebted to him for a perfect gallery of portraits, drawn to the life and never to be forgotten. The man who created such a variety of such typical characters, and succeeded in giving expression to such opposite sentiments, and portraying so many shades of passion, must have been a true poet. His countrymen have never done him justice, but the many touching melodies he wrote bespoke him a man of heart, and enlure our warmest sympathies. Besides all this, he is by turns tender and persuasive, grand and solemn, graceful and refined, intellectual and witty, and invariably distinguished. We admit that his horror of vulgarity sometimes prevented his being sufficiently spontaneous, but we pardon a few awkward or tedious phrases, a few spun-out passages, in one who possessed such a mastery of melancholy, and had equally within his grasp lofty and pathetic tragedy, and sparkling comedy thoroughly in harmony with French taste.

Not content with supplying the repertoires of three great lyric theatres, Hélyévy also found time to become one of the first professors at the Conservatoire. As early as 1816 he was teaching solfeggio, while completing his own studies; and in 1827 was appointed professor of harmony, while filling at the same time the post of 'Maestro al cembalo' at the Italian Opéra, a post he left two years later in order to become 'chef du chant' at the Académie de Musique. In 1833 he was appointed professor of counterpoint and fugue, and in 1840 professor of composition. His lessons were learned and interesting, but he wanted method. Among his pupils may be mentioned Gounod, Victor Massé, Bazin, Deldevez, Eugene Gautier, Deffès, Henri Duverney, Bazille, Ch. Delioux, A. Hignon, Gastinel, Mathias, Samuel David, and the lamented George Bizet, who married his daughter. With Cherubini he maintained to the last an intimate and affectionate friendship which does credit to both, though sometimes put rudely to the proof. See

1 The book of this opera was adapted by Scribe from Shakespeare, originally for Herold's success. Its reception was extraordinarily favourable, but it is said that the score was plagiarised by the artists, and which everybody was to be heard humming, was that of 'Where the bee sucks,' by Arne, which had introduced into the part of Ariel.
a good story in Hiller's 'Cerubini' (Macmillan's Magazine, July 1875). Halevy's only didactic work was an elementary book called 'Leçons de lecture musicales' (Paris, Léon Escutier, 1857). This book, revised and completed after his death, is still the standard work for teaching solfeggio in the primary schools of Paris.

We have mentioned Halevy's entrance into the Institut in 1856; in 54 he was elected permanent secretary of the Académie des Beaux Arts, and in this capacity had to pronounce eulogiums, which he published with some musical critiques in a volume entitled 'Souvenirs et Portraits, études sur les beaux arts' (1861). These critical and biographical essays are pleasant reading; they secured Halevy's reputation as a writer, which however he did not long enjoy, as he died of consumption at Nice, March 17, 1862. His remains were brought to Paris, and interred with great solemnity on the 24th of the same month. [G.C.]

HALF-CLOSE OF SEMI-CADENCE. An equivalent term for Imperfect Cadence, and the better of the two. [See IMPERFECT CADENCE, p. 767 a.][G.]

HALL, Henry, son of Capt. Henry Hall of Windsor, where he was born about 1655, was a chorister of the Chapel Royal under Capt. Cooke. He is said to have studied under Dr. Blow, but this is doubtful. In 1674 he succeeded Theodore Coleby as organist of Exeter Cathedral, an appointment which he resigned on becoming organist and vicar choral of Hereford Cathedral. It is said that about 1665 Hall took deacon's orders to qualify himself for some preferment in the gift of the Dean and Chapter of Hereford. He composed a Te Deum in E flat, a Benedictine in C minor, and a Cantate Domino and Deus Misereatur in B flat, all which, together with 5 anthems, are included in the Tudway Collection (Harl. MSS. 7240 and 7241), and other anthems of considerable merit. The Te Deum has been printed with a Jubilate by William Hine, and an Evening Service by Dr. W. Hayes. Some songs and duets by Hall are included in 'Thesaurus Musicus,' 1693, and 'Delicæ Musices,' 1695, and some catches in 'The Monthly Masks of Vocal Music' for 1704 and 1707. Hall cultivated poetry as well as music; commemorative verses of some merit by him are prefixed to both books of Purcell's 'Orpheus Britannicus,' 1696 and 1702, and to Blow's 'Amphiôn Anglicus,' 1700. He died March 30, 1707, and was buried in the cloister of the vicar chorals at Hereford.

His son, Henry Hall, the younger, succeeded his father as organist and vicar choral of Hereford. He does not appear to have been a composer, but in postical ability he excelled his father. Many of his poems, among them a once well-known ballad, 'All in the land of Cyder,' are included in 'The Grove,' 1721. He died Jan. 22, 1723, and was buried near his father. [W.H.H.]

HALL, William, a member of the king's band in the latter part of the 17th century, composed some airs which were published in the collection called 'Tripla Concordia.' He died in 1700, and was buried in the churchyard of Richmond, Surrey, being styled on his gravestone, 'a superior violin.' [W.H.H.]

HALLE, Charles (originally Carl), born April 11, 1819, at Hagen, near Elberfeld, where his father was Capellmeister. Began to play very early; in 1835 studied under Rink at Darmstadt. In the latter part of 1836 went to Paris, and remained there for 13 years in constant intercourse with Cherubini, Chopin, Liszt, Berlioz, Kalkbrenner, and other musicians. In 1841 he married. In 1846 he, Alard, and Franchomme, started chamber concerts in the small room of the Conservatoire. These, though very successful, were rudely interrupted by the revolution of Feb. 1848, which burst out after the second concert of the third series. Halle left for England, and has ever since been permanently settled here. His first appearance was at the orchestral Concerts at Covent Garden (May 12, 48) in the E major concerto of Beethoven. He played that season and several subsequent ones at the Musical Union; and at the Philharmonic made the first of many appearances March 15, 53. His connexion with Manchester began soon after his arrival here, and in 1857 he started his orchestral subscription concerts there, which are now so justly famed. In London Mr. Halle has been closely attached to the Monday and Saturday Popular Concerts since their origin. He is also well known for his annual series of Recitals at St. James's Hall, which began in 1861, with a performance of the whole of Beethoven's sonatas spread over eight matinées. The programmes were illustrated by an analysis of the sonatas with quotations, from the pen of Mr. J. W. Davison, which were as welcome a novelty as the performances themselves. The same programmes were repeated for 2 years, and have since been annually varied through a very large repertoire of classical compositions, including many of the most recent works. Notwithstanding his many public duties Mr. Halle has as a teacher a very large clientele, both in London and the North. [G.]

HALLELUJAH. A Hebrew term (kallélú-¡h, 'praise Jehovah') which, like Amen, Selah, Hosanna, etc., has been preserved untranslated in our Bibles. In the Latin Church the Alleluia is sung in the ordinary service, except during Lent. It is omitted from the Anglican Liturgy and Communion Service, but has revenged itself by keeping a place in the popular Easter hymn 'Jesus Christ is risen to-day,' which the writer remembers to have heard sung at Vespers by the French nuns at the Trinita de' Monti.

The Hallelujah Chorus in the Messiah is known to every one. Handel is reported to have said that when he wrote it he 'thought he saw Heaven opened, and the great God Himself.' The phrase 'For the Lord God omnipotent reigneth' is almost identical with that to 'I will sing...unto the Lord' in Isaiah in Egypt. He has written other Hallelujahs or Alleluias—though none to compare with this—in Judas Maccabeus, the Occasional Oratorio, and the
HANDEL.

HAMMER (Fr. Morteau; Ital. Martello; Germ. Hammer). The sound of a pianoforte is produced by hammers. In this the pianoforte resembles the dulcimer, from which we may regard it as developed by contrivance of keys and intermediate mechanism, rendering the pianoforte a sensitive instrument of touch, instead of one of mere percussion, incapable of refinement or expression. The pianoforte hammer consists of head and shank like any other hammer; the shank is either glued into a butt that forms its axis, or is widened out and centred or hinged with the same intention; and the blow is given and controlled by leverage more or less ingenious, and varying with the shape of the instrument and the ideas of the makers.

Both head and shank must be elastic: English makers use mahogany for the former, on which are glued thicknesses of sole or buffalo leather and specially prepared felt. Of late years single coverings of very thick felt have been successfully employed. For the shanks most English makers prefer cedars, on account of its peculiar elasticity and freedom from warping; on the continent, pear-tree, birch, hickory, and other woods are in use. The hammers gradually diminish in size and weight from bass to treble. [A.J.H.]

HAMMERTON, William Henry, born at Nottingham 1795; was placed as a chorister at Christ Church Cathedral, Dublin. In 1812 he came to London and studied singing under Thomas Vaughan. In 1814 he returned to Dublin and established himself as a teacher. In 1815, on the resignation of John Elliott, he was appointed master of the choristers of Christ Church Cathedral, and in 1832 Gentleman of the Chapel Royal, Dublin. In 1829 he resigned his appointments and went to Calcutta, where he resided until his death. Hamerton's compositions comprise some anthems and chants; an opera, entitled 'St. Alban,' performed at Dublin in 1827, and a few songs and duets. He was also author of an elementary work published in 1824, entitled 'Vocal Instructions, combined with the Theory and Practice of Pianoforte Accompaniments.' [W.H.H.]

HAMILTON, James Alexander, born in London in 1785, was the son of a dealer in old books, and self-educated. Music became his particular study—the theory rather than the practice. He wrote many elementary works, including a long series of useful catechisms on musical instruments and subjects, many of which have passed through numerous editions, and a list of which will be found in the catalogue of R. Cocks & Co. He also translated and edited Cherubini's Counterpoint and Fugue, Ballot's Method for the Violin, and other important treatises. He died Aug. 2, 1845. [W.H.H.]

HAMLET. Grand opera in 5 acts; words by Barbier and Carré after Shakespeare; music by Amb. Thomas. Produced at the Académie, March 9, 1868; in London, in Italian, as Amleto, at Covent Garden, June 19, 69 (Nilsson and Santley). [G.]
raise his son in the social scale, he thought to do so by making him a lawyer, and to this end he strove in every way to stifle the alarming symptoms of musical genius which appeared almost in infancy, while he refused even to send the child to school, lest there, among other things, he should also learn his notes. In spite of this, some friendly hand contrived to convey into the house a dumb spinet (a little instrument in which the strings, to deaden their sound, were bound with strips of cloth)—it was concealed in a garret, where, without being discovered, the boy taught himself to play.

When he was seven years old, his father set out on a journey to visit a son by a former marriage, who was valet-de-chambre to the Duke of Saxe Weissenfels. George begged to be allowed to go too; his request was denied, but, with the persistence of purpose which characterised him through life, he determined to follow the carriage on foot, and actually did so for a considerable distance, a proceeding which resulted in his getting his way. At Weissenfels he was not long in making friends among the musicians of the Duke, and the Duke gave them opportunities of trying his hand on the organ. One day, after the service, he was lifted on to the organ stool, and played in such a manner as to surprise every one, and to attract the attention of the Duke, who, on making enquiries, found out the state of the case, and sent for both father and son. He spoke kindly to the latter; to the former he represented that such genius as that of his son should be encouraged. The reluctant surgeon yielded to these arguments, and from that time the little Handel was emancipated.

He now became a pupil of Zachau, organist of the cathedral at Halle, under whom he studied composition, in the forms of canon, counterpoint, and fugue, and practised on the organ, the harpsichord, the violin, and the hautboy, for which last instrument he had a special predilection.

After three years, during which time he composed a sacred motet each week as an exercise, his master confessed that the pupil knew more than himself, and Handel was sent to Berlin. Here he made the acquaintance of the two composers, Buononcini and Attilio Ariosti, whom in after years he was to meet again in London. Ariosti received him kindly, and warmly admired his talents; but Buononcini, whose disposition was sombre and harsh, treated him at first with scorn and then with jealous dislike. Handel's wonderful powers of improvisation on both organ and harpsichord caused him to be regarded here as a prodigy. The Elector wished to attach him to his Court, and to send him to Italy; but Handel's father thought this undesirable, and the boy was, therefore, brought back to Halle, where he set to work again with Zachau, 'copying and composing large quantities of music . . . . and working constantly to acquire the most solid knowledge of the science.' At this time he lost his father, and it became necessary for him to work for his own subsistence and the support of his mother. He went, there-

fore, to Hamburg, where the German Opera-house, under the direction of the famous composer, Reinhard Keiser, enjoyed a great reputation. Young Handel entered the orchestra as 'violine di ripieno,' and amused himself by affecting to be an instrument 'a musica di soffitta; a musica che non conta niente.' But it happened that Keiser was involved by his partner in some unsuccessful speculations, and was forced to hide for a time from his creditors. During his absence, Handel took his place at the harpsichord in the orchestra, and, his real powers being made manifest, he remained there permanently. He made here the acquaintance of the composer Telemann, and of Mattheson, a very clever young musician, a few years older than himself, who also had been an 'infant prodigy,' and was chiefly remarkable for the versatility of his powers. It is as a writer on music and kindred subjects that he is best remembered, and especially for his valuable reminiscences of Handel. Among other anecdotes, he tells us that in 1703 he and Handel went to Liibeck to compete for the vacant post of organist. They lost, however, that it was necessary that the successful candidate should marry the daughter of the retiring organist. This condition seemed to them prohibitory, and the two young men thought it best to return to Hamburg. The friendship between the two young composers was, at one time, very nearly brought to a sudden and tragical conclusion. While Handel was acting as conductor at the Opera-house, it happened that there was given Mattheson's opera of 'Cleopatra' (1704), in which the composer himself played the part of Antony. After that point in the play where the hero dies, it had been Mattheson's custom to return to the clavecin and to conduct the remainder of the opera. To this Keiser seems not to have objected, but Handel was more obstinate, and refused to abridge his place in favour of the resuscitated Antony. Mattheson was indignant, a dispute ensued, and a duel, in which Handel's life was only saved, and the loss to the world of this mighty master only averted, by the accidental circumstance that the point of Mattheson's sword was turned aside by coming into contact with a brass button on his antagonist's coat. At Hamburg, in Jan. 1705, was produced Handel's first opera, 'Almira,' followed in the same year by 'Nero.' These were performed in the barbarous manner universal at that time, partly in German and partly in Italian. The success of 'Almira' seems, however, to have been great enough to excite some jealousy in Keiser and other musicians. Mattheson says that, when Handel came to Hamburg, he composed 'long airs and interminable cantatas,' more scholastic than melodious or graceful; and he claims to have contributed not a little to the young composer's improvement. It is probable, at any rate, that the genius of Keiser, whose numerous compositions are full of a melody and charm till then unknown, did go far to counteract the influence of the craved teaching of Zachau. In 'Almira' is a Sarabande, consisting of the same air which
Handel afterwards used for the beautiful song in 'Rinaldo,' 'Lascia ch'io pianga.' His other works at this time were the operas 'Daphne' and 'Florinda,' and a German Cantata on the Passion.

In 1706 he set off on a journey to Italy. He went to Florence, Venice, Rome, and Naples, producing during this time both operas and sacred music, and always with the greatest success. Among these works may be mentioned two Latin Psalms, 'Dixit Dominus' and 'Laudate Pueri,' two Operas, 'Rodrigo' and 'Agrrippina,' two Oratorios, 'Resurrezione' and 'Il Trionfo del Tempo,' and the serenata 'Acis, Galatea, e Polifemo,' produced at Naples, and quite distinct from the subsequent English work of a similar name. This serenata is remarkable for an air, written for some Bass singer whose name has remained unknown, but whose voice must have been extraordinary, for this song requires a compass of no less than two octaves and a fifth! [BASS.]

In 1709 Handel returned to Germany, where the Elector of Hanover (afterwards George I of England) offered him the post of Capellmeister, held till then by the Abbé Steffani, who himself designated Handel as his successor. The latter had already received pressing invitations from England, and he only accepted the Capellmeistership on the condition that he should be allowed to visit this country, whither he came at the end of 1710.

Italian music had recently become the fashion in London; operas on the Italian model, that is, with the dialogue in recitativo, having been first given in 1705, at Drury Lane, and afterwards at the King's Theatre. The opera of 'Rinaldo,' written by Handel in fourteen days, was first performed on February 24, 1711. It was mounted with a magnificence then quite unusual; and, among other innovations, the gardens of Armida were filled with living birds, a piece of realism hardly outdone in these days. The music was enthusiastically received, and it at once established its composer's reputation. He was obliged, at the end of six months, to return to his post in Hanover; but he had found in London a fitting field for the exercise of his genius; and in January, 1712, he was here again. Now had he yet made up his mind to leave England for Hanover, when the Elector of that State succeeded to the English throne. It was not to be expected that the new king should look with favourably eyes on his truant Capellmeister, who, for his part, kept carefully out of the way. Peace was, however, brought about by the good offices of the Hanoverian Baron Kilmannscek, who requested Handel to compose some music for the occasion of an aquatic fête given by the king. The result was the series of twenty-five pieces, known as the 'Water Music.' These, performed under Handel's direction by an orchestra in a barge which followed the king's boat, had the effect of softening the royal resentment, and Handel's pardon was sealed not long after by a 'grant to the composer of an annuity of £200.

In 1716 he accompanied the king to Hanover, where he remained till 1718, producing while there one German oratorio, the 'Passion.' This work contains great beauties, but it is very different in style from his subsequent compositions of a similar kind, still strongly suggesting the influence of Keiser and of Steffani.

On Handel's return to England, he accepted the post of chapel-master to the Duke of Chandos. This nobleman—who from the magnificence of his style of living was sometimes called the Grand Duke, had a palace named Cannons, near Edge- ware, and a chapel furnished like the churches of Italy. His first chapel-master was Dr. Pepusch, his countryman, who retired gracefully in favour of the younger master. Here Handel remained for three years, with an orchestra and singers at his disposal; and produced the two 'Chandos' Te Deums, the twelve 'Chandos' Anthems, the English serenata 'Acis and Galatea,' and 'Esther,' his first English oratorio. He also taught the daughters of the Prince of Wales, for whom he wrote his 'Suites de pièces pour le Clavecin' (vol. 1). Besides all this, he, in 1720, undertook to direct the Italian Opera for the society called the Royal Academy of Music. He engaged a company of Italian singers, including Durastanti and the celebrated soprano, Senesino; and with these he produced 'Radamisto.' The success of this opera was complete; but a party, jealous of Handel's ascendancy, was forming in opposition to him. Ruononcenti and Arne had also a contract given to London by the Royal Academy of Music, and each of these composers had a following among the supporters of the Opera. It was, perhaps, 1 RUGONCENTI or RONONCENTI, a family of musicians in the 17th and 18th centuries, whose name, having been omitted in its proper place, is added here. The father, Giovanni Maria, was born at Modena about 1646, and was chief musician to the Duke, Maestro di Capella of the Church of Modena, and a member of the Accademia dei Filarmonici of Bologna. He was a competent and productive artist, who held compositions in many classes, vocal and instrumental, and a treatise on "Musica pratico" (Bologna 1673, 1686), which was translated into German, and is a clear and sensible work, still of use to the student. He died at Modena. One of his sons, Antonio, or MARCO ANTONIO, was born at Modena 1673. He appears to have travelled much, and to have been for some years in Germany. Though this may be confirmed, in general, in his connection with HANDEL, it is certain that he was at Rome, in 1721 Maestro di Capella to the Duke of Modena, where he died July 7, 1756. - Concerning his other compositions, as stated above, it was at the Court of Vienna at or about 1695. His Camilla, which has been pubhshed, had an extraordinary popularity abroad; and in England ran 64 nights in 4 years (Purney in 1700). He was apparently the best of the family, though his light is considerably obscured by his brother Giovanni Battista, on whom, rightly or wrongly, the name of the family rests. He was born at Modena 1675, and instructed by his father and by Colonna. He was a musician of undoubted merit, though not of marked originality who suffered from too close comparison with his brother—so that his talent was always suffer when brought into collision with genius—and from a proud and difficult disposition very damaging to his interests. His first entrance into public life was as a composer of sacred music to which capacity he was attached to the Court of Vienna at or about 1695. His earliest opera, Camilla, if indeed that was not his brother's, was given at Vienna about the same date: his next, "Tulio Orsini" and "Serafina," at Rome 1604. In 1606 we find him and Arne at the Court of Berlin, where Handel, then a lad of 12, was there too for a time (Chryssanthis's Handel, i. 526). At Arne's court composed (1721) for the King a very prominent personage, but from 1706 to 1750 his time seems to have been divided between Vienna and London. In the latter year he received a call to London. A great impulse had recently been given to Italian opera by the establishment of the Royal Academy of Music. Handel, as director, and in his place Arne, had a new institution on the broadest possible basis. Ruononcenti was received with extraordinary favour, and there are perhaps few subscription-lists so remarkable as that to his 'Cantata a Duetti' (1721), for the large number of copies taken by individuals of rank. In England at that time everything was more or less political, and the subscription list to the Handel's Cantatas was taken up by the great houses of Rutland, Queenberry, Sunderland, and Marlborough. From
with the object of reconciling all parties, that it was arranged to produce 'Music Scevola,' an opera of which the first act was written by Ariosti, or, according to Chrysander, by a certain Mattei, alias Pipolo, the second by Buononcini, and the third by Handel. Poor Ariosti had no chance in this formidable competition. With Buononcini, a man of distinguished talent, and able in some measure to support the rivalry with Handel, the case was different. Handel's act, however, was universally declared to be the best; but his victory only excited the enmity of his opponents more than ever. His stubborn pride and independence of character were ill suited to conciliate the nobility, in those days the chief supporters of the Opera; and all those whom he had personally offended joined the Buononcini faction. This fashionable excitement about the rival claims of two composers, like that which raged in Paris when the whole of society was divided into 'Gluckists' and 'Piccinnists,' gave rise to many ribes and lampoons, the best of which, perhaps, has been more often incorrectly quoted and erroneously attributed to any similar *jeu d'esprit.* The epigram, usually ascribed to Dean Swift, and actually printed in some collections of his works, is undoubtedly the work of John Byrom, the Lancashire poet, and inventor of a system of shorthand. He speaks in his diary, under date June 5, 1725, of 'my epigram upon Handel and Buononcini being in the papers.' It runs, correctly, as published in Byrom's *Miscellaneous Poems,* as follows:—

'Some say, compar'd to Buononcini,
That Mynheer Handel's but a Ninny;
Others aver, that he to Handel
Is scarcely fit to hold a Candle;
Strange all this Difference should be,
To a youth of Twozti-dees!'

Handel worked on, unmoved, amid the general strife, and in 1729 entered into partnership with Heidegger, proprietor of the King's Theatre. He produced opera after opera; but, owing to the ever-increasing opposition, his later pieces met with less success than his earlier works. On the other hand, the oratorio of 'Esther,' and 'Acis and Galatea,' composed at Cannons, were now given in public for the first time; they were performed on the stage, with scenic effects, but without action, and were very well received. Several of Handel's instrumental works were written at this epoch. On the occasion of the performance of 'Deborah,' an oratorio, in 1732, the raised prices of seats at the theatre added to the number of the composer's enemies; and, to crown all, he quarrelled with Senesino, whose engagement was, therefore, broken off. Senesino was the spoiled child of the public; his cause was hotly espoused by all the patricians of Buononcini, and even those influential personages who had remained faithful to Handel insisted that their candidate should be retained at the theatre. Handel thought this condition incompatible with his dignity; he refused, and his friends deserted him for the enemy's camp. At this juncture a charge was brought against Buononcini, that he had presented as his own to the Academy of Music a Madrigal, in reality the work of Lotti, the Venetian. This was very strange, as Buononcini might have been expected to compose almost as good a madrigal as Lotti: he quitted England, however, without defence or reply, and his party had to make Senesino their rallying-point.

Handel's partnership with Heidegger ended in 1734, and the King's Theatre was given up to the rival company. He now assumed an imperious on his own account, and from 1730 the theatre in Lincoln's-Inn-Fields, but soon left it for Covent Garden, where, besides several operas, he produced the music to Dryden's Ode 'Alexander's Feast, or the Power of Music.' His undertaking proved, commercially, a failure; and in 1737 he became bankrupt. It speaks volumes for the low state of musical taste at the period, that at this time the rival house was also forced to close its doors for want of support; although its company included, besides Cuzzoni and Senesino, the wonderful Farinelli, who soon quitted England in disgust. Handel's health succumbed to its labours and anxieties; he had an attack of paralysis, which forced him to go to Aix la Chapelle. He returned, scarcely recovered, in November, and, between the 15th of that month and the 24th of December, wrote the opera of 'Faramondo' and the Funeral Anthem for the death of Queen Caroline. 'Faramondo' was a failure; so were also the pasticcio
Alexander Severus' and the opera of 'Xerxes,' performed in the spring of 1735. He had, however, a number of faithful friends who remained loyal to him in his adversity. They persuaded him to give a concert for his own benefit; and this was a complete success. It shows what, in spite of his unpopularity with the great, was the public appreciation of his genius and high character, that a statue of him, by Roubillac, was erected in Vauxhall Gardens; the only instance on record of such an honour being paid to an artist during his lifetime. From 1735 he did little in the way of opera-composing. With the exception of 'Imeneo' in 1740, and of 'Deidamia' in 1741, he thenceforward treated only oratorio, or similar subjects. He said that 'sacred music was best suited to a man descending in the vale of years;' but it was with regret, and only after reiterated failures, that he quitted the stormy sea of operatic enterprise. The world has no reason to be sorry that he did so, for there is no doubt that in Oratorio he found his real field, for which Nature and education had equally and specially fitted him.

The series of works which have immortalised Handel's name only began now, when he was fifty-five years old. In 1740 he composed and performed 'Saul' and 'Israel in Egypt.' 'Saul' (says Chrysander) 'fulfils in the highest degree every condition of a perfect historical picture; reflecting, as it does, the historical object at once faithfully and in its noblest aspect.' It was successful. 'Israel,' which contains some of the most colossal choral scenes that Handel ever wrote, was so ill-received that, at the second performance, it was thought necessary to lighten the work by the introduction of operatic songs between the choruses. After the third performance, it was withdrawn. 'Israel' was followed by the music to Dryden's 'Od on St. Cecilia's Day,' and that to 'L'Allegro' and 'Il Penseroso' of Milton, and to 'Il Moderato,' which was a third part added by Charles Jennens, who afterwards compiled the words of the 'Messiah.'

In 1741 Handel received from the Duke of Devonshire, then Lord Lieutenant of Ireland, a pressing invitation to visit that country. Accordingly, in the month of November he went there, and was warmly received, his principal works (not operatic) being performed in Dublin and enthusiastically applauded. On April 18, 1742, for the benefit of a charitable society, he produced the 'Messiah,' his greatest oratorio, and that which has obtained the finest and most enduring hold on public favour. Signora Avoglio and Mrs. Cibber were the principal singers on the occasion of its first performance. After a sojourn in Ireland of nine months, during which he met with worthy appreciation and also somewhat repaired his broken fortunes, he returned to London; and the 'Messiah' was performed for the first time there on March 23, 1749. It is related that, on this occasion, the audience was exceedingly struck and affected by the music in general, but that when that part of the Hallelujah Chorus began, 'For the Lord God omnipotent reigneth,' they were so transported that they all, with the king, who was present, started at once to their feet, and remained standing till the chorus ended. The custom of rising during the performance of the 'Hallelujah Chorus' originated from this incident.

The 'Messiah' was followed by 'Samson,' and the 'Za Deu' and anthem written to celebrate the victory of Dettingen; by 'Joseph,' 'Semele,' 'Belshazzar,' and 'Hercules.' But the hostility of the aristocratic party which he had provoked by refusing to compose music for Senecke, was still as virulent as ever. They worked against him persistently, so that at the end of the season 1744-5 he was again bankrupt, and seems to have been, for the time, overwhelmed by his failure, for during a year and a half he wrote scarcely anything. He began again in 1746 with the 'Occasional Oratorio,' and 'Judas Maccabaeus;' and these were followed by 'Joshua,' 'Solomon' (which contains an unrivalled series of descriptive choruses), 'Susanna,' 'Theodora' and the 'Choice of Hercules.' His last oratorio was 'Jephtha,' composed in February, 1752. It was while engaged on it that he was first attacked by the disease which finally deprived him of sight. Three times he was counselled for cataract, but without success; and for the remainder of his life he was almost, if not entirely blind. He was at first profoundly depressed by his affliction; but after a time, with indomitable strength, he rose superior to it. His energy, though lessened, was not paralysed. He actually continued to preside at the organ during the performance of his own oratorios, and even to play organ-concertos. In 1757, one more work was produced at Covent Garden, the 'Triumph of Time and Truth,' an augmented version, in English, of the Italian oratorio of 1708, 'Il Triunfo del Tempo e del Disinganno.' Of the numerous additions in the later version many were new, some taken from former works. His name and popularity steadily increased during those last years, and much of the old animosity against him died away. On April 3, 1759, he attended a performance of the 'Messiah' at Covent Garden; it was his last effort. On Saturday the 11th of April, he died, at his house in Brook Street. He was buried in the South Transept of Westminster Abbey, where a monument by Roubillac was erected to, his memory in 1762. His gravestone, with his coat of arms, his name, and the two dates 'Born 24th February 1684, Died 14th of April 1759,' is below the monument. It was engraved as a frontispiece to the Book of Words of the Handel Festival, 1862.

Handel has left behind him in his adopted country a name and a popularity which never 1 This date is supported by the entry in the Westminster Abbey Funeral Book, by the letter of James Syme, the perfumer, Handel's most intimate friend, by all the contemporary journals and magazines, and by the date on the tombstone. Dr. Burney is alone in stating, on quite insufficient evidence, the date as the 13th; and it is a pity that he should have altered the inscription of the tombstone in copying it for his book, so as to support his statement.

2 Formerly No. 57, now No. 23, on the south side, four doors from New Bond Street.
has been, and probably never will be, rivalled by that of any other composer. He became a naturalised British subject (in 1726); but to claim him as an Englishman is as gratuitous as it would be to deny that the whole tone of his mind and genius were singularly attuned to the best features of the English character. The stubborn independence, the fearless truth and loyalty of that character, the deep, genuine feeling which, in its horror of pretence or false sentiment, hides itself behind bluntness of expression, the practicalness of mind which seeks to derive its ideas from facts, and not its facts from ideas,—these found their artistic expression in the works of Handel; beside which he was, beyond all doubt, intimately acquainted with the works of England's greatest composer, Henry Purcell: and no native composer could in these days be as truly English as he was, for in an age of rapid travelling and constant interchange of ideas, men and thought become cosmopolitan. Grandeur and simplicity, the majestic scale on which his compositions are conceived, the clear definiteness of his ideas and the directness of the means employed in carrying them out, pathetic feeling expressed with a grave seriousness equally removed from the sensuous and the abstract,—these are the distinguishing qualities of Handel's music.

Handel was a man of honour and integrity, and of an uncompromising independence of character. 'In an age when artists used to live in a sort of domesticity to the rich and powerful, he refused to be the dependent of any one, and preserved his dignity with a jealous care.' This, no doubt, irritated those great people whose vanity was gratified when men of genius lived by their patronage; but, on the other hand, it must be admitted that his temper was naturally irascible and even violent, and his fits of passion, while they lasted, quite un governable. Even when he was conducting concerts for the Prince of Wales, if the ladies of the Court talked instead of listening, 'his rage was uncontrollable, and sometimes carried him to the length of swearing and calling names.... whereupon the gentle Princess would say to the offenders, 'Hush, hush! Handel is angry.' It is to the credit of the prince and princess that they respected the real worth of the master too much to be seriously offended by his manners.

Handel never married, nor did he ever show any inclination for the cares and joys of domestic life. He was a good son and a good brother; but he lived wholly for his art, his only other taste being for pictures, of which he was a connoisseur. He seldom left his house, except to go to the theatre, or to some picture-sale. His tastes were simple, though he ate enormously; having a large, if not an unhealthy, appetite to satisfy. His charitableness and liberality were unbounded; he was one of the founders of the Society for the benefit of distressed musicians, and one of the chief benefactors of the Foundling Hospital.

He was 74 years old when he died; but, when we contemplate the amount of work he accomplished, his life seems short in comparison. Nor did he live in seclusion, where he could command all his time. Gifted with abnormal bodily strength, and with an industry truly characteristic of that nation 'which' (as says Chrysander) 'has laboured more than any other to turn into a blessing the curse of Adam. In the sweat of thy brow thou shalt eat bread,' he excelled in every branch of his art; but, beside this, he was a teacher, a chapel-master, an opera-director, and an impresario. He was, with the exception of J. S. Bach, the greatest organist and harpsichordist of his age. He never devoted much time to the violin; but, when it suited him to play, his tone was such that avowed professors of the instrument might have taken him as a model. He had but little voice, yet he was an excellent singer of such songs as required an expressive delivery rather than florid execution. With his singers he was sometimes tyrannical, and amusing stories are told of his passages of arms with recalcitrant prime donne; but he knew how to conciliate them, and how to preserve their respect; he would take any trouble, and go any distance, to teach them their songs; and all the principal artists resident in London, whom he employed, remained permanently with him to the end of his life.

The rapidity with which he composed was as wonderful as his industry; he may be said to have improvised many of his works on paper. 'Rinaldo' was written in 14 days; the 'Messiah' in 24! From his earliest years he was remarkable for this great readiness in extemporising; he was always teeming with ideas, to which his perfect command of all the resources of counterpoint enabled him to give instantaneous and fluent expression. It was his custom to play organconcertos between the acts or the pieces of his oratorios; but these written compositions were only of service to him when he felt that he was not in the vein; otherwise, he gave himself up to the inspirations of his genius. This, indeed, was almost always the case after he became blind, when all that was given to the orchestra was a sort of ritornello, between the recurrences of which Handel improvised away as long as it pleased him, the band waiting until a pause or a trill gave them the signal for recommencement. His instrumental compositions have, in many respects, such as their lucid simplicity and a certain unexpectedness in the modulations and the entries of the various subjects, the character of improvisations. He seems to have regarded these works as a storehouse for his ideas, on which he often drew for his more important compositions.

It must not, however, be supposed that the speed with which he worked argues any want of care in the workmanship, nor that he was content always to leave his ideas in the form in which they first occurred to him. The shortness of time occupied in the completion of his great masterpieces is to be explained, not merely by the ever-readiness of his inspiration, but also by the laboriousness and wonderful power of
concentration which enabled him actually to get through more work in a given time than is accomplished by ordinary men. Those original sketches of his works that are extant, while bearing in their penmanship the traces of impecunious speed, yet abound in erasures, corrections and afterthoughts, showing that he brought sound judgment and stern criticism to bear on his own creations.

In gratitude for the pension allowed him by the king after Handel's death, Smith, his amanuensis, to whom Handel had left his MSS., presented them all to George III. They remain still in the Musical Library of Buckingham Palace, and are as follows:—Operas, 32 vols.; Oratorios, 21 vols.; Odes and Serenatas, 7 vols.; Sacred Music, 12 vols.; Cantatas and Sketches, 11 vols.; and Instrumental Music, 5 vols. Beside these, there is a collection of copies by Smith (the elder), forming a continuation to the original MSS., in 17 vols. There is also a collection of copies, partly in the hand of Smith (the elder) and partly in another hand, chiefly of the Oratorios, in 24 vols. large folio, in the same Library.

Another, smaller collection of original MSS. is to be found in the Fitzwilliam Museum, Cambridge, consisting of 7 vols. of the greatest interest, containing rough drafts, notes, and sketches for various works, and one of the Chandos Anthems, entire, 'O Praise the Lord with one consent.'

Very few compositions in Handel's writing are in private collections.

The original MS. score of the work alluded to above as achieved in 24 days, the 'Messiah,'—the greatest, and also the most universally known of all Handel's oratorios,—has been facsimiled in photo-lithography, and so placed with in the reach of all who may wish to become familiar with Handel's mode of working. Here it can be seen how much the work differed in its first form from what it finally became,—the work as we know it. Some alterations are of comparatively slight importance, such as the substitution of one kind of choral voice for another in the 'lead' of a fugue-subject,—the alteration of the form of a violin-figure, and so on. But in other cases there are actually two, and sometimes even three, different settings of the same words, showing that Handel himself failed occasionally in at once grasping the true realisation of his own conceptions. Among many instances of change of purpose which might be given, it will be sufficient to quote two. In the 'Nativity music' there are two settings of the words 'And lo! the angel of the Lord came upon them,' the first of which is that now used, and the second an Andante in F major, which bears the traces of a good deal of labour, but which was finally rejected by the composer.

The second case is that of the air 'How beautiful are the feet,' and the subsequent chorus 'Their sound is gone out.' At first the air was written as it now stands, but afterwards its theme was taken as a duet in F minor for Alto voices (appendix), to which is added a chorus on the words, 'Break forth into joy,' after which the duet is resumed. As to 'Their sound is gone out,' these words were originally set as a second strophe to 'How beautiful are the feet' (in its first form as an air); they were then set as a tenor solo (appendix), which opens with the same theme as that of the chorus which afterwards took its place, and which was ultimately embodied in the work. We give a fac-simile of Handel's signature at the end of this MS.

His orchestration sounds, of course, scanty to modern ears. The balance of the orchestra was very different, in his time, from what it is now; some wind-instruments, such as the clarinet, not being yet in use, while others were then employed in greater numbers; and some stringed instruments were included that are now obsolete. The wind-instruments were certainly more prominent in the band than they now are; he used the hautbois freely, seeming to have a particular affection for them, and sometimes employed them in large numbers, as a 'wind-band,' in 'The Fireworks Music,' etc. He made, in fact, abundant use of all the materials at his command, and, in his own day, was regarded as noisy and even sensational. He was said to sigh for a cannon (worthy, this, of Berlioz in later times); and there is extant a caricature of him, by Goupuy, representing him at the organ, with a boar's head and enormous tusks (alluding to his passionate temper); the room is strewn with horus, trumpets, and kettle-drums; further off are visible a donkey braying, and a battery of artillery, which is fired by the blazing music of the organist. Mozart reinstrumented much of the 'Messiah,' to suit the more modern orchestra; and he, as well as Mendelssohn and other musicians, have written similar additional accompaniments to several of the other Oratorios and Cantatas. [See ADDITIONAL ACCOMPANIMENTS.]

1 The figure which immediately precedes the date is the old astrological or chemical sign for Saturn, denoting Saturday. Handel was in the frequent habit of introducing these signs into his dates.

2 Amonas were used at the Crystal Palace, on one occasion, with no bad effect, and also at the Festival in Boston, 1871. On one occasion, Handel is said to have exclaimed, during the performance of one of his oratorios, 'Oh that I had a woman!' Stated in an early curricula, 'Jupiter,' makes one of his character's say, when a pistol has been fired by way of effect, 'This blast I took from Handel.' (Townsend).
It is as a vocal and, above all, as a choral writer, that Handel is supreme. No one ever developed the resources of the chorus as he did; and his compositions of this class remain to this day unapproachable. No one, before or since, has so well understood how to extract from a body of voices such grand results by such artfully-simple means as he has used. As an example of the union of broad effect with science, the chorus 'Envy! eldest-born of hell!' in 'Saul' may be mentioned. On the unskilled hearer this produces the impression of a free composition in the rondò-form, with a strongly-contrasted second strain, and a very remarkable and telling accomplishment. Each phrase seems suggested by the words that are sung; while, in fact, the voices move, in strict canonic imitation, on a ground-bass which, itself one bar in length, recurs, at the outset, sixteen times without intermission. As specimens of descriptive choral writing, the grand chains of choruses in 'Israel' and in 'Solomon' are unmatch'd.

Handel's songs, though conventional in form, are so varied in idea, so melodious, and so vocally-expressive, that it is hard to believe Mattheson's statement, that in his early years, though unrivalled in cantabile, he was deficient in melody. The vein must always have been present in him; but it is not unlikely that the influence of Keiser and, subsequently, of Steffani, gave a powerful and a happy impetus to his genius in this direction. It is nearly certain, too, that his experience of Italian music and singers, and his long career as an operatic composer, had the effect of influencing his subsequent treatment of sacred subjects, leading him to give to the words their natural dramatic expression, and to overstep the bounds of stiff conventional formality.

We have remarked that he often drew themes for his choruses from his instrumental pieces; beside this, he used portions of his earlier vocal compositions in writing his later works. Thus, four choruses in the 'Messiah' were taken from the 'Chamber Duets'; so was the second part of the chorus 'With mirth and songs' in 'Amen', and the 'Magnificent' furnished subjects for several choruses in 'Israel.' It is, however, an undeniable fact that, beside repeating himself, he drew largely and unhesitatingly on the resources of his predecessors and contemporaries. And yet his own powers of invention were such as must preclude the supposition that he was driven by lack of ideas to steal those of other people. In those days there were many forms of borrowing which were not regarded as thefts. When we find, for instance, that the chorus just mentioned, 'Wretched lovers,' has for its first theme the subject of a fugue of Bach's, that otherwise the most charming of the Chamber Duets was taken from a similar duet by Steffani, that the subject of the clavier-fugue in G (afterwards used for the third movement of the second Hauboisconcerto) was borrowed note for note from a canon by Turini, that, among the subjects which form the groundwork of many of his choruses, themes are to be found, taken from the works of Leo, Carissimi, Pergolesi, Graun, Muffat, Caldana, and others,—it can only be urged that in an age of conventionality, when musical training consisted solely of exercise in the contrapuntal treatment of given themes, originality of idea did not hold the place it holds now. Such themes became common property; some of them might even have been given to Handel by Zachau, in the days when his weekly exercises consisted of a sacred motet, and he would have regarded them as a preacher would regard a text,—merely as a peg on which he or any other man might hang a homily. But Handel did not stop here. He seems to have looked upon his own work as the embodiment, as well as the culmination, of all existing music, and therefore to have employed without scruple all such existing material as he thought worthy to serve his purpose. 'It is certain' (to quote a distinguished writer of our own day) 'that many of the musical forms of expression which the untechnical man hears and admires in a performance of one of the works of Handel, the technical mind may see in the written scores of his predecessors; and that innumerable subjects, harmonic progressions, points of imitation, sequences, etc., which the unlearned are accustomed to admire (and with reason) in Handel, are no more the invention of that master than they are of Auber or Rossini.' In some cases, passages of considerable length, and even entire movements, were appropriated more or less unaltered by Handel. Two compositions we may quote especially, as having been largely laid under contribution for some of his best-known works. One is the 'Te Deum' by Francesco Antonio Uria or Urlo. No less than nine movements in the 'Dettingen Te Deum' and six in the oratorio 'Saul' are founded wholly or in part on themes, and contain long passages, taken from this work. The other is a very curious piece by Alessandro Stradella, unpublished, and therefore inaccessible to musicians in general. It is a serenade, in the dramatic form, for three voices and a double orchestra (of strings). This has been largely used by Handel for more than one of his works, but chiefly for 'Israel in Egypt,' in which instances occur of large portions (in one instance

1 It has been doubted whether this 'Magnificent' was really the original work of Handel, on the ground of a MS. copy very incorrect in the library of the Sacred Harmonic Society, having the word 'del' for 'Big', Eres at the head of the page. This MS., however, is by an English hand, 'del' does not imply necessarily the authorship of Eres, as 'del' would have done; and the MS. is on English (Whatman) paper, and later in date than the MS. of the same work, in Handel's autograph, which is in Buckingham Palace. The latter is not, as M. Schachtel thought, on the thick paper used by Handel in Italy, but on English paper and in the hand he wrote about the time of the composition of the 'Messiah.' It is almost inconceivable that he, having an amanuensis, should, at that time, copy entirely the unknown work of an almost unknown composer, though we may admit that he would have considered it to borrow from it. The work is among a number of sketches and rough drafts of Handel's own, ideas noted and compositions projected by him, some of which have, others have not, been carried out to completion.

There are but two persons of the name of Eres, Donatello and Giorgio, mentioned by the biographers of musicians. The former, a Milanese, flourished about 1600; but few of his compositions have been thought worthy of being chronicled. The latter, a violinist of Milan, according to some writers, or of Rome, according to others, was the author of some pieces for his own instrument. It is doubtful whether either of these artists deserved, as an ecclesiastic, the title of 'M.'

2 See Dr. Croft's Lectures, p. 125.
Handel's influence over the men who were his contemporaries was great; yet he founded no school. All his works were performed as soon as they were written; and, thanks to the constant opportunity thus afforded to him of comparing his conceptions with their realisation, his growth of mind was such that he surpassed himself more rapidly than he influenced others. That which is imitable in his work is simply the result of certain forms of expression that he used because he found them ready to his hand; that which is his own is inimitable. His oratorios are, in their own style, as unapproached now as ever; he seems to have exhausted what art can do in this direction; but he has not awayed the minds of modern composers as Bach has done.

Bach lived and wrote in retirement; a small proportion only of his works was published in his lifetime, nor did he take into account their effect on the public mind, or feel the public pulse, as Handel did. It is strange that he in his seclusion should have preserved a keen interest in the music of other men, whereas Handel's shell of artistic egotism seemed hardened by the rough contact of the world and society; music for him existed only in his own works. Bach was very anxious to make the acquaintance of his famous contemporary; and, on two occasions, when the latter visited Halle, made efforts to meet him, but without success. When Handel went thither the third time, Bach was dead.

Bach's influence began to be felt some fifty years after his death, when the treasures he had left behind were first brought to light. He was a thinker who traced ideas to their source, an idealist who worshipped abstract truth for its own sake. His works were close chairs of thought and reasoning, prompted by profound feeling, and infinitely suggestive; from the various starting-points which they offer, we go on arguing to this day; but they appeal chiefly to the reflective mind. They are no less complete as wholes than the works of Handel, but they are far more complex; and to perceive their unity requires a broad scope of judgment, not possessed by every hearer.

Handel's works appeal to all alike. He was a man of action; what he felt and what he saw he painted, but did not analyse. The difference is the same as that which lies between a great philosopher and a great epic poet.—between Plato and Homer. Who shall say whether is greater? For traces of the influence of the one we must seek deeper and look farther, but the power of the other is more consciously felt and more universally recognised.

'The figure of Handel,' says Burney, who knew him well, 'was large, and he was somewhat unyielding in his actions; but his countenance was

---

No biographer of Bach or of Handel can refrain from drawing a parallel between these two gigantic, contemporary masters, who never met, but who, in their respective spheres, united in their own persons all the influences and tendencies of modern thought, which brought about the revolution from the art of Palestrina to the art of Beethoven.

As much as 27 bars) being transferred bodily to his score. 'Israel in Egypt' contains another still more flagrant appropriation, the transfer of an Organ Canon by Johann Caspar Kerl to the Chorus 'Egypt was glad,' the only change being that of the key, from D minor to E minor. The Canon is printed by Sir John Hawkins (chap. 124), so that any reader may judge for himself.

That such wholesale pilfering as this should have been possible or even conceivable, is a fact which points to a very different standard of artistic morality from that of the present day. Might, in fact, was right. After acknowledging this, it is, at first, hard to see why so great an outcry should have been made against Buononcini for his theft. The difference seems to be that the latter thought it sufficient to copy another man's work, without even attempting to set it in any framework of his own. In Handel's case, the greater part of the music he 'adopted' was, no doubt, saved from oblivion by the fact of its inclusion in his works. The only possible justification of the proceeding is afforded by success.

Among the minor instances of appropriation by Handel of other men's themes, it has been alleged that the popular air known as 'The Harmonious Blacksmith,' which figures (with variations) in Handel's 'Suites de Pièces,' was the composition of Wagenseil, or of some still older and less known composer. There was republished at Paris a version of it, adapted to words by Clément Marot, which was said to be its original form; but no copy of the air, in any form, is extant of an earlier date than the set of 'Suites de Pièces' in which it appears; there is, therefore, absolutely nothing to show that it is not the work of Handel.

In any case, musical plagiarism is hard to define. The gamut is limited; similarity of thought is frequent, and coincidence of expression must be sometimes inevitable between composers of the same period. Justification can only be afforded by success. We are irresistibly reminded of the passage in which Hume speaks of the philosopher Schelling, who complained that Hegel had stolen his ideas: 'He was like a shoemaker accusing another shoemaker of having taken his leather and made boots with it. . . . Nothing is more absurd than the assumed right of property in ideas. Hegel certainly used many of Schelling's ideas in his philosophy, but Schelling himself never could have done anything with them.'

One man there was.—J. S. Bach,—whose fertility was so inexhaustible that he invented his own fugal subjects, and did not draw on the common stock. In this he was,—with all his severe science and seeming formality,—the true precursor of Beethoven and the modern romantic school of instrumental music; while Handel, in spite of his breadth and flow of melody, and the picturesque scenes of his grand yet simple conceptions, was the glorified apotheosis of the purely contrapuntal, vocal music.

1 See two papers by Mr. E. Prout in the Monthly Musical Record for Nov. and Dec. 1871.
full of fire and dignity. His general look was somewhat heavy and sour, but when he did smile it was the sun bursting out of a black cloud. There was a sudden flash of intelligence, wit, and good humour, beaming in his countenance which I hardly ever saw in any other. "His smile was like heaven." To this Hawkins adds that "his gait was ever sauntering, with something of a rocking motion."

Of portraits of Handel there is a multitude. Several were executed in marble by Roubiliac; one, a bust, presented to George III, with the original MSS. and Handel's harpsichord, by Smith; another, also a bust (1738), bought by Bartleman at the sale of the properties at Vauxhall, and bought at his sale again by Mr. Pollock, who presented it to the Foundling Hospital; another, in the collection of Mr. Alfred Morrison; fourthly, the Vauxhall statue (1738), now the property of the Sacred Harmonic Society, Roubiliac's first work, in which the association of the commonplace dress of the figure with the lyre and naked Cupid is very ludicrous; and lastly, the statue in the monument in Westminster Abbey, which, in spite of the French affectation of the pose, is one of the best portraits of the master, the head having been taken from a mould of his face taken after death by Roubiliac, and said to have been afterwards touched upon by him, the eyes opened, etc. A reproduction of this occurs in 'The Mirror' for July 19, 1834, from which it is here engraved.

Of pictures, the one by Denner, a very unsatisfactory portrait, was given by Lady Rivers to the Sacred Harmonic Society; another, hardly more trustworthy, by G. A. Wolfgang, is in the collection of Mr. Snoxell. Two by Hudson are in the possession of the Royal Society of Musicians, while another, said to be the original, was described by Forstemann (1844) as belonging to the granddaughters of Handel's niece, Johanna Friderica Flörchen, at Halle. It is doubtful if this latter exists. There is, however, an undoubted original by Hudson, signed, 1736, at Gopsall, and a duplicate of it, slightly different, in Buckingham Palace. Another, a capital little

1 This dispenses effectually the claim of the harpsichord, now in the South Kensington Museum, to be considered as Handel's harpsichord, unless he had more than one.
HANDEL COMMEMORATION OF. Early in 1783 three musical amateurs, Viscount Fitzwilliam, Sir William, and William Wyn, and John Bates, conceived the idea of celebrating the centenary of the birth of Handel (1654–5), by performing some of his works on a scale then unprecedented in England. The scheme being supported by the leading musical professors and the Directors of the Concert of Ancient Music (who undertook the arrangement of the performances), and warmly entered into by the King, it was determined to carry it into effect by giving two performances in Westminster Abbey (where Handel was buried), and one at the Pantheon. The first performance was given in the Abbey on Wednesday morning, May 26, 1784; it consisted of The Dedinning Te Deum, one of the Coronation Anthems, one of the Chandos Anthems, part of the Funeral Anthem, and a few other fragments. The second, on Thursday evening, May 27 at the Pantheon, and comprised various sacred songs and choruses, sacred and secular, four concertos and an overture. The third was at the Abbey on Saturday morning, May 29, when Messiah was given. These performances were so attractive as to lead to a repetition of the first day’s music, with some little variations, at the Abbey on Thursday morning, June 3, and of Messiah, at the same place, on Saturday morning, June 5. The orchestra (erected at the west end of the nave, and surmounted by an organ built for the occasion by Green) contained 52 performers, viz. 59 sopranos, 48 altos, 83 tenors, and 84 basses; 48 first and 47 second violins, 26 violas, 21 violoncellos, 15 double basses, 6 flutes, 26 oboes, 26 bassoons, 1 double bassoon, 12 trumpets, 12 horns, 6 trombones, 4 drums, and the conductor (at the organ), John Hay around.

The principal vocalists, who are included in the above enumeration, were Madame Mara, Miss Harwood, Miss Cantelo, Miss Abrams, Miss Theodosia Abrams, and Signor Bartolini; Rev. Mr. Clerk, Dyne, and Knivett, altos; Harrison, U u
Norris, and Corfe, tenors: Bellamy, Champness, Reinhold, Matthews, and Tasse, basses. The orchestra at the Pantheon consisted of 200 performers selected from those at the Abbey, and also included Signor Pacchierotti among the principal sopranos. The total receipts were £1,273 12s. 10d., and the total expenses £2,450 6s. 4d., leaving a surplus of £7,286 6s. 6d., which, after retaining £286 6s. 6d. to meet subsequent demands, was divided between the Society of Musicians (£6,000), and the Westminster Hospital (£1,000). A mural tablet recording the event was placed in the Abbey above Handel's monument. In 1785 Dr. Burney published a quarto volume containing an Account of the Commemoration, with a Sketch of the Life of Handel, and plates, one of which represents his monument. In this the inscription is altered to support the assertion in the Life (made upon the alleged authority of Dr. Warren, who is asserted to have attended Handel in his last illness), that Handel died on Good Friday, April 13, and not on Saturday, April 14, 1759. Assuming Burney to have believed the unsupported statement of Dr. Warren, made 25 years after the event, in preference to the unanimous contemporary testimony to the contrary, still he could not but have been conscious that in putting forth that engraving of the monument he was circulating a misrepresentation. The matter is important, as Burney's date has been generally accepted, but it is too lengthy to be further entered upon here. The evidence proving Saturday, April 14, to be the true date may be seen stated in the Introduction to the Word Book of the Handel Festival, 1863, and Notes and Queries, 3rd Series, iii. 421.

The Commemoration of 1784 was followed by similar meetings at the Abbey, with more performers, in 1785, 86, 87, and 91. In the latter year the performers are said to have numbered 1068, but that number was probably made up by inserting the names of persons who performed alternately with others, so that the numbers engaged in any one performance did not much exceed those on the former occasions. [W.H.H.]

HANDEL FESTIVAL. In 1856 Mr. R. K. Bowley [see that name] conceived the idea of commemorating the genius of Handel on the centenary (in 1859) of his death by performing some of his works on a scale of unprecedented magnitude. On Sept. 1, 1856, he communicated his idea to the Committee of the Sacred Harmonic Society, by whom it was favourably received. No building in London being large enough to contain the necessary orchestra, the attention of the Society was directed towards the Central Transept of the Crystal Palace (of which they had already had experience in the performance of the music at the opening of the Palace, May 10, 1854) as the most likely place to answer the desired end. The Directors of the Crystal Palace Company entered warmly into the project, and it was determined to hold a preliminary festival in 1857. A large orchestra was accordingly erected, with a grand organ, built by Gray and Davison expressly for the occasion. With the chorus of the Society as a nucleus, a choir of upwards of 1,000 picked singers was formed in London, which was supplemented by others from the principal towns in the United Kingdom until the whole numbered 2000. The band, similarly constituted, numbered 396. The meeting, under the title of 'The Great Handel Festival,' was held on Monday, Wednesday, and Friday, 15th, 17th, and 19th June, 1857, with a public rehearsal on the preceding Saturday. The sole direction of the musical arrangements was committed to the Society, the Company taking charge of the other arrangements. The oratorios of 'Messiah,' 'Judás Maccabas,' and 'Israel in Egypt,' were performed, the principal singers including Clara Novello, Miss Dolby, Mr. Sims Reeves and Herr Formes, and the conductor being Mr. (now Sir Michael) Costa, as conductor of the Society.

This festival having established the fact that the Central Transept of the Palace might be made a fitting locality for the Commemoration in 1859, it took place under the same management, on the 20th, 22nd, and 24th June, 'Messiah' and 'Israel in Egypt' again occupying the first and third days, the second being devoted to 'The Dettingen Te Deum' and a selection from various works. The band was augmented to 450, and the chorus up to 2,700 performers; Mr. Costa was conductor, and the principal singers included Clara Novello, Sims Reeves, and Signor Belletti. The orchestra was improved by enclosing it with wooden screens, and covering it in with an enormous awning of oiled and hardened canvas. The three performances and the public rehearsal were remarkably successful, and attracted 81,319 visitors.

This success led to the determination that similar festivals should be held periodically under the name of the Triennial Handel Festival. Six have been held, viz. in 1862, 1865, 1868, 1871, 1874, and 1877. The first and third days have invariably been occupied by 'Messiah,' and 'Israel,' the intermediate days being devoted to varied selections, including 'The Dettingen Te Deum' in 1871; the Coronation Anthems, 'Zadok the Priest' (1865), and 'The king shall rejoice' (1877); and the First, Fourth, and Second Organ Concertos respectively in 1871, 1874, and 1877. The singers who appeared at these festivals were the most eminent then before the public. The Sacred Harmonic Society has been solely responsible for the performances, which have been all conducted by Sir M. Costa, as conductor of the Society. The band was augmented in 1865 to 495 performers, and the chorus in 1874 to nearly 3,200. The sonority of the orchestra was increased by the erection in 1861 of a boarded roof covering in the whole space occupied by the performers, and extending 24 feet beyond the front. [W.H.H.]
Händel-Gesellschaft.

lation of the text. The Prospectus is dated 15 Aug. 1856, and has 35 names appended to it, including those of Chysander, Dethn, Franz, Gervinus, Hauptmann, Hiller, Jahn, Lizzi, Meyerbeer, Moscheles, Neukomm, Riezl. A second Prospectus announcing the first year's issue is dated Leipzig, 1 June 1859, and signed by the Directorium, viz. Riezl, Hauptmann, Chysander, Gervinus, Breitkopf & Härtel. For the editing—which is of the most thorough character, and based in every possible case on the autograph MSS.—Dr. Chysander is understood to be responsible; and the execution is all that might be expected from the well-known efficiency and taste of the firm of Breitkopf & Härtel, by whom the volumes are issued. The annual subscription is 15 thalers, or 30l.

The following works have been published, and it is intended to complete the whole by 1885, the second centenary of Handel's birth. (Those marked with an * are published for the first time.)

1. 1865. 1. Susannah. 2. Harpsichord works. 3. Suites de Féttes etc. 3. Aria.
8. 1872. 27. Solomon. 28. Alcina. 29. 13 Oratorio Concerts.
11. 1875. 32. Chandos Anthems. 33. 2 Wedding Anthems, Dettingen etc.
12. 1876. 33. Chandos Anthems. 34. 2 Wedding Anthems, Dettingen etc.
14. 1877. 41. Agrippina. 42. Rinaldo. 43. Teosa. 44. Amadigi. 45. Musico Scorda.

Many things, even in the well-known works, have been here published, and indeed revealed, for the first time—such as the trombone parts in Israel in Egypt and Saul, the organ part in Saul, the recitative, in D, for Samson, of the Dead March in Saul, the final chorus in Belshazzar, etc., etc.

Händel Society. The society formed in 1843, for the production of a superior and standard edition of the works of Handel. It was suggested by Mr. Macfarren, senior, who however died on the 24th April, immediately after the first meeting convened by him. The Prospectus was signed by George A. Macfarren as Secretary, on behalf of the Council, and was issued from his residence 73 Berners Street, June 16, 1843. The Council for the first year consisted of R. Addison, Treasurer; W. Sterndale Bennett; Sir H. R. Bishop; Dr. Crotch; J. W. Davison; E. J. Hopkins; G. A. Macfarren, Secretary; J. Moscheles; T. M. Mudie; E. F. Rimbault; Sir George Smart, and Henry Smart. The annual subscription was a guineas, and the Society commenced operations with 1100 members. The publications—in large folio, full score, each with F. P. arrangement and editor's preface—were issued by Cramer, Addisson, and Beale, as follows:

1843-4. 4 Coronation Anthems, ed. by Dr. Crotch; and L'Allegro, Il Penseroso, ed II. Modinato, by J. Moscheles.
1845-6. Israel in Egypt by Mendelssohn.
1850. Messiah, by Dr. Rimbault.
1851. 13 Chamber Duets and 9 Trios, by Henry Smart.
1852. Samson, by Dr. Rimbault.
1854. Saul, by Dr. Rimbault.

The Society was dissolved in Jan. 1848, owing to a lack of subscribers; but the publication of the works was continued by Cramer & Co. till 1858, when the last volume (for 1855) was issued. [G.]

Händel and Haydn Society, the, Boston, Massachusetts, is the largest, and, with one exception, the oldest living musical organisation in the United States. It dates from March 30, 1815, when sixteen gentlemen met in answer to an invitation dated six days before, signed by Gottlieb Graupner, Thomas Smith Webb, and Asa Peabody, to consider the expediency of forming a society for cultivating and improving a correct taste in the performance of sacred music, and also to introduce into more general practice the works of Handel, Haydn, and other eminent composers. At a second meeting a fortnight later, a set of rules was adopted, and Matthew S. Parker was elected Secretary. The first board of government was completed at the third meeting, April 20, 1815, by the election of Thomas Smith Webb as president, Amasa Winchester vice-president, and Nathaniel Tucker treasurer, and nine others as trustees.

The state of music in Boston was at this time very low. The 'Massachusetts Musical Society,' formed in 1807, was extinct. The Philharmonic Society—for orchestra music only—was still in existence; but of professional musicians there were probably not a score in the town. The society's first musical utterances were from the 'Lock Hospital' and other collections of hymn tunes then in general use in New England. By degrees, and as its numbers grew, music of a higher order was rehearsed. Early in September, 1815, the project of a 'public exhibition' assumed importance. And on the night of the following Christmas, at the Stone Chapel, in the presence of a thousand auditors, the society gave to the public the first taste of its quality. The chorus numbered about a hundred, of which perhaps ten were ladies; an orchestra of less than a dozen and an organ furnished the accompaniments; the programme was long and varied, and included selections from 'The Creation' and 'The Messiah,' and other works by Handel. An enthusiastic journalist declared that there was

---

1 The Stoughton Musical Society, formed Nov. 7, 1798. Stoughton is an inland town about twenty miles from Boston. The Society's artistic importance has been much less than that of the subject of this article.
HANDEL AND HAYDN SOCIETY.

‘nothing to compare with it,’ and that the society was ‘now the wonder of the nation.’ The concert was repeated on the 18th January following.

The State legislature having granted, Feb. 9, 1816, a special charter, wherein the purpose of the society ‘to extend the knowledge and improve the style of church music’ was recognised, a new code of rules was framed, and other means adopted to strengthen the efficiency of the organisation. The records of the first decade furnish abundant evidence of the poverty of the musical resources of Boston. With the hope of securing better organists than were available at home, liberal offers were made to musicians in New York and Philadelphia. On one occasion there was an undisguised fear that a certain concert must be postponed ‘in consequence of the want of an organist.’ In the early concerts the solos were sung by members of the choir. The first engagement of a professional vocalist was that of Mr. Thomas Phillips, in April, 1818, to whom was paid the extraordinary sum of 400 dollars for two concerts. The following list presents the names of eminent artists who have appeared at the society’s concerts: English—Mmes. Anna Bishop, Patey, Parepa-Rosa, Catherine Hayes, and Edith Wynne; Messrs. Graham, Cummings, Hatton, Incledon, Patey, Henry Phillips, and Santley; Continental—Mmes. Alboni, Caradori-Allan, Grist, Nilsson, Rudersdorf, Sontag, and Tietjens (whose last appearance in America was at a concert by the society); Messrs. Forment, Stigelli, Mario, etc.; American—Mmes. Clara Louise Kellogg, Antoinette Sterling, etc.; Messrs. Charles R. Adams, Thomas Ball (the eminent sculptor), Myron W. Whitney—and many others.

It was not until the 17th concert, Dec. 25, 1818, that a complete oratorio was performed. This was ‘The Messiah.’ Liberal selections from the work had however been given at the previous concerts. The following list of works, with the year of first performance, contains the most important choral compositions produced in the course of the 63 seasons which have passed (1815-1878), comprising 610 concerts. Of the compositions named few had been heard in Boston, or even in America, before their performance by the society.

Handel’s Messiah (1742), Detting: Bennett’s Woman of Samaria to Z. Lwows (1819), Samsen (1849), (1871); Costa’s Eri (1867), Naaman Judas (1847), Solomon (1850), Israel (1859); Verdi’s Requiem (1874); be (1859), Sc. Cecilia (1821), Jephthah sides works by Marcello, Neumann, (1871), Joshua (1870), Harpsichord, theirs; L’Enfance du Roi (1810), Mass in Bb (1820); Sefun, Bohler, and Nicolai; by Forment (1859); Bach’s Passion, Dudley Buck, Palae, and Parker, (1874); Aria Oratorio, Paris among Americans, and Horn and 1 and 2 (1877): Mozart’s Mass in C of M. F. King amongst English conductors, Rossini’s Petite Messe solennelle; Haydn’s oratorios—7 works in all. Of these Moun of Olivera (1833), Ninth the Messiah has been performed Symphony (1830); Spohr’s Last 5 times, the Creation 20, Nem Judgments (1839); Mendelssohn’s Hymn’s 24th; Mozart in Egypt St. Paul (1840), Eliah (1846), 45, Eliah 7; Samson, LGPLagrunges (1851), Psalm xlviii, 1946), 12, Ps. 41, the Ninth Symphony of Verdi (1850); Pater 6, Isaiah in Egypt 3; Mozart (1874), Christus (1751); Howells’s Requiem, etc. etc.

Bhaba (1865), Moses in Egypt (1845).

Excluded from this enumeration are those occasions when selections only were sung; as well as numerous concerts at which the society formed only a part of the choir, or which were not given under its own direction; the most important of these have been ceremonial of public rejoicing or mourning, dedicatory exercises, musical festivals at New York, and the Peace Jubilee at Boston in 1869 and 72. The number of concerts given during a season has varied in accordance with the public demand: it has been as low as one and as high as twenty-three. Very rarely during the past twenty-five years has a concert been omitted at Easter-tide; and more rarely still Christmas passed without a performance of ‘The Messiah.’ The support of the society is nearly all derived from the profits of its concerts. New members pay an initiation fee of five dollars, and it has sometimes been necessary to levy a special assessment to pay off outstanding debts. There is a permanent trust fund, the nucleus of which was formed from the earnings of the festival of 1865, and which, by subsequent earnings, interest, bequests and donations, now (1878) amounts to 12,000 dollars; the income is available at the discretion of the board of government.

Six festivals, modelled on those of Birmingham, have been held. The first occurred in 1857. The fiftieth anniversary was celebrated in May 1865, by a week’s performances. Triennial festivals have since been regularly held, beginning in 1868. On each of these occasions, excepting the last (1877), a guarantee fund has been subscribed by the friends of the society.

In pursuance of its avowed purpose to improve the style of church-music, the society, in its earlier days, published several volumes of anthems and hymn-tunes, established lectures on musical topics, and formed singing classes. The publications quickly became standard, and large profits were realised from their sale. Oratorios were also published under its supervision. By these means, and by the generally high standard of its concerts, the society has largely contributed to the elevation of musical taste in Boston, and has prompted the formation of similar associations all over the Union.

The number of members, active and retired (the latter by voluntary condition, after twenty years’ service), at present is about 300. The active choral force is 600 strong. The female choristers have never been members, technically, the system of annually inviting the aid of their voices having obtained ab initio. Mr. Chas. E. Horne was the first regularly chosen musical director (1847), the president having until then performed the duties of a conductor, in accordance with a provision in the by-laws. In 1850, Mr. Charles C. Perkins, being president, assumed the bâton. Since then, a conductor has been appointed by the board of government as follows: J. E. Goodson, 1851; G. J. Webb, 1852; Carl Bergmann, 1852; Carl Zerrahn, the present (1878) conductor, Aug 24, 1854. The following have been appointed organists: Samuel Stockwell; S. P. Taylor; S. A. Cooper; J. B. Taylor; Miss Sarah Hewitt; Charles Zeuner; A. U. Hayter; G. F. Hayter; F. F. Mueller; J. C. D. Parker. The position is now held by Mr. B. J. Lang, elected September 15, 1859.
Rehearsals are regularly held on Sunday nights during the season (October to April inclusive), and the majority of the concerts also occur on Sundays. The annual election of officers is held in May. The following gentlemen now constitute the board of government:—C. C. Perkins, president; G. H. Chickering, vice-president; G. W. Palmer, treasurer; A. F. Browne, secretary; J. H. Stickney, librarian, and eight others, directors. [F. H. J.]

Händl, Jacob, also Händl and Hähnel, an old German master of the first class (1550–1591), whose name, after the punning fashion of those days, was latinised into Gallas, under which head he is noticed in this work. Handel has done him the favour to transfer a very characteristic and evidently favourite passage which winds up both portions of his motet 'Ecce quo modo moritur justus,' to the same position in his 'Funeral Anthem' ('But their name'). [G.]

HANIBAL. See ANNIBAL.

HANOVER SQUARE ROOMS. In 1773 a piece of ground on the east side of Hanover Square at the north-west corner of Hanover Street, formerly part of a field called the Mill Field, alias Kirkham Close, and described as 'containing in breadth from north to south in the front next the Square as well as in the rear 40 feet of assize, more or less, and in depth from west to east on the north side as well as on the south, 135 feet more or less,' was occupied by a house, garden, and office, then in the occupation of Lord Dillon. The freehold belonged to the Earl of Plymouth. On June 28, 1774, Lord Plymouth sold the freehold for £5000 1 to Viscount Wenman, who on the same day conveyed the whole to Giovanni Andrea Gallini, John Christian Bach, and Charles Frederick Abel. Gallini owned one-half, and the others each one-fourth. They erected on the site of the garden and office, and joining on to the house, rooms for the purposes of concerts, assemblies, etc., consisting of a principal room, 95 ft. by 35, on the level of the first floor; a small room on the north side, originally used as a tea-room; and one on the ground floor beneath the principal room. The ceiling of the principal room was arched, and decorated with paintings by Gprian. The orchestra stood at the east end. The rooms were opened on Feb. 1, 1775, with one of Bach and Abel's Subscription Concerts, established by them in 1763: later in the month Subscription 'Festinos' were announced; on May 4, 'Mr. Gallini's Annual Ball,' and on May 22, the first 'Grand Subscription Masquerade.' On Nov. 12, 1775, Gallini purchased the shares of Bach and Abel, and became sole proprietor. Bach and Abel's concerts continued to be held there until 1782, when the withdrawal by Lord Abington of the pecuniary aid he had theretofore given, led to their discontinuance. Thereupon some professors of music established similar concerts under the name of 'The Professional Concert,' which were given in the room from 1783 to 1793. In 1786 Salomon, the violinist, piqued at being left out of the Professional Concert, established concerts here, at which in 1791 and 1792, and again in 1794 and 1795, Haydn directed the performance of his 12 'grand' symphonies. At the 8th concert in 1792, 'Master Hummel' played a concerto on the pianoforte, and in 1796 John Braham was introduced to the public as a tenor singer. In 1804 the Concert of Ancient Music was removed to these rooms, the Directors having taken a lease from Gallini at a rental of £1000 per annum, and they continued to be held here until 1848, the last year of their existence. The Directors made considerable alterations; the orchestra was removed to the west end, three boxes were erected across the east end for the royal family and their attendants, and the rooms were newly fitted up in a splendid manner. On the death of Gallini (Jan. 5, 1805), the freehold passed to his two nieces, who leased the rooms to Wallace and Martin, and Martin and Son successively. In December 1832 alterations were made in the great room by the enlargement of the windows so as to render it available for morning concerts; and many mirrors were introduced. The concerts of the Vocal Society were given in these rooms from its foundation in 1833 to its dissolution in 1837. A new Vocal Society gave concerts here in 1838, but its existence was of very brief duration. In 1833 the concerts of the Philharmonic Society were removed here from the Concert Room of the King's Theatre, and continued here until their departure to St. James's Hall in 1866. Both the Misses Gallini dying in 1845, the freehold was sold by auction to Robert Cocks, the music publisher, under whom the younger Martin held it by lease until December 1861. Extensive alterations and decorations were then made in the rooms, which were re-opened Jan. 8, 1862, by Mr. Henry Leslie's Choir; the concerts of the Royal Academy of Music were also removed there. The annual performance of Handel's 'Messiah,' for the benefit of the Royal Society of Musicians was given there from 1783 to 1848, after which it was given first at Exeter Hall, and afterwards at St. James's Hall. In 1874 the premises were let on lease for the purpose of being converted into a club house. The last concert was given in the rooms on Saturday, Dec. 19, 1874, and the building, after undergoing an entire transformation, was opened early in 1876 as 'The Hanover Square Club.' It must not be omitted to be mentioned that the great room was remarkable for its excellent acoustic properties. [W.H.H.]

HANSlick, Eduard, musical critic and writer on aesthetics, born at Prague Sept. 11, 1825, son of a well-known bibliographer, studied law and philosophy in Prague and in Vienna, where he took the degree of Doctor. In 1856 he was appointed tutor of aesthetics and musical history

1 Being at the rate of very nearly 12 per square foot of ground.

2 Gallini was a twin of Italian extraction, who had taught the children of George III to dance, and won a fortune, became member of the House of Commons, 1770, was knighted as Sir John Gallini, and married a daughter of the Earl of Abington.
at the university; in 61 professor extraordinary, and in 70 regular professor. His love of music had been fostered at home, and under Tomaschek he became an excellent pianist. In Vienna he had ample opportunities of becoming a critic of no ordinary merit, and his keen insight and cogent logic, and the elegance and versatility of his style, make his literary productions of lasting value. As a juror for the musical department of the Exhibitions of Paris (1867), Vienna (1873), and Paris (1878), he did everything in his power to further the interests of the musical instrument makers of Austria. In 1876 he was appointed a member of the Imperial Council, having some time before received the order of the Iron Crown. During the years 1859-63 he gave public lectures on the history of music in Vienna, and occasionally in Prague, Cologne, etc. He has been musical critic successively to the 'Wiener Zeitung,' 1848-49, the 'Presse,' 1855-64, and the 'Neue freie Presse.' Hanlick has published the following books:—'Vom musikalisch-Schönen' (Leipzig, 1854, 5th ed. 1876, also translated into French), a work which marks an epoch; 'Geschichte des Concertwesens in Wien' (Vienna, 1869); 'Aus dem Concertsaal' (Vienna, 1870); 'Die moderne Oper' (Berlin, 1875, 2nd ed. 1876, sequel 1877); and has written the text for the 'Galerie deutscher Tondichter' (Munich, 1873), and the 'Galerie franz. und ital. Tondichter' (Berlin, 1874). In music Hanlick is a Conservative. His resistance to the Liszt-Wagner movement is well known. On the other hand he was an early supporter of Schumann and is a strong adherent of Brahms.

[C. F. P.]

HARMONICA. The power of producing musical sounds from glass basons or drinking glasses by the application of the moistened finger, and of tuning them so as to obtain concords from two at once, was known as early as the middle of the 17th century, since it is alluded to in Harndorfer's 'Mathematische und philosophische Erquickungen,' ii. 147 (Nuremberg, 1677). Gluck, the great composer, when in England, played 'at the Little Theatre in the Haymarket,' April 23, 1746—a concerto on 26 drinking glasses tuned with spring water, accompanied with the whole band, being a new instrument of his own invention; upon which he performs whatever may be done on a violin or 'harpischord.' This or some other circumstance made the instrument fashionable, for 15 years later, in 1761, Goldsmith's fine ladies in the Vicar of Wakefield, who confined their conversation to the most fashionable topics, 'would talk of nothing but high life and high lived company . . . pictures, taste, Shakespeare, and the musical glasses.' That they patronised the talents of lesser persons than Lady Blarney and the Hon. Carolina Willemina Amelia Skeggs is evident from the testimony of Franklin. He came to London in 1757, and writing on July 13, 1762, to Padre Beccaria at Turin, he tells him of the attempts of Mr. Puckeridge and of Mr. Delaval, F.R.S. who fixed their glasses in order on a table, tuned them by putting in more or less water, and played them by passing the finger round the brims. Franklin's practical mind saw that this might be greatly improved, and he accordingly constructed an instrument in which the bells or basons of glass were ranged or strung on an iron spindle, the largest and deepest-toned ones on the left, and gradually mounting in pitch according to the usual musical scale. The lower edge of the basons dipped into a trough of water. The spindle was made to revolve by a treadle. It carried the basons round with it, and on applying a finger to their wet edges the sound was produced. The following cut is reduced from the engraving in Franklin's letter (Spark's ed. vi. 245).

The essential difference between this instrument and the former ones was (1) that the pitch of the tone was produced by the size of the glasses, and not by their containing more or less water; and (2) that chords could be produced of as many notes as the fingers could reach at once. Franklin calls it the 'Armonica,' but it seems to have been generally known as 'Harmonica.' The first great player on the new instrument was Miss Marianne Davies, who had a European fame, and played music composed for her by Hasse. Another celebrated performer was Marriana Kirchhäuser, a blind musician. She visited Vienna in 1791, and interested Mozart so much that he wrote an Adagio and Rondo in C for harmonica, flute, oboe, viola, and cello, which she played at her concert on June 19 (Köchel No. 517). Sketches of his for another Quintet in the same key are also in existence. Kirchhäuser was in London in 1794, and a new harmonica is said to have been built for her by Froeckel, a German mechanician. In England the instrument appears to have been little if at all used during the present century. In Saxony and Thuringia however it was widely popular; at Dresden, Naumann played it, and wrote 6 sonatas for it. At Darmstadt a harmonica formed a part of the Court orchestra; the Princess Louise, afterwards Grand Duchess, was a proficient upon it, and C. F. Pohl, son, the Princess's music,
was engaged exclusively for the instrument as late as 1818.

Attempts have been made to improve or modify the harmonica by substituting a violin bow for the hand, or by reducing the peculiarly penetrating and exciting tone which is said to be so prejudicial to the nerves of players—but without success. An account of these and of much more than can be included in this short statement will be found in C. F. Pohl’s ‘Zur Geschichte der Glas Harmonica’ (Vienna, 1862). One method only exists for this instrument, that of J. C. Müller, Leipzig, 1788. A specimen of the harmonica, built by Emanuel Pohl of Krebitz, Bohemia, is in the South Kensington Museum.

The following little piece for the harmonica was composed by Beethoven for the ‘Leonora Prohaska’ of his friend Duncker in 1814 or 15. The autograph is preserved in the Library of the Gesellschaft der Musikfreunde at Vienna, and has not before been published.

\[
\text{Du dem die gewunden} \quad \text{(Du den die gewunden)}
\]

\[
\text{Jetzt kann ich nur Todtenblumen dir weihn} \quad \text{(Jetzt kann ich nur Todtenblumen dir weihn)}
\]

\[
\text{Doch wachen an meinem Leichenstein} \quad \text{(Doch wachen an meinem Leichenstein)}
\]

\[
\text{Die Lette und Rose auf’s neu} \quad \text{Die Lette und Rose auf’s neu}
\]

The name Harmonica is now used for a toy-instrument of plates of glass hung on two tapes and struck with hammers.

HARMONICHORD. A keyed instrument invented in 1810 by Friedrich Kaufmann, the

celebrated musical instrument maker of Dresden. In its form it resembled a small square piano; but the sound was obtained not by striking the wires with hammers, but by the friction against them of a revolving cylinder (as in the ordinary hurdy-gurdy), covered with leather, and rosinated. This cylinder, which in the effect it produced somewhat resembled the bow of a violin, was set in motion by a pedal worked by the foot of the player. All gradations of tone, as well as the power of swelling or diminishing the sound upon a sustained note were produced by the pressure of the finger. For this instrument Weber composed in the year 1811 a very interesting adagio and rondo, with orchestral accompaniment, which is published by Peters, of Leipzig. Weber wrote concerning this composition—‘It was an infernal piece of work to write for an instrument whose tone is so peculiar and strange that one has to call to one’s aid the liveliest imagination to bring it suitably forward in combination with other instruments. It is a cousin of the harmonica, and has this peculiarity, that with every sustained note its octave is prominently heard.’ On the printed title-page it is said to be for Harmonichord or Harmonion. This, however, is an addition of the publisher; as not only are the two instruments totally distinct, but the phonomatics, the predecessor of the harmonion, was not invented till about fifteen years later.

[E. P.]

HARMONICON, The, a monthly musical periodical edited by W. Ayton, commenced January 1823, and continued until September 1825. It contained ably written memoirs of eminent musicians, some of the earlier being accompanied by engraved portraits, essays, reviews of new music, correspondence, criticisms of musical performances of all kinds, foreign musical news, information on all subjects interesting to musicians, and original and selected vocal and instrumental music. It was of quarto size, in 22 vols., and is the best musical periodical ever published in England.

[W. H. H.]

HARMONICS, tones of higher pitch which accompany every perfect musical sound in a regular series. As they ascend they diminish in intensity, and approximate in pitch. If the piano be opened and a note—say D—in the bass—be struck smartly and kept down, on listening attentively a succession of faint sounds will be heard, apparently rising out of the principal sound and floating round it. These are the harmonics. They are really constituents of the main musical tone, and are produced by the concurrent vibration of the aliquot parts of the string. Hence Helmoltz proposes to call them ‘partial tones’ (Partialtöne). This term is no doubt more appropriate, inasmuch as above the tenth degree most of these notes form intervals dissonant from the prime note and also from each other, and thus become perceptibly inharmonic. On the best musical instruments, however, these high inharmonic tones are not reached, the vibratory impulse being exhausted on the prime note and the lower harmonics, which are consonant
both with the prime note and among themselves.
At the same time the smaller the aliquot parts
become in the ascending series, the less easily
are they set in a state of separate vibration.
Consequently these high dissonant harmonics are
distinctly audible only on highly resonant metallic
instruments, such as the cymbals, bell, and
triangle, and for practical purposes the old term
harmonic answers as well as the term ‘partial.’
A few instruments, such as the tuning-fork
and the wide stopped organ pipe, practically
yield no harmonics. The human voice, the
harmonium, and all orchestral instruments, are
rich in them—the human voice probably the
richest of all; but nature has so admirably
compounded them that it is very difficult to
analyse them scientifically. Rameau distinguished
harmonics in the human voice as early as the
beginning of the last century.
Harmonics naturally reinforce the fundamental
sound, in which case their extent and distribution
largely influence the intensity and the quality of
the sound. They may, however, in many instances,
be produced singly by mechanically checking
the vibration of the fundamental note. In this
relation they constitute an important practical
department in most orchestral instruments.

**Law of Harmonics.** A sonorous body not
only vibrates as a whole but in each of its
several fractions or aliquot parts, \( \frac{1}{2}, \frac{3}{4}, \frac{2}{3}, \frac{3}{5}, \)
and so on at the same time; and each of
these parts gives a separate note, the \( \frac{1}{2} \)
yielding the octave, the \( \frac{3}{4} \) the fifth, the \( \frac{2}{3} \) the double
octave, the \( \frac{3}{5} \) the third above the double octave,
and so on. The following scheme or diagram,
taken from Monigny, shows the harmonics of
the open string G on the violoncello up to thir-
teen places:

![Harmonics Diagram]

Here the bottom G is produced by the vibra-
tion of the whole string. The two Gs next
above are produced by the vibration of the two
halves. The three Ds next above by the vibra-
tion of the three thirds; and so on. Thus the
diagram represents the whole of the notes pro-
duced by the vibrations of the whole string and
its various sections up to its one-fourteenth part.

In this scheme the first F (counting upwards),
the C a fifth above it, and the topmost notes E
and F, are more or less faulty. In practically
deducing the diatonic scale from this scheme,
these intervals have to be corrected by the ear.
By inspection of this scheme we discover the
intervals of the diatonic scale in the following
order:

![Diatonic Scale Diagram]

From this scale may obviously be deduced the
chords of the third, fifth, seventh, and ninth.

By combining and transposing these notes into
one octave we get the following scale:

![Transposed Scale Diagram]

which is the scale of C major ascending from
dominant to dominant. As the same thing
happens in other keys, we have thus proved the
law that the intervals of each scale are generated
by its dominant. The dominant, not the tonic,
is therefore the true root of the whole scale.

**Practical effect of Harmonics heard simulta-
enuously with the fundamental note.** The har-
monics not only determine the diatonic intervals,
but to some extent the intensity and, as has been
lately proved by Helmholtz, the quality of musical
tones. On applying the ear to the soundhole of
a violin during a long crescendo on one note, the
reinforcement of the tone by the gradual addition
of the higher and more piercing harmonics is
distinctly perceptible. The principle and the
effect are precisely the same in a crescendo
produced by the addition of the mixture stops
on an organ. The loudest musical instruments,
ceteris paribus, are those in which the highest
harmonics predominate, e.g. the cymbals, triangle,
bell, and gong.

The effect of harmonics on the quality of
musical sounds is easily tested by carefully com-
paring the tones of an old and a new violin. In
the former the strong vibrations of the funda-
mental note and the lower harmonics leave but
little force to be expended on the higher and
noisier harmonics: in the latter the fundamental
note and lower harmonics are capable of absorb-
ing less of the force, which is transmitted to the
upper harmonics, and produces a harsh quality of
sound. When the fundamental note and lowest
harmonics predominate in the tone, the quality is
soft and flute-like; when the combination is well
balanced by the addition of the intermediate har-
monics up to the sixth, the quality is rich and
sonorous; when the highest harmonics, above
the sixth and seventh, predominate, the quality is
harsh and screaming. When the high disso-
nant harmonics are produced in a tolerably era
and continuous stream of sound, the quality is
said to be ‘metallic.’ If an instrument is ill-
strung or out of order the harmonic scale is
disturbed; and the harsh, uncertain, and irregular
tones which it yields consist of harmonics out of
their true place. Less varied comparisons may be
obtained on the stops of an organ. Wide pipes,
yielding a dull, heavy tone, have virtually so
harmonics. In the tone of narrower open pipes
the harmonics up to the sixth can be detected by
the aid of Helmholtz’s resonators. Pipes
conically narrowed at the upper end, such as
compose the stop called Gemshorn, Salicional,
and Spitz-flute, yield strong intermediate har-
monics, which render the tone bright, though
perceptibly thin. The Rohr-flute is so con-
structed as greatly to reinforce the fifth harmonic
(\( 2\text{\frac{1}{2}} \) octaves above the prime note). The nasal
quality of sound, such as is yielded by the soter
HARMONICS.

reed-stops, by violins of a certain build, and by
the clarinet, bassoon, etc., is produced by the
predominance of the uneven harmonics \( \frac{5}{4}, \frac{7}{4}, \frac{9}{4}, \) etc. On the harmonium these uneven harmonics are stronger than the even ones. The peculiar tinkling tones of the zither arise from the high uneven harmonics yielded by its comparatively thick metal strings.

If a singer produces a low note crescendo against a reflecting surface, the harmonics become distinctly audible. If the note is produced partly through the nose, the uneven harmonics perceptibly predominate. The number of upper harmonics in the human voice is very great; and they are, according to Helmholtz, distinct and powerful in their whole range.

**Practical use of single Harmonic tones on stringed instruments.** Harmonics may be singly produced (1) by varying the point of contact with the bow, or (2) by slightly pressing the string at the nodes, or divisions of its aliquot parts \( \left( \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \right) \). (1) In the first case, advancing the bow from the usual place where the fundamental note is produced, towards the bridge, the whole scale of harmonics may be produced in succession on an old and highly resonant instrument. The employment of this means produces the effect called 'sul ponticello.' [See Ponticello.]. (2) The production of harmonics by the slight pressure of the finger on the open string is more useful. When produced by pressing slightly on the various nodes of the open strings they are called 'Natural harmonics.' In the following example the lower notes represent the fingerings, the upper ones the effect:

**Scotch Air.**

![Natural Harmonics](image)

Natural harmonics are occasionally employed *pizzicato* on the violin and violoncello, and are an important resource in harp music. Accurate violinists are disinclined to use them, because the player has no control over their exact intonation, which is rigidly determined by that of the open string; and the tones of the open strings, which are tuned by perfect fifths, are in certain scales slightly dissonant. In the key of G, for instance, the harmonics of the first or E string are slightly dissonant, though they are perfect in the key of A.

Artificial harmonics are produced by stopping the string with the first or second finger, and thus making an artificial 'nut,' and then slightly pressing the node with the fourth finger. By this means harmonics in perfect intonation can be produced in all scales. Example—

---

HARMONIC STOPS.

Carnaval de Venise.

![Harmonic Stop](image)

For the entire theory of artificial harmonics in single and double scales see 'L'Art de Jouer du Violon de Paganini' by Guhr. They can however only be produced by using thin strings, and are little employed by the best writers. In modern music they are designated by an open note of this \( \phi \) form. (See the Andante of Joachim's Concerto, etc.)

**Practical use of single harmonic tones on wind instruments.** As in the case of stringed instruments, the harmonics of wind instruments naturally reinforce the prime note, but are separable from it by artificial means. In wind instruments this is done by varying the intensity or the direction of the air current from the mouth, which sets in vibration the air-column in the tube, so as to throw the air-column into vibrating portions of different lengths, as in the case of the aliquot parts of a string. The falsetto voice consists of harmonic octaves of the natural voice. All the notes of the flute above the lowest octave are harmonic octaves, twelfths, and double octaves of the lower notes. Like the corresponding harmonics on the oboe and clarinet, these tones are produced by blowing. Brass instruments are richest in the practical employment of harmonics. Any brass instrument, such as the hunting horn or military bugle, yielding one fundamental note, yields the familiar harmonic scale

Violinists are well aware that the longer the string in proportion to its thickness, the greater the number of upper harmonics it can be made to yield. Similarly, the longer the tube of a brass instrument, the higher does the series of its practicable harmonic tones ascend. The old French horn consists simply of a conical tube of great length, which readily yields the scale of harmonic intervals. They are produced by gently varying the degree and direction of the current of air. The dissonant notes \( \left( \frac{5}{4}, \frac{7}{4}, \frac{9}{4}, \right) \) in the scale are to some extent corrected, and some of the missing tones are supplied by introducing the hand into the bell. Mechanical appliances have been contrived for the same purposes. On the trumpet the tube is extended for the same purposes by means of a slide. [See Horn, Trumpet, etc.] [E.J.P.]

HARMONIC INSTITUTION. [See Abgail Rooms.]

HARMONIC STOPS are organ stops, the upper pipes of which do not produce the sound that would be expected, having regard to their
length, but the cetera to that sound. They have been known in Germany for nearly two hundred years. The ‘violoncello, 8 feet pitch’ on the Pedal organ at Weingarten, made in the first half of last century, is in reality 16 feet in length, of tin, and 3½ inches in diameter.

Harmonic stops have in recent years come into great favour, in the first instance through the careful and successful experiments of the eminent French builder, M. Cavaillé-Coll, of Paris. Guided by the fact that performers upon wind instruments exercise a greater pressure of wind for the production of the higher notes than the lower, the above ingenious builders applied the same principle to some of their organ registers, with the most excellent result. In this manner they produced the stops—most of which have been naturalized in England—called ‘Flute Harmunique, 8 pieds,’ ‘Flute Octavante, 4 pieds,’ ‘Trompette Harmonique, 8 pieds,’ etc. At first only a few experimental pipes were made to test the soundness of the theory, for the resistance presented to the finger by the highly compressed air was so excessive as to prevent their adoption in practice; but the invention of the Pneumatic lever removed this objection, and Harmonic Stops and the Pneumatic attachment were introduced together for the first time, in Cavaille’s fine organ in the abbey church of St. Denis near Paris, finished in 1841. Very effective Harmonic Flutes, though naturally less powerful, are frequently voiced upon a wind of the ordinary strength when there is a copious supply of it. [E. J. H.]

HARMONIC UNION, THE. A society based on subscriptions, ‘for the performance of sacred and secular music both of the Ancient and Modern Schools,’ and particularly of living composers, with Solos, Chorus and Orchestras. The first proposal was issued in July, 1853, Mr. Benedict was chosen conductor, and Mr. Blackman leader; the concerts took place at Exeter Hall, and the subscription was 2½ 3 per head. The first was held on Dec. 17, 1854, the programme being Metot No. 6, J. S. Bach, and the oratorio of Joseph by C. E. Horsley. Others followed at about a month’s interval until Feb. 23, 1854, which appears to have been the date of the last. Many new works were brought forward, such as Horsley’s Joseph; Macfarren’s Venora; Pierson’s Jerusalem; F. Mori’s Fridolin; Symphony (G minor) by C. E. Stephens—besides the Messiah, Acis and Galatea (with Mozart’s accompaniments), Alexander’s Feast, Ruins of Athens, Elijah, Walpurgisnight, Midsummer Night’s Dream, etc. [G.]

HARMONIE, the French and German word for the wind instruments of the orchestra. Musique d’harmonie or Harmonie musik is music written for wind-band alone, such as Mendelssohn’s overture in C, op. 24. Meyerbeer’s Fakeltei, etc. The origin of the term is not known. [G.]

HARMONIUM (French, also Orgue expressif). A well-known popular keyed instrument, the tones of which are produced by thin tongues of brass or steel, set in periodic motion by pressure of air, and called ‘vibrators.’ They are known also as ‘free reeds’; reeds, because their principle is that of the shepherd’s pipe; free, because they do not entirely close the openings in which they vibrate at any period of their movement, while those generally used in the organ, known as ‘beating or striking reeds,’ close the orifice at each pulsation. It is not however the vibration of the tongue itself that we hear as the tone: according to Helmholtz this is due to the escape of the air in puffs near its point, the rapidity of alternation of the puffs determining the pitch. The timbre of the note is conditioned in the first place by this opening, and then by the size and form of the channel above the tongue and its pallet hole, through which the air immediately passes. The Harmonium is the most modern of keyed instruments, if we include the nearly related American Organ, in which the vibrator is set in motion by reverse power, that is by drawing in the air; for if we go back to the earliest attempts to make instruments of the kind we are still within the 19th century. The usefulness and convenience of the harmonium have gone far to establish it, almost as a rival, in a commercial sense, to the pianoforte. It has been too much the practice to regard the harmonium only as a handy substitute for the organ, and this has been fostered by interested persons to the detriment of its individuality and the loss of the perception that it has reason to exist from its own merits as a musical instrument. It is true that like the organ the tones of the harmonium may be sustained at one power so long as the keys are kept down, and variety of timbre is obtained by using the stops; but when the Expression stop is used, by which the air reservoir is cut off and the pressure made to depend entirely upon the management of the bellows, the harmonium gains the power of increase and decrease of tone under the control of the player, who by the treadles can graduate the condensation of the wind almost as a violin-player manages his tone by the bow. To use this power artistically the harmonium—player must have skill; and few take to this instrument with anything like the high technical aim with which the pianoforte and violin are studied. There is however no reason that there should not be a school of composers and players competent to utilize and develop the individual character of the instrument.

The history of the harmonium is intimately connected with that of the different wind harmonicas which from the musical fruit and baby trumpets of Nuremberg, to accordions and concertinas, have during the past fifty years had such extensive popularity. Unlike as the whole tribe of reed organs have been to any notion of music that pertained to ancient Greece, it is not a little surprising that a large vocabulary of Greek names should have been adopted to describe them. The first name, and one still in use, that of Orgue expressif, was due to a French...
The experiments of Sebastian Erard with free reeds, of which Geytray thought so much, were already known. A few years later than these, about 1814 some say, and quite independently, Eschenbach of Koenigsbaven in Bavaria invented a keyboard instrument with vibrators, which he named ‘Organo-violine.’ Then began the Greek era. In 1816 Schlimbach of Ohrdruff, improving upon Eschenbach, produced the Æoline. The next step was an apparatus for continuous wind, by Voit of Schweinfurt, who called his instrument Ælodicon. In 1818 Anton Häckel of Vienna constructed a diminutive Æoline as an instrument to be used with a pianoforte, bringing it out as Phys harmonica. This bellows-harmonica Professor Payer took with him to Paris in 1823, and several imitations were made of it, one of which, the Aerophone of Christian Dietz, was described by him in the 6th volume of the Revue Musicale (Paris 1829). Returning to Germany, Reich of Pforz, near Nuremberg, produced at Munich in 1820 timbre registers imitating the clarinet and bassoon. The 16-foot or octave-deeper register Fétis attributes to Fournaux peré de Paris, 1836. The Melophone came out at the Paris Exhibition of 1834, and was probably made by Jacquet, whom the same authority quotes as the only maker of melophones in 1855. Elsewhere we read of an Ælodicon with bent tongues, and of a Terpodon with tongues of wood; of an Æolophone, an Adelphone, an Adiaphonon, an Harmonicon, and a Harmonie; of Melodiums, Æolians, and Panorgues; of the Poikilorgue of M. Cavalli-Coll, etc. In England keyboard harmonicas with bellows were known by the name of Sera phine, which was not a harmonium, for it had no channels for the tongues. The oldest English patent for a sphariphone is that of Myers and Steger, dated July 20, 1859. It must be noted that nearly all these instruments had but one complete set of vibrators to a keyboard. The Organo, a tentative instrument of Alexandre Debain (born 1809, died 1877), had two notes an octave apart on each key. To this remarkable mechanician was due the gathering up the work of all his predecessors and uniting four stops on one keyboard to produce the Harmonium. His first patent for this instrument, in Paris, is dated Aug. 9, 1849 (Notabilités de la Facture Instrumentale, Paris 1857). Inventor or improver, Debain had the great merit of opening the path to contrasts in colour of free reed tone, by means of various sized channels to the vibrators, submitted in different registers, to one keyboard. It was however unfortunate that in the defence of his rights he was induced to secure to himself the sole privilege of using the name Harmonium in France, thus forcing other makers to use the name Organ, and thus to add another stone to the cairn of confusion in musical instrument nomenclature. Of late the name Reed-organ has been used to express both the harmonium and the American organ, and is perhaps the best way out of a difficulty. The next great invention after Debain —attributed by Fétis to the Alexanders, father and son —was the Expression, already mentioned, the creation of a new and aesthetically more valuable harmonium. Another major invention was that of Martin, who gave the harmonium, to use a technical term, ‘quicker speech,’ i.e. made the sound more quickly follow the descent of the key. The invention is known as ‘percussion,’ and is an adaptation of the pianoforte escapement, by which a little hammer strikes the tongue at the same moment that it receives the impact of the wind. Another invention of Martin’s, termed ‘prolongement,’ enables the player to prolong certain notes after the fingers have quitted the keys. Martin governed this by knee pedals, but it is now usually effected by a stop, and knocked off at will by a little heel movement. The ‘melody-attachment’ of William Dawes, patented in London 1864, has the effect of making the melody-note, or air, when in the highest part, predominate, by a contrivance that shuts off all notes below the highest in certain registers of a combination. In the ‘pedal-substitute’ of Dawes and Ramsden this is reversed, and the lowest notes can be made to predominate over the other notes of a left hand chord. An important invention, and curious as bringing the pianoforte touch to a certain extent upon the harmonium keyboard, is the ‘double touch,’ invented by an English musician, Mr. Augustus L. Tamplin, before 1855, and now introduced systematically in the famous harmoniums of Mustel of Paris, and of Mr. Gilbert L. Bauer, an artistic London maker, and producing emphasised or strengthened tones by a greater depression of the key. Another important invention of the greatest delicacy is Mustel’s ‘pneumatic balance’ (French Double Expression)—valves of delicate construction acting in the wind reservoir, and keeping the pressure of air in it practically equal, so that it cannot possibly be overblown.

Proceeding now to the structure of the harmonium it is sufficient to notice externally the keyboard and treadles as prominent features. The latter (a), moved by the foot of the player, feed the bellows (b); the air is by them forced up the wind-trunk (g) into the wind-chest (d), and from thence, while the expression-stop is not
drawn, into the reservoir (f), in a continuous and equal stream, excess in which is obviated by a discharge pallet (e) acting as a safety valve. But when the expression stop is drawn and the expression hole (h) to the reservoir is consequently closed, the air acts directly upon the vibrators or tongues (m), from the feeders (c). The entire apparatus for the wind is covered by the bellows-board (k), containing the valves (j) that admit the wind to the different rows of vibrators or reed compartments, as the stops (t) may be drawn. Above the bellows board is the 'pan' (l), sometimes erroneously called the soundboard, a board of graduated thickness in which are the channels (n) — separate chambers of air to each vibrator, determining, as said before, the different timbres. The proportions of the channels and size of the pallet-holes are found empirically. The air within the channels, set in vibration by the tongues, is highly compressed. Sometimes, to gain space and a different quality, the channels with their tongues are placed upright. A stop (t) being drawn and a key (q) depressed, wind is admitted by the action to the tongue or vibrator, and escapes by the pallet hole (o) — at a comparatively even pressure if it comes from the reservoir, or at a varying pressure if, as already explained, the expression stop is drawn and the wind comes from the feeders direct.

We give a cut of the percussion action already alluded to. Here q is the key, which on being depressed sends down a 'plunger' (u), which acts upon a little escapement action, with lever (b), hammer (c), and set-off (d); m is the reed, which by this arrangement is struck by the hammer and assisted to move at the moment the wind is admitted.

The harmonium has a keyboard of five octaves at 8-ft. pitch. The bass stops range up to and include the on the first line of the treble staff; and the treble stops range from the f upwards —29 and 32 notes, respectively — a wider compass than any other wind instrument. In an ordinary harmonium the registers or rows of vibrators are four in number, divided as just stated, into bass and treble, and again into front and back organs as they are technically called. The front organ has the foundation and fuller toned stops, the back organ the imitation and more reedy stops. Thus, adding the French names as they are frequently to be met with —

Front. No. 1. Diapason bass and Diapasons treble—Cor Anglais and Flûte. 8-ft. pitch.

No. 2. Bourdon bass and Double Diapasons treble—Bourdon and Clarinette. 16-ft. pitch.

Back. No. 3. Clarion bass and Principal treble—Clarin and Fifer. 4-ft. pitch.

No. 4. Bassoon bass and Oboe treble—Bassoon and Horns hos. 8-ft. pitch.

M. Mustel retains this arrangement of the foundation stops in all harmoniums; Mr. Bauer in large harmoniums has doubled them. In the large Mustel instruments other stops of great beauty are added, the indisputable introduction of their ingenious maker —

*Harpe Bolienne.* Bass. 3-ft. pitch. Two ranks of
HARMONY.

Music it becomes clear that a scale adapted for any kind of elaboration of harmony could only be arrived at by centuries of labour and thought. In the search after such a scale experiment has succeeded experiment, those which were successful serving as the basis for further experiments by fresh generations of musicians till the scale we now use was arrived at. The ecclesiastical scales, out of which our modern system was gradually developed, were the descendants of the Greek scales, and like them only adapted for melody, which in the dark ages was of a sufficiently rude description. The people’s songs of various nations also indicate characteristic scales, but these were equally unfit for purposes of combination, unless it were with a drone bass, which must have been a very early discovery. In point of fact the drone bass can hardly be taken as representing any idea of harmony proper; it is very likely that it originated in the instruments of percussion or any other form of noise-making invention which served to mark the rhythms or divisions in dancing or singing; and as this would in most cases (especially in barbarous ages) be only one note, repeated at whatever pitch the melody might be, the idea of using a continuous note in place of a rhythmic one would seem naturally to follow; but this does not necessarily imply a feeling for harmony, though the principle had certain issues in the development of harmonic combinations, which will presently be noticed. It would be impossible to enter here into the question of the construction and gradual modification of the scales. It must suffice to point out that the ecclesiastical scales are tolerably well represented by the white notes of our keyed instruments, the different ones commencing upon each white note successively, that commencing on D being the one which was more commonly used than the others. In these scales there were only two which had a leading note or major seventh from the tonic. Of these the one beginning on F (the ecclesiastical Lydian) was vitiated by having an augmented fourth from the Tonic, and the one commencing on C (the ecclesiastical Ionic, or Greek Lydian) was looked upon with disfavour as the ‘modus lascivus.’ These circumstances affected very materially the early ideas of harmony; and it will be seen that, conversely, the gradual growth of the perception of harmonic relations modified these ecclesiastical scales by very slow degrees, by the introduction of accidentals, so that the various modes were by degrees fused into our modern major and minor scales.

The earliest attempts at harmony of which there are any examples or any description, was the Diaphony or Organum which is described by Hucbald, a Flemish monk of the tenth century, in a book called ‘Enchiridion Musicum.’ These consist for the most part of successions of fourths or fifths, and octaves. Burney gives an example from the work, and translates it as follows:

\[ \text{Example of Diaphony or Organum} \]

\[ \text{Music notation showing diaphony or organum} \]
The practice of adding extra parts to a Canto fermo at the distance of a fourth or fifth, with an octave to make it complete, seems to have been common for some time, and was expressed by such terms as 'distessonare,' or in French 'quintoier.' This however was not the only style of combination known to Hucbald, for in another example which consists chiefly of successions of fifths and octaves the parallelism is interrupted at the close, and the last chord but one contains a major sixth. Further than this, Burney gives an example in which the influence of a drone bass or holding note is apparent, whereby the origin of passing notes is indicated, as will be observed in the use of a ninth transitionally between the combinations of the octave and the tenth in the following example at *.

[Music notation]

The use of tenths in this example is remarkable, and evidently unusual, for Guido of Arezzo, who lived full a century later, speaks of the 'symphonias vocum' in his Antiphonarium, and mentions only fourths, fifths, and octaves. This might be through Hucbald's notions of combination being more vague than those of Guido, and his attempts at harmony more experimental; for, as far as can be gathered from the documents, the time which elapsed between them was a period of gradual realisation of the qualifications of intervals, and not of progress towards the use of fresh ones. Guido's description of the Organum is essentially the same as the succession of fourths and fifths given by Hucbald; he does not however consider it very satisfactory, and gives an example of what was more musical according to his notions; but as this is not in any degree superior to the second example quoted from Hucbald above, it is clear that Guido's views on the subject of Harmony do not demand lengthy consideration here. It is only necessary to point out that he seems to have more defined notions as to what is desirable and what not, and he is remarkable also for having proposed a definition of Harmony in his Antiphonarium in the following terms—'Armonia est diversarum vocum apta confundatio.'

The Diaphony or Organum above described was succeeded, perhaps about Guido's time, by the more elaborate system called Discantus. This consisted at first of manipulation of two different tunes so as to make them tolerably endurable when sung together. Helmholts suggests that 'such examples could scarcely have been intended for more than musical tricks to amuse social meetings. It was a new and amusing discovery that two totally independent melodies might be sung together and yet sound well.' The principle was however early adopted for ecclesiastical purposes, and is described under the name Discantus by Franco of Cologne, who lived but little after Guido in the eleventh century. From this Discantus sprang counterpoint and that whole genus of polyphonic music, which was developed to such a high pitch of perfection between the 14th and the 17th centuries; a period in which the minds of successive generations of musicians were becoming unconsciously habituated to harmonic combinations of greater and greater complexity, ready for the final realisation of harmony in and for itself, which, as will be seen presently, appears to have been achieved about the year 1600. Franco of Cologne, who as above stated describes the first forms of this Descant, is also somewhat in advance of Guido in his views of harmony. He classifies concords into perfect, middle, and imperfect consonances, the first being the octaves, the second the fourths and fifths, and the third the major and minor thirds. He puts the sixths among the discords, but admits of their use in Descant as less disagreeable than flat seconds or sharp fourths, fifths, and sevenths. He is also remarkable for giving the first indication of a revulsion of feeling against the system of 'Organising' in fifths and fourths, and a tendency towards the modern dogma against consecutive fifths and octaves, as he says that it is best to mix imperfect concords with perfect concords instead of having successions of imperfect or perfect.

It is unfortunate that there is a deficiency of examples of the secular music of these early times, as it must inevitably have been among the unsophisticated geniuses of the lastity that the most daring experiments as in the art were made; and it would be very interesting to trace the process of selection which must have unconsciously played an important part in the survival of what was fit in these experiments, and the non-survival of what was unfit. An indication of this progress is given in a work by Marchetto of Padua, who lived in the 13th century, in which it appears that secular music was much cultivated in Italy in his time, and examples of the chromatic progressions which were used are given; as for instance—

[Music notation]

Marchetto speaks also of the resolutions of Discords, among which he classes fourths, and explains that the part which offends the ear by one of these discords must make amends by passing to a concord, while the other part stands still. This classification of the fourth among discords, which here appears for the first time, marks a decided advance in refinement of feeling for harmony, and a boldness in accepting that feeling as a guide in preference to theory. As far as the ratios of the vibrational numbers of the limiting sounds are concerned, the fourth stands next to the fifth in excellence, and above the third; and theoretically this was all that the medieval musicians had to guide them. But they were instinctively choosing those consonances which are represented in the compound
HARMONY.

tone of the lower note, that is in the series of harmonics of which it is the prime tone, or 'generator,' and among these the fourth does not occur; and they had not yet learnt to feel the significance of inversions of given intervals; and therefore the development of the system of harmonies, dealing as yet only with combinations of two different notes at a time, would lead them to reject the fourth, and put it in the category of discordant fourths, in which it has ever since remained as far as contrapuntal music is concerned, while even in harmonic music it cannot be said to be at all on an equality with other consonances.

The next writer on music of any prominent importance after Marchetto was Jean de Muries, who lived in the 14th century. In his 'Ars Contrapuncti' he systematizes concords, as the previous writers had done, into perfect and imperfect; but his distribution is different from Franco's, and indicates advance. He calls the octave and the fifth the perfect, and the major and minor thirds and major sixths the imperfect concords. The minor sixth he still excludes. Similarly to Franco he gives directions for intermingling the perfect and imperfect concords, and further states that parts should not ascend or descend in perfect concords, but that they may in imperfect. It is clear that individual caprice was playing a considerable part in the development of musical resources in de Muries's time, as he speaks with great bitterness of extempore descanters. He says of this new mode of descanting, in which they professed to use new concords, 'O magnus abusus, magna ruditas, magna bestialitas, ut asinus sumatur pro homine, capra pro leone,' and so on, concluding, 'sic enim concordiae confunduntur cum discordia ut nullatenus una distinctur ab alia.' Such wildness may be aggravating to a theorist, but in early stages of art it must be looked upon with satisfaction by the student who sees therein the elements of progress. Fortunately, after de Muries's time, original examples begin to multiply, and it becomes less necessary to refer to reporters for evidence, as the facts remain to speak for themselves. Kiesewetter gives an example of four-part counterpoint by Dufay, a Netherlander, who was born about 1360. This is supposed to be the earliest example of its kind extant, and is a very considerable advance on anything of which there is any previous account or existing examples, as there appears in it a frequent use of what we call the complete common chord with the third in it, and also its first inversion; and in technical construction especially it shows great advance in comparison with previous examples, and approaches much nearer to what we should call real music. It requires to be noted moreover that this improvement in technical construction is the most striking feature of the progress of music in the next two centuries, rather than any large extension of the actual harmonic combinations.

The works of Ockeghem, who lived in the next century to Dufay, do not seem to present much

that is worthy of remark as compared with him. He occasionally uses suspended discords in chords of more than two parts, as—

from a canon quoted by Burney; but discords are of rare occurrence in his works, as they are also in those of his great pupil Josquin de Prés. For instance, in the first part of the Stabat Mater by the latter (in the Raccolta Generale delle Opere Classiche, edited by Choron), there are only ten examples of such discords in the whole eighty-eight bars, and it is probable that this was a liberal supply for the time when it was written.

Ambros says that Josquin was the first to use accidentals to indicate the modifications of notes, which we are tolerably certain must have been modified according to fixed rules before his time without actual indication in the copies. Josquin certainly made use of them also to obtain effects which could not have been derived from the ordinary principles of rendering the music, and thus took an important step in the direction of assimilating the ecclesiastical scales in the manner which gradually resulted in the musical system we now use. A remarkable instance of this is his use more than once of a concluding chord with a major third in it, the major third being indicated by an accidental. Prior to him the concluding chord had contained only a bare fifth at most, and of this there are examples in his works also, as—

from the Benedictus of the Mass 'Fayans re- regrets' quoted by Burney (Il 500)—in which progression the use of the Eb is worthy of notice; but his use of the major third shows a remarkable advance, especially in the direction of feeling for tonality, which is one of the essential features of modern music.

This use of the major third in the final chord of a piece in a minor key became at a later time almost universal, the only alternative being a bare fifth, as in the last example; and the practice was continued far on into modern music; as by Bach and Handel, in the former of whose works it is very common even in instrumental music. And still later we find it in Mozart, as at the end of the 'Quam olim Abrahae' in the Requiem Mass. On the other hand, at the conclusion of the Chorus 'Dies Irae' of the same mass the final chord appears, as far as the voices are concerned, with only a fifth in it, as in the example from Josquin above. However with composers of the harmonic period such as these it has not been at all a recognized rule to avoid the minor third in the final chord, its employment or avoidance being rather the result of charac-
t eristic qualities of the piece which it concludes. But with composers of the preharmonic period it was clearly a rule; and its origin depended on the same feeling as that which caused them to put the fourth in the category of the discords; for like the fourth, the minor third does not exist as a part of the compound tone of the lower note, and its quality is veiled and undefined; and it was not till a totally new way of looking at music came into force that it could stand on its own basis as final; for among other considerations, the very vagueness of tonality which characterised the old polyphonic school necessitated absolute freedom from anything approaching to ambiguity or vagueness in the concluding combination of sounds. In modern music the passage preceding the final cadence is likely to be all so consistently and clearly in one key, that the conclusion could hardly suffer in definition by the use of the veiled third; but if the following beautiful passage from the conclusion of Josquin’s ‘Deploitation de Jehan Okenheim’ be attempted with a minor third instead of his major third for the conclusion, the truth of these views will be more strongly felt than after any possible argument:

\[\text{\textcopyright 2023 The McGraw-Hill Companies, Inc. All rights reserved.}

In this case it is quite clear that a minor third would not seem like any conclusion at all; even the bare fifth would be better, since at least the harmonic major third of the three A’s would sound unembarrassed by a contiguous semitone, for each of the A’s in the chord would have a tolerably strong harmonic C♯, with which the presence of a C would conflict. But the major third has in this place a remarkable finality, without which the preceding progressions, so entirely alien to modern theories of tonality, would be incomplete, and, as it were, wanting a boundary line to define them.

This vagueness of tonality, as it is called, which is so happily exemplified in the above example, especially in the ‘Amen,’ is one of the strongest points of external difference between the medieval and modern musical systems. The vagueness is to a great extent owing to the construction of the ecclesiastical scales, which gives rise to such peculiarities as the use of a common chord on the minor seventh of the key, as in the following example from Bird’s Anthem, ‘Bow

\[\text{\textcopyright 2023 The McGraw-Hill Companies, Inc. All rights reserved.}

But the actual and vital difference between the two systems lay in the fact that the old musicians regarded music as it were horizontally, whereas the moderns regard it perpendicularly. The former looked upon it and taught it in the sense of combined voice parts, the harmonic result of which was more or less a matter of indifference; but the latter regard the series of harmonies as primary, and base whole movements upon their interdependent connection, obtaining unity chiefly by the distribution of the keys which throws those harmonies into groups. In the entire absence of any idea of such principles of construction, the mediævalists had to seek elsewhere their bond of connection, and found it in Canonic imitation, or Fugue, though it must be remembered that their idea of Fugue was not of the elaborate nature denoted by the term at the present day. As an example of this Canonic form, the famous secular song, ‘Sumer is icum in,’ will serve very well; and as it is printed in score in both Burney’s and Hawkins’s Histories, it will be unnecessary to dwell upon it here, since its harmonic construction does not call for special notice. In all such devices of Canon and Fugue the great early masters were proficient, but the greatest of them were not merely proficient in such technicalities, but were feeling forward towards things which were of greater importance, namely, pure harmonic effects. This is noticeable even as early as Josquin, but by Palestrina’s time it becomes clear and indubitable. On the one hand, the use of note against note counterpoint, which so frequently occurs in Palestrina’s works, brings forward prominently the qualities of chords; and on the other, even in his polyphony it is not uncommon to meet with passages which are as clearly founded on a simple succession of chords as anything in modern music could be. Thus the following example from the motet, ‘Hec dies quam fecit Dominus’—
is simply an elaboration of the progression:

\[\text{Music notation}\]

In fact, Palestrina’s success in the attempt to revivify Church Music lay chiefly in the recognition of harmonic principles; and in many cases this recognition amounted to the use of simple successions of chords in note against note counterpoint, as a contrast to the portion of the work which is polyphonic. His success also depended to a great degree on a very highly developed sense for qualities known as chords arising from the distribution of the notes of which they are composed. He uses discords more frequently than his predecessors, but still with far greater reticence than a modern would do; and in order to obtain the necessary effects of contrast, he uses chords in various positions, such as give a variety of qualities of softness or roughness. This question, which shows to what a high degree of perfection the art was carried, is unfortunately too complicated to be discussed here, and the reader must be referred to part ii. chap. 12 of Helmholtz’s work on the ‘Sensations of Tone as a physiological basis for the theory of Music,’ where it is completely investigated. As an example of the freedom with which accidentals were used in secular music in Palestrina’s time may be taken the following passage from a madrigal by Cipriano Rore, which is quoted by Burney (Hist. iii. 319):

\[\text{Music notation}\]

It will have been remarked from the above survey, that from the dawn of any ideas of combination of notes, musicians were constantly accepting fresh facts of harmony. First perfect consonances, then imperfect, and then suspended discords, which amounted to the delaying of one note in passing from one concord to another; then modifications of the scales were made by the use of accidentals, and approaches were by that means made towards a scale which should admit of much more complex harmonic combinations. But before it could be further modified, it was necessary that a new standpoint should be gained. The great musicians of the 16th century had carried the art to as high a pitch of perfection in the pure polyphonic style as seems to us possible, and men being accustomed to hear in their works the chords which were the result of their polyphony were ready for the first steps of transition from that style to the harmonic. Palestrina, the hero of the old order, died in 1592, and in 1600 the first modern opera, the ‘Euridice’ of Gioacomo Peri, was performed at Florence. It is impossible to point definitely to any particular time and say, Here the old order ended and the new began; for in point of fact the periods overlap one another. A species of theatrical performance accompanied by music had been attempted long before this, and secular music had long displayed very free use of chromaticisms similar to the modern style of writing; and, on the other hand, fine examples of polyphony may be found later; but nevertheless the appearance of this opera is a very good typical landmark, since features of the modern school are so clearly displayed in it, such as arias and recitatives accompanied harmonically after the modern manner; moreover in these the harmonies are indicated by figures, which is a matter of considerable importance, as it implies a total change of position relative to the construction of the music. As long as harmony was the accidental result of the combination of different melodies, the idea of using abbreviations for a factor which was hardly a recognized part of the effect would not have occurred to any one, but as soon as harmony came to be recognized as a prominent fact, the use of signs to indicate the grouping of notes into these chords would naturally suggest itself, especially as in the infancy of these views the chords were of a simple description. That the system of figuring a bass was afterwards largely employed in works founded exclusively on the old theory of counterpoint is no argument against this view, as no one can fail to see how entirely inadequate the figuring is to supply any idea whatever of the effects of contrapuntal music. With Peri are associated the names of Cavaliere, Viadana, Caccini, and Monteverde. To Caccini the invention of recitative is attributed, to Viadana that of the ‘basso continuo,’ and to Monteverde the boldest new experiments in harmony; and to the present question the last of these is the most important. It has already been remarked that during the previous century progress had been rather in technical expression and perfection of detail than in new harmonies. Palestrina’s fame does not rest upon elaborate discords, but upon perfect management of a limited number of different combinations. Monteverde evidently abandoned this ideal refinement, and sought for harsher and more violent forms of contrast. Thus in a madrigal ‘Stracci me pur,’ quoted in Burney’s History (iii. 239), the following double suspensions occur:

\[\text{Music notation}\]

But a far more important innovation, which there need be no hesitation in attributing to him, as he was personally blamed for it by the dogmatists of his time, was the use of the minor seventh, which we call the Dominant seventh, without preparation. There is more than one example
of this in his works, but one which occurs in a madrigal, 'Cruda Amarilli,' is specially remarkable, as it is preceded by a ninth used evidently as a grace-note in a manner which for his time must have been very daring. It is as follows:

This independent manner of using the Dominant seventh shows an appreciation of the principle of the relation of chords through a common tonic: that is to say, the connection and relative importance of chords founded on different root notes of a scale according to the modern and not the old ecclesiastical principle. It is true that the very idea of roots of chords did not suggest itself as a realisable conception till nearly a century later; but as is usual in these cases, artistic instinct was feeling its way slowly and surely, and scientific demonstration had nothing to do with the discovery till it came in to explain the results when it was all accomplished. The development of this principle is the most important fact to trace in this period of the history of music. Under the ecclesiastical system one chord was not more important than another, and the very existence of a Dominant seventh according to the modern acceptance of the term was precluded in most scales by the absence of a leading note which would give the indispensable major third. The note immediately below the Tonic was almost invariably sharpened by an accidental in the cadence in spite of the prohibition of Pope John XXII, and musicians were thereby gradually realizing the sense of the dominant harmony; but apart from the cadence this note was extremely variable, and many chords occur, as in the example already quoted from Byrd, which could not occur in that manner in the modern scales, where the Dominant has always a major third. Even considerably later than the period at present under consideration—as in Carissimi and his contemporaries, who represent very distinctly the first definite harmonic period—the habits of the old ecclesiastical style reappear in the use of notes and chords which would not occur in the same tonal relations in modern music; and the effect of confusion which results is all the more remarkable because they had lost the nobility and richness which characterised the last and greatest period of the polyphonic style. The deeply ingrained habits of taking the chords wherever they lay, according to the old teaching of Descant, retarded considerably the recognition of the Dominant and Tonic as the two poles of the harmonic circle of the key; but Monteverde's use of the seventh, above quoted, shows a decided approach to it. Moreover in works of this time the universality of the harmonic Cadence as distinguished from the cadences of the ecclesiastical modes becomes apparent. The ecclesiastical cadences were nominally defined by the progressions of the individual voices, and the fact of their collectively giving the ordinary Dominant Cadence in a large proportion of instances was not the result of principle, but in point of fact an accident. The modern Dominant Harmonic Cadence is the passage of the mass of the harmony of the Dominant into the mass of the Tonic, and defines the key absolutely by giving successively the harmonics which represent the compound tone d the two most important roots in the scale, the most important of all coming last.

The following examples will serve to illustrate the character of the transition. The conclusion of Palestrina's Motet, 'O bone Jesu,' is as follows:

In this a modern, regarding it in the light of masses of harmony with a fundamental bass, would find difficulty in recognizing any particular key which would be essential to a modern Cadence; but the melodic progressions of the voices according to the laws of Cadence in Descant are from that point of view sufficient. On the other hand, the following conclusion of a Canzona by Frescobaldi, which must have been written within fifty years after the death of Palestrina, fully illustrates the modern idea, marking first the Dominant with great clearness, and passing thence firmly to the chord of the Tonic F:

It is clear that the recognition of this relation between the Dominant and Tonic harmony was indispensable to the perfect establishment of the modern system. Composers might wake up to the appreciation of the effects of various chords and of successions of full chords (as in the first chorus of Carissimi's 'Jonah'), but insomuch as the Dominant is indispensable for the definition of a key (hence called 'der herrschende Ton'), the principle of modulation, which is the most important secondary feature of modern music, could not be systematically and clearly carried out till that
means of defining the transition from one key to another had been attained. Under the old system there was practically no modulation. The impression of change of key is not infrequently produced, and sustained for some time by the very scarceness of accidentals; since a single accidental, such as F♯ in the progress of a passage in C, is enough to give to a modern musician the impression of change to G, and the number of chords which are common to G and C would sustain the illusion. Sufficient examples have already been given to show that these impressions are illusory, and reference may be made further to the commencement of Palestrina's ‘Stabat Mater’ in 8 parts, and his Motet ‘ Hodie Christus natus est,’ and Gibbons's Madrigal 'Ah, dear heart,' which will also further show that even the use of accidentals was not the fruit of any idea of modulation. The frequent use of the perfect Dominant Cadence or 'full Close,' must have tended to accustom composers to this important point in modern harmony, and it is inevitable that musicians of such delicate artistic sensibility as the great composers of the latter part of the 16th century should have approached nearer and nearer to a definite feeling for tonality, otherwise it would be impossible to account for the strides which had been made in that direction by the time of Carissimi. For in his works the principle of tonality, or in other words the fact that a piece of music can be written in a certain key and can pass from that to others and back, is certainly displayed, though the succession of these keys is to modern ideas irregular and their individuality is not well sustained, owing partly no doubt to the lingering sense of a possible minor third to the Dominant.

The supporters of the new kind of music as opposed to the old polyphonic style had a great number of representative composers at this time, as may be seen from the examples in the fourth volume of Burney's History; and among them a revolutionary spirit was evidently powerful, which makes them more important as innovators than as great musicians. The discovery of harmony seems to have acted in their music for a time unfavourably to its quality, which is immensely inferior to that of the works of the polyphonic school they were supplanting. Their harmonic successions are poor, and often disagreeable, and in a large number of cases purely tentative. The tendency was for some time in favour of the development of tunes, to which the new conceptions of harmony supplied a fresh interest. Tunes in the first instance had been homophonic—that is, absolutely devoid of any sense of relation to harmony; and the discovery that a new and varied character could be given to melody by supplying a harmonic basis naturally gave impetus to its cultivation. This also was unfavourable to the development of a high order of art, and it was only by the re-establishment of polyphony upon the basis of harmony, as we see it displayed to perfection in the works of Bach, that the art could regain a lofty standard comparable to that of Palestrina, Lasso, Byrd, Gibbons, and the many great representatives of the art at the end of the sixteenth and the beginning of the seventeenth centuries. In point of fact harmonic music cannot be considered apart from the parts or voices of which it is composed. It consists of an alternation of discord and concord, and the passage of one to the other cannot be conceived except through the progression of the parts. As has been pointed out with respect to the discovery of harmonic or tonal form in musical composition in the article FORM, the effect of the new discovery was at first to make composers lose sight of the important element of progression of parts, and to look upon harmony as pre-eminent; consequently the progressions of parts in the works of the middle of the 17th century seem to be dull and uninteresting. Many composers still went on working in the light of the old system, but they must be regarded in relation to that system, and not as representatives of the new; it was only when men strong enough to combine the principles of both schools appeared that modern music sprang into full vigour. The way was prepared for the two great masters who were to achieve this at the beginning of the eighteenth century by the constant labours and experiments of the composers of the seventeenth. It would be impossible to trace the appearance of fresh harmonic material, as the composers were so numerous, and many of their works, especially in the early period, are either lost or unattainable. But in surveying the general aspect of the works which are available, a gradual advance is to be remarked in all departments, and from the mass of experiments certain facts are established. Thus clearness of modulation is early arrived at in occasional instances; for example, in an opera called 'Orontes' by Cesti, which was performed at Venice as early as 1649, there is a sort of short Aria, quoted by Burney (iv. 67), which is as clearly defined in this respect as any work of the present day would be. It commences in E minor, and modulates in a perfectly natural and modern way to the relative major G, and makes a full close in that key. From thence it proceeds to A minor, the sub-dominant of the original key, and makes another full close, and then, just touching G on the way, it passes back to E minor, and closes fully in that key. This is all so clear and regular according to modern ideas that it is difficult to realise that Cesti wrote within half a century of Palestrina, and of the first recognition of the elements of modern harmony by Caccini, Monteverde, and their fellows. The clearness of each individual modulation, and the way in which the different keys are rendered distinct from one another, both by the use of appropriate Dominant harmony, and by avoiding the obscurity which results from the introduction of foreign chords, is important to note, as it indicates so strongly the feeling for tonality which by constant attention and cultivation culminated in the definite principles which we assume. That the instance was tentative, and that Cesti was
guided by feeling and not rule, is sufficiently proved by the fact that not only contemporary musicians, but successive generations up to the end of the century, and even later, frequently fell into the old habits, presenting examples of successions of harmony which are obscure and confused in key.

It is not possible to discover precisely when the use of the seventh in the Dominant Cadence came into use. It has been already pointed out that Monteverdi hazarded experimentally the use of the Dominant seventh without preparation, but nevertheless it does not seem to have been used with any obvious frequency by musicians in the early part of the 17th century; but by the middle and latter part it is found almost as a matter of course, as in the works of the distinguished French instrumental composers Duport, Jacques de Chambonnières, and Couperin. The following is an example from the second of these—

![Harmony Example](image)

which shows how easily it might have been introduced in the first instance as a passing note between the root of the first chord and the third of the next, and its true significance have been seen afterwards.

This use of the seventh in the Dominant chord in the Cadence makes the whole effect of the Cadence softer and less vigorous, but for the purpose of defining the key it makes the Cadence as strong as possible; and this, in consideration of the great latitude of modulation and the great richness and variety of harmony in modern music, becomes of great importance. It does this in three ways. First, by simply adding another note to the positive representative notes of the key which are heard in the Cadence, in which form the submediant (as A in the key of C) will be the only note of the scale which will not be heard. Secondly, by giving a very complete representation of the compound tone of the root-notes as contained in the Diatonic scale; since the seventh harmonic, though not absolutely exact with the minor seventh which is used in harmony, is so near that they can hardly be distinguished from one another, as is admitted by Helmholz. And thirdly, by presenting a kind of additional downward-tending leading-note to the third in the Tonic chord, to which it thereby directs the more attention. In relation to which it is also to be noted that the combination of leading note and subdominant is decisive as regards the key, since they cannot occur in combination with the Dominant as an essential Diatonic chord in any other key than that which the Cadence indicates. The softness which characterises this form of the Cadence has led to its avoidance in a noticeable degree in many great works, notwithstanding its defining properties—as in both the first and last movements of Beethoven's C-minor Symphony, the first movement of his Symphony in A, and the Scherzo of the Ninth Symphony. In such cases the definition of key is obtained by other means, as for example in the last movement of the C-minor Symphony by the remarkable reiteration both of the simple concordant cadence and of the Tonic chord. In the first movement of the A Symphony and the Scherzo of the Ninth, the note which represents the seventh, although omitted in the actual harmony of the Cadences, appears elsewhere in the passage preceding. In respect of definition of key it will be apposite here to notice another form of Cadence, namely that commonly called Plagal, in which the chord of the sub-dominant (as F in the key of C) precedes the final Tonic chord. This Cadence is chiefly associated with ecclesiastical music, to which it was more appropriate than it is in more elaborate modern music. On the one hand it avoided the difficulty of the Dominant chord which resulted from the nature of most of the ecclesiastical scales, while its want of capacity for enforcing the key was less observable in relation to the simpler harmonies and absence of modulation of the older style. This deficiency arises from the fact that the chord of the Sub-dominant already contains the Tonic to which it is finally to pass, and it compound tone which also contains it does not represent a position so completely in the opposite phase to the Tonic as the Dominant does; whence the progression is not strongly characteristic. It also omits the characteristic progression of the leading note up to the Tonic, and does not represent so many positive notes of the scale as the Dominant Cadence. For these various reasons, though not totally banished from modern music, it is rare, and when used appears more as supplementary to the Dominant Cadence, and serving to enforce the Tonic note, than as standing on its own basis. Moreover, as supplementary to the Dominant Cadence it offers the advantage of giving the extra note in the scale which, as has been remarked, is almost inevitably omitted in the Dominant Cadence. Hence an extended type of Cadence is given by some theorists as the most complete, which, as it were, combines the properties of the two Cadences in this form.

![Extended Cadence Example](image)

In this the sub-dominant chord of the weaker Cadence comes first, and a chord of 6-4, as it is called, is inserted to connect it with the Dominant chord, (as otherwise they would have no notes in common and the connection between them harmonically would not be tenable,) and then the Dominant chord passes into the Tonic.
after the usual fashion. Other methods of joining the Subdominant chord to the Dominant chord are plentifully scattered in musical works, as for instance the use of a suspended fourth in the place of the 6–4; but as a type the above answers very well, and it must not be taken as more than a type, since a bare theoretical fact in such a form is not music, but only lifeless theory. As an example of the theory vitalised in a modern form may be given the conclusion of Schumann's Toccata in C for pianoforte (op. 7), as follows:

\[\text{music notation}\]

In this the weak progression of the 6–4 is happily obviated by connecting the Subdominant and Dominant chords by the minor third of the former becoming the minor ninth of the latter; and at the same time the novelty of using the inversion of the Dominant minor ninth as the penultimate chord, and its having also a slight flavour of the old plagal Cadence, gives an additional vitality and interest to the whole. Composers of the early harmonic period also saw the necessity of putting recognised facts in some form which presented novelty and individuality, and their efforts in that direction will be shortly taken notice of. Meanwhile, it must be observed that the discovery of the harmonic Cadence as a means of taking breath or expressing a conclusion of a phrase and binding it into a definite thought, affected music for a time unfavourably in respect of its continuity and breadth. In Polyphonic times, if it was desirable to make a break in the progress of a movement, the composers had to devise their own means to that end and consequently a great variety is observable in the devices used for that purpose, which being individual and various have most of the elements of vitality in them. But the harmonic Cadence became everybody's property; and whenever a composer's ideas failed him, or his imagination became feeble, he helped himself out by using the Cadence as a full stop and beginning again; a proceeding which conveys to the mind of a cultivated modern musician a feeling of weakness and inconsequence, which the softness and refinement of style and a certain sense of languor in the works of the early Italian masters rather tend to aggravate. Thus in the first part of Carissimi's Cantata 'Deh contentatevi,' which is only 74 bars in length, there are no less than 10 perfect Dominant Cadences with the chords in their first positions, besides Interrupted Cadences and imperfect Cadences such as are sometimes called half-closes. This is no doubt rather an excessive instance, but it serves to illustrate the effect which the discovery of the Cadence had on music; and its effect on English ecclesiastical music of a slightly later period, as for instance in the works of Rogers, will be remembered by musicians acquainted with that branch of the art as a proof that the case is not over-stated. It was no doubt necessary for the development of Form in musical works that this phase should be gone through, and the part it played in that development is considered under that head, and therefore must not be further dwelt upon here.

The use of imperfect and interrupted Cadences, as above alluded to, appears in works early in the 17th century, being used relatively to perfect Cadences as commas and semicolons are used in literature in relation to full stops. The form of the imperfect Cadence or half-close is generally a progression towards a pause on the Dominant of the key. The two following examples from Carissimi will illustrate his method of using them:

\[\text{music notation}\]
in which the key is C, and

\[\text{music notation}\]
in which the key is Eb. The form of the Interrupted Cadence which is usually quoted as typical is that where the progression which seems to tend through the Dominant chord to the concluding Tonic chord is made to divert to some other position, such as a chord on the submediant of the key, as on A in the key of C.

This form also appears in Carissimi, but not with any apparent definiteness of purpose. In fact, as a predetermined effect the Interrupted Cadence belongs to a more advanced condition of ideas in music than that illustrated by Carissimi and his followers and contemporaries, and only demands a passing notice here from the fact that it does occur, though rarely. Composers in those times were more in the habit of concluding with the Cadence, and repeating part of what they had said before over again with another Cadence; which answers the same requirements of form as most of the uses of Interrupted Cadences by Bach and Handel, but in a much less refined and artistically intelligent manner.

In order to see the bearings of many of the experiments which were made by the early representatives of harmonic music it will be necessary to return for a short space to their predecessors. The basis which the old contrapuntists had worked upon—which we express, for brevity's sake, in the language which is consistently only applicable to harmonic music, as concords and their first inversions and simple discords of suspension—had been varied and enriched by them by the use of passing notes. In the use of these a great deal of ingenuity was
exercised, and the devices which resulted were in some instances looked upon as everybody's property, and became quite characteristic of the particular form of art. As a type of these may be taken the following from Dufay, who lived in the 14th century, and has already been spoken of as being quoted by Klosewetter—

In this the F is clearly taken as a passing note between G and E, and a note on the other side of the E is interpolated before the legitimate passage of the passing note is concluded. This particular figure reappears with astonishing frequency all through the polyphonic period, as in Josquin's Stabat Mater, in Palestrina's Missa Papae Marcelli, in Gibbons's Hosanna, and in Byrd's Mass. But what is particularly noticeable about it is that it gets so thoroughly fixed as a figure in the minds of musicians that ultimately its true significance is sometimes lost sight of, and it actually appears in a form in which the discord of the seventh made by the passing note is shorn of its resolution. As an example of this (which however is rare) may be taken the following passage from the Credo in Byrd's Mass—

In this the seventh in the treble and its counterpart in the bass never arrive at the Bb on which they should naturally resolve, and musicians were probably so accustomed to the phrase that they did not notice anything anomalous in the progression. It is probable, moreover, that the device in the first instance was not the result of intellectual calculation—such as we are forced to assume in analysing the progression—but merely of artistic feeling; and in point of fact such artistic feeling, when it is sound, is to all appearances a complex intellectual feat done instinctively at a single stroke; and we estimate its soundness or unsoundness by applying intellectual analysis to the result. The first example given above stands this test, but the latter, judged by the light of the rules of Descant, does not; hence we must regard it as an arbitrary use of a well-known figure which is justifiable only because it is well-known; and the principle will be found to apply to several peculiar features which presently will be observed as making their appearance in harmonic music. The early harmonists proceeded in a similar direction in their attempt to give richness to the bare outline of the harmonic substructure by the use of grace-notes, appoggiaturas, anticipatory notes and the like, and by certain processes of condensation or prolongation which they devised to vary the monotonous uniform resolution of discords. Of these some seem as arbitrary as the use of the characteristic figure of the polyphonic times just quoted from Byrd, and others were the fruit of that kind of spontaneous generalisation which we recognise as sound. It is chiefly important to the present question to notice the principles which guided or seem to have guided them in that which seems to us sound. As an example of insertion between a discord and its resolution, the following passage from a Canzona by Frescobaldi may be taken—

in which the seventh (a) is not actually resolved till (b); the principle of the device being the same as in the early example quoted above from Dufay. Bach carried this principle to a remarkable pitch, as for instance

from the Fugue in B minor, No. 24 in the 'Wohltemperirte Clavier.' The simple form of anticipation which appears with so much frequency in Handel's works in the following form—

is found commonly in the works of the Italian composers of the early part of the 17th century. Several other forms also are of frequent occurrence, but it is likely that some of them were not actually rendered as they stand on paper, since it is clear that there were accepted principles of modification by which singers and accompanists were guided in such things just as they are now in rendering old recitatives in the traditional manner, and had been previously in sharpening the leading note of the ecclesiastical modes. Hence it is difficult to estimate the real value of some of the anticipations as they appear in the works themselves, since the traditions have in many instances been lost. An anticipation relative melodically to the general composition of the tonic chord, which is also characteristic of modern music, occurs even as early as Perti, from whose 'Eurydice' the following example is taken—
This feature has a singular counterpart in the Handelian recitative, e.g.—

The following examples are more characteristic of the 17th century.

is quoted by Burney (iv. 34) from Peri. In Carissimi and Cesti are found characteristic closes of recitative in this manner—

but in this case the actual rendering is particularly doubtful, and the passage was probably modified after the manner in which recitatives are always rendered. A less doubtful instance, in which there is a string of anticipations, is from a fragment quoted also by Burney (iv. 147) from a Cantata by Carissimi as follows:—

The use of combinations which result from the simultaneous occurrence of passing notes, a practice so characteristic of Bach, cannot definitely be traced at this early period. Indeed, it is not certain that the musicians had discovered the principle which is most prolific in these effects—namely, the use of preliminary notes a semitone above or below any note of an essential chord, irrespective of what precedes, and at any position relative to the rhythmic divisions of the music, as—

in which B♭, G♭, and D♭, which seem to constitute an actual chord, are merely the result of the simultaneous occurrence of chromatic preliminary passing notes before the essential notes C, A, and C of the common chord of F major. But there is a combination which is very common in the music of the 17th century, which has all the appearance of being derived from some such principle, and demands notice. It appears in Cesti's 'Orontee' (Burney, iv. 68) as follows:—

and, however preceded, it always amounts to the same idea—namely, that of using an unprepared seventh on the subdominant of the key (major or minor) preceding the Dominant chord of the Cadence. This may be explained as a passing note downwards towards the uppermost note of the succeeding concord on the Dominant, which happens to coincide with the passing note upwards between the third of the tonic chord and the root of the Dominant chord,—as C between B♭ and D in the example; in which case it would be derived from the principle above explained; or on the other hand the passage may be explained on the basis of the old theory of passing notes in a way which is highly illustrative of the methods by which novelty is arrived at in music. Composers were accustomed to the progression in which a chord of 6–4 precedes the Dominant chord, as—

and having the particular melodic progression which results from this well fixed in their minds, they inserted a passing note on the strong beat of the bar in the bass without altering the treble, as in the example quoted above from Cesti, and thereby added considerably to the vigour of the passage. This particular feature seems to have been accepted as a musical fact by composers, and appears constantly, from Monteverde till the end of the century, among French and Italians alike; and it is invested with the more interest because it is found in Lully in an improved form, which again renewed its vitality. It stands as follows in a Sarabande by him—

and this form was adopted by Handel, and will be easily recognised as familiar by those acquainted with his works. Corelli indicates the firm hold which this particular seventh had obtained
on the minds of musicians by using it in immediate succession to a Dominant 7th, so that the two intervals succeed each other in the following manner:

in the Sonata II of the Opera 2nda, published in Rome, 1685. These methods of using passing notes, anticipations, and like devices, are extremely important, as it is on the lines thereby indicated that progress in the harmonic department of music is made. Many of the most prolific sources of variety of these kinds had descended from the contrapuntal school, and of these their immediate successors took chief advantage; at first with moderation, but with ever gradually increasing complexity as more insight was gained into the opportunities they offered. Some devices do not appear till somewhat later in the century, and of this kind were the condensation of the resolution of suspensions, which became very fruitful in variety as music progressed. The old-fashioned suspensions were merely temporary retardations in the progression of the parts which, taken together in their simplicity, constituted a series of concords. Thus the succession—

is evidently only a sophisticated version of the succession of sixths—

and the principle which is applied is analogous to the other devices for sophisticating the simplicity of concords which have been analysed above; and the whole shewing how device is built upon device in the progress of the art. Sometime in the 17th century a composer, whose name is probably lost to posterity, hit upon the happy idea of making the concordant notes move without waiting for the resolution of the discordant note, so that the process—

in which there are three steps, is condensed into the following (from Alessandro Scarlatti)—

In which there are only two to gain the same end. This device is very common at the end of the 17th century, as in Corelli, and it immediately bore fresh fruit, as the possibility of new successions of suspensions interlaced with one another became apparent, such as—

in which each shift of a note which would be considered as part of the implied concord creates a fresh suspension. And by this process a new and important element of effect was obtained, for the ultimate resolution of discord into concord could be constantly postponed although the harmonies changed; whereas under the old system each discord must be resolved into the particular concord to which it belonged, and therefore the periods of suspense caused by the discords were necessarily of short duration. In dealing with discords attempts were occasionally made to vary the recognized modes of their resolutions; for instance, there are early examples of attempts to make the minor seventh resolve upwards satisfactorily, and both Carissimi and Purcell endeavoured to make a seventh go practically without any resolution at all, in this form—

from Purcell's 'Dido and Æneas'—where the resolution is only supplied by the second violins—

and from Carissimi—in which it is not supplied at all, if Burney's transcription (iv. 147) is correct. Another experiment which illustrates a principle, and therefore demands notice, is the following from Purcell's service in Bb, in which the analogue of a pedal in an upper part is used to obtain a new harmonic effect:

About this time also a chord which is extremely characteristic of modern music makes its appearance, namely, the chord of the diminished seventh. This appears for example, unprepared in Corelli's Sonata X of the 'Opera Terza,' published in 1689, as follows—
In this and in other instances of his use of it, it occupies so exactly analogous a position to the familiar use of the seventh on the subdominant which has already been commented upon at length, that the inference is almost unavoidable that composers first used the diminished seventh as a modification of that well-known device in a minor key, by sharpening its base note to make it approach nearer to the dominant, and also to soften its quality.

It will be necessary at this point to turn again for a short space to theorists, for it was in relation to the standard of harmony which characterises the end of the 17th century that Rameau’s attempt was made to put the theory of music on some sort of philosophical basis. He called attention to the fact that a tone consists not only of the single note which everybody recognizes, which he calls the principal sound, but also of harmonic sounds corresponding to notes which stand at certain definite distances from this lower note, among which are the sixth and seventh, corresponding to the fifth and third; that as there is a perfect correspondence between octave and octave these notes can be taken either as the major common chord in its first position, or its inversions; and that judged from this point of view the lower note is the root or fundamental note of the combination. This was the basis of his theory of harmony, and it is generally considered to have been the first explicit statement of the theory of chords in connection with roots or fundamental notes. Rameau declines to accept the minor seventh as part of the compound tone of the root, and he does not take his minor third as represented by the 13th upper partial, which is very remote, but justifies the minor chord on the principle that the minor third as well as the root note generates the fifth (as both C and Eb would generate G), and that this community between them makes them prescribed by nature. D’Alembert took the part of expositor, and also in some slight particulars of modifier, of Rameau’s principles, in his ‘Eléments de Musique.’ It is not the place here to enter into details with respect to the particulars resulting from the theory, which was applied to explain the construction of scale, temperament, and many other subordinate matters, and to discover the proper progressions of roots, and the interconnection between chords. But a passage in D’Alembert’s book deserves especial notice as illustrating modern harmonic as distinguished from the old contrapuntal ideas with respect to the nature of discords; since it shows how completely the old ideas of suspensions as retardations of the parts had been lost sight of: ‘En general la dissonance étant un ouvrage de l’art, surtout dans les accords qui ne sont point de dominant, tonique, ou de sousdominant; le seul moyen d’empêcher qu’elle ne déplaise en paroisant trop estranger à l’accord, c’est qu’elle soit, pour ainsi dire, annoncée à l’oreille en se trouvant dans l’accord précédent, et qu’elle serve par là a tier les deux accords.’ The sole exception is in respect of the dominant seventh, which, apparently as a mere matter of experience, does not seem to require this preparatory announcement. Tartini published his theories about the same time as Rameau, and derived the effect of chords from the combinational tones, of which he is reputed to have been the discoverer. Helmholts has lately shown that neither theory is complete without the other, and that together they are not complete without the theory of beats, which really affords the distinction between consonance and dissonance; and that all of these principles taken together constitute the scientific basis of the facts of harmony. Both Rameau and Tartini were therefore working in the right direction; but for the musical world Rameau’s principles were the most valuable, and the idea of systematising chords according to their roots or fundamental basses has been since generally adopted.

By the beginning of the 18th century the practice of grouping the harmonic elements of music or chords according to the keys to which they belong, which is called observing the laws of tonality, was tolerably universal. Composers had for the most part moved sufficiently far away from the influence of the old ecclesiastical system to be able to realise the first principles of the new secular school. These principles are essential to instrumental music, and it is chiefly in relation to that large department of the modern art that they must be considered. Under the conditions of modern harmony the harmonic basis of any passage is not intellectually appreciable unless the principle of the relations of the chords composing it to one another through a common tonic be observed. Thus if in the middle of a succession of chords in C a chord appears which cannot be referred to that key, the passage is inconsistent and obscure; but if this chord is followed by others which can with it be referred to a different key, modulation has been effected, and the succession is rendered intelligible by its relation to a fresh tonic in the place of C. The range of chords which were recognized as characteristic of any given key was at first very limited, and it was soon perceived that some notes of the scale served as the bass to a larger number and a more important class of them, the Dominant appearing as the most important, as the generator of the larger number of diatonic chords; and since it also contains in its compound tone the notes which are most remote from the chord of the tonic, the artistic sense of musicians led them to regard the Dominant and the Tonic as the opposite poles of the harmonic circle of the key, and no progression was sufficiently definable to stand in a position of tonal importance in a movement unless the two poles were somehow indicated. That is to say, if a movement is to be cast upon certain prominent successions of keys to which other keys are to be subsidiary, those which are to stand prominently forward must be defined by some sort of contrast based on the alternation of Tonic and Dominant harmony. It is
probably for this reason that the key of the Subdominant is unsatisfactory as a balance or complementary key of a movement, since in progressing to its Dominant to verify the tonality, the mind of an intelligent listener recognises the original Tonic again, and thus the force of the intended contrast is weakened. This, as has been above indicated, is frequently found in works of the early harmonic period, while composers were still searching for the scale which should give them a major Dominant chord, and the effect of such movements is curiously wandering and vague. The use of the Dominant as the complementary key becomes frequent in works of the latter portion of the 17th century, as in Corelli; and early in the next, as in Bach and Handel, it is recognised as a matter of course; in the time of Haydn and Mozart so much strain was put upon it as a centre, that it began to assume the character of a conventionalism and to lose its force. Beethoven consequently began very early to enlarge the range of harmonic bases of the key by the use of chords which properly belonged to other nearly related keys; and on his lines composers have since continued to work. The Tonic and Dominant centres are still apparently inevitable, but they are supplemented by an enlarged range of harmonic roots giving chromatic combinations which are affiliated on the original Tonic through their relations to the more important notes of the scale which that Tonic represents, and can be therefore used without obscuring the tonality. As examples of this may be taken the minor seventh on the tonic, which properly belongs to the nearly allied key of the subdominant; a major concord on the supertonic, with the minor seventh superimposed, which properly belong to the Dominant key; the major chord on the mediant, which properly belongs to the key of the relative minor represented by the chord of the submediant, and so on.

Bach's use of harmony was a perfect adaptation to it of the principles of polyphony. He resumed the principle of making the harmony ostensibly the sum of the independent parts, but with this difference from the old style, that the harmonies really formed the substratum, and that their progressions were as intelligible as the melodies of which they seemed to be the result. From such a principle sprang an immense extension of the range of harmonic combinations. The essential fundamental chords are but few, and must remain so, but the combinations which can be made to represent them on the polyphonic principle are almost infinite. By the use of chromatic passing and preliminary notes, by retardations, and by simple chromatic alterations of the notes of chords according to their melodic significance, combinations are arrived at such as puzzled and do continue to puzzle theorists who regard harmony as so many unchangeable lumps of chords which cannot be admitted in music unless a fundamental bass can be found for them. Thus the chord of the augmented sixth is probably nothing more than the modification of a melodic progression of one or two parts at the point where naturally they would be either a major or minor sixth from one another, the downward tendency of the one and the upward tendency of the other causing them to be respectively flattened and sharpened to make them approach nearer to the notes to which they are moving. In the case of the augmented sixth on the flat second of the key, there is only one note to be altered; and as that note is constantly altered in this fashion in other combinations—namely by substituting the flattened note for the natural diatonic note, as D♭ for D in the key of C, by Carissimi, Bach, Beethoven, Chopin, in all ages of harmonic music—it seems superfluous to consider whether or no it is a chord with a double root as theorists propose, in which one note is the minor ninth of one root, and the other the major third of another. The way in which ideas become fixed by constant recurrence has already (p. 65) been indicated in the case of a figure which was very characteristic of the polyphonic school, and in that of the subdominant seventh with the early harmonists; in like manner modifications, such as the augmented sixth, and the sharp fifth (which is merely the straining upwards of the upper note of a concord in its melodic progression to the next diatonic note), become so familiar by constant recurrence, that they are accepted as facts, or rather as representatives, by association, of the unmodified intervals, and are used to all intents as essential chords; and moreover being so recognised, they are made liable to resolutions and combinations with other notes which would not have been possible while they were in the unaltered condition; which is not really more to be wondered at than the fact that Bach and his contemporaries and immediate predecessors habitually associated tunes originally cast in the old ecclesiastical modes with harmonies which would have been impossible if those modes had not been superseded by the modern system of scales. The inversion of the above-mentioned augmented sixth as a diminished third is remarkable for two reasons. In the first place, because when used with artistic purpose it is one of the most striking chords in modern music, owing to the gradual contraction towards the resolution—as is felt in the employment of it by both Bach and Beethoven to the words 'et sepultus est' in the 'Crucifixus' of their masses in B minor and D respectively; and in the second, because a distinguished modern theorist (whose work is in many respects very valuable) having discovered that the augmented sixth is a double rooted chord, says that it 'should not be inverted, because the upper note being a secondary harmonic, and capable of belonging only to the secondary root, should not be beneath the lower, which can only belong to the primary root.' It must not be forgotten, however, in considering the opinions of theorists on the origin of chords such as these, that their explanations are not unfrequently given merely
for the purpose of classifying the chords, and of expounding the laws of their resolutions for the benefit of composers who might not be able otherwise to employ them correctly.

The actual number of essential chords has remained the same as it was when Monteverde indicated the nature of the Dominant seventh by using it without preparation, unless a single exception be made in favour of the chord of the major ninth and its sister the minor ninth, both of which Helmoltz acknowledges may be taken as representatives of the lower note or root; and it cannot be denied that they are both used with remarkable freedom, both in their preparation and resolution, by the great masters. Haydn, for instance, who is not usually held to be guilty of harmonic extravagance, uses the major ninth on the Dominant thus in his Quartet in G, Op. 76—

and the minor ninth similarly, and with as great freedom, as follows, in a Quartet in F minor (Trautwcin, No. 3).

It is not possible to enter here into discussion of particular questions, such as the nature of the chord frequently called the ‘Added Sixth,’ to which theorists have proposed almost as many roots as the chord has notes; Rameau originally suggesting the Subdominant, German theorists the Supertonic as an inversion of a seventh, Mr. Alfred Day the Dominant, as an inversion of a chord of the eleventh, and Helmoltz returning to the Subdominant again in support of Rameau. Neither is it necessary to enter into particulars on the subject of the diminished seventh, which modern composers have found so useful for purposes of modulation, or into the devices of enharmonic changes, which are so fruitful in novel and beautiful effects, or into the discordance or non-discordance of the fourth. It is necessary for the sake of brevity to restrict ourselves as far as possible to things which illustrate general principles; and of these none are much more remarkable than the complicated use of suspensions and passing notes, which follow from the principles of Bach in polyphony as applied to harmony, and were remarked on above as laying the foundations of all the advance that has been made in Harmony since his time. Suspensions are now taken in any form and position which can in the first place be possibly prepared even by passing notes, or in the second place be possibly resolved even by causing a fresh discord, so long as the ultimate resolution into concord is feasible in an intelligible manner. Thus Wagner’s Meistersinger opens with the phrase—

in which B is a suspended passing note resolving so as to make a fresh discord with the treble, which in reality is resolved into another discord made by the appearance of a chromatic passing note, and does not find its way into an essential concord till three chords further on; but the example is sufficient to show the application of both principles as above expressed. One of the most powerful suspensions in existence is the following from Bach’s Organ Toccata in D minor—

Of strongly accented passing notes the following are good examples—

from the Overture to the Messiah; and

from Brahms’s Ballade in D, which is practically the same passing note as that in the example from Handel, but passing in the opposite direction.

A good example of a succession of combinations resulting from the principles above enumerated with regard to the modification of diatonic notes, and the use of chromatic passing notes, occurs in Bach’s Cantata, ‘Christ unser Herr’ (p. 208)
In the 2nd scene of the 2nd act of 'Tristan and Isolde' the combination given theoretically above (p. 679 a) actually occurs, and two of the preliminary chromatic notes (*) are sustained as a suspension into the next chord—

\[ \text{music notation} \]

In the latter part of the last Act of the same work are some extremely remarkable examples of the adaptation of the polyphonic principle to harmony, entailing very close modulations, for which there is not space here.

The principle of persistence was early recognised in the use of what were called Diatonic successions or sequences. They are defined by Prof. Macfarren as 'the repetition of a progression of harmony, upon other notes of the scale, when all the parts proceed by the same degrees in each repetition as in the original progression,' irrespective of augmented or diminished intervals, or doublings of notes which in other cases it is not desirable to double. And this may be expanded into the more general proposition that when a figure has been established, and the principle and manner of its repetition, it may be repeated analogously without any consideration of the resulting circumstances. Thus Beethoven having established the form of his accompaniment—

\[ \text{music notation} \]

goes through it in despite of the consecutive fifths which result—

\[ \text{music notation} \]

Again, a single note whose stationary character has been established in harmony of which it actually forms a part, can persist through harmonies which are otherwise alien to it, and irrespective of any degree of dissonance which results. This was early seen in the use of a Pedal, and as that was its earliest form (being the immediate descendant of the Drone bass mentioned at the beginning of the Article) the singular name of an inverted Pedal was applied to it when the persistent note was in the treble, as in an often-quoted instance from the slow movement of the C-minor Symphony of Beethoven, and a fine example in the Fugue which stands as Finale to Brahms's set of Variations on a Theme by Handel, and in the example quoted from Purcell's Service above. Beethoven even makes more than one note persist, as in the first variation on the Diabelli Valse (op. 121)—

\[ \text{music notation} \]

Another familiar example of persistence is persistence of direction, as it is a well-known device to make parts which are progressing in opposite directions persist in doing so irrespective of the combinations which result. For the limitations which may be put on these devices reference must be made to the regular text-books, as they are many of them principles of expediency and custom, and many of them depend on laws of melodic progression, the consideration of which it is necessary to leave to its own particular head.

It appears then, finally, that the actual basis of harmonic music is extremely limited consisting of concords and their inversions, and at best not more than a few minor sevenths and major and minor ninths; and on this basis the art of modern music is constructed by devices and principles which are either intellectually conceived or are the fruit of highly developed musical instinct, which is according to vulgar phrase 'inspired,' and thereby discovers truths at a single leap which the rest of the world recognise as evidently the result of so complex a generalisation that they are unable to imagine how it was done, and therefore apply to it the useful term 'inspiration.' But in every case, if a novelty is sound, it must answer to verification, and the verification is to be obtained only by intellectual analysis, which in fact may not at first be able to cope with it. Finally, everything is admissible which is intellectually verifiable, and what is inadmissible is so relatively only. For instance, in the large majority of cases, the simultaneous occurrence of all the diatonic notes of the scale would be quite inadmissible, but composers have shown how it can be done, and there is no reason why some other composer should not show how all the chromatic notes can be added also; and if the principles by which he arrived at the combination stand the ultimate test of analysis, musicians must bow and acknowledge his right to the combination. The history of harmony is the history of ever-increasing richness of combination, from the use, first, of simple concords, then of concords superimposed on one another, which we call common chords, and of a few simple discords simply contrived; then of a system of classification of these concords and discords by key relationship, which enables some of them to be used with greater freedom than formerly; then of the use of combinations which were specially familiar as analogues to essential chords; then of enlargement of the bounds of the keys, so that a greater number and variety of chords could be used in relation to one another, and finally of the recognition of the principle that harmony is the result of combined
melodies, through the treatment of the progressions of which the limits of combination become practically co-extensive with the number of notes in the musical system. [C.H.H.P.]

HAROLD EN ITALIE. The 4th of Berlioz's 5 symphonies, op. 16, dedicated to Humbert Ferrand; for full orchestra with sola viola; in 4 movements — (1) 'Harold aux montagnes. Scènes de mélanclolie, de bonheur et de joie.' Adagio and Allegro; in G. (2) 'Marche de Pélerins chantant la prière du soir.' Allegretto; in E. (3) 'Sérénade d'un Montagnard des Abruzzes à sa maîtresse.' Allegro assai; in C. (4) 'Orgie de Brigaude. Souvenirs des Scènes précédentes.' Allegro frenetico; in G. It was composed in 1834, and originated in a request of Pagani's that Berlioz should write a solo in which he could display the qualities of his Stradivarius viola. It is needless to say that it did not fulfil that intention. The idea of the work is based on Childs Harold. (See Berlioz's Mémoires, chap. 45.) It was first performed at the Conservatoire Nov. 23, 1834, but has been much altered since. Score and parts are published by Schlesinger. It was played for the first time in England at the New Philharmonic Concert, July 4, 1855. Berlioz conducted and Ernst played the viola part. [G.]

HARP (Fr. Harpe; Ital. Arpa; Germ. Harfe). A musical instrument of great antiquity; in its modern development, by means of the ingenious mechanism of the double action, distinguished as the only instrument with fixed tones not formed by the ear and touch of the player, that has separate notes for sharps, flats, and naturals, thus approaching written music more nearly than any other.

The harp presents a triangular form of singular beauty, the graceful curve of the neck adding to the elegance of its appearance. Although the outline has varied at different epochs and in different countries, the relation of its proportions to the musical scale—a condition of symmetry in musical instruments—is in the harp very close; so that whether it be Egyptian, Persian, Medieval, or Keltic, it is always fashioned in beauty of line, and often characteristically adorned.

In looking at a harp we recognise at once the varied functions of its structure. The resonant instrument is the soundboard, forming with its body the angle next the player. The opposite angle is the pillar. Both support the neck, a curved bracket between which and the soundboard the strings are stretched. In modern harps the neck includes the 'comb' containing the mechanism for raising the pitch of the strings one half tone by the single action, or two half tones by the double action. The pillar is hollow to include the rods working the mechanism. The pedestal, where pillar and soundboard unite, is the frame for the pedals, levers acted upon by the feet and moving the rods in the pillar.

The wood used in a harp is chiefly sycamore, but the soundboard is of pine, and in old harps was frequently ornamented with painted devices.

The dimensions of soundboard and body increase downwards. Along the centre of the soundboard is glued a strip of beech, or other hard wood, in which are inserted the pegs that hold the lower ends of the strings, the upper ends being wound round tuning-pins piercing the wrestplank which forms the upper part of the neck. The soundboard is ribbed underneath by two narrow bars, crossing the grain of the pine, their duty being to drive the soundboard into nodes and figures of vibration. The strings are of caiguti, coloured to facilitate the recognition of the notes by the player, the lowest string being spun over, wire upon silk or wire upon wire. The compass of an Erard double-action harp is 6½ octaves. 8ecs.

The apparently slight resistance offered by the bridge to the tension of the strings, inadequate if their drawing power were perpendicular, is sufficient because they are placed at an angle. There is also a lateral angle in the position of the neck and strings, to allow for the strain on the side the strings are attached to.

The origin of the harp must be put back anterior to the earliest records of civilisation. It was possibly suggested by the stretched string of the bow. The addition of several strings would be analogous to binding several reeds or whistles together to form a syrinx, both contrivances apparently preceding the shortening to different lengths by the finger of a single vibrating string, as in a lute, or the shortening of the vibrating column of air in a pipe by means of holes perforated in it to be stopped also by the fingers. The oldest monuments of the harp are Egyptian. Those first seen by Bruce, painted on the wall of a burying-place at Thebes, are supposed to be as old as the 13th century B.C. These are very large harps, richly ornamented, and standing, to judge from the players, more than six feet high. These instruments, which have been often described, having no front pillar, could have had no great tension, and were probably of a low and sweet tone. But while all Egyptian harps wanted this important member for support, they were not limited to one size. There seems to have been a great variety in dimensions, number of strings, and amount of ornament. Some, like Bruce's, were placed upon the ground; others were upon rests or stools, to admit of the player's standing. Those held by seated players were more like the Greek trigonon, a link between the harp and lyre.

The Assyrian harps resembled the Egyptian in having no front pillar, but differed in the soundboard being uppermost, the lower angle being a simple bar for the attachment of the strings. Mr. Engel ('Music of the most Ancient Nations,' London, 1864) regards the absence or presence of the front pillar as distinguishing the Eastern harp from the Western, but it may be that the distinction is rather that of ancient and modern, for the very earliest Western harp of which a representation exists, that in Bunting's 'Ancient Music of Ireland,' attributed by him to an earlier
HARP.

date than a.d. 830, has no front pillar. The beautiful form of the more modern Irish harp is well known from its representation in the royal coat of arms. Two specimens are to be seen in South Kensington Museum: one is a cast of the ancient harp in Trinity College, Dublin, said to have belonged to Brian Boroirme. In these the body is perpendicular, or nearly so, instead of slanting, as in modern harps; the front pillar being curved to admit of this, and the neck—in the Irish harp called the Harmonic Curve—descending rather to meet it. This form gives a more acute angle to the strings, which were of brass, two to each note, the sounds being produced by the pointed finger-nails of the player. The number of strings is uncertain, but the fragments of the ‘Dalway’ harp, shown in the Special Exhibition at South Kensington in 1872, inscribed ‘Ego sum Regina Citharae,’ and dated a.d. 1621, justify our assuming the large scale of fifty-two for this instrument.

The Irish Gaelic harp must have been the Scotch Gaelic one also. According to Gunn (Historical Inquiry, etc., Edinburgh 1807) a lady of the clan Lamont in Argyle took a harp with her on her marriage in 1640 to Robertson of Lude, which had for several centuries been the harp of a succession of Highland barons. Gunn described it as then existing, 38 inches high and 16 broad, with 30 strings. Another, then existing, and in excellent preservation, he stated to have been the gift of Queen Mary to Miss Gardyn of Banchory. It was smaller than the Lude harp, and could only have carried twenty-eight strings.

The Welch Harp has likewise a perpendicular body, but is larger than the Irish, increasing considerably downwards. The neck ascends, the front pillar being longer. The Welch harp has three rows of gut strings, the outer rows being unisons in diatonic series, the inner the chromatic semitones. There is one at South Kensington, lent by Lady Llanover.

The earliest representation of the portable medieval harp, which so many painters loved to delineate along with lutes and viols, is perhaps that in Gerbert’s De Cantu et Musicae Sacrae, copied from a MS. of the 9th century in the Monastery of St. Blaise in the Black Forest, destroyed by fire in 1768. The form of this instrument is preserved in the modern harp, the front pillar only differing in being straight instead of slightly curving, to admit of the movement of the rods for working the pedals.

That the Western harp belongs to Northern Europe in its origin there seems to be no doubt. Mr. Max Müller claims the name as Teutonic, and has contributed these historic and dialectic forms:—Old High German, Harappa; Middle do., Harpe; Modern do., Harfe; Old Norse, Harpa. From the last were derived the Spanish and Italian Arpa, the Portuguese Harpa, and the French Harpe—the aspirate showing the Teutonic origin. The Anglo-Saxon form was Hearpe. The Basque and Slavonian, as well as the Romance, took the name with the instrument, but there is a remarkable exception in the fact of the Celtic peoples having their own names, and these again divided according to the Gaelic and Cymric branches. Price Louis Lucien Bonaparte has supplied the following illustration:—Irish Gaelic, Claidheach; Scotch do., Clàirach; Manx, Clásagh; Welsh, Telyn; Cornish, Telein; Breton, Télen.

The Medieval harp, a simple diatonic instrument, was sufficient in its time, but when modern instrumental music arose, its limits were found too narrow, and notwithstanding its charm of tone it would have fallen into oblivion. It had but one scale, and to obtain an accidental semitone the only resource was to shorten the string as much as was needed by firmly pressing it with the finger. But this was a poor expedient, as it robbed the harpist for the time of the use of one hand. Chromatic harps were attempted by German makers in the last century and early in this, but it was found impracticable through difficulty of execution to give the harp thirteen strings in each octave, by which each would have been a sharp to its next lower and a flat to its next higher string. The first step towards the reconstruction of the harp was due to a Tyrolse, who came upon the idea of screwing little crooks of metal (crochets) into the neck, which when turned against the string would cause the shortening necessary for a chromatic interval. Still the harpist lost the use of one hand while placing or releasing a crook, and one string only was modified, not its octaves. About the year 1720, one Hochbrucker, a native of Donauworth in Bavaria, conceived and executed the first pedal mechanism, and rendered the harp fit for modulation, by using the foot to raise each open string, at will and instantaneously, half a tone higher, and leaving the player’s hands free. This brought about a very remarkable revolution in harp-playing, giving the instrument eight major scales and five minor complete, besides three minor scales descending only. Hochbrucker’s mechanism acted upon crooks which pressed the strings above nuts projecting from the neck. But there were inconveniences arising from this construction; each string acted upon by a crook was removed from the plane of the open strings, an impediment to the fingergiving and frequent cause of jarring, and the stopped strings were less good in tone than the open. A fault no less serious was due to the mechanism being adjusted to the wooden neck, which was intractable for the curving required; if too much bent it was liable to break, and if not bent enough the middle strings would break when tuned up from being too long.

The first to make harps without crooks, and yet to stop half tones, were Frenchmen—the Cousineaus, father and son. They passed each string between two small pieces of metal (bequilles) placed beneath the bridge-pin. Then by the pedal action these metal pieces were made to grasp the string, and shorten it the distance required. The Cousineaus also introduced a slide to raise or lower the bridge-pin regulating the length of the string, and placed each system of lever
belonging to strings of the same name between metal plates which were bevelled to make them lighter. Thus the neck could be curved at pleasure, and its solidity being assured, the proportions of the strings could be more accurately established. About 1782 they doubled the pedals and connected mechanism, and thus constructed the first double-action harp. The pedals were arranged in two rows, and the tuning of the open strings was changed to the scale of Cb instead of Eb, as in the single-action harps. But it does not appear that the Cousineaus made many double action harps; they were still too imperfect; and the Revolution must have closed their business, for we hear no more of them.

We now arrive at the perfecting of the harp by that great mechanician Sebastian Erard, whose merit it was to leave this instrument as complete as the Cremona school of luthiers left the violin. His earliest essays to improve the harp date about 1786, and were confined to the single action. He worked upon a new principle, the fork mechanism, and in his harps which were finished about 1789, the arrangement of it was chiefly internal; the studs that shorten the strings alone performing their functions externally. He patented in London in 1794 a fork mechanism external to the plate. He made a double-action harp in 1804, patenting it in 1809, but it was not until 1810 that he produced the culmination of his beautiful contrivance, which has since been the model for all harp makers. In this harp, as in the single action one, Erard maintained seven pedals only, and simply augmented the extent of movement of the cranks and tringles (or levers) acted upon by the pillar-rods, to give successively a portion of revolution to the disks from which the studs project; the first movement of the pedal serving to shorten strings of the same name, to produce the first half tone, the second movement of the pedal for the second half tone, the contrivance being so ingenious that the position of the upper disk—the second to move but the first to act upon the strings—is not changed when the lower disk completes its movement of revolution and acts upon the strings also.

The drawing represents 3 sections of the neck of Erard's double action harp, and shows the position of the forks and external levers, (1) when the strings are open, (2) when stopped for the first half tone, and (3) when stopped for the second. Two strings are shown for each pitch.

It is not necessary to keep the foot upon a pedal, as it may be fixed in a notch and set free when not required; spiral springs with two arms fixed beneath the pedestal accelerate the return of the pedals. Unlike the weighty expedient of the Cousineaus, there are but two brass plates which form the comb concealing the greater part of the action. Lastly, Erard made the convex body bearing the soundboard of one piece, doing away with the old lute-like plan of building it up with staves.

As already stated, the double-action harp is tuned in Cb. By taking successively the seven pedals for the half-tone transposition, it can be played in Gb, Db, Ab, Eb, Bb, F, and Cb. By the next action of the pedals, completing the rise of the whole tone, the harp is set successively in G, D, A, E, B, F#, and C#. The minor scales can only be set in their descending form, the ascending requiring change of pedals. Changes by transposition constitute a formidable difficulty in playing keyed instruments through the altered fingering required. On the harp passages may be repeated in any key with fingering absolutely the same. The complication of scale fingering, so troublesome to pianoforte playing, is with the harp practically unknown.

The harmonics of the harp are frequently used by solo players, and 'the sonorosity of these mysterious notes when used in combination with flutes and clarinets in the medium' called forth the admiration of Berlioz. ('Modern Instrumentation,' Novello 1858.)

In describing the Double-action Harp of Sebastian Erard, the writer has been much helped by a report, read before the French Institute in 1815, and lent to him by Mr. George Bruzaud.

HARPER, THOMAS, born at Worcester May 3, 1787; when about ten years of age came to London and learnt the horn and trumpet under
Eley, then master of the East India Volunteer Band. He soon afterwards became a member of the band and a great proficient on the trumpet. He continued in the band nearly 18 years, during the first 7 of which he also performed in the orchestra of some of the minor theatres. About 1806 he was appointed principal trumpet at Drury Lane, and the English Opera House, Lyceum. In 1820 he was engaged in the same capacity at the Birmingham Musical Festival, and in the following year succeeded the elder Hyde at the Concert of Ancient Music, the Italian Opera, and all the principal concerts and festivals, a position which he retained for upwards of a quarter of a century. The East India Company nominated him inspector of the musical instruments supplied to their bands, an appointment which he held until his death. Harper played on the slide trumpet, and produced a pure, brilliant, and even tone, with a command of execution which enabled him to surmount the greatest difficulties on his most difficult instrument. He was stricken with mortal sickness at a rehearsal in Exeter Hall for a concert of the Harmonic Union, and died in a few hours afterwards on Jan. 20, 1853. He was author of an Instruction Book for the Trumpet. Harper left three sons, the eldest of whom, Thomas, succeeded his father in all his appointments as principal trumpet, a position he still holds; the second, Charles, long filled the place of principal horn in the best orchestras; and the youngest, Edmund, also a horn player, settled at Hillsborough, Ireland, as pianist and organist, and died there, May 18, 1869. [W.H.H.]

Harpischord. (Fr. Claricé, Ital. Clavicembalo, Gravicembalo, not unfrequently Cembalo only, also Harpico; Germ. Clavicymbel, Kielflügel, Flügel). The most important of the group of keyed instruments that preceded the piano-forte, holding during the 16th, 17th, and 18th centuries a position analogous to that now accorded to the grand piano-forte. It had a place in the orchestra as an accompanying instrument with voices and with first oratorio works performed (Florence and Rome, about A.D. 1600), and during the time of Handel and Bach was the constant support to the recitativo secco, its weak bass notes being reinforced by large lutes and viols, and ultimately by violoncellos and double basses. Towards the end of the 18th century the instrument was withdrawn, and the big fiddles were left by themselves to accompany the ordinary recitative in a fashion more peculiar than satisfactory.

The name harpsichord is the English variant of the original harpinicordo, which, like clavicembalo, clavicordo, spinetto, and pianoforte, betrays its Italian origin. The clavicordo was a table-shaped, five-cornered harpinicordo, rectangular, like the German clavicord, but otherwise quite different from that instrument, which was made to sound by 'tangents,' or simple brass uprights from the keys. All instruments of the harpinicordo, clavicembalo, or spinetto family were at the pleasure principle, and therefore were incapable of dynamic modification of tone by difference of touch. The strings were set in vibration by strikes of quill or hard leather, elevated on wooden uprights, known as jacks, and twitching or plucking them as the depression of the keys caused the points to pass upwards. [JACK.] Leather points were probably used first, since we learn from Scaliger, who lived 1484-1550 (Postices, lib. i. cap. 48), that crows quills were introduced in keyed instruments subsequent to his boyhood, and he informs us that through them the 'spinett' (from spine, a thorn or point) became applied to what had been known as the 'clavecymbal' and 'harpichord.' The Canon Paul Belisius, of Pavia, is said to have introduced quills: the use of leather is shown in a harpinicordo by Baffo, dated A.D. 1574, and presently to be referred to; and in one by the elder Andreas Rucker of Antwerp, dated A.D. 1614, now in the possession of Col. Hopkins, at London.

It is the principle of the piano that derives the descent of the harpinicordo from the palsy, just as the pianoforte is derived, by analogy at least, from the dulcimer, and the clavicord from the moveable-bridged monochord; the model for the shape of the long harpinicordo being that kind of palsy which the common people called 'istromento di porco'—from a supposed resemblance between the trapeze form and a pig's head. [See PALSERY.] There is an interesting suggestion of this connection of the harpinicordo with the palsy preserved in the church of the Certosa, near Pavia, built about A.D. 1475. King David, who in the Middle Ages always played a palsy, is there shown holding an 'istromento di porco.' The body of the palsy is open, and shows eight keys, lying parallel with the eight strings. David touches the keys with his right hand, and uses the left to draw the strings. All this may be the sculptor's fancy, but Dr. Ambros (Geschichte der Musik, 1864) regards it as a recollection of a real instrument, although obsolete, somewhere seen by him.

The earliest mention of the harpinicordo is under the name of claveicymbolum, in the rules of the Minnesingers, by Eberhard Cermes, a.D. 1404. With it occurs the clavicord, the monochord and other musical instruments in use at that time. [See CLAVICHORD.] The absence of any prior mention or illustration of keyed stringed instruments is negative evidence only, but it may be assumed to have been shortly before that date—say in the latter half of the 14th century, especially as Jean de Muris, writing in a.D. 1323 (Musica speculativa), and enumerating musical instruments, makes no reference to either clavicembalo or clavicord, but describes the monochord (recommending four strings however) as in use for measuring intervals at that time. Moreover there was no music wire before this epoch; the earliest record of wire drawing being a.D. 1311, at Augsburg. It may occur to the reader why
were hammers not sooner introduced after the natural suggestion of the Dulcimer, instead of the field being so long occupied by the less effective jack and tangent contrivances? The chasm universal to all forgotten Cristoforis and Schützers was the gap between wrestplank and soundboard, for the passage of the hammers, which weakened the frame and prohibited the introduction of thicker strings strong enough to withstand the impact of hammers. It took more than three hundred years to bridge this chasm by stronger framing, and thus render hammers possible.

As pianofortes have been made in three quite different shapes, the grand, the square, and the upright, there were as many varieties of the jack instruments—to wit, the harpsichord proper (clavicembalo, clavecin, or flügel) of trapeze form; the clavichord, of oblong or pentangular form, frequently called spinet or virginal, and the upright harpsichord, or clavicetherium. It must be remembered that the long harpsichords were often described as spinet or virginal, from their plerota or their use by young ladies; but the table-shaped ones known commonly by the latter names were never called harpsichords. No specimen of the upright harpsichord seems to exist, yet the instrument has been made in a comparatively recent period, since a receipt for one, dated 1753, and signed by the maker, Samuel Blumen, ‘Harpsichord and Spinnet Maker in Great Poultnay Street, near Golden Square, London. N.B. Late foreman to Mr. Shudi,’ is in the possession of Messrs. Broadwood.

We are spared the necessity of reconstructing the older hammers from the obscure and often inaccurate allusions of the older writers, such as Virgini and Kircher, by the valuable collection now in South Kensington Museum, that includes instruments of this family dating from A.D. 1555 to Pascal Taskin, A.D. 1786. In private hands, but accessible to the enquirer, are large harpsichords by Tschudi and by Kirkman, still playable. The oldest harpsichord in the Museum is a Venetian clavicembalo, signed and dated ‘Ioannes Antonius Basso, Venetus, 1574.’ It has a compass of 4½ octaves, from C to F, the extreme limits of the human voice. Raising the top and looking inside, we observe the harp-like disposition of the strings as in a modern grand piano, which led Galilei, the father of the astronomer Galileo, to infer the direct derivation of the harpsichord from the harp. In front, immediately over the keys, is the wrestplank, with the tuning-pins inserted, round which are wound the inner ends of the strings—this instrument two to each note—the further ends being attached to hitchpins, driven into the soundboard itself, and following the angle of the bent side of the case to the narrow end, where the longest strings are stretched. There is a straight bridge along the edge of the wrestplank, and a curved bridge upon the soundboard. The strings pass over these bridges, between which they vibrate, and the impulse of their vibrations is communicated by the curved bridge to the soundboard. The plectra or jacks, with the exception that they carry points of leather instead of quill, are the same as in later instruments. [See JACk.]

This Venetian harpsichord has a separate case, from which it could be withdrawn for performance, a contrivance usual in Italy, the outer case being frequently adorned with painting. The raised blocks on each side the keys, by which the instrument was drawn out of the case, survived long after, when there was no outer case. Lastly, the natural keys are white and the sharps black, the rule in Italian keyed instruments, the German practice having been the reverse.

Reference to the oblong ‘clavecords, in which South Kensington Museum is rich, will be found under SKnawi. The actual workmanship of all these Italian keyed instruments is so different; we must turn to the Netherlands for that care in manipulation and choice of materials which, united with constructive ingenuity equaling that of the best Italian artists, culminated in the Double Harpsichords of the Ruckers family of Antwerp. [See Ruckers.]

Of this family there were four members living and working between 1579 and 1651 or later, who achieved great reputation. Their instruments are known by their signatures; and by the monograms forming the ornamental rosette or soundhole in the soundboard—a survival from the palettery. The great improvement of the harpsichord is attributed to Hans, the eldest, who, by adding to the two unison strings of each note a third of shorter length and finer wire tuned an octave higher, increased the power and brilliancy of the tone. To employ this addition at will, alone, or with one or both the unison strings, he contrived, after the example of the organ, a second keyboard, and stops to be moved by the hand, for the control of the registers or slides of jacks acting upon the strings. By these expedients all the legitimate variety ever given to the instrument was secured. The Ruckers harpsichord given by Messrs. Broadwood to South Kensington Museum, signed and dated ‘Andreas Ruckers fecit Antverpam 1651’ (see next page), said to have been left by Handel to Christopher Smith, shows these additions to the construction, and was, in the writer’s remembrance, before the soundboard gave way, of deliciously soft and delicately rosy timbre. The tension being comparatively small, these harpsichords lasted much longer than our modern pianofortes, even of the best construction. James Shudi Broadwood (‘Notes,’ 1838) states that many Ruckers harpsichords were in existence and good condition until nearly the end of the last century, and fetched high prices; one having sold in 1770 for 3000 francs (£120).

When the Ruckers family passed away we hear no more of Antwerp as the city of harpsichord

1 The oldest trace in the Netherlands of the harpsichord or clavecin is that a house in Antwerp, in the parish of Notre Dame, bore in 1032 the name of ‘de Clavichimbels.’
makers; London and Paris took the tale. But all these Antwerp workmen belonged of right to the Guild of St. Luke, the artist's corporation, to which they were in the first instance introduced by the practice of ornamenting their instruments with painting and carving. In 1557 ten of the Antwerp harpsichord makers petitioned the deans and masters of the guild to be admitted without submitting masterpieces, and the chiefs of the commune consenting, in the next year they were received. The responsibility of signing their work was perhaps the foundation of the great reputation afterwards enjoyed by Antwerp for harpsichords and similar musical instruments. ('Recherches,' etc., Léon de Burbure, Brussels, 1863.)

The earliest historical mention of the harpsichord in England occurs under the name of Claricymball, A.D. 1502. The late Dr. Rimbaud ('The Pianoforte,' London 1862) collected this and other references to old keyed instruments from records of Privy Purse expenses and from contemporary poets. The house- proof of Leckingfield, the residence of Algernon Percy in the time of Henry VII, preserved (for the house was burnt) in a MS. in the British Museum, named it 'claricymballis.' For a long while after this, if the instrument existed, it was known under a general name, as 'virginallis.' It was the school of Ruckers, transferred to this country by a Fleming named Tabel, that was the real basis of harpsichord making as a distinct business in this country, separating it from organ building with which it had been, as in Flanders, often combined. Tabel's pupil, Burkhard Tschudi (anglicet Shudi) and Jacob Kirchmann (anglicet Kirkman), became famous in the last century, developing the harpsichord in the direction of power and majesty of tone to the farthest limit. The difference in length between a Ruckers and a Shudi or Kirkman harpsichord, viz. from 6 or 7 ¼ feet to nearly 9 feet, is in direct proportion to this increase of power. Stronger framing and thicker stringing helped in the production of their pompous, rushing-sounding instruments. Perhaps Shudi's were the longest, as he carried his later instruments down to C in the bass, while Kirkman remained at F; but the latter set up one row of jacks with leather instead of quills, and with due increase in the forte combination. Shudi, in his last years (A.D. 1769), patented a Venetian Swell, an adaptation from the organ to the harpsichord. Kirkman added a pedal to raise a portion of the top or cover. Both used two pedals; the one for the swell, the other by an external lever apparatus to shut off the octave and one of the unison registers, leaving the player with both hands free, an invention of John Hayward's, described in Mace's 'Musick's Monument,' A.D. 1676, p. 235.

In these 18th-century harpsichords, the Flemish practice of ornamenting with painting—often the cause of an instrument being broken up when no longer efficient—was done away with; also the laudable old custom of mottoes to remind the player of the analogous brevity of life and sound of the divine nature of the gift of music, or of dead wood reviving as living tone. But it was when the instrument went out altogether that
this enrichment of picture galleries by the demolition of harpsichords was most effected. The number of Ruckers however known to exist has been extended by research to upwards of thirty. Still there was great care in the artistic choice of wood and in the cabinet-work of Tschudi’s beautiful instruments. One in the possession of Her Majesty the Queen, and long preserved in Kew Palace, is quite a masterpiece in these respects. It bears Tschudi’s name, spelt, as was usual, Shudi; the date 1740 and maker’s number 94 are inside. The compass is as in the South Kensington Ruckers, G to F, without the lowest GG. Two, of 1758 (probably) and 1766, are in the New Palace at Potsdam, and were Frederick the Great’s. Messrs. Broadwood have one dated 1771, with five and a half octaves, C to F, Venetian Swell and five stops, comprising the two unisons and octave of the Ruckers, with a slide of jacks striking the strings much nearer to the bridge (also a Ruckers contrivance), and producing a more twanging quality of tone, the so-called ‘lute-stop’ and a ‘buff’-stop of small pieces of leather, brought into contact with the strings, damping the tone and thus giving a kind of piano effect. This fine instrument was used by Moscheles in his Historical Concerts in 1837, and by Mr. Bauer in similar performances in 1862, 63, and 67. There is also one in the Musik Verein at Vienna of similar construction, made by ‘Burkat Shudi et Johannes Broadwood,’ and dated 1775, which belonged to Joseph Haydn. This was the young Shudi; it is very doubtful if another harpsichord exists with Broadwood’s name upon it.

The variety of stops and combinations introduced by different makers here and abroad at last became legion, and were as worthless as they were numerous. Pascal Taskin, a native of Théou in Liège and a famous Parisian harpsichord maker, is credited with the reintroduction of leather as an alternative to quills; his Clavecin ‘en peau de buffle’ made in 1768 was pronounced superior to the pianoforte (De la Bourdais, ‘Essai sur la musique,’ 1773). Taskin’s were smaller scale harpsichords than those in vogue in England, and had ebony naturals and ivory sharps, and a Japanese fashion of external ornamentation. There is one at South Kensington, dated 1786. In the Liceo Communale di Musica at Bologna there is a harpsichord with four rows of keys, called an ‘Archicembalo.’ This instrument, according to Mr. Engel, was made by a Venetian, Vito Trausntino, after the invention of Nicolo Vicentino, who described it in his work ‘L’Antica Musica ridotta alla moderna pratica’ (Rome 1555). The compass comprises only four octaves, but in each octave are thirty-one keys. A ‘Tetracordo’ was made to facilitate the tuning of these minute intervals. Thus early were attempts made to arrive at purity of intonation by multiplying the number of keys within the bounds of the octave. Another of the curiosities of harpsichord making was the ‘Transponciavymbal’ described by Praetorius (1614-18). By shifting the keyboard the player could transpose two tones higher or lower, passing at pleasure through the intermediate half tones. Arnold Schlick, however, had achieved a similar transposition with the organ as early as 1512 (Monatshefte für Musik-Geschichte, Berlin, 1869). A harpsichord peda- lier—Clavicymbelpedal—according to Dr. Oscar Paul, an independent instrument with two octaves of pedals, was used by J. S. Bach, notably in his Trios and the famous ‘Passacaille’; and in his transcriptions of Vivaldi’s Concertos. Lastly a ‘Lautenwerke’ must be noticed, a gut-string harpsichord, an instrument not worth remembering had not Bach himself directed the making of one by Zacharias Hildebrand of Leipzig. It was shorter than the usual harpsichord, had two unisons of gut strings, and an octave register of brass wire, and was praised as capable, if heard concealed, of deceiving a lute-player by profession (Paul, Gesch. des Claviers, Leipsic 1868).

[HARRIS, JOSEPH, John, born in 1799, was chorister in the Chapel Royal under John Stafford Smith. In 1823 he was appointed organist of St. Olave’s Church, Southwark. In 1827 he published ‘A Selection of Psalm and Hymn Tunes, adapted to the psalms and hymns used in the church of St. Olave, Southwark.’ In Feb. 1826 he quitted Southwark to become organist of Blackburn, Lancashire; in 1831 he was made ‘lay precentor,’ or choir master at the collegiate church (now the cathedral) at]
Manchester, deputy organist, and on March 25, 1848, organist. Harris composed some cathedral music and a few glees, songs, etc. He died at Manchester, Feb. 10, 1869. [W.H.H.]

HARRIS, JOSEPH MACDONALD, was born in 1789, and at an early age became a chorister of Westminster Abbey under Richard Guise. On quitting the choir on the breaking of his voice, he became a pupil of Robert Cooke, then organist of the Abbey. Harris was employed as a teacher, and occasional conductor at minor concerts. His compositions are songs, duets, trios, and pianoforte pieces. He died in May 1860, aged 71. [W.H.H.]

HARRIS, RENÁ or RENATUS, is the most celebrated member of his family. Engaged in family of English organ builders. His grandfather had an organ for Magdalen College, Oxford; but his father, Thomas, appears to have emigrated to France, for Dr. Burnay says that Renatus came to England with his father a few months after Father Smith's arrival (1660). To Smith, Renatus Harris became a formidable rival, especially in the competition for building an organ in the Temple Church. [SCHMIDT, BERNARD.]

Thomas Harris of New Sarum in 1666 contracted to build an organ for Worcester Cathedral. Renatus Harris in 1690 agreed to improve and enlarge his grandfather's organ in Magdalen College, Oxford. Dr. Rimbault gives a list of 39 organs built by this eminent artist. He had two sons—Renatus, Jun., who built an organ for St. Dionis Backchurch, London, in 1724, and John, who built most of his organs in conjunction with his son-in-law, John Byfield.

The firm of Harris (John) & Byfield (John) carried on business in Red Lion St., Holborn. In 1729 they built an organ for Shrewsbury, and in 1740 one for Doncaster, which cost £325, besides several others. [V.de P.]

HARRISON, SAMUEL, born at Belper, Derbyshire, Sept. 8, 1760. He received his musical education from Burton, a well-known bass chorus singer, probably the same whose nervous system was so powerfully affected by the music on the first day of the Commemoration of Handel, in 1734, as to occasion his death in the course of a few hours. On the establishment of the Concert of Ancient Music in 1776, Harrison appeared as a solo soprano singer, and continued so for two years afterwards. But in 1778, being engaged to sing at Gloucester, his voice suddenly failed him. After an interval of six years, during which he most assiduously cultivated his voice and style, George III. heard him sing at one of Queen Charlotte's musical parties, and caused him to be engaged for the Commemoration of Handel in 1784, at which he sang "Rendi il sereno al ciglio" from "Sosarme," and the opening recitative and air in "Moseiah." He was next engaged as principal tenor at the Concert of Ancient Music, and from that time took his place at the head of his profession as a concert singer. Harrison's voice had a compass of two octaves (A to A). It was remarkably sweet, pure and even in tone, but deficient in power. His taste and judgment were of a high order, and in the cantabile style he had no equal. Compelled by the exigencies of his engagements to sing songs which demanded greater physical power than he possessed, he always sang them reluctantly. On Dec. 6, 1790, Harrison married Miss Cantelo, for some years principal second soprano at all the best concerts, etc. In 1791 he and Knypersley established the Vocal Concerts, which were carried on to the end of 1794, and revived in 1801. Harrison's last appearance in public was at his benefit concert, May 8, 1812, when he sang Pepusch's "Alexis," and Handel's "Gentle airs." On June 25 following, a sudden inflammation carried him off. He was buried in the graveyard of the old church of St. Pancras. The inscription on his tombstone includes an extract from an elegiac ode on Harrison, written by Rev. Thomas Beaufort, and set to music by William Horley, but the lines are so inaccurately given as completely to mar the allusion to the song, "Gentle airs." Mrs. Harrison survived her husband 19 years. [W.H.H.]

HARRISON, WILLIAM, born in Marylebone parish, 1813. Being gifted with a tenor voice of remarkable purity and sweetness, he appeared in public as an amateur concert singer early in 1835. He then entered as a pupil at the Royal Academy of Music, and in 1837 appeared as a professional singer at the concerts of the Academy, and subsequently at the Sacred Harmonic Society. On Thursday, May 2, 1839, he made his first appearance on the stage at Covent Garden, in Rocke's opera, "Henriques." A few years later he was engaged at Drury Lane, where he sustained the principal tenor parts in Balfe's "Bohemian Girl," Wallace's "Maritana," and Benedict's "Bride of Venice," and "Crusaders," on their first production. In 1851 he performed at the Haymarket Theatre, in Mendelssohn's "Son and Stranger," and other operas. In 1856, in conjunction with Miss Louisa Pyne, he established an English Opera Company, and for several years gave performances at the Lyceum, Drury Lane, and Covent Garden Theatres. During their management the following new operas were produced : Balfe's "Rose of Castille" 1857, "Satanella" 1858, "Blanca, the Bravo's Bride" 1860; "Puritan's Daughter," 1861, and "Armurer of Nantes," 1863; Wallace's "Lurline," 1860, and "Love's Triumph" 1862; Benedict's "Lily of Killarney" 1862; Mellon's "Victorina" 1859; and Howard Glover's "Bux Blas" 1861. In the winter of 1864 Harrison opened Her Majesty's Theatre for the performance of English operas. He translated Massé's operetta, "Les Noces de Jeanette," and produced it at Covent Garden Theatre in Nov. 1860, under the title of "Georgette's Wedding." Harrison, in addition to his vocal qualifications, was an excellent actor. He died at his residence in Kentish Town, Nov. 9, 1868. [W.H.H.]

HART, CHARLES, born May 19, 1797, pupil of the Royal Academy of Music under Croch
From 1829 to 1833 organist to St. Dunstan's, Stepney, and subsequently to the church in Tredegar Square, Mile End. and St. George's, Beckenham. In 1830 he published 'Three Anthems,' and in 1832 a 'Te Deum and Jubilate,' the latter of which had gained the Gresham Prize Medal in 1831. In April 1839 he produced an oratorio entitled 'Omnipotence.' He was author of a motet which gained a premium at Crosby Hall, 'Sacred Harmony,' and other compositions. He died March 29, 1859. [W. H. H.]

HART, Joseph, born in London in 1794, became in 1801 a chorister of St. Paul's under John Sale. Whilst in the choir he was taught the organ by Samuel Weasley and Matthew Cooke, and the piano by J. B. Cramer. At 11 he acted as deputy for Attwood at St. Paul's. He remained in the choir nearly 9 years, and on quitting it became organist of Walthamstow, and private organist to the Earl of Uxbridge. He left Walthamstow to become organist of Tottenham. At the termination of the war in 1815, when quadrille dancing came into vogue, Hart became an arranger of dance music, and his 'Lancers' Quadrille' has continued in use ever since. From 1818 to 1820 he was chorus master and pianist at the English Opera House, Lyceum. He composed the music for 'Amateurs and Actors,' 1818; 'A Walk for a Walker,' and 'The Bull's Head,' 1819, all musical farces; and 'The Vampire,' melodrama, 1820. In 1829 he removed to Hasings, commenced business as a music seller, and was appointed organist of St. Mary's Chapel. Hart composed 48 sets of quadrilles, waltzes and galopades, and 'An Easy Mode of teaching Thorough-bass and Composition.' He died in December, 1844. [W. H. H.]

HART, Philip (conjectured by Hawkins to be the son of James Hart), bass singer at York Minster until 1670, and thereafter to his death, May 8, 1718, a Gentleman of the Chapel Royal, and lay vicar of Westminster Abbey, was the composer of several songs published in 'Choice Ayres, Songs and Dialogue,' 1676–84; 'The Theater of Music,' 1685–87; 'The Banquet of Music,' 1688–92, and other collections of that period. Philip Hart was organist of St. Andrew Undershalt, and St. Michael, Cornhill. In 1723 he composed the music for Hughes's 'Ode on Praise of Music,' performed at Stationers' Hall on St. Cecilia's day, 1703. On May 28, 1724, he was appointed the first organist of St. Dionis Backchurch, at a salary of 30l. In 1729 he published his music to 'The Morning Hymn from the Fifth Book of Milton's Paradise Lost.' He also published a Collection of Fugues for the Organ. Two anthems by him are included in the Tudway Collection (Harl. MS. 7341). From Hawkins' account of him (chap. 175) he appears to have been a sound and very conservative musician, and a highly respectable man. Sir John elsewhere mentions his excessive use of the shake in his organ playing. Hart died, at a very advanced age, in or about 1749. [W. H. H.]
Hasingler prepared a complete copy of Beethoven's compositions in full score, beautifully written by a single copyist. This was purchased by the Archduke Rudolph, and bequeathed by him to the Gesellschaft der Musikfreunde, in whose library it now is. He was one of the 36 torch-bearers who surrounded the bier of his great friend, and it fell to his lot to hand the three laurel wreaths to Hummel, by whom they were placed on the coffin before the closing of the grave. He died at Vienna, June 18, 1842, and the business came into the hands of his son Karl, a pupil of Czerny and Seyfried, a remarkable pianoforte-player, and an industrious composer. His wiriness were well known and much frequented, and many a young musician has made his first appearance there. He died Dec. 26, 1868, leaving as many as 100 published works of all classes and dimensions. The concern was carried on by his widow till Jan. 1785, when it was bought by the firm of Schlesinger of Berlin, by whom it is maintained under the style of 'Carl Hasingler, quondam Tobias.' Among the works published by this establishment may be named Schubert's 'Winterreise' and 'Schwanengesang'; Beethoven's Symphonies 2, 3, 4, 7, 8, Overtures to Coriolan, Ruins of Athens, op. 115, King Stephen, Leonora 'No. 1,' Violin Concerto, Battle Symphony, P. F. Concertos 1, 3, 4, 5, Trio in Bb, Sonatas and Variations, Liederkreis, etc.; Spohr's Symphonies 4 ('Weihe der Töne') and 5; Litz's Concerto in E♭; Moscheles' ditto 2, 3, 5, 6, 7; Hummel's ditto in C, G, A minor, and Ab, 4 Sonatas, etc. The dance music of Lanner and the Strausses forms an important part of the repertory of the firm, which under the new proprietorship has received a great impulse.

C. F. P.

HASSE, JOHANN ADOLPH, who for a third part of the 18th century was the most popular dramatic composer in Europe, was born on March 25, 1699, at 1 Bergedorf, Hamburg, where his father was organist and schoolmaster. At 18 years of age he went to Hamburg, where his musical talent and fine tenor voice attracted the notice of Ulrich König, a German poet attached to the Polish court, through whose recommendation he was engaged as tenor singer by Keiser, director of the Hamburg Opera, and the most famous dramatic composer of the day. At the end of four years König procured for Hasse a like engagement at the Brunswick theatre, where, a year later, was produced his first opera, 'Antigonus.' This (the only opera he ever composed to a German libretto) was very well received, but as, while evincing great natural facility in composition, it also betrayed a profound ignorance of the grammar of his art, it was decided that he must go to Italy, then the musical centre of Europe, for the purpose of serious study. Accordingly, in 1724, he repaired to Naples, and became the pupil of Porpora, for whom, however, he had neither liking nor sympathy, and whom he soon deserted for the veteran Alessandro Scarlatti. In 1725 he received the commission to compose a serenade for two voices. In this work, which had the advantage of being performed by two great singers, Farinelli and Signora Tessi, Hasse acquitted himself so well that he was entrusted with the composition of the new opera for the next year. This was 'Secessratio,' performed at Naples in 1726, and which extended its composer's fame over the whole of Italy. In 1727 he went to Venice, where he was appointed professor at the Scuola degli Incurabili, for which he wrote a 'Miserere' for two sopranos and two contralti, with accompaniment of stringed instruments, a piece which long enjoyed a great celebrity. He was now the most popular composer of the day. His fine manner and agreeable manners, his beautiful voice and great proficiency on the clavecin caused him to be much sought after in society, and he was known throughout Italy by the name of 'Il caro Sussone.' In 1728 he produced, at Naples, another opera, 'Attalo, re di Bitinìa,' as successful as its predecessor. In 1739 he returned to Venice, where he met with the famous Contatrice, Faustina Bordoni (see next article), then at the zenith of her powers and her charms, who shortly afterwards became his wife. For her he composed the operas 'Dalisia' and 'Artaserse' ('No. 1'), the latter of which is one of his best works.

In 1731 this celebrated couple were summoned to Dresden, where August II. reigned over a brilliant court. Hasse was appointed Capellmeister and Director of the Opera. His first opera produced in Dresden, 'Alessandro nell' Indie,' had an unprecedented success, owing not only to its own merits, but to the splendid performance by Faustina of the principal part. Hasse's position, however, as the husband of the most fascinating prima donna of the day, was, at this time, far from being an easy one. His life was embittered also by his enmity to his old master, Porpora, whom he found established in Dresden, and patronised by some members of the royal family, and by jealousy of Porpora's pupil, Regina Mingotti. This excellent singer was a dangerous rival to Faustina, and Hasse neglected no opportunity of manifesting his spite against her. In 'Demofonte' he introduced into her part an air written entirely in what he thought a defective part of her voice, while the accompaniment was artfully contrived to destroy all effect while giving no support. Mingotti was obliged to sing it, but like the great artist that she was, she acquiesced in such a manner as to disappoint Hasse. and this very air became one of her most successful show-pieces. This combination of causes seems to have made Hasse's footing in Dresden uncertain, and up to 1740 he abstained himself as much as possible, while Faustina remained behind. He revisited Venice, Milan, and Naples, and also went to London, where he was pressed to undertake the direction of the opera established in opposition to Handel. His 'Artaserse' met with a brilliant reception, but he had no wish to support the rivalry with Handel; besides which he disliked England, and

1 Now the residence of Dr. Chrysander.
soon quitted the country. He returned, in 1730, to Dresden, where he was no longer vexed by the presence of Porpora, and where August III. had succeeded his father. Here, with the exception of a short sojourn in Venice in 1740, he and Faustina remained till 1753. In 1745, on the very evening of Frederick the Great's entry into Dresden after the battle of Kesselsdorff, Hasse's opera 'Armindo' was performed by command of the conqueror, who graciously commended the work and its performance, especially the part of Faustina. During Frederick's nine days stay in the Saxony capital Hasse had to attend at court every evening and superintend the musical performances, and was rewarded by the present of a magnificent diamond ring and 1000 thalers for distribution among the musicians of the orchestra. In 1750 occurred the siege of Dresden, in which Hasse lost most of his property, and during which his collected MSS., prepared for a complete edition of his works, to be published at the expense of the King of Poland, were nearly all destroyed. At the end of the war the king was obliged from motives of economy, to suppress both opera and chamber music. The Capellmeister and his wife were pensioned, and retired to Vienna, where Hasse, in conjunction with the poet Metastasio, was soon engaged in active opposition to a more formidable rival than Porpora, viz. Christoph Gluck. Although he was 64 years old, he now composed several new operas. His last dramatic work, 'Ruggiero,' was produced at Milan in 1774 for the marriage of the Archduke Ferdinand. On this same occasion was performed a dramatic serenade, 'Ascanio in Alba,' the work of Wolfgang Mozart, then 13 years of age. After hearing it, old Hasse is said to have exclaimed, 'This boy will throw us all into the shade,' a prediction which was verified within a few years of its utterance. The remainder of Hasse's life was passed at Venice, where he died at the age of 85, on Dec. 16, 1783.

Owing to the destruction of Hasse's works at Dresden, his autograph scores are exceedingly rare; scarcely a MS. or even a letter of his being found in any collection, public or private; though contemporary copies are common enough. The following compositions of Hasse's are the chief of those which are published, and accessible at the present day:—

1. 'Miserere' for 2 Soprani and 2 Alti (Berlin, Trautwein).
2. '113th Psalm'; for Bass solo and Chorus, with orchestra (Elberfeld, Arnold).
3. 'Alcide al Bivio,' opera, P. F. score (Leipzig, Breitkopf).
4. 'Te Deum in D for Soli and Chorus, with Orchestra and Organ (Leipzig, Peters).
5. 'Die Pilgerin auf Golgatha' ('Pellegrini al Sepolcro,' German translation), Oratorio, P. F. score (Leipzig, Schwicke).
6. Quintet, from the above, 2 Sopr., 2 Alts, and Bass (Berlin, Damköhler; Breulau, Leuckard).
7. Air for Alto, from Oratorio 'Die Bekehrung des heiligen Augustins' (Berlin, Damköhler, & Schlesinger).

There is a fine portrait of Hasse, oval, in folio, engraved by L. Zucchi at Dresden from a picture by C. P. Rotavi, representing him as a middle aged man, with pleasing features and expression. Hasse's facility in composition was astonishing. He wrote more than a hundred operas, besides oratorios, masses, cantatas, psalms, symphonies, sonatas, concertos, and a host of smaller compositions. He set to music the whole of Metastasio's dramatic works, several of them three or four times over. His career was one long success: few composers have enjoyed during their lifetime such world-wide celebrity as he; of those few none are more completely forgotten now. Great as was his personal popularity, it is insufficient to account for the universal accept ance of his music. The secret probably lay in the receptivity of his nature, which, joined to the gift of facile expression, caused some of the most genial, though not the deepest, influences of his time to find in him a faithful echo. First among these was the spreading fascination of modern Italian melody. It is as an Italian, not a German composer that Hasse must take rank, although, innocent as he was of contrapuntal science, he has nothing in common with the majesty, profound in its simplicity, of the early Italian writers. He began life as a singer, in the age of great singers, and must be classed among the first representatives of that modern Italian school which was called into existence by the worship of vocal art for its own sake. His harmonies, though always agreeable, sound poor ears accustomed to the richer combinations of the German composers who were his contemporaries and immediate successors. Yet even as a harmonicist he is linked to modern times by his fond and frequent use of the diminished seventh and its inversion, as an interval both of melody and of harmony; while his smooth and somewhat cloying successions of thirds and sixths may have afforded delight to hearers inured to the stern severities of counterpoint. He had an inexhaustible flow of pleasing melody, which, if it is never grand or sublime, is never crabbed or ugly. Many of his best airs are charming even now, and, if in some respects they appear trite, it should be remembered that we have become familiar with the type of which they are examples through the medium of compositions which, in virtue of other qualities than his, are longer-lived than Hasse's, though written at a later date. A few have been republished in our own day, among which we may quote 'Ritornerai fra poco,' from a Cantata (to be found in the series called 'Gemme d'Antichità,' published by Lonsdale), which has real beauty. As a fair specimen of his style, exhibiting all the
qualities which made him popular, we will mention the opening symphony and the first air in the oratorio 'I Polifovini at Sepolcro,' written for the Electoral Chapel at Dresden. To appreciate the deficiencies which have caused him to be forgotten, we have only to proceed a little further in this or any other of his works. They are inexpressibly monotonous. In the matter of form he attempted nothing new. All his airs are in two parts, with the inevitable Da Capo, or repetition of the first strain. All his operas consist of such airs, varied by occasional duets, more rarely a trio, or a simple chorus, all cast in the same mould. His orchestra consists merely of the string quartet, sometimes of a string trio only; if now and then he adds hautbois, flutes, bassoons, or horns, there is nothing distinctive in his writing for these wind instruments, and their part might equally well be played by the violins. Nor is there anything distinctive in his writing of Church music, which curiously enough is the same melodious characteristics as his operas. His Symphonies are for three, or at the most four, instruments. The harmonic basis of his airs is of the very slightest, his modulations the most simple and obvious, and these are repeated with little variety in all his songs. The charm of these songs consists in the elegance of the melodic superstructure and its sympathetic adaptation to the requirements of the voice. Singers found in them the most congenial exercise for their powers, and the most perfect vehicle for expression and display. For ten years Farinelli charmed away the melancholy of Philip V. of Spain by singing to him every evening the same two airs of Hasse (from a second opera, 'Artaserse'), 'Pallido è il sole' and 'Per questo dolce ampiesso.'

The source of Hasse's inspiration lay, not in intuition, but in his susceptibility to external impressions. In Art, the universally pleasing is the already familiar; so long as nothing is recognised, nothing is understood. Recognition may come as revelation; but, for a great original work to find acceptance, the truth of which it is the first expression must be latent in the minds of those who have to receive it. Hasse was no prophet, but in his works his contemporaries found fluent utterance given to their own feelings. Such men please all, while they offend none; but when the spirit and the time of which they are at once the embodiment and the reflection passes away, so, with it, must they and their work pass away and be forgotten.

HASSE, FAUSTINA BORDONI, the wife of the foregoing, was born at Venice, 1700, of a noble family, formerly one of the governing families of the republic. Her first instruction was derived from Gasparini, who helped her to develop a beautiful and flexible voice to the greatest advantage. In 1715 Bordoni made her début in 'Ariodante' by C. F. Pollaroli, achieved at once a reputation as a great singer, and was, soon known as the 'New Syren.' In 1719 she sang again at Venice with Cuzzoni and Bernacchi, whose florid style her own resembled. In 1722 she sang at Naples, and at Florence a medal was struck in her honour. She visited Vienna in 1724, and was engaged for the Court Theatre at a salary of 15,000 florins. Here she was found by Handel, who immediately secured her for London, where she made her début May 5, 1726, in his 'Alessandro.' Her salary was fixed at £2000. 'She, in a manner,' says Burney, 'invented a new kind of singing, by running divisions with a neatness and velocity which aston- ished all who heard her. She had the art of sustaining a note longer, in the opinion of the public, than any other singer, by taking her breath imperceptibly. Her beata and trills were strong and rapid; her intonation perfect; and her professional perfections were enhanced by a beautiful face, a symmetric figure, though of small stature, and a countenance and gesture on the stage, which indicated an entire intelligence of her part. Apostol Zeno, in speaking of her departure from Vienna, says — 'But whatever good fortune she meets with, she merits it all by her courteous and polite manners, as well as talents, with which she has enchanted and gained the esteem and affection of the whole Court'.

In London she stayed but two sessions and then returned to Venice, where she was married to Hasse. In 1731 she went to Dresden, and remained there till 1756. During the war, she and her husband went to Vienna, and resided there until 1775, when they retired to Venice, where they ended their days, she in 1783 at the age of 90, and Hasse not long after, at nearly the same age.

Faustina has seldom been equalled in agility of voice; 'a matchless facility and rapidity is her execution; dexterity in taking breath, exquisite shake, new and brilliant passages of embellishment, and a thousand other qualities contributed to inscribe her name among the first singers in Europe' (Stef. Artegna). In London she divided the popular favour with Cuzzoni. 'When the admirers of the one began to applaud, those of the other were sure to hiss; on which account operas ceased for some time in London' (Quain). In a libretto of 'Admeto,' Lady Cowper, the original possessor, has written opposite to Faustina's name, 'she is the devil of a singer.'

Fétis mentions her portrait in Hawkins's History; but he seems not to have known the print, engraved by L. Zucchi after S. Torelli, which is a companion to that of Hasse by the same engraver, and represents Faustina as an elderly person, handsomely dressed, and with a sweet and intelligent countenance. This portrait is uncommon.

HASSLER or HASSLER, HANS LEOPHARD, eldest of the 3 sons of Isaac Hassler—a musician of the Joachimsthal who settled in Nuremberg—and the ablest of the three. Of his life little is known. He is said to have been born in 1564; he received his instruction from his father, and from A. Gabrielli, with whom he remained in Venice for a year, after which he found a house in the house of the Fuggers at Augsburg. There he composed his famous 'xxiv Canzonetti a 4
veci' (Norimberga, 1590) and his 'Cantiones sacre de festis precipius totius anni 4, 5, 8 et pluriium vocum' (Augsburg, 1591)—28 Latin motets. These were followed by his 'Concentus ecclesiasticus' (Augsburg, 1596); 'Neue deutsche Gesange' (1596); 'Madrigali' (1597); and 'Cantiones novae' (1597). The statement so often repeated by the Lexicons that Hassler entered the Imperial chapel at Vienna in 1601 is inaccurate, and arises from the fact that a certain Jacob Häslar joined that establishment on July 1, 1602. (See Köchel 'Kais, Hofkapelle,' p. 53.) At a later time Hassler entered the service of Christian II. of Saxony, and died probably on June 5, 1612.

Besides the works already named there exist 8 Masses of his (1599); four-part Psalms and Gesänge (Nuremberg 1607, republished by Breitkopfs in score, 1777); and five collections of German and Latin secular songs. Many single pieces are given in Bodenbachi's 'Florilegium' and in Schadnaeus's 'Promptuarium Musicum' (See Eitner's Bibliographie of his compositions in the Monatshefte für Musikgeschichte, 1853). Forke (Musikgesellschaft, 1848) says that Hassler gave 3 Masses and 7 other pieces of his, and says of his style that 'it unites all the greatest beauty and dignity that can be found in both the Italian and German art of that day.' Rochlitz includes a Pater Noster for 7 voices in his 'Sammlung,' vol. 3. The well-known chorale 'Herzlich that mich verlangen' or 'Befiehl du deine Wege,' so much used by Bach in the Passion, was originally a love song, 'Mein Gemuth is mir verwirret,' in his 'Lustgarten deutscher Gesänge' (1601).

His younger brother, Jacob, a meritorious church composer, is probably the Häslar already mentioned as having joined the Chapel at Vienna. It is at least certain that he was organist to Graf Eytel Friedrich von Hohenzollern Herbingen in 1601. The third brother, Caspar, born probably 1570, acquired a reputation for playing the organ and claviers, and was one of the musicians appointed to try the organs at Magdeburg and other Lutherans. Some of his vocal pieces are found in 'Symphoniae sacrae' (Nuremberg, 1598-1600).

HATTON, John Lipbor, born in Liverpool 1809, received in his youth a small rudimentary instruction in music, but was otherwise entirely self-taught. He settled in London in 1832, and soon became known as a composer. In 1842 he was engaged at Drury Lane Theatre, at which house, in 1844, he produced an operetta called 'The Queen of the Thames.' In the same year he went to Vienna and brought out his opera, 'Pascal Brion.' On his return to England he published, under the pseudonym of 'Czapek,' several songs which met with considerable success. In 1848 he visited America. Hatton was for some years director of the music at the Princess's Theatre under Chas. Kean, and whilst there composed music for 'Mabeth' and 'Sardanapalus,' 1853; 'Faust and Marguerite,' overture and en actes, 54; 'King Henry VIII,' 55; 'Pizarro,' 56; 'King Richard II,' 57; and 'King Lear,' 'The Merchant of Venice, and 'Much Ado about Nothing,' g. He has also composed two Cathedral services; several anthems; 'Rose, or Love's Ransom, opera, Covent Garden, 1864; 'Robin Hood,' cantata, Bradford Musical Festival, 1865; several books of part songs, and a great number of songs ('Good by sweet órgers,' etc.). One of his latest achievements was the sacred drama of 'Hezekiah,' produced at the Crystal Palace, Dec. 15, 1877. [W.H.H.]

HAUCK, MINNIS, born (of a German father) at New York Nov. 16, 1853, made her first appearance at a concert at New York about 1885. She was then placed under the care of Signor Errani in New York, and made her début on the stage of that city as Amina in 1868. After a successful tour in the States with a large répertoire of characters she came to London, and appeared at Covent Garden as Amina (Oct. 26, 1868) and Margherita. In 1869 she was engaged by the Grand Opera, Vienna, and sang there and at Moscow, Berlin, Paris, and Brussels, with great success for several years in a large range of parts. On April 27, 1878, she reappeared here at Her Majesty's as Violetta in the Traviata. She sustained the part of Carmen in Bizet's opera of that name at Brussels, and on its production in London by Mr. Mapleson at Her Majesty's on June 22, thus making the success of the piece, which had not pleased in Paris and showing herself to be not only a high-class singer, but also a mistress of lower dramatic power. Her voice is a mezzo sano capable of great force and richness, and she is said to sing Italian, German, French and Hungarian with equal facility. [G.]

HAUPT, CarL, a very distinguished German organist, born Aug. 25, 1810, at Cunau in Sileisia; pupil of A. W. Bach, Klein, and Dehn, and at a later date of the two Schneiders. In 1832 he obtained his first post at the French convent in Berlin, from which he gradually rose to the parish church of the city, where he succeeded Thiele in 1849. His reputation spread far beyond his native country, and in 1854 he was consulted by Professors Donaldson, Ouseley, and Willis, the committee appointed to draw up a scheme for a gigantic organ at the Crystal Palace. In 1870 he succeeded his old master Bach as Director of the Königliche Kirchenmusik Institut at Berlin, over which he still continues (1878) to preside. Haupt is remarkable for his fine extemporaneous variations in the style of J. S. Bach—close and scientific, and increasing in elaboration with each fresh treatment of the theme; and in that master's organ music he is probably unsurpassed. [G.]

HAUPT, Leopold, a clergyman of Görlitz, author of 'Volklieder der Wend' (Grimme, 1841), a collection of the melodies sung in the district round Dantzig, the ancient seat of the Wends. [M.C.C.]

HAUPTMANN, Moritz, Doctor of Philosophy, German composer and eminent theorist, and Cantor of the Thomas School at Leipzig, born at Dresden Oct. 13, 1792. His education was conducted mostly with a view to his father's
profession of architecture; but he was also well
grounded in music at an early age. He studied
the violin under Scholz, and harmony and com-
position under various masters, concluding with
Morlaesschi. As Hauptmann grew up he deter-
mined to adopt music as a profession. To perfect
himself in the violin and composition, he went in
1811 to Gotha, where Spohr was concert-meister,
and the two then contracted a life-long friendship.
He was for a short time violinist in the court
band at Dresden (1812), and soon afterwards
entered the household of Prince Reppin, Russian
Governor of Dresden, with whom he went to
Russia for four years in 1815. On his return to
Germany he became violinist (1822) in Spohr's
band at Cassel, and here gave the first indications
of his remarkable faculty for teaching the theory
of music. F. David, Curschmann, Burgmüller,
Kufferath and Kiel, are among the long list of
his pupils at that time. In 1842, on Mendels-
sohn's recommendation, he was appointed Cantor
and Musik-director of the Thomas-Schule, and
professor of counterpoint and composition at the
new Conservatorium at Leipzig, where he thence-
forward resided. Here he became the most cele-
brated theorist and most valued teacher of his
day. Not only are there very few of the fore-
most musicians in Germany at the present mo-
tment who do not look back with gratitude to
his instructions, but pupils flocked to him from
England, America and Russia. Among his pupils
will be found such names as Joachim, von Bülow,
Cossmann, the Baches, Sullivan, Cowen, etc., etc.
(See the list at the end of his letters to Hauser.)
He died at Leipzig Jan. 3, 1868, loaded with
decorations and diplomas.
In teaching, Hauptmann laid great stress on
the two fundamental esthetical requirements in
all works of art, unity of idea and symmetry
of form, and his compositions are admirable
examples of both. With such views he naturally
had little sympathy with the new destructive
school, but he was always courteous to those
who had a different creed. His respect for classical
forms never trammeled him; and this very in-
dependence kept him free from party spirit and
personal animosity. Altogether he offers a beau-
tiful example of a life and work the value of
which was acknowledged even by his bitterest
controversial opponents. Nothing but a life of
single devotion to the cause of art, could have
exacted such universal homage. His works are
characterised by deep thought, philosophic
treatment, imagination, and much sense of humour.
His chief work is 'Die Natur der Harmonik und
Metrik' (1853, 2nd ed. 1873). His mathema-
tical and philosophical studies had given a strictly
logical turn to his mind, and in this book he applies
Hegel's dialectic method to the study of
music. Gifted with an ear of unusual delicacy,
he speculated deeply on the nature of sound,
applying to the subject Hegel's formulae of
proposition, counter-proposition, and the ultimate
unity of the two. The book is not intended for
practical instruction, and is indeed placed beyond
the reach of ordinary musicians by its difficult
terminology. But by those who have mastered
it, it is highly appreciated, and its influence on
later theoretical works is undeniable. The obvi-
sous endeavour of recent authors to treat the
theory of music on a really scientific basis, is
mainly to be attributed to the impetus given by
Hauptmann. His other works are—een 'Erles-
nerung zu der Kunst der Fuge von J. S. Bach';
various articles on acoustics in Chemnitz's
'Jahrbücher'; 'Die Lehre von der Harmonik,' a
posthumous supplement to the 'Harmonik und
Metrik,' edited by his pupil Dr. Oscar Paul;
'Opuscula,' a small collection of articles musical
and philosophical, edited by his son; and his
'Letters,' of which 2 vols. (1871) are address-
ed to Hauser, late director of the Munich Con-
servatoire, and the third, edited by Hiller (1876),
to Spohr and others. Hauptmann published
some 60 compositions, mainly interesting from
the characteristic harmony between the whole
and its parts, which pervades them. Idea and
execution are alike complete; the thought is
clear, the style correct; while their symmetry
of form and purity of expression make them true
works of art and perfect reflections of the
harmonious graceful nature of their author. In
early life he wrote chiefly instrumental music—
Sonatas for P. F. and violin (op. 5, 22); Duos
for 2 violins (op. 2, 16, 17) etc., which bet
the influence of Spohr. During the latter half
of his life he wrote exclusively for the voice.
Among his vocal compositions, more important
as well as more original than the instrumental—
may be named, a Mass (op. 18); a Mass with orch.
(op. 42); Choruses for mixed voices (op. 25, 32,
47), perfect examples of this style of writing;
2-part songs (op. 49); and 3-part canons (op. 50).
Op. 33, six sacred songs, were published in Engli-
sh by Ewer & Co. Early in life he composed
an opera, 'Mathilde,' which was repeatedly per-
formed at Cassel. His part-songs are eminently
vocal, and widely popular, and are stock pieces
with all the Associations and church-choirs
throughout Germany.

HAUTBOY. The English transference of the
French Haut-bois, i.e. a wooden instrument
with a high tone. The word is used by Shak-
speare. In Handel's time it was phoneticised
into Hoboy. The Italians spell it Oboe, which
form (occasionally, as by Schumann, Hubbe) is now
adopted in Germany and England. Under that
head the instrument is described. [OBOE.]

HAWES, WILLIAM, born in London in 1755;
from 1793 to 1801 a chorister of the Chapel
Royal. In 1802 he was engaged as a violinist
in the band of Covent Garden, and about the
same time began to teach singing. In 1803 he
officiated as deputy lay vicar at Westminster
Abbey. On July 15, 1805, he was appointed
gentleman of the Chapel Royal, and on the forma-
tion of the Philharmonic Society in 1813 he was
elected an associate. In 1814 he was appointed
almoner, master of the choristers and vicar-choral
of St. Paul's, and in 1817 master of the children
and lutenist of the Chapel Royal. In the same
year he became lay vicar of Westminster Abbey, but resigned his appointment in 1820. He was the first promoter of the Harmonic Institution [see Argyll Rooms], and after the breaking up of that establishment carried on for some years the business of a music publisher in the Strand. He was for several years director of the music at the English Opera, Lyceum; and it was at his instance that Weber's 'Der Freischütz' was first performed in England, July 24, 1824, an event which forms an era in the history of the opera in this country. Hawes did not at first venture to perform the entire work, the finals being omitted and ballads for the soprano and tenor interpolated, but he had soon the satisfaction of discovering that the opera would be accepted without curtailment. The great success of the work induced him subsequently to adapt the following operas to the English stage:—Salieri's 'Tarrare,' 1825; Winter's 'Das Unterbrochene Opferfest' ('The Oracle, or, The Interrupted Sacrifice'), 1826; Päcer's 'I Furoscuti' ('The Freebooters'), 1827; Mozart's 'Coel fan tutte' ('Tit for Tat'), 1828; Ries' 'Die Rabenbraut' ('The Robber's Bride'), and Marschner's 'Der Vampyr,' 1829. Hawes composed or compiled music for the following pieces:—'Brocken Promises' (compiled), 1825; 'The Sister of Charity,' 1829; 'The Irish Girl,' 1830; 'Comfortable Lodging,' 'The Dilok Gatherer,' and 'The Climbing Boy,' 1832; 'The Mummy,' 'The Quartette,' and 'The Yeoman's Daughter,' 1833; and 'The Muleteer's Vow' (partly selected), 1835. He was the composer of 'A Collection of five Glee and one Madrigal,' and 'Six Glee for three and four voices'; and the arranger of 'Six Scotch Songs, harmonized as Glee.' His glee, 'The bee, the golden daughter of the spring,' gained the prize given by the Glee Club on its 50th anniversary in April 1836. He edited the publication in score of 'The Triumphs of Oriana'; of a collection of madrigals by composers of the 16th and 17th centuries; a collection of the then unpublished glee of Reginald Spofforth; and a collection of Chants, Sanctuaries, and Responses to the Commandments. In 1830 he gave oratorio performances in Lent at both the patent theatres, but with heavy los-s. He was for many years conductor of the Madrigal Society, and organizer of the German Lutheran Church in the Savoy. Hawes died Feb. 18, 1846. His daughter, Maria Billington Hawes, afterwards Mrs. Merest, for some years occupied a high position as a contralto singer, and was the composer of several pleasing ballads. [W.H.H.]

HAWKINS, James, Mus. Bac., was a chorister of St. John's College, Cambridge, and afterwards organist of Ely Cathedral from 1682 until his death in 1729. He was a voluminous composer of church music, and 17 services and 75 anthems by him are preserved (more or less complete) in MS. in the library of Ely Cathedral. Two services and 9 anthems (part of these) are also included in the Tudway collection (Harl. MSS. 7341, 7342). Hawkins transcribed and presented to the library of Ely Cathedral many volumes of cathedral music. He took his degree at Cambridge in 1719. He was a nonjuror, as appears by an autograph copy of one of his anthems in the library of the Sacred Harmonic Society (No. 1719), the words of which are applicable to party purposes, and which has a manuscript dedication 'to the Very Revd. Mr. Tomkinson and the rest of the Great, Good, and Just Non-jurors of St. John's College in Cambridge.'

JAMES HAWKINS, his son, was organist of Peterborough Cathedral from 1714 (when he was appointed at a salary of £20 per annum) to 1759. He composed some church music. One of his anthems is included in the Tudway collection (Harl. MSS. 7342). [W.H.H.]

HAWKINS, Sir John, Knight, born Mar. 30, 1719, originally intended for the profession of his father, an architect and surveyor, but eventually articled to an attorney. He was duly admitted to the practice of his profession, devoting his leisure hours to the cultivation of literature and music. On the formation of the Madrigal Society (1741), Hawkins, at the instance of Immyns, its founder, a brother attorney, became one of the original members. About the same time he became a member of the Academy of Antient Music. Hawkins wrote the words of Six Cantatas, which were set to music for a voice and instruments, by John Stanley, and published at their joint risk in 1742. These succeeded so well that the authors were induced to publish, a few months afterwards, a similar set, which met with equal success. Hawkins was also a frequent contributor to the 'Gentleman's Magazine' and other periodicals. In 1749 he was invited by Samuel Johnson to be one of the nine members who formed his Thursday evening club in Ivy Lane. In 1753 he married Miss Sidney Storer, with whom he received a considerable fortune, which was greatly increased on the death of her brother in 1759. Hawkins then purchased a property near Twickenham, of which he retired. In 1760 he published an edition of Walton and Cotton's 'Complete Angler,' with a preface of Walton and notes by himself, and a life of Cotton by William Oldys. The publication involved him in a dispute with Moses Browne, who had shortly before put forth an edition of the 'Angler.' Hawkins's edition was thrice reproduced by him in his lifetime, and again by his son, John Sidney Hawkins, after his death. He was an active magistrate, and in 1765 became Chairman of the Middlesex Quarter Sessions. In 1770, with a view of assisting the Academy, he wrote and published anonymously a pamphlet entitled, 'An Account of the Institution and Progress of the Academy of Ancient Music.' In 1772, on Oct. 23, he was knighted. In 1776 he gave to the world the work on which his fame rests—his 'General History of the Science and Practice of Music,' in 5 vols. 4to., on which he had been engaged for 16 years. In the same year Dr. Burney published the first volume of his 'General History of Music'; the other three appearing at intervals between that date and 1789. Contemporary judgment awarded the palm
of superiority to Burney and neglected Hawkins. Evidence of the feeling is found in a catch which was formerly better known than it is now:—

'Have you Sir John Hawkins' History? Some folks think it quite a mystery. Musick fill'd his wondrous brain, How'd ye like him? is it plain? But I've read Bond myself. That Burney's history pleases me.'

Which in performance is made to sound:—

'Sir John Hawkins! Burn his history! How'd ye like him? Burn his history! Burney's history pleases me.'

Posterity, however, has reversed the decision of the wise; Hawkins' History has been reprinted (Novello, 1875, 2 vols. Svo.), but Burney's never reached a second edition. The truth lies between the extremes. Burney, possessed of far greater musical knowledge than Hawkins, better judgment, and a better style, frequently wrote about things which he had not sufficiently examined; Hawkins, on the other hand, more industrious and painstaking than Burney, was deficient in technical skill, and often inaccurate. In 1784 Dr. Johnson appointed Sir John Hawkins one of his executors, and left to him the care of his fame. Sir John fulfilled this trust by writing a life of Johnson, and publishing an edition of his works in 11 vols. Svo. in 1787. Whilst engaged on the work the library at his house in Queen Square, Westminster, was destroyed by fire. Fortunately he had, soon after the publication of his History, preserved the fine collections of musical treatises and other works formed by Dr. Pepusch, and which he had acquired, to the British Museum, so that the loss, although severe, was much less than it might have been. On May 14, 1789, Hawkins was attacked by paralysis, from the effects of which he died on 21st of the same month. He was buried in the cloisters of Westminster Abbey, under a stone on which was inscribed, pursuant to his own wish, only the initials of his name, the date of his death, and his age.

The following pieces are printed by Hawkins in his History. The reference is to the chapter, in the Appendix to the No.

Bewick. Canon, 103. 'Cecil's old,' 124.
Byrd. W. [Canon, 'O Lux.' 95. Do. 'Dobhacks,' 106.
Do. 'Nemerset,' 96. Do. 'Tenete,' 94.
Do. 'Diliges,' 95. Do. The eagle's song, App. 3.
Birds, songs of, 1.
Canon, 5 in 2.
Canons, various, 119.
Casta figurae, 51.
Carastili. 'Eilie o cileil,' 124.
Cecil, the old, App. 29.
Cold and raw, 20. Do. 'Come follow me,' 20.
'Conditor alme,' 87. Contrapunta. 'Simplices and
Dismutatis.' St. Colman. Hymn, 19.
Corlyne, W. 'Ab thyshower, ye.' 96. Cotton, F. 'My time, O ye maes.' 117.
Dunstable. 'Necesse virgo,' 61.
Dyer, J. 'Ad aperita,' 70.
Evelst. 'A soldier and a sailor,' 124.
Edkins. A rope dance, App. 34.
Fecres, 60. 'Fellinama,' App. 23.
Edwards, B. 'Where graping grace,' 44.
Merton. 'Salve mater,' 7.
Musica Ficta, 65.
Ottorinius. Fuga in Residuo.
'Old Simon the king,' App. 20.
'O my friend, my Muse,' 34.
Ora et labora.' canzon. 10.
Palestrina. 'Scint cucur.' 28.
Do. 'Crede gaudens.' 29.
Partebena, 102.
'Paul's mosque,' App. 16.
Purcell. 'Golden showes.' 102.
Quidquevis, canzon. 119.
Gloster, A. 'Our first mother.' 79.
Redford. 'Rejoice.' App. 31.
Roper of Coverley. App. 8.
B. 'Ye Deus panes.'
App. 22.
Sorinus, 'Ancel salut.' 8.
Roual. Emilia. Canon, 2.
Saccochi. 'Vobis daramus.' 22.
Thom. 'Golden showes.' 102.
Shaking of the sheeple.' App. 3.
Sheppard, J. 'Stirr's New.' 8.
Do. A point. App. 18.
Sloth, cry of the 1.
Steffani. 'For ams man.' 31.
Herrnholtz and Hopkins. J. Pale.
Subligusus, misalet. App. 22.
Summer is comewes in, 6.
Tellus. 'Asterop.' 106.
Do. 'Minseria.' 95.
Do. 'Desidio.' 106.
Do. 'Compendio.' 101.
Taverner, J. 'O spendor.' 22.
Theobaldus of Xavier, sung. 112.
Thom. 'Inciplendum, pedic.' 129.
Thorne. J. 'Stella celat.' 117.
Tye. 'It chanced in London.' 7.
'In ror mea.' App. 32.
Valentine, A. 'All 'skept.' 86.
Wolfgangus i cometis. 6.
Venosa, Prince of. 'Birt mur.' 102.
Vicentino. 'Atalanta.' 89.
Milton's 'Comus.' 102.
Wolmerr. canon, 119.
'Miserere nostr.' Tellus, 94.
Monte, F. de. 'Da be ratent.' 94.
Monterredo. 'Perch.' a (Orfeo), 104.
Do. 'Doreca.' do. 100.
Morley, T. 'Beside a fountain,' 101.
Wiltshire, A. 'Queen devout.' 7.

[WH]

HAYDÉE OU LE SECRET. Opéra comique in 3 acts; words by Scribe, music byuber. Produced at the Opéra Comique Dec. 26, 1841. It was produced in English (same title) at the Strand Theatre April 3, 48, and at Covent Garden (Fyne and Harrison) Nov. 4, 48 (1st appearance of Miss Lucombe).

[WH]

HAYDEN, GEORGE, organist of St. Mary Magdalen, Bermondsey, in the earlier part of the 18th century. About 1723 he published Three Cantatas, which displayed considerable ability. He also composed a song called 'New Mad Tom commencing' in my triumphant chariot hurled which was afterwards tucked on to the front part of the older song 'Forth from my dais and dimond into the field' beginning 'Last night I heard the dog-star died' and was often sung with it. His two-part song 'As I saw fair Clara walk alone,' was long a favourite.

[WH]

HAYDEN, JOHNNY MICHAEL, born, like his brother Joseph, at Rohran, Sept. 14, 1757; was grounded in music by the village schoolmaster, and at eight became chorister at St. Stephen's Vienna. His voice was a pure soprano of great compass, and his style so good that, as soon as
Joseph's voice began to change Michael took all the principal parts. He played the violin and organ, and was soon able to act as deputé organist at St. Stephen's. He was fond of history, geography, and the classics. In music he aimed at originality from the first, and formed a sort of society among his school-fellows for detecting plagiarisms. Like his brother he had no regular instruction in composition, but taught himself from Fux's 'Gradus,' which he copied in entirety in 1757. His first known mass is dated Temesvar, 1754; other works were composed at Warsadín and Belényes; but how he came to be in Hungary is not known. In 1758 he was Kapelmeister at Grosswardein to the bishop Count Firmian, whose uncle Archbishop Sigismund of Salzburg appointed him, in 1762, his director and concertmeister. In 1777 he also became organist at the churches of Holy Trinity and St. Peter. On the 17th of August, 1768, he married Maria Magdalena Lipp, daughter of the cathedral organist, and a singer at the archbishop's court, who took the principal parts in several of Mozart's juvenile operas, and is mentioned by him as leading a peculiarly strict life. They had one child, a daughter, born 1770, died the following year. The wife lived to be 82, and died in June 1837. Michael's salary, at first 300 florins (234) with board and lodging, was afterwards doubled; and this modest pittance was sufficient to retain him for the whole of his life at Salzburg. His attachment to the place was extraordinary, one attraction being the proximity of his great friend, a clergyman named Rettensteiner. In 1783 the then archbishop, Hieronymus Count Colloredo, commissioned him to compose some vocal pieces to be used instead of the instrumental music between the Gloria and Credo at high mass. Michael selected words from the Roman Missal, and his first Graduale—first of 114—was performed on Dec. 24. In 1798 he visited Vienna, and was cordially received by his brother, and by Eybler, Susseman, Herbergh, Hummel, and von Reich the amateur, who pressed him to settle among them, but in vain. In Dec. 1800 he lost his property through the taking of Salzburg by the French, but his brother and friends came liberally to his assistance. The Empress Maria Theresa hearing of his losses commissioned him to compose a mass, which he presented to her in person. The performance took place at Laxenburg, Oct. 4, 1801, under his own direction; the Empress sang the soprano solo, rewarded him munificently, and commanded another to be composed for the Empress's requiem. Accompanied by his friend Rettensteiner he visited Eisenstadt, where for the first and only time in their lives the three Haydns spent some happy days together. Michael much enjoyed the canons which decorated the walls of Joseph's study in Vienna, and asked leave to copy some of them, but Joseph replied, 'Get away with your copies; you can compose much better for yourself.' Michael however carried his point, and even added a fourth part to 'Die Mutter an ihr Kind.' Prince Esterhazy commissioned Michael to compose a mass and vespers, and offered him the vice-capellmeistership of his chapel, but he twice refused, in the hope that the chapel at Salzburg would be reorganised and his salary raised. His hopes were deceived, but meantime the post at Eisenstadt had been filled up, and he wrote to his brother complaining bitterly of the disappointment. Joseph thought Michael too straightforward for Eisenstadt: 'Ours is a court life,' said he, 'but a very different one from yours at Salzburg; it is uncommonly hard to do what you want.' At this time Michael was elected a member of the Academy at Stockholm, and sent in exchange for his diploma a Missa Hispanica for two choirs (comp. 1786), and other church works. In Dec. 1805 he finished his last mass, for two sopranos and alto, written for his choristers. He made some progress with the requiem for the Empress, but was unable to finish it. While on his deathbed his beautiful 'Lauda Sion' was sung at his request in the next room, and soon after, on August 10, 1806, he expired. The requiem was completed by portions from his earlier one in C minor, and performed at his funeral. He lies in a side chapel of St. Peter's Church. A well-designed monument was erected in 1821, and over it is an urn containing his skull. In the tavern of St. Peter's monastery is still shown the 'Haydn-Stübben,' his almost daily resort. His widow received from the Empress 600 florins for the score of the requiem; from Prince Esterhazy 30 ducats for the opera 'Andromeda and Perseus,' and an annuity of 36 gold ducats for all his MS. compositions. His brother several times sent him money, and in his first will (1801) left 4000 florins to him, and in his second (1809) 1000 to the widow. His likeness, with regular, steady features, exists in many oil-portraits, engravings, lithographs, and drawings.

In character Michael was upright, good-tempered, and modest; a little rough in manners, and in later life given to drink. His letters show him to have been a warm-hearted friend, and that he was devout may be inferred from his habit of initiating all his MSS. with 'O, a. M. D. Gl.' (Omnia ad Majorem Dei Gloriam). As a composer he was overshadowed by the fame of his brother. His own words 'Give me good librettos, and the same patronage as my brother, and I should not be behind him,' could scarcely have been fulfilled, since he failed in the very qualities which ensured his brother's success. On the other hand, Joseph professed that Michael's church compositions were superior to his own in earnestness, severity of style, and sustained power. They are however very unequal; many are antedated from the monotony of the accompaniment, while others—the Mass in D minor, the Graduale 'Tres sunt,' the 'Lauda Sion,' the well-known 'Tenebrae' in Ep, etc.—are still highly

1 His MS. copy, like the autograph of his first mass, 1754, is in the Hofbibliothek.
2 Second wife of Francis II.
esteemed. Leopold Mozart, a man who disliked his manners, wrote to his son 'Herr Haydn is a man whose merit you will be forced to acknowledge.' This refers to his sacred works, several of which Wolfgang scored for practice; he also sent them to Vienna, and endeavoured to make them better known, especially introducing them to Van Swieten. In 1783, when Michael was laid aside by illness, Mozart composed two string duets for him. Franz Schubert visited Michael's grave in 1825, and thus records his impressions: 'The good Haydn! It almost seemed as if his clear calm spirit were hovering over me. I may be neither calm nor clear, but no man living reverences him more than I do. My eyes filled with tears as we came away.' Ferdinand Schubert composed a striking chorus to words in praise of Michael Haydn. Among his numerous pupils we may mention C. M. von Weber, Neukomm, Wölfl, and Reicha. There exists 'Biographische Skizze,' a very warm-hearted pamphlet written by Schinn and Otter (Salzburg, 1808).

Of his compositions comparatively few have been printed. His modesty was excessive, and prevented him from availing himself of the offers of Breitkopf & Härtel. The following list of his works is complete.

Instrumental — 20 short organ pieces for beginners, consisting of preludes and fugues; in all 8 Church tunes (published at Linz); 30 symphonies, 2 and Partiten, 1 sextet, 3 quartets, 12 marches, 12 minuets for full orchestra (Augsburg, Gombart); 1 violin concerto, etc.

Vocal — about 360 compositions for the Church, including 2 quartets, 34 masses, 4 German masses, 5144 graduates, 67 offer- tores, 9 'Hanks,' 11 repars, 6 Salve Regina, 8 Responsorien, 2 Tene bram, Regina Coeli, etc., etc.; and several German sacred songs. A great many oratorios, cantatas, oratorios among which 'Andromeda a Ferrara' (1774), mythological operas, a pastoral 'De Hochzeit auf dem Berge,' and 2 collections of 4 songs (Vienna, Eder, 1790; Salzburg, Hacker, 1800); several single ones. 'Karl der Held, Erbengesetz von Osterreich,' etc.; 4 canons in 4 and 5 parts (Salzburg, Meyer, 1800).

Theoretical — 'Partitur-Fundament,' 14th of 1836, edited by Martin Schloch ber. In the Imperial Library is an Antiphonarium romanum with figured bass, finished in 1792.

[C. F. P.]

HAYDN, JOSEPH, or, according to the baptismal register, FRANZ JOSEPH, the father of the symphony and the quartet, was born in the night between March 31 and April 1, 1732, at Rohrau, a small Austrian village on the Leitha, which there divides Lower Austria and Hungary. He was the second child of Mathias Haydn, a master wheelwright, by his marriage (Nov. 24, 1748) with Maria Koller, daughter of the ‘Markrichter’ and cook in Count Harrach’s household. Haydn’s ancestors came originally from Hainburg, a town close to the Danube, about 4 leagues from Rohrau. His great-grandfather Kaspar was a servant in the hill-castle

there, one of the few who escaped massacre when it was stormed by the Turks on July 11, 1683; Kaspar’s son Thomas, a master wheelwright and member of the town council, had been, of whom Mathias, the father of our Haydn, born Jan. 31, 1699, was youngest but one. Thomas’ widow married a journeyman wheelwright Mathias Seeßl Franz (died May 2, 1761, aged 89), who thus became Haydn’s step-grandfather, and one of their children, Julie Rosina, married a schoolmaster named Frankh, afterwards Haydn’s first teacher. The sons nearly all learnt the wheelwright’s trade, and then set out on their travels; after which Mathias settled in Rohrau, and built himself a little house at the end of the marketplace, where Haydn was born, and which though rebuilt is still standing in its original form. Maria Haydn (born Nov. 10, 1707) bore her husband 12 children, of whom the sixth was Johann Michael, the church composer; and the eleventh Johann Evangelist, an unimportant tenor singer, who was admitted to the chapel of Prince Esterhazy on his brother Joseph’s recommendation. After Maria’s death (Feb. 3, 1754) Mathias married again, and had the more children, who died young. He himself departed Sept. 12, 1763.

Haydn’s parents were honest, industrious people, who instilled into their children a love for work, method, cleanliness, and, above all, religion. In his old age Haydn gratefully acknowledged his obligations to their care. Both were fond of music, and both sang. The father had a fair tenor voice, and accompanied himself on the harp, though without knowing a note. The child soon began to sing their simple songs, astonish ing them by the correctness of his ear and the beauty of his voice. But he did not stop there. Having seen the schoolmaster play the violin, he would sit on the stove-bench and accompany his parents as they sang, precisely imitating the schoolmaster’s handling of the bow, and keeping strict time, with two pieces of wood as his instrument. He was one day surprised, when thus engaged, by his relative Frankh, from Hainburg. Thinking that he was in the making of a musician, Frankh persuaded the parents to commit their little boy to his care. The mother would have preferred entering the priesthood, or becoming a schoolmaster, and it required all the father’s authority to make her consent; but he felt that he had himself been capable of better things, and looked forward to seeing his son a Choir-organ Capellmeister, as a compensation for his own. At the age of six, then, the little Joseph—in his Austrian dialect ‘Seppel’—was taken by his father to school at Hainburg.

Johann Mathias Frankh, Haydn’s distant relative (he called him simply ‘cousin’), was an excellent teacher, very strict, and eminently practical. Haydn not only became a first-rate singer, but also learned something of the instruments most in use, and spent nearly all his time in church or in school. Learning came easily to
It was in 1740 that Haydn entered the Cantorei of St. Stephen's, where he was to pass his remaining years of study. The house was one of a row which came close up to the principal entrance of the cathedral, and from his window he looked straight on the glorious spire. He tells us that, besides the regular studies, he learned singing, the clavier, and the violin from good masters. The 'regular studies' included religion, a little Latin, writing, and ciphering. His singing-masters are said to have been Gegenbauer and Finsterbusch; the former, sub-cantor and violinist at St. Stephen's, probably taught him the violin as well; the latter was a tenor in the court chapel. No instruction seems to have been given in harmony and composition at the Cantorei; but this did not trouble von Reutter (ennobled in 1740). Haydn could only remember having had two lessons from him all the time he was there. But the instinct for composition made him cover every blank sheet of music-paper on which he could lay his hands—'it must be all right if the paper was nice and full.' Reutter surprised him once by sketching a 'Salve Regina' for 12 voices, and told him sharply he had better try it first in two parts—how, he did not take the pains to show— and further advised him to write variations on the motets and vespers he heard in church. In this way he was thrown back upon himself. 'I certainly had the gift,' he says, 'and by dint of hard work I managed to get on.' An anecdote of this time shows that as a boy he was not behind his comrades in fun and mischief. The choristers were frequently required to sing with the imperial chapel—which explains Haydn's statement that he had sung with great success both at court and in St. Stephen's. This generally happened when the court was at Schönbrunn. The palace had only just been completed, and the scaffolding was still standing—an irresistible temptation to boys. The Empress Maria Theresa had caught them climbing it many a time, but her threats and prohibitions had no effect. One day when Haydn was balancing himself aloft, far above his schoolfellows, the Empress saw him from the windows, and requested her Hofcomposer to take care that 'that fair-haired blockhead' (blonder Dickkopf), the ringleader of them all, got 'einen recenten Schilling' (signing for a 'good hiding'). When he was Capellmeister to Prince Esterhazy, 'the fair-haired blockhead' had an opportunity, at Esterházy, of thanking the Empress for this mark of imperial favour.

In the autumn of 1745 Haydn had the pleasure of welcoming his brother Michael as a fellow-chorister at the Cantorei, and of helping him in his work. Michael made rapid progress, but a cloud came over poor Joseph's prospects. His voice began to break, and the Empress, who had before taken particular pleasure in his singing, remarked jocosely to him 'Von Capellmeister' that young Haydn's singing was more like the crowing of a cock than anything else.

1 Von Reutter was advanced to this post in 1744.
Reutter took the hint, and on the festival of St. Leopold (Nov. 15), 1748, celebrated at the monastery of Klosterneuburg, near Vienna, gave the ‘Salve Regina’ to Michael, who sang it so beautifully as to charm both Emperor and Empress, from whom he received 24 ducats in gold.

Joseph was thus completely supplanted by his brother. His voice had lost all its power, and he was oppressed with grief and anxiety. In the midst of his trouble Reutter suggested a means by which his voice might be preserved, and even improved; and referred him to the court chapel, which contained at least a dozen ‘castrati.’ Haydn’s father however, having probably heard of the proposal, came in all haste to Vienna, and saved his son.

His days at the Cantorei were now numbered. He was of no use as a singer, and it does not seem to have occurred to any one that he might be employed as a violinist. Reutter did not consider himself in the least bound to look after his future, and was only waiting for an opportunity to get rid of him. This occurred soon enough, and Haydn himself furnished the pretext. Always full of fun, and inclined to practical jokes, he one day tried a new pair of scissors on the pigtails of a schoolfellow. The pigtails fell, but the culprit was condemned to a caning on the hand. In vain he begged to be let off, declaring he would rather leave than submit to the indignity. That he might do, Reutter said, but he must first be caned and then dismissed.

Haydn was thus thrown upon the world, with an empty purse, a keen appetite, and no friends. The first person to help him was Spangler, a chorister of St. Michael’s. He offered him shelter; a few pupils presented themselves, and a good Viennese lent him 150 florins, which enabled him to rent an attic in the old Miesserhaus, attached to the college of St. Barnabas, in the Kohlmarkt. Here he abandoned himself to the study of composition, and made acquaintance with the master who more than any other became his model—Emmanuel Bach. Having acquired his first 6 Clavier-Sonatas, he dared over them at his little worm-eaten clavier—and how thoroughly he mastered their style his compositions show. Indeed Bach afterwards sent him word, that he alone fully understood his writings, and knew how to use them. Besides the clavier, he diligently practised the violin, so that ‘although,’ as he said, ‘no conjurer on any instrument, he was able to play a concerto.’ About this time (1751–52, not 1742 as is always said) he composed his first Mass, in F (No. 11 in Novello’s edition). It bears unmistakable evidences of undeveloped and unaided talent. Haydn had forgotten its very existence when, to his great delight, he discovered it in his old age, and inserted additional wind parts.

Having accidentally become acquainted with Felix Kurs, a favourite comic actor at the Stadttheater, Haydn was asked to set his comic opera, ‘Der neue krumme Teufel,’ a kind of magic farce, interspersed with songs and a few instrumental pieces; and received for it a considerable sum. It was produced at the Stadttheater in the spring of 1752, and frequently repeated in Vienna, Prague, Berlin, Saxony, and the Breisgau. The libretto had been preserved, but the music is lost. Metastasio was then living in the same house with Haydn. He shared the apartments of a Spanish family to whom he was much attached, and superintended the education of the two daughters. The youth, having completed his training of the elder, Marianne de Martinez, was confided to Haydn, who in this way became acquainted with Porpora, then teaching singing to the mistress of Correr, the Venetian ambassador. Porpora proposed that Haydn should act as his accompanist, thus giving him an opportunity of learning his method. He took him to the baths of Mannersdorf, on the confines of Hungary, where they remained for some months, and, in return indeed for various menial offices, gave him instruction in composition. At Mannersdorf, at the soirées of Prince Hildburghausen, Haydn met Bonno, Wagenseil, Gluck, and Dittersdorf, to the last of whom he became much attached. Gluck advised his going to Italy. Burney heard his quartets finely played at Gluck’s house in 1774. One by one he procured all the known theoretical works, and thoroughly mastered their contents, especially Fux’s ‘Gradus,’ which he afterwards used as the foundation of his own teaching. He had had, as we have seen, no regular musical training; but by industry, careful observation, and reiterated attempts, he gradually attained that independence which gave the impress of originality to all his works.

Haydn now made the important acquaintance of Karl Joseph Edlen von Fürnberg, a wealthy proprietor and enthusiastic amateur, who passed the greater part of the year at Weinzirl, near the monastery of Melk. Here he had constant performances of string trios and quartets; he invited Haydn to stay with him, and encouraged him to compose his first quartet (1755, hitherto misdated 1756)—

\[\text{[Musical notation image]}\]

which was soon followed by others, to the number of 18 in all (1755–56; Trautwine, Nos. 58–75). Fürnberg was thus the first to direct Haydn’s attention to a branch of composition in which alone he did enough to immortalize his name.

His pecuniary condition now began to amend; he sang and played in several churches, and raised his terms for lessons from 2 florins a month to 5. Among his pupils at this period was the Countess Thun (a name we also encounter in connection with Mozart, Gluck, and Beethoven), who first heard of him through one of his clavier sonatas, then circulated in MS. This highly-cultivated lady took both harpsichord and singing lessons from him, and paid him well for his compositions. In 1759 he had the good fortune to
be appointed Musikdirektor and Kammercomposer to the Bohemian Count Ferdinand Maximilian Morzin, who had a small well-chosen orchestra at his country house at Lukavec, near Plzen. Fünnberg had recommended him for the post, and it was thus again through him that Haydn entered upon the second most important part of his career. Here, in 1759, he wrote his first Symphony:

\[\text{Presto} \]

It is a small work, in three movements, for 2 violins, viola, bass, 2 oboes, and 2 horns; and in its cheerful unpretending character gives decided indications of what the composer was destined to become. His salary now amounted to 200 florins (say £20), with board and lodging. Small as this was, it induced him to think of taking a companion for life, although the Count never kept a married man in his employ. His choice fell on the daughter of Keller, a wig-maker, to whose house he had been introduced by his brother, who was violinist at St. Stephen's, when Haydn was a chorister. He gave music-lessons to the two daughters, and fell in love with the youngest. She however took the veil, and the father, anxious to keep him in the family, persuaded him to marry the other, Maria Anna, 3 years his senior. The wedding took place at St. Stephen's, Nov. 26, 1760 — a bad day for Haydn, and the foundation of unutterable domestic misery. His wife was a regular Xantippe — heartless, unsociable, quarrelsome, extravagant and bigoted, who, as her husband said, cared not a straw whether he was an artist or a shoemaker. They had no children, and it can scarcely be wondered at if in time Haydn sought elsewhere the consolations which were denied him at home, or even showed himself susceptible to the attractions of other women. His wife spent the last years of her life at Baden, near Vienna, and died March 20, 1800.

Soon after the marriage, Count Morzin was compelled to dismiss his band and its director; but Haydn was not long unemployed. Paul Anton Esterhazy, the then reigning Prince, who had heard his symphonies when visiting Morzin, hastened to secure the young composer as his second Capellmeister, under Werner, who was growing old. He was appointed May 1, 1761, and immediately set out for Eisenstadt, in Hungary, the country seat of the new master in whose service he was destined to remain to the end of his life. The Esterhazy family had been musical amateurs and performers since the days of Paul, first Prince of the name (1635-1713), who established a private chapel, small at first but gradually increasing. The orchestra, chorus, and solo singers took part both in the church service and in concerts, and in time even performed operas. When Haydn entered upon his duties there were only 16 members in all, but the excellence of their playing acted as a powerful stimulus to his invention. His arrival gave a great impulse to the concerts, Werner, a first-rate master of counterpoint, having concentrated all his energies on the Church service. [See Werner.] To a man with Werner's notions of music Haydn must have been a constant vexation; and he always spoke of him as 'a mere fop,' and a 'scribbler of songs.' Haydn, on the contrary, had a high respect for Werner, as he proved late in life by arranging six of his fugues as string-quartets, and publishing them, through Artaud, 'out of sincere esteem for that celebrated master.'

Prince Paul Anton died March 18, 1762, and was succeeded by his brother Nicolaus, who was passionately fond of art and science, generous, and truly kind-hearted. The love of pomp and display, of which his well-known diamond-covered uniform was an example, earned him the sobriquet of 'der Prächtige,' or the Magnificent. He loved music, and played well on the baryton, or viola di bordone, for which instrument Haydn was constantly required to furnish him with new pieces. In the hope of pleasing his master Haydn himself learned the instrument; but on making his début was disappointed to find that the Prince did not approve of such rivalry; on which he at once relinquished it for ever.

The relations between the Prince and his new Capellmeister, who found his time fully occupied, were genial and hearty. Haydn's salary was raised from 400 florins a year to 600, and then to 782 (£78), new musicians were engaged, and rehearsals — orchestral, chamber, and dramatic — took place every day. The principal members of the chapel at the time were: Luigi Tomasinii (violin); Joseph Weigl (cello); two excellent French horn-players, Thaddäus Steinhüller and Karl Franz (the latter also playing the baryton); Anna Maria Scheffers (soprano), who afterwards married Weigl; and Karl Fribirth (tenor). The wind music, formerly played by the band of the regiment, was now given to good players (including the two just named) regularly appointed. On March 5, 1766, Werner died, and Haydn became sole Capellmeister. His compositions were already known far outside of Austria; in Leipzig, Paris, Amsterdam and London his symphonies and concertos, trios, and quartets, were to be had in print or MS. Even the official gazette, the 'Wiener Diarium,' for 1766, speaks of him as 'our national favourite' (der Liebling unserer Nation), and draws a parallel between him and the poet Gellert, at that time the highest possible compliment.

His works composed up to this time at Eisenstadt comprise about 30 symphonies (including 'Le Matin.', 'Le Midi', and 'Le Soir,' 1761) and concertos, a few divertimenti in 5 parts; six string-trios; a piece for 4 violins and 2 celli, called 'Echo'; a concerto for the French horn (1762); 12 minutes for orchestra; concertos, trios, sonatas, and variations for clavier. In vocal music—a Salve Regina for soprano and 1 See the themes, p. 721, 722.
alto, 2 violins, and organ a Te Deum (1764); 4 Italian Operettas (1762); a pastoral, 'Acide e Galatea' (the action identical with that of Haselius's cantata), performed Jan. 11, 1763, on the marriage of Count Anton, eldest son of Prince Nicolaus; and a grand cantata, in honour of the Prince's return from the coronation of the Archduke Joseph as King of the Romans (1764).

Soon after Werner's death an event took place, which greatly affected the music, viz., the establishment of a new palace near Sütto, at the southern end of the Neusiedler-See, where the Prince rebuilt an old hunting-place, turned it into a splendid summer residence, and gave it the name of Esterháza. Here the chapel (except a small portion left to carry on the church service at Eisenstadt) were located for the greater part of the year, during which they were expected to redouble their exertions.

Esterháza—described by a French traveller as 'having no place but Versailles to compare to it for magnificence'—stands in the middle of an unhealthy marsh, quite out of the world. The erection of such a building in such a neighbourhood, at a cost amounting it is said to 11,000,000 gulden, was one of the caprices of Prince Nicolaus. The canals and dykes he constructed were, however, substantial improvements to the neighbourhood. The dense wood behind the castle was turned into a delightful grove, containing a deer-park, flower-gardens and hot-houses, elaborately furnished summer-houses, grottoes, hermitages, and temples. Near the castle stood an elegant theatre, for operas, dramas, and comedies; also a second theatre, brilliantly ornamented, and furnished with large artistic marionettes, excellent scenery and appliances. The orchestra of the opera was formed of members of the chapel, under Haydn's direction; the singers were Italian for the most part, engaged for one, two, or more years, and the books of the words were printed. Numerous strolling companies were engaged for shorter terms; travelling virtuosi often played with the members of the band; special days and hours were fixed for chamber-music and for orchestral works; and in the intervals the singers, musicians, and actors met at the café, and formed, so to speak, one family. The castle itself was fitted up in exquisite taste, and stored with numerous and costly collections of works of art. Royal and noble personages, home and foreign, formed a constant stream of guests at whose disposal the Prince placed his beautiful carriages, and to whom he proved the most attentive and charming of hosts. He became so much attached to this place of his own creation, as often to stay there till quite the end of autumn, and return with the first days of spring. Eisenstadt he visited very rarely, and Vienna he disliked more and more, often cutting short his visits in the most abrupt manner. Hence his singers and musicians were increasingly tied to this one spot—a fate all the harder, since very few were allowed to bring their wives and families. Here Haydn composed nearly all his operas, most of his arias and songs, the music for the marionette theatre—of which he was particularly fond—and the greater part of his orchestral and chamber works. He was satisfied with his position, and though he sometimes complained of the disadvantages of such an seclusion, and often expressed his wish to visit Italy, he also acknowledged its compensating advantages. In his own words: 'My Prince was always satisfied with my works; I not only had the encouragement of constant approval, but as conductor of an orchestra I could make experiments, observe what produced an effect and what weakened it, and was thus in a position to improve, alter, make additions or omissions, and be as bold as I pleased; I was cut off from the world, there was no one to confuse or torment me, and I was forced to become original.'

With the band and singers Haydn was on the best of terms. They lived with each other in carrying out his intentions, simply to show their gratitude and affection for him. He was constantly endeavouring to improve their lot, was invariably a warm advocate with the Prince on their behalf, and they all loved him like a father. The Prince gave unusually high salaries, and several of the musicians played two instruments—generally the violin and a wind instrument. A good many of them afterwards entered the Imperial chapel.

The principal and best-paid members of the chapel during the period spoken of (1767–90) were: female singers, Weigl, Cellini, Jermoli, Rippamonti, Vallesi, Tavecchia, Maria and Matilda Bolognia, Raimondi, Nencini, Berne- nuti; male singers—Fribert, Biaschi, Gherardi, Jermoli, Moratti, Morelli, Totii (2), Peschi; voile-Tommasini, Rosetti, Rippamonti, Men- trino, Mraw; cellists—Weigl, Kiffel, Marteau, Kraft; flute—Hirsch; clarinets—Griesbacker (2); oboi—Columbaso (2), Poechwa, Cas- wenken; bassoons—Schiriger, Percival; horns—Steinmüller, Karl Franz (also played the baryton) Stamitz, Oliva, Paer, Lendway. Besides Franz there was another performer on the prince's own instrument, the baryton—Andreas Lidl (1769–74) who played in London soon after leaving the band. J. B. Krumpoltz the harpist was engaged from 1773–76.

In March, 1790, the whole musical establishment visited Vienna for the first time; and, under Haydn's direction, gave a performance of his opera, 'Lo Speziale' (comp. 1758), at the house of Früherr von Sommerau; and a repetition in the form of a concert. On their second visit, in the summer of 1777, they performed at Schönbrunn an opera and a marionette-opera of Haydn's, and also played during the Empress's dinner. The Prince would often take them to Presburg during the sitting of the Hungarian diet, or for the festival of Count Grassalovich, and in 1772 Haydn conducted the Count's own orchestra even at a ball.

In 1771 Haydn composed a 'Stabat Mater'. 1

1 Afterwards married to Schicht, Cantor of the Thomas-school at Leipzig.
and a "Salve Regina." In 1775 followed his first oratorio, "Il Ritorno di Tobia," which was performed in Vienna by the Tonkünstler Societät, with solo-singers from Esterháza, and repeated in 1784 with two additional choruses. 1 To this period belong 4 Masses (2 small ones of an early date have been lost)—in G (1772); in C, "Cäsici- lienmesse"; in Eb, with organ obbligato; and in Bb, with organ solo (Nos. 7, 5, 12, and 8 in Novello’s edition). The last is a small but particularly charming work, and, like the first, is still often heard; but that in Eb is old-fashioned. The "Cäsicienmesse" has many fugues, and is seldom performed on account of its length. (Novello’s edition is taken from Breitkopf’s curtailed score.)

In 1773 the Empress Maria Theresa visited Esterháza from Sept. 1 to 3, and was entertained with performances of a new symphony of Haydn’s—now known by his name (p. 721 b)—his opera "L’Isola disabitata," composed at "Flammon und Bautz," a marionette piece, which especially pleased her. One song and the overture,—or "symphony"—in 2 movements, have survived. Similar festivities took place on various occasions—a visit from one of the Imperial family, or an event in the Prince’s own circle. Even Eisenstadt gave a glimpse of its old splendour when the Prince de Rohan, French Ambassador, stayed there in 1772.

In 1776 Haydn composed "La vera Costanza," for the court-theatre of Vienna. The intrigues against it were however too strong, and eventually Anfossi’s opera of the same name was preferred. Haydn withdrew his score, and produced it at Esterháza. It was revived in 1790 at the theatre then in the Landstrasse suburb of Vienna, and Artaria engraved six of the airs and a duet. In 1778 the Tonkünstler Societät offered Haydn a strange affidavit. He wished to join the society, and had already paid his deposit, when he was asked to sign an agreement binding him to furnish compositions of importance whenever so required. He naturally declined, and withdrew his money. No reparation was made for this indignity till after his return from London in 1777, when he was introduced at a special meeting by Counta Kufstein and Johann Esterházy, and, amid general acclamation, appointed "Assessor senior" for life. This compliment he acknowledged by presenting the society with the "Creation" and the "Seasons," to which gift its prosperity is mainly owing. "L’Isola disabitata," one of his best operas, composed in 1779 to a libretto by Metastasio, procured Haydn’s nomination as a member of the Accademica Filarmonica at Modena. He sent the score to the King of Spain, and received in return a gold snuff-box set in brilliants. The opera was performed at the court-theatre in Vienna, at a concert given by Willmann the cellist in 1785.

On Nov. 18, 1779, the theatre at Esterháza was burnt down, and during the rebuilding the Prince went to Paris. This interval will enable us to mention the origin of the famous "Farewell Symphony." It has been often asserted that Haydn intended it as an appeal to the Prince against the dismissal of the chapel, but this is incorrect; the real object was to persuade him to shorten his stay at Esterháza; and so enable the musicians to rejoin their wives and families. As one after another stopped playing and left the orchestra, until only two violins were left (Tomassini, the Prince’s favourite, being one), the hint was unmistakable. "If all go," said the Prince, "we may as well go too"; and Haydn knew that his object was attained.

This seems also the place to speak of a subject closely affecting Haydn’s private life. In 1779 a couple named Poizelli were admitted into the chapel—the husband, Anton, being an indifferent violinist, and the wife, Luigia, by birth a Roman of the name of Moresechi, a second-rate singer. For the latter Haydn composed a violin sonata returned by shamefully abusing his kindness and continually importuning him for money, and even extracting from him a written promise that if his wife died he would marry no one but her. This paper he afterwards repudiated, but he left her a small annuity in his will. Before his death she had been married a second time, to an Italian singer, and died at Kaschau in 1832. 2 Mme. Poizelli had two sons, of whom the elder died in 1796, while the younger entered the chapel, and eventually became its music-director. He was a pupil of Haydn’s, and was popularly supposed to be his son, but the fact is doubtful. Haydn was certainly very fond of him; but he left him only a small sum in his first will, and revoked it in the second. 3

On Oct. 15, 1780, the beautiful new theatre at Esterháza was opened with "La Fedeltà premiata." This opera was twice represented in Vienna in 1784, once in the presence of the Emperor Joseph, Haydn himself conducting. From 1780 dates his acquaintance with Artaria—the commencement of a business connexion of many years’ duration. The first works which Artaria published for him were 6 Clavier sonatas (op. 30), his first 12 Lieder, 6 Quartets (‘die Russischen’), 6 Divertissements in 8 parts (op. 31), and 6 Symphonies (op. 51 and 52). In 1781—82 the Emperor Joseph received two visits from the Grand Duke Paul and his wife. Great entertainments were given in their honour, consisting chiefly of musical performances, for which the Grand Duchess had a great taste. 4 Gluck’s operas were given at the theatre, and some of Haydn’s quartets played at her house, so much to her satisfaction, that she gave him a diamond snuff-box, and took lessons from him. Haydn seems to have retained a pleasant recollection of her, for

1 Tobia was rearranged by Neukom in 1808, and performed at the Tonkünstler Societät concerts.

2 The Symphony was published in parts by Steber (No. 16); a new edition by Simrock (31); in score by Le Duc (6); and for 4 hands by Graun (39). Andre’s edition is the finale only, transcribed for 2 violins and E minor.

3 Proshch’s two daughters are still living at Pest.

4 She was present at the well-known competition between Clementi and Mozart.
20 years later—in 1802, when she was Dowager Empress—he sent her his fine part-songs for 3 and 4 voices. He also dedicated the 6 'Russian' quartets just mentioned to the Grand Duke. The Duke and Duchess had intended accompanying the Emperor to Eisenstadt, and Haydn was hastily composing an opera, but their departure was anticipated, and the visit did not take place.

About this time Haydn entered into correspondence with William Forster, the well-known violin-maker in London, to whom he sold the English copyright of a series of compositions. From first to last (the first receipt is dated Aug. 22, 1781) Forster and Son published 129 of his works, including 83 symphonies. Almost simultaneously he received a letter from Le Gros, conductor of the 'Concerts Spirituels,' saying that his 'Stabat Mater' had been performed four times with the greatest success, and, in the name of the members, asking permission to print it. They also invited him to come to Paris, and proposed to have all his future compositions engraved there for his own benefit. Cherubini's veneration for Haydn is said to have dated from his hearing one of the six symphonies (op. 51 and 52) which he composed for the 'Concerts de la Loge Olympique.' Besides the publishers already named, he had satisfactory dealings with Nadermann, Willmann, Isbault, Le Duc, and especially with Sieber.

The opera which he composed for the expected visit of the Grand Duke and Duchess was 'Orlando Paladino' (given at Esterházy in the autumn of 1782), which in its German form as 'Ritter Roland' has been more frequently performed than any of his other operas. It was followed by 'Armida' (composed in 1783, performed in 1784, and again in 1797 at Schikaneder's theatre in Vienna), the autograph score of which he sent to London, in compensation for the non-completion of 'Orfeo.' In judging of his other works may be guided by an expression of his own when refusing an invitation to produce one in Prague: 'My operas are calculated exclusively for our own company, and would not produce their effect elsewhere.' The overtures to six of them were published by Artaria as 'symphonies,' though under protest from Haydn. To 1782 also belongs the well-known 'Marizell-Messe' (in C, Novello, No. 15), so called from the place of that name in Styria. It was bespoken by a certain Herr Liebe de Kreutzner, and Haydn is said to have taken particular pleasure in its composition, not necessarily because he reminded him of a visit to Marizell when a young man without experience, friends, or means, of any kind. This was his eighth Mass, and he wrote no more till 1796, between which year and 1802 his best and most important works of the kind were composed.

Between 1780 and 1790 he met a number of artists in Vienna whom he was destined to meet again in London, such as Mara, Banti, Storage, and her brother Stephen, Attwood, Janiewicz, and Jarnowick. In 1784 he met Paisielo, Sarti, and Signora Strinasacchi, the violinist, at Michael Kelly's lodgings; the latter paid him a visit at Esterházy with Brida, an enthusiastic amateur.

The chief event of 1785 was the composition of the 'Seven Words of our Saviour on the Cross' for the cathedral of Cadiz, in compliance with a request from the chapter for appropriate instrumental music for Good Friday. The work was published simultaneously by Artaria and Forster, and in this form Haydn produced it as 'Passione instrumentale' in London. He afterwards added choruses and solos, and divided it into two parts by the introduction of a Largo for wind instruments. In this new form it was produced for the first time at Eisenstadt in Oct. 1797, and published by Breitkopf & Härtel (1801), with a preface by the composer. It may seem surprising that the chapter of Cadiz should have applied to Haydn; but in fact he was well known in Spain to others besides the king, who had been in person communications before, as we have seen. Thus Boccherini wrote to him from Madrid expressing the pleasure he received from his works, and Yriarte celebrated him with enthusiasm in his poem of 'La Musica' (Madrid, 1779).—In Jan. 1785 Haydn acquired two interesting pupils—Fritz and Edmund von Weber. They were brought to him by their father Franz Anton, who had just remanired in Vienna. His desire to see one of his children develop into a great musician, afterwards so gloriously fulfilled in the composer of the 'Freischütz,' was, to a certain extent, granted in Edmund. In the same year Mozart dedicated the well-known six quartets to Haydn, in terms of almost filial affection. It was after listening to a performance of one of those that Haydn said to Mozart's father, in his open-hearted way, 'I declare to you on my honour that I consider your son the greatest composer I have ever heard; he has taste, and possesses the most consummate knowledge of the art of composition.' He spoke of him still more warmly in a letter to Prague in 1787. The relation in which these two great men stood to each other does credit to them both, and leads us to form a high estimate of their characters. It would be difficult to find a parallel instance.

In 1787 Haydn received a pressing invitation to London, from W. Cramer, the violinist, who wrote offering to engage him at any cost for the Professional Concerts. Gallini also wrote asking his terms for an opera. Nothing came of either at the time, but Salomon determined to try what personal influence would do, and despatched Bland, the music-publisher, to Vienna, where he arrived in November, and finding Haydn still at Esterházy, followed him there. He did not attain his main object, but Haydn gave him the copyright of several of his

---

2 Kelly, Reminiscences, i, 222, calls it Eisenstadt by mistake.

3 Though often included among his quartets, it has nothing to do with them. It was first published alone by Artaria, but was afterwards omitted from his authorised series of Haydn's quartets.
'm compositions, among others ‘Ariadne,’ a cantata for a single voice (composed in 1782). An anecdote of Haydn's visit is often told. When he was admitted, Haydn was in the act of shaving, and grubbing over the bluntness of his razor. Bland caught the exclamation, 'I would give my best quartet for a good razor,' and, rushing off to his lodging, fetched his own pair, which he presented to Haydn, and received in exchange his newest quartet, which is often called the 'Rasenmesser' (razor) quartet (Trautwein, No. 2).

On Sept. 28, 1790, Prince Nicolaus died—a great loss for Haydn, who really loved him. He left his Campbellmayer, on condition of his retaining the title, an annual pension of 1000 florins, as a mark of esteem and affection. To this sum his successor, Prince Anton, added another 400 florins, but deprived Haydn of his occupation by dismissing the whole chapel, except the few members necessary to keep up the services in church. Haydn now fixed his abode in Vienna, but had hardly done so before Salomon appeared on the scene. He had heard of the Prince's death at Cologne, on his way to England, and immediately returned, hoping now that Haydn was free, to persuade him to visit London. Haydn could no longer plead the old excuse of unwillingness to leave his master, so he gave way, and began to make preparations for the journey. While thus occupied he was informed that Ferdinand IV, King of Naples, then in Vienna for the marriage of his two daughters, wished to see him. Haydn had thought of visiting Naples in 1787, and the King was well acquainted with his music. He had even commissioned him to compose several concerted pieces for his favourite instrument, the lyre. Nevertheless, the audience was put off several times, and when it did take place, and Haydn presented his compositions, the King said: 'The day after to-morrow we will try again.' Haydn replied that he was to start for England on that day. 'What!' exclaimed the King, 'and you promised to come to Naples!' He then indignantly left the room, but returned in an hour, and, having recovered his temper, made Haydn promise to visit Naples on his return from London, gave him a letter of recommendation to his ambassador, Prince Castelcicalo, and sent after him a valuable tabatiere. And thus Haydn got over a great turning-point in his life. Among those of whom he took leave was his old and dear friend Madame Genzinger. [See Karajan.]

His last hours in Vienna were enlivened by the company of Mozart, who had come to see him off. He too had been invited to London in 1786, and had only declined in deference to his father's wishes. His father was now dead, and Salomon promised him a speedy opportunity of making up for lost time. Too late again—in less than a year Mozart's eyes were closed in death.

To the compositions of the period 1767–70, already mentioned, must be added the following:

Instrumental music—about 90 symphonies, including the original, the rest arrangements; smaller pieces: variations Nos. 6, 7; 'Cantilene,' for 2 violins and orchestra; 'Field-particle,' for wind instruments; minuet and variations for full orchestra; and Inextime langue, for harp and bass; string-quartets, 6 composed 1776; 6 diito comp. 1774; 4 diito comp. 1779; 16 string quartets, dedicated to the Grand Duke of Tuscany, ded. to Mr. Bland on that comp. 1786, dedicated to the King of Prussia; 6 diito comp. 1786, and 6 diito comp. 1792, ded. to Mr. Pitt (Nov. 15–17); 44–47; 58–63; in 1786, and Boccherini's score and so. on that comp. 1788, dedicated to the King of Prussia; 6 diito comp. 1789, and 6 diito comp. 1789, ded. to Lestrade (Nov. 15–17).

Vocal compositions—10 Lieder, 12 diito (Artilia), several single Lieder: airs for various operas: operas (1) The Convent, 1773; (2) In Castris, 1774; (3) Le Spectacle, dramma giocoso (1779); 'Le Presetri,' diito (1779); 'L’inferdellina, burridetta (1779); 'L’Incontro improviso, dramma giocoso (1779); 'Le Mondo della Luna,' diito (1777); 'La vera Costanza,' diito (comp. 1777, perf. 1779); 'L’Ideale e Suprema, drama giocoso (1779); 'La Fede fedele, fedele saldo' (1779); 'Orlando Falsario, dramma erudito (1782); 'L’Isaura, dramma serio (1783); 'L’Amante di Pentapoli, dramma serio (1783); 'L’Incendio musicale to the following plays, 'Der Zarenturm,' 'Die Freun- derin,' 'Le Prigioniera,' 'L’Inno alla Berlichingen,' 'Kühn, Leer,' 'Zur Grenze des Himmels.' Lastly, mark, 'of whom he was particularly fond,' (prelude to 'Fidelio and Ras- cius,' and 'Der Rittersprosse,' Ge- net, part 1, 1820, p. 166).

Leaving Vienna on Wednesday, Dec. 15, 1790, Haydn and Salomon travelled by Munich, Bonn, and Brussels to Calais, crossed the Channel in nine hours on New Year's Day, 1791, and from Dover proceeded straight to London. Haydn first put up at the house of Bland, the music-seller, 45 Holborn, but soon removed to rooms prepared for him at Salomon's, 18 Great Pulteney Street. Here he found himself the object of every species of attention: ambassadors and noblemen called on him, invitations poured in from all quarters, and he was surrounded by a circle of the most distinguished artists, conspicuous among whom was his young countryman Grynowets, and Dr. Burney, who had been for some time in correspondence with him, and had, in a letter to him, addressed him with a poetical effusion.

The Anacreontic Society, the Ladies' Concerts, the New Musical Fund, the Professional Concerts, and all the other musical societies eagerly desired his presence at their meetings. His quartets and symphonies were performed, Paccherotti sang his cantata 'Ariadne a Naxos,' and he was enthusiastically noticed in all the newspapers.

Before leaving Vienna Salomon had announced his subscription concerts in the Morning Chronicle, for which Haydn was engaged to compose six symphonies, and conduct them at the pianoforte. The first of the series took place on March 11, 1791, in the Hanover Square Rooms. The orchestra, led by Salomon, consisted of 35 or 40 performers, and was placed at the end opposite to that which was

1 In G: known in the Library of the Philharmonic Society as Letter Q, recently published in score and parts by Bieder-Biedermann.
2 First circulated in May 1736, afterwards by Artaria, now reprinted by André.
3 André has lately republished a fine one in B, 1813.
4 It has been republished by André for solo and chorus, and with orchestra, and recently arranged for 4 hands by Bieder-Biedermann.
it occupied latterly. The Symphony (Salomon, No. 2) was the first piece in the second part, the position stipulated for by Haydn, and the Adagio was encored—'a very rare occurrence.' The Morning Chronicle gives an animated description of the concert, the success of which was most brilliant, and ensured that of the whole series. Haydn's benefit was on May 16; £200 was guaranteed, but the receipts amounted to £350. Meantime Gallini, manager of the King's Theatre, was trying in vain to obtain a licence for the performance of operas. Two parties were at issue on the question. The Prince of Wales espoused the cause of the King's Theatre, while the King publicly declared his adhesion to the Pantheon, and pronounced two Italian opera-houses undesirable. At length Gallini was clever enough to obtain a licence for 'Entertainments of Music and Dancing,' with which he opened the theatre on March 26, with David as tenor, Vestris as ballet-master, Haydn as composer, Federici as composer and conductor, and Salomon as leader—and with these he performed various works of Haydn's, including symphonies and quartets, his Chorus 'The Storm' (the work by Peter Pindar, 'Hark the wild uproar of the waves'), an Italian catch for 7 voices, and a cantata composed for David. His opera 'Orfeo ed Euridice,' though paid for and nearly completed, was not performed, owing to the failure of the undertaking. During the time he was composing it, Haydn lived in Lisson Grove—then absolutely in the country—where one of his most frequent visitors was J. B. Cramer, then 20 years old. His second benefit was on May 30, at the request of some amateurs of high position. Haydn gave a concert at the Hanover Square Rooms, where he conducted two of his symphonies, and, for the first time, the 'Seven Words' ('La Passione instrumentale'), afterwards repeated at the concert of Clement, the boy-violinist, and elsewhere. About this time he was invited to the annual dinner of the Royal Society of Musicians, and composed for the occasion a march for orchestra, the autograph of which is still preserved by the society. He also attended the Handel Commemoration in Westminster Abbey. He had a good place near the King's box, and never having heard any performance on so grand a scale, was immensely impressed. When the Hallelujah Chorus rang through the nave, and the whole audience rose to their feet, he wept like a child, exclaiming, 'He is the master of us all.'

In the first week of July he went to the Oxford Commemoration, for the honorary degree of Doctor of Music, conferred at Dr. Burney's suggestion. Three grand concerts formed an important feature of the entertainments; at the second of these the 'Oxford' symphony was performed, Haydn giving the tempi at the organ; and at the third he appeared in his Doctor's gown, amid enthusiastic applause. The 'Catalogue of all Graduates' contains the entry, 'Haydn, Joseph. Composer to His Serene Highness the Prince of Esterhazy, cr. Doctor of Music, July 8, 1791.' He sent the University as his 'exercise' the following composition—afterwards used for the first of the 'Ten Commandments, the whole of which he set to canons during his stay in London.'

- Canon canticum, a tre.

On his return he made several excursions in the neighbourhood of London, and stayed five weeks with Mr. Braaey (of 71 Lombard Street) at his country house 12 miles from town, where he gave lessons to Miss Braaey, and enjoyed the repose of country life in the midst of a family circle all cordially attached to him. Meanwhile a new contract was entered into with Salomon, which prevented his obeying a pressing summons from Prince Esterhazy to a great fête for the Emperor. In November he was a guest at two Guildhall banquets—that of the outgoing Lord Mayor (Sir John Boydell) on the 6th, and that of the new one (John Hopkins) on the 9th. Of these entertainments he left a curious account in his diary. In the same month he visited the marionettes at the Fantocci theatre in Saville Row, in which he took a great interest from old associations with Esterhazy. On the 25th, on an invitation from the Prince of Wales, he went to Oatlands, to visit the Duke of York, who had married the Princess of Prussia two days before. 'Die liebe kleine—she was but 17—quite won Haydn's heart;' she sang, played the piano, sat by his side during his symphony (one she had often heard at home), and hummed all the airs as it went on. The Prince of Wales played the violoncello, and all the music was of Haydn's composition. They even made him sing his own songs. During the visit, which lasted three days, Hopper painted his portrait, by the Prince's command; it was engraved in 1807 by Facius and is now at Hampton Court (Ante-room, No. 920). Engravings were also published in London by Schiavonetti and Bartolozzi from portraits by Guttenbrunn and Ott, and by Hardy from his own oil-painting. Haydn next went to Cambridge to see the University, thence to Sir Patrick Blake's at Langham, and afterwards to the house of a Mr. Shaw, where he was received

---

1 He had taken a new Symphony with him, but that in G (Letter O, No. 8) was substituted, owing to the time being too short for rehearsals.

2 An ancestor of the present Thomas Braaey, Esq., M. P.

HAYDN.

with every possible mark of respect and attention. He said in his diary, 'Mrs. Shaw is the most beautiful woman I ever saw'; and when quite an old man still preserved a ribbon which she had worn during his visit, and on which his name was embroidered in gold.

The directors of the Professional Concerts had been for some time endeavouring to make Haydn break his engagements with Salomon and Gallini. Not succeeding, they invited his pupil Ignaz Pleyel, from Strassburg, to conduct their concerts; but far from showing any symptoms of rivalry or hostility, master and pupil continued the best of friends, and took every opportunity of displaying their attachment. The Professionals were first in the field, as their opening concert took place on Feb. 15, 1792, while Salomon's series did not begin till the 17th. Gyrwetz was associated with Haydn as composer for the year, and his works were as much appreciated by him as in Paris. At those concerts Haydn produced symphonies, divertimentos for concerted instruments, a notturno for the same, string quartets, a clavier trio, airs, a cantata, and the 'Storm' chorus already mentioned. He was also in great request at concerts, and conducted those of Barthelemon (with whom he formed a close friendship), Hassler the pianist, Mme. Mara (who sang at his benefit), and many others. Besides his own annual benefit Salomon gave 'by desire' an extra concert on June 6, when he played several violin solos, and when Haydn's favourite compositions were 'received with an extasy of admiration.' 'Thus,' to quote the Morning Chronicle, 'Salomon finished his season on Wednesday night with the greatest eclat.' The concerts over, he made excursions to Windsor Castle, Ascot Races, and Slough, where he stayed with Herschel, of whose domestic life he gives a particular description in his diary. The only son, afterwards Sir John Herschel, was then a few months old. He went also to the meeting of the Charity Children in St. Paul's Cathedral, and was deeply moved by the singing. 'I was more touched,' says he in his diary, 'by this innocent and reverent music than by any I ever heard in my life.' The somewhat commonplace double chant by Jones the organist, is quoted in his diary. [See Jones.]

Amongst Haydn's intimate associates in this year were Bartolozzi the engraver, to whose wife he dedicated 3 Clavier trios and a sonata in C, and John Hunter the surgeon (who begged in vain to be allowed to remove a polypus in the nose which he had inherited from his mother), and whose wife wrote the words for most of his 12 English canzonets—the first set dedicated to her; the second to Lady Charlotte Bertie. But the dearest of all his friends was Mrs. Schroeter, a lady of good birth, and widow of the Queen's music-master, John Samuel Schroeter, who died Nov. 1, 1788. She took lessons from him on the pianoforte, and a warm feeling of esteem and respect sprang up between them, which on her side ripened into a passionate attachment. Haydn's affections must also have been involved, for in his old age he said once, pointing to a packet of her letters, 'Those are from an English widow who fell in love with me. She was a very attractive woman and still handsome, though over sixty; and had I been free I should certainly have married her.' Haydn dedicated to Mrs. Schroeter three Clavier-Trios (Breitkopf & Härtel, Nos. 1, 2, 6). In the 2nd (F$ minor) he adapted the Adagio from the Salomon-symphony, No. 9 (Bb), probably a favourite of the lady's. A second of his London admirers deserves mention. Among his papers is a short piece with a note saying that it was 'by Mrs. Hodges, the loveliest woman I ever saw, and a great pianoforte player. Both words and music are hers,' and then follows a P.S. in the trembling hand and of his latest life, 'Requiescat in pace! J. Haydn.'

During his absence his wife had had the offer of a small house and garden in the suburbs of Vienna (Windmühle, 73 kleine Steingasse, now 19 Haydn-gasse, then a retired spot in the 4th district of the Mariahilf suburb), and she wrote asking him to send her the money for it, as it would be just the house for her when she became a widow. He did not send the money, but on his return to Vienna bought it, added a storey, and lived there from Jan. 1797 till his death.

Haydn left London towards the end of June 1792, and travelling by way of Bonn—where Beethoven asked his opinion of a cantata, and Frankfort—where he met Prince Anton at the coronation of the Emperor Francis II, reached Vienna at the end of July. His reception was enthusiastic, and all were eager to hear his London symphonies. In Dec. 1792 Beethoven came to him for instruction, and continued to take lessons until Haydn's second journey to England. The relations of these two great men have been much misrepresented. That Haydn had not in any way forfeited Beethoven's respect is evident, as he spoke highly of him whenever opportunity offered, usually chose one of Haydn's themes when improvising in public, scored one of his 'quartets for his own use, and carefully preserved the autograph of one of the English symphonies.' But whatever Beethoven's early feeling may have been, all doubts as to his latest sentiments are set at rest by his explanation on his death-bed on seeing a view of Haydn's birthplace, sent to him by Diabelli—'To think that so great a man should have been born in a common peasant's cottage!' [See Beethoven, p. 199.]

Again invited by Salomon, under special stipulation, to compose 6 new symphonies, Haydn started on his second journey on Jan. 19,
1794. Prince Anton took a reluctant leave of him, and died three days after. He then
this time Haydn went down the Rhine, accompanied by his faithful copyist and
Elisler, and arrived in London on Feb. 4. He
He had lodgings at No. 1 Bury Street, St. James's,
probably to be near Mr. Schroeter, who lived in
James Street, Buckingham Gate. Nothing
is known of their relations at this time; Elsler
could have given information on this and many
other points, but unlike Handel's Smith he was
a mere copyist, and none of Haydn's biographers
seem to have thought of applying to him for
particulars about his master, though he lived
1843.—Haydn's engagement with Salomon
bound him to compose and conduct six fresh
symphonies; and besides these, the former set,
including the 'Surprise,' was repeated. Some
new quartets are also mentioned, and a quintet
in C (known as op. 88), which however was
his brother Michael's. The first concert was on
Feb. 10, and the last on May 12. At one of the
rehearsals Haydn surprised the orchestra by
showing young Smart (afterwards Sir George)
the proper way to play the drums. At Haydn's
benefit (May 2) the 'Military' Symphony was
produced for the first time, and Dussek and
Viotti played concertos. The latter was also
leader at Salomon's benefit—a proof of the good
understanding between the two violinists.

During his second visit Haydn had ample
opportunities of becoming acquainted with Han-
del's music. Regular performances of his or-
torios took place in Lent both at Covent Garden
and Drury Lane; and in 1795 concerts of sacred
music, interspersed with some of Haydn's sym-
phonies, were given at the King's Theatre.
Haydn also conducted performances of his sym-
phonies at the New Musical Fund concerts.

Among his new acquaintances we find Dragonezzi,
who had accompanied Banti to London in 1794,
and a lasting friendship sprang up between
Haydn and that good-natured artist. For Banti
Haydn composed an air 'Non partire,' in E (the
recitative begins, 'Berenice'), which she sang at
his benefit.

1 This name is closely associated with that of Haydn from 1780, the
date of his engagement at Esterhazy. His children were taken into
the 'chapel' on Haydn's recommendation, and the second son, Johannes (born at Eisenstadt 1790), lived the whole of his life with him, first
as copyist and then as general servant and factotum. He accompanied
Haydn on his second journey to London, and tended him to his last years with the greatest care. Despite the proverb that 'no man is a hero to his
talet,' Haydn was to Elisler a constant subject of vexation, which he carried so
far that when he thought himself unobserved he would stop with the
concern before his master's portrait, as if it were the altar.

2 This name is closely associated with that of Haydn from 1780, the
date of his engagement at Esterhazy. His children were taken into
the 'chapel' on Haydn's recommendation, and the second son, Johannes (born at Eisenstadt 1790), lived the whole of his life with him, first
as copyist and then as general servant and factotum. He accompanied
Haydn on his second journey to London, and tended him to his last years with the greatest care. Despite the proverb that 'no man is a hero to his
talet,' Haydn was to Elisler a constant subject of vexation, which he carried so
far that when he thought himself unobserved he would stop with the
concern before his master's portrait, as if it were the altar.

Among the numerous violinists then in Lon-
don—Jarnowick, Janiewicz, Gamer, Viotti,
Bremont, Bridgewater, etc.—we must not omit
Giardini. Though nearly 80 years of age he
produced an oratorio, 'Ruth,' at Ranelagh, and
even played a concerto. His temper was fright-
ful, and he showed a particular spite against
Haydn, even remarking within his hearing,
when urged to call upon him, 'I don't want to
see the German dog.' Haydn retorted by writing
in his diary, after hearing him play, 'Giardini
played like a pig.' After the exertions of the
season Haydn sought refreshment in the country,
first staying at Sir Charles Rich's house near
Waverley Abbey, in Surrey. In September he
went with Dr. Burney to see Rauzini at Bath,
where he passed three pleasant days, and wrote
a canon to the inscription which Rauzini had
put on a monument in his garden to 'his best
friend'—'Turk was a faithful dog, and not a
man.' He also went to Taplow with Shield,
and with Lord Abingdon visited Lord Aston at
Preston. An anecdote of this time shows the
humour which was so native to Haydn, and so
often pervades his compositions. He composed
an apparently easy sonata for pianoforte and
violin, called it 'Jacob's Dream,' and sent it
anonymously to an amateur who professed him-
self addicted to the extreme upper notes of the
violin. The unfortunate performer was delighted
with the opening; here was a composer who
thoroughly understood the instruments! but as
he found himself compelled to mount the ladder
higher and higher without any chance of coming
down again, the perspiration burst out upon his
forehead, and he exclaimed, 'What sort of com-
position do you call this! the man knows nothing
whatever of the violin.'

In 1795 Salomon announced his concerts under
a new name and place, the 'National School
of Music,' in the King's Concert-room, recently
added to the King's Theatre. Haydn was again
engaged as composer and conductor of his own
symphonies, and Salomon had collected an
unprecedented assemblage of talent. The music
was chiefly operatic, but one or even two of
Haydn's symphonies were given regularly, the
'Surprise' being a special favourite. With
regard to this symphony Haydn confessed to
Gyrowetz, who happened to call when he was
composing the Andante, that he intended to
starle the audience. There all the women will
scream,' he said with a laugh, pointing to the
well-known explosion of the drums. The first
concert was on Feb. 2, and two extra ones
were given on May 21 and June 1, the latter
being Haydn's last appearance before an Eng-
lish audience. His last benefit was on May 4, when
the programme consisted entirely of his works,
except the concertos of Viotti and of Ferleidis
in the oboe. Banti sang his aria for the first
time, but according to his diary 'she sang very
scanty.' He was greatly pleased with the success.
of this concert; the audience was a distinguished one, and the net receipts amounted to £200. 'It is only in England that one can make such sums,' he remarked. J. B. Cramer and Mme. Dussek gave concerts soon after, at which Haydn conducted his own symphonies.

During the latter months of his stay in London Haydn was much distinguished by the Court. At a concert at York House the programme consisted entirely of his compositions, he presided at the pianoforte, and Salomon was leader. The King and Queen, the Princesses, the Prince of Wales, and the Dukes of Clarence and Gloucester were present, and the Prince of Wales presented Haydn to the King, who, in spite of his almost exclusive preference for Handel, expressed great interest in the music, and presented the composer to the Queen, who begged him to sing some of his own songs. He was also repeatedly invited to the Queen's concerts at Buckingham House; and both King and Queen expressed a wish that he should remain in England, and spend the summer at Windsor. Haydn replied that he felt bound not to desert Prince Esterhazy, and was not inclined entirely to forsake his own country. As a particular mark of esteem the Queen presented him with a copy of the score of Handel's Passion-music to Brook's words. He was frequently at Carlton House, where the Prince of Wales (a pupil of Crozdeli's on the cello, and fond of taking the bass in catches and glees), had a regular concert-room, and often played his part in the orchestra with the Dukes of Cumberland (viola) and Gloucester (violin). In 1795 he gave many musical parties, and at one which took place soon after his marriage (April 8) the Prince of Wales played the pianoforte and sang with Haydn, who not only conducted but sang some of his own songs. He attended at Carlton House 26 times in all, but like other musicians found much difficulty in getting paid. After waiting long in vain he sent in a bill for 100 guineas from Vienna, which was immediately discharged by Parliament. It must be admitted that the demand was moderate.

Encouraged by the success of the 'Storm,' Haydn undertook to compose a larger work to English words. Lord Abingdon suggested Needham's 'Invocation of Neptune,' an adaptation of some poor verses prefixed to Selden's 'Mare Clausum,' but he made little progress, probably finding his acquaintance with English too limited. The only finished numbers are, a bass solo, 'Nor can I think my suit is vain,' and a chorus, 'Thy great endeavours to increase.' The autograph is in the British Museum. Haydn received parting gifts from Clementi, Tattersall, and many others, one being a talking parrot, which realised 1400 florins after his death. In 1804 he received from Gardiner of Leicester six pairs of cotton stockings, into which were worked favourite themes from his music.—His return was now inevitable, as Prince Esterhazy had written some time before that he wished his chapel reconstituted, with Haydn again as its conductor.

The second visit to London was a brilliant success. He returned from it with increased powers, unlimited fame, and a competence for life. By concerts, lessons, and symphonies, not counting his other compositions, he had again—as before—made too much room, to relieve him from all anxiety for the future. He announced afterwards that it was not till he had been in England that he became famous in Germany, by which he meant that though his reputation was high at home, the English were the first to give him public homage and liberal remuneration. His diary contains a list of the works composed in London. To those already mentioned we must add—

4 hymns for Tattersall's 'Parochial Psalmody'; songs for Gallini and others; 6 Lieder—one with Maple the publisher; a symphonic accompaniment; arias for David, Signor Bauti, and Miss Poole, and another with orchestral accompaniment for Salomon's 'Windsor Castle' accompaniment; 'O tuneful voice,' (Covent Garden); 4 marches; 26 songs, composed for a distinguished minnesinger and aleman; 6 cotillion dances; 6 quartets (finished in Vienna) by Knight, a virtuoso, in 1791, known as op. 75 and grand air; 'The spirit of the 74, dedicated to London and Paris editions. No. 1 assignee's meeting set the end of Mörcks canon in an album; 6 English songs; 12 Canzettas (last set); Merian's song; La Haydn; Haydn's Toccata; Despair; Pleading pain; Urge; Beatitude. 2nd set: sailor's song; The Wanderer; Sympathy; She's his sweet works, dedicated to Mrs. Floyer; 12 Redoutensiel and 12 Tunes for the benefit of the Artists' Widows' Fund. The Salomon symphony in Es (No. 10) was written in Vienna in 1794.

Haydn left London August 15, 1795, and travelled by way of Hamburg, Berlin, and Dresden. Soon after his return a pleasant surprise awaited him. He was taken by Count Harrach and a genial party of noblemen and gentleman, first to a small peninsula formed by the Leitha in a park near Rohrau, where he found a monument and bust of himself, and next to his birthplace. Overcome by his feelings, on entering the humble abode. Haydn stooped down and kissed the threshold, and then pointing to the stove, told the company that it was on that very spot that his career as a musician began. On the 18th December he gave a concert in the small Redoutensaal, at which three of his London symphonies were performed, and Beethoven played either his first or second clavier-concerto. At this time he lived in the Neumarkt (now No. 11) which he left in Jan. 1797 for his own house in the suburbs. He now only went to Eisenstadt for the summer and autumn. Down to 1802 he always had a new mass ready for Princess Esterhazy's name-day, in September. (Novello, Nos. 2, 1, 3, 16, 4, 6.)

To these years belong several other compositions—A cantata, 'Die Erwählung eines Kapellmeisters,' composed for a club meeting regularly in the evenings at the tavern 'zum Schwanen,' in the Neumarkt. Incidental music for 'Alfred,' a

1. No. 12 was composed 1788. 'In tempere bello,' and called the 'Paukenmesse,' because in the Agnus the drums are introduced. No. 3 was composed 1797. 'In honorem patriae' (Berlin). No. 7 in Germany as 'Die Nelsonmesse,' because it is said to have been performed during Nelson's visit to Eisenstadt in 1800; he asked Haydn for his pen, and gave him his own gold watch in exchange.

2. Much frequented in later years by Beethoven (see his letters to Eusebius). It was the scene of the adventure with the waiter (Eise, p. 123).
tragedy adapted from the English of Cowmeadow, and performed once in 1795 at Schikaneder's Theatre in Vienna; a fine chorus in the old Italian style, 'Non nobis Domine,' perhaps suggested by Byrd's canon which he heard so often in London on grand 'Deum' composed 1610; and the 'Seven Words,' rewritten for voices, and first performed at Eisenstadt, Oct. 1797. Instrumental music—Clavier-trios, Breitkopf & Härtel, Nos. 18, 19, 20, dedicated to Princess Marie Esterhazy; 1, 2, 6, to Mrs. Schroeter; 3, 4, 5, to Bartolozzi; 12, 15 to Mlle. Madelaine de Kurzebeck; when requested by Prince Esterhazy in 1803 to compose a sonata for the wife of Marechal Moreau, Haydn arranged this trio as a duet for clarinet and violin; and in that form it was published years after as his 'dernière Sonate.' Clavier sonata (Breitk. & Härtel, No. 1), dedicated to Mlle. Kurzebeck; 6 string-quartets, known as op. 75 and 76, dedicated to Count Erdödy; and a ditto, op. 77, dedicated to Prince Lobkowitz. During his visit Haydn had often envied the English the 'George and the Dragon,' and the war with France having quickened his desire to provide the people with an adequate expression of their fidelity to the throne, he determined to compose a national anthem for Austria. Hence arose 'Gott erhalte Franz den Kaiser,' the most popular of all his Lieder. Haydn's friend, Freiherr van Swieten, suggested the idea to the Prime Minister, Graf von Saurau, and the poet Hauschka was commissioned to write the words, which Haydn set in January 1797. On the Emperor's birthday, Feb. 12, the air was sung simultaneously at the national theatre in Vienna, and at all the principal theatres in the provinces. [See EMperor's HYMN.] This strain, almost sublime in its simplicity, and so devotional in its character that it is used as a hymn-tune, faithfully reflects Haydn's feelings towards his sovereign. It was his favourite work, and towards the close of his life he often conveyed himself by playing it with great expression. He also introduced a set of masterly variations on it into the so-called 'Kaisersquartett' (No. 77).

High as his reputation already was, it had not reached its culminating point. This was attained by two works of his old age, the 'Creation' and the 'Seasons.' Shortly before his departure from London, Salomon offered him a poem for music, which had been compiled by Lidley from Milton's 'Paradise Lost' before the death of Handel, but not used. Haydn took it to Vienna, and when Freiherr van Swieten suggested his composing an oratorio, he handed him the poem. Van Swieten translated it with considerable alterations, and a sum of 500 ducats was guaranteed by twelve of the principal nobility. Haydn set to work with the greatest ardour. 'Never was I so pious,' he says, 'as when composing the Creation. I kneit down every day and prayed God to strengthen me for my work.' It was first given in private at the Schwarzenberg palace, on the 29th and 30th of April, 1798; and in public on Haydn's name-day, March 19, 1799, at the National Theatre. The noblemen previously mentioned paid the expenses, and handed over to Haydn the entire proceeds, amounting to 4,000 florins (£320). The impression it produced was extraordinary; the whole audience was deeply moved, and Haydn confessed that he could not describe his sensations. 'One moment,' he said, 'I was as cold as ice, the next I seemed on fire. More than once I was afraid I should have a stroke.' The next performance was given by the Tonkünstler Societät, Haydn conducting. Once only he conducted it outside Vienna—March 9, 1800, at a grand performance in the palace at Öfen before the Archduke Palatine Joseph of Hungary. No sooner was the score engraved (1801), than the 'Creation' was performed everywhere. Choral societies were formed for the express purpose, and its popularity was for long equalled only by that of the 'Messiah.' In London Ashley and Salomon gave rival performances, the former on March 28, 1800, at Covent Garden, the latter on April 21, in the concert-room of the King's Theatre, with Mars and Dussek in the principal parts, and a concerto on the organ by Samuel Wesley. In the English provinces it was first performed by the Three Choirs—at Worcester in 1800, Hereford in 1801, and Gloucester in 1802. In 1799 Haydn entered into relations with Breitkopf & Härtel, and edited the 12 vols. in red covers which formed for long the only collection of his works for clavier and for voice.

As soon as the 'Creation' was finished, Van Swieten persuaded Haydn to begin another oratorio, which he had adapted from Thomson's 'Seasons.' He consented to the proposition with reluctance, on the ground that his powers were failing; but he began, and in spite of his objections to certain passages as unsuited to music (a point over which he and Van Swieten nearly quarrelled), the work as a whole interested him much, and was speedily completed. The first performances took place April 24 and 25, and May 1, at the Schwarzenberg palace. On May 29 he conducted it for his own benefit in the large Redoutensaal, and in December handed over the score, as he had that of the 'Creation,' to the Tonkünstler Societät, which has derived a permanent income from both works. Opinions are now divided as to the respective values of the two, but at the time the success of the 'Seasons' fully equalled that of the 'Creation,' and even now the youthful freshness which characterises it is very striking. The strain however was too great; as he often said afterwards, 'The Seasons gave me the finishing stroke.' On Dec. 26, 1803, he conducted the 'Seven Words' for the hospital fund at the Redoutensaal, but it was his last public exertion. In the following year he was asked to conduct the 'Creation'
at Eisenstadt, but declined on the score of weakness; and indeed he was failing rapidly. His works composed after the 'Seasons' are very few, the chief being some vocal quartets, on which he set a high value. In these his devotional feeling comes out strongly, in 'Herr der du mir das Leben,' 'Du bist's dem Ruhm und Ehre gebühret,' and 'Der Greis'—'Hin ist alle meine Kraft.' In 1803 and 3 he harmonised and wrote accompaniments for a number of Scotch songs, for which he received 500 florins from Whyte of Edinburgh. This pleased him so much that he is said to have expressed his pride in the work as one which would long preserve his memory in Scotland. He also arranged Welsh airs (Preston: 41 Ns. in 3 vols.) and Irish airs, but the latter he did not complete, and they were undertaken by Beethoven. One of his last string-quartets (Trautwein 83) has two movements complete, the 'Andante' and the 'Minuet'; in despair of finishing it, in 1806, he added the first few bars of 'Der Greis' as a conclusion. He had these same bars printed as a card in answer to friends who enquired after him.

\[ \text{Hin ist al-le meine Kraft} \]

\[ \text{all und schooch bin ich.} \]

Joseph Haydn.

Haydn's last years were passed in a continual struggle with the infirmities of age, relieved by occasional gleams of sunshine. When in a happy mood he would unlock his cabinet, and exhibit to his intimate friends the souvenirs, diplomas, and valuable of all kinds which it contained. This often led him to speak of the events of his life, and in this way Griesinger, Dies, Berluch, Carpani, and Neukomm, became acquainted with many details. Haydn also received other visitors who cannot have failed to give him pleasure; such were Cherubini, the Abbé Vogler, the Weber family, Baillot, Mme. Bigot the pianist, Pleyel, Bieray, Gaisbacher, Hummel, Niel, Tommaschek, Reichardt, Iffland; his faithful friends Mmes. Aurnhammer, Kurzbeck, and Spielmann, the Princess Esterhazy with her son Paul—who all came to render homage to the old man. Mozart's widow did not forget her husband's best friend, and her son Wolfgang, then 14, begged his blessing at his first public concert, in the Theatre an-der-Wien, on April 8, 1805, for which he had composed a cantata, in honour of Haydn's 73rd birthday.

After a long seclusion Haydn appeared in public for the last time at a remarkable performance of the 'Creation' at the University on March 27, 1808. He was carried in his armchair to a place among the first ladies of the land, and received with the warmest demonstrations of welcome. Salieri conducted. At the words 'And there was light,' Haydn was quite overcome, and pointing upwards exclaimed, 'It came from thence.' As the performance went on his agitation became extreme, and it was thought better to take him home after the first part. As he was carried out people of the highest rank thronged to take leave of him, and Beethoven fervently kissed his hand and forehead. At the door he paused, and turning round lifted up his hands as if in the act of blessing.

In 1797 Prince Nicolaus had augmented his salary by 300 florins, and in 1806 added another 600—making his whole emolument 2,300 florins (£200)—besides paying his doctor's bills. This increase in income was a great satisfaction to Haydn, as he had long earnestly desired to help his many poor relations during his life, and to leave them something after his death.

To one who loved his country so deeply, it was a sore trial to see Vienna twice occupied by the enemy—in 1805 and 1809. The second time the city was bombarded, and the first shot fell not far from his residence. In his infirm condition this alarmed him greatly, but he called out to his

---

1 Dedicated to Count Maurice de Fries. Haydn gave it to Griesinger saying, 'It is my last child, and not unlike me.'

2 'Fled for ever is my strength;
Old and weak am I!''

Abbé Studler made a canon out of these lines by adding two more—

'Doch was Sie erzehlt nicht stets,
Ewig ist dein Ruhm.'

'But what thou hast achieved stands fast;
Lasting is thy fame.'
servants, 'Children, don’t be frightened; no harm can happen to you while Haydn is by.' The last visit he received on his death-bed (the city being then in the occupation of the French) was from a French officer, who sang 'In native worth' with a depth of expression doubtless inspired by the occasion. Haydn was much moved, and embraced him warmly at parting. On May 26, 1809, he called his servants round him for the last time, and having been carried to the piano solemnly played the Emperor's Hymn three times over. Five days afterwards, at one o’clock in the morning of the 31st, he expired.

On June 15 Mozart’s Requiem was performed in his honour at the Schottenkirche. Amongst the mourners were many French officers of high rank; and the guard of honour round the catafalque was composed of French soldiers, and a detachment of the Bürgerwehr. He was buried in the Hundsturm churchyard, outside the lines, close to the suburb in which he lived, but his remains were exhumed by command of Prince Esterhazy, and solemnly re-interred in the upper parish church at Eisenstadt on Nov. 7, 1820. A simple stone with a Latin inscription is inserted in the wall over the vault—to inform the passer-by that a great man rests below.

It is a well-known fact that when the coffin was opened for identification before the removal, the skull was missing; it had been stolen two days after the funeral. The one which was afterwards sent to the Prince anonymously as Haydn’s, was buried with the other remains; but the real one was retained and is at present in the possession of the family of a celebrated physician. The grave at Vienna remained absolutely undistinguished for 5 years after Haydn’s death, till 1814, when his pupil Neukomm erected a stone bearing the following inscription, which contains a 5-part Canon for solution.

HAYDN

NATVS MDCCXXXII

OBIT MDCCXIX

CAN. AENIGM. QUINQUE. VOC.

D. D. D.

MDCCXIV.

This stone was renewed by Graf von Stockhammer in 1842.

As soon as Haydn’s death was known, funeral services were held in all the principal cities of Europe. In Paris was performed a sacred cantata for three voices and orchestra (Breitkopf & Härtel) composed by Cherubini on a false report of his death in 1805. It was also given elsewhere.

Among his pupils we may mention—Robert Kimmerling and Abund Mykisch, both priests who learnt from him as early as 1753; Count Thun; the Erdödy family; Ignaz Pleyel; Nemez, a monk; Krumpolz, Ant. Kraft, and Rešetti, members of the Esterhazy Chapel; Dieckmann, violinist; Fernandi, organist; Démar, composer; Hoffmann of Livonia; Kranz of Stuttgart; Prazomtz; Ed. von Weber; Ant. Wranitz; Haigh, Graeff, and Calloott, of London; Nát; Franz de Paula Roser; the Poizelz; J. G. Fuchs afterwards vice-Capellmeister of the chapel, and Haydn’s successor; Struck; Bartsch; Lessel; Neukom; Händel; Seyfried, and Desteboche; Haydn used to call Pleyel, Neukomm, and Lessel his favourite and most grateful pupils. Most
those named dedicated to him their first published work—generally a piece of chamber music.

A few remarks on Haydn's personal and mental characteristics, and on his position in the history of art, will conclude our task. We learn from his contemporaries that he was below the middle height, with legs disproportionately short; his build substantial, but deficient in muscle. His features were tolerably regular; his expression, slightly stern in repose, invariably softened in conversation. His aquiline nose was latterly much disfigured by a polyposis; and his face deeply pitted by small-pox. His complexion was very dark. His dark gray eyes roamed with benevolence; and he used to say himself, 'Any one can see by the look of me that I am a good-natured sort of fellow.' The impression given by his countenance and bearing was that of an earnest dignified man, perhaps a little over-precise. Though fond of a joke, he never indulged in immoderate laughter. His broad and well-formed forehead was partly concealed by a wig with side curls and a pigtail, which he wore to the end of his days. A prominent and slightly coarse under-lip, with a massive jaw, completed this singular union of so much that was attractive and repelling, intellectual and vulgar. He always considered himself an ugly man, and could not understand how so many handsome women fell in love with him; 'At any rate,' he used to say, 'they were not tempted by my beauty,' though he admitted that he liked looking at a pretty woman, and was never at a loss for a compliment. He habitually spoke in the broad Austrian dialect, but could express himself fluently in Italian, and with some difficulty in French. He studied English when in London, and in the country would often take his grammar into the woods. He was also fond of introducing English phrases into his diary. He knew enough Latin to read Fux's 'Gradus,' and to set the Church services. Though he lived so long in Hungary he never learned the vernacular, which was only used by the servants among themselves, the Eszterhazy family always speaking German. His love of fun sometimes carried him away; as he remarked to Dies, 'A mischievous fit comes over one sometimes that is perfectly beyond control.' At the same time he was sensitive, and when provoked by a bad return for his kindness could be very sarcastic. With all his modesty he was aware of his own merits, and liked to be appreciated, but flattery he never permitted. Like a true man of genius he enjoyed honour and fame, but carefully avoided ambition. He has often been reproached with cringing to his superiors, but it should not be forgotten that a man who was in daily intercourse with people of the highest rank would have no difficulty in drawing the line between respect and servitude. That he was quite capable of defending his dignity as an artist is proved by the following occurrence. Prince Nicolaus (the second of the name) being present at a rehearsal, and expressing disapprobation, Haydn at once interposed—'Your Highness, all that is my business.' He was very fond of children, and they in return loved 'Papa Haydn' with all their hearts. He never forgot a benefit, though his kindness to his many needy relations often met with a poor return. The 'chapel' looked up to him as a father, and when occasion arose he was an unwearied intercessor on their behalf with the Prince. Young men of talent found in him a generous friend, always ready to aid them with advice and substantial help. To this fact Ebyler, A. Romberg, Seyfried, Weigl, and others have borne ample testimony. His intercourse with Mozart was a striking example of his readiness to acknowledge the merits of others. Throughout life he was distinguished by industry and method; he maintained a strict daily routine, and never sat down to work or received a visit until he was fully dressed. This custom he kept up long after he was too old to leave the house. His uniform, which the Prince was continually changing both in colour and style, he never wore unless actually at his post.

One of his most marked characteristics was his constant aim at perfection in his art. He once said regretfully to Kalkbrenner, 'I have only just learned in my old age how to use the wind-instruments, and now that I do understand them I must leave the world.' And to Griesinger he said that he had by no means come to the end of his powers; that ideas were often floating in his mind, by which he could have carried the art far beyond anything it had yet attained, had his physical powers been equal to the task.

He was a devout Christian, and attended strictly to his religious duties; but he saw no inconsistency in becoming a Freemason—probably at the instigation of Leopold Mozart, who in Vienna in 1785. His genius he looked on as a gift from above, for which he was bound to be thankful. This feeling dictated the inscriptions on all his scores large and small; 'In nomine Domini,' at the beginning, and 'Lauda Deo' at the end; with the occasional addition of 'et

B. V. M. et omnis S.' (Beatæ Virginis Mariæ et omnium Sanctiæ). His writing is extremely neat and uniform, with remarkably few corrections: 'Because,' said he, 'I never put anything
down till I have quite made up my mind about it.' When intending to write something superior he liked to wear the ring given him by the King of Prussia.

The immense quantity of his compositions would lead to the belief that he worked with unusual rapidity, but this was by no means the case. 'I never was a quick writer,' he assures us himself, 'and always composed with care and deliberation; that alone is the way to compose works that will last, and a real connoisseur can see at a glance whether a score has been written in undue haste or not.' He sketched all his compositions at the piano—a dangerous proceeding, often leading to fragmentariness of style. The condition of the instrument had its effect upon him, for we find him writing to Artaria in 1788, 'I was obliged to buy a new fortepiano, that I might compose your Clavier sonatas particularly well.' When an idea struck him he sketched it out in a few notes and figures: this would be his morning's work; in the afternoon he would enlarge this sketch, elaborating it according to rule, but taking pains to preserve the unity of the idea.

'That is where so many young composers fail,' he says; 'they string together a number of fragments; they break off almost as soon as they have begun; and so at the end the listener carries away no definite impression.' He also objected to composers not learning to sing, 'Singing is almost one of the forgotten arts, and that is why the instruments are allowed to overpower the voices.' The subject of melody he regarded very seriously. 'It is the air which is the charm of music,' he said to Michael Kelly, 'and it is that which is most difficult to produce. The invention of a fine melody is a work of genius.'

Like many other creative artists, Haydn disliked estheticism, and all mere talk about Art. He had always a bad word for the critics with their 'sharp-pointed pens' ("spitzigen und witzigen Federnd"), especially those of Berlin, who used him very badly in early life. His words to Breitkopf, when sending him the Creation, are very touching, as coming from a man of his established reputation,—"My one hope and prayer is, and I think at my age it may well be granted, that the critics will not be too hard on my Creation and they do it real harm." He had of course plenty of detractors, among others Koselewch and Kreigb, who represented him to the Emperor Joseph II. as a mere mountebank. Even after he had met with due recognition abroad, he was accused of trying to found a new school, though his compositions were at the same time condemned as for the most part hasty, trivial, and extravagant. He sums up his own opinion of his works in these words, 'Sunt mala mixta bonis; some of my children are well-bred, some ill-bred, and here and there there is a changing among them.' He was perfectly aware of how much he had done for the progress of Art; 'I know,' he said, 'that God has bestowed a talent upon me, and I thank Him for it; I think I have done my duty, and been of use in my generation by my works; let others do the same.'

He was no pedant with regard to rules, and would acknowledge no restrictions on genius. 'If Mozart wrote thus, he must have had a good reason for it,' was his answer when his attention was drawn to an unusual passage in one of Mozart's quartets. With regard to Albrechtsberger's condemnation of consecutive fourths in strict composition he remarked, 'What is the good of such rules? Art is free, and should be fettered by no such mechanical regulations. The educated ear is the sole authority on all these questions, and I think I have as much right to lay down the law as any one. Such trifling is absurd; I wish instead that some one would try to compose a really new "minuet." And again to Dies, 'Supposing an idea struck me as good, and thoroughly satisfactory both to the ear and the heart, I would far rather pass over some slight grammatical error, than sacrifice what seemed to me beautiful to any mere pedantic trifling.' Even during Haydn's lifetime his compositions became the subject of a real worship. Many distinguished men, such as Exner of Zittau, Von Mastiaux of Bonn, Gerber, Bossler, Count Fuchs, Baron du Baine, and Kees the Court Secretary of Vienna, corresponded with him with a view to procuring as many of his works as possible for their libraries. There is great significance in the sobriquet of 'Papa Haydn,' which is still in general use, as if musicians of all countries claimed descent from him. One writer declares that after listening to Haydn's compositions he always felt impelled to do some good work; and Zelter said they had a similar effect upon him.

Haydn's position in the history of music is of the first importance. When we consider the poor condition in which he found certain important departments of music, and, on the other hand, the vast fields which he opened to his successors, it is impossible to over-rate his creative powers. Justly called the father of instrumental music, there is scarcely a department throughout its whole range in which he did not make his influence felt. Starting from Emmanuel Bach, he seems, if it may use the expression, forced in between Mozart and Beethoven. His works are characterised by lucidity, perfect finish, studied moderation, avoidance of meaningless phrases, firmness of design, and richness of development. The subjects principal and secondary, down to the smallest episodes, are thoroughly connected, and the whole conveys the impression of being cast in one mould. We admire his inexhaustible invention as shown in the originality of his themes and melodies; the life and spontaneity of the ideas; the clearness which makes his compositions as interesting to the amateur as to the artist; the child-like cheerfulness and drollery which charm away trouble and care.

Of the Symphony he may be said with truth to have enlarged its sphere, stereotyped its form.

1 'Reminiscences,' London 1828, L.190. 2 Was this before or after the appearance of Beethoven's Symphony No. 17.
enriched and developed its capacities with the versatility of true genius. Like those which Mozart wrote after studying the orchestras of Munich, Mannheim, and Paris, Haydn’s later symphonies are the most copious in ideas, the most animated, and the most delicate in construction. They have in fact completely banished those of his predecessors.

The Quartet he also brought to its greatest perfection. ‘It is not often,’ says Otto Jahn, ‘that a composer hits so exactly upon the form suited to his conceptions; the quartet was Haydn’s natural mode of expressing his feelings.’

The life and freshness, the cheerfulness and geniality which give the peculiar stamp to these compositions at once secured their universal acceptance. It is true that scientific musicians at first regarded this new element in music with suspicion and even contempt, but they gradually came to the conclusion that it was compatible not only with artistic treatment, but with earnestness and sentiment. ‘It was from Haydn,’ said Mozart, ‘that I first learned the true way to compose quartets.’

His symphonies encouraged the formation of numerous amateur orchestras; while his quartets became an unfailing source of elevated pleasure in family circles, and thus raised the general standard of musical cultivation.

Encouraged partly by the progress made by Emmanuel Bach on the original foundation of Kuhnau and Domenico Scarlatti, Haydn also left his mark on the Sonata. His compositions of this kind exhibit the same vitality, and the same individual treatment; indeed in some of them he seems to step beyond Mozart into the Beethoven period. His clavier-trios also, though no longer valuable from a technical point of view, are still models of composition.

On the other hand, his accompanied divertimenti, and his concertos, with a single exception, were far surpassed by those of Mozart, and have long since disappeared. His first collections of Songs were written to trivial words, and can only be used for social amusement; but the later series, especially the canzonets, rank far higher, and many of them have survived, and are still heard with delight, in spite of the progress in this particular branch of composition since his day. The airs and duets composed for insertion in various operas were essentially ephemeral productions. His canons—some serious and dignified, others overflowing with fun—strikingly exhibit his power of combination.

His three-part and four-part songs—like the canons, especial favourites with the composer—are excellent compositions, and still retain their power of arousing either devotional feeling or mirth.

His larger Masses are a series of masterpieces, admirable for freshness of invention, breadth of design, and richness of development, both in the voice-parts and the instruments. The cheerfulness which pervades them does not arise from frivolity, but rather from the joy of a heart devoted to God, and trusting all things to a Father’s care. He told Carpani that ‘...at the thought of God, his heart leaped for joy, and he could not help his music doing the same.’

And to this day, difficult as it may seem to reconcile the fact with the true dignity of church music, Haydn’s masses and oratorios are executed more frequently than any others in the Catholic churches of Germany.

Frequent performances of his celebrated Oratorios have familiarised every one with the charm and freshness of his melody, and his expressive treatment of the voices, which are invariably supported without being overpowered by refined and brilliant orchestration. In these points none of his predecessors approached him. With regard to his operas composed for Esterháza, we have already quoted his own opinion; they attained their end. Had his project of visiting Italy been fulfilled, and his faculties been stimulated in this direction by fresh scenes and a larger sphere, we might have gained some fine operas, but we should certainly have lost the Haydn we all so dearly love.

When we consider what Haydn did for music, and what his feelings with regard to it were—the willing service he rendered to art, and his delight in ministering to the happiness of others—we can but express our deep veneration, and exclaim with gratitude, ‘Heaven pardon him with genius—he is one of the immortals.’

The Haydn literature contains the following books and pamphlets:

- L. A. C. Bombeck (Paris 1784), published as 'Die Ideen von Haydn, Mozart, und Gluck,' first edition (Paris 1747); Grosset’s ‘Die Musikwissenschaft’ (Wien 1863); ‘Die Musik in London’ (Paris 1792); and several others, with a biographical sketch by Frohlich; the article in Félibrige (1843), ‘Die Musik der Musikwissenschaften’;

- J. Haydn in London in 1791 and 1792, by Karl A. J. V. von Karajan (Vienna 1863); Joseph Haydn und sein Bruder Michael von Worrab (Vienna 1863); Ludwig’s ‘Joseph Haydn in England’ (Worthing 1863); Joseph Haydn’s ‘Die Musikwissenschaften’ (Paris 1843); and several others, with a biographical sketch by Frohlich; the article in Félibrige (1843), ‘Die Musik der Musikwissenschaften’.

The following is a list of Haydn's compositions — printed, copied, and autograph — with others mentioned in various catalogues.

I. Instrumental. 1 Symphonies, various other plays; 23 airs, mostly inserted overtures to operas and play; 22 works by the same H. N. — 548 — and 549. 14 symphonies from the 4 Crosses; various compositions for wind and strings; 10 Duos; 10 Duets; 22 Songs. 22 duos, 32 strings, 21 harpsichord, 124 sonatas, 17 harpsichord sonatas, 17 quintets, 9 quartets, 12 trios, 176. 12 single songs (5 unpublished).

2. "Field Books," 1800-1810; 4 "Opus" Symphonies; *De Ferro brevi,* partially adapted from Haydn's *La Follia* symphonies; by Frédolin Weber (C. M. v. Weber afterwards added 24 two-hand numbers; "Die Soldatenkaiser," by Salieri; "La Fée Urgèle," by a bass song by Boer (Diabelli).

In the impossibility of giving a complete thematic list of Haydn's 175 Symphonies, some particulars regarding a few of them may be useful.

I. The 12 Symphonies which he composed for Salomon's concerts, numbered in the order of their occurrence in the catalogue of the Philharmonic Society of London.

N.B.—The dates given in inverted commas as *'Londini, 1791'* are those on the autograph scores. Those in brackets, [1792], are conjectural.

The numbers in brackets, [8], are those of Breitkopf & Härtel's edition.

The titles in inverted commas are those usual in England; those in brackets are accepted in Germany.

No. 1. [7]. *Adagio.*

"'La cfalteria bizarna.' (By Weigold.)

"Die Hochzeit auf der Alm (M. Haydn)." *'Der Apfelkern,* Singpiel (by Tast, also set by Barrey; "Debey, Hodler, Elycey, etc." (by Schleichner); comic Scenes *"Der Freybrief,* partially adapted from Haydn's *La Follia* symphonies; by Frédolin Weber (C. M. von Weber afterwards added 24 two-hand numbers; "Die Soldatenkaiser," by Salieri; *"La Fée Urgèle,"* by a bass song by Boer (Diabelli)."

No. 2. [5]. *Adagio.*

"'Londoni, 1791.'"

No. 3. [2]. "The Surprise." [Mit dem Paukenzugs.]

No. 4. [7]. "Adagio.*

"'Londoni, 1791.'"

No. 5. [9]. *Alle moderato.*

"'Londoni, 1791.'"

No. 6. [14]. *Adagio.*

"'Londoni, 1791.'"

No. 7. [14]. *Adagio.*

"'Londoni, 1791.'"

No. 8. [14]. *Adagio.*

"'Londoni, 1791.'"
II. Symphonies which are known by titles.

The letters ('Letter A,' etc.) are those in the Philharmonic catalogue, by which these Symphonies are designated in the Society's programmes.

Symphonies marked with a * are published by Simrock, in parts, engraved from the original scores.

*Adagio.  'Letter A.' [1760]

*Adagio.  'Letter B.' 'The Farewell Symphony.' [1772]

*All' assai.  'Letter H.' [1774]

*All' con brio.  'Letter I.' [Trauer.] [1772]

*Allegro.  'Letter I.' [1772]

Adagio.  'Letter Q.' 'The Oxford.' [1783]

*Adagio.  'Le Matin.' [1786-]

Composed in Vienna.  Referring to the Andante.
HAYNES, CATHARINE, distinguished soprano, was born in Ireland in 1825 or 26, and learnt singing in Dublin from Sajo, in Paris from Garcia, and at Milan from Ronconi. On her departure for abroad Thackeray wished her farewell in his Irish Sketchbook. She made her first appearance at Marseilles in 1845 to Puriani, and this successful début was the beginning of a very brilliant career in Italy and Austria. Her first appearance in London was at Covent Garden, April 10, 1849, in Linda. After a short period of fair success here, during which she also sang in Lucia, the Sonnambula, and the Prophète (Bertha)—and of much greater éclat in Ireland, where she sang Irish songs amid vast applause—she left Europe for America, India, Australia, and Polynesia. In 1857 she returned with a fortune, and married Mr. Bushnell, but was known by her maiden name till her death, which took place at Bocceles, Sydenham, Aug. 11, 1861. Her voice was beautiful, but she was an imperfect musician, and did not study. In society and domestic life she was greatly beloved and esteemed.

HAYNES, PHILIP, Mus. Doc., second son of Dr. William Haynes, born in April 1738; received his musical education principally from his father; graduated Mus. Bac. at Oxford, May 18, 1753; on Nov. 30, 1767, was appointed a Gentleman of the Chapel Royal. In 1776, on the resignation of Richard Church, he was chosen to succeed him as organist of New College, Oxford, and on the death of his father in the following year obtained his appointments of organist of Magdalen College, Oxford, and Professor of Music in the University. He proceeded Doctor of Music, Nov. 6, 1777. On the death of Thomas Norris in 1790 he was appointed organist of St. John’s College, Oxford. Dr. Haynes composed several anthems, eight of which he published in a volume; ‘Prophecy,’ an oratorio, performed at the Commemoration at Oxford, 1781; Ode for St. Cecilia’s day, ‘Begin the Song’ (written by John Oldham and originally set by Dr. Blow, 1684); ‘Telemachus,’ a masque, and 16 Psalms from Merrick’s Version. He was editor of ‘Harmonia Wiccamica,’ a collection of the music sung at the Meeting of Wykehamists in London, and of some MS. Memoirs of the Duke of Gloucester (son of Princess Anne of Denmark), commenced by Jenkin Lewis, one of his attendants, and completed by the editor. Dr. P. Haynes, who was one of the largest men in England, died March 19, 1797, and was buried in St. Paul’s Cathedral.

HAYNES, WILLIAM, Mus. Doc., born at Gloucester in 1707, became a chorister of the cathedral there under William Hine. He was articled to Hine, and soon became distinguished as an organist. After the expiration of his articles he obtained the appointment of organist at St. Mary’s Church, Shrewsbury. In 1731 he

---

HAYDN IN LONDON. The second volume of ‘Mozart und Haydn in London,’ by C. F. Pohl (Vienna, Gerold, 1867), devoted to an account of Haydn’s two visits to England and the musical condition of the country at the time. It abounds with curious details gathered during a long residence here, and its accuracy is unimpeachable. It will to some extent be superseded by Mr. Pohl’s Life of Haydn from new and authentic sources, especially from the archives of Eisenstadt and Forchtenstein, of which one volume has appeared (Leipzig, Breitkopf & Härtel, 1878).

[C.F.P.]
became organist of Worcester Cathedral, which he resigned in 1734 on being appointed organist and master of the choristers at Magdalen College, Oxford. He graduated at Oxford as Mus. Bac. July 8, 1735. On Jan. 14, 1742, he succeeded Richard Goodson as Professor of Music in the University. On the opening of the Radcliffe Library Hayes directed the performance, and was on that occasion created Doctor of Music, April 14, 1749. In 1763 Dr. Hayes became a competitor for the prizes then first offered by the Catch Club, and obtained three for his canons, 'Alleluja,' and 'Miserere nobis,' and his glee, 'Melting airs soft joys inspire.' He conducted the music at the Gloucester Festival in 1763. His compositions comprise 'Twelve Arietta or Ballads and Two Cantatas,' 1725; 'Collins's Ode on the Passions'; 'Vocal and Instrumental Music containing I. The Overture and Songs in the Masque of Circe, II. A Sonata or Trio and Ballads, Airs, and Cantatas, III. An Ode being part of an Exercise performed for a Bachelor's Degree in Music, 1742; 'Catches, Glee, and Canons'; 'Cathedral Music (Services and Anthems), 1725; 'Instrumental Accompaniments to the Old Hundredth Psalm, for the Sons of the Clergy'; and 'Sixteen Psalms fromerrick's Version.' He was author of 'Remarks on Mr. Avison's Essay on Musical Expression,' 1762. He died at Oxford July 30, 1777, and was buried in the Churchyard of St. Peter in the East.

WILLIAM HAYES, JUN., third son of the above, was born in 1741, and on June 27, 1749, was admitted a chorister of Magdalen College. He resigned in 1751. He matriculated from Magdalen Hall, July 16, 1757, graduated as B.A. April 7, 1761, M.A. Jan. 15, 1764, was admitted a clerk of Magdalen College, July 6, 1764, and resigned in 1765 on obtaining a minor canonry in Worcester Cathedral. On Jan. 14, 1766, he was appointed minor canon of St. Paul's Cathedral, and made 'junior cardinal' in 1783. He was also Vicar of Tillingham, Essex. He died Oct. 22, 1790. In May 1765 he contributed to the Gentleman's Magazine a paper entitled, 'Rules necessary to be observed by all Cathedral Singers in this Kingdom.'

[ W. H. H.]

HAYM, NICOLIO FRANCESCO, born at Rome, of German parents, came to England in 1704. A little later, he engaged with Clayton and Dieupart in an attempt to establish Italian opera in London; and played the principal cello in Clayton's 'Arinione.' 'Camilla' was Haym's first opera, produced at Drury Lane, April 30, 1706. His next performances were the alteration of Buononcini's 'Thomyris' for the stage, and the arrangement of 'Pyrrhus and Demetrius' [see NICOLINI], which, in his copy of his agreement (in the writer's possession), he calls 'my opera,' though in reality composed by A. Scarlatti. For the latter he received £300 from Rich, while he was paid regularly for play-

1 Haym composed for this, it is true, a new overture and several additional songs, which have considerably merit.
also be produced 'from the head'; or, in other words, that the different 'registers' of every voice may be made to cross each other. [See CHEST-VOICE; FALSETTO.]

J. H.

HEBRIDES. 'Die Hebriden' is one of the names of Mendelssohn's 2nd Concert Overture (in B minor, op. 26), the others being 'Fingals Höhle' and 'Die einsame Insel.' He and Klingemann were at Staffa on Aug. 7, 1829; and the next letter to his family is dated 'Auf einer Hebride;' and contains the first 20 bars of the overture. (See fascimile in 'Die Familie Mendelssohn,' I, 257.) It is said that when he returned to Berlin and was asked by his sisters what he had seen, he went to the piano and played the opening of the overture as much as to say 'that is what I have seen.' He began it seriously at Rome in the winter of 1830 (see the 'Reisebriefe'), and the first score is dated 'Rome, Dec. 16, 1830,' and entitled 'Die einsame Insel.' This MS. is in the possession of Mr. Felix Moscheles. It was played at the Crystal Palace on Oct. 14, 1871. A second score is dated 'London, June 20, 1832,' and entitled 'The Hebrides'; it is in possession of the family of Sir W. Sterndale Bennett. A comparison between the two was attempted in the G. P. programme book of the above date. The differences are very great, and are chiefly in the middle portion or working out (see letter Jan. 15, 1832). The printed score (Breitkopf), an 8vo (published Easter 1834), is entitled 'Fingals Höhle.' The parts are headed 'Hebrides,' and do not agree with the score (see bars 7 and 87).

The overture was first played by the Philharmonie Society, May 14, 1832.

G.

HEDGELAND, WILLIAM, established an organ factory in London in 1851. Amongst his instruments are those of St. Mary Magdalen, Paddington; Holy Cross, St. Helen's, Lancashire; and St. Thomas, Portman Square, London. [V.deP.]

HEIDEGGER, JOHN JAMES, by birth a Fleming, as it is supposed, arrived in England in necessitous circumstances in 1707. Swain was still sole manager of the Opera-house, but Heidegger was probably the person ('tho' musick is only his diversion') to whom Motteux alluded in his Preface to 'Thomyris,' as the selector of the songs in that opera. In 1708 he undertook the management, and he held it until the end of the season of 1734 with varying success; but ended by acquiring a large fortune. He had the address to procure a subscription which enabled him to put 'Thomyris' on the stage, and by this alone he gained 500 guineas. He introduced Ridotti and masquerades at the Opera; and, in allusion to this, Dr. Arbuthnot inscribed to him a poem, 'The Masquerade,' in which he is more severe on his ugliness than on his more voluntary vices. Pope describes him as—

'With less reading than makes felons' scape,
Less human genius than God gives an ape,'

and commemorates his personal charms in the lines—

'And lo! her bird (a monster of a fowl),
Something bewitrix an Heideggern and owl.'

(Dunciad, bk. I.)

And a little print, below which are the words 'Risum teneatis amici!' translates his words into a caricature, representing a chimeras with the head of Heidegger. His face is preserved also in a rare etching by Wofford, and in a capital mezzotint by Faber (1749) after Vanloo. Lord Chesterfield, on one occasion, wagered that Heidegger was the ugliest person in the town; but a hideous old woman was, after some trouble, discovered, who was admitted to be even uglier than Heidegger. As the latter was pluming himself on his victory, Lord Chesterfield insisted on putting on the old woman's bonnet, when the tables were turned, and Lord Chesterfield was unanimously declared the winner amid thunders of applause.

Heidegger was commonly called the 'Swiss Count,' under which name he is alluded to in 'A Critical Discourse on Operas and Music in England,' appended to the 'Comparison between the French and Italian Music and Operas' of the Abbé Ragonet, and in Hughes's 'Vision of Charon or the Ferry-boat.'

The libretto of Handel's 'Amadigi' (1716) is signed by Heidegger as author. In 1729 they entered into operatic partnership at the Haymarket Theatre for three years, but the agreement lasted till 1734. In 1737 Heidegger resumed the management, which the nobility had abandoned, in consequence of Farinelli's detention at Madrid; but the season was calamitous. Previous to closing the theatre, he advertised for a new subscription (May 24, 1739); but a second advertisement (July 25), announced that the project of another season was relinquished, and after that we hear no more of Heidegger.

J. M.

HEIGHTON, MISGRAVE, MUS. Doc., born 1680, son of Ambrose Heighton, of White Hurworth, Durham, and grandson of Sir Edward Musgrave, of Hayton Castle, Cumberland, Bar., embraced the profession of music and in 1738 was organist at Yarmouth. On Aug. 12, 1736, he was admitted a member of the Gentleman's Society at Spalding, a literary and antiquarian body corresponding with the Society of Antiquaries. In 1739, being then organist at Leicestershire, he produced at the Society's anniversary an ode composed by him for the occasion. He composed the vocal music in 'The Enchanter, or, Harlequin Merlin,' a pantomime published in Dublin, together with the instrumental music, a circumstance which, coupled with the facts of his wife being an Irish lady and his son born in Dublin, leads to the inference that he at some time pursued his profession in that city. He also composed 'Six Select Odes,' and some minor pieces. He is said to have obtained his degree at Oxford, but his name is not to be found in the records there, nor in the catalogues of graduates at Cambridge or Dublin. He died at Dundee about 1774.

W. H. H.
HEIL DIR IM SIEGERKRANZ. A German national song, written by Heinrich Harries, a Holstein clergyman, for the birthday of Christian VII of Denmark, was published in the Flensburg Wochenblatt of Jan. 27, 1790, 'to the melody of the English God save great George the King.' It was originally in 8 stanzas, but was reduced to five and otherwise slightly modified for Prussian use by B. G. Schumacher, and in this form appeared as a 'Berliner Volklied' in the Spenerische Zeitung of Dec. 17, 1793. The first stanza of the hymn in its present form is as follows:—

HEIMKEHR AUS DER FREMDE. [Son and Stranger.]

HELLER, Stephen, born May 15, 1815, at Pesth, is an accomplished pianist, and author of a large number of pieces for his instrument, mostly on a small scale, but generally elegant in form and refined in diction. He has for the last twenty-five years enjoyed great popularity amongst cultivated amateurs in France and England. His first publication was a set of Variations in 1839, and his latest (Jan. 1870) is a Sonatina (op. 147). Next to his numerous Etudes and Preludes, the best of his publications consists of several series of morceaux put forth under various titles, such as 'Promenades d'un Solitaire' (taken from Rousseau's letters), 'Hymnen,' 'Blumen- und Frucht- und Dornen Stücke' (from Jean Paul), 'Dans les Bois,' 'Nuits blanches,' etc. A 'Saltarello' on a phrase from Mendelssohn's Italian symphony (op. 77), five Tarantellas (op. 53, 61, 85, 87), a Caprice on Schubert's 'Forelle' (known as La Truite), are pieces wherein Heller rings the changes on his stock of musical material with delicate ingenuity, and exhibits less of that wearisome reiteration of some short phrase, without either development or attempt at attractive variety in treatment, which of late has grown into mannerism with him. He has also put forth four solo sonatas which have left no trace, and, together with Ernst the violinist, a set of 'Pensées fugitives' for piano and violin, which have met with great and deserved success amongst dilettante players.

Having appeared in public at Pesth at an early age, he made a tour through Germany, and settled for some years at Augsburg, where after a prolonged illness he found ample leisure to pursue his studies. Since 1838 he has resided in Paris, rarely playing in public, but much esteemed as a teacher and composer. He visited England in 1862, and played at the Crystal Palace with Halle on May 3 in Mozart's Concerto in E flat for 2 Pianos. His 'Life and Works' are the subjects of a monograph by H. Barbedette, translated into English by Rev. R. Brown Borthwick, 1877. [E.D.]

HELLMESBERGER, a distinguished family of musicians in Vienna. Georg, the father, born April 24, 1800, son of a country schoolmaster, and chorister in the court chapel, entered the Conservatorium of the Gesellschaft der Musikfreunde and learnt the violin from Böhm and composition from E. Förster. In 1821 he was appointed assistant teacher, and in 1833 professor at the Conservatorium, where he formed a host of distinguished pupils, including his two sons, until he retired on a pension in 1875. In 1829 he became conductor of the Imperial opera, and in 1830 a member of the court chapel. This unassuming man, who lived only for his art, was leader at innumerable concerts, published many compositions for his instrument, and died universally respected at Neuwaldweg on Aug. 16, 1873. His eldest son Georg, born in Vienna, 1828 (?), made a successful concert-tour through Germany and England with his father and brother in 1847, but chiefly devoted himself to private lessons, which he studied under Rotter. When barely 21 he was appointed concert-maister at Hanover, where he brought out two operas, 'Bürgerschaft,' and 'Die beide Königinen.' He died Nov. 12, 1852, leaving numerous MSS. His brother Joseph, born Nov. 3, 1828, early displayed a great faculty for music, and appeared in public with applause as an infant prodigy. In spite of his youth he was appointed violin professor and director of the Conservatorium, when it was reconstituted in 1852, and professional conductor of the Gesellschaft concerts. He resigned the latter post in favour of Herbeck in 1859, and the professorship in 1877, but still retains the post of director, with signal advantage to the institution. In 1860 he was appointed concert-master at the Imperial opera, in 63 first violin solo in the court chapel, and in 77 chief capellmeister to the emperor. The quartet parties which he has led since 1849 have maintained their attraction undiminished in spite of all rivalry. The repertory is large, and his performances were the first to awaken general interest in Beethoven's later quartets. The fine tone, grace, and poetical feeling which mark Hellmesberger's execution as a solo and quartet player, are equally conspicuous in the orchestra, of which he is a brilliant leader. To these qualities he adds perfect familiarity with every instrument in the orchestra, and considerable skill as a pianist. He received the Legion of Honour for his services as a juror in the Paris Exhibition of 1855; and many other orders, both of his own and other countries, have since been conferred on him. On the 25th anniversary of his directorship of the Conservatorium he was presented with the freedom of the city of Vienna. His son Joseph, born April 9, 1855, inherits the family talent, and has played second violin in his father's quartet since 1875. He has been since 78 solo player at the court opera and chapel, and professor at the Conservatorium. [C.F.P.]

HELMHOLTZ, Hermann Ludwig Ferdinand, was born Aug. 31, 1821, at Potsdam. His father was Professor at the Gymnasium
there, and his mother, Caroline Penn, belonged to an emigrated English family. He studied medicine in Berlin in 1839, and rose to be Teacher of Anatomy at the Berlin Academy in 1845. In the following year he became Professor of Physiology in Königsberg; in 1848, Professor of the same at Heidelberg, and Geheimrat. In 1871 he returned to the Berlin University as Professor of Natural Philosophy, and at Christmas, 1877, was elected Rektor. His essay on the Conservation of Force ("Erhaltung der Kraft") appeared in 1847; his Physiological Optics ("Physiologische Optik") in 1856-66; and his Popular Scientific Lectures ("Pop. wissenschaft. Vorträge") at Brunswick, 1865-76. It is, however, with his "Treatise on the Sensations of Tone as a physiological basis for the theory of Music," and with his valuable inventions and discoveries in relation to the art, that we are here concerned.

Professor Helmholtz has invented a double harmonium with 24 vibrators to the octave, by means of which the musician can modulate into all keys quite as easily as on a single manual tuned by equal temperament, and without the dissonant thirds and sixths which that mode of tuning introduces. The system may be easily applied to the organ and piano. It is extremely simple, as it does not add to the number of notes in the scale, and requires no new system of fingering to be learnt by the performer. This invention, originally suggested by the extremely unpleasant effect of the equally tempered harmonium, may not impossibly revolutionise modern musical practice, extending as it does to manual instruments that perfect intonation which has hitherto been attainable only by stringed instruments and the human voice. The following may be selected, amongst many others, to illustrate the nature of the discoveries of Helmholtz:—

1. Quality of Musical sounds determined by Harmonics. By means of a series of resonators, each of which on being applied to the ear reinforces any harmonic of equal pitch which may be present in a given note, Helmholtz has effected the most complete analysis of musical tone hitherto attained. The resonator is a hollow sphere of glass or metal, with two openings opposite to each other, one of which is funnel-shaped, for insertion into the ear. Let the note of the resonator be upper C, the air contained in it will vibrate very powerfully when that note is given by the voice or any musical instrument; and less powerfully when the note given is one of those lower notes which are harmonic sub-tones of C, or is, in other words, a note among the harmonics of which the upper C occurs.

The chief results of Helmholtz’s experiments with resonators have been given under the head Harmonics.

More curious is his determination of the nature of the vowel sounds of the human voice, in which Helmholtz has developed the discoveries of Wheatstone. The shape of the mouth-cavity is altered for the production of each particular vowel; and in each of the shapes which it assumes it may be considered as a musical instrument yielding a different note, and in the case of the compound vowels, yielding simultaneously two separate notes of different pitch, just as the neck and body of a glass bottle do. The natural resonance of the mouth-cavity, independently of the tension of the vocal chords, for different vowels, is as follows (the pronunciation of the vowels being not English but German):—

Thus, when the mouth-cavity is found to utter the sound u (oo), it is in effect a musical instrument, the natural pitch of which is lower $f$, and so on.

For the highly interesting experiments on vowel-pitch by means of the resonators, and the importance to singers and composers of the results deducible from them, the reader must be referred to Helmholtz’s work (Ellis’s translation, pp. 153-172).

2. Summational Tones. The fact that when two notes are sounded together they generate a third and deeper tone, whose vibrational number equals the difference of their several vibrational numbers, has been known to violinists ever since the time of Tartini. [See Tartini’s Tones.] These tones Helmholtz calls differential tones, to distinguish them from another set of generated tones discovered by himself, the vibrational numbers of which equal the sum of the vibrational numbers of the generating tones, and which he hence calls summational tones. These tones are of course higher than the generating tones. Thus, if the chords in minims in the following figure be played forte on the violin, the double series of combinational tones above and below will be produced:
3. Physiology of the Minor Chord. Among the most interesting of these discoveries is the reason of the heavy and quasi-dissonant effect produced by minor triads. Just intonation deepens the well-known grave, obscure, and mysterious character which belongs to minor chords; and the observations of Helmholtz on accurately tuned instruments have enabled him to trace this grave and obscure character to the presence of certain deep combinational tones, foreign to the chord, which are absent from major chords, and which without being near enough to be felt, and thus actually to disturb the harmony, make themselves sufficiently audible, at least to a practised ear, as not belonging to the harmony. No minor chord can be obtained perfectly free from such false combinational tones. For the ordinary hearer the presence of these tones gives to the chord its well-known, obscure, and mysterious character, for which he is unable to account, because the weak combinational tones on which it depends are concealed by other louder tones. The fact that this unsatisfactory though not dissonant effect of the minor chord is deepened when the chord is played perfectly in tune, led musicians who wrote before the era of equal temperament to avoid the minor chord as close, and to reserve the effect produced by minor chords for distinct passages or episodes in the composition, instead of using them in indiscriminate combination with major chords, as is the practice of ordinary modern composers. The ‘Ave verum’ of Mozart, and the choral hymn of Mendelssohn, ‘Vaterland in deinem Gauen,’ are good examples of this separation of major and minor effects as instinctively practised by the best writers.

4. Perception of musical tones by the human ear. Starting from the anatomical discoveries of the Marchese Corti, Helmholtz has shown how different parts of the ear are set in vibration by tones of different pitch. The human cochlea contains about 3000 of the rods or fibres known as ‘Corti’s arches.’ The human ear, in fact, is a highly sensitive musical instrument, furnished with 3000 strings, which are set in motion by the concurrent vibration of external sonorous bodies, exactly in the same way in which the ‘resonator’ responds to a musical sound, or in which the strings of a silent violoncello or pianoforte are set in vibration by the production, in a sufficient degree of strength, of notes of equivalent pitch on any other instrument placed near it. On the perfect or imperfect anatomical constitution of these 3000 musical strings, and on their connection with the brain, depends the capacity in the human subject for the sensation of tone: probably in persons who have ‘no ear’ they are imperfectly developed. Deducting 200 for tones which lie beyond musical limits, there remain 2800 for the seven octaves of musical pitch, that is, 400 for every octave. If the experiments of E. H. Weber are correct, sensitive and practised musicians can perceive a difference of pitch for which the vibrtational numbers are as 1000 to 1001. Intervals so fine, falling between the pitch of two of Corti’s arches, would probably set both arches unequally in vibration, that one vibrating most strongly which is nearest to the pitch of the tone.

5. Distribution of harmonic intervals. The common rule of avoiding close intervals in the bass, and of distributing intervals with tolerable evenness between the extreme tones, has long been arrived at by experience. Helmholtz has demonstrated its physiological basis to consist in the dissonant combinational tones which result from intervals otherwise distributed. For Professor Helmholtz’s deduction of other rules of musical science from the physical nature of musical sounds, together with his historical exposition of the growth of melodic scales and of modern harmony, the reader is referred to his work, as already cited.

E. J. P.

HELMORE, Rev. Thomas, was born at Kidderminster, May 7, 1811, and educated at Magdalen Hall, Oxford. In 1840 he became curate of St. Michael’s, Lichfield, and a priest-vicar of Lichfield Cathedral. In 1842 he was appointed Vice-Principal and Precentor of St. Mark’s College, Chelsea, and in 1846 succeeded William Hawes as Master of the Choristers of the Chapel Royal, of which in 1847 he was admitted as one of the Priests in Ordinary. He is author or editor of ‘The Psalter noted,’ ‘The Canticles noted,’ ‘A Manual of Plain Song,’ ‘A Brief Directory of Plain Song,’ ‘The Hymnal noted,’ ‘Carols for Christmas,’ ‘Carols for Easter,’ ‘St. Mark’s College Chant Book,’ and ‘The Canticles accented,’ and translator of Fetti’s ‘Treatise on Chorus Singing.’ He is composer of music for some of Neele’s translations of Hymns of the Eastern Church.

W. H. H.

HEMIOLIA (Gr. Ημιόλιον; Lat. Sessuialtera; Ital. Emiolìa; Fr. Hemïole). Literally, the whole and a half; technically, the proportion of two to three. In this latter sense the word is used, in the musical terminology of the Middle Ages, to denote the Perfect Fifth, the sound of which is produced on the monochord by two-thirds of the open string. The term is also applied by writers of the 16th century to certain rhythmical proportions, corresponding to the triplets of modern music. Thus, three minims, sung against two, are called Hemiola major; three crotchets (seminimine) against two, Hemiola minor. Italian writers of later date call 3-4 time Emiolìa maggiore, and 3-8 Emiolìa minore.

W. S. R.

HENLEY, Rev. Phocion, nephew of Lord Chancellor Henley, was born at Wootton Abrbot, 1728, matriculated at Oxford (Wadham) May 7, 1746, where he spent a great part of his time in the cultivation of music in company with his friend Jones, afterwards of Nayland. In 1759 he was presented to the rectory of St. Andrew by the Wardrobe, and St. Anne’s, Blackfriars. He composed several chants—one of which is still in use—and anthems, and a set of 6 hymns entitled ‘The Cure of Saul.’ He died Aug. 29,
1764, of a contagious fever caught whilst visiting a sick parishioner. [W. H. H.]

HENNEBERG, JOHANN BAPTIST, born at Vienna Dec. 6, 1768; succeeded his father as organist of the Scottish church there. In 1790 was conductor at Schikaneder's theatre, and as such directed the rehearsals of the Zauberflöte, and all the performances of it after the second. He continued to hold the same post in the Theatre an-der-Wien (1801), but soon afterwards left the city. In 1805 he entered Prince Esterhazy's establishment as first organist, and on Hummel's retirement in 1811 conducted the operas at Eisenstadt. In 1813 he returned to Vienna, became choirmaster at the parish church 'am Hof,' and in 1818 organist to the court, and died Nov. 27, 1822. He was much esteemed both as a player and a composer. Amongst his operas have been published—'Die Derwische,' 'Die Eisenköning,' and 'Die Waldmänner'; also his arrangement of Winter's 'Labyrinthe.' [C. F. P.]

HENRI QUATRE (VIVE). This historical song consists of three couplets, which we append in the order in which they should be sung.

J'aime les filles;
Et j'aime le bon vin;
De nos bons drilles
Voila tout le refrain;
J'aime les filles
Et j'aime le bon vin.

Si tu veux t'établir
On va te suivre
Et j'aime le bon vin.

[Vive Henri quatr'oeuvres]
Vi - ve ce roi vale - rant!

Oh diable à quar - tre
Le tri - ple ta - lent;
Heureux,
Le tri - ple ta - lent;
De boire
et de bai - tre;
Et d'être un vert ga - vant!

The authorship of the words and the date of their composition are disputed points, although the first two couplets have been very generally attributed to Collé (1709-83). We are disposed from internal evidence to assign all three verses to the second period of the reign of Henri IV (1589-1610), i.e. the early part of the 17th century. People plunged in all the horrors of civil war, and in continual terror for their lives and their families, are scarcely in the mood to sing of women and wine. The second verse implies that the League is an affair of the past; and it was not till 1598 that the League was terminated by the submission of Mercour. In the third stanza the King is represented as victorious over his enemies at home and abroad; and it was not till 1601 that the treaty of peace with the Duke of Savoy was signed. Finally it was not till after he had remitted 20,000,000 frs. of taxes in arrear, and reduced the income-tax by 4,000,000 frs. annually, that Henri IV became the idol of France, and especially of the peasantry; and these reductions were in progress from 1601 to 1610.

We ascribe the song then to the first decade of the 17th century; and are also inclined to believe that the couplet 'J'aime les filles' is older than the other two, and was taken from a 'chanson de table' or drinking-song, of the time of Henri III. In the 2nd and 3rd stanzas the last line but one contains five syllables, whereas in the 1st there are only four. This slight change may have arisen insensibly, either from the author not having at hand a copy of his predecessor's lines, or because he improvised his words as he sang to some well-known air, and naturally gave a separate syllable to each note of the melody. He has also involuntarily, or from intentional imitation, repeated in the second verse the rhymes of the first.

If Collé had been the author of these lines, he would certainly have told us the fact in his 'Mémoires.' He records the minutest particulars concerning the metamorphoses of 'Le ROI et le Fermier,' and the performances of 'La Partie de chasse de Henri IV'; puts down unimportant improvisations, and the most insignificant rhymes; and it is impossible to suppose that he would not have mentioned having added two verses to 'Vive Henri IV,' if such had been the case. The supposition is rendered still more inadmissible by the fact that he gives the other refrains in 'La Partie de chasse de Henri IV' word for word. We may assume that Collé quoted this historical song in its traditional form, and is no more to be accredited with additions to it than to 'La belle Jardinière,' the three couplets of which he also transcribed. (See Collé, 'La Partie de chasse de Henri IV,' Scène xi.)

The air has been often said to resemble one of the themes of the contredanse called 'Les Tricotet,' the title and the notes of which are to be found in 'Les Paradis nouvelles et les Vaudevilles inconnus' (vol. i. p. 32); and 'Rondes et Chansons à danser' (vol. ii. p. 191) only. Now, not only do neither of these two airs bear any resemblance to 'Vive Henri IV,' but they differ from each other, and thus either 'Les Tricotet' has not survived in a complete form, and the best subject in that 'suite d'airs de danse' is the very one that the collections have not noted down; or the melody of 'Vive Henri IV' is original, and has no connection with 'Les Tricotet.' We adopt the latter conclusion.

One thing is certain; these couplets have been handed down from generation to generation without losing anything of their spirit or freshness; and were spontaneously adopted by the people as the national anthem of royalty at the Bourbon Restoration. On the day when the Allied Armies entered Paris, April 1, 1814, crowds flocked to the Opera to see the Emperor Alexander and the King of Prussia. The opera was Spontini's 'Vestale,' as an overture to which the band performed 'Vive Henri IV' amid a perfect storm of bravos; and at the close of the opera the air was again called for, sung by Lays with the whole power of his magnificent voice,
HENRI QUATRE.

and received with rapturous applause. On July 14, 1815, Lays had a similar success when repeating the air at a performance of 'Iphigénie en Aulide' and 'La Danasmanie' before Louis XVIII, the Emperor of Russia, and the King of Prussia. On the opening of the new theatre of the 'Academie royale de Musique' in the Rue de Peletier, the first words sung in that area, the loss of which is so much to be regretted on acoustical grounds, were those of 'Vive Henri IV.' Pater wrote some brilliant variations on this air. They were engraven in full score and deserve to be rescued from the oblivion into which they have fallen. Grétry also introduced the air into the Overture in 'Le Magnifique' (1773).

HENRIQUE; OR THE LOVE-PILGRIM. Grand opera in 3 acts; words by T. J. Hainos; music by Rookes. Produced at Covent Garden, May 2, 1839.

HENRY VIII, King, born June 28, 1491, died Jan. 30, 1547-8, being originally designed for the church, was duly instructed in music (then an essential part of the acquirements of an ecclesiastic), and appears to have attained some skill in composition. Hall, the Chronicler, and Lord Herbert of Cherbury mention two masses of his composition, neither now extant; Hawkins (chap. 77) has printed a Latin motet for 3 voices by Henry from a MS. collection of anthems, motets, etc., written in 1591 by John Baldwin, singing man of Windsor and subsequently gentleman and clerk of the cheque of the Chapel Royal (died Aug. 28, 1615); and the anthem, 'O Lord, the Maker of all things,' assigned by Barnard and others to William Mundy, was by Aldrich and Boyce declared to be proved to be his production (see Boyce's 'Cath. Music,' ii. 1). In the British Museum (Add. MSS. 5665) is 'Passetyme with good compaunye.' The Kynges balade,' set to music for 3 voices. It is printed in John Stafford Smith's 'Musica Antiqua' and Chappell's 'Popular Music of the Olden Time.' In Harl. MSS. 1410, fol. 200, is a catalogue of the numerous musical instruments belonging to Henry at the time of his death. [W.H.H.]

HENSCHEL, GEORG, born Feb. 18, 1850, at Breslau, made his first appearance as a pianist at 12 years of age. In 1867 he entered at the Leipzig Conservatorium under Moscheles, Richter and Gütze. His next move, in 1870, was to Berlin, where he studied composition under Kiel and singing under Adolph Schulze. Since that date Herr Henschel's reputation as a concert singer has been steadily increasing. His voice is a baritone of great power, richness, and compass. His style is pure, his repertoire large, and he is always conscientious and loyal to the composer. His own compositions are numerous and varied, embracing solo and part songs; chorusses; a gipsy serenade with orchestra; a serenade for stringed orchestra in canon form; the 130th Psalm for solos, 5-part chorus, and orchestra (op. 30).

Mr. Henschel made his first appearance in England Feb. 19, 1877, and has now (1879) taken up his residence here.

HENSEL, FANNY CECILE, the eldest of the Mendelssohn-Bartholdy family, born at Hamburg Nov. 14, 1805, and therefore more than 3 years older than her brother Felix. She was regularly instructed in music, and Mendelssohn used to say that at one time she played better than he. (See also Devrient, Recoll. p. 3.) Oct. 3, 1829, she married W. Hensel, a painter, of Berlin (1794-1861), and on May 17, 1847, died suddenly. Her death shook her brother terribly, and no doubt hastened his own, which happened only 6 months later. Felix's letters show how much he loved her, and the value which he placed on her judgment and her musical ability. He called her 'the Cantor.' 'Before I can receive Fanny's advice,' says he, 'the Walpurgisnight will be packed up . . . I feel convinced she would say 'Yes,' and yet I feel doubtful' (Letter, April 27, 1831). 'Fanny may add the second part,' says he, in sending a Song without words (Dec. 11, 1830). 'Again, I have just played your Caprices . . . all was un mixed delight' (Jan. 4, 40). Still, indications are not wanting of a certain over earnestness, not to say pedantry, which was occasionally too severe for her more plastic brother. (See Letter, April 7, 34, on Melusina; 'Goethe and Mendelssohn,' p. 47, etc.)

Six of her songs were published with his without indication, viz. Op. 8, Nos. 2, 3, 12; Op. 9, Nos. 7, 10, 11. She also published in her own name 4 books of melodies and Lieder for P. F. solo; 2 ditto of songs for voice and P. F.; 1 ditto of Part-songs—'Gartenlieder' (republished by Novello 1878); and after her death a few more songs and P. F. pieces were printed, and a Trio for P. F. and Strings in D, reaching in all to op. 11. For her letters, journals, and portrait see 'Die Familie Mendelssohn,' by S. Hensel (Berlin 1879).

She is buried in the Mendelssohn portion of the Friedhof at the Hallethor, Berlin, and a line of her music is engraved on the tombstone:—

\[ Staff notation \]

Go-dank en Lied-der, fort bis in Him- mel-reich; fort bis in Him-ev-reich.

HENSEL, ADOLPH, born May 12, 1814, at Schwabach in Bavaria, and since 1858 resident at St. Petersburgh, had lessons from Hummel, but can hardly be called Hummel's disciple, since his method of treating the pianoforte differs as much from Hummel's as our concert grand differs from the light Viennese instruments of 1820. Hensel's ways at the keyboard may be taken as the link between Hummel's and Liszt's; that is to say, with Hummel's strictly legato touch, quiet hands and strong fingers, Hensel produces effects of rich sonority something like those which Liszt gets with the aid of the wrists and pedals. But as such sonority, apart from
any rhythmical accentuation, depends in the main upon the widespread position of chords and arpeggios, the component notes of which are made to extend beyond the limits of an octave, Henselt's way of holding the keys down as much as possible with the fingers, over and above keeping the fingers raised by means of the pedals, does not seem the most practical; for it necessitates a continuous straining of the muscles such as only hands of abnormal construction or fingers stretched to the utmost by incessant and tortuous practice can stand. We have the testimony of Mendelssohn \(^1\) that his specialty in 1838 was 'playing widespread chords, and that he went on all day stretching his fingers over arpeggios played prestissimo.' And even up to the present time, he is said to waste an hour daily upon mere Dehnungs-studien, i.e. studies of his own invention for extending the stretch of the hand, and training the fingers to work independently. Nevertheless, be his method of touch needlessly cumbrous or not, if applied to effects à la Chopin and Liszt, the result under his own hands is grand; so grand indeed, that though his appearances in public have been fewer than those of any other celebrated pianist, he has been hailed by judges like Robert Schumann and Herr von Lens as one of the greatest players. His representative works are two sets of twelve Etudes each, op. 2 and 5, which, though not so surprisingly original, deserve to be ranked near Chopin's, inasmuch as they are true lyrical effusions of considerable musical value, over and above their setting forth some specially characteristic or difficult pianoforte effect. Henselt has also published a Concerto (in F minor op. 16), likely to survive, a trio, stillborn, and a number of smaller salon pieces, like 'Frühlingstob,' 'Wiengeflécht,' 'Impromptu in C minor,' 'La Gondola,' etc.—gems in their way.

Henselt's success in 1838 at St. Petersburg was unprecedented. He was at once made Court pianist and teacher to the Imperial children, and soon after Inspector of 'the Imperial Russian female seminaries,' in which latter capacity his firmness and disinterested zeal has borne good fruit. An uniform edition of Henselt's works would be a boon, as some pieces are published in Russia only, others appear under different designations, etc. His arrangements for two pianofortes of Weber's Duo in Eò for pianoforte and clarinet, and of selections from Cramer's Etudes, to which he has added a second pianoforte part; his transcription of Weber's Ouvertures, bits from Weber's operas, and above all his edition of Weber's principal pianoforte works with variante, are masterly. Henselt visited England in 1867, but did not play in public. [E.D.]

HENSTRIDGE, DANIEL, on the death of Nicholas Wotton in 1700 was appointed his successor as organist of Canterbury Cathedral, and held that post until his death in 1730. The organ parts of some of his compositions are still extant, but the voice parts are mostly lost. He seems to have been an imitator of Purcell. [W.H.H.]

HERBECK, JOHANN, court capellmeister, born at Vienna Dec. 25, 1831. He had a few months' instruction in harmony from Rotter, but was virtually a self-made man. His ambition was high, he worked hard, and his progress was rapid and steady. In 1852 he was Choirmaster to the Piarists in the Josephstadt; in 56 choir-master to the first Männersangverein; in 58 professor at the Conservatorium, and choir-master of the Singverein of the Gesellschaft der Musikfreunde; in 59 professional conductor of the Gesellschaft concerts; in 66 chief court capellmeister; and in 71 director of the court opera. The intrigues and annoyances inseparable from this post were insupportable to Herbeck's nature: in 1875 he resigned it, and resumed the conductorship of the Gesellschaft concerts. He died, after a short illness, on the 28th of Oct. 1877. As a conductor he has left a permanent mark on music in Vienna. The numerous choral societies in particular owe their prosperity in great measure to him. As a composer he was equally ambitious and industrious, although in this branch less remarkable for invention than for his power of assimilating, rather than imitating, the best points of his favourites, especially Schubert, of whose works he was an indefatigable exponent. His most successful compositions are his part-songs, which are admirable for simplicity and effect. His published works include:—songs for a single voice; part-songs for men's voices, and choruses, both mixed and harmonised; 'Lied und Reigen' for chorus and orchestra, etc.; 'Tanz- und geschichte;' 'Künstlertafel;' 'Symphonische variationen,' and Symphony in D minor—all for full orchestra, the last with organ; string-quartet in F. op. 9. In MS. a grand mass in E, and a small ditto in F; a Te Deum; graduales; a string-quartet in D minor. Herbeck possessed several orders, including the 3rd division of the Iron Crown, which raised him to the rank of knighthood. [C. P. F. P.]

HERCULANEUM. Opera in 4 acts; libretto by Mery and Hadot, music by Felicien David; given at the Académie, March 4, 1859. The drama was originally intended to deal with a more tremendous catastrophe than that of Herculanum—viz. 'La fin du monde.' Herculanum obtained for its author the Institute's prize of 20,000 frs. [G.]

HERCULES, by Handel; the words by Rev. Thos. Broughton; composed between July 19 and Aug. 17, 1744. Announced as a 'musical drama'; performed and published as an oratorio. First given at the King's Theatre, Haymarket, Jan. 5, 1745; at the Lower Rhine Festival, Düsseldorf, May 17, 1875; and by H. Louis, June 8, 1877. [G.]

HÉROLD, LOUIS JOSEPH FERDINAND, born in Paris Wednesday Jan. 28, 1791, at 30 Rue des Vieux Augustins, now 10 Rue d'Argout; only child of François Joseph Hérol, an able pianist of the school of Emmanuel Bach. Louis's gifts for music were soon apparent. He was educated at the Institution Hix, where he distinguished himself, and at the same time worked at

---

\(^1\) Hiller's 'Mendelssohn,' p. 112.
solfeggio under Fétis, and the pianoforte under his godfather Louis Adam, father of Adolphe. In 1806 he entered the Conservatoire, where he obtained the first piano prize, studied harmony under Catel, and composition under Méhul, whom he always held in great admiration, and at length, in 1812, carried off the ‘Grand prix de Rome’ for his cantata ‘Mlle. de la Vallière,’ the unpublished score of which is in the library of the Conservatoire, together with his ‘ensavo de Rome. These are, a ‘Hymne à 4 voix sur la Transfiguration’ with orchestra; a Symphony in C (Rome, April 1813); a second, in D (May); ‘Sooins ed Aris con cori’ (June); and three Quartets, in D, C, and G minor (July 1814), all written at Naples. These works, which are not given correctly in any previous biography, are short, but contain many interesting ideas; the only one performed in public was the 2nd Symphony, which is by no means a ‘youthful indiscretion.’ The quasi-monochord that such music now be heard with pleasure; and altogether these ‘ensavo de Rome show that Hérold would have shone in symphony if he had adhered to that branch of composition. The stage however possesses an irresistible attraction for a man gifted with ardent imagination and capacity for expressing emotion. It was natural that he should wish to make his début as a dramatic composer at Naples, where he was pianist to Queen Caroline, and where he led a happy life, in good relations with the court and society. With Landrani’s assistance he compiled a libretto from Duval’s comedy ‘La jeunesse de Henri V,’ and the opera was a success. The libretto was printed (Naples 1815) anonymously, but the music remains in MS.

Shortly after this he left Italy, and made a stay of some months at Vienna on his way home. On his return to Paris he at once tried to procure a good opera-book, but might have waited long for an opportunity of coming before the public, if Boieldieu had not asked him to write the latter half of ‘Charles de France,’ an opera de circonstance produced June 18, 1816. This led to his obtaining the libretto of ‘Les Rosières,’ 3 acts (Jan. 27, 1817), which was a complete success. ‘La Clochette,’ 3 acts (Oct. 18 of the same year), was full of new and fresh ideas; the charming air ‘Me voilà’ soon became popular, while those competent to judge were struck by the advance in knowledge of the stage, and the originality of instrumentation which it displayed. His industry and fertility were further proved by ‘Le premier venu’ (1818), ‘Les Troqueurs’ (1819), and ‘L’Auteur mort et vivant’ (1820); but unfortunately he accepted libretti that were neither interesting nor adapted for music. ‘Le Muletier’ (May 12, 1823) however is full of life and colour, and assured his reputation with all who were competent to judge. After the success of this lively little piece it is difficult to understand how a man of literary tastes and culture could have undertaken dramas so tame and uninteresting as ‘La Thénie’ (Sept. 1823), and ‘Le Lepin blanc’ (1825). The fever of production which consumes all composers of genius, affords the only possible explanation. In fact, rather than remain idle he undertook any employment however unwarranting. Thus from 1820–27 he was pianist to an embâ»rateur to the Opéra Italian; and in 1821 was sent to Italy to engage singers, among whom he brought back no less a person than Mme. Pasta, and Galli. In 1827 he became choir-master at the Académie de Musique, and began to write ballets. During these laborious years, Hérold threw off for the publishers an immense quantity of pianoforte music. Fifty-nine of these pieces, on which he laid no value, have been engraved, but we need only mention the sonatas in Ab; another called ‘L’Amante disperato;’ variations on ‘Au clair de la lune,’ and on ‘Maribrook;’ a ‘Rondo dramatique’; and a caprice, ‘Pulcinella.’ He also made arrangements for the piano, Rossini’s ‘Mozet’ among the rest, and like a true artist managed to turn even such work as this to account. In the midst of his daily drudgery however, Hérold kept one aim steadfastly in view; that of becoming a great composer. Any opportunity of making himself known was welcome, and accordingly he consented to join Aubert in writing an opéra de circonstance ‘Vendôme en Espagne’ (1823); and also composed ‘Le Roi René,’ 2 acts (1824) for the fête of Louis XVIII. In ‘Marie,’ 3 acts (Aug. 12, 1826), a charming opera which has kept the boards, he evinces thorough knowledge of the stage, great sensibility, and graceful and refined orchestration. It contains perhaps too many short pieces, and the treble and tenor voices unduly predominate, but these drawbacks are redeemed by original and varied melody, by charming effects, and great skill in the arrangement. The scene of Marie’s despair is the work of a master of pathos, and a true dramatic poet.

Urged by a desire to give a practical scope to his fancy, Hérold composed a series of ballets, ‘Astolphe et Jouconde’; ‘La Sonnambule’ (Jan. 20, and Sept. 19, 1827; ‘La Fille mal gardée’ (Nov. 17, 1828); and ‘La Belle au bois dormant’ (April 27, 1829). It was largely owing to him that the music of French ballets acquired its peculiarly graceful, poetic, expressive and passionate character. These works gave him the same facility and command of his pen, that writing verses does to an author. This is clearly seen in his next opera ‘L’Illusion,’ 1 act (July 18, 1829), the remarkable finale of which contains a valse with a melody of a very high order. ‘Emmeline’ (Nov. 28, 1830) was a farce, chiefly owing to the libretto; but a rich compensation was in store for him in the brilliant success of ‘Zampa’ (May 3, 1831). Speaking briefly we may say that the quartet in the 1st act, ‘Le voilà,’ is a model of dignity and refinement; the recitative duet in the 2nd, is full of life, taste, and dramatic skill; and the deep and eminently characteristic pathos of the principal number of the 3rd act, the duet ‘Pourquoi trembler,’ makes it one of the finest inspirations in modern opera. There is also much variety both of form and movement in the different pieces. The first finale with its richly contrasted effects, is entirely different
from the second, the stretto of which is full of tune and inspiration. In a word, we recognize in Zampa the hand of a master, who to the spirit of Italian music unites the depth of the German and the elegance of the French school.

It is a curious fact that Herold's own countrymen rank the Pré aux Clercs (Dec. 15, 1832) above Zampa, while the Germans give the preference to the latter. This arises probably from the criticism to which a French audience instinctively subjects the literary part of an opera. Any want of unanimity between dramatist and composer is felt at once. In Zampa, this is very marked; for the book, excellent as it is in the number and variety of the dramatic situations, bears marks of being the work of one who does not believe a word of the story he is telling, and has therefore no sympathy with his characters. Hence there is a want of relation between the librettist who is no true poet, and the composer, who moves others because he is moved himself, and is eloquent because he is sincere. In the Pré aux Clercs on the other hand, the actor takes place, and the public is more accessible to the ordinary run of play-goers, and the drama is a very pleasing national poem, free from incongruities and well adapted for music. In setting it Herold not only did much to elevate the tone of French opera-comique, but had the satisfaction of treating a historical subject. We might specify each number, from the overture— as full of warmth and colour as that to Zampa, but forming an independent symphony not built upon the materials of the opera—to the scene of the barque, where the expressive tones of the violas and cellos complete the narrative of the voices, and the whole forms one of the finest effects of pathos ever produced on the stage. The work is characterised throughout by unity of style, variety of accent, and sustained inspiration, always kept within the limits of dramatic truth. The great requisites for a creative artist are colour, dramatic instinct, and sensibility. In colour Herold was not so far behind Weber, while in dramatic instinct he may be said to have equalled him. His remark to a friend a few days before his death shows his own estimate of his work; 'I am going too soon; I was just beginning to understand the stage.' So modest are the utterances of these great poets, who are the glory of their art and their nation!

On January 19, 1833, within a few days of his 42nd year, and but a month after the production of his chef-d'œuvre, Herold succumbed to the chest-malady from which he had been suffering for some time; and was buried with great pomp three days after. He died in the Maison des Termes, which had been his home since his marriage with Adèle Eise Rollet in 1827, and now forms the corner of the Rue Demours and the Rue Bayen, on the side of the even numbers. Here were born his three

children:—Ferdinand, an able avocat, now a senator; Adèle, married in 1854 to M. Clamorgan, now member of the Paris Conseil municipal; and Eugénie, born 1832, a gifted musician, who was carried off in 1852 by consumption.

Among the many critical and biographical articles on this eminent composer, we may mention those of Chaulieu, Castil-Blaze, Scudo, Adolphe Adam, a brief but very accurate notice with portrait in the 'Magasin pittoresque' for 1873 (pp. 156-159), and above all 'Herold sa vie et ses œuvres' by Jouvin (Paris, Hougel, 1868, 8vo), which contains many of his own letters and memoranda. In society he showed himself a brilliant and original talker, though inclined to sarcasm. The best portrait is that in the Magasin pittoresque. His friend David d'Angers made a medallion of him in Rome in 1815; and there are busts by Dantan (1833), Demesmay—in the foyer of the new Opéra, and Charles Gauthier—in the library of the Conservatoire. [G.C.]

HERMANN, Jacob Z. See Zeugker.

HERSCHEL, Sir Frederick William, K.C.H., D.C.L. ('Sir William Herschel'), born at Hanover, Nov. 15, 1738, was second son of a musician there. He received a good education, and was destined for the profession of his father, was, at the age of 14, placed in the band of the Hanoverian regiment of guards. He came to England with the regiment about 1757 and was stationed at Durham. He soon became organist of Halifax parish church, and continued so until 1766, when he was appointed organist of the Octagon Chapel, Bath. Whilst residing at Bath he turned his attention to astronomy, and pursued his studies for several years during the intervals of his professional duties. He constructed a telescope of large dimensions, and in 1781 announced the discovery of a supposed comet, which soon proved to be the planet Uranus. He was thereupon appointed private astronomer to the king, with a salary of £200 per annum, and abandoned the musical profession. He removed to Datchet and afterwards to Slough, was knighted, and received an honorary degree at Oxford. In the summer of 1792 he was visited at Slough by Haydn. He died Aug. 23, 1822. He published a symphony for orchestra and two military concertos for wind instruments in 1768.

JACOB HERSCHEL, his elder brother, born about 1734, was master of the king's band at Hanover, came to England and died here in 1792. He composed some instrumental music. [W.H.H.]

HERZ, Heinrich, born at Vienna Jan. 6, 1806, son of a musician who, anxious to turn his early talent for the piano to the best account, wisely entered him in 1816 at the Conservatoire at Paris under Prud'homme. He carried off the prize for pianoforte-playing in his first year, and thenceforward his career was continually successful. He became virtually a Parisian, and was known as Henri Herz. In 1821 Moscheles visited Paris, and though
HERZ.

HEXACHORD. 733

dienbuch’ and his ‘Handbuch für Organisten’ are widely and deservedly known. His Organ school is a work of very great merit, and his Fantasias are fine and effective compositions. [G.]

HESELTINE, James, a pupil of Dr. Blow, was in the early part of the 18th century organist of St. Katherine's Hospital, near the Tower. In 1711 he was elected organist of Durham Cathedral, retaining his London appointment. Heeseltine composed many excellent anthems, etc., a few of which are still extant in the books of some of the cathedrals, but the major part were destroyed by their composer upon some difference between him and the Dean and Chapter of Durham. He died in 1763. A portrait of him is in the Music School, Oxford. [W.H.H.]

HESSE, ADOLPHE FRIEDRICH, great organ-player and composer, son of an organ-builder, born Aug. 30, 1809, at Breslau. His masters in the pianoforte, composition, and the organ, were Berner and E. Köhler. His talent was sufficiently remarkable to induce the authorities of Breslau to grant him an allowance, which enabled him to visit Leipzig, Cassel, Hamburg, Berlin, and Weimar, in each of which he played his own and other compositions, and enjoyed the instruction and acquaintance of Hummel, Rìnck, and Spohr. In 1831 he obtained the post which he kept till his death, that of organist to the church of the Bernhardins, Breslau. In 1844 he opened the organ at S. Eustache in Paris, and astonished the Parisians by his pedal playing. In 1851 he was in London, and played on several of the organs in the Crystal Palace in Hyde Park—protesting much against the unequal temperament in some of them. But his home was Breslau, where he was visited by a constant stream of admirers from far and near up to his death, Aug. 5, 1863. Hesse was director of the Symphony-Conservatory at Breslau, and left behind him a mass of compositions of all classes. But it is by his organ works that he will be remembered. His ‘Practical Organist,’ containing 29 pieces—amongst them the well-known variations on ‘God save the King’—has been edited by Lincoln and published by Novello. A complete collection of his organ works was edited by Steggall and published by Boosey. [GJ.

HEWE, John, in 1485, received 13s. 9d. for repairing the organ at the altar of the Virgin in York Minster, and for carrying it to the House of the Minorite Brethren and bringing it back to the cathedral. This is probably the earliest instance to be found, though afterwards common, of one church lending another its organ. [V.de.P.]

HEXACHORD. In order to remove certain grave difficulties connected with the Tetrachords of the Greek tonal system, Guido Arétin is said to have proposed, about the year 1024, a new arrangement, based upon a more convenient division of the scale into Hexachords—groups of six sounds, so disposed as to place a diatonic semitone between the third and fourth notes of each series, the remaining intervals being

1 In Fétis’s Biographie.
2 ‘Gothic and Mendelssohn,’ p. 66.
HEXACHORD.

The sounds of which these Hexachords are composed are sung, by the rules of this system, to the syllables ut, re, mi, fa, sol, la, the semitone falling always between the syllables mi and fa. But, in addition to this syllabic distinction, the notes of each entire octave are provided with alphabetical names, exactly similar to those now in use—A, B, C, D, E, F, G; and, these names being immutable, it follows, that, as the Hexachords begin on different notes, and constantly overlap each other, the same syllable is not always found in conjunction with the same letter. At this point arises the only complication with which the system is burdened—a complication so slight that it is well worth the student’s while to master it, seeing that its bearing upon the treatment of the Ecclesiastical Modes, and the management of Real Fugue, is very important indeed. [See Real Fugue.]

The first, or Hard Hexachord (Hexachordon durum), begins on G, the first line in the bass: a note which is said to have been added, below the Greek scale, by Guido, who called it Γ (gamma), whence the word gamma-ut, or gamut:—

![Image]

The second, or Natural Hexachord (Hexachordon naturale), begins on C, the second space:—

![Image]

On comparing these two examples it will be seen that the note which, in the first Hexachord, was sung to the syllable fa, is here sung to ut. Hence, this note, in the collective gamut, is called C fa ut. And the same system is followed with regard to all notes that occur in more than one Hexachord.

The third, or Soft Hexachord (Hexachordon molle), begins on F, the fourth line: and, in order to place the semitone between its third and fourth sounds, the note, B, must be made flat.

![Image]

The note, sung, in the second Hexachord, to the syllable fa, is here sung to ut, and is therefore called F fa ut. The next note, G, is sung to sol, in the second Hexachord, re, in the third, and ut, in the next Hard Hexachord, beginning on the octave G; hence, this note is called G sol re ut. And the same rule is followed with regard to all notes that appear in three different Hexachords. The note B♭, occurring only in the Soft Hexachord, is always called B fa. B♭ is called B mi, from its place in the Hard Hexachord, where it alone is found.

The four remaining Hexachords—for there are seven in all—are mere recapitulations of the first three, in the higher octaves. The entire scheme, therefore, may be represented, thus—

![Image]

The art of correctly adapting the syllables to the sounds is called Solmisation. So long as the compass of a single Hexachord is not exceeded, its Solmisation remains immutable. But, when a melody extends from one Hexachord into the next, or next but one, the syllables proper to the new series are substituted—by a change called a Mutation—for those of the old one. In the following example, the bar shows the place at which the syllables of the Hexachord of C are to be sung in place of those belonging to that of G; the syllables to be omitted being placed in brackets.

![Image]

The Hexachord of C passes, freely, either into that of G, or F: but no direct communication between the two latter is possible, on account of the confusion which would arise between the B♭ and B♭. The mutation usually takes place at re, in ascending; and sol, in descending.

We have said that this subject exercises an important bearing upon the treatment of Real Fugue, in the Ecclesiastical Modes. Without the aid of Solmisation, it would sometimes be impossible to demonstrate, in these Modes, the fitting answer to a given subject; for, in order that the answer may be a strict one, it is necessary that its Solmisation shall correspond, exactly, in one Hexachord, with that of the subject, in another. Failing this characteristic, the passage degenerates into one of mere imitation. The
answer, therefore, given at b, in the following example, to the subject at a, is, as Pietro Aro, justly teaches, an answer in appearance only, and none at all in reality.

a. Subject, in the Hexachord of C.  

\[ \text{\textit{Ex:}} \]  

\[ \text{\textit{B. Pretended Answer, in the Hexachord of G.}} \]

\[ \text{\textit{Answer in Hexachord of F.}} \]

\[ \text{\textit{CANTUS}} \]

\[ \text{\textit{Subject in Hexachord of C.}} \]

\[ \text{\textit{ALTUS}} \]

\[ \text{\textit{Answer in Hexachord of F.}} \]

\[ \text{\textit{BASSUS}} \]

subject begins on the second degree of the scale —by no means an unusual arrangement in the Thirteenth and Fourteenth Modes—the customary reference to the Tonic and Dominant would not only have failed to throw any light upon the question, but would even have tended to obscure it, by suggesting D as a not impossible response to the initial G.

It would be easy to multiply examples: but we trust enough has been said to prove that those who would rightly understand the magnificent Real Fugues of Palestrina and Anerio, will not waste the time they devote to the study of Guido’s Hexachords. To us, familiar with a clearer system, their machinery may seem unnecessarily cumbrous. We may wonder, that, with the Octave within his reach, the great Benedictine should have gone so far out of the way, in his search for the means of passing from one group of sounds to another. But, we must remember that he was patiently groping in the dark, for an as yet undiscovered truth. We look down upon his Hexachords from the perfection of the Octave. He looked up to them from the shortcomings of the Tetrachord. In order fully to appreciate the value of his contribution to musical science, we must try to imagine ourselves in his place. Whatever may be the defects of his system, it is immeasurably superior to any that preceded it: and, so long as the Modes continued in general use, it fulfilled its purpose perfectly.

HEYTHE or HEATHER, WILLIAM, Mus. Doc., born at Harmondsworth, Middlesex, was a lay vicar of Westminster Abbey, and on March 27, 1615, sworn a gentleman of the Chapel Royal. He was the intimate friend of Camden; they occupied the same house in Westminster, and when, in 1609, Camden was attacked by a pestilential disease, he retired to Heyther’s house at Chislehurst to be cured, and there he died in 1635, having appointed Heyther his executor. When Camden founded the history lecture at Oxford in 1622, he made his friend Heyther the bearer to the University of the deed of endowment. The University on that occasion complimented Heyther by creating him Doctor of Music, May 18, 1622. (As to the improbable story of Gibbons having composed his exercise for him, see Gibbons, Orlando.) In 1626—7 Heyther founded the music lecture at Oxford, and endowed it with £17 6s. 8d. per ann. The deed bears date Feb. 2, of 1 Charles I. Richard Nicholson, Mus. Bac., organist of Magdalen College, was the first professor. Dr. Heyther died in July 1627, and was buried Aug. 1 in the south aisle of the choir of Westminster Abbey. He gave £100 to St. Margaret’s Hospital in Tothill Fields, commonly known as the Green Coat School. There is a portrait of him in his doctor’s robes in the Music School, Oxford, which is engraved by Hawkins (chap. 130). [W. H. H.]

HIDDEN FIFTHS AND OCTAVES (Lat. Quinta cooperta, seu abacandida; Germ. Verdeckte Quinten). Hidden Fifths, or Octaves, are held to be produced, whenever two parts proceed, in similar motion, towards a single Fifth, or Octave, to which one of them at least progresses by a leap, as in the following example:

\[ \text{\textit{Ex:}} \]

Progressions such as these are prohibited, because, were the leaps filled up by the intervals of the Diatonic Scale, the hidden ‘consecutives’ [see Consecutive] would at once be converted into real ones, thus:

\[ \text{\textit{Ex:}} \]

It may be urged, that, as the leaps are not intended to be filled up, the forbidden sequence...
is not formed, and there remains, therefore, nothing to be condemned.

The answer to this objection is twofold. In the first place, the impression left on the ear by Hidden Fifths or Octaves is sometimes almost as strongly produced as that produced by real ones; the ear itself possessing the faculty of filling up the leaps, in imagination, when tempted to do so by the nature of the progression submitted to it. Secondly, in unaccompanied vocal music—to which the prohibition most particularly refers—the least tendency on the part of an incautious singer to bridge over the leap by means of a portamento would instantly produce the effect indicated in the above example.

Nevertheless, the law against Hidden Fifths and Octaves is not an inelastic one. It is true, that, in two-part counterpoint, they are as sternly condemned as the most glaring sequence of real Fifths. Even in three parts their presence is scarcely tolerated. But, in four or more parts, they are only to be reprobated under certain conditions. For instance, between the extreme parts there should only be used as a means of escape from some serious difficulty. Between one extreme and one mean part they are considered less objectionable. Between two mean parts there is little to be said against them; and, when one of the parts concerned in their formation moves a semitone, they are freely permitted, even between treble and bass. Bearing these rules in mind, the student can scarcely go very far wrong; and, should he find any difficulty in detecting the faulty progressions, it may be removed by a reference to the old law, which enacts that 'A Perfect Concord may not be approached in similar motion.'

The great masters of the 16th century were far more lenient towards Hidden Fifths and Octaves than many modern theorists. In the works of Palestrina and his contemporaries, examples, even between extreme parts, may be found on almost every page. These composers also delighted in hiding Fifths and Octaves in another and a singularly beautiful way. It is of course understood that such progressions are only forbidden when they occur between the same two parts. When formed between different voices, by means of crossing the parts, they are perfectly lawful; as in the following combinations from Palestrina's 'Missa Papæ Marcelli' and 'Missa Breviss'—

The effect of such passages as these, when sung without accompaniment, is perfectly pure and beautiful; but when arranged for keyed instruments, where the motion of the parts cannot

---

be distinguished, they become simply intolerable. In this form they degenerate into sequences of

the most vulgar character; but this is not the form in which Palestrina intended them to be heard.

[W.S.R.]

HIGHLAND FLING. A step in dancing, peculiar to the Scotch Highlands. The name is commonly transferred to the dance itself. The term 'fling' expresses the kicking gesture which characterizes it. When a horse kicks by merely raising one leg and striking with it, he is said, in grooms' parlance, to 'fling like a cow.' The performer dances on each leg alternately, and flings the other leg in front and behind. The Highland Fling, in which three, four, or more persons may take part, is danced to the music of the Strathspey. The following is a specimen:—

Marquis of Huntly's Highland Fling.

Allegro.

[Hill, W., & Son are organ builders in London. The house was founded by John Snetzler about 1755, who was succeeded in 1780 by his foreman, Ohrmann. [SNETZLER.] The latter had a partner, W. Nutt, in 1790, who was afterwards joined by Thomas Elliott about 1803. After Elliott had done business for some time alone, he took as partner, in 1835, William Hill, a Lincolnshire man, who had married his daughter, and died in 1834; Hill remaining alone until 1837, when he was joined by Frederic Davison. After 1838 Davison left to become a partner of John Gray, and the firm became W. Hill & Son. [GRAY & DAVISON.] Hill died Dec, 18, 1870. He deserves the gratitude of English organists for having, in conjunction with Gauntlett, introduced the CC compass into this country.

---

[Gr. 3.12]
Elliott & Hill built the present organ in York Minster, since which the Hills have built, amongst many others, the organs of Ely, Worcester, and Manchester Cathedrals, Birmingham Town Hall, St. Peter's, Cornhill, and All Saints', Margate St., London, Melbourne Town Hall, etc. [IV. de P.]

HILLER, Dr. Ferdinand, one of the most eminent of living German musicians, distinguished alike as composer, conductor, pianist, and writer, born of Jewish parents at Frankfort on the Main, Oct. 24, 1811. His first music-lessons were from a violinist named Hoffmann, who did little beyond allowing him to form his taste by playing the sonatas of Mozart and Beethoven. Instruction on the pianoforte he received from Aloys Schmidt, and in harmony and counterpoint from Vollweiler. At 10 he played a concerto of Mozart's in public, and at 12 began to compose. Though educated for a learned profession, he was allowed to take up the study of music in earnest; and in 1825 was placed with Hummel at Weimar. Here for a time his attention was absorbed by composition, for Hummel, recognising his obvious bent, allowed him to take his views at his own sweet will. Machaut's Simone, on his early compositions were severe and disheartening, but Hiller proved the reality of his artistic impulse by never allowing himself to be discouraged from further effort and deeper study, both in music and literature. In 1827 he accompanied Hummel on a professional tour to Vienna, and had the privilege of seeing Beethoven on his death-bed and of witnessing the dissipation of the cloud which had once interrupted his intercourse with Hummel. Of this meeting he has given an interesting account from memory in his 'Aus dem Tonleben' (2nd series). While in Vienna he published his op. 1, a pianoforte quartet written in Weimar. He then returned to Frankfort, but stayed there only a short time, in spite of his advantageous intercourse with Schelble, as he was anxious to push on to Paris, at that time the head-quarters of music and everything else. His stay in Paris lasted from 1828 to 35, with one break caused by the death of his father. He acted for a time as professor in Choron's 'Institution de Musique,' but afterwards lived independently, perfecting himself as a pianist and composer, and enjoying the best society. There is scarcely a well-known man of that period, particularly among musicians, with whom Hiller was not on good terms. Besides Mendelssohn, whom he met as a boy at Frankfort and with whom he remained in the closest friendship to a late date, he was intimate with Cherubini, Rossini, Chopin, Liszt, Meyerbeer, Berlioz, Nourrit, Heine, and many others. Fétis, in his Biographie Universelle, gives further particulars of this stay in Paris, and especially of Hiller's concerts, in which Fétis took part. Sufficient it is to say here that his performances of Bach and Beethoven had an important share in making the works of those great masters better known in France. He was the first to play Beethoven's Eb Concerto in Paris; and his classical soirées, given in company with Baillot, excited much attention at the time. From Paris he returned to Frankfort, conducted the Cysilien-Verein in 1836 and 37 during Schelble's illness, and then passed on to Milan, where he again met Liszt and Rossini. Rossini furnished him with the libretto of 'Hililda,' which he set to music, and which, through the intervention of Rossini, was produced at the Scala in 1839, but without success. Here also he began his oratorio 'Die Zerstörung Jerusalems,' perhaps his most important work, and one that interested Mendelssohn so much that he induced Hiller to pass the winter of 1839 in Leipsic, personally superintending its production (April 2, 1840), which was most successful, and was followed by performances at Frankfort, Berlin, Dresden, Vienna, Amsterdam, and elsewhere. On his second journey to Italy in 1841, he went to Rome, and studied old Italian Church music under the guidance of Baini, of whom he has recorded his recollections ('Tonleben,' II. 101). On his return to Germany he lived successively in Frankfort, Leipsic (conducting the Gewandhaus Concerts of 1843-4), and Dresden. Here he produced two more operas, 'Traum in der Christnacht,' and 'Comradin.' During this time he lived on intimate terms with Spohr, Mendelssohn, the Schumanns, David, Hauptmann, Joschim, and many more illustrious artists. A lasting memorial of this period is preserved in the dedication of Schumann's P. F. Concerto to him—'freundschaltlich zugesignet.' In 1847 he became municipal capellmeister at Düsseldorf, and in 1850 accepted a similar post at Cologne, where he organised the Conservatorium, and became its first director. This post he still (1879) retains, and, in his various capacities of composer, conductor, teacher, and littérateur, has exercised an important influence on music in the Rheinish Provinces. He gave such an impetus to the musical society of which he was conductor, that its concerts have been long considered among the best in Germany. The Lower Rhine Festivals, which he conducted from 1850 as often as they were held at Cologne, have however chiefly contributed to gain him his high reputation as a conductor. As a teacher his career is closely connected with the history of the Cologne Conservatorium. Among his numerous pupils there, the best-known is Max Bruch. He has occasionally left Cologne to make concert-tours in Germany, or longer excursions abroad. He conducted the Italian opera in Paris for a time (1852-53), and visited Vienna and St. Petersburg, where in 1870 he conducted a series of concerts by the Russian Musical Society. England he has visited several times, particularly in 1871, when his cantata 'Nala und Damajanti' was performed at the Birmingham Festival, and in 1872, when he was enthusiastically received both as a pianist and conductor of his own works at the Monday Popular and Crystal Palace Concerts, and also in Liverpool and Manchester.

Hiller's published works (to Feb. 1879) number 183. They include, Chamber music—5 P. F. quartets; 5 trios; 5 string quartets; Sonatas for P. F. alone, and with violin and cello; a suite in 3 B
Canone' for P. F. and violin; Serenade for P. F. and cello; 'Moderne Suite' for P. F.; and a mass of other pianoforte compositions, including 24 Etudes, 'rhythmische Studien,' Impromptu 'zur Gitarre,' operettas without words, etc. etc. Orchestral works—4 overtures, including that to 'Demetrius'; a Festival March for the opening of the Albert Hall; 3 symphonies, including that with the motto 'Es muss doch Frühling werden'; etc. etc. Vocal compositions—2 oratorios, 'Die Zerstörung Jerusalem's' and 'Saul'; 5 operas, including 'Die Katakomben,' 'Der Daseinwerter,' and many smaller works; Lieder; choruses, mixed and for men's voices only; motets, psalms, etc.: a number of cantatas for solo, chorus, and orchestra, especially 'O weint um Sie' from Byron's Hebrew Melodies, op. 49, 'Ver sacrum,' op. 75; 'Nala und Damajani,' written for Birmingham; 'Israelis Siegesgesang,' op. 151; and his 'Prometheus,' op. 175, and 'Rebeca,' op. 182.

His literary works include a crowd of interesting articles, biographical, critical, and miscellaneous, contributed to the 'Kölische Zeitung,' many of them reprinted under the title 'Aus dem Tonleben unserer Zeit,' 2 volumes in 1867, with a 'Neue Folge' in 1871, and a 4th vol. 'Persönliches und Musikalisches' in 1876. He has also published his recollections of Mendelssohn—which appeared in Macmillan's Magazine, and were reprinted separately with a dedication to Queen Victoria—and a very interesting paper on Cherubini, first printed in the same periodical. He has recently edited a volume of letters by Hauptmann to Spohr and other well-known musicians. To complete the list, we may add—additional accompaniments for Handel's 'Deborah' (for the Lower Rhine Festival 1834), and 'Theodora'; and an instruction book 'Übungen zum Studium der Harmonie und des Kontrapunkt's' (2nd ed. 1860).

Hiller occupies in some respect the same position which Spohr held before his death, as the 'Altsmeister,' the representative of the old classical school. His pleasant genial personality, and his great intelligence and wide range of knowledge, make him welcome wherever he goes. In England he has many friends, who are always glad to see him, and hear his delicate legato style of playing, soon, alas, to be numbered with the things of the past.

Being throughout his life in easy circumstances, he has been always able to indulge his taste for a variety of intellectual interests, to the neglect perhaps of that concentration of the whole powers which is necessary to stamp any mental production as a work of genius. But the advantages of such an education were not lost upon him. He gained from it a general ease and flexibility of mind, and a refined taste for all that is intellectual. These are the qualities which, combined with his avoidance of all mere dilettantism, and his grasp of that which is sternly grave, and essential, have enabled him to accomplish something of value in each department he has touched. It is not easy to point out the special characteristics of his work, as it possesses few of those prominent traits which catch the eye at once. Although he has been constantly attracted by the classical period, his talent is essentially modern, as his elegant and well-chosen melody, his piquant rhythm, and his interesting harmony, never trivial, sufficiently prove. Humorous and graceful, rather than profound, his mode of expression is always elevated, pleasing, and clever, and with a delicate polish of each separate part which is very characteristic. Facility of invention, and mastery of the technicalities of composition may have sometimes supplied the place of true creative instinct, but give him a really important theme, and he produces music that will undoubtedly live. His 'Destruktion of Jerusalem,' his Spring Symphony in E minor (already mentioned), his Piano-Concerto in F minor, and more than one of his pianoforte works, are surely destined to survive. All his writings, both in music and literature, show real talent and thought, a genuine artistic turn of mind, and often a very happy mode of expression. He forms one of that circle of musicians, a few of whom are still living, who have made it the object of their lives to extend the knowledge of classical music. At a time when Italian opera, and a brilliant and important though somewhat barren devotion to mere execution, exercised an undue influence on the minds of musicians, these men upheld the standard of serious and solid music, and it is largely owing to their indefatigable exertions that Bach's deep thought and Beethoven's passionate energy are appreciated as they now are. Brought up and living to old age in this classical atmosphere, a friend of Mendelssohn and Schumann, and thinking with them on these subjects, Hiller has naturally but little sympathy with the so-called new German school. He has never concealed his sentiments on this point, but may we confidently say that he has never expressed them in a manner unworthy of him as a man or an artist.

HILLER, JOHANN ADAM, whose real name was HÜLLER, born Dec. 25, 1728 (4 years before Joseph Haydn), at Wendisch-Ossig near Gorlitz in Prussia, the son of a school-master and parish-clerk. He lost his father when barely six, and had a hard struggle to obtain his education. He possessed a fine treble voice, and had already acquired considerable facility on various instruments, and he quickly turned these talents to account. He passed from the Gymnasium at Gorlitz to the Kreuzschule at Dresden, where he studied the harpsichord and thorough-bass under Homilius. It was however the operas and sacred compositions of Hasse and Graun which exercised the most lasting influence upon him. Hasse's operas, of which he had the opportunity of hearing excellent performances, had a special attraction for him, and he copied the scores of several. In 1751 he went to the University of Leipsic, where, besides his legal studies, he devoted much attention to music, 'partly from choice, partly from necessity,' as he himself relates. He took part in the so-called 'Grosses Concert' both as flutist and singer, and began to
HILLER.

make his way as a composer and author. In 1754 he entered the household of Count Brühl, the Saxon minister, as tutor, and in this capacity accompanied his pupil to Leipzig in 1755. A hypochondriacal tendency, which overshadowed his whole life, caused him not only to resign this appointment, but also to refuse the offer of a Professorship at St. Petersburg. Henceforward he lived independently at Leipzig, engaged in literature and music, and actively employed in promoting the public concerts; and it is largely owing to his exertions that they afterwards reached so high a pitch of excellence. He was appointed director in 1763, and immediately took steps to improve the choruses. In 1771 he founded a school for the cultivation of singing, which he supported by giving performances of the oratorios of Handel, Graun, etc. As paid director of a society for the practice of music, he established 'Concerts Spirituels' (so called after the Paris concerts of that name), which took the place left vacant by the failure of the old 'Grosses Concert.' In 1781 this 'Concert-Institut' moved into the newly-built hall of the 'Gewandhaus,' and thus originated the 'Gewandhaus-Concerts' of world-wide celebrity. Not content with this he composed for the then flourishing theatre at Leipzig, a series of 'Singspiele,' which are sufficient of themselves to perpetuate his name in the history of music. Though doubtless an adaptation of the French opéraetta, Hiller established the German 'Singspiel' as a separate branch of art. He took for his basis the simple 'Lied,' a form which brought it within the capacities of the company, who were by no means trained singers; but within these narrow limits he developed a variety of invention and expression, a delicacy and precision of character, which at once secured universal approval, and have sufficed to maintain this class of piece to the present day. He enlarged both the form and substance of the 'Lied' proper, by departing from the simple strophe, and giving to the songs a specific dramatic colouring in accordance with the character. He also introduced 'morceaux d'ensemble' and trances not wanting of the beginnings even of the dramatic 'scena.' Of these 'Singspiele' Hiller composed 14, each containing 30 numbers of this 'lied'-like character. The best known are 'Lisvart und Dariolette,' 'Lottchen am Hof,' 'Liebe auf dem Lande,' 'Dorfbarbier,' and especially 'Die Jagd,' which has kept the stage for more than a century, and is even still performed. He also wrote a quantity of sacred songs and 'Lieder,' which had their share in bringing to perfection this style of composition—so significant a contrast to the Italian 'aria.' Having been induced to accompany his pupils, the two Fräulein Podleska, to the court of the Duke of Courland at Mittau, Hiller made so favourable an impression, that on his departure he was appointed court-chapelmaster, with a salary. In 1786 his many services to the cause of music were compensated by the appointment as Cantor and musical director to the Thomas-schule in Leipzig. This post he held till 1801, and his death took place in 1804, after much trouble from the old hypochondria. As composer, conductor, teacher, and author, Hiller's industry was indefatigable. His instrumental compositions are now quite antiquated, but not so his vocal works. These consist chiefly of motets and the 'Singspiele' already named; but the following must not be omitted:—'Choralmelodien zu Gellert's geistlichen Oden und Liedern' (1761); 'Weisse's Lieder für Kinder' (1759); '50 geistliche Lieder für Kinder' (1774); and 'Vierstimmmige Chor-arien' (1774). Of his larger works may be cited, a 'Passions-cantata,' and a 100th Psalm, both much prized by his contemporaries. Hiller also composed a 'Choral-buch' (1793), with two appendices (1794 and 1797), largely used in his day, though since widely condemned. It should be remembered that he lived in a time of general softness and relaxation, when all music took its tone from Italian opera. Haase and Graun were the models of his taste, whom he revered all his life. But he was by no means insensible to the influence of the great renovation of music originated by Haydn and Mozart, and was powerfully impressed by Handel, while for Bach and Gluck he entertained the outward respect, with no real sympathy. He had deeply imbued the spirit of that insipid and shallow age, which being entirely without feeling for historical propriety, permitted arbitrary changes in the treatment of older works, which to our day of historical enlightenment seem as astounding as they are impertinent. This is very remarkable in Hiller's careful editions of classical works. Thus he introduced many alterations of his own into a German edition of Handel's 'Jubilate,' under the title of the 100th Psalm; and arranged Pergolesi's two-part 'Stabat Mater' for a four-part choir. He also edited Haase's 'Pilgriime auf Golgatha,' Graun's 'Tod Jesu,' and Haydn's 'Stabat Mater' with German words, and in an abridged form for pianoforte. Still much praise is due to him for his frequent performances of oratorios, chiefly those of Handel. The 'Messiah' especially was given at Berlin, Breslau, Leipzig, and elsewhere with much éclat as at the great festivals. As an author Hiller was painstaking and prolific. Besides several single articles in periodicals he edited a weekly paper, 'Wöchentliche Nachrichten und Anmerkungen die Musik betreffend' (1766-1770). He had always given great attention to the cultivation of singing, and two instruction books of that kind—'Anweisung zum musikalisch-richtigen Gesange' (1774), and 'Anweisung zum musikalisch zierlichen Gesange' (1780), are among the most valuable of his works. He also published a good method for violin. He edited 'Lebensbeschreibungen berühmter Musikgelehrten und Tonkünstler' (1 vol. 1784), with his autobiography. Two of his collections also deserve mention—'Musikalische Zeitvertreib' (1760), of German and Italian airs, duets, etc., and 'Vierstimmmige Motetten,' etc. (6 vols. 1804-91), containing motets by many celebrated composers—a work of real value. His grateful pupils, the
sisters Podleska, erected in 1832 a small monu-
ment to his memory on the Promenade at Leipsic,
before the windows of his official residence at the
Thomas School, and close to Mundelschain's Bach
memorial. [A.M.]

HILTON, JOHN, Mus. Bac., first appears as a
composer in 'The Triumphs of Orion,' 1601,
to which he contributed the 5-part madrigal,
'Faire Oriana, beautie's queene.' He graduated
at Cambridge in 1626. In 1627 he published
'Ayres, or Fa las for three voyces,' dedicated
'To the worshipful William Heather, Doctor of
Musicke,' reprinted in score by the Musical
Antiquarian Society. In 1638 Hilton was elected
organist and parish clerk of St. Margaret's West-
minster. It is presumed that he was deprived of
the first-named appointment when the organ
was taken down pursuant to the Parliamentary
ordinances of 1644, but that he continued to hold
the latter. In 1652 he published the collection
called 'Catch that Catch can, or, A Choice Collec-
tion of Catches Rounds and Canons for 3 or 4
voyces.' He was buried at S. Margaret's, West-
minster, March 21, 1657. Hawkins' statement
that he lies in the Abbey Cloisters, and that an
anthem was sung in the Abbey before his body
was brought out of his house for interment can
therefore at best be only partially true. Besides
the above-named compositions Hilton produced
a Service in G minor, printed in Rimbault's Catho-
edral Music, a second Service in the same key,
and some anthems which remain in MS. 'Lord,
for Thy tender mercies,' usually given to Farrant,
has been attributed to Hilton. The copies in
which it is so attributed have a few additional
bars on the word 'Amen,' which may possibly be
of Hilton's composition. (See Harl. MS. 7340.)
Several songs, dialogues, catches, canons and
rounds by him are contained in a volume in the
British Museum (Add. MS. 11,608). An Elegy
on William Lawes composed by Hilton for 3
voices is printed in Henry and William Lawes'
'Choice Psalms,' 1648. His portrait is in the
Music School, Oxford, and is engraved by Hawks-
kirk (chap. 121).

[H.W.H.]

HIMMEL, FRIEDRICH HEINRICH, a man of
some mark in his day, born Nov. 20, 1765, at
Treuenbrietzen, Brandenburg. He was intended
for the Church, and studied theology at Halle;
but the excellence of his pianoforte playing ind-
duced the king, Frederic William II, to have
him educated as a musician. After three years
harmony and counterpoint under Naumann at
Dresden, he took to Berlin 'Isacco,' an oratorio,
performed (1792) by the court-chapel with brilli-
ant success, and a cantata 'La Danza.' The
king gave him 100 Friedricks for his oratorio,
made him his chamber-composer, and sent him
to Italy for two years. While there he produced
'Il primo Navigatore' at the Fenice in Venice
(1794), and 'Semiramide' at San Carlo in Naples
(Jan. 1795). Himmels' having been dismissed
from the Court-Capellmeistership at Berlin, the
king gave the appointment to Himmel, who
thereupon returned at once. When in office he
composed several pieces de circonstance, such as

a Trauer-cantata for the funeral of king Frederic
William in 1797, and a Te Deum for the corona-
tion of his successor. In 1798 he visited Stock-
holm and St. Petersburgh, where the Emperor
commissioned him to write 'Alessandro,' an opera
for which he received 6000 roubles. In 1801 he
produced 'Vasco di Gama' at Copenhagen, pro-
ceeded thence to France, England—where he
made only a short stay of which he knew no
particulars—and Vienna, returning to Berlin in
December 1802. After the battle of Jena he
retired first to Pyrmont, and then to Cassel, and
died of dropy at Berlin, June 8, 1814. Besides
the works already mentioned he composed—
'Der Kobold' ('1804'); 'Fanchon, das Lieermädchen'
('1805'), libretto by Kotzebue, his best opera;
'Les Sylphes' ('1807), all produced in Berlin: a
Vater Unser'; Psalms; a mass, etc.: P. F.
sonatas; dance music and concerted music for
P. E.; and a number of songs. The sonatas and
songs abound in melody, and are the work of a
sound musician, but though popular in their day,
they are now quite forgotten. Himmel had much
intercourse with Beethoven during the visit of the
latter to Berlin in 1796. If Beethoven had not
feeling his rule joks on his composition, Himmel
had certainly the better of the encounter in the
end. [See p. 1724]. For a song by him, 'Adac to
Alexia,' see 'Musical Library,' vol. i. A couple
more pieces are published by Novello. [M.C.C.]

HINDE, JOHN, Mus. Bac., born in West-
minster in 1761, was a lay vicar of Westminster
Abbey. He matriculated at Oxford in 1791.
He published 'A Collection of Songs for One
and Two Voices,' and 'A Set of Glee for 3
and 5 voices.' His favourite glee 'Queen of
the silver bow,' first appeared (with another)
in the 'Professional Collection.' He also com-
posed a well-known chant. He died in 1796.

[H.W.H.]

HINE, WILLIAM, born at Brightwell, Oxford-
shire, in 1687, became a chorister of Magdalcn
College, Oxford, in 1694, and continued so until
1705, when he was appointed a clerk. He was
removed from his place in the same year, when
he came to London and studied under Jeremiah
Clark. In 1713 he succeeded Stephen Jefferys
as organist of Gloucester Cathedral, and shortly
afterwards married Alicia, daughter of Abraham
Rudhall of Gloucester, the famous bell founder.
Hine died Aug. 28, 1730. His wife survived him
until June 28, 1735. Both were interred in the
eastern ambulatory of the cloisters, where a
mural tablet to their memory informs us that the
Dean and Chapter had voluntarily increased
Hine's stipend in consideration of his deserts. Dr.
Philip Hayes presented a portrait of Hine (his
father's instructor) to the Music School, Oxford.
After Hine's death his widow published, by sub-
scription, 'Harmonia Sacra Gloucestriensis; or,
Select Anthems for 1, 3 and 3 voices, and a Te
Deum and Jubilate, together with a Voluntary
for the Organ.' The Te Deum is by Henry Hall,
and the other compositions by Hine. The volun-
tary furnishes a curious example of the style of
organ playing then in vogue.

[H.W.H.]
HINGSTON, JOHN, was one of the musicians to Charles I, and afterwards entered the service of Oliver Cromwell, whose daughters he instructed in music. When the organ of Magdalen College was removed from Oxford to Hampton Court, about 1654, Hingston was appointed organist to the Protector at a salary of £100 per annum, and with two boys, his pupils, was accustomed to sing Dering's Latin motets to Cromwell, who greatly delighted in them. He had concerts at his house, at which Cromwell was often present. Hingston has been said to have been Dr. Blow's master, but this is doubtful. He composed some Fancies. He was buried at St. Margaret's, Westminster, December 17, 1683. A portrait of him is in the Music School, Oxford. [W.H.H.]

HISTORIES OF MUSIC. [See Music, HISTORIES OF.]

HOBBS, JOHN WILLIAM, was born Aug. 1, 1799, at Henley-on-Thames, where his father was handmaster of a volunteer corps. He sang in public at the early age of three years, and at five was admitted a chorister of Canterbury Cathedral, of which his father was a lay vicar. The beauty of his voice attracting the attention of Goss, the alto singer and singing master, young Hobbs was articulated to him. He appeared as principal singer at a Musical Festival at Norwich in 1813. On arriving at manhood his voice had developed into a tenor of limited compass, but of remarkable purity and sweetness. He became a member of the choirs of King's, Trinity and St. John's, Cambridge, and afterwards of that of St. George's Chapel, Windsor, of which his father was already a member. In 1827 he was appointed a gentleman of the Chapel Royal, and in 1836 a lay vicar of Westminster Abbey. Hobbs long held a prominent position as a concert-singer. His singing was distinguished by taste, refinement, and expression. He was the inventor of a very large number of songs, several of which gained prizes from the Melodist's Club, and many were highly popular, especially 'When Delia sleeps.' 'My ancestors were Englishmen,' and 'The captive Greek girl.' He died at Croydon, Jan. 12, 1877. [W.H.H.]

HOBRECHT. [See OBERCHT.]

HOCKET. A term which occurs in old English writers on music, beginning with De Handlo (1316), for passages which were truncated or mangled, or a combination of notes and pauses. The term puzzles Sir John Hawkins (Hist. chap. 53), but the late Mr. Charley used ingeniously to explain it as a corruption of hocquet, a hiccup, and signifying a syncopation. [See OCHETTO.] [G.-]

HODGES, EDWARD, Mus. Doc., born July 20, 1796, at Bristol, was organist of Clifton Church, and afterwards of the churches of St. James and St. Nicholas, Bristol. He produced a Morning and Evening Service and two Anthems on the reopening of St. James's organ, May 2, 1824, and published them in 1825. He obtained his doctor's degree at Cambridge in 1825. He was a contributor to 'The Quarterly Musical Magazine,' and 'The Musical World.' In 1838 he quitted England for America, and in the next year became organist of St. John's Episcopal Chapel, New York. He published 'An Essay on the Cultivation of Church Music' at New York in 1841. On the opening of Trinity Church, New York, May 21, 1846 (the organ in which had been built from his specifications), Dr. Hodges quitted St. John's to become its organist. He composed church music, some published in New York, and others in London. During his long residence in America he was much esteemed for his performance on the organ. Dr. Hodges returned to England in 1863, and died at Clifton, Sept. 1, 1867. His daughter, Miss Faustina Hase Hodges, formerly organist in the Chapel, and now (1878) organist of two churches in Philadelphia, has composed some songs and instrumental pieces. —His son, Rev. JOHN SEBASTIAN BACH HODGES, D.D., Rector of St. Paul's Church, Baltimore, is an excellent organist. [W.H.H.]

HOFFMANN, ERNST THEODOR WILHELM, a man of genius, and an extraordinarily clever and eccentric musician and litterateur, who though a voluminous composer will not live by his compositions so much as by some other productions of his pen. He was born at Königsberg Jan. 24, 1776; learned music and law at the same time, and bid fair to rise in the official world; but an irrepressible love of caricaturing put an end to such solid prospects and drove him to music as his main pursuit. His first musical appointment was to the theatre at Bamberg in 1809, but it was a post without salary, on which he starved. It fortunately urged him to writing a set of papers in the character of 'Johannes Kreisler, the Kapellmeister' for the 'Allgemeine musikalische Zeitung' of Leipzig. They appeared at intervals from Sept. 26, 1810, and onwards, and in 1814 Hoffmann republished them with other essays in the same vein in two volumes as 'Fantasiestücke in Callot's Manier,' with a preface by Jean Paul, in whose style they are couched. Among the most interesting, and at the same time most practically valuable, are the essay on Beethoven's instrumental music —far in advance of the day—another on Gluck, and a third on Don Giovanni. The essays, which have often been reprinted, are all more or less humorous, some extremely so. They were followed by the 'Elfiere des Teufels,' a novel (1815); 'Nachtstücke' (1817), 'Serapionsbrüder' (4 vols. 1819-21); and by the 'Lebensansichten des Kater Murr,' etc., or 'Views of life of Murr the tomcat, with fragments of the biography of Johann Kreisler, the Kapellmeister, from loose and spotted sheets.' Schumann's admiration of these pieces may be inferred from his imitations of them in his Florestan and Eusebius, and his adoption of their nomenclature in the titles of his music. After the fall of Napoleon, Hoffmann again obtained official employment at Berlin, which he discharged with efficiency, and kept till his death at a Silesian bath on June 25, 1822, of gradual paralysis, after much suffering for four months. He was fantastic and odd in the greatest degree, much given to liquor and strange company, over which 'he wasted faculties
Hoffmann's devotion to Mozart led him to add Amadeus to his Christian names. Weber knew and loved him, and he died keenly regretted by many friends. Carlyle has translated his 'Goldene Topf' in 'German Romance' (vol. ii.), and gives a sketch of his life, which is also in the 'Miscellanies' (vol. iii.). His life by Rochlitz is in 'Für Freunde d. Tonkunst,' vol. i., and Hitzig's 'Aus Hoffmann's Leben,' etc. (Berlin, 1833), contains an estimate of him as a musician by A. B. Marx. [F.G.]

Hoffmann, Gerhard, architect, born at Rosenburg, Nov. 11, 1690; composed sacred cantatas, and church music; is credited by Walther with certain improvements in musical instruments—an additional key to the horizontal flute, making it easier to tune (1727); an additional key to the oboe, by which the G in both octaves was given much more correctly; a mechanical arrangement by which the whole four strings of the violin could be altered at once (a different pitch was then in use for secular and sacred music); a new temperament for tuning instruments (1728); and for the organ (1733); and a gauge for the strings of violins, bass-violin, guitar, and other stringed instruments. [M.C.C.]

Hoffmann, Henrich August, surnamed 'von Fallersleben' from his birthplace in Hanover, April 2, 1708, philologist, poet, and German hymn writer; was educated at Helmstedt, Brunswick, and (under Grimm) at the University of Göttingen (1816). In 1819 he removed to Bonn, and in 1821, after studying Dutch literature in Holland, was appointed Professor at Breslau. His political views caused his dismissal in 1843, and he was not allowed to return to Prussia till 1848. Finally he became librarian to Prince Lippé at Corvey in Westphalia, and there died Jan. 19, 1874. His 'Geschichte des Deutschen Kirchenleides' (1st ed. 1832, and 1854; Rumpler, Hanover) is written in a thoroughly scientific spirit, and contains important discoveries. He edited 'Schlesische Volkssäule mit Melodien' and 'Gesellschaftsalieder des 16 und 17 Jahrhunderts.' His original melodies, and above all his poems for children, are widely and deservedly popular. [F.G.]

Hoffmeister, Franz Anton, born at Rothenburg on the Neckar, 1754; studied law at Vienna, began his musical life as a Church-Capellmeister, and in 1784 opened a book, art, and music business there. This he threw up in 1798 with the intention of going to London. He however got no farther than Leipzig, remained there, and in Dec. 1800, in conjunction with Kuhn, founded the well-known 'Bureau de Musique,' which still flourishes more than ever. [Peters.] On Jan. 2, 1805, he again relinquished his business, returned to Vienna, devoted himself to composition, and died Feb. 10, 1812. Hoffmeister was an extraordinarily prolific writer; he left 350 pieces of all dimensions for the Flute alone; 120 for Strings; Symphonies and Nocturnes for full orchestra; pieces for wind band and for clavier; songs; church music; and a large list of operas—all light and pleasing, and much relished by dilettanti. The early publications of his Firm were very coarsely engraved, as for instance Haydn's overture in D and quartet in D minor (known as op. 8), also Mozart's F.F. quartet in G minor and Eb—which promised to be the beginning of a long series, but on Hoffmeister's allegation that they were too obscure for the public, Mozart cancelled the contract, though applying to Hoffmeister when in want of money shortly afterwards. The nature of Beethoven's relations with him is shown by his letters of 1800 and 1801, in which he offers his op. 19, 20, 21, 22, to his 'geliebtesten Herrn Bruder.' [C.F.P.]

Hogarth, George, born 1753, was educated for the legal profession, which he practised in Edinburgh. He studied music as an amateur, and became a violoncellist and composer. In 1815 he was joint secretary with George Farquhar Graham of the first Edinburgh Musical Festival. From 1830 he was a contributor to 'The Harmonicon.' About 1834 he settled in London, and became sub-editor and music critic of 'The Morning Chronicle.' In 1835 he published 'Musical History, Biography and Criticism' in 1 vol., enlarged in 1838 to 2 vols. In the latter year he also published 'Memoirs of the Musical Drama,' 2 vols., subsequently republished as 'Memoirs of the Opera.' Upon the establishment of 'The Daily News' in 1846, Hogarth was appointed its music critic, and held that post until 1866. In Nov. 1850 he became secretary to The Philharmonic Society, and in 1852 published 'The Philharmonic Society of London from its foundation, 1813, to its fiftieth year, 1862.' He died Feb. 12, 1870. Hogarth's compositions consist of a few songs and glee. His eldest daughter, Catherine, was married at St. Luke's, Chelsea, April 2, 1836, to Charles Dickens, who is recorded in the parish register as Charles John Huffam Dickens. [W.H.H.]

Holborne, Antony and William. There was published in 1597 a work bearing the title of 'The Githarn Schoole, by Antony Holborne. Gentleman, and servant to her most excellent Maiestie. Hereunto are added six short Arts Neapolitan like to three voyces, without the la-
HOLDER, Rev. William, D.D., born in Nottinghamshire about 1614, and educated at Pembroke Hall, Cambridge, became, in 1642, Rector of Bichlondon, Oxon. He took the degree of Doctor of Divinity in 1650. He was afterwards appointed Canon of Ely and Canon of St. Paul's. On Sept. 2, 1674, he was sworn Sub-dean of the Chapel Royal, which office he resigned before Christmas 1659, and he was also Sub-almoner to the King. He was author of 'A Treatise on the Natural Grounds and Principles of Harmony,' 1694; and 2nd edit. 1701, a very able work, written chiefly for the service of the gentlemen of the Chapel Royal. An Evening Service in C and two anthems by him are in the Tudway Collection (Harr. MSS. 7338 & 7339). Dr. Holder died at his residence in Amen Corner, Jan. 24, 1697. [W.H.H.]

HOLDICH, George Matdwell, established an organ factory in London in 1838. He is the builder of the organs of Lichfield Cathedral, St. Paul's, Brighton, and others. [v.d.E.P.]

HOLMES, Alfred, born in London, Nov. 9, 1837, son of Thomas Holmes, of Lincoln, a self-taught man, was at the age of 7 initiated by his father in the practice of violin playing. With no other instruction than that of his parent and Spohr's 'Violin School,' he soon became distinguished, and especially noted for the performance of duets with his younger brother, Henry. At a later period their father made them study the classic French school of Rode, Baillot, and Kreutzer. When about 10 years of age Alfred became principal soprano boy at the Oratory, then newly established in King William Street, Strand, in the building theretofore the Lowther Rooms, and now the Folly Theatre. On July 13, 1847, the two brothers made their first appearance in public at the Haymarket Theatre at the benefit of F. Webster, and played Auber's overture to 'Masaniello,' arranged as a violin duet. They did not again appear in public until 1853, in the summer of which year they played at a concert at the Beethoven Rooms, assisted by W. H. Webb, Patti, and Lindsay Sloper. In 1855 they made their first visit to the continent and went to Brussels, where they remained for several months performing with great success. In 1856 they visited Wiesbaden, Frankfort, Darmstadt, Leipzig, Mayence, and Cassel. In 1857 they went to Vienna; after that to Sweden, where they remained for two years, and then to Copenhagen in 1860 and Amsterdam in 1861, meeting everywhere with great success. In 1864 Alfred Holmes settled in Paris, where in 1866 he established a quartet party. In 1867 he made a tour in Belgium, Holland, Germany, and Russia. At St. Petersburg he produced his 'Jeanne d'Arc,' symphony with solos and chorus, which was performed for the first time in England at the Crystal Palace, Feb. 27, 1875. Returning to Paris he gave some fragments of a symphony called 'The Youth of Shaksper,' and an opera, 'Inez de Castro.' He afterwards produced two symphonies entitled 'Robin Hood' and 'The Siege of
Paris,' and composed two others under the names of 'Charles XII' and 'Romeo and Juliet.' He died, after a short illness, at Paris, March 4, 1876. Shortly after his death two overtures, 'The God' and 'The Muses,' his last works, were produced in London.

His brother Henry, born in London, Nov. 7, 1839, was, like him, instructed solely by his father. In his boyhood he was also a chorister at the Oratory. After quitting his brother in Paris in 1865 he proceeded to Copenhagen and thence to Stockholm, where he remained some time, but ultimately returned to England and settled in London, where he is highly esteemed as a solo violinist and quintet player. His principal compositions are four symphonies (No. I, in A, performed at the Crystal Palace Feb. 24, 1872), a concert overture, two quintets for stringed instruments, a violin concerto (in F, Crystal Palace Dec. 11, 1875), many violin solos, two sacred cantatas for solo voices, chorus and orchestra, entitled 'Praise ye the Lord,' and 'Christmas,' and numerous solo pieces.

HOLMES, Edward, born in 1767, schoolfellow and friend of Keats, was educated for the musical profession under V. Novello, and became a teacher of the pianoforte. He was engaged as music critic of 'The Atlas' newspaper. In 1827, before or during this engagement, he made a tour in Germany, the result of which was a volume entitled, 'A Ramble among the Musicians of Germany, etc.' 1828. This work was well received, and reached a third edition. In 1845 he published 'The Life of Mozart,' including his correspondence, in an 8vo volume, which justly attracted great attention. This book, which was the result of a second visit to Germany, and bears traces of great and conscientious labour, as well as of talent and judgment of no common order, is characterized by Otto Jahn as the most useful, complete, and trustworthy biography then in existence (Jahn's Mozart, 2nd ed. Vorwort, p. xvi). Jahn's own Life of the master contains a mass of materials which no one but a German residing on the spot could have collected, but Holmes's has greatly the advantage of it in compression and readability, and it is with pleasure that, as these sheets are passing through the press, we notice the publication of a new edition by Mr. Prout (Novello & Co., 1878). In addition to this, his great work, Holmes wrote a life of Purcell for the second issue of Novello's edition of his Sacred Music, an 'Analytical and Thematic Index of Mozart's P. F. works,' often reprinted by the same firm, analyses of several of Mozart's Masses, which were published in the 'Musical Times,' with many other papers on musical subjects. He married the granddaughter of S. Webbe, and died Aug. 28, 1859. (See Mus. Times, Oct. 1, 1859.)

HOLMES, George, organist to the Bishop of Durham, was appointed organist of Lincoln Cathedral on the death of Thomas Allinson in 1704. He composed several anthems, two of which—'Arise, shine, O daughter of Zion,' composed on the Union with Scotland, 1706, and 'I will love Thee, O Lord,—are to be found in the Tudway Collection (Harl. MS. 7341), and others are in the choir books of Lincoln. Holmes composed an Ode for St. Cecilia's day, but for what particular year is not stated; its contents however show it to have been written between 1703 and 1713. He died in 1720. Some catches by a George Holmes are contained in Hilton's 'Catch that Catch can,' 1652; their composer may possibly have been the father of the organist of Lincoln.

HOLMES, John, organist of Winchester Cathedral in the latter part of the 17th century, and organist of Salisbury Cathedral from 1602 to 1610, contributed to 'The Triumphes of Oriana,' 1601, the madrigal for five voices, 'Thus Bonny Boots the birthday celebrated.' Some church music of his composition is extant in MS. He was master to Adrian Batten and Edward Lowe. His son Thomas was sworn a gentleman of the Chapel Royal, Sept. 17, 1653. Some catches by him are contained in Hilton's 'Catch that Catch can,' 1652. He died at Salisbury, March 25, 1638.

HOLMES, William Henry, son of a musician, born at Sudbury, Derbyshire, Jan. 8, 1812, entered the Royal Academy of Music at its opening in 1822, and gained two of the first medals granted there for composition and the piano. In 1826 Mr. Holmes became Sub-professor and subsequently Professor of the Piano, and is now (1879) the father of the Academy. As a teacher he has been remarkably successful, and has trained some of the most eminent of English musicians; among them Sterndale Bennett, the two Macfarrens, J. W. Davison, and others. His knowledge of P. F. music is very great, and as a virtuoso he long enjoyed a high reputation. His first appearance at the Philharmonic was in Mendelssohn's Introduction and Rondo, March 24, 1851; and as late as 1876 he performed at the Alexandra Palace a concerto of his own, in A major, written for the Jubilee of the R. A. M. His compositions are numerous and of all classes—symphonies, concertos, sonatas, songs, and an opera—still in MS. Like his friend Cipriani Potter he was always ready to welcome new composers and new music, in proof of which we may name the fact that it was at his instigation and under his care that Brahms's P. F. Concerto was first played in England by Miss Baglehole, at the Crystal Palace, March 9, 1872.

HOLZ, Karl, Austrian official, able violinist, and devoted lover of music, born at Vienna, 1798. In 1824 he became one of Schuppanzigh's quartet party, and an active member of the direction of Gebauer's 'Spiritual Concerte,' in which he led the first violins. A jovial, pleasant fellow, devoted heart and soul to Beethoven, who dubbed him 'Mahagoni-Holz,' and often invited him to dinner, where he took more than his share of his entertainer's wine—'a hard drinker, between ourselves,' says Beethoven.

1 Letter of Aug. 29, 1824. 2 Letter, Aug. 11, 1825.
Possibly drink was not his only failing, if we may so interpret the 'Monsieur terrible amour-eux' of another letter of Beethoven's.1

In 1826 Beethoven informed him by letter2 that he had chosen him for his biographer, in the confidence that whatever information might be given him for that purpose would be accurately communicated to the world. According to Schindler, Beethoven afterwards repented of this arrangement. In 1843 Holz made over his rights to Gassner of Carlsruhe, but nothing has been done. Holz died at Vienna, Nov. 9, 1858.

One of the last times that Beethoven's pen touched the paper before he took to his death-bed was to add his signature and a line of music (in a strange scale) to a note of his dictation to Holz, 'Dec. 1826' (Nohl, 'Letters,' 385):

Wir ir ren alle Serm. Nur jeder ir ret andern.
We immer Ihr Freund Beethoven.
[C.F.P.]

HOLZBAUER, Ignaz, composer, born at Vienna in 1711. He was destined for the bar, but devoted all his spare time to music, and by study of Fux's 'Gradus' made himself a good contrapuntist. On Fux's advice he went to Italy, running away from the Prince of Tour and Taxis to whom he was secretary at Laybach; but a fever caught at Venice obliged him to return. He next became Capellmeister to Count Rottal in Moravia, and while there married. Returning to Vienna in 1745, the court-theatre engaged him as director of music, and his wife as singer. In 1747 they started on a tour in Italy, and in 1750 he became first Capellmeister to the Duke of Würtemberg at Stuttgart. In 1753 his pastoral opera 'Il Figlio delle Selve' (Schweizingen) procured him the appointment of Capellmeister to the Elector Palatine at Mannheim. It was during his time that the Mannheim orchestra attained that excellence of performance which made it so famous, though it is difficult to say how much of this was due to Holzbaeur and how much to Cannabich the leader. In 1757 he produced 'Nittet' at Turin with great success, and in the following year his best work, 'Alessandro nell'Indie' was well received at Milan. In 1776 he composed his only German opera, 'Günther von Schwarzburg' (Mannheim), which was brilliantly successful. He was entirely deaf for some years before his death, which took place at Mannheim, April 7, 1783. He composed other operas besides those mentioned, and church and instrumental music, all now forgotten, though not without value in its day, as we may judge from the testimony of Mozart, no lenient critic: 'I heard to-day a mass of Holzbaeur's, which is still good although 26 years old. He writes very well, in a good church style; the vocal and instrumental parts go well together, and his fugues are good.' (Letter, Nov. 4, 1777.) And again: 'Holzbaeur's music (in Günther) is very beautiful—too good for the libretto. It is wonderful that so old a man has so much spirit, for you can't imagine how much fire there is in the music.' (Nov. 14—16, 1777.) He evidently behaved well to Mozart, without any of the jealousy which he too often generated. [M.C.C.]

HOME, Sweet HOME. This favourite melody occurs in Bishop's opera of 'Clari, or the Maid of Milan,' brought out at Covent Garden May 8, 1823. In the published music it is called a 'Siciliana air,' but is not impossibly Bishop's own.

HOMILIIUS, Gottfried August, born Feb. 2, 1714, at Rosenthal in Saxony. Beyond the facts that he was a pupil of J. S. Bach, and master of Adam Hiller, little is known of his life or circumstances. In 1742 he became organist of the Frauenkirche in Dresden, and in 1755 director of the music in the three principal churches there, and Cantor of the Kreuzschule, the choir of which he brought to a high pitch of perfection. He led a simple modest life, entirely occupied with his duties, and died June 1, 1785. He enjoyed a considerable reputation among his contemporaries as an organist, especially for his skill in combining and arranging the stops. He was an industrious composer, and in the latter part of last century his larger church works were ranked very high. Although we cannot now endorse that verdict, we must still allow Homiliius to have been no unworthy pupil of J. S. Bach's. His numerous sacred compositions are characterised by a peculiarly happy vein of melody, and, in accordance with the taste of the day, an avoidance of polyphonic treatment of the parts. On the other hand, it is difficult to compare his music with more modern homophonic compositions. His treatment of his themes—as is the case throughout this period in which Bach's influence was paramount—is always interesting, and sometimes masterly. His most important works are his motets, model compositions of the kind. Little of his music has been printed, but he was very liberal in allowing copies of his works to be taken. Of his 32 motets some excellent examples are to be found in his pupil J. A. Hiller's 'Vierstimmige Motetten,' in Sander's 'Heilige Cecilia' (Berlin 1818—19), Weber's 'Kirchliche Chorgesänge' (Stuttgart 1857), and Trautwein's 'Auswahl.' Specimens of his organ works are to be found in Körner's Orgelvirtuosen. A Pater noster for 4 voices, fully bearing out the description of his style just given, is printed in Mr. Hullah's 'Vocal Scores.' His published works include, a 'Passions-Cantata' (1775); a Christmas oratorio, 'Die Freude der Hirten über die Geburt Jesu' (1777); and 'Sechs Deutsche Arien für Freunde ernsthafter Gesänge' (1786). Those still in MS. are much more numerous, and comprise a course of church music for Sundays and festivals; several Passions, including one according to St. Mark, perhaps his best work; a 'Choralbuch' containing 167 chorales; and finally organ music, consisting of fugues, chorales with variations, and trios. [A.M.]
HOMOPHONE (δομοφωνης), voices or instruments sounding alike—unison. The term is sometimes applied to music written in what was formerly called the Monodic style. [See MONODIA.] But it is now ordinarily employed for music in plain harmony, the parts all sounding together, as opposed to the Polyphonic treatment, in which the several voices or parts move independently of each other or in imitation. Thus in Elijah, 'Cast thy burden' would in this latter sense be called homophonic, while 'He that shall endure to the end' is polyphonic after the 6th bar. [POLYPHONY.]

HOOK, James, born at Norwich in 1746, studied music under Garland, organist of the cathedral. When a very young man he came to London and composed some songs which were sung at Richmond and Ranelagh, and which he published as his Op. 1. In 1769 he was engaged at Marylebone Gardens as organist and composer, and continued there until 1773. In 1774 he was engaged at Vauxhall Gardens in the same capacities, and continued there until 1820. He was for long organist of St. John's, Horsleydown. During his engagements at Marylebone and Vauxhall he is said to have composed upwards of 2000 songs, cantatas, catches, etc. He gained prize medals at the Catch Club, in 1772, for his catch, 'One morning Dame Turner,' and in 1780 for 'Come, kiss me, dear Dolly.' In 1776 Hook brought out 'The Ascension,' an oratorio. He composed the music for the following dramatic pieces—'Dido,' 1771; 'The Divorce,' composed in 1771 for Marylebone, but not produced until 1781 at Drury Lane; 'Trick upon Trick,' 'Il Dilettante' and 'Cupid's Revenge,' 1772; 'Apollo and Daphne,' 1773; 'The Lady of the Manor,' 1778; 'Too civil by half,' 1783; 'The Double Disguise,' 1784; 'The Fair Peruvian,' 1786; 'Jack of Newbury,' 1795; 'Diamond cut Diamond,' 1797; 'Wilmore Castle,' 1800; 'The Soldier's Return,' 1805; 'Tekell,' and 'Catch him who can,' 1806; 'Music Mad,' and 'The Festival,' 1807; 'The Siege of St. Quintin,' 1808; 'Killing no Murder' and 'Safe and Sound,' 1809. Besides these he composed music for the following, the dates of production of which are uncertain: 'The Wedding,' 'Love and Virtue,' 'The Cery of Vauxhall,' 'The Pledge,' 'Coralie,' 'Blanche and Edgar,' and 'The Country Wake.' Many of his songs were published in collections, as 'The Feast of Anacreon,' 'Hours of Love,' etc., but the greater number were issued singly. Hook composed several concertos for the organ or harpsichord, and sonatas for the pianoforte, and was author of 'Guida di Musica,' a book of instruction for the pianoforte. Several of his glees, catches and rounds are printed in Warren's Collections. Hook died at Boulogne in 1827. Several members of his family were eminent in literature. His first wife, Miss Madder (died Oct. 19, 1793), was author of 'The Double Disguise.' His son, James Hook, D.D., Dean of Worcester (born 1772, died 1828), was author of the words of 'Jack of Newbury,' 'Diamond cut Diamond,' etc.

HOPKINS. His younger son Theodore Edward (born 1783, died 1841), was the well-known humourist; and his grandson, Walter Farquhar Hook, D.D., Dean of Chichester (born 1798, died 1873), son of James, was the famous divine. [W.H.H.]

HOOKER, EDMOND, born at Halberton, Devon, probably about 1553, became connected with the choir of Westminster Abbey about 1582, and on Dec. 3, 1588, was appointed Master of the Children. He was one of the ten composers who harmonised the tunes for 'The Whole Booke of Psalms,' published by Este in 1592. On March 1, 1603-4 he was sworn a Gentleman of the Chapel Royal, and on May 9, 1606, was appointed organist of Westminster Abbey. Three anthems by him are printed in Barnard's collection, and six others, and a set of Precies Psalms and Responses are contained in Barnard's MS. collections in the Sacred Harmonic Society's library, and two anthems in the Tudway Collection (Harl. MSS. 7337 and 7340). He contributed two pieces to Leighton's 'Tears or Lamentations,' 1614. He died July 14, 1621, and was buried July 16, in the cloisters of Westminster.

His eldest son, JAMES, a lay vicar of Westminster, died Dec. 1651. [W.H.H.]

HOPKINS, EDWARD JOHN, born in Westminster, June 30, 1818, became in 1826 a chorister of the Chapel Royal under William Hawes. On quitting the choir in 1833 he studied under Thomas Forbes Walmisley. In 1834 he was chosen organist of Mitcham Church, in 38 organist of St. Peter's, Ixlington, and in 41 of St. Luke's, Berwick Street. In 43 he was appointed organist of the Temple Church, the musical service of which under his care has acquired great reputation. As an accompanist he is quite unrivalled. Hopkins has composed several church services, anthems, chants, and psalm tunes. His anthems, 'Out of the deep,' and 'God is gone up,' obtained the Gresham prize medals in 1838 and 1840 respectively. He is also composer of May Day (duet) and 'Welcome' (trio), and author of 'The Organ, its History and Construction,' an excellent treatise published in conjunction with Dr. Rimbault's 'History of the Organ,' in 1855; 2nd edit. 1870; 3rd edit. 1877. He edited Bennet's 'Madrigals,' and Weelkes' 'First Set of Madrigals' for the Musical Antiquarian Society, and the music portion of 'The Temple Church Choral Service.'

John Hopkins, his younger brother, born in Westminster in 1842, was a chorister of St. Paul's from Sept. 1831 to Sept. 1838. In August 1838 (before quitting the choir) he was appointed to succeed his brother as organist of Mitcham Church. He afterwards became successively organist of St. Stephen's, Islington, June 1839; St. Benet's, Paul's Wharf, July 1841; Trinity Church, Islington, May 1843; St. Mark's, Jersey, Feb. 1845; St. Michael's, Chester Square, 1846; and Epson Church, Jan. 1854. In May 1856 he succeeded his cousin, John Larkin Hopkins, as organist of Rochester Cathedral, which he still holds. John Hopkins has composed services, anthems, chants, hymn...
tunes, voluntaries, pianoforte sketches, songs and part-songs, a few of which have been published.

His cousin, John Larkin Hopkins, Mus. Doc., born in Westminster in 1820, was a chorister of Westminster Abbey under James Turle. In 1841 he succeeded Ralph Banks as organist of Rochester. In 1842 he graduated Mus. Bac. at Cambridge. In 1856 he removed to Cambridge on being appointed organist to Trinity College and to the University. He proceeded Mus. Doc. in 1867. Hopkins composed many services and anthems, and published a collection of his anthems. In 1847 he edited, in conjunction with Rev. S. Shepherd, a collection of the Words of Anthems used in Rochester Cathedral. He died at Ventnor, April 25, 1873. [W.H.H.]

HOPKINSON. The greater part of the pianoforte making of this country has centred in London, and the firm of J. & J. Hopkins—though founded and at first carried on exclusively at Leeds—cannot now be quoted as an exception. Mr. John Hopkins established his workshops in Leeds in 1842, and removed them to London in 1846. The warerooms were at first in Soho Square, and were in 1856 removed to Regent Street, where the business is now carried on. Mr. Hopkins patented a repetition action for a grand pianoforte in 1850, and in 1852 he further patented a 'harmonic pedal,' producing the octave harmonics from the strings by the contact, at the exact half of the vibrating length, of a very slender strip of felt governed by a special pedal. The firm gained high distinction at the Exhibitions of 1862 and 1878—at the latter the Great Gold Medal. Mr. John Hopkins retired in 1869, leaving his brother, Mr. James Hopkins, the first place in the business. [A.J.H.]

HOPPER. A name applied to the jack or escapement lever in the action of a pianoforte, or to the escapement lever with its backpiece, regulating screw, etc. complete. [See Grasshopper.] So named because this lever hops out of the notch against which its thrust has been directed; allowing the hammer to rebound, and leaving the string free to vibrate. [A.J.H.]

HORN, FRENCH HORN (Fr. Cor, Cor de Chasse; Ger. Horn, Waldhorn; It. Corno, Corno di Caccia). One of the most characteristic and important instruments among those played by means of a cupped circular mouthpiece (Trumpet, Trombone, Cornet, etc.). It differs from all others of this family by the considerably greater length of its tube, the wider expansion of its bell, the spiral form in which its convolutions are arranged, the softer quality of its tone, and its great complexity. In its most modern shape it is composed of a tube 17 feet in length divided into three main sections—(1) the Body, comprising the lower two-thirds of the tube and a large everted bell, spreading out rapidly to a diameter of about fifteen inches; (2) a series of interchangeable rings, of smaller tubing, termed Crooks, progressive in length, forming about the upper third of the instrument; and (3) the Mouthpiece, which is of different shape, size, and calibre from all kinds of brass instruments. Short intermediate crooks, intended for tuning purposes, are often interpolated between the body and the larger crook: the body itself carries a pair of U-shaped slides fitting with stiff friction into one another, for the purpose of finally and more accurately adjusting the pitch. This portion of the instrument is termed the 'tuning-slide,' and has been of late employed for the farther advantage of affording attachment to a set of valves, not dissimilar from those of the cornet, euphonium, or other valve instruments. [See Valves.] The slides of the tuning apparatus are sometimes utilised as a place of attachment for the different crooks, which then slip on in the middle of the instrument, instead of being affixed to a conical socket at the upper extremity of the body.

The body of the horn has a length of 7 feet 4 inches; the crooks are of increasing length as they descend in pitch. The following are the dimensions of the crooks most in use, for which the writer is indebted to Mr. Kohler of Henrietta Street:—

<table>
<thead>
<tr>
<th>Crook</th>
<th>Length</th>
<th>Pitch</th>
</tr>
</thead>
<tbody>
<tr>
<td>A ½</td>
<td>26 in.</td>
<td>E</td>
</tr>
<tr>
<td>Ab</td>
<td>31 ½ in.</td>
<td>E♭</td>
</tr>
<tr>
<td>G</td>
<td>40 in.</td>
<td>D</td>
</tr>
<tr>
<td>F</td>
<td>55 in.</td>
<td>C basso</td>
</tr>
</tbody>
</table>

The crook for the C alto pitch, a minor third above A ½, and shorter in proportion, would, if in use, reduce the total length of the instrument to about 8 feet, while with that for the C basso pitch it is 16 feet and a fraction long.

The mouthpiece consists of a funnel-shaped tube of brass or silver, terminating at its upper extremity in a rounded ring of metal for the application of the lips. The bore tapers downwards...
in a curved conical form, from about three-quarters of an inch in diameter at the embouchure, to a size enabling the smaller end of the mouthpiece to be slipped tightly into the upper orifice of the crook. It is to be noted that the cavity into which the lips vibrate is thus not cup-shaped, as in the trumpet and cornet, but conoidal downwards, with curved sides approximately hyperbolic in contour. The peculiar softness of quality of the Horn is in some measure due to this fact. The mouthpiece used in playing first-horn parts is about an eighth of an inch less in diameter than that appropriated to the second horn.

The original use of the French Horn was to give signals in hunting. In this function it is difficult to say at what precise date it superseded the more ancient cornet, of wood, horn, or ivory, which was more akin to the Bugle. Louis XI of France ordered the statue on his tomb to be dressed in the costume of a hunter with his cornet at his side. Dufouilloz dedicated a treatise on Venery to Charles IX, who had himself written a similar work. He therein praises the cornet, and imitates its sound by the word tran. In the woodcuts contained in his work, and in pictures of Louis XI’s projected monument, the cornet appears to have only a single ring or spiral; being thus competent to produce only a few notes. In the edition of Dufouilloz published in 1628, however, the king and his lords are represented as having cornets with a second half-circle in the middle. Louis XIII, who was extremely fond of hunting the fox, invented a call, to distinguish that animal, containing several different notes, which show that for their proper intonation the instrument itself must have made progress, and increased in length. Louis XV, however, and his master of the hunt, M. de Dampierre, composed and selected the greater number of calls and fanfares used in the royal hunt, which continue to be employed up to the present time.

The hunting horn finally adopted differs from the orchestral horn in consisting of an unbroken spiral of three turns, sufficiently large to be worn obliquely round the body, resting on one shoulder and passing under the opposite arm. The hands are thus left at liberty, and the mouthpiece can easily be brought to the lips by a single movement.

Three kinds of hunting airs are to be made out. (1) Cerft (tons de chasse), of which there are about 31. These are intended to cheer on the hounds, to give warning, to call for aid, and to indicate the circumstances of the hunt. (2) Fanfares, of which there is one for each animal, and several for the stag, according to his age and antlers. (3) Fancy airs performed as signs of joy or after a successful hunting.

The best-known calls are the Revellée, the Lancet and Relâché; the Hourwari, or default: the Debuché; the Volcelest (when the fresh footmark of the animal is found); the Halot, and the Mort. Of fanfares there are the Royale, sounded for a stag of ten points—invented by Louis XV; the petite Royale, sounded for the wild bear; various others distinguishing the wolf, fox, weasel, and hare; and the Fanfare de St. Hubert, as the patron saint of hunting, only sounded on his day.

The third series approximates more than the others to regular musical performances, and furnishes the link between the use of the Horn as a signal, and as a melodic instrument. These airs are many and various, named after royal personages or distinguished hunters.—Donner du cor is the term for sounding the horn.¹

The introduction of the Horn into the orchestra in France is attributed to Gossec. He, when still very young, was requested to write two airs for the debut of Sophie Arnould at the opera in 1757, in which he introduced obligato parts for two Horns and two Clarinets; the latter instrument being also heard for the first time.² Lotti and Scarlatti introduced it into Italy, and were followed by Hasse and Alberti. It must have been previously used in Germany, since it appears frequently in the scores of J. S. Bach, who died in 1750. It was first used in England as early as 1720 by the opera band in the Haymarket, at the performance of Handel’s Radamisto.

It was much objected to when first heard, as coarse and vulgar; and severe strictures were indulged in at the introduction of a rude instrument of the chase among more refined sources of sound, such as the Violins and Oboe. It is remarkable how subsequent experience has reversed this hasty judgment; the smooth tender tone peculiar to the Horn contrasting admirably with its orchestral companions, and forming a firm foundation for harmony in chords and holding notes.

In consequence of this prejudice, when the Horn was originally transferred in Germany from the hunting field to the orchestra, it was suggested to introduce a mute or damper into the bell, for the purpose of softening the tone; this was at first made of wood, and afterwards of cardboard. It was the custom to produce a like effect in the Oboe by filling the bell, made globular for the purpose, with cotton-wool; a plan

¹ In English we say 'sound the horn;' 'wind the horn'; Tenorhorn 'Lockhaz' is an obsolete name for the bugle horn.
² Gossec is also said to have introduced the Trombone in his opera, 'Le Fables,' in 1775.
HORN.

which suggested to Hampf, a celebrated horn-player at the court of Dresden, about the year 1770, to do the same with the Horn. To his surprise the insertion of the pad of cotton raised the pitch of the instrument by a semitone. Struck with the result, he employed his hand instead of the pad, and discovered the first and original method by which the intervals between the harmonic series of open notes could be partially bridged over. The notes thus modified have since been termed 'hand notes,' and the instrument itself the 'Hand horn.' Sir John Hawkins mentions a concerto played by an artist named Spandau with the help of the hand notes in 1773, 'attempering the sound by the application of his fingers in the different parts of the tube.'

The method of stopping the Horn is not by introducing the closed fist into the bell, but the open hand, with the fingers close together, some way up the bore. By drawing the fingers back, the natural sounds are again produced. The degree in which the Horn is stopped is not the same as for a stopped flute: there being half and whole stopping. In the first case by raising the hand the bell alone is, as it were, closed; in the second the hand is introduced as far as if it were intended almost to prevent the passage of air.

Between the stopped or 'hand notes' and the open notes there is an obvious difference in character and quality which it is impossible wholly to suppress, but which may be sufficiently modified so as not to offend the ear. This object is attained by blowing the open notes softly, so as to reduce the contrast between their sonoroumess, and the closed or 'stuffed' (étouffé) character of those modified by means of the hand. Much difference of opinion exists as to the superiority of the simple Handhorn, or the more modern instrument furnished with valves. It appears certain that the lightness and vibratile power of the former, added to the absence of abrupt bends and sinuositues in the bore, adds materially to the brilliancy of the tone. But, on the other hand, in rapid melodic passages, such as it is now the fashion to write, the alternation of open and stopped notes tends to produce uncertainty and unevenness. The older composers, especially Mozart, seem to have been aware of this fact, and employ both open and stopped notes with full consciousness of their respective effects. Many examples could be given of the mournful and mysterious effect of the stopped notes judiciously used. A convenient compromise between the two forms of the instrument has been adopted by fixing a pair of valves on the tuning slide named above. It is quaintly termed a 'grasshopper' action, and can easily be removed when the simple tube is preferred. Mr. Ford has registered a sliding action like that of the trombone, or slide trumpet, in place of the valves, by means of which notes can be depressed to any extent according to the ear of the performer. This excellent plan, which would at once give the horn the enharmonic accuracy now possessed by the trumpet and trombone alone among wind instruments, does not seem to have attracted the notice it deserves. The same may be said of Mr. Bassett's comma valve, applicable both to Horn and Trumpet, by which the error existing between major and minor tones may be corrected. [See Trumpet.]

The scale of the Horn consists of a fundamental tone, and the consecutive harmonics or 'upper partial' tones of an open tube which reaches the extreme length of 16 feet. It has usually been described as a conical shape; but Mr. Blaikley has ingeniously shown of late that a somewhat different form, with a hyperbolic contour, is required to produce accurate harmonic relations, in consequence of the mouthpiece not being applied to the exact apex of the cone, but somewhat lower down.

As the prime tone of so long a tube is very deep, the harmonics in the middle of the scale lie so close together as to produce many consecutive notes. Eight-foot C is usually taken as the fundamental note, and the scale founded on it is given as follows, the two highest notes being seldom or never used.

\[\text{\begin{verbatim}
\begin{align*}
\text{16 feet C} & \quad \text{16 feet G} \\
\text{12 feet C} & \quad \text{12 feet G} \\
\text{8 feet C} & \quad \text{8 feet G} \\
\text{6 feet C} & \quad \text{6 feet G} \\
\text{4 feet C} & \quad \text{4 feet G} \\
\text{3 feet C} & \quad \text{3 feet G} \\
\text{2 feet C} & \quad \text{2 feet G} \\
\text{1 foot C} & \quad \text{1 foot G}
\end{align*}
\end{verbatim}\]

This notation is substantially correct for the 8-foot or C alto instrument, now disused; and it is clear that it will have to be lowered successively through a whole chromatic octave as the longer and deeper crooks are made use of. For the C basso crook, 8-foot C will thus become 16-foot C, on the 6th space below the bass stave, and with all intermediate crooks the real foundation sound will be some intermediate note of the 16-foot octave. How well the great value of these low notes was known to Beethoven is evident from more than one passage in his works. In the allegro moderato of his Sonata in F for Horn and Piano (op. 17) the following passage occurs twice over:

\[\text{\begin{verbatim}
\begin{align*}
\text{Horn in F.} & \quad \text{Pp} \\
\text{\begin{verbatim} \end{verbatim}} & \quad \text{\begin{verbatim} \end{verbatim}}
\end{align*}
\end{verbatim}\]

The same note also occurs in the 7th Symphony. Allowing for a crook one-fifth lower, the real sound would be as at (a):

\[\text{\begin{verbatim}
\begin{align*}
\text{(a)} & \quad \text{(b)} \\
\text{\begin{verbatim} \end{verbatim}} & \quad \text{\begin{verbatim} \end{verbatim}}
\end{align*}
\end{verbatim}\]

that is to say, 16-foot F and 16-foot C. The former of these is practically, and the latter entirely impossible on a tube of under 12 feet long. It is evident therefore, that by a freak of notation, the bass notes have been referred to a 16-foot scale, whereas those in the treble, as already explained, belong to one of 8 feet, and the real note sounded is as at (b). This accounts for the ordinary but erroneous statement in Horn Methods, that the 'Treble part is conventionally written an octave higher than it is
played,' the fact being that the bass part is an octave too low. In consequence of this misconception, no two scales as given in the ordinary instruction books agree with one another; many beginning at the 4-foot C, which stands second in the scale diagram given above. This is partially owing to the fact that the extreme low tones are difficult, if not impossible to produce, except with a larger mouthpiece. Indeed, 16-foot C can only be feebly touched with a trombone mouthpiece and by an experienced trombone player. The scale given above agrees with the harmonic series common to all modes of eliciting sound, and has therefore been preferred for illustration. The Horn is invariably written for in the G or treble clef (with the exception of the three or four lowest sounds described above), and in the key of C; the difference of pitch necessary for orchestral tonality being provided by the various crooks, of which eleven are used, supplemented by two intermediate; one of which lowers the pitch of any crook approximately a semitone, the other a whole tone. The whole diatonic scale is thus accessible, and even lower pitches than C are occasionally needed, as in the 'Stabat Mater' of Rossini, where a horn in Ab basso is introduced. The upper C crook is rarely used, and the series commonly terminates with Bb basso. In his 2nd Symphony, Brahms uses 2 horns in B♭ basso, and 2 in C basso. The following table shows the relation between the written notes and the actual sounds produced in the various Horns:—

<table>
<thead>
<tr>
<th>Written notes</th>
<th>C Horn</th>
<th>D Horn</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eb Horn</td>
<td>E Horn</td>
<td>F Horn</td>
</tr>
<tr>
<td>G Horn</td>
<td>Ab Horn</td>
<td>A Horn</td>
</tr>
<tr>
<td>B♭ alto Horn</td>
<td>B♭ basso Horn</td>
<td>B♭ basso Horn</td>
</tr>
</tbody>
</table>

It will thus be seen that although the written symbol of the sound remains unchanged, the actual sounds produced, and the embouchure required for producing them, vary over a range of more than an octave. This constitutes the chief difficulty of the instrument; for as the various harmonics differ only in the altered tension of the lip-muscles, what is required to produce a high note on a low crook is clearly insufficient for one far lower on the more acute. It is thus often impossible to ascertain, without actual trial, which particular individual of the series may be first struck; the sound for instance which is fundamental on the B♭ alto being the first octave harmonic on the B♭ basso. It is always advisable in writing for an instrument singularly tender and treacherous, to give the player, in case of change, some opportunity of making this adjustment of the lip unperceived, and under the cover of more forcible instrumentation. This precaution is the more needful as the brass tubing of the Horn is very susceptible to changes of temperature, and a cold crook put on suddenly is in consequence liable to commence too flat.

The Horn is seldom played singly in the orchestra. A pair at least, and four, or two pairs, are most commonly employed. The Third is in the latter case regarded as a ripieno first, and the Second and Fourth as being correlative to one another.

Every great composer since Handel has written freely for the Horn. A characteristic specimen of this master occurs in his Allegro and Pensieroso, where the basso song 'Mirth, admit me of thy crew,' is embellished by a brilliant arpeggio accompaniment rising to the top C. This solo, though preserved among the orchestral parts, and occasionally played, is not to be found in the score of the German Handel Society, nor in Arnold's edition of the work; so that, though traditionally referred to Handel, it may be a subsequent addition. Mozart, even where his score is otherwise limited, hardly ever dispenses with two horns. For these he writes with the most perfect tact and judgment; seldom introducing hand notes, except when their peculiar effect is required. Instances of this can easily be found in any of his symphonies, overtures, or operas. He has moreover written three concertos for orchestra with Horn obbligato, and a large quantity of concerted music such as that named under Clarinet for two horns and the reed instruments. All his compositions are eminently fitted for the hand-horn, of which he had thoroughly studied the capacities.

Beethoven has been especially lavish, though singularly cruel and exacting, in the use of the Horn, for besides the Sonatas in F for Horn and Piano, the Sextet, for String quartet and two Horns obbligato—which is so difficult as to be never played, and the Septet, which contains a trying passage in triplets for Eb horn,—

Horn in Eb.

He constantly gives it a prominent place in all his works. The most noticeable of these are the Second Horn solo in the overture to Fidelio, in E, which incidentally demonstrates the error in notation adverted to above.

End solo.

Correctly played.
In the last bar but one there is a jump of a twelfth from treble G to bass C; whereas Horn players invariably fulfill the obvious intention of the composer by descending only a fifth, and thus completing the common chord.

The fact is, that the first part of the melody, written in the treble clef, is really played by the E Horn a minor sixth lower than its written symbol, and the bass part a major third higher, thus reaching E in the 8-foot octave. The passage, if literally played, as it would be by an organist, would end on the impossible and hardly musical E of the 16-foot octave. These remarks also apply to the illustrative passage read below from the Choral Symphony: the Scene ("Komm Hoffnung") in "Fidelio" for 3 Horns; and a very florid obbligato to the bass song "Deign, great Apollo," in the "Ruins of Athens," scored for four horns, two in F and two in C.

In the Eroica Symphony the trio is scored for 3 Horns in Eb, playing on closed notes. In the 4th Symphony two horns in Eb attack top C pianissimo, and slur down to G and E below. The slow movement of the Pastoral contains a difficult passage for two horns in thirds, kept up for several bars. In the Vivace of the 7th—near the close—the low note already named (sounding E) is sustained by the second horn for no less than 22 bars without intermission.

Horn in A.

The G here given, and which has been shown to be noted an octave too low, really appears to be an outlying harmonic, or fictitious note, not recognised in the ordinary harmonic scale, obtained by a very loose lip and sounding the fifth of the fundamental note, intermediate between that and the first harmonic. To make it a real note, the Horn should begin on 32-foot C, which is impossible for a 16-foot tube, and there ought to be a harmonic third on the second space in the bass clef, which does not exist. Many players can produce it at all, and few can make sure of it. The slow movement contains a melodic passage in contrary motion with the Clarinet, and in the scherzo the two move in close harmony with the Bassoons and Clarinets, the second horn commencing the trio with a solo on its low G and F♯ (sounding E and D♯, as at b), the latter a closed note; a phrase which is repeated 17 times with but slight change.

Horn in A.

In the minuet of the 8th occurs a long and important duet for two Horns in F, accompanied by the violin-cello solo, and beginning as follows:—

Schubert’s great Symphony in C (No. 9) opens with a passage of eight bars for the two horns in unison, and they are used with beautiful effect, with the accompaniment of the strings alone, in the Andante of the same work just before the return to the subject.

No other composer has surpassed or even equalled Weber in his masterly use of this instrument. He evidently loved it above all other voices in the orchestra. Besides abundant concerted music, the effective opening of the Overture to Oberon, the weird notes in that of Der Freischütz, and the lovely obbligato to the Mermaid’s song, will rise to immediate remembrance. He fully appreciates its value, not only as a melodic instrument, but as a source, whether alone or blended with other qualities of tone, of strange and new aesthetical effects.

The same, in a somewhat less marked degree, may be said of Mendelssohn, who makes comparatively less melodic use of the Horn, but very much of its combining and steadying powers. Notable exceptions are however the opening phrase of the Duet and Chorus in the Hymn of Praise, and the Notturno in the ‘Midsummer Night’s Dream.’ When the latter was first performed in this country, the composer especially

1 The difficulty of this passage is sometimes met in the orchestra by giving the two low notes (which sound Eb and E♭ below the bass stave) to one of the other players, so that the sudden transition of three octaves is not felt, and the low notes are obtained with greater clarity.
desired the copist to forward the part early to Mr. Platt, who was to play it.

With Rossini, the son of a horn-player, and himself no mean performer on it, a new school may be said to commence. He uses it freely for his bright and taking melodies, whether alone or in pairs; but the old method of Mozart is lost, and valves become essential for the execution of runs, turns, scales with which the part is abundantly strewn. In 'William Tell,' especially a favourite and recurring effect is that of the Horn imitating the Alpenhorn, and echoing among the Swiss mountains. The triplet passages thus allotted it in rapidly shifting keys are to the last degree difficult and treacherous. Rossini's example seems to have been followed by Auber and many more recent composers.

In Brahms's 2nd Symphony (in D, op. 73) the Horns have a very important part, especially in the first Allegro.

Music for the Horn.

With orchestras:

Mozart.—Op. 92, First Concerto; op. 105, Second do.; op. 106, Third do.
Schumann.—Op. 86, Concerto for 4 horns and orchestra.

Concerted:

Himmel.—Op. 18, Grand Sextet for piano, 2 horns and strings.
Mozart.—First divertimento for 2 violins, 2 horns and cello.
Mozart.—Op. 106, Quintet for horn and string Quartet.
Himmel.—Op. 74, Grand Septet for piano, oboe, horn, flute, viola, cello and contrabass.
Kalkbrenner.—Op. 13, Septett for piano, 2 violins, 2 horns, tenor and bass.
Schumann.—Op. 70, Adagio and Allegro for horn and piano.
Brahms.—Op. 40, Trio for piano, violin, and horn (or cello).

See also under Clarinet, Oboe, etc. for concerted pieces.

[H. E. S.]

Horn, Karl Friedrich, was born at Nordhausen, Saxony, 1762. After studying music under Schröter at Nordhausen, he came in 1782 to London, where Count Brühl, the Saxon ambassador, patronised him, and introduced him as a teacher amongst the English nobility. Having published his first work, 'Six Sonatas for the Pianoforte,' he was appointed music master in ordinary to Queen Charlotte and the Princesses, an office which he held until 1811. In 1808, in conjunction with Samuel Wesley, he commenced the preparation of an English edition of J. S. Bach's 'Wohltemperiertes Clavier,' which was published in 1810. In 1813 he succeeded William Sexton as organist of St. George's Chapel, Windsor, and died Aug. 5, 1830. Horn composed some 'Military Divertimentos,' 'Twelve Themes with Variations for the Pianoforte, with an accompaniment for Flute or Violin,' and several sets of Sonatas. He was also author of a Treatise on Thorough Bass.

His son, Charles Edward, was born in St. Martin's-in-the-Fields in 1786. He received his early musical education from his father, and in 1808 had a few lessons from Rauzini. Returning to London, he endeavoured to obtain a position as a concert singer, but not succeeding he changed his course, and on June 26, 1809, appeared at the English Opera House, Lyceum, in M. P. King's opera, 'Up all night.' In the next year he composed and produced 'The Magic Bride,' upon which he quitted the stage and studied singing under Thomas Welsh. In 1814 he reappeared as The Seraskier in Storage's 'Siege of Belgrade,' with great success. His connection with the theatres both as composer and singer lasted for many years. His voice was poor, but of such extensive compass that he was able to undertake baritone as well as tenor parts. On the production of 'Der Freischütz' at Drury Lane, Horn took the part of Caspar, displaying considerable histrionic ability. In 1831 and 32 he was director of the music at the Olympic. About 33 he went to America and introduced several English operas at the Park Theatre, New York, with marked success. A severe illness having deprived him of the use of his voice, he retired from the stage and commenced teaching, and established himself in business as an importer and publisher of music in connection with a Mr. Davis. During his stay in America he produced an oratorio, entitled 'The Remission of Sin.' In the beginning of 1843 Horn returned to England. In 1845 his oratorio, renamed 'Satam,' was performed by the Melodphonic Society, and he was appointed musical director at the Princess's Theatre. In 1847 he again went to America, and on July 23 was elected conductor of the Handel and Haydn Society of Boston. Early in 1848 he revisited England for a short time, and produced his oratorio 'Daniel's Prediction.' Upon his return to Boston he was re-elected conductor of the Handel and Haydn Society, June 10, 1848. He died at Boston Oct. 21, 1849. His productions for the theatre include 'The Magic Bride,' and 'Tricks upon Travellers' (with Reeve), 1810; 'The Bee Hive' and 'The Boarding House,' 1811; 'Rich and Poor,' and 'The Devil's Bridge' (with Brahaim), 1812; 'Godolphin, the Lion of the North,' 1813; 'The Ninth Statue,' and 'The Woodman's Hut,' 1814; 'Charles the Bold,' 1815; 'The Persian Hunters,' 'The Election,' and 'The Wizard,' 1817; 'Dirce,' 1821; Songs in 'The Merry Wives of Windsor' (with Webbe, jun., Parry, etc.), including the popular duct, 'I know a bank,' and 'Actors al fresco' (with T.
HORN.

Cooke and Blewitt, 1823; 'Philanderer,' 1824; 'The Death Fetch,' and 'Feveril of the Peak,' 1826; 'Pay to my order,' 1827; and 'Honest Fruds' (containing the beautiful ballad, 'The deep, deep sea,' originally sung by the composer, and afterwards raised to the summit of popularity by the singing of Malibran), 1830. He also composed 'Lalla Rookh' (produced in Dublin), 'Annette,' 'Nourjahed,' and 'M. P.,' the dates of performance of which are uncertain, a cantata entitled 'Christmas Bells,' a set of canzonete, besides numerous single songs, glees, etc., and edited a collection of Indian Melodies. Some of his songs, 'Cherry ripe,' 'Thro' the wood,' 'I've been roaming,' and 'Ev'n as the sun,' were highly popular.

W. H. H.

HORNPIPE. An English dance, probably called after an obsolete instrument, of which nothing but the name is known. The 'College Hornpipe' is a well-known and spirited specimen. It is in two sections of 8 bars, each ending with three beats of the foot, like the Branel. [See p. 289.] We quote the first section; there is no repeat, but the tune closes with the three last bars of the quotation.

Hornpipes were much written in the last century, and Dr. Stainer (Dict. of Musical Terms) and Mr. Chappell (Popular Music) give specimens with various dates from 1700 to 1800. The older ones are in 3-2 time; the later ones, as above, in common time.

Handel ends the 7th of his 12 Grand Concertos with one which may serve as a specimen of the Hornpipe artistically treated.

In his 'Semele' the Chorus 'Now Love, that everlasting boy,' is headed alla hornpipe.

The airs 'My Love is but a lassie yet' and 'The British Grenadier,' and the hymn tune 'Helmsley,' are hornpipes; the last, indeed, strongly resembles Miss Catley's hornpipe, 1780.

HOLYOKE, SAMUEL, A.M. An American teacher and composer of both vocal and instrumental music, born at Boxford, Mass., 1771. He published 'Harmonia Americana' (printed in type at Boston, 1791)—a collection of hymntunes and other pieces, in which the absurd practice of imitation and 'fugues' was done away with, and homophony and common sense introduced. Also 'The Instrumental Assistant' (vol. i. 1806, vol. ii. 1807, Exeter, N.H.) Also 'The Columbian Repository of Sacred Harmony' (Exeter, N. H., 1809), a very voluminous work. Also, with Oliver Holden, 'The Massachusetts Compiler.' He died at Concord, N. H., in the spring of 1816, much regretted and esteemed. No piece of his music is known on this side of the Atlantic.

G.

HORSLEY, WILLIAM, Mus. Bac., born in London, Nov. 15, 1774, having at the age of 16 chosen music as a profession, was articled for five years to Theodore Smith, a pianist and minor composer, from whom he received but small instruction and much ill usage. He profited greatly however by his intimacy with the three brothers Pring and Dr. Calcott, his association with whom led him to the practice of purely vocal composition, and he soon produced many excellent glees, canons and rounds, besides services and anthems. He became organist of Ely Chapel, Holborn. In 1798 a suggestion of his resulted in the establishment of the Concerto Sodales. About the same time he was appointed assistant organist to Dr. Calcott at the Asylum for Female Orphans, upon which he resigned his appointment at Ely Chapel. On June 18, 1800, he graduated Mus. Bac. at Oxford, his exercise being an anthem, 'When Israel came out of Egypt.' On the revival of the Vocal Concerts in 1801, Horsley produced several new compositions, and for several years continued to supply them, not only with glees and songs, but also with instrumental pieces, amongst which were three symphonies for full orchestra. In 1802, Calcott having resigned the organistship of the Asylum, Horsley was appointed his successor. In 1812 he was chosen organist of the newly-erected Belgrave Chapel, Halkin Street, Grosvenor Place, which he held in conjunction with the Asylum. In 1837, on the death of R. J. S. Stevens, he became organist of the Charter House, still retaining his other appointments. Horsley published five Collections of Glees; a Collection of 40 Canons; a Collection of Psalm Tunes with Interludes, 1858; many single glees and songs, anthems and other works for the harpsichord, and 'An Explanation of the Major and Minor Scales.' He contributed several glees to Clementi and Co.'s 'Vocal Harmony,' the second edition of which was issued under his care. He edited a Collection of the Glees, etc., of Dr. Calcott, to which he prefixed a memoir of the composer and an analysis of his works, and Book I. of Byrd's 'Cantiones Sacre' (for the Musical Antiquarian Society). Horsley holds a deservedly high rank among glee composers. His 'By Celia's arbour,' 'See the chariot at hand,' 'Mine be a cot,' 'Cold in Cadowalk's 3 G.
tongue,' 'O Nightingale,' and others, have long held, and will doubtless long continue to hold, a foremost place in the estimation of lovers of that class of composition. He died June 12, 1858. He married Elizabeth Hutchins, eldest daughter of Dr. Calcott, who survived him until Jan. 20, 1875. During Mendelssohn's visit to England in 1829 he began an acquaintance with the Horsey family which ripened into an intimate friendship, as is evident from the letters printed in 'Goethe and Mendelssohn.'

Horsley's son, CHARLES EDWARD, was born in London in 1812, and instructed in music by his father, and in the pianoforte by Moscheles. His promise was so great that he was sent, in 1839, on Mendelssohn's advice, to study under Hauptmann at Cassel, whence he afterwards went to Leipsic and enjoyed the friendship and instruction of Mendelssohn himself. Whilst in Germany he produced several instrumental compositions, amongst them a Trio for pianoforte, violin, and violoncello, and an overture, the latter performed at Cassel in 1845. Returning to England he became organist of St. John's, Notting Hill, and produced several important works— 'David' and 'Joseph,' oratorios, both composed for the Liverpool Philharmonic Society, and 'Gideon,' oratorio, composed for the Glasgow Musical Festival, 1863; an anthem for the consecration of Fairfield Church, near Liverpool, 1854; and music for Milton's 'Comus,' besides many pieces for the pianoforte, songs, etc. In 1868 he quitted England for Australia, and there he wrote an ode entitled 'Euterpe,' for solos, chorus and orchestra, for the opening of the Town Hall, Melbourne, in 1870. After remaining in Melbourne for some time, he removed to the United States, and died at New York, March 2, 1876. A 'Text Book of Harmony' by him was published posthumously in Dec. 75, by Sampson Low & Co. [W.H.H.]

HORSENT, Eugène de Brauchmaris, daughter of Josephine, Queen of Holland and mother of Napoleon III, known as 'La reine Horsent,' born in Paris April 10, 1783, died at Viry, Oct. 5, 1837, the reputed authoress (at Utrecht, 1807) of both words and melody of 'Partant pour la Syrie,' an air which has been said to have been to the Empire what the 'Marcellaise' was to the Republic. Her musical knowledge was very slight, but in Drouet she had a clever musician for secretary, who has left an amusing account of the manner in which he was required to reduce into form the melodies which she hummed. Whether Drouet or the Queen of Holland were the real author of the pretty tune in question, it is certain that she will always be credited with it. [M.C.C.]

HOSANNA, a Hebrew word, hoshia na, meaning 'Save now!' (Psalms cxxviii. 25), used as an exclamation of triumph in Matt. xxxi. 9, etc. In its Latin form Osanna in excelsis it occurs in the Mass, after both Sanctus and Benedictum. [OSANNA.] In English music the word will always live in the grand anthem of Orlando Gibbons, 'Hosanna to the Son of David,' the subject of which is introduced by Sullivan in the 'Light of the World.' [G.]

HOTHBY, or OTTEBY, John, an English Carmelite monk, who lived in the latter half of the 15th century, and passed the greater part of his life in the Carmelite monastery at Ferrara, was famous for his skill in the science of music. He was author of a treatise on the Proportions of Music, Cantus figuratus and Counterpoint, MS. copies of which exist at Ferrara and Bologna, in the National Library at Paris and the British Museum (Add. MS. 10356). It is printed by Coussemaker, 'Scriptorium de Musica Medii aevi,' ill. 328. [W.H.H.]

HOWARD, Samuel, Mus. Doc., born 1710, a chorister of the Chapel Royal under Croft and subsequently a pupil of Pepusch; was afterwards organist of St. Clement Danes, and St. Bride's Church, London. In 1744 he composed the music for 'The Amorous Goddess, or, Harlequin Married,' a pantomime produced at Drury Lane. In 1769 he graduated as Doctor of Music at Cambridge. He composed numerous songs and cantatas (many of which appeared under the name of 'The British Orpheus,' in several books, and others in various collections), sonatas, and other pieces for instruments. He assisted Boyce in the compilation of his 'Cathedral Music.' He died in 1782. An anthem of his, with orchestra, 'This is the day,' was published in 1792. A melodious song by him, 'O had I been,' from 'Love in a Village,' is given in the Musical Library, vol. iii. [W.H.H.]

HOWELL, James, was born at Plymouth. Possessing a fine voice he was, at an early age, taught singing, and at 10 years of age sang in public. He was brought to London in 1824 and in the next year admitted a pupil of the Royal Academy of Music, where he studied singing under Rovedino and afterwards under Crevelli, and the pianoforte and clarinet under T. M. Mudie. He subsequently learned the double bass under Anfossi, and made such rapid progress that he decided upon making it his especial instrument. He continued a pupil of the Academy for about 5 years, during part of which time he acted as sub-professor of the double bass. On the cessation of his pupillage he was appointed a Professor and afterwards Associated Honorary member of the Academy. He soon took his place in all the best orchestras, and on the death of Dragonetti in 1846 succeeded him as principal. His elder son, Arthur, is an excellent double bass player and bass singer; and his younger son, Edward, holds the post of principal violoncello at the Royal Italian Opera. [W.H.H.]

HOWGILL, William, organist at Whithaven in 1794, and afterwards in London; published 'Four Voluntaries, part of the 3rd chapter of the Wisdom of Solomon for three voices, and Six favourite Psalm Tunes, with an accompani-
ment for the Organ'; 'Two Voluntaries for the Organ, with a Misere and Gloria Tibi, Domine,' and 'An Anthem and two preludes for the Organ.'

[W.H.H.]

HOYLAND, JOHN, son of a cutler at Sheffield, born in 1753, in early life a pupil of William Mather, organist of St. James's Church in that town. In 1788 he succeeded his master, and in 1819 removed to Louth, Lincolnshire, where he established himself as a teacher, and was shortly afterwards chosen organist of the parish church. He composed several anthems and other pieces of sacred music, besides songs and pianoforte pieces. He died Jan. 18, 1827. His son, William, was elected organist of Louth parish church in 1830, and held the appointment until his death, Nov. 1, 1857.

[W.H.H.]

HOYLE, JOHN, was author of a dictionary of musical terms entitled 'Dictionarium Musicum, being a complete Dictionary, or Treasury of Music,' published in 1770, and republished with a varied title in 1790. He is said to have died in 1797.

[W.H.H.]

HUBERT. See Porperino.

HUDSON, ROBERT, Mus. Bac., born 1734, was a tenor singer, and sang when a young man at Ranelagh and Marylebone Gardens. In 1755 he was assistant organist of St. Mildred, Bread Street. In 1756 he was appointed vicar-choral of St. Paul's, in 1758 a gentleman of the Chapel Royal, and in 1772 almoner and master of the children of St. Paul's, which offices he resigned in 1793. He was also music master at Christ's Hospital. Hudson was the composer of 'The Myrtle,' a collection of songs in three books, published in 1767; of a service and some chants, and many hymn tunes. He also set for five voices the lines on Dr. Child's monument at Windsor, commencing 'Go, happy soul.' He died at Eton in Dec. 1815. His daughter, Mary, was in 1790, and till her death, March 28, 1801, organist of St. Olave, Hart Street, and St. Gregory, Old Fish Street. She was the composer of several hymn tunes, and set for five voices the English version of the Latin epitaph on Purcell's gravestone, 'Applaud so great a guest.'

[W.H.H.]

HÜTENTEN, FRANZ, pianist and composer, born Dec. 26, 1793, at Coblenz, where his father Daniel was organist. In 1819 he went to the Paris Conservatoire, studying the piano with Pradher, and composition with Reicha and Cherubini. He lived by teaching and arranging pieces for the pianoforte, and in time his lessons and compositions commanded high prices, although the latter, with the exception of a trio concertante for F. F. violon, and cello, were of little value. His 'Méthode nouvelle pour le piano' (Schott) had at one time a reputation. In 1837 he retired to Coblenz, and lived on his income till his death in February 1878. His two brothers, Wilhelm and Peter, are still successful pianoforte teachers at Coblenz and Duisburg.

[F.G.]

HÜTTENBRENNER. An Austrian musical family, memorable from its connexion with Beethoven and Schubert. ANSELME, the eldest, a professional musician, was born at Gratz, Oct. 13, 1794. He was for five years a pupil of Salieri's in Vienna, during which time he became intimate with Beethoven, Schubert, and other musicians of the day. He was one of the two persons present when Beethoven died. Why he took no part in the funeral is not explained, but it is certain that his name is not mentioned. He was a very voluminous composer in all departments, and one of his Requiem, dedicated to Salieri, is spoken of as a work of real merit. It was performed for Schubert Dec. 23, 1828. Schubert had a great regard for Anselm. The well-known song 'Die Forelle' (op. 32) was written at his house 'at 12 o'clock at night,' as Schubert himself says. In his hurry Schubert shook the ink over the paper by mistake, and a fact to which the autograph bears ample witness. The B minor Symphony was in Anselm's possession up to the time of its first performance at Vienna in Dec. 1865. He died at Ober-Andritz, Styria, June 5, 1868. For full details see his biography by von Leitner (Gratz, 1868).

JOSEF, the second brother, an enthusiastic amateur, was a government employé. His devotion to Schubert was excessive, as great as sometimes to bore the object of it; he was unwearied in his active services, communicated with publishers, and did all that devotion and admiration could do for his idol. The two used to play duets on an old worn-out piano. He was about Schubert during his last illness, and obtained the official permission for the performance of the Requiem after his death. The fine dramatic song 'Die Erwartung' by Schillier (op. 116) is dedicated by Schubert to his friend, Josef Hüttenbrenner.

The third brother, HEINRICH, was a lawyer and a 'Dr. juria.' He was also a poet, and wrote the words for at least one of Schubert's pieces—the part-song 'Wehmut' (op. 80, No. 1).

[H.]

HUGUENOTS, LES. Opera in 5 acts; words by Scribe and Deschamps, music by Meyerbeer. Produced at the Académie Feb. 28, 1836; in London, first by a German company, at Covent Garden, April 20, 1842; in Italian at Covent Garden as 'Gli Ugonotti,' July 20, 1848; in English at the Surrey Theatre, Aug. 16, 1849. Like 'William Tell,' the opera is always greatly shortened in performance.

For a remarkable criticism by Schumann see the Neue Zeitschrift, Sept. 5, 1837, and Gesammtliche Schriften, ii. 220.

[H.]

HULLAH, JOHN, LL.D., was born at Worcester, June 27, 1812, but came whilst very young to London, where his life has been spent. He received no regular musical instruction until 1829, when he was placed under William Horsey. In 1832 he entered the Royal Academy of Music for the purpose of receiving instruction in singing from Crivelli. He first became known as a composer by his music to Charles Dickens's opera, 'The Village Coquettes,' produced at the St. James's Theatre, Dec. 5, 1836. This was

1 Kreisla von Heillbom, 106. But I am assured by Mr. Nottebohm that the song was composed in 1817, so that this, though an autograph, is not the autograph.
followed by 'The Barbers of Bassora,' a comic opera, produced at Covent Garden Theatre, Nov. 11, 1837, and 'The Outpost,' at the same theatre, May 17, 1838. Soon after this Mr. Humfrey's attention was turned to that which became subsequently the business of his life—popular instruction in vocal music; and attracted by the request of a young lady as a teacher, he visited Paris, only to find Mainzer's classes entirely dispersed. Early in 1840 he returned to Paris, and remained for some time observing Wilhem's classes, then in the full tide of success. On his return to England he made the acquaintance of the late Sir James Kay Shuttleworth, then Dr. Kay, and undertook the instruction of the students in the Training College at Battersea, the first established in England, and just opened under the direction and at the cost of Dr. Kay and Mr. Edward Carlton Tufnell. On Feb. 18, 1840, he gave his first class-lesson at Battersea, and from that day dates the movement he originated. On Feb. 1, 1841, he opened at Exeter Hall a school for the instruction of Schoolmasters of Day and Sunday Schools in Vocal Music by a system based on that of Wilhem, which met with remarkable success. Not only schoolmasters but the general public flocked to obtain instruction, and country professors came to London to learn the system and obtain certificates of being qualified to teach it. The system was acrimoniously attacked, but it outlived all opposition. From his early classes Mr. Humfrey formed two schools, an upper and a lower, and commenced giving concerts in Exeter Hall, the members of his upper school forming his chorus, and the orchestra being completed by professional principal singers and instrumentalists. Remarkable among these were four historical concerts illustrating in chronological order the rise and progress of English vocal music, given at Exeter Hall on Mondays in the first four months of 1847. At this time Mr. Humfrey's friends and supporters determined on erecting and presenting to him a concert hall, and, having procured a piece of ground near Long Acre, the foundation stone of St. Martin's Hall was laid June 21, 1847. The hall was opened, although not entirely completed, on Feb. 11, 1850, and Mr. Humfrey continued to give his concerts there until the building was destroyed by fire Aug. 26, 1860, on the occurrence of which event his friends and pupils testified their gratitude and sympathy for him by the presentation of a handsome testimonial. During the existence of the upper school Mr. Humfrey brought forward a large number of unknown works, old and new, and introduced many vocalists, some of whom have become very eminent. From 1840 to 1860 about 25,000 persons passed through his classes. In 1844 Mr. Humfrey was appointed Professor of Vocal Music in King's College, London, an office which he resigned in 1874. He still holds (1879) similar appointments in Queen's College and Bedford College, London, with both of which he has been connected since their foundation. From 1870 to 1873 he was conductor of the concerts of the Royal Academy of Music. On the death of his old master, Horsley, in 1858, Mr. Humfrey was appointed organist of the Charter House, where since 1841 he had carried on a singing class. For many years he conducted the annual concert of the Children of the Metropolitan Schools at the Crystal Palace. In March 1871 he was appointed by the Committee of Council on Education Inspector of Training Schools for the United Kingdom, which office he still holds. In 1876 the University of Edinburgh unexpectedly conferred on him the honorary degree of LL.D., and in 1877 he was made a member of the Society of St. Cecilia in Rome and of the Musical Academy in Florence. Dr. Humfrey is the composer of many songs, etc., and is author of 'A Grammar of Vocal Music;' 'A Grammar of Harmony;' and 'A Grammar of Counterpoint;' 'The History of Modern Music' (1867), and 'The Third or Transition Period of Musical History' (1865) (Courses of Lectures delivered at the Royal Institution of Great Britain); 'The Cultivation of the Speaking Voice'; 'Music in the House,' 1877; and of numerous essays and other papers on the history and science of music contributed to various periodicals; also of many songs, some of which—such as 'O that we two were Maying,' 'Three Fishers,' 'The Storm'—have become very popular. He edited 'Wilhem's Method of teaching Singing, adapted to English use;' 'The Psalmter, a collection of Psalm Tunes in 4 parts,' 1843; 'The Book of Praise Hymnal,' 1866; 'The Whole Book of Psalms, with Chants'; and a large number of vocal compositions in parts and other publications for the use of his classes. Amongst these should be named 'Part Music' (reprinted as 'Vocal Music'), for 4 voices, and 'Vocal Scores,'—two most admirable collections; 'Sacred Music' (1867); 'The Singer's Library'; 'Sea Songs,' etc., etc. [See PART MUSIC; VOCAL SCORES.] [W.H.H.]

HUME, TObIAS, an officer in the army and an excellent performer on the violin da-gamba; published in 1605 'The First Part of Ayres, French, Polish and others together, some in Tabulature, and some in Pricke-Song. With Pavines, Galliards, and Almaines for the Viole da Gambo alone ... and some Songs to be sung to the Viole,' etc., containing 116 airs in tablature and 5 songs. In 1607 he published 'Captain Hume's Posteckall Musicke principally made for two bass-violes, yet so contrived that it may be played eight several violes upon sundry instruments with much facilitie,' etc., containing 18 instrumental and 4 vocal pieces. Hume rose to the rank of colonel. In 1642, being then a poor brother of the Charter House, he presented a petition to the House of Lords offering his services against the Irish rebels, which he afterwards printed, but it is evident from its contents that he was labouring under mental delusion. [W.H.H.]

HUMFRY, PELHAM (as he himself wrote his name, although it is commonly found as Humphry or Humphreys, with every possible
HUMFREY.

variety of spelling), was born in 1647. 'He is said to have been a nephew of Col. John Humfrey, a noted Cromwellian, and Bradshaw's sword-bearer.' In 1660 he became one of the first set of Children of the re-established Chapel Royal under Capt. Henry Cooke. Whilst still a chorister he shewed skill in composition, as appears by the 2nd edition of Clifford's 'Divine Services and Anthems,' 1664, which contains the words of five anthems 'composed by Felsham Humfrey, one of the Children of His Majesty's Chappel,' the music of two of which is still extant. During the same period he joined Blow and Turner, two of his fellow-choristers, in the composition of what is commonly known as the Club-Anthem. In 1664 he quitted the choir and was sent abroad by Charles II to pursue his studies. He received from the Secret Service money in that year 'to defray the charge of his journey into France and Italy 200l.' in the following year from the same source 100l., and in 1666, 150l. His studies were prosecuted chiefly in Paris under Lully. On Jan. 24, 1666-7 he was during his absence appointed a Gentleman of the Chapel Royal in the room of Thomas Hazard, deceased. He returned to England in the following October, and on the 26th was sworn into his place. Anthems by him were at once performed in the Chapel Royal. On the death of Capt. Cooke, July 13, 1672, Humfrey was appointed his successor as Master of the Children. On Aug. 8 following he had a patent (jointly with Thomas Purcell) as 'Composer in Ordinary for the Violins to His Majesty.' Humfrey died at Windsor, July 14, 1674, at the early age of 27, and, three days afterwards, was buried in the cloisters of Westminster Abbey, near the south-east door. He was the composer of several fine anthems, 7 of which are printed, but without the necessary parts in Boydell's 'Cathedral Music.' The greater part of these, together with 6 others and the Club Anthem, also an Evening Service in E minor, are contained in the Tudway Collection (Harl. MS. 7338), and others are extant at Ely, Salisbury, and Windsor. Three Sacred Songs by him, and a Dialogue, composed jointly with Blow, are printed in 'Harmonia Sacra,' book ii. 1714. He composed two Odes for the King's Birthday, 'Smile, smile again,' and 'When from his throne,' and an Ode for New Year's day, 'See, mighty sir.' Many songs by him are included in 'Choice Ayres, Songs and Dialogues,' 1675-84; and on the rare, separately-paged, sheet inserted in some copies of book i. of that publication, containing 'The Ariel's Songs in the Play call'd The Tempest' (Dryden and Davenant's alteration produced in 1670), his setting of 'Where the bee sucks' is to be found. His song 'I pass all my hours in a shady old grove' was first printed in

the appendix to Hawkins's History. J. S. Smith included 5 songs by Humfrey in his 'Musica Antiqua,' amongst them 'Wherever I am and whatever I do,' composed for Dryden's 'Conquest of Granada,' part i, 1672. Humfrey is said to have been the author of the words of several songs published in the collections of his time, and to have been a fine lutenist. He introduced many new and beautiful effects into his compositions. He was the first to infuse into English church music the new style which he himself had learnt from Lully, and which was carried much farther by Purcell (see Mr. Hullah's 'Modern Music,' Lect. 4). His predilection for minor keys was remarkable.

W.H.H.

HUMMEL, JOHANN NEPOMUK, a classic of the pianoforte—but a dull classic—was the son of a musician, born at Pressburg Nov. 14, 1778, and died at Weimar, Oct. 17, 1837. He is the principal representative of a manner of treating the pianoforte which rested upon the light touch and thin tone of early Viennese instruments, and grew together with the rapid improvements in the manufacture of pianos. He lived during the beginning of the century to about 1830. Hummel is important to pianists as the author of those academical stock-pieces, the Concertos in A minor and B minor, the Septet, op. 74, the Sonatas in F sharp minor, op. 81, and D major, op. 106, and of an elaborate instruction-book, which was published some years too late to make its mark.

Brought up in Mozart's house, deemed the main conservator of Mozartian traditions, an expert conductor and a good teacher, the leading German pianist, a very clever extempore player, and a ready writer of all classes of music from pianoforte solos to masses and operas,—Hummel in his prime, circa 1818, was treated by the mass of professed musicians as the equal of Beethoven! Endowed with curiously little inventive power, rarely warm, and quite incapable of humour or of passion, but fully equipped with every musical virtue that can be acquired by steady plodding, he achieved by hardly any effort for the hero of respectable mediocrity. The formidable size, conventional shape, and uniformly careful workmanship of his pieces, and particularly the 'brilliant' treatment of the pianoforte part, misled his contemporaries to accept him as a master of the first order.

It was about 1786, whilst Hummel's father was conducting the band at the theatre of Schikaneder,—Mozart's friend and the author of the libretto to Die Zauberflöte—that the boy, who had made considerable progress in singing and piano-playing, became the inmate of Mozart's house, and for two years enjoyed Mozart's instruction. From 1788 to 95 he travelled as a pianist in the care of his father through Germany, Denmark, England and Holland, and on his return to Vienna resumed his studies in counterpoint under Albrechtsberger, and had the advice of Haydn and Salieri regarding composition. From April 1, 1804, to May 1811, he was Kapellmeister to Prince Esterhazy, doing the work Haydn had formerly done. After teaching and composing

---

1 Said by Dr. Tudway to have been composed on a naval victory over the Dutch by the Duke of York; but it cannot have been so, as no such event occurred until June 1664, at which time Humfrey was abroad. The statement of Dr. Royce and others that it was composed as a memorial of the fraternal esteem and friendship of the antagonists is unfounded. Humfrey is said to have composed the former, and Blow the latter portion of the anthem, Turner's share being an intermediate bass solo.
for some years at Vienna, he was called, in 1816, to the post of conductor to Stuttgart, and subsequently, in 1820, to Weimar, from whence, in the suite of the grand-duchess Maria Paulowna he went to Russia, and there met with a reception, the cordiality of which was not exceeded, and rarely equalled, in the various journeys he undertook between 1825 and 33 to France, Holland, and England, where in the latter year he conducted operas.

Hummel's compositions consist of three operas; music to a 'Faerie,' to five pantomimes or ballets, all more or less stillborn; two masses, op. 80 and 81; a Graduale and an Offertorium, op. 88 and 89, which are still to be met with in the churches of Austria and elsewhere; and, besides the piano-forte works already mentioned, of a number of Sonatas, Etudes, and miscellaneous display pieces for two or four hands, a couple of Trios, a Quintet, etc. [E. D.]

HUMORESKE. A title adopted by Schumann for his Op. 30 and Op. 88, No. 2, the former for Piano solo, the latter for Piano, Violin, and Cello. Heller and Grieg have also used the term for pianoforte pieces—op. 64 and op. 9 and 16 respectively. There is nothing obviously 'humorous' in any of these, and the term 'caprices' might equally well be applied to them. Rubinstein also entitles his Don Quixote 'Humoreske,' but the 'humour' is there of a much more obvious and boisterous kind. [G.]

HUMPHREYS, SAMUEL, was employed by Handel to make additions to the libretto of his oratorio 'Esther,' to fit it for public performance in 1732. He subsequently provided him with the words of 'Deborah' and 'Athaliah.' He was also author of 'Ulysses,' an opera set to music by John Christopher Smith, and of a poem on the Duke of Chandos's seat at Canons. He died at Canbury, Jan. 11, 1738, aged about 40 years. [W. H. H.]

HUNGARIAN MUSIC. [See Magyar.]

HUNT, ARABELLA, singer, lutenist, and singing mistress, was the instructress in singing of the Princess (afterwards Queen) Anne. She was also a favourite of Queen Mary, who made her one of her personal attendants in order that she might have frequent opportunities of hearing her sing. Many of the songs of Purcell and Blow were composed for her. The beauty of her person equalled that of her voice. Congreve wrote an ode 'On Mrs. Arabella Hunt singing,' which is mentioned by Johnson as the best of his irregular poems. She died Dec. 26, 1705. After her death an engraving from her portrait by Kneller was published, with some panegyrical lines by Congreve (not from his ode) subjoined. [W. H. H.]

HUNT, THOMAS, contributed to 'The Triumphs of Oria,' 1601, the 6-part madrigal, 'Hark! did you ever hear so sweet a singing?' An anthem by him, 'Put me not to rebuke,' is contained in Barnard's MS. collection in the Sacred Harmonic Society's library. Nothing is known of his biography. [W. H. H.]

HUNTER, ANNE, a Scotch lady, wife of John Hunter the surgeon, and sister of Sir Everard Home the physician. She was born 1742, and died 1821. The Hunters lived in Leicester Square during Haydn's first visit, and were intimate with him. Mrs. Hunter wrote the words for his 11 Canzonets (1792), of which the first six were dedicated to her and the second six to Lady Charlotte Bertrum. Hunter's death (Oct. 16, 1793) put a stop to the acquaintance. Mrs. Hunter published a volume of poems (1801; 2nd ed. 1803), which are condemned by the Edinburgh and praised by Blackwood. She was also probably the author of both words and melody of 'Lady Anne Bothwell's Lament.' She is mentioned in Robert Burns's MS. 'Edinburgh Commonplace-Book,' and two poems by her—'To the Nightingale, on leaving El[ar's] C[ourt]', 1784, and 'A Sonnet in Petrarch's manner'—are there copied out by the Poet, the only poems which received that distinction. [G.]

HURDY GURDY (Fr. Vielle; Itl. Lira tedesca, Ghironda riebea, Stampella, Viola da arco; Germ. Bauernlieder, Deutscheslieder, Bitterlieder, Drehrlieder; Latinised, Lyra rustic, Lyra pugnana). Has a place among musical instruments like that of the Dulcimer and the Bagpipes, as belonging to rural life, and quite outside modern musical art. It is true that in the first half of the last century the Hurdy Gurdy or Vielle contributed to the amusement of the French higher classes, but evidently with that affection of rusticity so abundantly shown when mock shepherds and shepherdesses flourished. Mr. Engel ('Musical Instruments,' 1874, p. 235) gives several titles of compositions wherein the Vielle formed, in combination with Bagpipes (Musette), Flutes (of both kinds), and Hautbois, a Fête Champêtre orchestra. M. G. Chouquet ('Catalogue du Musée du Conservatoire,' Paris, 1875, p. 23) adds, for the instrument alone, sonatas, duos, etc., by Baptiste and other composers, and two methods for instruction by Bossin and Corette. This music of a modern Arcadia seems to have culminated about 1750 in the virtuosity of two brothers, Charles and Henri Baton, the former playing the Vielle, which he had much improved, the latter the Musette. Their father, a luthier at Versailles, was a famous Vielle maker, who about 1716-20 adapted old guitars and lutes and mounted them as hurdy-gurdies. Other eminent makers were
Pierre and Jean Louvet, Paris, about 1750; Lambert, of Nancy, 1770-80; Delaunay, Paris; and Berge, Toulouse.

The Hurdy Gurdy is an instrument the sound of which is produced by the friction of stretched strings, and the different tones by the help of keys. It has thus analogies to both bowed and clavier instruments. It is sometimes in the shape of the old Viola d'Amore (a viol with very high ribs), of the Guitar, or, as in the woodcut, of the Lute. Four to six tuning pegs in the head bear as many strings of catgut or sometimes wire, two of which only are carried direct to the tailpiece, and tuned in unison, and one or both are 'stopped' by a simple apparatus of keys with tangents, which directed by the fingers of the player's left hand, shortens the vibrating length to make the melody. The chanterelle has two octaves from the tenor G upwards; the drones are tuned in C or G; G being the lowest string in either key.

In the cut showing the wheel and tangents one string only is used as a melody string. The ebony keys are the natural notes, the ivory the sharps. From the position in which the Hurdy Gurdy is held the keys return by their own weight. The longer strings, deflected and carried round the ribs or over the belly and raised upon projecting studs, are tuned as drones or bourdon strings. All these strings are set in vibration by the wooden wheel, which, being fixed, has the function of a violin bow, and is inserted crosswise in an opening of the belly just above the tailpiece, the motor being a handle at the tail-end turned by the player's right hand. There are two sound-holes in the belly near the wheel. The Hurdy Gurdy here represented is a modern French instrument ('Vieille en forme de luth'), 27 inches in length without the handle. Two of the drones are spun strings, and one, so-called 'trumpet,' is of copper, and is brought upon the wheel at pleasure by turning an ivory peg in the tail-piece. There are also four sympathetic wire strings tuned in the fifth and octave. Like lutes and other medieval instruments, the Hurdy Gurdy was often much and well adorned, as may be seen in South Kensington Museum; fancy woods, carving, inlaying and painting being lavishly employed. The Hurdy Gurdy has been sometimes called Rota (from its wheel), but the Rote of Chauuer had no wheel, and was a kind of half fiddle, half lyre, with an opening (as in the Cithre) for the hand of the player to touch the strings from the back. The old Latin name for a Hurdy Gurdy was Organistrum, and this large form of the instrument it took two persons to play, as it was so long as to lie across the knees of both. The artist touched the keys; the handle-turner was no more important than an organ bellows blower. The summit of the arch of the Gate of Glory of Santiago da Compostella, a cast of which is at South Kensington, is occupied by two figures playing an Organistrum. The date of this great Spanish work is 1188. There are other early representations, especially one in the museum at Rouen, but the earliest, dating in the 9th century, was copied by Gerbert from a MS. in the monastery of St. Blaise in the Black Forest, and published by him (De Cantu et Musica Sacra) in 1774. Mr. Engel has reproduced this drawing in the work already referred to (p. 103). The instrument had eight keys acting on three strings, tuned either in unison or concord. The 'Symphonie' or 'Chifonie' was the Hurdy Gurdy in the 13th century. As for the name Hurdy Gurdy it was probably made merely for euphony, like 'hocus pocus,' 'harum scarum,' but it may have been suggested by the peculiar tone. The Hurdy Gurdy was the prototype of the Piano Violin, and all similar sonoriente instruments, and we may perhaps see in its simple action the origin of the Clavichord. Donizetti's 'Linda di Chamouni' (1842) contains two Savoyard songs with accompaniment for the Hurdy Gurdy. In recent performances violins and violas, and even the concertina, have been substituted for the original instrument, which however remains in the score...[A.J.H.]

HUTCHINSON, Francis, an amateur composer, who, under the pseudonym of Francis Ireland, produced in the latter half of the 18th century many vocal compositions of considerable merit. The Catch Club awarded him three prizes, viz. in 1777 for his catch 'As Colin one evening'; in 1777 for his cheerful glee 'Jolly Bacchus'; and in 1773 for his serious glee 'Where weeping yews.' 11 glee's and 8 catches by him are printed in Warren's collections. His beautiful madrigal, 'Return, return, my lovely maid,' is universally admired. He is sometimes styled 'Dr.' Hutchinson, but he does not appear to have graduated in any faculty. He may possibly have been a medical practitioner, to whom the term 'Dr.' was popularly applied. [W.H.H.]

HUTCHINSON, John, was organist of Durham Cathedral in the earlier part of the 17th century, and had, probably, previously held some appointment at Southwell Minster. He composed some anthems, one of which is preserved in the Tudway collection (Hari. MS. 1740), and, with two others, at Ely. [W.H.H.]

HYMN (Gr. ἡμνος; Lat. Hymnus; Ital. Inno; Germ. Kirchenlied, Kirchengesang). The first Hymn mentioned in the annals of Christianity is that sung by our Lord, and His Apostles, immediately after the institution of the Holy Eucharist. There is some ground for believing
that this may have been the series of Psalms
called Hallel (cxii to cxviii of the Authorised
Version), which was used, in the Second Temple,
at all great festivals, and consequently at that of
the Passover; and it has been supposed—though
the circumstance does not admit of proof—that
the melody to which the most characteristic of
these Psalms, In exitu Israel, was originally
sung, is the germ of that with which it has been
associated, in the Christian Church, from time
immemorial—the Tonus Peregrinus.

In early times, any act of praise to God was
called a Hymn, provided only that it was sung.
Afterwards, the use of the term became more
restricted. The Psalms were eliminated from the
category, and Hymns, properly so called, formed
into a distinct class by themselves. So too,
choruses were composition tributed to Athanagoras,
and still constantly sung in the Offices of the
Eastern Church, is supposed to be the oldest
Hymn of this description now in use. Little less
venerable, in point of antiquity, is the 'Angelic
Hymn,' Gloria in excelsis Deo, of which special
mention is made in the Apostolic Constitutions.
It was not, however, until the latter half of the
4th century, that the immense importance of the
Hymn, as an element of Christian Worship,
began fully understood. S. Ephrem of Edessa
made many valuable contributions to the store
of Hymns already in use at that period. S.
Chrysostom zealously carried on the work at
Constantinople, and S. Ambrose at Milan. The
nobliest Latin Hymn we possess—Te Deum
laudamus—was long believed to be the joint
production of S. Ambrose and S. Augustine. To
S. Ambrose, also, is due the honour of having
first introduced the true Metrical Hymn into the
services of the Western Church; and the rhythm
of the older examples was very distinct from
actual metre. His favourite species of verse was
Iambic Dimeter—the 'Long Measure' of English
Hymnology—which was long regarded as the
normal metre of the Latin Hymn. S. Gregory the
Great first introduced Sapphics; as in Nocte sur-
gentes vigilemus omnes. Prudentius wrote,
with great effort, Trochae to Tetrameter Catatactic—
Corde natus ex Parentis ante mundi exordium;
and also used Iambic Trimeter—O Nazarene, lax
Bethlem, verbum Patris; and Iambic Dimeter Cat-
tatactic—Cultur Dei mememo. One of the earliest
instances of Elegiac Verse is found in the

1 Cruce benedicta niter, Dominus qua carne penedit,
Aique cruores sub vulnera nostra latet

2 See 'The Hymnal Notices,' by the Rev. T. Helmore (Novello).

3 Sung also, as a Procesional Hymn, on the morning of Good
Friday. See Introspexia.
HYMN.

A few Latin Hymns, such as those to be found among the works of Hassler, Tallis, Byrd, and some other great composers, have been set, for 4 or more voices, in a similar manner: but, as a whole, Palestrina’s magnificent Hymnal stands quite alone—too great to admit the possibility of rivalry. The delight with which it was received was unbounded. Indeed, long before the middle of the 16th century, the Science of Hymnology had already begun to attract an immense amount of attention, in widely different directions. Hymns, or rather 1 Carols, of a somewhat lighter character than those we have been considering, had been sung, for ages past, between the scenes of the Mysteries and Miracle Plays which form so conspicuous a feature in the religious history of the middle ages. Many of these—notably such as set forth the Glad Tidings commemorated at Christmas-tide—became, from time to time, extremely popular, and obtained a firm hold on the affections of rich and poor alike.

[See Noët.] Well knowing the effect of songs upon popular feeling, and fully appreciating the beauty of the Latin hymns to which he had been accustomed from his earliest youth, Luther turned these circumstances to account by producing a vast amount of German Kirchenlieder, which, adapted to the most favourite melodies of the day, both sacred and secular, and set for four, five, and six voices, (with the Plain Chant in the Tenor,) by Johannes Walther, were first published, at Wittenberg, in 1524, and re-issued, in the following year, with a special preface by Luther himself. Innumerably other works of a similar description followed in rapid succession. The vernacular Hymn found its way more readily than ever to the inmost heart of the German people. The Chorale was sung, far and wide; and, at last, under the treatment of John Sebastian Bach, its beauties were developed, with a depth of insight into its melodic and harmonic resources which is not likely ever to be surpassed. Even the simplest settings of this great master bear tokens of a certain individuality which will render them household words, in the land of their birth, as long as true musical expression shall continue to be valued at its true worth: and, perhaps, in these gentle inspirations, Bach speaks more plainly to the outer world than in some cases where he has subjected the melody to more elaborate treatment. [See Chorale.]

In France, the Metrical Psalms of Clement Marot, and Theodore Beza, were no less enthusiastically received than the Hymns of Luther in Germany, though their popularity was less lasting. They were originally sung to the most familiar ditties of the time, which were adapted to them, probably by Guillaume Franc, in the Psalter first published by Calvin at Geneva in 1542. In 1561, Louis Bourgeois published a volume, at Lyons, containing 83 of these Tunes, set for four, five, and six voices; and, in 1565, Adrian Le Roy printed, at Paris, an entire Psalter, in which the melodies were treated, after the manner of Motets, by Claude Goudimel. This last-named work was reprinted, in Holland, in 1607: but Goudimel’s polyphonic settings were found too difficult for general use, and were supplanted, after a time, by some less elaborate arrangements—with the melody, as usual, in the Tenor—by Claudin le Jeune, whose collection was published at Leyden in 1633.

1 Ital. Carole; from corolare, to sing songs of joy. Bailey, however, suggests a falso eymone; servil, rustic—whence ‘churl.’
The Hundredth Psalm Tune.  

It was not to be supposed that the movement which had spread thus rapidly in France and Germany, would be suffered to pass unheeded in England, where the study of the Madrigal had already brought part-singing to a high degree of perfection. [MADRIGAL] Here, as in France, the first incentive to popular Hymnody seems to have been the rendering of the Psalms into verse in the mother tongue. Sternhold's fifty-one Psalms first saw the light in 1549: but the 'Whole Booke of Psalmes,' by T. Sternhold, J. Hopkins, and others, did not appear until 1562, when it was 'imprinted' by John Daye, 'with apt notes to sing them within': the 'apt notes' being simply the melodies, as sung in France and Germany, without bass, or any other part. In 1563, the same John Daye 'imprinted' the 'whole Psalms, in four parts,' harmonised, in the simplest possible manner, by Thomas Talys, Richard Brimle, William Parsons, Thomas Cavston, J. Hake, and Richard Edwardis. This was the first collection of Hymn Tunes ever published in England for four voices. Neither Burney nor Hawkins seem to have been aware of its existence. A perfect copy is, however, preserved in the Library of Brasenose College, Oxford; and one, containing the Medius and Tenor parts only, in that of the British Museum. It was followed, in 1567, by another invaluabal volume, also 'imprinted,' but not published, by John Daye, viz. 'The first Quinquagene' of Archbishop Parker's metrical version of the Psalms—a work which has only been preserved through the medium of a few copies given away by Mistress Parker, and so scarce that Strype 'could never get a sight of it.' At the end of this precious volume—a copy of which is happily preserved in the British Museum—we find, printed in four parts, eight Tunes, set, by Talys, in plain counterpoint, with the melody in the Tenor. Each of these Tunes is written in one of the first eight Modes; the eighth, or Hypomixolydian Tune, being the well-known Canon now universally adapted to the words of Bishop Ken's Evening Hymn. A larger collection was published, in 1579, by Guillemo Damon, whose charmoy song and good taste, as always should be, when intended for congregational use—extremely simple. In 1591, another collection appeared, by the same author, in two books, in the second of which 'the highest part singeth the Church Tune'—probably for the first time. In 1585, six years before the publication of Damon's second work, John Cosyns had put forth sixty Psalms, with the Tunes first printed by Daye, set for five and six voices: but, by far the most important volume which appeared before the close of the century was the complete Psalter printed by Thomas Este in 1594, and containing Tunes skilfully harmonised, for four voices, by John Dowland, E. Blancks, E. Hooper, J. Farmer, R. Allison, G. Kirbye, W. Cobbold, E. Johnson, and G. Farnaby—composers of no mean reputation, and generally reckoned among the best of the period. A far inferior volume was published, by John Mundy, in the same year; and, in 1599, a collection appeared, by Richard Allison, with accompaniments 'to be plaiide upon the lute, orpharion, citernae, or base violl, severally or together': but all these works were superseded in 1621 by 'The Whole Booke of Psalms,' edited, and in great part arranged, by Thomas Ravenscroft. This famous volume contains settings, for four voices, of the best German, French, and English Tunes, by Tallis, Dowland, Morley, Bennet, Stubbs, Farnaby, the editor himself, and fourteen other noted musicians of the day. The melody, according to custom, is always given to the Tenor. The counterpoint throughout is admirable, and every Tune may fairly be regarded as a masterpiece. The Bass and Tenor proceed, for the most part, nota contra notam, while the Treble, and Alto, though by no means written in a florid style, exhibit a little more variety of treatment. The effect of this arrangement, when the Tenor is sung by a large body of voices, in unison, and the harmony, by a select Choir, is exceedingly impressive. The finest Tune in the collection—John Dowland's setting of the Hundredth Psalm—may still be frequently heard in Salisbury Cathedral; and there is no possible reason why many others should not be brought into almost universal use.

1 Set to the 134th Psalm of the French translation.

2 Burney erroneously describes this as the first collection, in four parts, published in England.
A second edition of Ravenscroft’s Psalter was published in 1633. William and Henry Lawes set the Psalms of Mr. George Sandys, in three parts, in 1648. In 1671, John Playford printed his ‘Psalms and Hymns in solemn Musick of foure parts; followed, in 1677, by his more widely-known ‘Whole Book of Psalms’ for three voices—a work, the popularity of which was so extended, that, by the year 1757, it had run through no less than twenty editions. But those later works show a lamentable deterioration both of technical skill and artistic feeling. English Hymnody was not destined to remain for any length of time in the high state of cultivation indicated by the collections of Estay and Ravenscroft. Step by step the decadence of the Hymn Tune kept pace with that of the Madrigal, which had once done so much towards preparing the way for its more perfect development. Had any hope of a revival existed, it would have been dispelled by the Great Rebellion. The Restoration did nothing towards the resuscitation of the falling Art. The vigorous treatment of the old Masters faded gradually into vague inanity. The Tunes of Hayes, Wainwright, Carey, Tans’ur, and other more modern writers, are as far inferior to those of their predecessors as those of their followers are to them. The popular taste grew daily more and more corrupt; until, about the beginning of the present century, it reached a pitch of degradation beneath which it would seem impossible that it could ever sink. At that hopeless level it remained for many years. Not a few of us can remember when the most popular Hymn Tune in England—that known as ‘Helsley,’ set to the hymn ‘Lo, he comes with clouds descending’—was an air of so secular a character, that it had probably been composed to some amatory verses, beginning

Guardian Angels, now protect me,
Send me back the youth I love—
sung by Mistress Anne Catley, in ‘The Golden Pippin’; and danced, as a hornpipe, at Sadler’s Wells. [See Lo, he comes.]

The real objection to such melodies as this lies, less in their origin, than in their esoteric unfitness for the purpose to which they are so inappropriately applied. The one may, in time, be forgotten—the other, never. Few people, nowadays, are acquainted with the source of ‘Helsley’: but no one who has seen a Hornpipe danced can mistake its Terpsichorean animus—and, surely, no possible animus could be less fitted to harmonise with the feelings which should be excited by a Hymn on the Last Judgment. Nun ruhen alle Wölter, and O Welt, ich muss Dich lassen, were originally secular airs: but, how different their character!

Vigorous efforts have recently been made, and are made still, to introduce something better. But public taste seems scarcely leading in a hopeful direction. Where Plain Chant is affected, the melodies are too frequently tortured beyond all possibility of recognition; while they are invariably accompanied by harmonies which utterly destroy their distinctive character—passionate dissonances, unblushingly stolen from the theatre, and only fitted to illustrate the romance of Der Freischütz or the deep tragedy of Lucia di Lammermoor. Palestrina’s exquisite settings are undoubtedly too difficult for general use; though they lie quite within the compass of an ordinary Cathedral Choir. But, apart from these, few things in music are more beautiful than a Plain Chant melody, distantly accompanied in simple counterpoint: and, surely, the art of so accompanying it is not beyond the power of an average organist! The settings of John Dowland, and Claudin le Jeune, may be sung by almost any Choir, however modest its pretensions. Ravenscroft’s work has been reprinted, of late years, at a price which places it within the reach of every one. But, before the sterling Tunes contained...
In January 1859 the committee set to work. A specimen was issued in May of the same year. In 1860 the first Edition was published, with the Imprint of Dr. Hampden, Sir Henry Baker’s diocesan. The first ‘Edition with Tunes,’ under the musical editorship of Professor W. H. Monk, King’s College, London, appeared March 20, 1861. An ‘Appendix’ in Dec. 1868, and in 1875 The Revised and Enlarged Edition, completing the work.

Since its first introduction 20 million copies of the book have been sold. Its publication is continued at present by the survivors of the original committee, and in the future it will be continued by a body of trustees constituted by deed for its management.

**HYPER.** (Gr. ὑπέρ, over, above: Lat. *super*.)

A preface, extensively used in the terminology of ancient Greek music—wherein it appears in the names of the five Acute Modes—and then transferred to the musical system of the Middle Ages. The nomenclature of the one system must, however, be very carefully distinguished from that of the other; for, though the same terms are, in many cases, common to both, they are used to designate very different things. For instance, the discordan Locrian Mode (B, C, D, E, F, G, A, B) is often called the Hyper-solian, in recognition of the fact that its range lies a tone above that of the true *solian*; but this Mode has no connexion whatever with the Hyper-solian of the Greeks; neither have the Authentic Modes, as we now use them, the slightest affinity with the Greek acute forms, though the prefix ‘hyper’ has sometimes been very unnecessarily added to the names of all of them.

[See Modes.]

Greek authors constantly use the prepositions *bēpe* and *bēn* in what we should now consider an inverted sense; applying the former to grave sounds, and the latter to acute ones. This apparent contradiction vanishes when we remember that they are speaking, not of the gravity or acuteness of the sounds, but of the position on the lyre of the strings designed to produce them.

The prefix *Hypo-* (Gr. ὑπώ, under; Lat. *sub*) was applied, in antient Greek music, to the names of the five Grave Modes. In the Middle Ages it was added to the names of the seven Plagal Modes—the Hypo-dorian, the Hypo-phrygian, the Hypo-lydian, the Hypo-mixo-lydian, the Hypo-solian, the discordan Hypo-locrian, and the Hypo-Ionian—the range of which lies a fourth below that of their Authentic originals. [See Modes.]

Early writers also add this prefix to the names of certain intervals, when reckoned downwards, instead of upwards; as Hypo-diattessaron (=Sub-diatessaron), a fourth below; Hypo-diascgon (=Subdiapente), a fifth below. [See Interval.]

[W.S.R.]
AMBIC. An iamb or iambus is a metrical foot consisting of a short and a long syllable—as before; or as Coleridge ‘gives it, ‘Iambics march from short to long.’

\begin{equation}
\text{Revenge! revenge! revenge! Ti - mo - thea cries}
\end{equation}

This, from Handel’s Alexander’s Feast, is an iambic passage. So also is ‘Rejoice greatly’ from the Messiah. So is the following from the Finale to Beethoven’s ‘Kreutzer Sonata’ (op. 47).

&\text{IDEA, a theme or subject.}
\end{align*}

IDOMENEO RÉ DI CRETA, OSSIA ILIA E ADAMANTE, an opera seria in 3 acts; music by Mozart. Composed at Salzburg in 1780, and produced at Munich, Jan. 29, 1781 (the 2nd day of Mozart’s 26th year). The libretto was Italian, adapted by the Abbé Varesco (also author of that of ‘L’Oca del Cairo’) from a French piece of the same name by Danchet, which had been composed by Campra in 1712. Mozart’s autograph is in the possession of André at Offenbach. Full score published by Simrock with Italian text. The opera contains a complete ballet in 5 numbers (autog. André) which has not yet been printed, but is announced for publication in the new edition of Breitkopf.

Idomeneo has never been a favourite opera. The Allg. Musik. Zeitung during 50 years only chronicles 16 performances, and it appears never to have been put on the stage either in Paris or London. It has been twice newly arranged—by Treitschke (Vienna, 1806), and by Lichtenháal (Milan, 1843). Mozart himself felt that some improvements were wanted, as he speaks (Letter, Sept. 12, 1781) of rewriting the part of Idomeneo and making many alterations ‘in the French style.’

[G.]

IFIGENIA. The story of Iphigenia, the daughter of Agamemnon and Clytemnestra—in the two episodes of her deliverance from sacrifice at Aulis, and her rescue of her brother Orestes from the same fate at Tauria, which formed the subject of Euripides’ two tragedies—has been a favourite subject with the composers of operas. Not to speak of the two masterpieces of Gluck, which are noticed under the head of IPHIGENIA, we may say here that the opera of ‘Ifigenia in Aulis’ by Apostolo Zeno has been, according to the Catalogue in the Theatre Lyrique of F. Clement, set to music by no fewer than 20 com-

Imitations are sometimes conducted by contrary motion of the parts, or ‘by inversion,’ e.g.—

More rarely we meet with imitations *per rectè et retrò* or, as they are sometimes called, ‘by reversion,’ in which the *antece*dat, being read backwards, becomes the *consequent*:

(These examples are all taken from Fétié.)

Imitations may also be made by *inversion and recession*, or by ‘augmentation,’ or ‘diminution.’ It will be needless to give examples of all these different kinds. Good examples may be found in the theoretical works of Baltiféri, Azopardi, Zimmermann, Marpurg, Fux, and Cherubini. The Suites and Fugues of Bach, the Symphonies and Sonatas of Haydn, Mozart, and Beethoven are full of good examples of various kinds of imitation. In fact every classical writer, whether of vocal or instrumental music, has derived some of his finest effects from a judicious employment of such artifices. Every student of music must make himself familiar with these contrapuntal resources if he would fairly scale the loftiest heights and make himself distinguished as a composer of high-class music. [F.A.G.O.]

IMMANUEL. Oratorio in 2 parts, words selected and music composed by Henry Leslie; produced at St. Martin’s Hall, March 2, 1854. [G.]

IMMYNS, JOHN, by profession an attorney, was an active member of the Academy of Ancient Music. Having in his younger days been guilty of some indiscretion which proved a bar to success in his profession, he was reduced to become clerk to a city attorney, copyst to the Academy, and amansensis to D. Pepusch. He possessed a strong alto voice and played indifferently on the flute, violin, viol da gamba and harpsichord. At the age of 40, by the sole aid of Mace’s ‘Musick’s Monument,’ he learned to play upon the lute. In 1741 he established the Madrigal Society [see Madrigal Society.] In 1752, upon the death of John Shore, he was appointed lutenist of the Chapel Royal. He was a diligent collector and assiduous student of the works of the madrigal writers and other early composers, but had no taste whatever for the music of his own time. He died of an asthma at his residence in Cold Bath Fields, April 15, 1764.

His son JOHN made music his profession, became a violoncellist and organist, and was organist of Surrey Chapel at the time of his death in 1794. [W.H.H.]

I. Time. Medieval writers (accustomed to look upon the number Three—the Symbol of the Blessed Trinity—as the sign of Perfection) applied the term, Imperfect, to all rhythmic proportions subject to the binary division.

The notes of Measured Music were called Imperfect, when divisible into two equal portions. Thus, the Minim—always equal to two Crotchets only—was essentially Imperfect, in common with all other notes shorter than the Semibreve. The Large was also Imperfect, whenever it was made equal to two Longs; the Long, when equal to two Breves: the breve, when equal to two Semibreves; and the Semibreve when equal to two Minims.

The Imperfection of the Minim, and Crotchet, was inherent in their nature. That of the longer notes was governed, for the most part, by the species of Mode, Time, or Prolation, in which they were written: for, Mode, Time, and Prolation, were themselves capable of assuming a Perfect, or an Imperfect form. In the Great Mode Imperfect, the Large was equal to two Longs only, and therefore Imperfect; while all shorter notes were Perfect, and, consequently, divisible by three. In the Lesser Mode Imperfect, the Large was, in like manner, equal to no more than two Breves. In Imperfect Time, the breve was equal to two Semibreves. In the Lesser (or Imperfect) Prolation, the Semibreve was equal to two Minims.

But notes, even when Perfect by virtue of the Mode, Time, or Prolation in which they were written, could be made Imperfect; and that, in several different ways.

A Perfect note was made Imperfect, ‘by position,’ when another note, or rest, of half its value, was written either before, or after it; thus, the Semibreves, in the following example, though written under the signature of the Greater Prolation, were each equal to two Minims only—

Black square notes, though Perfect by the Modal Sign, became Imperfect, in like manner, when mixed with white ones; thus, in the following example, each white Breve is equal to
three Semibreves; and the black one, to two only—

\[ \text{\textit{Imperfect.}} \]

Again, the Perfection, or Imperfection, of any note whatever, could be regulated by means of a Point.

Imperfect notes were made Perfect by the Point of Augmentation—the exact equivalent to the dot in modern Music, and, therefore, needing no example.

Notes, Perfect by the Modal Sign, but rendered Imperfect, by position, could be restored to Perfection by a Point of Division, as in the next example, where the first Semibreve, equal, in the Greater Prolation, to three Minims, would be made Imperfect by the Minim which follows it, were it not for the Point of Division placed between the two notes—

\[ \text{\textit{Imperfect.}} \]

In both these cases, the Point serves to augment the value of the notes: but, it may also be made to produce an exactly contrary effect. For instance, a Point of Division, placed between two shorter notes, following and preceding two longer ones, in Perfect Time, served, antiently, to render both the longer notes Imperfect. In the following example, therefore, the Breves are equal to two Semibreves only—

\[ \text{\textit{Imperfect.}} \]

There are other ways in which the Perfection of certain notes may be changed to Imperfection, and vice versa; and, for these, the Student will do well to consult the pages of Zacconi, Zarlino, and Thomas Morley. [See Mode, Time, Prolation, Proportion, Point, Notation.]

II. Writers on Plain Chant apply the term, Imperfect, to Melodies which fail to extend throughout the entire compass of the Mode in which they are written. Thus, the melody of the Antiphon, Angelus autem Domini (see Antiphon), is in the Eighth Mode; but, as it only extends from F to D—two notes short of the full range of the Hypomixolydian scale—it is called an Imperfect Melody.

[W. S. R.]

III. Imperfect Cadence or Half Close. Cadences occupy the position in music which stops do in literature, and of these the Perfect Cadence or full close answers to a full stop, and the Imperfect Cadence or half close to stops of less value. The former consists invariably of a progression towards and a pause upon the Tonic chord in its first position; the latter of a progression towards and a pause on some other chord than the chord of the Tonic in its first position. Both Cadences are to a certain degree dependent on the position they occupy in the group of bars or rhythms which constitute the period or phrase; for when the succession of chords which theoretically constitutes a cadence occurs in the middle of a continuous passage it has not any actual significance of the kind implied by a cadence, but only when it occurs at the end of a period or phrase of some sort. This point is more important to note in relation to the Imperfect than to the Perfect Cadence; since the latter, being absolutely final, is restricted both as to its penultimate and to its ultimate chord; but the former being final only relatively to an incomplete portion of the music, as a comma is to an incomplete portion of an entire sentence, admits of variety not only in its penultimate but also in its ultimate chord; the chief requisites being that the final chord shall be sufficiently clear in its relation to the Tonic and sufficiently simple in its construction to stand in a position of harmonical prominence, and be listened to without any strong craving in the mind for change or resolution; since the chord which comes last must inevitably have much stress laid upon it.

The simplest form of the Imperfect Cadence is an exact reversal of the Perfect Cadence, viz., the succession of Tonic and Dominant harmony, as \( (a) \), in the key of C. The Dominant chord is the one most commonly met with as the last in an Imperfect Cadence, but it is capable of being preceded by a great variety of chords other than that of the Tonic in its first position. It is extremely common to meet with the first inversion of the major or minor chord of the supertonic, and even, though more rarely, the first position of that chord, as \( (b) \)—

\[ \text{\textit{Imperfect.}} \]

from ‘Cruel perché’ in the second act of Figaro. It is also frequently preceded by the first inversion of the chord of the subdominant, both major and minor; and by its first position more rarely. The chord of the submediant does not often occur, but it has been tried, as by Carissimi, as follows

\[ \text{\textit{Imperfect.}} \]

The chord of the augmented sixth is also not unfrequently found, as
from the Fugue in Beethoven's Sonata in Bb, Opus 106.

The diminished seventh which is derived from the supertonic root is also common in various positions as (c) from the second of the Preludes in F minor in Bach's 'Wohltemperirte Clavier.'

As an example of an Imperfect Cadence which concludes on a chord other than the Dominant the following (d) from the slow movement of Beethoven's Violin Sonata in C minor, op. 30, will serve.

\[ \text{[谱写音乐符号]} \]

Occasionally the Imperfect Cadence appears to belong to another key, which is used transitionally on principles which are explained near the conclusion of the article HARMONY (p. 682 a). The following instance is from Mozart's Quartet in G, No. 1.

\[ \text{[谱写音乐符号]} \]

in which case the two chords forming the Imperfect Cadence are the only ones not in the key of G in the whole passage up to the first perfect cadence, and cannot be considered as constituting a modulation.

The properties of the Imperfect Cadence were apprehended by the earliest composers of the modern harmonic period, and it is frequently found in works of quite the beginning of the 17th century. An example from Carissimi has been given above. In the instrumental music of the epoch of Haydn and Mozart and their immediate predecessors and successors it played a conspicuous part, as the system of Form in Music which was at that time being developed necessitated in its earliest stages very clear definition of the different sections and periods and phrases of which it was constructed, and this was obtained by the frequent use of simple and obvious forms of Perfect and Imperfect Cadences. The desire for continuity and intensity of detail which is characteristic of later music has inclined to lessen the frequency and prominence of cadences of all kinds in the course of a work, and to cause composers in many cases to make use of more sublim means of defining the lesser divisions of a movement than by the frequent use of recognisable Imperfect Cadences.

In Ellis's translation of Helmholtz the term 'Imperfect Cadence' is applied to that which is commonly called the Plagal Cadence. This use of the term is logical, but unfortunately liable to mislead through its conflicting with custom use. The common application of the term which has been accepted above is also not by any means incapable of a logical defence, but it must be confessed to be inferior both in accuracy of definition and comprehensibility to the expressive 'Half-close', which expresses admirably both the form of the succession of chords and the officer most frequently performs in music.

IV. For Imperfect Interval, see INTERVALS.

IMPRESARIO, L'. The title of the French adaptation (considerably altered) of Mozart 'Schauspiel ‘director,' by Leon Battu and Ludovic Halevy, produced at the Bouffes Parisiens, May 20, 1856. This piece is said to have been mixed up with Cimarosa's 'Impresario in Avignon' so as to form one piece by Goethe in 179 while director of the theatre at Weimar.

IMPROMPTU. Originally no doubt the name for an extempore piece; but as no piece can be extempore when written down, the term is used for pianoforte compositions which have (or have not) the character of extempore performance. The most remarkable are Chopin's, of which there are 4—op. 29, 36, 43, and 56 (Fantasie-Impromptu in G minor). The two sets of pieces by Schubert known as Impromptus—op. 90, nos. 1 to 4, and op. 142, nos. 1 to 4, mostly variations—were, the first certainly and the second probably, not so entitled by him. The autograph of the first exists. It has no date, and no title to either of the pieces, the word 'Impromptu' having been added by the publishers, the Haingers, one of whom also took upon himself to change the key of the third piece from Gb to G. The autograph of the second set is at present unknown. It was to these latter ones that Schumann devoted one of his most affectionate papers ("Gesamm. Schriften," iii. 37). He doubt Schubert's having himself called them Impromptus, and would have us take the first second, and fourth as the successive movements of a Sonata in F minor. The first does in fact bear the stamp of a regular first movement. Schubert himself has Impromptus on a then of his wife's, op. 5, and another Impromptu among his Albumblätter. Neither Beethoven Weber, nor Mendelssohn ever use the word.
